*MARCH of the Column of Route.* The following extracts out of the last printed Regulations, comprehend the most important observations relative to the column of route, which being composed of the different divisions of the battalion, is the foundation of all great distant movements, and even of evolutions and *mancuvres*. It is in that order that the battalion should at any time be permitted to move; that the columns of an army should perform their marches; that an enemy should be approached; and that safety can be ensured to the troops in their transitions from one point to another. All marches are therefore made in column of divisions of the line, and never on a less front than 6 files where the formation is 3 deep, or 4 files where it is 2 deep, nor does any advantage arise from such column, if it is an open column, exceeding 16 or 18 file in

front, where a considerable space is to be gone over.

At no time whatever ought a column of *mancuvre* or of route to occupy a greater extent of ground in marching than what is equal to its front when in order of battle; no situation can require it as an advantage. Therefore, the marching of great bodies in file, where improper extension is unavoidable, must be looked upon as an unmilitary practice, and ought only to be had recourse to when unavoidably necessary. Where woods, inclosures, and bad or narrow routes absolutely require a march in file, there is no remedy for the delay in forming, and man may be obliged to come up after man; but these circumstances, which should be regarded as exceptions from the primary and desired order of march on a greater front, should tend the more to enforce the great principle of preventing improper distances, and of getting out of so weak a situation as soon as the nature of the ground will allow of the front of the march being increased.

In common route marching, the battalion or more considerable column may be carried on at a natural pace of about 75 steps in a minute, or near two miles and an half in an hour: the attention of the soldier is allowed to be relaxed, he moves without the restraint of cadence of step, or carried arms; rear ranks are opened to one or two paces; files are loosened but never confounded; in no situation is the ordered distance between divisions ever to be increased, and the proper flank officers and under officers remain answerable for them.

If the column is halted, the whole must be put in march at the same time. The movement of the head division must be steady and equal; the descending of heights must not be hurried, that the part of the column ascending may properly keep up. Alterations occasioned by the windings of the route are executed without losing distance. Soldiers are not to break to avoid mud or small spots of water. The pivots must trace out such a path for themselves as will best avoid small obstructions, and the men of the divisions will open from, and not press upon their pivots. When platoon officers are permitted to be mounted, each will remain on the flank of his division watching over its exactness, and that the proper

proper distance of march is kept by the flank pivot under the officer appointed to preserve it.

Where the arrival of a column at a given point is to be perfectly punctual, in that case the distance being known, the head must move at an equal cadenced step, and the rear must conform; and a person, expressly appointed, will, at the head of the column, take such step as the nature of the route shall permit the column to comply with.

Nothing so much fatigues troops in a considerable column, and is more to be avoided than an inequality of march.—One great reason is, that the rear of the column frequently and unnecessarily deviates from the line which its head traces out; and in endeavouring to regain that line, and their first distances, the divisions must of course run or stop, and again take up their march. It is unnecessary to attempt the same scrupulous observances in common route marching, as when going to enter into the alignment; but even a general attention to this circumstance will in that case prevent unnecessary winding in the march, which tends to prolong it, and to harass the soldier.

When the probable required formation of the line will be to a flank, then the column of march is an open one, and except the cannon, no impediment or circumstance whatever must be allowed betwixt the divisions or in the intervals of battalions. When cannon can possibly move on the flank of the battalion, they ought, and mounted officers or bat-horses must not be permitted betwixt the divisions. If the probable formation may be to the front, then distances are more closed up, and bat-horses, &c. may be allowed betwixt the brigades of a column, but not betwixt the battalions of a brigade.

It is always time well employed to halt the head of a considerable column, and enlarge an opening, or repair a bad step in the road, rather than to diminish the front, or lengthen out the line of march. No individual is to presume to march on a less front than what the leader of the column directs, and all doublings must therefore come from the head only. The preservation of the original front of march, on all occasions, is a point of the

highest consequence, and it is a most meritorious service in any officer to prevent all unnecessary doublings, or to correct them as soon as made; no advantage can arrive from them, and therefore each commanding officer, when he arrives near the cause, should be assured that it is necessary before he permits his battalion so to double: on all occasions he should continue his march on the greatest front, that, without crowding, the road or overtures will allow, although the regiments or divisions before him may be marching on a narrower front.

All openings made for the march of a column should be sufficient for the greatest front on which it is to march, they should be all of the same width, otherwise each smaller one becomes a defile.

At all points of increasing or diminishing the front of the march, an intelligent officer, per battalion or brigade, should be stationed to see that it is performed with celerity; and the commandant of a considerable column should have constant reports and inspections made that the column is moving with proper regularity; he should have officers in advance to apprise him of difficulties to be avoided, or obstacles to be passed, and should himself apply every proper means to obviate such as may occur in the march.—(And at no time are such helps more necessary than when regiments are acting in line on broken ground, and when their movements are combined with those of others.)—When the column arrives near its object of formation or manœuvre, the strictest attention of officers and men is to be resumed, and each individual is to be at his post.

The great principle on all occasions of diminishing or increasing the front of the column in march is, that such part as doubles or forms up shall slacken or quicken its pace, as is necessary to conform to the part which has no such operation to perform, but which continues its uniform march, without the least alteration, as if no such process was going on; and if this is observed, distances can never be lost, or the column lengthened out.—Unless the unremitting attention and intelligence of officers commanding battalions and their divisions are given to this object, disorder

disorder and constant stops and runs take place in the column; the soldier is improperly and unnecessarily harassed; disease soon gains ground in a corps thus ill conducted, which is not to be depended on in any combined arrangement, is unequal to any effort when its exertion may be required, and is soon ruined from a neglect of the first and most important of military duties.

The most important exercise that troops can attend to is the march in column of route. No calculation can be made on columns which do not move with an ascertained regularity, and great fatigue arises to the soldier. A General cannot depend on execution, and therefore can make no combination of time or distance in the arrival of columns at their several points. In many situations an improper extended column will be liable to be beat in detail, and before it can be formed. Troops that are seldom assembled for the manœuvres of war, can hardly feel the necessity of the modes in which a considerable body of infantry must march and move.

The distance of columns from each other, during a march, depends on the circumstances of ground, and the object of that march, with regard to future formations. The more columns in which a considerable corps marches, the less extent in depth will it take up, the less frequent will be its halts, and the more speedily can it form in order of battle to the front.

On the combinations of march, and on their execution by the component parts of the body, does the success of every military operation or enterprise depend. —To fulfil the intentions of the chief every concurrent exertion of the subordinate officer is *required*, and the best calculated dispositions, founded on local knowledge, must fail, if there is a want of that punctuality of execution which every General must trust to, and has a right to expect from the leaders of his columns.

The composition of the columns of an army must always depend on the nature of the country and the objects of the movement. Marches made *parallel* to the front of the enemy will generally be performed by the lines on which the army is encamped, each marching by its flank, and occupying, when in march,

the same extent of ground as when formed in line. Marches made *perpendicular* to the front of the enemy, either advancing or retiring, will be covered by strong van or rear guards. The column will be formed of considerable divisions of the army, each generally composed both of cavalry and infantry: they will move at half or quarter distance, and the nature of the country will determine which arm precedes.

During a march to the *front*, the separation of the heads of the columns must unavoidably be considerable; but, when they approach the enemy, they must be so regulated and directed as to be able to occupy the intermediate spaces, if required to form in line. Some one column must determine the relative situation of the others, and divisions must be more closed up than in a march to a flank, and in proportion as they draw near to the enemy must exactness and attention increase. The General, in consequence of the observations he has made, will determine on his disposition: the columns which are now probably halted and collected will be subdivided and multiplied; each body will be directed on its point of formation, and the component parts of each will, in due time, disengage from the general column, and form in line.

The safety of marches to the *rear* must depend on particular dispositions, on strong covering or rear guards, and on the judicious choice of such posts as will check the pursuit of the enemy. In these marches to front or rear, the divisions of the second line generally follow or lead those of the first, and all their formations are relative thereto. The heavy artillery and carriages of an army form a particular object of every march, and must be directed according to circumstances of the day. The safety of the march, by the arrangement of detachments and posts to cover the front, rear, or flanks of the columns, depends also on many local and temporary reasons, but are an essential part of the general disposition. See pages 367 to 374, of general Rules and Regulations.

**MARCH-IN-LINE.** According to the last printed Regulations, the *march-in-line* must be uniformly steady, without floating, opening, or closing.

**MARCH-IN-FILE,** must be close, firm, and without lengthening out.

To *MARCH past*, is to advance in open or close column, in ordinary or quick time, with a firm and steady step, erect person, the eye glanced towards the reviewing general.

The *ordered or cadenced MARCH*.—The prescribed movement in military tactics. It is observed in the Regulations printed by authority, see page 73, that all military movements are intended to be made with the greatest quickness consistent with order, regularity, and without hurry or fatigue to the troops. The uniformity of position, and the cadence and length of step, produce that equality and freedom of march, on which every thing depends, and to which the soldier must be carefully trained, nor suffered to join the battalion, until he be thoroughly perfected in this most essential duty. Many different times of march must not be required of the soldier—These three must suffice:

*Ordinary time*, 75 steps in the minute—*Quick time*, 108 in the minute—*Wheeling or quickest time*, 120 in the minute.

In order to accustom soldiers to accurate movements, plummets, which vibrate the required times of march in a minute, have been recommended: musket-balls suspended by a string which is not subject to stretch, and on which are marked the different required lengths, will answer the above purpose. The length of the plummet is to be measured from the point of suspension, to the center of the ball.

The several lengths are:—

	steps in. hun.		
Ordinary time in a minute	75	21	96
Quick time - - -	108	12	3
Quickest or wheeling time	120	9	80

*MARCHING by Files*, is to march with the narrowest front, except that of rank entire or Indian file, which bodies of men are susceptible of.

The strictest observance of all the rules for marching, is particularly necessary in marching by files, which is first to be taught at the ordinary time, or 75 steps in the minute, and afterwards in quick time or 108 steps in the minute.

In file-marching, particularly at the drill, the whole of a company or squad, having been previously faced, are immediately to step off together, gaining at the very first step 30 inches.

The first adoption of file-marching has been attributed to the Prussians, and the advocates for what is called the *Ordre mince des Prussiens*, the thin or narrow order, have in contradistinction named the *ordre profond*, the deep order, or column, the French order. According to a very ingenious and lively writer, who has had frequent occasions to see the practice of both orders, the *ordre mince*, or file-marching, may be very useful during a march, but the deep order or column ought only to be depended upon in manœuvring before an enemy.

To *MARCH according to time and measure*, (*marcher en cadence*, Fr) Marshal Saxe, in page 23, art. 6, of the folio edition of his *Reveries or Memoires sur l'Art de la Guerre*, is of opinion, that marching to time and measure, constitutes one of the essential requisites in war; he calls it indeed the principal one to be observed by troops who are going into action. By marching according to time and measure, we understand that regular movement of a large body of men whose steps are cadenced and uniformly the same, and which are kept so by the artificial aid of music.

The Marshal observes, that although military men will enter into much desultory conversation respecting the tactic, (*la tactique*) of the ancients, they seldom or ever understand the real definition of the word. It is, in fact, so much corrupted in modern times, that what really conveyed no more than a regular principle in marching, has since been made to signify the exercise and evolutions of troops. All the world know how to beat a march, without comprehending the real object, and half the world imagine, that the noise of a drum or life is nothing more than military parade.

It is ridiculous to suppose, that martial sounds and military music, were first invented for the sole purpose of confounding each other on the day of battle. Let us indulge a better opinion of the good understanding of the ancients, particularly of the Romans, and endeavour to prove, that regularity in marching, (which depends wholly upon the cadenced step,) is the ground-work of military operations, and that nothing is more simple because it corresponds with

nature, This was, in fact, the military step which the Romans brought to so great a perfection, and which has since been so closely followed by the Prussians. It was upon this principle that marches were first devised, and that the drum was adopted to second the purposes. This is literally nothing more than a certain beat or *tact*, as the Marshal expresses it, and which is evidently derived from the Roman word *tactum*, touch, and by means of which men may be taught to move in quick or slow time. As long as this principle can be followed up, the rear will never lag behind, soldiers will preserve the same step, and march with the same foot; the wheelings will be made uniformly together, without confusion or delay; and the men will be less fatigued than if they were suffered to march or wheel at random. Every person of the least reflexion or observation, will be convinced of the truth of this last remark. Let one man, for instance, be ordered to dance two hours, without the assistance of any sort of musical instrument, and let another, with the same bodily powers and activity, go through the same operation, during double the time, accompanied by music, and let it then be determined which of the two has been most fatigued. It will evidently appear that the former has: for it is an unquestionable fact, that sounds of concord and harmony have a wonderful secret influence over the human frame, and that they render the exercises and functions of the body extremely easy. It is well known, that when the camel drivers wish to make their camels get on, they never flog or strike them with sticks, but sing, whistle, or repeat some humorous song.

Should it be asked, what sort of music is best adopted to the human organs in military movements? It may safely be replied, all those simple tunes which can be played by the life and drum; I shall perhaps be told, (observes the Marshal) that many men have no ear for music; this I deny, as far as the observation regards marching, which is a movement so easy to the human frame, that it comes, as it were, naturally to man. I have often remarked, that when the long roll has beat, the men in repairing to their several parades, have insensibly preserved the regular step, without

knowing that they did so: nature, in fact, and instinct go together. If marching according to time and measure be considered in a mere superficial manner, the cadence step will undoubtedly appear of little importance; but if it be considered as an essential requisite to quicken or slacken the movement of troops who are going into action, it must be found an important object. No evolution, in fact, can be well done at close order without its assistance. The military step of the Romans was the cadenced or measured movement, and they were thereby enabled to march with ease upwards of 24 miles in five hours. This, however, would be looked upon as great exertion, if not fatigue, among modern troops, although it constituted a principal part of the Roman exercise. Hence some opinion may be formed of the attention which they paid to that species of training, by which men were habituated to long marches; and this they accomplished by means of the *tact*, or cadenced movement.

In order to prove the validity of our observations, let us, for a moment, imagine a thing which is scarcely possible to be accomplished by troops that do not march according to time and measure. Let us, suppose, that two battalions, advancing to attack one another, should march up without floating, overlapping, or breaking in the least; under these circumstances, which would obtain the superiority? the one that should imprudently have commenced firing, or that which should have reserved its fire? Every intelligent and able officer will instantly determine in favour of the latter; and his decision would unquestionably be correct; for the former, besides being disheartened by seeing men advance against them with a reserved fire, would necessarily be retarded in their march in order to prime and load; and it must be evident to every man, that their antagonists would completely overthrow them by advancing with a rapid and cadenced step.

This was the plain and effectual method of the Romans. It may, perhaps, be said, that their ignorance of the use of gunpowder alters the case with respect to our manner of fighting. Let it, however, be recollected, that they fought with missile weapons, which did full as

much

much mischief as our fire-arms can produce. Gunpowder, in fact, is not so destructive as most people are apt to imagine. Few men are killed in regular fought actions, by the two armies engaging with musquetry only. Marshal Saxe does not scruple to assert, that it is impossible for a battalion of armed men to charge its enemy with vigour and effect, unless it preserve the cadenced step. For the ranks must unavoidably open during the march in line; and when the troops get within 50 or 60 paces of their opponents, the commanding officers see chasms, cry out *serre*, or close into the center; and in the hurry of so doing, one rank overlaps another, and the center itself becomes insensibly broken, standing eight or ten deep, while the wings are at two, three, or four. To remedy this defect, the whole line is halted, and if the enemy be wise enough to advance in regular order during this operation, it is ten to one that he turns the flank of his opponent, and completely routs him. With regard to the musquetry-firing, it may be laid down as a certain fact, that the mischief it does in pitched battles is more imaginary than real. It has been acknowledged by the most experienced officers, it is, indeed, positively asserted by Marshal Saxe, (page 29 of the folio edition) that the closest volleys have produced little or no effect against a line of determined steady troops. I have seen, observes the Marshal, a whole volley of cool directed musquetry, occasion the loss of no more than four men; while the troops against which it has been poured, have calmly marched up, reserved their fire till they got in contact with the enemy, and then amply revenged the deaths of their comrades by discharging their pieces, and following up with the bayonet. It is at this stage of the battle, that a real carnage commences; and its execution rests wholly with the victorious party; and we need scarcely add, that its success must be attributed to that composed, steady movement, or cadenced step, which enabled the troops to act together, when they came to close action.—The military reader will be gratified by a perusal of two or three interesting anecdotes in pages 29, 30, 31, of the *Reveries*, fol. edit.

*MARCH in prolongation of the line.—*

This operation is gone through when a battalion standing in open column, with the pivot flanks of its divisions on the line, and advanced points being ascertained, moves forward at the word *march*, which is given by the commanding officer. See sec. 115, page 150, of *Rules and Regulations*. It is stated in page 148 of *Dundas*, that whenever the battalion wheels into open column, in order to prolong the line on which it was formed, and that no distant point in that prolongation is previously given, the sergeant of the leading company will advance 15 or 20 paces, and place himself in the line of the pivot-flanks, and the leading officer will thereby (taking a line over his head) be enabled to ascertain the direction in which he is to move.

*MARCH by the Inversion of Files, or Countermarch*, a compound word signifying retrocession, backward movement, change of measures or conduct, any alteration, in fact, of an original conception or undertaking. Thus the countermarch of ideas in the mind is the precursor of the different changes made by the body. In a military sense it is variously applicable; and as every countermarch or backward movement, necessarily implies a previous march, or forward movement, we shall extract under this article the most material instructions that have been published by authority relative to the countermarch of the component parts of a battalion, &c. observing generally that the word countermarch may be applied to the most extensive scale of military operations. Thus, a whole army which has advanced into an enemy's country, is said to countermarch, when it not only ceases to make progress in a forward direction, but changes its whole plan of manœuvre, and trends back the ground over which it had advanced. To countermarch, in a more desultory manner, means to quit different positions by the countermarch of detached bodies, by changing their relative fronts, without abandoning the field, or scene of general operation. In order to execute such evolutions and inversions with accuracy, every battalion should be well instructed in the prescribed methods of changing front by the inversion of its files to right or left, in front or in rear

of a leading division, from and on its center.

**The COUNTERMARCH by Files.** According to the last printed Regulations, this movement is of two kinds. Either *successive* (the body being halted) by each file successively turning on its own ground, the moment it is disengaged by the departure of its preceding file: or *progressive* (the body being in motion) by each file turning when it arrives at the point from which the leading or head file first wheeled. In the first case the body must shift its ground to a flank a space at least equal to its front: in the second it will perform this operation of the countermarch on its original ground, exchanging flanks and fronts, so that what before stood as the leading or head division, will become the rear of the column; or, if in line, what was the right flank fronting one way, will still remain the right flank fronting another. In both cases the pivots are in a small degree moveable, but they must be so as little as possible, since a solid and compact inversion of the files is as requisite to a true and close formation in line or column, as the lock-step is indispensable in every other movement by files.

**COUNTERMARCH by Files in Front of the Battalion, &c.** In this case the front men become the pivots, on which every successive file turns, till the rear file gets upon the identical space of ground from whence the front file first wheeled.

**COUNTERMARCH by Files in rear of the Battalion.** In this case the rear rank men become the pivots upon similar principles of movement. All countermarches of a battalion or greater body, must be made in ordinary time; of smaller divisions in general in quick time. The observations which have already been made, under the head *Files*, with respect to a solidity and quickness of movement in each wheeling, and to an unity of step, (allowing for an increased length of it in the wheeling men) are especially applicable to the countermarch by files.

**The COUNTERMARCH of a Battalion, from both Flanks on its Center, by Files.** In order to effect this movement and change of formation, the wings face outwards from the colours, which stand

fast, and a serjeant remains at the point of each wing, in order to mark the ground. At the word *march*, the right wing files successively close behind the rear rank, and the left wing before the front rank of the battalion, till they arrive at the points where each other stood. They then halt, cover, and front by word of command, looking to the colours, which take their places. The commanding officer dresses the line if necessary.

**The COUNTERMARCH of the Battalion, from its Center, and on its Center, by Files.** The wings face inwards to the colours, which stand fast, and a serjeant remains to mark each flank. The whole then take three side steps to the right, by word of command, in order to disengage the center. At the second word of command, the whole move on, and each file successively wheels into the center as it arrives at and beyond the colours. As soon as each company is in the line from the colours to the flank serjeant, its leading officer *fronts* it. When the whole is formed, the colours countermarch, and every company dresses to the colours and otherwise ordered. It must be remembered, as a general rule, that in the countermarch from both flanks, no part of the battalion is fronted till the whole is on its ground. In the countermarch from the center, the battalion begins instantly and successively to front by companies, as each is ready and on its ground.

**The COUNTERMARCH by Companies or Subdivisions, on the Center of a Battalion or Line.** Although this may be done by files, it has been allowed, that on account of the unavoidable openings which always occur in file-marching, a battalion, or larger body, will be best enabled to execute that movement with quickness and rapidity, by the march of columns of companies or subdivisions in front. To effect this object, the battalion is cautioned to countermarch from its center by subdivisions; one or two central subdivisions having wheeled the half circle upon their center point, or countermarched into the new line, so that the front rank stands precisely where the rear rank did: one of the wings then faces to the right about, and both wheel inwards by subdivisions: they march along the rear and front of

the formed divisions, and successively *wheel* up into their respective places on each side of those already arranged in the line. The subdivisions which wheel up to the rear, successively *halt, front, dress*, when they reach their ground. The officers who lead them must be particularly attentive to their wheeling points, by being at their proper front rank when they *halt, front* their subdivisions. They would otherwise pass the rear, and disfigure the formation.

If it be intended that the front rank of the directing company or subdivision, should stand on the identical line which it occupied before the countermarch, it will be placed in that direction. In that case, after the subdivision is wheeled inward, the wing which is to march in rear of it, must shift a few paces to the flank, in order to get clear of the rear ranks, and then proceed.

When one flank of a battalion or line is to occupy the spot where the other one stands, its most expeditious movement to arrive at it, will be along the prolongation of the line. If the flanks are to exchange places with each other, the countermarch on the center, or on a flank, is the best method by which that exchange can be effected. The single battalion may do it by files, if its ground be confined, but a line must do it by countermarch of divisions in open column.

*The Countermarch in Column*, is the inversion of the different files which constitute the several divisions, subdivisions, or sections of which the column is composed. By which inversion the front of the column is completely reversed.

*To Countermarch a Column the Right in Front*, is to change the front, or aspect of the leading company, subdivision, or section, and to place it in the rear of its perpendicular formation. After the caution has been given to countermarch by files, the whole will face to the right, by word of command. Each company or leading officer, or sergeant, will immediately quit the pivot, and place himself on the right of his company, subdivision, or section, whilst his covering sergeant advances to the spot which he has quitted, and faces to the right about. At the word *march* the whole move. The leader in the first in-

stance wheels short round to the right, and proceeds, followed by his files of men, until he has placed his pivot front rank man close to his sergeant, who remains immovable. As soon as the leading officer or sergeant of each company, subdivision, or section, has countermarched the extent of his front, he instantly gives the words *halt, front, dress*, so as to have it squared and closed in to the right, which is now become the pivot flank, and on which the officer or sergeant replaces the person that had advanced to ascertain the exact point of perpendicular formation; and who falls back behind the rear rank. By means of this inversion of the files, the column will face to its rear, each company, subdivision, or section, having its original follower its head or leading object.

*To Countermarch a Column, the Left in Front*, is to make the left company, subdivision or section, which is now in the rear of the column, become the head of it. After the caution, to countermarch by files, has been given, at the word *left face*, the whole face to the left, the officer or sergeant moves to the left of his company, subdivision, or section, and the person who has covered him, moves to his place, and faces about. At the word *march*, the officer turns short to the left, and proceeds as before until he is fixed on the left, which is now become the pivot-flank, as the column stands with its right in front. In all countermarches, the facing is always to that hand which is *not* the pivot, but which is to become such. The countermarch of each division, subdivision, or section, separately on its own ground, is an evolution of great utility on many occasions. It enables a column which has its right in front, and is marching in an alignment, to return along that same line, and to take such new positions in it as circumstances may require, without inverting or altering the proper front of the line. In many situations of forming from column into line, it becomes a previous operation which ought not to be dispensed with.

When a column countermarches by divisions, each on its own ground, unless the divisions be equal, the distances after the countermarch will not be the true wheeling

wheeling distances, but will be such as are equal to the front of the preceding division, and therefore the true distances must be regained before the divisions can wheel up into line with the accuracy and completion of space which are required.

*MARCHING past by the Cavalry.*—At a review, or inspection, regiments, brigades, or lines, do not march past in column of squadrons, but in column of half squadrons.

In passing by in half squadrons at open ranks, the commander of the squadron will be in front of his leading half squadron, covered by the standard, with which the other officers of the half squadron dress. In the second half squadron all its officers are in front, and in one line. The trumpets are all in front of the regiment, and when they have passed, wheel quickly round, and remain posted opposite his Majesty, and sound till the regiment has passed; when they cease (and those of the succeeding regiments commence) follow their regiment, and regain its front.

The half squadrons, or divisions, will dress, and cover to the passing hand; after the successive wheel, which brings them on the line of passing, they will open ranks, 60 or 70 yards before they approach his Majesty, and close them about the same distance after passing, and they will continue so to dress, and preserve the line, till each division wheels at the point, where the head one has changed its direction; there, and not before, the dressing and covering will be made to the proper pivot flank of divisions.

The whole pass, (whether at open or close ranks) as one column; nor is any division, squadron, or regiment, to increase, or alter the distances it possessed, at the moment it wheeled from line into column.

In passing by half squadrons or divisions, at close ranks, the standard may take the center of the front rank of the leading one. The commanding officer is before it, other officers are at their squadron posts, and care is taken, that there shall be an officer on each passing flank.

At the drawing of swords, and general salute, on his Majesty's approach, the trumpets all sound the parade march.

When his Majesty passes along the line, each regiment successively sounds its own march, or such other as it shall be ordered, and the same is done by each regiment when it passes his Majesty.

His Majesty's Regulations have prescribed the soundings with which all generals, and other persons are to be received; when they pass along the line, or the line before them, the trumpet soundings will be the same as before his Majesty.

The trumpet flourish, in drawing swords, is used regimentally on their own ground, and is the sounding used in receiving a major-general; it is repeated twice for a lieutenant-general, and to all superior generals the march is sounded.

In parade, to receive his Majesty, or the commanding general, the trumpets are assembled on the right of their regiments (whether single or in line) in two ranks and the staff beyond them. The staff does not march past.

On all occasions of exercise, and manœuvre, trumpets are behind their troops and squadrons, unless otherwise detached.

If his Majesty sees a brigade, he will be received at the point of his approach in the manner already directed, by the general commanding it. If a single regiment, in the same manner by its commanding officer.

After passing in parade, and in movements and exercise, it will depend on the commanding officer of the regiment, to place the other field officers at the head of squadrons, or to assign them the superintendence of wings, in order the better to assist.

In general, regiments manœuvre at too great a distance from the person inspecting them; they ought to terminate many of their movements and formations within 20 or 30 yards of where he stands.

Cavalry regiments, when dismounted, and formed in line, will have an interval of six paces between each.

When the regiments dismount, field officers and adjutants do not dismount, but remain on horseback.

When the dismounted line advances in front, at close ranks, general officers, and commanding officers of regiments, are behind the centre; the other field officers

officers are behind the flanks of the battalion.

When the dismounted line is at open ranks, field officers are on the flanks of the battalion, in a line with the men, and general officers, and commanding officers of regiments are in front.

In passing on foot, all mounted officers are in front of the regiment, except the adjutant, who is in the rear.

*General principles in MARCHING.—*

When a large body is marching in column or columns, through narrow ground, and when its parts are to be assembled beyond the defile, in several lines, in a compact manner behind each other,—such parts are not to begin to assemble when the leading one does, but the head of each line is successively first to come up to the ground on which it is to stand, and when it there halts, its proper followers (and not before) move into line with it, and thereby do not impede the bodies that are behind them, which are still in the defile, and are to perform the same operation.

When a new line to be marched, or formed upon, is taken up by markers, commanding officers of squadrons, of regiments and all other persons whatever, will take care that during such operation they do not stand upon, or obscure the direction of that line. In general, too many markers are thrown out: the Regulations are full and explicit on that head. In movements in column, commanding officers of squadrons and regiments should keep wide of the flanks, that the pivot leaders may more correctly follow each other, and that they themselves may the better see, and distinguish the relative situation of the whole.

We shall conclude our remarks on the principle of marching, by quoting a remarkable passage out of Marshal Saxe's *Reveries*, which may serve to undeceive many with regard to the overrated importance that is given to the expert handling of the firelock.

He justly remarks, that the manual and platoon exercise does extremely well to render the soldier easy under arms, but it should not engross the whole of our attention on that account. It is, perhaps, of all others, the least important branch in military acquirements, after the soldier has been taught

to carry his firelock on his left shoulder, to prime and load with accuracy and dispatch, and to fire in platoon.

When once a soldier has been rendered master of these essential requisites, (and it requires little to make him so) the full possession of his legs and feet becomes the principal object of his attention.

The secret of all manoeuvres, and the consequent issue of engagements, depend upon the legs. Hence the necessity of moving to time and measure, and the wise practice of teaching the cadenced step. Whoever attempts to drill a recruit without paying attention to this important object, must be ignorant of the first elements of war.

Il n'en est pas seulement aux éléments a qu'on appelle le métier de la guerre. He does not even know the first rudiments of what is called the profession of arms.

These observations ought to be strongly impressed upon the minds of those persons who are too apt to devote all their time to the firelock, and consequently to neglect the more necessary object of marching, &c. Officers, in particular, should be taught to feel the justness of those principles of movement, by which large bodies are enabled to act together. The motions of the firelock are easily learned, but the various changes to which the human frame must submit in marching, require something more than mere mechanical operation.

*MARCH of a Train of Artillery.* It has been observed, in page 192 of Muller's *Treatise of Artillery*, that the French march their artillery much in the same manner that we do, with this difference, that the French artillery is divided into brigades. In page 191 of Muller's *Treatise on Artillery*, we find the following detail of a march of English artillery:—

1. A guard of the army.
2. The company of miners, with their tumbrel of tools, drawn by two horses.
3. The regiments of artillery front guard.
4. The kettle drums, drawn by four horses; and two trumpeters on horseback.
5. The flag gun drawn by 17 horses, and five twelve-pounders more, by 15 horses each.
6. Eleven wagons with stores for the said guns, and one spare, by three

three horses each. 7. Six nine-pounders, drawn by eleven horses each. 8. Nine wagons with stores for the said guns, and one spare, by three horses each. 9. Five long six-pounders, by seven horses each. 10. Seven wagons with stores for ditto, and a spare one, drawn by three horses each. 11. Five long six-pounders, drawn by seven horses each. 12. Six wagons with stores for ditto, and a spare one, by three horses each. 13. Four long six-pounders, by seven horses each. 14. Five wagons with stores for ditto, and a spare one, by three horses each. 15. Two howitzers, by five horses each. 16. Four wagons with stores for ditto, by three horses each. 17. Six short six-pounders, by two horses each. 18. Three wagons with stores for ditto, by three horses each. 19. Six royals with their stores, in four wagons, by three horses each. 20. One twelve-pounder carriage, by seven horses; one nine-pounder carriage, by five; one long six-pounder carriage, by five; two short, by two; one short and one long limber, by one horse; and two forges, by two each. 21. Twenty ammunition carts, by three horses each. 22. Nineteen wagons with musquet cartridges, and one spare, by three horses each. 23. Thirty wagons with powder, and one spare, by three horses each. 24. Thirty wagons with musquet shot, and one spare, by three horses each. 25. Twenty-five wagons with intrenching tools, and one spare, by three horses each. 26. Twenty-five wagons with small stores, and one spare, by three each. 27. Six wagons for artificers, with four spare, each by three. 28. Thirty-two baggage wagons, nine by four horses, and twenty-three by three. 29. Thirty pontoons, and three spare carriages, each by seven. 30. The artillery rear-guard. 31. The rear-guard from the army.

It must be observed, that there are parties of gunners and matrosses marching with the guns: there are likewise some parties of pioneers interspersed here and there to mend the roads, when they are spoiled by the fore carriages.

We shall now present our military readers with an extract from a French work which has appeared since the *Memoires D'Artillerie*, par M. Surirey De Saint Remy, and which may put them

more specifically in possession of the French manner of marching their artillery, than Mr. Muller has afforded. We must, however, at the same time, refer them for more copious information to the third volume of Saint Remy, page 187 to 201.

In the last edition of the *Dictionnaire Militaire*, the following observations are made on this important operation:—

When the troops in the advanced camp of the army begin to assemble, the commanding officer of the artillery repairs to head-quarters, and communicates with the commander in chief.— Utensils, stores, and ammunition, are forwarded to the camp, and every soldier is provided with ten or twelve rounds of ball cartridge, before he commences his march against the enemy. These articles having been distributed, the wagons and horses return to the train of artillery, and proper dispositions are made to connect the whole line of march.

The horses belonging to the train are narrowly inspected by the lieutenant-general of artillery, who marks or rejects them according to his judgment, and sends one report of their actual state to government, and another to the master-general of the ordnance. He gives directions to the captain-general of the wagon-train to arrange matters in such a manner with each provincial commissary belonging to the park, that the different captains may know what brigades fall under their immediate superintendence. The latter must not on any account leave the brigades with which they are entrusted during the march.

The ammunition wagons having been loaded, and the horses harnessed in, they are distributed into different brigades, and put in motion to join the main army, according to the following order:—

The first thing that precedes the march of a regular train of artillery, is a wagon loaded with utensils, such as spades, pick-axes, shovels, mattocks, wooden-spades, with iron bottoms; grapples, hatchets, &c. These are under the care of a wagon-master, who is attended by forty pioneers to clear and point out the way.

In the rear of this wagon follow four four-pounders, mounted on their seve-  
ral

ral carriages with every necessary appendage on each side, loaded with ball, and the canoucers ready, each having a lighted match in his hand, and two steel prickors or *dégorgeoirs*. Next to these is a wagon loaded with different articles of ordnance, containing likewise one barrel of gunpowder, one ditto of ball, a bundle of matches, weighing together about fifty pounds, about fifty balls of the calibre of the guns, and five or six stout drag-ropes.

The military chest, and the king's or royal stores, generally accompany this small train, when the army consists of one column only.

The pontoons, with every thing belonging to them, follow next; and after them the crab, with its appendages, accompanied by the captain of artificers, with a certain number of carpenters.

Next follow the heavy ordnance.

- Those pieces of artillery which are mounted, follow each other according to their several calibres, with all their necessary implements for service hanging on each side.

Then come the frames belonging to the pieces of heavy ordnance, with their implements, &c. placed upon them.—The mortars follow next.

After these follow the caissons belonging to the escorts of the park of artillery, military chest, quarter-master-general, and captain of the artificers or workmen, in which are contained the tools belonging to the different workmen and miners, together with the forges, &c.

The baggage belonging to the commanding officer of artillery, and to the several officers of the train, follow next, each wagon succeeding the other according to the rank of the several officers. It frequently happens, that the carriages with stores and provisions, and those belonging to the royal regiment of artillery move together.

After these follow the tumbrils with gunpowder, matches, sand-bags, ropes, fuses for bombs and grenades, proof-pieces, if there are any, plummet, hand grenades, mining tools, mortar-carriages, bombs, balls, according to the different calibres of cannon, tools, and instruments for pioneers, with the spare cars.

In order to secure the regular pro-

gress and march of these different classes, it has been usual among the French, to divide them into five brigades, each brigade under the command of an artillery officer; and the whole subject to the orders of the commandant of artillery. All the equipage belonging to the train is distributed among these five brigades, and each brigade takes care to bring up its proportion every day to the park or spot of rendezvous. These are subject to a roster among themselves, some leading, and others bringing up the rear, according to its arrangement.

**Night-Marches.** Whenever marches are undertaken in the night, great precaution should be observed on the part of the commanding officer of the troops, to attach two or three faithful and intelligent guides to each column or detachment; for it may very easily happen, that in moving a considerable detachment during the night, some troops or squadrons may lose themselves, especially where there are cross roads, and difficult passes.

The commanding officer at the head of the detachment, must march slow, provided the nature of his expedition will admit of it: and wherever he finds any bye-roads on the march, he must post a few men there to direct the succeeding squadron; which squadron is to repeat the same caution, and so on throughout the whole.

As it is almost impossible for squadrons to keep constantly close together; and as it almost always happens, that, in order to conceal a march from the enemy, no trumpet must be sounded, (which would otherwise serve for a direction in the night time) a good non-commissioned officer, with four or six men, must be appointed to the rear of every squadron, who are to divide themselves, and form a chain in the interval, between it and the one succeeding, in order to prevent any mistake of the road.

Before the detachment marches off, the officer commanding must be careful to exhort the officers leading troops or squadrons, strictly to observe all the above directions: he must also have several orderly men to attend him; and, if possible, two or three guides in front.

The advanced guard must be re-

forced in the night-time, and march at a small distance from the main body, and whenever it shall happen unexpectedly to meet the enemy, it must instantly charge with all possible vigour; on which account, and in order to be in continual readiness, it must always march with advanced arms. Page 39, *Military Guide*.

*Secret MARCH* is made with a design to reconnoitre an enemy, surprise his camp, secure a post, or seize a place. They are likewise undertaken to succour troops that may be precariously situated, to relieve a besieged town, &c. It is in this service that a commander has occasion for his utmost sagacity and penetration, to prevent his being discovered or betrayed. In order to ensure success, the person who conducts the march, should have previously obtained good information relative to the different roads through which he is to pass, the disposition of the inhabitants, &c. He should also obtain correct intelligence respecting the situation of the enemy's outposts, &c.—*Military Guide*.

*To MARCH for the direct purpose of fighting an enemy.* In order to effect this important operation with confidence and safety, every army that marches from a distant point towards the ground which is occupied by an enemy, endeavours, as much as possible, to preserve its regular front, and to advance in order of battle. Whenever obstacles occur, and the ground becomes so confined, that the march in line cannot be preserved, the different squadrons and battalions must approach the enemy in such a disposition of columns, as to be able to form line in the quickest manner, and before the enemy could possibly attempt to make an impression on the advancing columns, by charging with his cavalry.

The general officers who command the several columns, in leading them forward must attentively observe each other's movement, so that their heads, at least, be upon a line; and that when they reach the ground where the whole are to deploy, this manœuvre may be accomplished with dispatch and safety, and the order of battle be fully made, out of the reach of the enemy's horse.

The general or commander in chief,

with his aids-de-camp, &c. takes his ground in such a manner as to be able to see the effect of the first fire. From being thus conveniently situated, he will know what orders to send, whether to support that part of the line which has gained ground, or to replace any particular one that may have given way. In order to accomplish this double purpose, he either makes use of the troops which have been drawn up between the two lines, as circumstances may require, or detaches from the reserve, as he judges best for the service.

The instant this line is formed, and the enemy appears in sight, every general officer must be found at the head of his division, actively employed either in leading on the troops entrusted to his skill and valour, or in speedily remedying every symptom of disorder which may occur throughout the whole extent of his command.

The disposition of an army (to quote the words of Mons. de Feuquieres) which comes to close action, differs essentially from that it assumes in a march, or previous movement. Were troops, indeed, to advance over a wide space of open and unembarrassed ground, the formation of them might be the same. But this is seldom or ever the case. The intervention of hills, woods, rivers, villages, and narrow passes or defiles, gives rise to so many obstacles, that a large body of men, such as constitutes an army, must necessarily be divided into many different corps, in order that the collective force may arrive, at a given time, within the lines of a new camp, or within sight of an enemy.

On these occasions the movements of an army are attended with considerable risk, especially if the enemy has himself taken the field; for by ably manœuvring he may take advantage of the divided state of your army, and attack it piecemeal. The greatest precautions, however, are observed in modern warfare, which were either unknown to, or neglected by our ancestors. Most of these have already been discussed, as far as the limits of our undertaking would admit. The following additional observations may not, perhaps, be thought wholly superfluous.

In the first instance it will be necessary for the quarter-master general, and  
• for

for the different officers who compose the staff or etat-major of the army, to render themselves perfectly masters of the country through which the troops are to march. The corps of guides, especially if the march should be continued during the night, must be well chosen on these occasions; and the different captains that have the charge of them, are frequently to communicate with the principal officers on the staff, to facilitate the several movements. All the general officers must be in possession of correct topographical sketches of the country; and their aids-de-camp, &c. must not only know how to deliver orders, but they must themselves be able to calculate (from a cursory view of the chart,) time and distance. The science of locality, has, indeed, become so manifestly useful in all military operations, that the French have formed regular companies of topographers, who accompany their armies; and it reflects credit upon the new institution, at High-Wycombe, to see so much attention paid to this branch of necessary knowledge.

Artificers and workmen, with appropriate escorts, precede the several columns, in order to clear the roads, and to remove obstacles that occur. Light troops, and large detachments of cavalry, are pushed forward for the purpose of keeping the enemy in awe, and to send the earliest intelligence respecting his movements. Bridges are thrown across rivers with astonishing activity and dispatch; every thing, in a word, which relates to the movement of the army, is so well digested before-hand, and subsequently so well executed, that all the different corps co-operate, and readily succour each other should the enemy attack. The natural formation of the battalion is preserved, whether the grenadiers are disposed in front, or the light companies lead; and the several piquets come regularly up with the rear during the march, and are as readily stationed in the front when their corps halt.

When a forced march is undertaken for the specific purpose of rendering some design of an enemy abortive, it is the duty of the commissariat to have provisions ready at hand, during the transient halts which are made in this harassing and fatiguing enterprise.

It is usual for great armies to march in three columns, in conformity to the order of battle, which has been laid down by the general or commander in chief, at the beginning of the campaign. Those battalions and squadrons which compose the right, take their line of march through that direction of the country: those which compose the left, preserve their relative time and distance in that quarter. The artillery and heavy baggage are generally disposed of in the center column.

When an army marches directly forward to attack or meet an enemy, the artillery is almost always distributed in the center: sometimes a brigade of that corps, with a body of select troops in front, precedes each column; but the heavy baggage invariably moves in the rear under cover of the reserve.

When an army marches through a woody or close country, the heads of the different columns are usually covered by a strong detachment of grenadiers, preceded by squadrons of horse. Should the enemy be in your rear, when it is found expedient to make a movement, the hospital stores, ammunition, baggage, and artillery, escorted by some squadrons of horse, must be sent forward, and the best disciplined troops, with a certain quantity of artillery, are in that case to make up the rear-guard. If the enemy should hang upon your flank (the right for instance,) the artillery, stores, and baggage, must be conducted by the left: should the enemy direct his operations from the left, the same movements must take place on the right.

A small army may march in one column, having its artillery and baggage between the advanced and rear-guards. Should it be brought to action, the dragoons and light cavalry belonging to the advanced guard will compose one wing, and the troops that are disposed of in the rear, will form the other: the infantry will be distributed in the center with the artillery in its front.

The French seem to have paid the greatest attention to the various details and incidental circumstances which attend the march of any considerable body of troops. It was not, however, until the reign of Louis XIII. that any sort of regular system began to prevail.—

There was certainly less necessity for such an arrangement, because the baggage was by no means so great, nor was the train of artillery half so extensive.—The only dangers, indeed, which were to be guarded against, when the enemy was near, seemed confined to the loss of baggage and artillery. These were, of course, provided against by every able general, who naturally observed the greatest secrecy with respect to his encampment, and practised various stratagems to conceal his march from the enemy.

Some very sensible observations, relative to the manner in which troops should be managed previous to an engagement, may be found in the *Réveries de M. le Maréchal de Saxe*; and considerable information may be derived from *Les Réflexions de M. le Baron d'Espagnac*, on the best method of forming the infantry for battle. See *Supplément aux Réveries*, page 19. See likewise *Oeuvres Militaires*, tom. 1, p. 121.

*General Observations on the March of Troops.*—As the regulations on this head, as far as they relate to the British home service, must be known to every officer, we shall extract some desultory observations from a French work, that may be applicable to general service. When troops are ordered to march, four principal objects should be well considered, viz. locality, time, possible ambuscades, and the ultimate end for which the march is undertaken. In order to secure these important points, some topographers (without whom no army can be said to be well constituted, or its staffably appointed) should be directed to give in plans of the country, to shew where it is intersected, where hills with their different incurvations appear, where the roads are narrow, where the ground is soft or marshy, and unfavourable to the passage of artillery, where intricate passes occur, where there are woods, hedges, rivers, or marshes, and finally where the country becomes totally impervious.

When these different objects have been well ascertained, and thoroughly digested at head quarters, the component parts of the army must be so distributed with respect to the battalions of infantry, squadrons of horse, artillery, and baggage, that the front of the leading co-

lumn shall invariably correspond with the extent of the road or defile which is to be marched over.

When troops are ordered to march through an inclosed country, the whole army is divided into a given number of columns, which successively follow each other, and are encamped, cantoned, or quartered separately. Sometimes the country is cleared, as much as circumstances will admit, in order that the several columns may advance, while the artillery, under an escort of infantry on each side, and with cavalry distributed upon both wings of the army, makes the best of its way through the main road. Small detachments, consisting of active, spirited young men, headed by intelligent and enterprising officers, are sent forward to take possession of the different defiles, woods, passes, and to post themselves close to an enemy's post, for the purpose of blocking it up until the whole of the army has marched by.

The leading columns should always be composed of tried and steady soldiers; and the front of each should invariably consist of the best men in the army.

The advanced and rear guards must be well supported by infantry, with the addition of some light field pieces. The order of battle is so arranged, that the heavy ordnance, the baggage, and the greatest part of the cavalry, which can be of little use on the wings, may be distributed in the center.

When it is necessary to cross a river, the artillery must be planted directly opposite to the post which the army intends to occupy. Considerable advantage will accrue should the river wind in such a manner as to form a re-entrant angle in that particular spot, which advantage would be greatly increased by having a ford near.

In proportion as the construction of the bridge advances, some steady troops must be marched forward, and a regular discharge of musquetry must be kept up against the enemy on the opposite bank.

The instant the bridge is finished, a corps of infantry, with some cavalry, some pieces of artillery, and a certain number of pioneers, to fortify the head of the bridge, must be ordered over.—Should there be the least ground to suspect an attack upon the rear guard, the inside

inside tête de pont must also be fortified.

Proper precautions will have been taken to prevent any surprise during the construction of the bridge, and while the troops are crossing. Each side of the river, above and below the bridge, will on this account have been well reconnoitred, to ascertain that there are not any armed barges or floating rafts with infernals upon them, kept ready to blow up the bridge, when a considerable part of the army shall have passed the river. If the preservation of the bridge be considered as an object, both ends must be fortified, and adequate guards stationed to defend them.

Each corps that marches separately, such as the advanced and rear guards, and the main body, must be provided with shovels, pick-axes, and a sufficient number of pioneers and guides, to clear the roads, and to direct it on its march.

The following general rules in route marching have been laid down by the celebrated Montecuculli:—

No officer or soldier is on any account to quit his post or rank. The battalion companies must never intermix with the squadrons or troops of cavalry. Squadrons or troops of cavalry must always take care not to leave such wide intervals between them, as will expose them to be suddenly cut off, or such contracted ones as might enable the enemy to throw them into confusion.

In summer, troops should quit their ground or quarters at day-break.

In winter, great care should be taken by the commissariat, to see that the troops are well supplied with fuel whenever they halt. During very inclement weather the march of troops should be greatly contracted.

Some steady old soldiers must be stationed at the different cross roads, to prevent the rear men from mistaking the line of march.

The leading columns, or those troops that precede them, must instantly fall upon any body of the enemy that may attempt to oppose their progress.

Three things are always to be considered, and well weighed, viz. whether there be much ground to apprehend a serious attack from the enemy; whether there be little ground to fear him; or whether there be no ground at all.

In the latter case each corps of cavalry and infantry, marches separately, and with its own baggage.

All convoys, containing stores and ammunition, move with the artillery, accompanied by an officer from the adjutant or quarter-master-general's department, who has the direction of the march, as far as regards the convoy itself; but cannot interfere with the artillery; the commanding officer of the latter being presumed to know best, when and where his park should halt, &c. A very sensible observation on this head may be found in a recent French publication, intituled, *Manuel des Adjudans Généraux*, by Paul Thiébault. On the evening preceding a march, each corps is specifically furnished with the necessary orders in writing.

At the hour which is named in general orders for the troops to commence their march, the quarter-master-general, and the captain of guides, repair to the advanced guard.

If the army has been encamped, the lines of entrenchment are levelled or cleared in such a manner, that the troops may move with an extended front. As soon as the troops have marched off, the different guards belonging to the camp will be withdrawn.

Pioneers must be sent forward to clear the roads, preceded by small detachments of light and select troops, together with estafettes or mounted messengers and vedettes, who are to reconnoitre in front, rear, and round the wings of the army. To these must be added appropriate guards and escorts to accompany the artillery, and to protect the baggage. It will belong to this latter description of troops, to take possession of advantageous heights, to discover ambuscades, and to send a faithful detail of all they observe to head quarters. These communications will be made by the chef of the état-major who accompanies them.

The advanced guard of the army will be composed of one half of the cavalry, the main body will consist of the infantry, attended by pioneers and detached corps of light artillery, which will be preceded by an iron instrument made in the shape of a plough-share, for the purpose of tracing out the paths, which must be kept by the waggon-train. In the rear of the

main

main body must follow the heavy ordnance, the baggage-waggons belonging to the several regiments, and the train of artillery. The other half of the cavalry will be disposed of in the rear-guard, in which the army stores and ammunition are to be escorted by a regiment of horse.

If the army should be divided, and march in different columns by indirect roads, a rendezvous or place d'armes must be marked out in writing, where the whole may conveniently meet on the line of march. The utmost attention must be paid to the selection of this spot, by the adjutant and quarter-master-general, lest it should be exposed to a surprise from the enemy; on which account it is kept as secret as possible, lest any intelligence should be given to him by deserters or spies. The hour and the manner in which the several columns are to arrive, is specifically stated to the different leaders; and scouts, &c. are sent round the country to discover the enemy's movements.

If there should be any reason to apprehend an attack, the various precautions must be increased in proportion to the alarm.

An army must always march, if it possibly can, in that order from which it may easily and expeditiously deploy into line; that is, it should invariably preserve the order of battle; every column bearing a natural front towards the enemy. Montecuculli further adds, that an army must invariably march the right or left in front, and not from its center.

Field-pieces, with a sufficient quantity of ammunition, shovels, spades, and pick-axes always at hand, must be disposed along the most vulnerable part of the rendezvous; these must be guarded by a body of cavalry and infantry, who are to be selected for that specific duty.

Care is likewise taken to lodge the baggage-waggons, &c. in the most secure and best defended spot.

The two first lines of the army will consist of the mounted artillery in front, next to which will stand the different squadrons of horse that are posted in intervals between the infantry battalions: after these will follow the train of caissons, &c. in as many files as the road will admit; then the stores and baggage, and finally the reserve.

Whenever the leading columns have passed an obstacle, the front men must be halted till the rear have completely cleared it likewise; and when the whole enters an open country, the line must be formed, and the march be continued in order of battle until a fresh obstacle occurs, when the troops must be prepared to pass the defilé, the advanced guard leading, the main body following next, and the reserve bringing up the rear.

When an army is thus advancing, the right or left flank, (according to circumstances) of its line of march, must be covered by rivers, and banks, rising grounds, or eminences; and if these natural advantages do not present themselves, artificial ones must be resorted to. These may consist of waggons, chevaux de frizes, or other temporary means of defence; the quantity, &c. must depend upon the nature of the country, and the number of troops that compose the columns.

It is, however, impossible to set down general rules for all cases; these must vary with the manifold circumstances that occur, and the different designs which are to be accomplished or pursued.

When the movements of an army are to be concealed, the march must be undertaken at night through woods, valleys, and concealed ways; all frequented and inhabited places must be carefully avoided; no loud instruments must on any account be played; and if fires are made, they must only be lighted on the eve of breaking up camp; in which case they must be left burning, for the purpose of deluding the enemy into a supposition, that the troops have not moved.

Small parties of cavalry are sent forward to seize all stragglers or scouts from the enemy, or to take possession of the different passes. In order to avoid being discovered in the object of the march, a different road must be taken from the one which you really propose to march through; and a fit opportunity must afterwards be embraced to get into the real track. Before you march out of a town or fortified place, the utmost care must be observed to prevent your intended route from being conveyed to the enemy. On this account the troops must be first marched out, and the gates immediately

shut

shut upon the rear, so that no stranger &c. may be able to slip out with the men.

During a march of this nature, the troops must be provided with subsistence, stores, and ammunition, to last out until the object is attained. No scout or *velette* is sent forward, when an army, or any part of it, advances to take possession of a post or place, to succour a town, to surprise an enemy, in a close or woody country, by favour of the night, or in hazy weather, or on any occasion when orders have been given to oppose and fight every thing it meets.

When an army marches for the direct purpose of forcing a passage, which is guarded by an enemy, a feint must be made in one quarter, whilst the real object is vigorously pursued in another. Sometimes you must appear suddenly disposed to make a retrograde movement, and then again as suddenly resume your progress; sometimes march beyond the spot you wish to occupy, insensibly drawing off the enemy's attention; and whilst the whole army is thus pushing forward, and is closely watched by its opponents, (who hang upon the flanks, and hug its line of march) let detached parties of cavalry and foot, that have lain in ambush, suddenly surprise the passage, and post themselves upon it.

When it is found expedient to advance rapidly into a country for the purpose of surprising an enemy, getting possession of a town or place, or avoiding superior forces, every species of baggage must be left behind (even the common necessaries of the men, if circumstances require,) the cavalry must be sent forward, and the infantry put in carts, carriages, and chaises, or mounted behind the dragoons. If there be spare horses enough in the different troops, or any can be procured from the inhabitants of the country, they must be led in order to relieve those that are double mounted, in the manner which is practised by the Tartars.—Marches of this description and urgency, must be kept up night and day; and it is on such occasions, that the value of a good staff or *etat-major* will have all its weight.

It must be observed, as a general maxim, that whenever troops are retiring

from a weak position, or to avoid the approach of a superior force, the retreat must be so managed, as not to bear the least resemblance of a flight.

*Order of MARCH, which is observed in the Turkish army:*—This order of march may be considered as the movement of an army that combines its several operations according to some established system of military art. The Turks usually divide this movement into three distinct operations: the first comprehends that by which troops of several denominations, and from different quarters, assemble together at some given spot or rendezvous. Such, for instance, is the march of various corps of militia, both in Asia and Europe, belonging to the Ottoman empire, who must necessarily pass through several quarters, and cross the sea, to form a junction. From the many inconveniences which troops must unavoidably experience on these occasions, and from the irregularity that always grows out of them, this *march* cannot be strictly called a systematic movement of the army.

The second order of march among the Turks is that which they call *Alay*; when the troops arrive, under the command of their several *bachas*, at the camp or given spot of rendezvous, for the purpose of being reviewed by the *serasquier*, the grand visir or the sultan. This order is observed likewise by the janizaries when they repair to a similar place.

The third order of march must be considered as a real military movement. It is that which is performed by the army that first takes up its ground in a regular manner, and encamps. This is the commencement or beginning of military marches, because from a situation or arrangement of this sort, troops either leave one camp to pitch their tents elsewhere, or return again to their old one after having made an attempt against an enemy's post, &c.

It is an established law in Turkey, whenever the sultan or grand vizier takes the field, to have their magnificent tents, with seven or five horse-tails displayed above them, regularly pitched in the plains of Constantinople, or in those of Adrianopolis, accordingly as the court happens to be in either of those imperial residences: which circumstance is announced

nounced throughout the empire, that every province, &c. may be made acquainted with the march of the sultan or grand vizier.

As soon as these pavilions or tents have been thus pitched, all the different armed corps that have not yet commenced their march receive their route; and those that are already on the march, advance with all the expedition they can, to the spot of general rendezvous. The troops from Egypt and Asia are particularly alert on these occasions, most especially if the war should be carried into Hungary. All the points from whence embarkations are to take place, appear conspicuously marked along the coasts of the Marmora, Propontides, and the Archipelago, in order that the different bodies of troops may take the direct road to Constantinople, Andrinopolis, Philippopolis Sophia, Nissa, and Belgrade, in which places was the general rendezvous of all the troops, when the Ottoman empire flourished. Those, however, were not included which were destined to act in Hungary and Bosnia. They met together, after having passed the bridge of Osek, and formed a junction with the main army. Kara-Mustapha followed these dispositions when he went to besiege Vienna.

The second march of the Turkish or Ottoman army, is a business of mere parade or ceremony. This movement is observed by all the different corps, and it is executed with great magnificence by the Pachas, particularly so when they repair the first time to the camp of general rendezvous.

With respect to the third march, it is a real and essential movement, and ought to be called the *military march* or *route*. Four principal branches or objects of service, constitute the nature of this march, and form its disposition. These are the cavalry, infantry, artillery, and baggage; in which latter are included the stores, &c. belonging to the Turkish militia, the royal provisions, public stores, and ammunition, comprehending gunpowder, shot, matches, spades, pick-axes, &c.

There is, however, no invariable rule attached to this arrangement, it alters according to circumstance and place.

The real or military march of the troops is entirely managed by the grand

vizier, or the seraskier. Written instructions are issued out for this purpose; for the Turks never give out verbal orders, except in matters of little or no importance, or in cases of extreme emergency, when they cannot commit them to writing.

It is an invariable maxim among the Turks, whenever their troops are upon the march, to throw new bridges over rivers, or to repair old ones, to clear public or bye roads, to fill up ditches, and to cut down trees, &c. so as to facilitate their movements, and to obviate delay. They moreover throw up small heaps of earth, which they call *unka*, at the distance of half a league from each other, and often nearer, especially on high grounds. When the sultan marches at their head they make two heaps of this description.

The Turks pay very particular attention to their movements or *marches* on service: the whole of the army is under arms during the night, in order to make the necessary dispositions; on which occasions the soldiers make use of small vessels with fire lighted in them, and tie them to the ends of long pikes or poles. The greatest silence is observed during the march; neither drums, trumpets, nor cymbals are heard. Sometimes, indeed, but this rarely happens, the drummers belonging to the band of the grand vizier, accompany the salutes or ceremonial compliments which are paid by the *salam-agasi*, or master of ceremonies.

When they march through a country in which there is no cause to apprehend surprise or hostility, the infantry generally takes the lead, two or three days march, in front of the main army. The troops march in the loosest manner, being neither confined to particular companies, nor formed in columns. They choose what roads they like best, halt where they please, and reach the camp in detached parties; with this injunction, however, that the whole must arrive at the spot of rendezvous before evening prayers.

Next to these follow the cavalry, headed by a general officer. Their march, notwithstanding his presence, is as irregular as that of the infantry. The men frequently halt out of mere laziness, and under pretence of refreshing their horses; and little or no attention is paid

to system and good order. The baggage and ammunition wagons, together with such stores, &c. as are carried by beasts of burthen, move in the same manner.

When the army enters an enemy's country, the whole of the infantry is collected together, and marches in one body. The Capiculy and the Seratculy, for instance, form one column. There is this distinction, however, observed, that every janizary marches under his own colours, and every officer remains attached to his oda or company, for the purpose of executing, in the speediest manner, the commander in chief's directions.

The cavalry is often divided into two wings; it is likewise frequently formed in one body. Every man is ranged under his own standard. The squadrons are commanded by the Alay-Begs, who receive orders through the Chiaous; and the other officers are near the Bucha.

The baggage sometimes moves in the front, and sometimes in the rear of the janizaries. A particular body of cavalry, called Topracly, are an exception to this arrangement: the men belonging to this corps are obliged to furnish themselves with all the necessaries of life, and consequently carry provisions, &c. with them in all their marches; which circumstance unavoidably creates much confusion.

The artillery is generally attached to the infantry; sometimes, however, it moves with the cavalry.

When the Turkish army marches through an enemy's country, it is covered by an advanced and a rear guard. The advanced guard is composed of five or six thousand of the best mounted cavalry. This body is under the immediate orders of a commanding officer, called *Cialcagy-Bascy*, whose appointment lasts during the whole of the campaign. The advanced guard usually moves six, seven, or eight leagues in front of the main body; but it falls back in proportion as the enemy retires. When there are bodies of Tartars or auxiliary troops from any of the rebellious provinces with the army, they are detached in front of the advanced guard, for the purpose of harassing the enemy's rear, pillaging the country, and committing those excesses which are not countenanced by regular troops.

The rear-guard generally consists of one thousand horse. It is the business of this body to escort the baggage safe into camp, and not to leave it until the whole be securely lodged.

The Turks, in all their movements on real service, display uncommon activity; and their marches are generally so well managed, that an enemy runs the greatest hazard of being surprised.

*Rogue's March*, a tune which is played by trumpeters or fifers of a regiment (as the case may be) for the purpose of drumming out any person who has behaved disorderly, &c. in a camp or garrison. Thieves, strumpets; &c. are frequently disgraced in this manner; being marched down the front of a battalion, from right to left, and along the rear: after which they are conducted to the gate of the garrison or entrance of the camp, where they receive a kick in the posteriors from the youngest drummer, and are warned never to appear within the limits of either place, under pain of being severely punished.

*MARCHANDS*, *Fr.* sloop-sellers; petty-suttlers. Men of this description always flock round and follow an army on its march. As they generally deal in articles which are wanted by the officers and soldiers, it is the business of every General to see them properly treated, to ensure their safety; and to permit them, under certain regulations, to have access to the camp. They should, however, be warily watched in some instances, especially upon the eve of a retreat, or before any advanced operation takes place. Spies frequently disguise themselves as pedlars, and under the mask of selling trifling articles, pry into the state of a camp, put indirect questions to the soldiers, and tamper with those who may seem disposed to act in a traitorous manner. Yet as armies cannot do without such men, they must be sanctioned, and it is the particular duty of the Provost-Marshal, and of the Wagon-Master General, to watch and superintend their motions.

*MARCHE accélérée, ou pas accéléré*,  
*Fr.* quick time.

*MARCHE ordinaire, ou pas ordinaire*,  
*Fr.* ordinary time.

*MARCHE précipité, ou pas précipité*,  
*Fr.* quickest time.

## M A R

**MARCHE cadencée, ou pas cadencé, Fr.** march or step according to time and measure. It is likewise called the cadenced step.

**MARCHE non-cadencée, ou pas non-cadencé, Fr.** This step is likewise called *pas de route*, and signifies that unconstrained movement which soldiers are permitted to adopt in marching over difficult ground, and in columns of route.

**MARCHE de Flanc, Fr.** flank movement or march.

**MARCHE forcée, Fr.** a forced march.

**Battre, sonner la MARCHE, Fr.** to put troops into motion by the beat of drum or sound of trumpet, &c.

**Gagner une MARCHE sur l'ennemi, Fr.** to gain ground or time upon an enemy, which signifies to get in his front or upon his flanks, so as to harass or perplex him, or by any able manœuvre to get the start of him.

**Dérober sa MARCHE, Fr.** to steal a march.

**Couvrir une MARCHE, Fr.** to conceal a march.

**MARCHE, Fr.** This word is likewise used among the French, to express the course or progress of a ship, or as we say, technically, the *way she makes*: hence *marche d'un ruisseau*.

**MARCHER par le Flanc, Fr.** to march from any given flank.

**MARCHER en Colonne avec distance entière, Fr.** to march in open column at open distance.

**MARCHER en Colonne à distance de Section, ou en Masse, Fr.** to march in column, quarter distance, or in mass.

**MARCHER en bataille, ou en colonne d'attaque, Fr.** to advance in column for the purpose of attacking an enemy.

**MARCHER en bataille en ordre déployé, Fr.** to advance by the echelon march in deployed order.

**MARCHER en retraite, Fr.** to retreat.

**MARCHER en bataille par le dernier rang, Fr.** to march in line rear front.

**MARCHER au pas accéléré, Fr.** to march in quick time.

**MARCHER le pas en arrière, Fr.** to take the back-step.

**MARCHER au pas ordinaire, Fr.** to march in ordinary time.

**MARCHER au pas précipité, Fr.** to march in quickest time.

## M A R

**MARCHER par le flanc, droit, ou gauche, Fr.** to march by the right or left flank.

**MARCHER en colonne, la droite, ou la gauche, en tête, Fr.** to march in column, the right or left in front.

**MARCHER en colonne serrée, Fr.** to march in close column.

**MARCHER en colonne ouverte, Fr.** to march in open column.

**MARCHER en terme d'évolutions, Fr.** to march in line, &c. which see.

**MARCHER en colonne renversée, Fr.** to march by inverted column; that is, to make the army move left in front; the left being the leading flank.

**Lords MARCHERS, noblemen who anciently inhabited and secured the Marches of Wales and Scotland.**

**MARCHES.** The limits or bounds between England, Wales, and Scotland, have been so called.

**MARCHES, Fr.** the various modes of marching which are adopted by a body of armed men in offensive or defensive movements.

**MARCHES d'armées, et ce que les soldats ont à faire quand la générale est battue, Fr.** column of route or general order of march which an army observes when it takes the field. See **CAMP**.

**MARCHING Regiments.** A term given to those corps who had not any permanent quarters, but were liable to be sent not only from one end of Great Britain to another, but to the most distant of her possessions abroad. Although the word *marching* is insensibly confounded with those of *line* and *regulars*, it was originally meant to convey something more than a mere facility to be ordered upon any service; for by marching the regular troops from one town to another, the inhabitants, who from time immemorial have been jealous of a standing army, lost their antipathy to *real* soldiers, by the occasional absence of regular troops. At present, the guards, militia, and fencibles, may be considered more or less as marching regiments. The marines and volunteer corps have stationary quarters.

**St. MARCOU.** Two rocks upon the coast of Normandy, lying in a bite or bay between Cape Barfleur and Point Percé, bearing south-east from La Hogue nine miles, from the mouth of the river Isigny, north, eight miles, and distant

distant from the body of the French shore about four miles. The surface of each island, which is 18 or 20 feet above the level of the sea at high water, comprises about an acre, and bear from each other W. by N. and E. by S. distant 200 yards. On the abandonment of an expedition to the islands of Chossé, in the year 1795, Sir Sidney Smith, whose active and comprehensive mind justly concluded, that the contiguity of these posts to the Continent would materially facilitate communications with the Royalists, took possession of them: and having drawn the Badger and Sandfly gun-vessels on shore, gave to their respective commanders the direction of the spot upon which he was thus placed. These officers having constructed batteries, mounted in them the guns belonging to their vessels, and in the year 1796 block-houses, with detachments of marines, invalids, and 12 artillery-men, were ordered out by government.

The extreme annoyance of these rocks to the coasting trade of the enemy, at length determined them to employ a part of the division of the army destined for the conquest of England, in their recovery, and 15,000 troops being assembled at the Hogue, 9000 were embarked on the 6th of May, 1798, on board 52 gun-vessels; when so great was the solicitude to partake in this conceived certain prelude to their glory, that several of the fourth demi-brigade of the army of Italy, whose tour of duty did not entitle them to be thus employed, gave four and five crowns each to others to change with them. Perfectly acquainted with the situation of the islands, the French flotilla rowed towards them in the night of the 6th, and at the dawn of the morning of the 7th, the weather being perfectly calm, they were discovered in a body between the islands and the shore. They soon separated into three divisions, one of which, comprising the heavy gun-brigs, remained in that position, while the other two, consisting of large flat boats, carrying a long 18 pounder in the bow, and a 6 pounder in the stern, took positions to the north and to the south of the islands, with an intention to drop into the passage that separates them. An animated and well directed fire was commenced from the

islands, and warmly returned by the enemy. The northern division having been driven by the ebb tide within a short distance of the East island, soon became disabled in their oars, and considerably increased its distance, while the attention of the two islands was principally directed to the southern division, which came up with the tide, and with almost unexampled gallantry pushed to the attack; being however by the severity of the fire that was kept up, foiled in its intention of getting between the islands, when each island would be exposed to the fire of the other, it passed quickly to the westward of the west island, and pulling up on the northern side of that island, the defence of which was almost wholly dependent on the flanking fire of the east island, made another determined effort to land. This appears to have been the critical period of the day, and the discharge of grape shot from the island was proportionate to the danger; the entire side of the commodore of this division's vessel was battered in, and she sunk; the others of the division, beaten and disabled, retreated to their companions, and being reduced to the number of 47, they all retreated to La Hogue, amidst the deriding taunts and huzzas of our countrymen, 400 of whom, with about 50 pieces of cannon, most of which were of a small calibre, and placed in works constructed by themselves, by vanquishing the advanced guard of the boasted army of England, with the loss of 1100 killed, drowned, and wounded, dissipated the terrors of a French invasion. The action lasted two hours and ten minutes, during which time there were upwards of 100 pieces of cannon firing on the islands; notwithstanding which the loss on our side was only one killed and two wounded.

The Adamant, of 58 guns; Eurydice, of 24, and Orestes, of 18 guns, were, at the commencement of the action, distant about nine miles, and the weather being calm, were not enabled to reach the islands until several hours after it had ceased.

Lieutenant Price, since made Commander, commanded on the West Island; and Lieutenant Bourne, on the East.

MARDIKERS, or *Tupasses*, a mixed breed of Dutch, Portuguese, Indians,

and other nations, incorporated with the Dutch at Batavia, in the East Indies. *Mardikers*, in all probability, derive their name from some original adventurers, who left a place called *Mardike*, about four miles from Dunkirk, and formerly subject to, or forming part of the Seventeen United Provinces. When the Dutch took possession of that territory which is named Batavia, these adventurers were, perhaps, the leading party, and from their being called *Mardikers*, the natives in those quarters insensibly attached the term to all persons of European descent, or connection. All, in fact, who wear hats are distinguished among turban-nations by the appellation of *Topasses* and *Mardikers*, and from that circumstance are confounded in the term, with respect to Batavia.

**MARÉCHAL**, *Fr.* a dignity of the second class, in the order of Malta. It was formerly attached to the Tongue or *Langue of Auvergne*.

**MARÉCHAL de Camp**, *Fr.* a military rank which existed during the French monarchy, and has been revived by Bonaparte. The person invested with it was a general officer, and ranked next to a lieutenant-general. It was his duty to see the army properly disposed of in camp or quarters; to be present at all the movements that were made; to be the first to mount his charger, and the last to quit him. He commanded the left in all attacks. The appointment, under this distinction, was first created by Henry IV. in 1598.

**MARÉCHAL du Camp**, *Fr.* During the reign of the first kings of France, when duelling was permitted, an officer was appointed to superintend the contest.

**MARÉCHAL-Général des camps et armées du Roi**, *Fr.* a post of high dignity and trust, which, during the French monarchy, was annexed to the rank of *Maréchal de France*. Military writers differ with respect to the privileges, &c. which belonged to this appointment; it is, however, generally acknowledged, that the general officer who held it, was entrusted with the whole management of a siege, being subordinate only to the constable, or to any other *Maréchal de France*, who was his senior in appointment.

**MARÉCHAL-général des logis de l'armée**, *Fr.* This appointment, which ex-

isted during the old French government, and has since been replaced by the *Chéf de l'Etat-Major*, corresponds with that of *Quarter-Master-General* in the British service.

**MARÉCHAL de Bataille**, *Fr.* a military rank, which once existed in France, but was suppressed before the Revolution, or rather confined to the body guards. An officer belonging to that corps received it as an honorary title. Its original functions, &c. with respect to general service, sunk in the appointments of *Maréchal de Camp*, and *Major-Général*. It was first created by Louis XIII.

**MARÉCHAL-général des logis de la cavalerie**, *Fr.* This appointment took place under Charles IX. in 1501. He had the chief direction of every thing which related to the French cavalry.

**MARÉCHAL des logis dans la cavalerie**, *Fr.* the quarter-master of a troop of horse was so called in the French service. In the old system every infantry regiment had one *Maréchal des Logis*; two were attached to each company of the gendarmes: each troop of light horse had likewise two; and every company of musqueteers had eight.

**MARÉCHAL des logis de l'artillerie**, *Fr.* an appointment which existed in France before the Revolution, and which was in the gift of the *Grand Master of the Ordnance*. This officer always accompanied the army on service, and was under the immediate orders of the commanding officer of the artillery.

**MARÉCHAL des logis pour les vivres**, *Fr.* a person belonging to the quarter-master-general's department, to whom the purveyors belonging to an army are subordinate.

**La MARÉCHALE**, *Fr.* a marshal's lady, i. e. wife was so called in France. We have already mentioned *la colonelle*, &c. This practice has, indeed, of late, obtained in England, but not in the unlimited manner which prevailed among the French. We use it merely to distinguish two ladies of the same name and family, or neighbourhood, viz. Mrs. Johnson, and Mrs. Colonel Johnson; meaning thereby that, the latter is the wife or widow of Colonel Johnson.

**MARÉCHAUSSÉES de France**, *Fr.* a species of military police, which has long existed in France. During the French monarchy there were 31 compa-

nies of *Maréchaussées à cheval*, or mounted police-men. After twenty years service, the individuals who belonged to this establishment were entitled to the privileges of invalid corps, being considered as a part of the gendarmerie.

These companies were first formed for the purpose of preserving public tranquillity, and were distributed in the different provinces of the kingdom.—They consisted of provosts-generals, lieutenants, exempts, brigadiers, sub-brigadiers, and horsemen. This useful body of men was first formed under Philip I. in 1060: they were afterwards suppressed, and again re-established in 1720, as constituting a part of the gendarmerie of France.

The uniform of the *Maréchaussées*, or mounted police-men, consisted of royal blue cloth for the coat, with red cuffs and linings; the waistcoat of chamoy-colour, lined with white serge; a cloak lined with red serge, the buttons of plated silver, placed in rows of three each, with intervals between them; horseman's sleeves, with six silver loops with tassels. The brigadiers and sub-brigadiers, had silver lace, one inch broad upon their sleeves; their cloaks were made of blue cloth with red cuffs, and they wore silver laced hats. The private horsemen wore bandoliers.

There were other companies of *Maréchaussées*, who were particularly distinguished from the thirty-one we have mentioned. Such, for instance, as that of the constable, called the gendarmerie.

*MARÉCHAUSSEES de France, camps, et armées du roi*, Fr. three companies, one of which was under the immediate direction of the provost-general of the isle of France, and the other belonged to the Mint.

The first of these companies is said to have been formed under the first race of French kings: the second by Francis I. and the third by Louis XIII. There were, besides, several small bodies of troops composed of officers and soldiers who had served, that remained stationary in the principal towns to assist the civil magistrates. Those in Paris consisted of three companies; the company belonging to the *Lieutenant Criminel de Robe-Courte*, or to that particular court of judicature which was superintended by the *Prévost de la Maréchaussée*, and

which Charles IX. attached to the gendarmerie: the independent company of mounted police, called *Guet à Cheval*; and the company of the police or foot patrolle, called *Guet à Pied*, which was again subdivided into two companies, in order that one might do the duty of the quays. These companies were under the immediate direction of the secretary of state for the interior department of Paris. The *Guet de Nuit*, or night patrolle, seems to have been first established by Clotaire the Second. The commanding officer of the patrolle, or chevalier du guet, during the reign of St. Louis, was called *Miles-Gueti*.

MARENGO, a plain and village in Italy, about one league distant from Tortona, so called. These spots have been rendered memorable in military history by the obstinate and decisive engagements which took place on the 14th of June, 1800, between the Imperialists, commanded by General Field Marshal Melas; and the Republican French army, under the direction and personal guidance of Bonaparte, then First Consul. According to a very recent publication, translated from the French of Joseph Petit, horse grenadier in the consular guard, the effective number of each army was nearly as follows:—The French army, at the moment the battle commenced, was computed from forty to forty-five thousand men, of which three thousand were cavalry: there were besides, from twenty-five to thirty pieces of cannon, in which were included two companies of light artillery: the Austrian army, according to the accounts of the best informed persons, contained from fifty-five to sixty thousand men, including the reinforcements which had just arrived from Genoa. From 15 to 18,000 of these were cavalry. The cannon amounted to fourscore pieces and upwards, two hundred ammunition wagons, well provided, besides an immense train of army implements, stores, and equipage. The French were extremely deficient in the latter articles, having been obliged for want of caissons, to put their ammunition upon tumbrils, drawn by oxen.

The loss on both sides was enormous; that of the French was rendered more serious to the republic, by the death of General Désaix, to whose intrepidity, at a most

a most critical juncture, the success of the day, and even the personal safety of Bonaparte were unquestionably owing. This admirable young officer, (for even his enemies pay homage to his virtues and talents) was called by the French and Austrian soldiers, *Guerrier sans peur et sans reproche*: an irreproachable and undaunted warrior.

Without entering into a minute detail of this memorable action, we shall so far trespass upon the limited arrangements of our work, as to extract a passage from another French publication, which has been written by Citizen Foudras, and may be found in the English translation from which we have already quoted:—

"It has already been shown with what obstinacy both armies fought (see page 64 of Petit's narrative) four times were the French driven back, four times did they return to the charge, and advance against the Austrians. At the very instant, when the Consul, surrounded by hostile shot, was re-animating his almost exhausted troops, General Desaix darted with impetuosity amidst the Austrian battalions, when he received his death wound from a musquet ball. He had only time to utter the following words to the son of the Consul Le Brun, in whose arms he expired:—"Go and tell the first Consul, that I die with regret in not having done enough to live in the memory of posterity!" See page 192 of Foudras's Biographical Notice.

**CHASSE-Morée, Fr.** This term means literally a Ripier, or man who brings fish from the sea-coast to sell in the inland parts; but it has frequently been used to signify the cart or carriage itself on which he sits. According to the French construction of it, it may serve for several purposes, particularly for the speedy conveyance of small bodies of troops. It consists of a four wheel carriage, of equal height with a common axle-tree, having a platform sufficiently elevated to suffer the fore-wheels to pass under it when on the lock. In the center of this platform is an upright back, with a seat on each side, resembling the seat of an Irish car; so that about six soldiers might sit on each side, back to back. On the platform, and attached to the axle-tree,

nearly at each corner, are four stout stumps on knee-hinges, that allow them to turn down flat on the platform, or to be fixed upright, when they serve, by a crutch which fits into a hole as a rest for rifles, or for a piece of horse light artillery; on the crutch being taken out it fits into the hole after the manner of a swivel on board ship.

**MARGA SEERSHA, Ind.** a month which partly agrees with October.

**MARIN, Fr.** any thing appertaining to the sea. *Avoir le pied marin*, to have sea-legs, or to be able to stand the motion of a vessel in rough water, and to go through the different functions of navigation. *Marin* is likewise used to distinguish a sea-faring man, (*homme de mer*) from *Marinier*, which literally means a sailor.

**La MARINE, Fr.** The French navy is so called.

**MARINE**, implies, in general, the whole navy of a kingdom or state, comprehending all the royal dock yards, and the officers, artificers, seamen, soldiers, &c. employed therein; as well as the shipping employed by the merchants, for military or commercial purposes; together with whatever relates to navigation, ship-building, sailors, and marines.

The history of the marine affairs of any one state is a very comprehensive subject; much more than of all nations. Not only the preservation of that share of commerce we at present possess, but its future advancement, and even the very being of Britain, as an independent empire, and a free people, depend no less on the good condition and wise regulation of our affairs of the marine, than on the superiority of its naval power. The Delphic oracle being consulted by the Athenians, on the formidable armament and invulnerable forces of Xerxes, returned for answer, "that they must seek their safety in wooden walls." To which we may affirm, that whenever this nation in particular has recourse to her floating bulwarks for her security and defence, she will find wealth, strength, and glory, to be the happy and infallible consequences.

**MARINES, or MARINE FORCES**, a body of soldiers raised for the sea-service, and trained to fight either in a naval engagement, or in an action on shore.

shore. Officers of the marines may sit on courts-martial with officers of the land forces. See *MUTINY ACT*, Sect. 13.

The great service which this useful corps has frequently rendered, entitles it to a fair record in every publication that treats of military matters. In the course of former wars the marines have distinguished themselves by great perseverance, strict attention to duty, and unquestionable valour. At the siege of Belleisle they rose into considerable notice, although they had, at that period, been only recently raised, and were scarcely competent to military discipline. When the marines are at sea, they form part of the ship's crew, and soon acquire a knowledge of nautical tactics. Their officers are directed by the admiralty, (under whose immediate controul they serve,) to encourage them in every disposition to become able seamen; but no sea officer has the power of ordering them to go aloft against their inclination. During an engagement at sea, they are of considerable service in scouring the decks of the enemy, by firing musquetry from the poop, round top, &c. and when they have been long enough out to obtain good sea-legs, they are preferable to mere seamen, especially when the enemy attempts to board; in which case the marines can fraise the poop, quarter-deck, fore-castle, &c. with their fixed bayonets, and prevent the completion of their design. In making this observation, we are necessarily led to recommend a more frequent use of the pike. Not only the seamen, but the marines, should be well exercised in the management of that weapon. The interior regulations for the several marine corps, have been well digested, and do credit to the establishment. If any fault can be found on that head, it must relate to the slops, which are given in too large a quantity, considering the little room that a marine must occupy on board. No commissions are bought or sold in the marines; every individual rises according to his seniority; but we are sorry to add, that a marine officer never can arrive at the highest rank or pay which exists upon the marine establishment; one general, one lieutenant-general, one major-general, three colonels, and one lieutenant-colonel commandant, being

naval officers, with those additional distinctions. It is not within our province to enter into the wisdom or injustice, not to say ignorance, of that policy which, with a series of indisputable claims to notice, still keeps the marine establishment upon the lowest footing of military honour and reward.

Fabulous as the defence of it may hereafter appear, from the extraordinary means which were made use of to reduce the place, and the more extraordinary exertions which succeeded in preserving it, the siege of St. John of Acre, will long be remembered, by the two first rival nations in Europe, and will form a brilliant part of the records of the Turkish empire. When posterity shall read the account, it may doubt the relation in its full extent of wonderful hardihood on both sides; but it will rest satisfied, that the garrison of St. John of Acre would not have resisted the first approach of Bonaparte's army, had not a handful of British marines stood in each breach his soldiers made, and communicated courage and perseverance to the natives of the place.

The marine forces have of late years been considerably augmented; and we make no doubt but they will continue to be so, through the many confessed advantages which are derived from the peculiar nature of their service.

It has already been remarked, that the marines are nominally under the command of three general officers, who are admirals or vice-admirals in the navy, and three colonels belonging to the sea service. The marines themselves never rise beyond the rank of colonel commandant in their own corps, but they may be general officers with respect to the army at large.

**MARK**, a note, character, &c. set upon a thing. Hence the soldier's mark  which he makes in his captain's or pay-serjeant's book, &c. when he cannot write.

**MARK** also denotes money of account. The English mark is 13s. 4d. among the Saxons it was equivalent to 7s. 6d. of our money. It is also a money of account in Scotland, and formerly a silver coin, being equal to 13d. and one-third English.

**Gunpowder MARKS**. The different sorts of gunpowder are distinguished by the following marks on the heads of the barrels.

barrels. All gunpowder for service is mixed in proportions according to its strength, so as to bring it as much as possible to a mean and uniform force. This sort of powder is marked with a blue L. G. and the figure  $\frac{1}{2}$ , or with F. G. and the figure 3, whose mean force is from 150 to 160 of the epreuve. This is the powder used for practice, for experiments, and for service. The white L. G. or F. G. is a second sort of powder of this quality. It is sometimes stronger, but not so uniform as the blue L. G. It is therefore generally used in filling shells, or such other things as do not require accuracy. The red L. G. F. G. denotes powder entirely made at the king's mills, with the coal burnt in cylinders, and is used at present only in particular cases, and in comparisons, and to mix with other sorts to bring them to a mean force. The figures 1, 2, or 3, denote that the powder is made from saltpetre obtained from damaged gunpowder; 4, 5, or 6, from saltpetre obtained from the grough. See pages 123, 124, of the Little Bombardier.

**MARK to shoot at**, a round or square piece of wood which is generally painted in red and white circles, and has a black spot in the center called the bull's eye. Soldiers should be frequently practised in shooting at a mark. At the commencement of the French revolution, particularly in 1792, previous to the battle of Jemappes, the inhabitants of the different towns exercised themselves several times during the course of the day, in firing at a mark. The national guards did the same. By means of this laudable practice several expert marksmen were formed. We need scarcely add, that the advantages which the service in general derived from their skill, has been too manifest to be denied. Our own army, indeed, has more than once experienced the want of detached corps of marksmen, whilst it fatally witnessed the effects of an enemy's superiority in that particular line. The truth of this remark is, however, too strongly felt not to be acknowledged in such a manner at head-quarters, as to induce his Royal Highness the Commander in Chief to pay some attention to the formation of detached corps of marksmen. It must be evident to every military man that (insular and inter-sected as Great Britain is,) corps of

light cavalry, mounted light artillery, and numerous small bodies of marksmen, capable of acting together, or on detached and desultory duties, would answer all the purposes of home defence.

**MARK time.** To mark time is to move each leg alternately in quick or ordinary time, without gaining ground. This is frequently practised when a front file or column is opened too much, in order to afford the rear an opportunity of getting up; and sometimes to let the head of a column disengage itself, or a body of troops file by, &c.

**Knights of St. MARK**, an order of knighthood which formerly existed in the republic of Venice, under the protection of St. Mark the Evangelist.

**To be MARKED.** Marshal Saxe, in his reveries, proposes that every soldier should be marked in his right hand to prevent desertion. He recommends the composition which is used by the Indians; and grounds the propriety of his plan upon the custom which prevailed among the Romans, who marked their soldiers with a hot iron. We mention this as a suggestion grounded upon good authority: but we by no means recommend it as an adoption which would be palatable to Englishmen.

**A MARKED MAN**, (*homme suspect*, Fr.) this word is seldom understood in a good sense. It generally signifies an individual of whose loyalty and general principles suspicions are entertained.

**MARKSMEN**, men expert at hitting a mark.

**Light-armed MARKSMEN**, men that are armed and accoutred for very active and desultory service. See **RIFLEMEN**.

**Austrian Volunteer MARKSMEN**, a corps which has been formed in the hereditary dominions of the Emperor of Germany, and is daily increasing by recruits and volunteers from the Tyrol, &c. The success which has uniformly attended the French *tirailleurs* in all their actions, has induced other nations to pay great attention to the formation of similar corps.

**MARLINS**, in *artillery*, are tarred white skains, or long wreaths or lines of untwisted hemp, dipped in pitch or tar, with which cables and other ropes are wrapped round, to prevent their fretting and rubbing in the blocks or pulleys through which they pass. The same serves

serves in artillery upon ropes used for rigging gins, usually put up in small parcels called skains.

**MARON**, *Fr.* a piece of brass or copper, about the size of a crown, on which the hours for going the rounds were marked, in the old French service. Several of these were put into a small bag, and deposited in the hands of the major of the regiment, out of which they were regularly drawn by the sergeants of companies, for the officers belonging to them. The hours and half-hours of the night were engraved upon each *maron* in the following manner—*Ronde de dix heures, de dix heures et demie*. The ten o'clock rounds, or those of half past ten.

These pieces were numbered 1, 2, &c. to correspond with the several periods of the nights; so that the officer, for instance, who was to go the ten o'clock rounds, had as many *marons*, marked 10, 10, as there were posts or guard-houses which he was directed to visit. Thus, on reaching the first, after having given the *mot*, or watchword to the corporal, (who, whilst he receives it, must keep the naked point of his sword or bayonet close to the chest of the person who gives it) he delivers into his hands the *maron* marked 1. These *marons* being pierced in the middle, are successively strung by the different corporals upon a piece of wire, from which they slide into a box called *boîte aux roudes*, or box belonging to the rounds. This box is carried the next morning to the major, who keeps the key; and who, on opening it, can easily ascertain whether the rounds have been regularly gone, by counting the different *marons*, and seeing them successively strung. This is certainly a most excellent invention to prevent a neglect of duty in officers, or non-commissioned officers.

**MARON d'artifice**, *Fr.* a species of fire-work, which is made with a piece of pasteboard in the shape of a parallelogram, one side of which is as five to three; so that fifteen squares, equal among themselves, may be made, three on one side, and five on the other; these are folded into the form of a die or cube, and filled with gunpowder. The effect produced by this firework is extremely beautiful.

**MARQUI**, or *Letters of Marque*, in

*naval affairs*, are letters of reprisal, granting the subjects of one prince or state liberty to make reprisals on those of another. See *LETTERS of MARQUE*.

**MARQUEE**, a word corrupted from the French *Marquise*, signifying a tent or cover made of strong canvas or Russia-duck, which is thrown over another tent, and serves to keep out rain. Its primitive etymology may be traced to *Marquis*, or *Marchio*, whence *Marchers*, and *Marches*.

The complete weight of a *Marquée* is 1 cwt. 17 lbs. ridge pole, 7 feet; standard 8 feet.

**MARQUER le Pas**, *Fr.* to mark time.

**MARQUER un Camp**, *Fr.* to prick out the lines of an encampment.

**MARQUIS**, *Marquess*, *Marchio*, a title of honor given by letter patent to a person who holds a middle rank between the dignity of a Duke and that of an Earl. This word, like *Margrave*, is derived from the high Dutch, or from the French *Marche*, a limit, as the guard of the frontiers was entrusted to a *Marquis*. The title itself is originally French, and was first known under Charlemagne. King Richard the Second first introduced the dignity of *Marquis* among us, by creating Robert de Vere, Earl of Oxford, *Marquis* of Dublin; but it was a title without any office annexed to it.

**MARQUISE**, *Fr.* See *Marquée*.

**Tendre une MARQUISE**, *Fr.* to pitch a *marquée*.

**MARQUISE**, *Fr.* This word likewise means a species of sky-rocket. See *Fusée volante*.

**MARRIAGE**. It is generally understood in the British service, that no soldier can marry without the previous knowledge and consent of his captain, or commanding officer. There is not, however, any specific regulation on this head. The regulations respecting the marriages of officers and soldiers in the old French service, were extremely rigid. It must, however, be remarked, that although the Marriage Act in Ireland authorizes Roman Catholic priests to perform this ceremony, no marriage between persons (vulgarly called *Papists*) is valid, or has any legal effect in Great Britain, unless it be rendered so by a clergyman of the Church of England. The Act has provided for the Recusants or Nonjurors of every other

other sect. As there are many non-commissioned officers and private soldiers of the Roman Catholic persuasion, both in the navy and the army, this caution may be useful.

**MAÏS.** According to the Heathen Mythology, the God of War was so called. The French frequently use the word in a figurative sense, viz. *Les travaux de Mars*, the labours or exploits of Mars, *le métier de Mars*, the military profession.

**The MARSEILLOIS**, or *Marseilles Hymn*, a national march adopted by the French during the course of their revolution, and since regularly played in their armies when they go to battle. It is frequently accompanied, or rather succeeded by the *Cà Ira*, a lively tune; the former being calculated for slow or ordinary time, and the latter for quick movements.

**MARSIAL**, } in its primitive signification, means an officer who has the care and charge of horses; but it is now applied to officers who have very different employments.—In a military sense, it means the commander in chief of all the forces. It is likewise given as an honorary rank to general officers who have no immediate command. See **GENERAL**.

**MARSHAL of France**, was an officer of the greatest dignity in the French army. It was first established by Philip-August, in the year 1185.

**PROVOST-MARSHAL**, an executive officer, whose duty is to see punishments put in force, when soldiers are condemned to death, or are to be otherwise chastised. Every army is provided with a provost-marshal-general, who has several deputies under him. By the last General Regulations it has been ordained, that in case the army should take the field in Great Britain, a deputy provost-marshal will be appointed to each district. The Provost, under those circumstances, will frequently make the tour of the camp, and its environs, and will have orders to seize such persons as are committing disorders.

The provost-marshal will be particularly directed, in making his rounds, to execute the awful punishment which the military law awards against plundering and marauding.

And in order to assist him in the discovery of such persons as may be guilty

of those offences, the regiments encamped nearest villages, will send frequent patrols into them, to apprehend such persons, as may be there without passes, or who having passes, may behave improperly.

If any soldier is base enough to attempt to desert to the enemy, he will suffer immediate death.

Any person forcing a safeguard will suffer death.

These punishments will attach equally to the followers of the camp, as to soldiers, and must be explained to them by the officers commanding the regiments by which such followers are employed.

The articles of war have decreed punishments for the following offences:—

Death is the absolute punishment for cowardice, or misbehaviour before an enemy, or speaking words inducing others to do the like.

For mutiny, or concealing a mutiny, desertion, sleeping on a post, or quitting it before relieved, plundering after victory, quitting a post in battle, compelling an officer to abandon or give up his post, or persuading others to do the like, corresponding with an enemy, and striking or refusing to obey any superior officer in the execution of his duty, a court martial may inflict death, or any other punishment it may judge adequate to the offence.

The crimes of persuading others to desert, of concealing, assisting, or relieving an enemy; of being absent from the troop or company a soldier belongs to, absence from duty, drunkenness, and false alarms, are punishable at the discretion of a general or regimental court-martial.

All officers in the command of guards or detachments are enjoined to give assistance to the Provost Marshal in the execution of his duty; and any officer or soldier impeding him in the same, or offering him any insult, will receive the most exemplary punishment.

**MARSHY Ground**, (*Les Marais*, Fr.) As it may be frequently necessary to convey heavy ordnance, &c. over marshy ground, and sometimes indeed to erect batteries upon it, the following method has been recommended for those purposes:—

In the first place, a firm and solid road must be made, in order to convey, with safety,

safety, the different materials which may be wanted for the construction of the battery, and along which the men may securely drag the various pieces of ordnance. This road must be ten feet high at least.

If the marsh or bog should not be very deep, let a bed or platform, consisting of fascines, and disposed according to the direction of the road, be constructed between two rows of thick saucissons, that are secured and fixed in the earth with strong stakes. This platform must be two thirds as thick as the bog is deep, and contain 12 feet in breadth. Spread hurdles over the level surface of this platform, and then make another bed or covering with fascines, ten feet long, and disposed according to the breadth of the road, taking care to bind their ends, &c. well together by means of stakes, which must be driven through the hurdles and the lower bed. Let this second surface be sufficiently covered with earth and straw, to secure the fascines, and to render the road solid and compact.

If the road should appear unsafe after these precautions, it must be made wider and deeper.

If the marsh or bog be very deep, you must construct several beds or surfaces of fascines, in the manner already mentioned, taking care to make the top equal to the breadth of the road, and capable of supporting the weight of a wagon or carriage. The ground for the epaulement belonging to the platforms, their recoil backwards, and the path to the magazines, must be rendered firm and solid after the same manner. On each side of this epaulement you must throw up a berm or path, measuring three feet in front, and as much on the sides.

You will collect the earth, &c. in the usual way for the construction of batteries on rocks, and mask your artificers in like manner.

**MARTEAU d'armes**, Fr. an offensive weapon, so called from its resemblance to a hammer.

**MARTIALIST**, a warrior, a man at arms.

**MARTIAL-Law**, is the law of war, which entirely depends on the arbitrary power of the Prince, or of those to whom he has delegated it; for, though the king can make no laws in time of peace without the consent of parliament,

yet in time of war he uses an absolute power over the army. See Articles of War.

**MARTIL**, Fr. uneasiness; inquietude.

**MARTINET**, a word frequently misapplied to signify a strict disciplinarian, who sometimes gives officers and soldiers unnecessary trouble. It is supposed to have taken its origin from an adjutant of that name, who was in high repute, as a drill officer, during the reign of Louis the XIVth.

In a book, published some years back for the use of the Militia of England, there is the following note on this head.

Lewis the XIVth, in 1662, employed Monsieur Martinet to regulate and discipline his infantry after the Dutch manner. He was first Lieutenant-Colonel, and afterwards Colonel of the *Régiment du Roi*, or what we call the King's own regiment, which was then the pattern. He was killed at the siege of Doesburg, in 1672.—His name is become, among our military gentlemen (or rather *would be* military gentlemen), a term of sneer and reproach, too often applied to such officers as shame the rest of their corps, by being more assiduous and exact in the performance of their duties, than suits the levity of the young, or the indolence of the old ones.

**MARTINET**, Fr. a small discipline, or cat o' nine tails, fixed to the end of a wooden handle, which schoolmasters use to punish refractory or idle boys. This affords us another path, and perhaps a surer one, than the surname already quoted, to find out the real origin of Martinet in a military sense, more especially as it is particularly indicative of the severity that is sometimes practised by what is, ridiculously enough, called a *tip-top* adjutant.

**MARTINET**, Fr. according to the last published Military Dictionary in France, a huge hammer, which was used by the ancients in besieging towns, particularly in forcing open the gates. Vegetius mentions it in his writings.

**MARTINGAL**, (*Martingale*, Fr.) a thong of leather, which is fastened to one end of the girths under the belly of a horse, and at the other end to the muzzroll, to keep him from rearing.

**MARTIOBARBULUS**, a weapon used among the Romans. There was

also a militia amongst them so called, consisting of twelve thousand men, who were singularly expert in throwing their arrows.

**MASHKAWAR**, *Ind.* monthly accounts.

**A MASK**, in field fortification, (*une Masque, Fr.*) It sometimes happens, that a ditch or fossé must be dug in an exposed situation; in this case it will be absolutely necessary for the artificers and workmen to get under cover, and to mask themselves in such a manner as to answer the double purpose of executing their immediate object, and of deceiving the enemy with respect to the real spot they occupy.

To effect the latter purpose, several masks must be hastily thrown up, whilst the men are employed behind one; by which means the enemy will either mistake the real point, or be induced to pour his fire in several directions, and thus weaken its effect.

A mask is generally six feet high. Bags made of wad or wool are too expensive on these occasions; nor are gabions, stuffed with fascines, seven or eight feet high to be preferred; for if the fascines be tied together they will leave spaces between them in the gabions; and if they are not bound together, they will be so open at top as to admit shot, &c.

In order to obviate these inconveniences, the following method has been proposed:—place two chandeliers, each seven feet high, and two feet broad, between the uprights, after which fill up the vacant spaces with fascines nine feet high, upon six inches diameter. One toise and a half of epaulement will require two chandeliers, and 60 fascines to mask it.

The engineer, or artillery officer, places himself behind this mask, and draws his plan.

As you must necessarily have earth, &c. to complete your work, these articles may be brought in shovels, sacks, or baskets; and if the quarter from whence you draw them should be exposed to the enemy's fire, cover that line, as well as the line of communication, between the trenches, or the parallels, with a mask.

If you cannot procure earth and fascines, make use of sacks stuffed with wool, &c. and let their diameters be

three feet, and their length likewise three, and let the outside be frequently wetted to prevent them from catching fire. See pages 828, 829, 830, Vol. II. of the *Aide-Mémoire à l'Usage des Officiers d'Artillerie, &c. &c.*

**To MASK**, (*Masquer, Fr.*) to cover any particular post or situation, for the purposes of attack or defence. In ambuscade, a battery is said to be masked, when its outward appearance is such as not to create any suspicion or mistrust in a reconnoitering or approaching enemy. A town or fortress, a battery, or the head of a bridge, may likewise be said to be masked, when a superior force sits down before them, and keeps the garrison in awe. This is frequently done, in order to render the advantages of such a place or hold ineffectual, while an army acts in its neighbourhood, or marches by.

**MASOLES**, a militia belonging to Croatia, which is bound to march to the frontiers, whenever there appears the least symptoms of hostile disposition on the part of the Turks. The private soldiers have lands allotted to them, which they cultivate for their own use, but they do not receive any pay from the public. The officers are paid.

**MASQUER un passage, Fr.** to block up any road or avenue through which an army might attempt to march.

**MASSALGIES, Ind.** persons employed in India as porters or messengers. Massalgies, Coolies, and Palankeen bearers, are allowed a certain batta when they travel.

**MASSÉ, Fr.** a species of stock-purse, which, during the French monarchy, was lodged in the hands of the regimental treasurer or paymaster, for every serjeant, corporal, muskadee, drummer, and private soldier. The sum returned for each serjeant was vingt deniers per day, (each denier being worth 3-10ths of an English farthing,) and ten deniers for each of the other ranks, according to the establishment, not the effective number of each battalion. Out of these stoppages a settled and regular masse, or stock-purse, was made up, and at the end of every month it was paid into the hands of the major or officer entrusted with the interior management of the corps, and was then appropriated to defray the expence of clothing the different regiments, and

lodged in the hands of the directors or inspector-general of clothing.

That part of the *masse*, or stock-purse, which remained in the major's hands, and which was destined for the dress of the recruits, as well as for repairs of the regimental clothing, &c. could never be disposed of, or appropriated, without the knowledge and concurrence of the colonels commandant of regiments, the lieutenant-colonels, and other superior officers of the corps.

To this end it was customary for the major to call the commanding officers and oldest captains of the regiments together, in order to lay before them the actual state of the corps, to select some officer who should superintend the repairing of whatever was found necessary, and defray the lodging-money, &c.—After this statement has been examined, the major must deliver in a faithful account of all the regimental debts that have been incurred; he must farther explain how the last amount of the *masse*, or stock-purse, has been laid out, and specify the actual sum in hand, that a proper arrangement may be made, and that the repairs in the clothing, and the expences attending quarters, &c. may be duly ascertained.

The major was, on these occasions, directed to give his advice, with due respect and deference to his superior officers, and to suggest the best and cheapest method of fitting out and embellishing the regiment; carefully adhering to that system of economy which prevents it from running into debt. The statement of the several articles, with their appropriate expenditure, was specifically drawn out, and counter-signed by the colonel-commandant, and two or three of the oldest captains of companies. Their signatures served as vouchers for the major. By these means all internal cavils and disputes were obviated; the interior economy of the corps was well conducted, and a seasonable check was kept upon those officers who had the management of the regiment. Every thing, besides, came in a regular form before the inspector-general, under whose eyes all the accounts were ultimately laid; whether they regarded the recruiting service, or the clothing and distribution of necessaries.

*MASSE du Régiment Royal Artillerie*, Fr. This corps, like other regiments in the old French service, had its *masse*, or stock-purse, formed by a certain stoppage or allowance for each serjeant, and for each master artificer in the corps of workmen; and for each corporal, unspessade, cannoneer, bombardier, sapper, miner, under-master, artificer, apprentice, cadet, private artillery-man, and drummer. These sums formed an aggregate *masse*, or stock-purse, which was regularly submitted to the director general of the school of artillery, and was laid out for the clothing of the different battalions, &c.

*MASSE des compagnies Franches d'infanterie*, Fr. The *masse* belonging to these companies was formed in the same manner, and was under the controul of the director or inspector-general.

*MASSE de la cavalerie et des dragons*, Fr. Every brigadier, horseman, carabincier, hussar, dragoon, trumpet, cymbal player, and drummer, belonging to the old French cavalry, was subject to a certain stoppage from the allowances that were made, over and above their regular subsistence, for the purpose of forming their *masse*, or stock-purse.—This money remained in the hands of the regimental treasurer, who accounted for its application at the end of every month, and delivered a statement into the hands of the officer who was entrusted with its distribution; the same having been vouched for by the colonel-general of cavalry and dragons.

In addition to these extracts from a French work, it may not be thought superfluous to give the following more specific explanation of what was comprehended under the term of regimental *masse*, or stock-purse, that was made out of stoppages.

There were three sorts of *masses*, or regimental stock-purses in the old French service; two of which were sanctioned by authority, or the king's order. The third was confined to the interior management of each corps, but never appeared in any public regulation. On this account it obtained the appellation of *Masse Noire*, or dark and unknown.

The first *masse* directed by government to be attended to in every regiment, was called *masse de linge et chaussure*, or stock

stock of necessaries, such as linen, shoes, &c. This *masse* was made up by means of a certain proportion of the recruit's bounty (amounting to 15 livres) which was kept in hand, and by the retention of a part of the daily pay of each soldier. The money, thus stopped, was destined to keep up the soldier's regular stock of shoes and breeches, as the king only allowed him one pair of each of those articles every year. He was likewise enabled thereby to provide himself with stockings, shirts, cravats or stocks, handkerchiefs and gaiters; for every French soldier was obliged to produce at each monthly inspection of necessaries, one good pair of shoes, two shirts, two stocks or cravats, (one white and the other black,) two handkerchiefs, three pair of gaiters; one of which was to be white for parade duty, one of black worsted to mount ordinary guards, and one of black canvas for marching.

At the expiration of three months, a regular account was made out of what remained unappropriated of the 15 livres and of the *masse* in general, after the soldier had been supplied with the above specified articles. This statement was stuck up in every barrack-room, exhibiting the balance due to each man, who, on his side was obliged to have a written counterpart, or schedule, of all the different articles, and of the exact sum in hand. When the captain of the company inspected the necessaries, each soldier was directed to produce this schedule, and to repeat its contents by heart.

Whenever it so happened, that 15 livres could not be kept in hand out of the soldier's bounty, he was permitted to work, as soon as he could, with propriety, he dismissed the drill; for which indulgence, and in order to keep his firelock and accoutrements in good condition, he was obliged to pay six livres.

The second *masse* was for purposes of cleanliness and military appearance.—This *masse* grew out of the surplus of two or three livres, which was stopped out of the pay of the men that were permitted to work; and from a further stoppage of two deniers out of the daily pay of each soldier. Out of this *masse* the soldier was obliged to supply himself with pipe-clay or whiting, clothes

brushes, shoe brushes, blacking, bees wax, emery, and hair-powder and powder-bag, and to defray the expence of washing. He was likewise enabled thereby to pay a man for shaving. This man was attached to the company, and was called *frater*, or brother. The same practice prevails in most regiments belonging to the British service, with this difference, that there is not any direct authority to enforce the observance of it as a regulation.

In cavalry regiments, as in the infantry, the *masses* were formed by a stoppage of two or three livres out of the pay of those men that were allowed to work, and by the produce of the dung, which was averaged at two sols per day. There was likewise a further stoppage of two deniers out of the daily subsistence of each dragoon, by means of which he was regularly furnished with shovels, besoms, and pitch-forks for the stables.

The third *masse* (which as we have already remarked, although distinguished by the appellation of *masse noire*, or dark and unknown, was still found indispensably necessary for the interior management of each regiment) grew out of the surplus money that was given for discharges, (it being only required of each regiment to account to government for 100 livres per man) out of deaths and other casualties, and out of the money which had accumulated from men struck off the sick list. The regiment, by means of this fund, (which may in some degree be considered in the same light that the stock-purse of a British regiment is,) made up the deficiency of the king's bounty, which was seldom or ever found enough to answer the purposes of recruiting. The persons employed upon this service were accordingly paid out of the *masse noire*; which was further increased by certain contributions that the men, who were permitted to work, voluntarily gave, in addition to the six livres already mentioned.

*MASSE d'armes*, Fr. a warlike weapon, which was formerly used. It consisted of a long pole with a large iron head.

*MASSELOTTE*, Fr. a French term which is used in foundry, signifying that superfluous metal which remains after

## M A S

after a cannon or mortar has been cast, and which is sawed or filed off, to give the piece its proper form.

**MASSIF**, *Fr.* a short stick or rod, used by artificers in making cartridges.

**MASSOOLAS**, *Ind.* the common boats, of a very slight construction, which are used on the Coromandel coast.

**MASSUE**, *Fr.* a club.

**MASTER at arms**, in the *marine*, an officer appointed to teach the officers and crew of a ship of war the exercise of small arms; to confine prisoners, and plant centinels over them, and to superintend whatever relates to them during their confinement. He is also to observe, that the fire and lights are all extinguished, as soon as the evening gun is fired, except those that are permitted by proper authority, or are under the inspection of centinels. It is likewise his duty to attend the gang-way, when any boats arrive aboard, and search them carefully, together with their rowers, that no spirituous liquors may be conveyed into the ship unless by permission of the commanding officer. In these several duties he is assisted by proper attendants, called his corporals, who also relieve the centinels, and one another, at certain periods.

**MASTER gunner**, in a *ship of war*, an officer appointed to take charge of the artillery and ammunition aboard, and to teach the men the exercise of the great guns.

**MASTER of the horse**, a great officer of the crown, who orders all matters relating to the king's stables, races, breed of horses, &c. and commands the equeries and all the other officers and men in the king's stables. His coaches, horses, and attendants, are the king's, and bear the king's arms and livery.

**MASTER general of the ordnance**. See **ORDNANCE**.

**Baggage-MASTER and Inspector of Roads**, an appointment in the British service.

**Barrack-MASTER-General**, an officer with the rank of a major-general in the British army, who was vested with considerable powers during the late war. These powers were formerly exercised by the Board of Ordnance, but they were transferred to the Barrack-Master General by a warrant under the

## M A S

sign manual, and countersigned by the Secretary at War on the 30th day of May, 1794. In 1795 the two warrants, whereby all matters relative to the government of barracks had been partially entrusted to the Board of Ordnance and a Barrack-Master-General, were revoked, and the following rules, orders, powers, and directions were established in lieu thereof, in as much as regards the duties of the department intrusted to the Barrack-Master-General to the British forces.

It is the duty of the Barrack-Master-General to erect and keep in repair all barracks that are not in fortified places; and all supplies of barrack furniture, utensils and other stores for the troops, are to be furnished by him. The accommodation for royal artillery in barracks is under the direction of the Barrack-Master-General, excepting at Woolwich, or wherever there may be a separate barrack for the artillery, or a fixed station for that corps.

The commanding officers in barracks are, in all matters relative to the accommodation, disposition, and supply of the troops stationed therein, to be under the direction of the Barrack-Master-General; and all applications and requisitions are to be made to him.

Whenever any damage, except from fair wear and tear, has been done to barrack-buildings, or any of the furniture or utensils have been injured, destroyed, or embezzled, a just estimate must be formed by the Barrack-master; and if his demand be not immediately paid by the commanding officer, it shall be verified by affidavit of the Barrack-master, submitted to the commanding officer, and if the answer be not satisfactory, the Barrack-Master-General is to certify the amount of the expence of making good the said injury to the Secretary at War, in order that he may direct the same to be charged against the regiment or detachment concerned.

In order to prevent the inconveniences and injury which might arise from officers making alterations in the barrack-rooms, &c. the Barrack-Master-General is directed to have the use, for which each room is intended, lettered on the door; and if any officer shall attempt to make any alteration in any room, or convert it to any purpose, other than is

so specified, or remove any of the furniture belonging thereto, the Barrack-master (who shall always be permitted to visit the rooms at seasonable hours, whenever he desires so to do,) shall represent the same to the commanding officer, and in case immediate attention is not paid thereto, the Barrack-master is strictly commanded immediately to report it to the Barrack-Master-General. And when any room shall not be occupied, the same shall be locked up, and no part of the furniture be removed therefrom.

No officer or Barrack-master, is, upon any account, to make any alteration or repairs at any barrack, or cause any expence to be incurred in providing any article relative thereto, without the direction of the Barrack-Master-General having been first obtained for that purpose.

On the 25th of March, 21th of June, 25th of September, and 21th of December, in every year, regular returns are to be transmitted by the Barrack-masters to the Barrack-Master-General, of the state of the barracks, and of the furniture and utensils, both in use and store, specifying the actual condition of each, and the manner in which the apartments of the barrack, or barracks, under their care, have been occupied for the three months preceding; which return shall be countersigned by the commanding officers, who are directed personally and diligently to inspect the same.

The Barrack-Master-General is to take care, that a proper quantity of good and sufficient arms, candles, and other stores, be provided for each barrack, every year; and the same is to be duly delivered out to the troops by the respective barrack-masters, at such times, and in such proportions, as are specified in the general regulations. The deliveries are to be vouched, not only by certificates of the actual amount, but also by accurate returns, stating the numbers in every troop, company, or detachment, present at each weekly delivery. The said certificates and returns are to be given under the hand of the commanding officer in the barracks, and to be transmitted with the accounts; and a return thereof is without delay to be transmitted by the several barrack-mas-

ters, who from thenceforth are to remain accountable for the same to the Barrack-Master-General.

Half-yearly accounts of expenditures, with general returns of the receipts and issues, and the necessary vouchers for the same, are to be made up to the 24th of June, and 21th of December, in each year, and to be transmitted, within fourteen days after the said periods, to the Barrack-Master-General, who is to examine and settle the same without delay.

The issue of forage to the cavalry, is to be made according to a prescribed regulation. The officer commanding in each of the cavalry barracks where forage shall be issued, is to transmit to the Barrack-Master-General a weekly return of the number of horses for which it has been delivered; and also the name and rank of each officer, with the number of horses for which he has received rations of forage. And at such periods as shall be required by the Barrack-Master-General, the said commanding officer shall transmit to him, a general statement of the quantity of forage received and actually issued to the troops; the said certificate to be according to such form as shall be prescribed by the Barrack-Master-General.

Every instance of neglect or misconduct which may occur in the management of barracks, must be reported to the Barrack-Master-General by the several officers commanding in barracks; and on the representation being judged sufficiently worthy, an inspector is to be sent down for the specific purpose of seeing every matter of complaint removed.

The Barrack-Master-General is authorised to take cognizance of all matters relative to accommodation, disposition, and supply, of the troops stationed in barracks, reporting thereupon, whenever it may be requisite, to the Secretary at War, for the King's information. And all officers, and Barrack-masters, are directed and enjoined to obey such orders and directions as the Barrack-Master-General shall find necessary to be given thereon.

The Barrack-Master-General is from time to time to receive imprests of money, for the current services of each year, upon estimates signed by him, and

delivered into the office of the Secretary at War. And at the end of each year, he shall make up and deliver into the said office, a general account of barrack expenditures for the preceding twelve months. The half-yearly accounts of the several barrack-masters, and the accounts of other persons to whom monies shall have been paid within the period on behalf of the barrack department (for the propriety, justness, and accuracy of which, as also for their strict conformity to the regulations, he shall be held responsible,) together with their acquittances, shall be the vouchers upon which the said general accounts shall be passed, and warrants shall be made out according to the royal sign manual.

*Quarter-MASTER of the Victuals.* The person who had the chief care and management of the provisions belonging to an army, was formerly so called. See PURVEYOR.

*Scout-MASTER-General.* A person formerly so called, under whose direction all the scouts and army messengers were placed. The appointment does not exist at present.

*MASULIT*, a boat used in the East Indies, which is caulked with moss.

*MATADORS, Fr.* a banditti, who formed themselves into armed bodies about the year 1714, in Catalonia.— Their object was to destroy every fellow citizen that would not acknowledge the title of the Archduke of Austria to the crown of Spain.

*MATCH, in artillery*, a kind of rope slightly twisted, and prepared to retain fire for the uses of the artillery, mines, fire-works, &c. Slow match is made of hemp or tow, spun on the wheel like cord, but very slack; and is composed of three twists, which are afterwards again covered with tow, so that the twists do not appear: lastly, it is boiled in the lees of old wine. This, when once lighted at the end, burns on gradually, without ever going out, till the whole be consumed. It is mounted on a lint-stock.

*Quick MATCH*, used in artillery, is made of three cotton strands drawn into lengths, and put into a kettle just covered with white wine vinegar, and then a quantity of saltpetre and mealed powder is put in it, and boiled till well mixed. Others put only saltpetre into water,

and after that take it out hot, and lay it into a trough with some mealed powder, moistened with spirits of wine, thoroughly wrought into the cotton by rolling it backwards and forwards with the hands; and when this is done, they are taken out separately, drawn through mealed powder, and dried upon a line. See LABORATORY.

*MATHEMATICS*, originally signified any kind of discipline or learning; but, at present, the term denotes that science, which teaches, or contemplates, whatever is capable of being numbered or measured; and accordingly is subdivided into arithmetic, which has numbers for its object; and geometry, which treats of magnitude.

*MATHEMATICS* are commonly distinguished into pure and speculative, which consider quantity abstractedly; and mixed, which treat of magnitude as subsisting in material bodies, and consequently are interwoven every where with physical considerations.

*Mixed MATHEMATICS* are very comprehensive, since to them may be referred astronomy, optics, geography, hydrography, hydrostatics, mechanics, fortification, gunnery, projectiles, mining, engineering, and navigation.

Pure mathematics have one peculiar advantage, that they occasion no difference of opinion among wrangling disputants, as in other branches of knowledge; and the reason is, because the definitions of the terms are premised, and every one that reads a proposition has the same idea of every part of it. Hence it is easy to put an end to all mathematical controversies, by shewing, that our adversary has not stuck to his definitions, or has not laid down true premises, or else that he has drawn false conclusions from true principles; and, in case we are able to do neither of these, we must acknowledge the truth of what he has proved.

It is true, that in mixed mathematics, where we reason mathematically upon physical subjects, we cannot give such just definitions as the geometers: we must therefore rest content with descriptions; and they will be of the same use as definitions, provided we are consistent with ourselves, and always mean the same thing by those terms we have once explained.

Dr. Barrow gives a most elegant description of the excellence and usefulness of mathematical knowledge, in his inaugural oration, upon being appointed professor of mathematics at Cambridge.

The mathematics, he observes, effectually exercise, not vainly delude, nor vexatiously torment studious minds with obscure subtleties; but plainly demonstrate every thing within their reach, draw certain conclusions, instruct by profitable rules, and unfold pleasant questions. These disciplines likewise enure and corroborate the mind to constant diligence in a study; they wholly deliver us from a credulous simplicity, most strongly fortify us against the vanity of scepticism, effectually restrain us from a rash presumption, most easily incline us to a due assent, and perfectly subject us to the government of right reason. While the mind is abstracted and elevated from sensible matter, it distinctly views pure forms, conceives the beauty of ideas, and investigates the harmony of proportions; the manners themselves are sensibly corrected and improved, the affections composed and rectified, the fancy calmed and settled, and the understanding raised and excited to nobler contemplations.

**MATRAS**, *Fr.* a sort of dart which was anciently used, and which was not sufficiently pointed to occasion any thing more than a bruise.

**MATRON**, a woman, (generally the wife of some well behaved and good soldier,) who is employed to assist in the regimental hospital. She is under the direction of the surgeon, by whom she is originally appointed to the situation.—See **NURSE**.

**MATROUSES** are properly assistants, being soldiers in the royal regiment of artillery, and next to the gunner, they assist in loading, firing, and spunging the great guns. They carry firelocks, and march along with the guns and store wagons, both as a guard, and to give their assistance on every emergency.

**MATTER of Deed**, in law, denotes something to be proved by witnesses, in contradistinction from *Matter of Record*, which may be proved from some process, &c. appearing in any court of record,

**MAITER**, in a military sense, especially with regard to courts-martial, consists of the specific charges which are brought against a prisoner, and to which the president and members must strictly confine themselves. It has been very properly observed, in a small pamphlet upon martial law, that unacquainted with the serious consequences of a strict attention to the manner of form in criminal proceedings, general courts-martial have looked upon the first swearing in of the court, as a sufficient authority to warrant their proceeding on the trial of a variety of offences; whereas, in propriety, the court should be sworn afresh at the commencement of every new prosecution: for though, as judges, (in the manner of a court of common law) once swearing would be sufficient; yet, as jurors, who are sworn on every different trial, though identically the same men, so are the members of general courts-martial to be considered, when a new criminal and fresh *Matter* are brought before them. Last, however, an established, and therefore an undisputed practice, should have acquired a force still difficult to be eradicated, we shall endeavour to point out those reasons which induce us to maintain this opinion. In the oath which is taken by each of the several members of a general court martial, the words *matter* (see Sect. 16th, Art. 6th, Articles of War) and *prisoner*, are cautiously inserted.—These words, therefore, being absolutely confined to a single matter, and a single prisoner, and *matters* and *prisoners* not being subjected to their jurisdiction, how is it possible that men, with propriety, can proceed upon a trial which they are not warranted by law to decide upon? Were the obligation in the Articles of War decisive as to the trial of all matters, and all persons, and in all cases; or were the court possessed of the authority of extending the meaning of the oath, once swearing would undoubtedly be sufficient; but, as in every respect, the contrary is evident, as the very words of the oath express (words which cannot be altered but by the legislature) that “*they shall well and truly try and determine according to their evidence in the matter before them, between their sovereign lord the king’s majesty, and the prisoner to be tried*,”

"*tried*," how can it be otherwise than an unwarrantable irregularity in them, to proceed upon the trial of offenders, who, in the eye of the law, are not amenable to their authority? For, if the *first* prisoner to be tried has a right to challenge an officer, who may be appointed to sit on an investigation of his offence, as a member of a court of enquiry, or who may be liable to any exceptions, why shall not the *second* and *third* prisoner be entitled to the same merciful indulgence? See *Thoughts on Martial Law*, pages 25, 26, 27, 28.

**Combustible MATTER, and MATTER of Composition.** All solids and fluids are so called which are of an inflammable nature themselves, and can communicate fire to other substances.

**MATTUCASHLASHI**, an ancient Scotch weapon, sometimes called arripit dagger, which was worn there ready to be used on coming to close quarters. This, with a broad sword and shield, completely armed the Highlanders.—Since the use of fire-arms, this weapon has been laid aside.

**MATTOCK**, an instrument somewhat resembling a pick-axe, but having two broad sharp edges instead of points.

**MATTRESS**, a sort of quilted bed of straw, used by officers on service, instead of the feather bed, differing from the pailasse in one particular only; the straw in the latter being loose, whereas that of the mattress is quilted in.

**MAUG**, *Ind.* the name of a month which partly agrees with our January and February.

**MAUI**, a heavy beater or hammer, generally shod with iron, used in driving piles, &c.

**MAURI**, the ancient inhabitants of Mauritania. They were famous for their skill in throwing lances, and constituted a part of the Roman cavalry.

**MAWANY**, *Ind.* See **KIR-BUNDY**.

**MAXIMS**, in *fortification*. See **FORTIFICATION**.

**MEALD**, pulverized, or reduced to powder.

**MEAN Fortification.** See **FORTIFICATION**.

**MEANA**, *Ind.* a machine or vehicle, resembling a palanquin, but only used for carrying one person. It is borne by four men, and supported by means of a bamboo extended from the ends; being

generally seven feet long, and three wide, with Venetian blinds, which slide and act as doors. Persons in India sometimes travel to a considerable distance in these vehicles; the number of bearers being increased, and successively relieved. It is computed that they will easily go at the rate of four miles in the hour.

**MEASURE**, in *geometry*, any quantity assumed as one, to which the ratio of other homogeneous or similar quantities is expressed.

**MEASURE of an angle**, the length of an arch described from the vertex to any place between its legs: hence angles are distinguished by the ratio of the arches between the legs to the peripheries. See **ANGLE**.

**MEASURE of a figure**, is a square, whose side is an inch, foot, yard, or other determinate measure. Hence square measures.

Among geometers it is usually a square rod, called *decempeda*, divided into 10 square feet, and those into square digits, and those again into 10 lines, &c.

**MEASURE of a line**, any right line taken at pleasure and considered as unity.

**MEASURE of the mass or quantity of matter**, in *mechanics*, is its weight: it being apparent that all the matter which coheres with a body, gravitates with it; and it being found by experiment, that the gravities of homogeneal bodies are in proportion to their bulks: hence while the mass continues the same, the absolute weight will be the same, whatever figure it puts on; for, as to its specific weight, it varies as the quantity of its surface does.

**MEASURE of a number**, in *arithmetic*, such a number as divides another without leaving a fraction: thus 9 is a measure of 27.

**MEASURE of a solid**, is a cube, whose side is an inch, foot, yard, or other determinate length: in *geometry*, it is a cubic perch, divided into cubic feet, digits, &c. Hence cubic measure, or measures of capacity.

**MEASURE of velocity**, in *projectiles*, and *mechanics*, the space passed over by a moving body in any given time.—The space therefore must be divided into as many equal parts, as the time is

conceived to be divided into: the quantity of space answering to such portion of time, is the measure of the velocity.

*Measures* then are various, according to the different kinds and dimensions of things measured. Hence arise lineal and longitudinal measures for lines or lengths; for square areas; and solid or cubic, for bodies and their capacities: all which again are very different in different countries and ages, and even many of them for different commodities. Hence also arise other divisions, of domestic and foreign, ancient and modern, dry and wet (or liquid) measures, &c.

**Long MEASURE.** The English standard long measure, or that whereby the quantities of things are ordinarily estimated, is the yard, containing three English feet, equal to three Paris feet one inch and 3-12ths of an inch, or 7-9ths of a Paris ell. Its subdivisions are the foot, span, palm, inch, and barley corn: its multipliers are the pace, fathom, pole, furlong, and mile.

The English foot, to the French royal, is as 107 to 114: and the French toise is equal to 6 feet English, nearly.

*Proportions of the long MEASURES of several nations to the English foot.*

The English standard foot being divided into 1000 equal parts, the other measures will have the proportions to it, which follow:

The English foot from the standard at Guildhall	-	1000
Paris royal foot, in the Chatelet	-	1068
Rhinland foot of Snellius	-	1033
Greek foot	-	1007 $\frac{2}{3}$
Roman foot on the monument of Cossutius	-	967
Roman foot of Villalpandus, taken from the congius of Vespasian	-	986
Venetian foot	-	1162
Ell of Amsterdam	-	2268
Amsterdam foot	-	942
Ell of Antwerp	-	2283
Foot of Antwerp	-	946
Ell of Leyden, in Holland	-	2260
Canna of Naples	-	6880
Vara of Almeria, and Gibraltar, in Spain	-	2760
Spanish foot	-	1001
Toledo foot	-	899

Braccio of Florence	-	1913
Palm of Genoa	-	815
Common braccio of Sienna	-	1242
Braccio of Sienna for linen	-	1974

Palm of the architects at Rome, whereof 10 make the canna of the same architects - 732

Palm of the braccio for the merchants and weavers at Rome, from a marble in the Capitol, with this inscription, CURANTE LV PORTO - 995  $\frac{1}{2}$

Large Pique of the Turks at Constantinople - 2200

Small Pique of the Turks at Constantinople, is to the larger as 31 to 32.

Arish of Persia - 3197

Derah or cubit of the Egyptians 1824

Dort foot, in Holland - 1184

Middleburg foot - 991

Strasbourg foot - 920

Bremen foot - 964

Foot of Cologne - 954

Foot of Frankfort on the Main 948

Dantzick foot - 944

Foot of Copenhagen - 965

Foot of Prague - 1526

Riga foot - 1831

Mantua - 1585

Bononia - 1204

Foot of Mechlin - 919

Stockholm - 963  $\frac{1}{2}$

Lisbon - 1005

**French standard MEASURE** is the aune or ell, containing three Paris feet, seven inches, eight lines, or one yard 2-7ths English: the Paris foot royal exceeding the English by 68-1000 parts: this ell is divided two ways; namely, into halves, thirds, sixths, and twelfths; and into quarters, half quarters, and sixteenths. This ell obtains in the greatest part of France, excepting at Troyes, Ares, and some parts of Picardy and Burgundy, where the ell is no more than two feet, five inches, one line; and at St. Genoux, where it exceeds the Paris ell by eight lines: but at Marseilles, Montpellier, Thoulouse in Provence and Guime, it contains five Paris feet, five inches, and six lines, or a Paris ell and an half: at Montpellier and the lower Languedoc, in Provence, Avignon, and even Dauphiné, it is a Paris ell and two thirds.

**Standard MEASURE**, in Holland, Flanders, Sweden, a good part of Germany,

**M E A**

*Turkish and Looant MEASURES, are* the pique, containing 3-5ths of the Paris ell. The Chinese measure is the cobre, ten of which are equal to three Paris ells. In Persia, and some parts of the Indies, the gaeze, of which there are two kinds; the royal gaeze, or gaeze monkelser, containing 4-5ths of the Paris ell; and the shorter gaeze, only 2-3ds of the former. At Goa and Ormus, the measure is the Portuguese vara. In Pegu, and other parts of the Indies, the cando, equal to the Venice ell. At Goa, and other parts, they use a larger caudo, equal to 17 Dutch ells. In Siam they use the ken, short of three Paris feet by an inch; the ken contains two socks, the sock two keubs, the keub twelve mions or inches; the mion is equal to eight grains of rice, that is, about muc lines. At Camboia, the haster; in Japan the tatam; and the span on some of the coasts of Guinea.

*Portugueze MEASURE*, is the covado, containing 4-7ths of the Paris ell; and

*French square MEASURES*, are regulated by 12 square lines in the inch square, 12 inches in the foot, 22 feet in the perch, and 100 perches in the arpent or acre.

*French liquid MEASURES*. At Paris, and in a great part of the kingdom, the smallest measure is the possu, which contains six cubic inches: 2 possus make the demiseptier; 2 demiseptiers the chopine; 2 chopines a pint; 2 pints a quart or pot; four quarts the gallon, or septier of estimation; 36 septiers the muid; which is subdivided into 2 demimuids, 4 quarter muids, and 8 half quarter muids. The queue in Orleans, Blois, &c. contains a Paris muid and a half. The tun used at Bayonne and

Bourdeaux, consists of 4 barriques, and is equal to 3 Paris muids; at Orleans to 2: so that the first tun contains 864 pints, and the second 576. The demi-queue in Champagne, 96 quarts; the pipe in Anjou and Poitou, 2 bussards, equal to 2 demi-queues of Orleans, &c. or a muid and a half of Paris. The millerolle used in Provencce, contains 66 Paris pints; and the poincon at Nantz, in Touraine, and the Blessois, equal to half the Orleans tun. The poincon at Paris is the same with the demi-queue.

The French have lately formed an entire new system of weights and measures, as in the following table, from *Nicholson's Philosophy*.

PRINCIPAL MEASURES OR UNITIES.						
Proportions of the measures of each species to its principal measure or unity.	First part of the name which indicates the proportion to the principal measure or unity.	Length.	Capacity.	Weight.	Agrarian.	For Firewood.
10,000 1,000 100 10 0 0.1 0.01 0.001	Myria Kilo Hecto Deca — Deci Centi Milli	Metre.	Litre.	Gramme.	Are.	Stere.
Proportion of the principal measures between themselves, and the length of the Meridian						
Value of the principal measures in the ancient French measures		10,000,000th part of the dist. from the Pole to the Equator	A Decimetre cube	Weight of a centimeter cube of distilled water.	100 square metres.	One cubic metre.
		3 feet 11 lines and $\frac{1}{2}$ nearly.	1 pint and $\frac{1}{8}$ or 1 litron and $\frac{1}{4}$ nearly	18 grains and 841,000 parts.	Two square perches des eaux et forêt.	1 demi voie or $\frac{1}{4}$ of a cord des eaux et forêt.
Value in English measures		Inches 39.383	61.083 inch, which is more than the wine and less than the beer quart.	22.966 grains.	11.968 square yards.	

**Cubical MEASURES**, or measures of capacity for liquors. English liquid measures were originally raised from troy weight, it being ordained that eight pounds troy of wheat, gathered from the middle of the ear, and well dried, should weigh a gallon of wine measure; yet a new weight, viz. the avoirdupoise weight, has been introduced, to which a second standard is adjusted, exceeding the former in the proportion of the avoirdupoise weight to the Troy weight. From this latter standard are raised two measures, the one for ale, the other for beer.

The sealed gallon at Guildhall, which is the standard for wine, spirits, oil, &c. is supposed to contain 231 cubic inches; yet, by actual experiment made in 1688, before the lord mayor and commissioners of excise, it only contains 224 cubic inches. It was however agreed to continue the common supposed contents of 231: hence, as 12 : 231 :: 14  $\frac{1}{2}$  : 281  $\frac{1}{2}$ , the cubic inches in an ale gallon; but, in effect, the ale quart contains 70  $\frac{1}{2}$  cubic inches; on which principles the ale and beer gallon will be 282 cubic inches.

**Dry MEASURE** is different from both the ale and wine measure, being nearly a mean between both.

According to an act of parliament passed in 1697, every round bushel with a plain and even bottom, being 18  $\frac{1}{4}$  inches throughout, and eight inches deep, is to be accounted a legal Winchester bushel, according to the standard in his majesty's exchequer; consequently a corn gallon will contain 268.8 inches, as in the following table.

2688	gallons

6 Quarters	-	1 French Ell

**MEASURE of wood for firing**, is the cord, being four feet high, as many broad, and eight long; it is divided into two half cords.

**MEASURE for horses**, is the hand, which by statute contains four inches.

**Powder MEASURES**, made of copper, holding from an ounce to 12 pounds, are very convenient in a siege, when guns or mortars are to be loaded with loose powder, especially in ricochet firing, &c.

The French recommend measures that are made of block tin, such as are used for measuring out salt; viz. 1 ounce, 2, 3, 4, 8, which makes the half pound; and lastly, of 16, which make the pound. These quantities answer every sort of ordnance.

*Diameters and Heights of Cylindric Powder Measures, holding from 1 to 15 Ounces.*

**MEASURE-angle**, a brass instrument to measure angles, either salient or reentrant, in order to ascertain, with precision, the number of degrees and minutes, for the purpose of delineating them on paper.

**MEASURING**, } in *military ma-*  
**MENSURATION**, } *thematics*, the assuming any certain quantity, and expressing the proportion of other similar quantities to the same; or the determining, by a certain known measure, the precise extent, quantity, or capacity of any thing.

**MEASURING**, in general, constitutes the practical part of geometry; and from the various subjects which it embraces, it acquires various names, and constitutes various arts, viz.

**LONGIMETRY**, **ALTIMETRY**, **LEVELLING**, **GEODESIA**, or **SURVEYING**, **STEREOMETRY**, **SUPERFICIALS**, and **SOLIDS**, &c. which see.

**MEASURING**. See **CHAIN**.

**MECHANICS**, a mixed mathematical science, which considers motion and moving powers, their nature and laws, with the effects thereof, in machines, &c. The word is derived from the Greek. That part which considers motion arising from gravity, is sometimes called *statics*, in contradistinction from that part which considers the mechanical powers, and their application, properly called *mechanics*: it is, in fine, the geometry of motion.

**MECHANICAL**, something relating to mechanics.

**MECHANICAL philosophy**, that which explains the phenomena of nature, and the operations of corporeal things, on the principles of mechanics; namely, the motion, gravity, figure, arrangement, &c. of the parts which compose natural bodies.

**MECHANICAL powers**. When two heavy bodies or weights are made by any contrivance to act in opposition, so as mutually to prevent each other from being put into motion by

gravity, they are said to be in equilibrio. The same expression is used with respect to other forces, which mutually prevent each other from producing motion.

Any force may be compared with gravity, considered as a standard. Weight is the action of gravity on a given mass. Whatever therefore is proved concerning the weights of bodies will be true in like circumstances of other forces.

Weights are supposed to act in lines of direction parallel to each other. In fact, these lines are directed to the center of the earth, but the angle formed between any two of them within the space occupied by a mechanical engine is so small, that the largest and most accurate astronomical instruments are scarcely capable of exhibiting it.

The simplest of those instruments, by means of which weights or forces are made to act in opposition to each other, are usually termed *mechanical powers*. Their names are, the *Lever*, the *Axis*, or *Steele*, and the *Pulley* or *Tackle*, the *inclined Plane*, the *Wedge*, and the *Screw*.

#### *Of the Lever.*

The lever is defined to be a moveable and inflexible line, acted upon by three forces, the middle one of which is contrary in direction to the other two.

One of these forces is usually produced by the re-action of a fixed body, called the *fulcrum*.

If two contrary forces be applied to a lever at unequal distances from the fulcrum, they will equiponderate when the forces are to each other in the reciprocal proportion of their distances. For, by the resolution of force it appears, that if two contrary forces be applied to a straight lever, at distances from the fulcrum in the reciprocal proportion of their quantities, and in directions always parallel to each other, the lever will remain at rest in any position.

Since of the three forces which act on the lever, the two which are applied at the extremes, are always in a contrary direction

direction to that which is applied in the space between them; this last force will sustain the effects of the other two; or, in other words, if the fulcrum be placed between the weights, it will be acted upon by, or will sustain their sum; but if the weights are on the same side of the fulcrum, it will be acted upon by their difference.

On the principle of the lever are made scales for weighing different quantities of various kinds of things; the steelyard which answers the same purpose by a single weight, removed to different distances from the fulcrum on a graduated arm, according as the body to be weighed is more or less in quantity; and the bent lever balance, which, by the revolution of a fixed weight, increasing in power as it ascends in the arc of a circle, indicates the weight of the counterpoise.

• On this principle also depend the motions of animals; the overcoming or lifting great weights by means of iron levers, called crows; the action of nut-crackers, pincers, and many other instruments of the same nature.

*Of the Axis or Arc, and Wheel, and of the Pulley, or Tackle.*

The axis and wheel may be considered as a lever, one of the forces being applied at the circumference of the axis, and the other at the circumference of the wheel, the central line of the axis being as it were the fulcrum.

For, if the semi-diameter of the axis, be to the semi-diameter of the wheel, reciprocally as the power A is to the power B, the first of which is applied in the direction of the tangent of the axis, and the other in the direction of the tangent of the wheel, they will be in equilibrium.

To this power may be referred the capstan, or crane, by which weights are raised; the winch and barrel, for drawing water, and numberless other machines on the same principle.

*The Pulley*, is likewise explained on same principle of the lever. Suppose the line A. C. to be a lever, whose arms A. B. and B. C. are equidistant from the fulcrum B. consequently the two equal powers E. and F. applied in the directions of the tangents to the circle in which the extremities are moveable, will be in equilibrium, and the fulcrum B. will sustain both forces.

But, suppose the fulcrum is at C. then a given force at E. will sustain in equilibrium a double force at F. for in that proportion reciprocally are their distances from the fulcrum. Whence it appears, that considering E. as a force, and F. as a weight to be raised, no increase of power is gained when the pulley is fixed, but that a double increase of power is gained when the pulley moves with the weight.

A combination of pulleys is called a tackle, and a box containing one or more pulleys, is called a block.

This is a tackle composed of four pulleys, two of which are in the fixed block A. and the other two in the block B. that moves with the weight F. Now, because the rope is equally stretched throughout, each lower pulley will be acted upon by an equal part of the weight; and because in each pulley that moves with the weight a double increase of power is gained; the force by which F. may be sustained will be equal to half the weight divided by the number of lower pulleys: that is, as twice the number of lower pulleys is to one, so is the weight suspended to the suspending force.

But if the extremity of the rope C. be affixed to the lower block, it will sustain half as much as a pulley; consequently the analogy will then be, as twice the number of lower pulleys, more 1 is to 1, so is the weight suspended to the suspending force.

The pulley or tackle is of such general utility, that it would seem unnecessary to point out any particular instance.

*Of the inclined Plane, and of the Wedge.*

The inclined plane has in its effects a near analogy to the lever; and the forces by which the same weight tends downwards in the directions of various planes, will be as the sines of their inclinations.

The wedge is composed of two inclined planes joined together at their common bases, in the direction of which the power is impressed.

This instrument is generally used in splitting wood, and was formerly applied in engines for stamping watch plates. The force impressed is commonly a blow, which is found to be much more effectual than a weight or pressure. This may be accounted for on the principles which obtain when resist-

ing bodies are penetrated, as if the mass and velocity vary, the depths to which the impinging body penetrates will be in the compound ratio of the masses and the squares of the velocities.

All cutting instruments may be referred to the wedge. A chisel, or an axe, is a simple wedge; a saw is a number of chisels fixed in a line: a knife may be considered as a simple wedge, when employed in splitting; but if attention be paid to the edge, it is found to be a fine saw, as is evident from the much greater effect all knives produce by a drawing stroke, than what would have followed from a direct action of the edge.

*Of the Screw, and of mechanical Engines in general.*

The screw is composed of two parts, one of which is called the screw, and consists of a spiral protuberance, called the thread, which is wound round a cylinder; and the other called the nut, is perforated to the dimensions of the cylinder, and in the internal cavity is cut a spiral groove, adapted to receive the thread.

It would be difficult to enumerate the very many uses to which the screw is applied. It is extremely serviceable in compressing bodies together, as paper, linen, &c. It is the principal organ in all stamping instruments for striking coins, or making impressions on paper, linen or cards, and is of vast utility to the philosopher, by affording an easy method of measuring or subdividing small spaces. A very ordinary screw will divide an inch into 5000 parts; but the fine hardened steel screws, that are applied to astronomical instruments, will go much further.

It is easy to conceive, that when forces applied to mechanical instruments are in equilibrium, if the least addition be made to one of them, it will preponderate and overcome the effort of the other. But the want of a perfect polish or smoothness in the parts of all instruments, and the rigidity of all ropes, which increases with the tension, are great impediments to motion, and in compounded engines are found to diminish about one-fourth of the effect of the power.

The properties of all the mechanical powers depending on the laws of motion, and the action or tendency to produce

motion of each of the two forces, being applied in directions contrary to each other, the following general rule for finding the proportion of the forces in equilibrium on any machine will require no proof.

If two opposite forces be applied to the extremes of any mechanical engine, in the direction of the lines, in which, by the construction of the engine, the said extremes would move; and the intensities of the forces be to each other reciprocally as the velocities the extremes when put in motion would acquire in the same indefinitely small time, then those forces will be in equilibrium.

Suppose the forces to be weights, and the same may be expressed thus:—

If two weights applied to the extremes of any mechanical engine, be to each other in the reciprocal proportion of the velocities resolved into a perpendicular direction, (rejecting the other part) which would be acquired by each when put in motion for the same indefinitely small time, they will be in equilibrio.

Whence it may be observed, that in all contrivances by which power is gained, a proportional loss is suffered in respect of time. If one man by means of a tackle, can raise as much weight, as ten men could by their unassisted strength, he will be ten times as long about it.

It is convenience alone, and not any actual increase of force, which we obtain from mechanics. As may be illustrated by the following example:—

Suppose a man at the top of a house draws up ten weights, one at a time, by a single rope in ten minutes: let him then have a tackle of five lower pulleys, and he will draw up the whole ten at once with the same ease as he before raised up one; but in ten times the time, that is, in ten minutes. Thus we see the same work is performed in the same time, whether the tackle be used or not: but the convenience is, that if the whole ten weights be joined into one, they may be raised with the tackle, though it would be impossible to move them by the unassisted strength of one man; or suppose, instead of ten weights, a man draws ten buckets of water from the hold of a ship in ten minutes, and that the ship being leaky, admits an equal quan-

quantity in the same time. It is proposed that by means of a tackle, he shall raise a bucket ten times as capacious. With this assistance he performs it, but in as long a time as he required to draw the ten, and therefore is as far from gaining on the water in this latter case as in the former.

Since then no real gain of force is acquired from mechanical contrivances, there is the greatest reason to conclude, that a perpetual motion is not to be obtained. For in all instruments the friction of their parts, together with other resistances, destroys a part of the moving force, and at last puts an end to the motion.

**MECHANICAL**, in *mathematics*, denotes a construction of some problem, by the assistance of instruments, as the duplicature of the cube, and quadrature of the circle, in contradistinction to that which is done in an accurate and geometrical manner.

**MÉCHANIQUE**, *Fr.* a science whose immediate object is the increase or accumulation of force and motion, by means of machines and instruments.—See **MECHANICS**.

**MÊCHE**, *Fr.* See **MATCH**.

**MÉDECIN**, *Fr.* Physician.

**MEDIATOR**, any state or potentate, that interferes to adjust the quarrel between any two or more powers, is called a mediator.

**MEDICINE-CHEST**, is composed of all sorts of medicines necessary for a campaign, together with such surgical instruments as are useful, fitted up in chests, and portable. The whole army are supplied with these at the expence of government.

Specific regulations have been issued by the Medical Board, respecting the quantity and quality of the different medicines.

**MEDIUM GUARD**, a preparatory guard, of the broad sword or sabre, which consists in presenting the sword in a perpendicular line with the center of the opposed object, having the point upwards, the ward iron and the cutting edge next to the object.

**MEER BUKSHY**, *Ind.* chief paymaster.

**MEER TOZUK**, *Ind.* a marshal, whose business is to preserve order in a procession or line of march, and to report absentees.

**General MEETINGS**. The general meetings of the lieutenancy of every county, riding, or place, must be holden, according to act of parliament, in some principal town of every such county, riding, and place; and such general meetings must consist of the lieutenant, together with two deputy lieutenants at the least, or, on the death or removal, or in the absence of the lieutenant, then of three deputy lieutenants at the least, of every county, riding, and place respectively. Notice is to be given in the *London Gazette*, and also in any weekly newspaper usually circulated in such county, riding, or place, fourteen days at the least before the days appointed for holding such meetings respectively.

**Subdivision MEETINGS**. These are appointed, in the first instance, by the lieutenant and deputy lieutenant, or the deputy lieutenants, at every annual meeting; and regular notice is to be given by the clerk to the several deputy lieutenants.

**MEGG**, a weapon made use of by the Turkish horse when in pursuit of an enemy. It resembles a long iron spit, and has a scabbard like a sword.

**MEGGHETERIARQUE**, *Fr.* the commanding officer of a body of men, who formerly did duty at Constantinople, and were called *Hétériennes*, being composed of soldiers that were enlisted in the allied nations.

**MELÉE**, *Fr.* a military term, which is used among the French to express the hurry and confusion of a battle; thus, *Un Général habile conserve sa tranquillité au milieu du combat, et dans l'horreur de la mêlée*:—An able General preserves his presence of mind in the thickest of the battle, and remains calm during the whole of the conflict. *Mêlée* corresponds with the English expression *Thick of the Fight*.

**MEMOIRS** are, strictly speaking, a species of history written by persons who have had some share in the transactions they relate, answering, in some measure, to what the Romans call *commentarii*, i. e. commentaries. Hence Cæsar's Commentaries, or the Memoirs of his Campaigns.

**MEMORABLE**, (*mémorable*, *Fr.*) worthy of remembrance; a term applied to some extraordinary feat in war.

**MEMORIAL**, an address to the king, or other chief commander, praying

ing for reward of services, or redress of grievances.

**BATTALION-MEN.** All the soldiers belonging to the different companies of an infantry regiment are so called, except those of the two flank companies.

**Camp-Colour-MEN,** soldiers under the immediate command and direction of the quarter-master of a regiment. Their business is to assist in marking out the lines of an encampment, &c. to carry the camp-colours to the field on days of exercise, and fix them occasionally for the purpose of enabling the troops to take up correct points in marching, &c. So that in this respect they frequently, indeed almost always, act as markers, or what the French call *Jalonneurs*. They are likewise employed in the trenches, and in all fatigue duties.

**Drag-ropes MEN.** In artillery, the men attached to light or heavy pieces of ordnance, for the purpose of advancing or retreating in action, are so called.—The French *servants à la prolonge* are of this description.

**MENACE,** an hostile threat. Any officer or soldier using menacing words or gestures in presence of a court-martial, or to a superior officer, is punishable for the same.—See the *Articles of War*.

**MENACE, (palissader en), Fr.** See **FRANSE.**

**MENSURATION, (mésurage, Fr.)** in general, denotes the act or art of measuring lines, superficies and solids.

**MENSURATION, in military mathematics,** is the art or science which treats of the measure of extension, or the magnitude of figures; and it is, next to arithmetic, a subject of the greatest use and importance, both in affairs that are absolutely necessary in human life, and in every branch of mathematics: a subject by which sciences are established, and commerce is conducted; by whose aid we manage our business, and inform ourselves of the wonderful operations in nature; by which we measure the heavens and the earth, estimate the capacities of all vessels, and bulks of all bodies, gauge our liquors, build edifices, measure our lands, and the works of artificers, buy and sell an infinite variety of things necessary in life, and are supplied with the means of making the calcula-

tions which are necessary for the construction of almost all machines.

It is evident that the close connection of this subject with the affairs of men, would very early evince its importance to them; and accordingly the greatest among them have paid the utmost attention to it; and the chief and most essential discoveries in geometry in all ages, have been made in consequence of their efforts in this subject. Socrates thought that the prime use of geometry was to measure the ground, and indeed this business gave name to the subject; and most of the ancients seem to have had no other end besides *mensuration* in view in all their laboured geometrical disquisitions. Euclid's elements are almost entirely devoted to it; and although there be contained in them many properties of geometrical figures, which may be applied to other purposes, and indeed of which the moderns have made the most material uses in various disquisitions of exceedingly different kinds; notwithstanding this, Euclid himself seems to have adapted them entirely to this purpose: for, if it be considered that his elements contain a continued chain of reasoning, and of truths, of which the former are successively applied to the discovery of the latter, one proposition depending on another, and the succeeding propositions still approximating towards some particular object near the end of each book; and when at the last we find that object to be the quality, proportion, or relation between the magnitudes of figures, both plane and solid; it is scarcely possible to avoid allowing this to have been Euclid's grand object. And accordingly he determined the chief properties in the mensuration of rectilinear plane and solid figures; and squared all such planes, and cubed all such solids. The only curve figures which he attempted besides are the circle and sphere; and when he could not accurately determine their measures, he gave an excellent method of approximating to them, by showing how in a circle to inscribe a regular polygon which should not touch another circle, concentric with the former, although their circumferences should be ever so near together; and, in like manner, between any two concentric spheres to describe a polyhedron

hedron which should not any where touch the inner one: and approximations to their measures are all that have hitherto been given. But although he could not square the circle, nor cube the sphere, he determined the proportion of one circle to another, and of one sphere to another, as well as the proportions of all rectilineal similar figures to one another.

Archimedes took up *mensuration* where Euclid left it, and carried it a great length. He was the first who squared a curvilinear space, unless Hypocrites must be excepted on account of his lunes. In his times the conic sections were admitted in geometry, and he applied himself closely to the measuring of them as well as other figures. Accordingly he determined the relations of spheres, spheroids, and coroids, to cylinders and cones; and the relations of parabolas to rectilineal planes whose quadratures had long before been determined by Euclid. He hath left us also his attempts upon the circle: he proved that a circle is equal to a right angled triangle, whose base is equal to the circumference, and its altitude equal to the radius; and consequently, that its area is found by drawing the radius into half the circumference; and so reduced the quadrature of the circle to the determination of the ratio of the diameter to the circumference; but which, however, hath not yet been done. Being disappointed of the exact quadrature of the circle, for want of the rectification of its circumference, which all his methods would not effect, he proceeded to assign an useful approximation to it: this he effected by the numerical calculation of the perimeters of the inscribed and circumscribed polygons; from which calculations it appears, that the perimeter of the circumscribed regular polygon of 192 sides is to the diameter, in a less ratio than that of  $3\frac{1}{7}$  ( $3\frac{1}{7}$ ) to 1, and that the inscribed polygon of 96 sides is to the diameter in a greater ratio than that of  $3\frac{1}{7}$  to 1; and consequently much more than the circumference of the circle is to the diameter in a less ratio than that of  $3\frac{1}{7}$  to 1, but greater than that of  $3\frac{1}{7}$  to 1: the first ratio of  $3\frac{1}{7}$  to 1, reduced to whole numbers, gives that of 22 to 7, for  $3\frac{1}{7}$ : 1

: 22 : 7, which therefore will be nearly the ratio of the circumference to the diameter. From this ratio of the circumference to the diameter he computed the approximate area of the circle, and found it to be to the square of the diameter as 11 to 14. He likewise determined the relation between the circle and ellipse, with that of their similar parts. The hyperbola too in all probability he attempted; but it is not to be hoped, that he met with any success, since approximations to its area are all that can be given by all the methods that have since been invented.

Besides these figures, he hath left us a treatise on the spiral described by a point moving uniformly along a right line, which at the same time moves with an uniform angular motion; and determined the proportion of its area to that of its circumscribed circle, as also the proportion of their sectors.

Throughout the whole works of this great man, which are chiefly on *mensuration*, he every where discovers the deepest design and finest invention; and seems to have been (with Euclid) exceedingly careful of admitting into his demonstrations nothing but principles perfectly geometrical and unexceptionable: and although his most general method of demonstrating the relations of curved figures to straight ones, be by inscribing polygons in them, yet to determine those relations, he does not increase the number and diminish the magnitude of the sides of the polygon *ad infinitum*; but from this plain fundamental principle, allowed in Euclid's elements, viz. that any quantity may be so often multiplied, or added to itself, as that the result shall exceed any proposed finite quantity of the same kind, he proves that to deny his figures to have the proposed relations, would involve an absurdity.

He demonstrated also many properties, particularly in the parabola, by means of certain numerical progressions, whose terms are similar to the inscribed figures: but without considering such series to be continued *ad infinitum*, and then summing up the terms of such infinite series.

He had another very curious and singular contrivance for determining the measures of figures, in which he proceeds

ceeds as it were mechanically by weighing them.

Several other eminent men among the ancients wrote upon this subject, both before and after Euclid and Archimedes; but their attempts were usually upon particular parts of it, and according to methods not essentially different from theirs. Among these are to be reckoned Thales, Anaxagoras, Pythagoras, Bryson, Antiphon, Hypocrates of Chios, Plato, Apollonius, Philo, and Ptolomy; most of whom wrote of the quadrature of the circle, and those after Archimedes, by his method, usually extended the approximation to a greater degree of accuracy.

Many of the moderns have also prosecuted the same problem of the quadrature of the circle, after the same methods, to greater lengths; such are Vieta, and Metius, whose proportion between the diameter and circumference is that of 113 to 355, which is within about  $\frac{3}{10000000}$  of the true ratio; but above all, Ludolph van Ceulen, who, with an amazing degree of industry and patience, by the same methods extended the ratio to 20 places of figures, making it that of 1 to 3.1415926535897932 3846 +.

The first material deviation from the principles used by the ancients in geometrical demonstrations was made by Cavalierius: the sides of their inscribed and circumscribed figures they always supposed of a finite and assignable number and length; he introduced the doctrine of indivisibles, a method which was very general and extensive, and which with great ease and expedition served to measure and compare geometrical figures. Very little new matter however was added to geometry by this method, its facility being its chief advantage. But there was great danger in using it, and it soon led the way to infinitely small elements, and infinitesimals of endless orders; methods which were very useful in solving difficult problems, and in investigating or demonstrating theories that are general and extensive; but sometimes led their incautious followers into errors and mistakes, which occasioned disputes and animosities among them.—There were now, however, many excellent things performed in this subject; not only many new things were effected concerning the old

figures, but new curves were measured; and for many things which could not be exactly squared or cubed, general and infinite approximating series were assigned, of which the laws of their continuation were manifest, and of some of which the terms were independent on each other. Mr. Wallis, Mr. Huygens, and Mr. James Gregory, performed wonders. Huygens in particular must be admired for his solid, accurate, and very masterly works.

During the preceding state of things, several men, whose vanity seemed to have overcome their regard for truth, asserted that they had discovered the quadrature of the circle, and published their attempts in the form of strict geometrical demonstrations, with such assurance and ambiguity as staggered and misled many who could not so well judge for themselves, and perceive the fallacy of their principles and arguments. Among those were Longomontanus, and our countryman Hobbs, who obstinately refused all conviction of his errors.

The use of infinites was however disliked by several people, particularly by Sir Isaac Newton, who, among his numerous and great discoveries hath given us that of the method of fluxions; a discovery of the greatest importance both in philosophy and mathematics; it being a method so general and extensive, as to include all investigations concerning magnitude, distance, motion, velocity, time, &c. with wonderful ease and brevity; a method established by its great author upon true and incontestible principles; principles perfectly consistent with those of the ancients, and which were free from the imperfections and absurdities attending some that had lately been introduced by the moderns; he rejected no quantities as infinitely small, nor supposed any parts of curves to coincide with right lines; but proposed it in such a form as admits of a strict geometrical demonstration. Upon the introduction of this method most sciences assumed a different appearance, and the most abstruse problems became easy and familiar to every one; things which before seemed to be insuperable, became easy examples or particular cases of theories still more general and extensive; rectifications, quadratures, cubatures, tangencies, cases *de maximis & minimis*, and many other subjects, became general problems,

problems, and delivered in the form of general theories which included all particular cases: thus, in quadratures, an expression would be investigated which defined the areas of all possible curves whatever, both known and unknown, and which, by proper substitutions, brought out the area for any particular case, either in finite terms, or in infinite series, of which any term, or any number of terms could be easily assigned; and the like in other things. And although no curve, whose quadrature was unsuccessfully attempted by the ancients, became by this method perfectly quadrable, there were assigned many general methods of approximating to their areas, of which in all probability the ancients had not the least idea or hope; and innumerable curves were squared which were utterly unknown to them.

The excellency of this method revived some hopes of squaring the circle, and its quadrature was attempted with eagerness. The quadrature of a space was now reduced to the finding of the fluent of a given fluxion; but this problem however was found to be incapable of a general solution in finite terms; the fluxion of every fluent was always assignable, but the reverse of this problem could be effected only in particular cases; among the exceptions, to the great grief of the geometers, was included the case of the circle, with regard to all the forms of fluxions attending it. Another method of obtaining the area was tried: of the quantity expressing the fluxion of any area, in general, could be assigned the fluent in the form of an infinite series, which series therefore defined all areas in general, and which, on substituting for particular cases, was often found to break off and terminate, and so afford an area in finite terms; but here again the case of the circle failed, its area still coming out an infinite series. All hopes of the quadrature of the circle being now at an end, the geometricians employed themselves in discovering and selecting the best forms of infinite series for determining its area, among which it is evident, that those were to be preferred which were simple, and which would converge quickly; but it generally happened, that these two properties were divided, the same series very rarely including them both: the mathematicians in most parts of Eu-

rope were now busy, and many series were assigned on all hands, some admired for their simplicity, and others for their rate of convergency; those which converged the quickest, and were at the same time simplest, which therefore were most useful in computing the area of the circle in numbers, were those in which, besides the radius, the tangent of some certain arc of the circle was the quantity by whose powers the series converged; and from some of these series's the area hath been computed to a very great extent of figures: Mr. Edmund Halley gave a remarkable one from the tangent of 30 degrees; which was rendered famous by the very industrious Mr. Abraham Sharp, who by means of it extended the area of the circle to 72 places of figures, as may be seen in Sherwin's book of logarithms; but even this was afterwards outdone by Mr. John Machin, who, by means described in Professor Hutton's *Mensuration*, composed a series so simple, and which converged so quickly, that by it, in a very little time, he extended the quadrature of the circle to 100 places of figures; from which, it appears, that if the diameter be 1, the circumference will be 3.1415926 535,8979323846, 2643383279, 50 238 41971, 6939937510, 5820974914, 592 3078161, 0628620899, 8623031825, 3421170679 +, and consequently the area will be 7853981633, 9741850961, 5660819819, 857210192, 9254984377, 6455243756, 1180769541, 0157155224, 9657008706, 3355292669 +.

From hence it appears, that all or most of the material improvements or inventions in the principles or method of treating of geometry, have been made especially for the improvement of this chief part of it, *mensuration*, which abundantly shows, what we at first undertook to declare, the dignity of this subject; a subject which, as Dr. Barrow says, after mentioning some other things, "deserves to be more curiously weighed, because from hence a name is imposed upon that mother and mistress of the rest of the mathematical sciences, which is employed about magnitudes, and which is wont to be called *Geometry* (a word taken from ancient use, because it was first applied only to measuring the earth, and fixing the limits of possessions) though the name seemed very ridiculous to Plato, who substitutes in its place

that more extensive name of *Metrics* or *Mensuration*; and others after him give it the title of *Puntometry*, because it teaches the method of measuring all kinds of magnitudes." See *SURVEYING, LEVELLING, and GEOMETRY.*

**MERHAU**, *Ind.* a deduction or abatement is so called in India.

**MERIT**, desert, excellence, deserving honour or reward.

**MERIT**, *Order of*, a military distinction given to officers or soldiers, for some signal service: the badge of which is generally expressive of the service.—Such was the medal, or order of merit, presented by the Emperor of Germany, to the officers of the 15th light dragoons, for their unexampled bravery in the affair of *Villers en Couché*, in 1794. See **ORDERS.**

**MERKIN**, a mop to clean cannon.

**MERLIN**, Handspike.

**MESS**, a sort of military ordinary, for the maintenance of which every officer gives a certain proportion of pay. The principal military mess in Great Britain is an exception to this rule, being kept and provided for in the extraordinaries of the army, at the Horse Guards. This mess consists of the field officers in waiting of the life and foot guards, officers on the king's life and king's foot guards; officer of the queen's guard, and tilt picket, and adjutant of the battalion of foot guards that mounts. The colonel of the foot guards is allowed to invite three visitors. There are likewise two breakfasts provided every morning, one for the guard coming on, and one for the guard going off, together with a supper every night.

**MESSENGERS** (of State) are officers under the direction of the secretaries of state, of whom there were 20 always in waiting, who were relieved monthly, and distributed in the following manner: four at court, five at each secretary's office, two at the third office for North Britain, three at the council office, and one at the lord chamberlain's office, who attend that office, always in readiness to be sent with dispatches, either domestic or foreign; to apprehend persons accused or suspected of high treason, or other offences against the state, being empowered by warrant from the secretaries; for the safe keeping of which, their houses are made a sort of confinement or prison; and for the maintenance

of the prisoners they have a certain allowance from government. The number has been increased since 1795.

**Military MESSENGERS**, a class superior to orderly men, consisting of confidential persons that are sent to and from head quarters, &c.

**MESTRE de CAMP**, *Fr.* the commanding officer of a regiment of cavalry was so called in the old French service. He was distinguished by this appellation on account of there being a colonel-general in the cavalry. The duty of a *Mestre de Camp* was principally confined to the following heads:—To see that the troops or companies were kept complete, that the arms were in good state and condition, the horses of a proper size, sound and well trained. He had likewise the direction of the different guards, &c.

**MESTRE de CAMP général**, *Fr.* the next officer in rank, in the old French cavalry service, to the colonel-general. This appointment was created under Henry II. in 1552.

**MESTRE de CAMP général des dragons**, *Fr.* an appointment which first took place under Louis the XIVth. in 1684.

**MESURES à poudre**, *Fr.* tin cases or vessels used in the artillery, to measure out gunpowder, according to the size and caliber of each piece of ordnance. See **Powder MEASURES.**

**Over-METAL**, (in gunnery).—When the mouth of a piece of ordnance, in disparting it, lies higher than the breech, it is then said to be *laid over metal*.

**Under-METAL**, (in gunnery) is when the mouth of a piece of ordnance lies lower than her breech.

**Right with METAL**, (in gunnery.) When a piece of ordnance lies truly level, point blank, or right with the mark, she is said to lie *right with her metal*.

**Superficies of METALS**, (in gunnery,) the surface or outside of a gun.

**METATORES**, among the ancient Romans were officers whose duties corresponded with those of the quartermaster-general's department in modern armies.

**MÉTIER**, *Fr.* means, literally, any calling or business. In a military sense, it is peculiarly applicable to those nations which keep up large standing armies,

mies, and make war their principal object and pursuit. In speaking of military matters, it is common among the French to say—*Guerre sur terre est notre métier; Guerre sur mer est le métier des Anglois.*—The land service is our peculiar business or calling; the sea service is the peculiar business or calling of the English; meaning thereby to express their reciprocal superiority.

Chevalier Polard gives the following definition relative to the question which is often discussed on the subject of war, namely, whether war be a trade or a science? (The English call it a profession). Polard, however, distinguishes it in this manner:—*La Guerre est un métier pour les ignorans, et une science pour les habiles gens.* War in the apprehension, and under the management of ignorant persons, is certainly a mere trade or business, but among able men, it becomes an important branch of science.

**METTRE à la main**, Fr. to grasp or take hold of any thing.

**METTRE l'épée à la main**, Fr. to draw swords. *Ils mirent l'épée à la main*, a figurative expression, signifying, they took their ground, and stood prepared to fight.

**METTRE les armes à la main de quelqu'un**, Fr. to teach a person the first rudiments of war, or lead him for the first time into action. *C'est lui qui m'a mis les armes à la main.* He first taught me how to fight, or I fought the first campaign under his orders.

**METTRE aux arrêts**, Fr. to put under arrest.

**METTRE sur pied**, Fr. to arm, to equip, to put troops upon an established footing.

**MEURTRIERES**, Fr. small loop holes, sufficiently large to admit the barrel of a rifle gun or musquet, through which soldiers may fire, under cover, against an enemy. They likewise mean the cavities that are made in the walls of a fortified town or place. See *Murdresses*.

**MICHÉ**. See *Malingerer*.

**MICROMETER**, (*Micromètre*, Fr.) an instrument contrived to measure small spaces, as in the divisions of the worm of a screw.

**MIDI**, Fr. The South; one of the four Cardinal points. It is always

looked for at the bottom of a map, and is opposite to the north.

**MILE**, in *geography*, a long measure, whereby the English, &c. express the distance between places: it is of different extent in different countries. The geometrical mile contains 1000 geometrical paces, or *mille passus*, from whence miles are denominated.

We shall here give a table of the miles in use among the principal nations of Europe, in geometrical paces, 60,000 of which make a degree of the equator.

	Geometrical paces.
Mile of Russia	750
Italy	1000
England	1200
Scotland and Ireland	1500
The old league of France	1500
The small ditto	2000
The great ditto	3000
Mile of Poland	3000
Spain and Portugal	3428
Germany	4000
Sweden	5000
Denmark	5010
Hungary	6000
Holland	3500

**MILICE**, Fr. soldiery, but more particularly the militia or trained bands.

**MILICES gardes-côtes**, Fr. a militia, somewhat similar to our sea-fencibles, which existed during the old French government, and whose services were confined to the coast. Every province, contiguous to the sea, was obliged to furnish a certain proportion of its male inhabitants, from 16 to 60 years old. This militia was exempted from the regulations which governed the land militia. It was under the admiralty.

**MILITAIRE**, Fr. a term used among the French, to signify any individual who bears arms for his country, or belongs to the profession: Hence *un bon Militaire*, a good and experienced officer or soldier.

*Un MILITAIRE*, Fr. a military man; any person following the profession of a soldier.

**MILITANT**, the state of warfare, or business of war.

**MILITAR**, } something belonging  
**MILITARY**, } to the soldiery or militia, &c.

**MILITARY architecture**, the same with fortification. See *Fortification*.

**MILITARY ways**, the large Roman roads

roads which Agrippa procured to be made through the empire in the reign of Augustus for the marching of troops and conveying of carriages. They were paved from the gates of Rome to the utmost limits of the empire.

**MILITARY discipline.** Next to the forming of troops, military discipline is the first object that presents itself to our notice: it is the soul of all armies; and unless it be established amongst them with great prudence, and supported with unshaken resolution, soldiers become a contemptible rabble, and are more dangerous to the very state that maintains them, than even its declared enemies. See *Discipline*.

**MILITARY execution,** the ravaging or destroying of a country or town that refuses to pay the contribution inflicted upon them. Also the punishment inflicted by the sentence of a court martial.

**MILITARY first principles,** consist in the bodily training a soldier, to make him hardy, robust, and capable of preserving health, amidst fatigue, bad weather, and change of climate; to march at such a pace, and for such length of time, and with such burden, as without training, he would not be able to do.

**MILITARY REGULATIONS,** the rules and regulations by which the discipline, formations, field exercise, and movements of the whole army are directed to be observed in one uniform system.

**MILITES ADSCRIPTITI,** supernumerary men that followed the Roman armies, for the purpose of filling up any vacancies which might occur through death or sickness. No particular duties were exacted from them, except that of marching in front of the troops, in order to annoy the enemy with their cross-bows.

**MILITES CAUSARI,** among the Romans, soldiers who were discharged on account of sickness and inability to serve, were so called.

**MILITES CONSUMMATI,** soldiers among the Romans, who had served their prescribed period. They were also called *Emeriti*.

**MILITES MERCENARI,** auxiliary troops or soldiers, who were hired by the Romans in time of war. Hence men hired to fight are called mercenaries.

**MILITES PROVINCIALES,** troops

which composed the Roman legions, and consisted wholly of Roman citizens. The auxiliary troops were originally drawn out of the Italian provinces, that were in alliance with Rome; and when they afterwards became Roman citizens, soldiers were enlisted and put from other countries. Thus, before Barbary fell under the Roman yoke, large levies were obtained from that quarter of the globe.

**MILITES STATIONARI,** bodies of armed men, among the Romans, who were distributed through the empire, in order to check disorders, prevent plunder, and to escort the guilty to the tribunals of justice.

**MILITES SUBITARI,** troops raised upon emergency, especially on the breaking out of unexpected hostilities. On these occasions, men of all ages were obliged to enrol themselves.

**MILITES URBANI,** a class of Roman soldiers, or rather an armed portion of the inhabitants of Rome, which remained in the capital, without any particular mark of distinction among themselves, in order to protect it during the absence of the regular troops, on the sudden commencement of hostilities. During the reign of the Emperors, these men became the Janissaries of Rome; for they insensibly became of so much importance, that they yielded in rank and consideration, as a body, to the Praetorian Bands only. They had regular camps in the city, which were called *Castra Urbana*. They were in high favour with the Emperors, and generally shared a large proportion of the legacies which were left by the former in their wills. The privates received half the pay and subsistence which were allowed the Praetorian Bands; enjoyed exclusive privileges, and could only be commanded by the Prefect of Rome.

**MILITIA,** a force whose services, in general, do not exceed the boundaries of its native land, but which may volunteer beyond them. In this case, as far at least as regards the British militia, the extension of service must have the sanction of parliament. The militia among the Romans was frequently called Agrarian soldiers. With respect to the native spirit and perseverance of the national troops of this country, (by national troops we mean the militia as established by law) it will not be thought

super-

superfluous to give the following account of their behaviour at the Norman conquest: In page 74 of Entick's History and Survey of London, Westminster, &c. it is recorded, that in 1066 the Danes, who had entered the Humber, and laid siege to York, were entirely routed by king Harold; and forced to return with great loss to Denmark. It was otherwise with the Duke of Normandy; for Harold, in opposing him, fell amongst the slain in the field of battle, and in the midst of the London and Middlesex militia, which had the honour of being commanded by himself in person, and his brother, and received the Normans with such resolution and courage, that they were at the point of retreating, had not William, whose crown now lay at stake, both performed the part of a leader bravely, and restrained them with his presence and authority; and, at last, an unfortunate dart shot through Harold's left eye into his brain, by which he fell off his horse, and was slain under his own standard, with 67,971 English soldiers, upon a Saturday, on the 11th of October, about seven miles from Hastings, in Sussex.

For the direction and command of the militia, the king constitutes lords-lieutenants of each county. The militia, when called out in time of war, are subject to the same regulations as to discipline and pay, as the infantry of the line.

In the time of Charles the Second, the militia were exercised four times a year, in their respective districts, and once a year in battalion. Some time after, the appointed time for their exercise and discipline was eight days in the course of the year, in companies, and four in camp. It was afterwards ordered by Act of Parliament, that the militia should be exercised twice a year, for the space of fourteen days each time. After the American war, no provision was made for the training and disciplining the militia, for a considerable time; and when government began to turn its attention to this important national concern, it was considered, on account of the effects produced by a long and expensive war, as proper to attend to the strictest economy. According to this principle, only two-thirds of the militia were called out, for the purpose of discipline, in the course

of the year. The militia being lately increased from 30 to 40,000 men, it appeared proper to government, that the whole should be exercised once a year, for twenty-one days instead of twenty-eight; by which regulation, a saving was made of seven day's pay of officers and men. It was subsequently thought that it was not very advisable to attend particularly to economy, in a matter of such importance to the nation, and it was on that account that Mr. York, the secretary at war, on the 12th of February, 1803, made a motion to have the militia drawn out for twenty-eight days instead of twenty-one. The whole expence of training the militia was, at that period, 300,000*l.* and the additional charges would not exceed the sum of 18,000*l.*

*Supplementary MILITIA*, an auxiliary body of men, which was raised in 1798, for the defence of Great Britain. See Act of the 20th of February, to enable the king to order out a certain proportion of the supplementary militia, and to provide for the augmentation of the militia, by incorporating the supplementary militia therewith.

*MILL*, (*moulin*, Fr.) properly denotes a machine for grinding corn, &c. but more generally all such machines whose action depends upon a circular motion. There are various kinds, though foreign to this work.

*Gun-powder MILL*, (*moulin à poudre*, Fr.) is that used for pounding and beating together the ingredients of which gunpowder is composed.

These ingredients being duly proportioned, and put into the mortars of the mills, which are hollow pieces of wood, each capable of holding 20 pounds of paste, are incorporated by means of the pestle and spiggle. There are 24 mortars in each mill, where are made each day 480 pounds of gunpowder, care being taken to sprinkle the ingredients in the mortars with water, from time to time, lest they should take fire. The pestle is a piece of wood 10 feet high, and 1½ inches broad, armed at bottom with a round piece of metal. It weighs about 60 pounds.

*MIM BASHY*, *Ind.* a commander of one thousand horse.

*MIND*, (*esprit*, *ame*, Fr.) the reason, or rational part of the soul.

*MILITARY MIND*, (*esprit*, *genie mili-*

*militaire*, Fr.) By this phrase we mean that uncommon constitution of mind, which is peculiar to great generals alone, which once animated the breasts of CÆSAR and of HANNIBAL in ancient, and of TURENNE and MONTÉCUCULI, in modern times. Great occasions may call it into action, experience may improve it; but, like the poet's fire, it is the boon of nature, the chosen gift of God to the elect. To others who call themselves generals, it may belong to intortilate battalions in 19 or 1900 different modes; to waste their own lives, to wear out the patience, to break the spirit of their soldiers, by an endless attention to endless minutæ; by never ceasing parades, by manœuvres long as the day, by all the mock parade and idle pageantry of military show. In some countries, and in some services, this may be the road to advancement, to fortune and to emolument; but it is not the path which leads to glory, or to genuine fame. An attention to all these details, when confined within just limits, may not only be laudable, but necessary. However, the verse of the *Henriade*, *tel brille au second rang qui s'éclipse au premier*, applies with more force to the army than to any other profession, or to any other human pursuit. He that is great on the parade may be little in the field; he that can draw on the sources of his memory, and cause to be performed with exactness, manœuvres, (which he has gotten by heart like a school boy), may be entirely deficient in that quickness of intellect, and that vigour of mind, which can alone enable an officer to execute military movements in the presence of an enemy, and under all the varying circumstances of actual warfare. The drill never formed a general. To be such, God, in the bounty of his providence, must have caused him to have been born a great man. On the contrary, the pursuits of little objects must narrow and shackle the mind.—Those habits which ensure mediocrity, will, almost always, preclude excellence. The boy who can form a Latin verse, is not therefore a poet. A special pleader is not a Somers or a Clarendon; nor is a good adjutant a great general. There is hardly any man so humbly gifted, that with sufficient ap-

plication cannot become the former.—To constitute the latter, requires the assemblage of some of the noblest attributes of our nature: that power of mind, that grasp of thought, which seizes almost every thing, as if by intuition; which thinks, decides and acts, in the same moment; which forms the best possible judgment in the shortest possible time; which is not only cool and collected, but is roused and excited by danger; must all be united to adorn the character of a great general. Add to these qualities great powers of discrimination, a constant attention to the study of the higher branches of his profession, an anxious imitation of the great models which antiquity and modern times afford, and, above all, the possession of that military imagination, of which the king of Prussia speaks in his instructions to his generals, and without which there can be no real excellence or superiority. You, who are conscious that you are thus endowed, may, with firm and assured step, approach the sanctuary; view, with the eye of anticipated hope, your niche in the Temple of Fame, saying, with Correggio—*Anché io son pittori*.

MINÉ, in a military sense, implies a subterraneous passage dug under the wall or rampart of a fortification, for the purpose of blowing it up by gunpowder.

Counter-MINES, are those made by the besieged, whereas mines are generally made by the besiegers. Both mines and counter mines are made in the same manner, and for the like purposes, viz. to blow up their enemies and their works; only the principal galleries and mines of the besieged, are usually made before the town is besieged, and frequently at the same time the fortification is built, to save expence.

*Excuser la MINÉ*, Fr. to spring a mine. When used figuratively, this expression signifies to discover a plot, or make it known. It likewise serves to express the failure of any expedition or undertaking.

*Definitions of MINES.* A mine is a subterraneous cavity made according to the rules of art, in which a certain quantity of powder is lodged, which by its explosion blows up the earth above it.

It has been found by experiments, that

that the figure produced by the explosion is a *paraboloid*, and that the center of the powder, or charge, occupies the *Focus*.

The place where the powder is lodged is called the *chamber* of the mine, or *fournneau*.

The passage leading to the powder is called the *gallery*.

The line drawn from the center of the chamber, perpendicular to the nearest surface of the ground, is called the line of least resistance.

The pit or hole, made by springing the mine, is called the *excavation*.

The fire is communicated to the mines by a pipe or hose, made of coarse cloth, whose diameter is about  $1\frac{1}{2}$  inch, called a *saucisson* (for the filling of which near half a pound of powder is allowed to every foot), extending from the chamber to the entrance of the gallery, to the end of which is fixed a match, that the miner who sets fire to it may have time to retire, before it reaches the chamber.

To prevent the powder from contracting any dampness, the saucisson is laid in a small trough, called an *auget*, made of boards, three inches and a half broad, joined together, lengthwise, with straw in it, and round the saucisson, with a wooden cover nailed upon it.

*Foyer, Fr. Focus, or Center of the Chamber.* Some authors call the end of the saucisson that comes within the work, and which is to be set fire to, the *foyer*, or *focus*: but by most people, this is generally understood to be the center of the chamber.

*Galleries and Chambers of MINES.* Galleries made within the fortification, before the place is attacked, and from

which several branches are carried to different places, are generally 4 or  $4\frac{1}{2}$  feet wide, and 5 or  $5\frac{1}{2}$  feet high. The earth is supported from falling in by arches and walls, as they are to remain for a considerable time; but when mines are made to be used in a short time, then the galleries are but 3 or  $3\frac{1}{2}$  feet wide, and five feet high, and the earth is supported by wooden frames or props.

The gallery being carried on to the place where the powder is to be lodged, the miners make the chamber. This is generally of a cubical form, large enough to hold the wooden box, which contains the powder necessary for the charge: the box is lined with straw and sand-bags, to prevent the powder from contracting dampness.

The chamber is sunk something lower than the gallery, if the soil permits; but where water is to be apprehended, it must be made higher than the gallery; otherwise the besieged will let in the water, and spoil the mine.

*Quantities of powder to charge MINES.* Before any calculation can be made of the proper charge for a mine, the density and tenacity of the soil in which it is to be made, must be ascertained, either by experiment, or otherwise; for, in soils of the same density, that which has the greatest tenacity, will require the greatest force to separate its parts. The density is determined by weighing a cubic foot (or any certain quantity) of the soil; but the tenacity can only be determined by making a mine. The following table contains experiments in six different soils, which may be of some assistance to form a judgment of the nature of the soil, when an actual experiment cannot be had.

Nature of the Soil.	Density.	Tenacity.
	Weight of 1 cubic foot.	Quantity of powder to raise 1 cub. fathom.
1. Loose earth or sand	95 pds.	8 pds.
2. Common-light soil	124	10
3. Loam, or strong soil	127	12½
4. Potter's clay, or stiff soil	135	13½
5. Clay, mixed with stones	160	16
6. Masonry	205	21½

All the requisites in mining may be determined by the following problems, which admit of four cases; for any three of the articles below being given, the fourth may thence be found.

1. The nature of the soil.
2. The diameter of the excavation.
3. The line of least resistance.
4. The charge.

#### PROBLEM I.

Given the nature of the soil, the diameter of the excavation, and the line of least resistance, to find the charge.

#### RULES.

1. To the square of the diameter of the excavation, add the square of double the line of least resistance, and reserve the said sum.
2. Multiply the square root of the reserved sum by double the line of least resistance, and subtract the product from the same sum.
3. Multiply half the remainder by the line of least resistance, and 1.57 times the product, will give the solidity of the excavation.
4. The charge will then be determined from the nature of the soil, as in the following example.

#### EXAMPLE I.

It is required to make a mine in the second sort of soil, mentioned in the foregoing experiments, which shall have a line of least resistance of 10 feet, and the diameter of its excavation 20 feet; what will be the proper charge?

The nature of this soil, by the table, requires ten pounds of powder to 216 cubic feet.

#### CALCULATION.

1. The diameter of the excavation is 20, and its square - 400
- Double the line of least resistance is 20, and its square - 400

Therefore the sum to be reserved is 800

2. The square root of 800 is 28.3
- Double the line of least resistance is 20 - 566

Which leaves the remainder 234

3. Half the remainder is 117
- Which multiplied by the line of least resistance - 10

Gives the product 1170

Which multiplied by 1.57

Gives the solidity of the excavation - feet 1836.9

4. If 216 : 10 :: 1836.9 : 85 which is the charge required.

#### By Logarithms.

1. Diam. of excavation is = 20 1.301030
- Diameter squared is = 2.002060 400
- Double the line of least resistance is = 20 and its square 400

The sum to be reserved is 2.903090 800

2. Square

# M I N

2. Square root of sum is  
 28.3 - 1.451545  
 Double the line of least  
 resistance is = 20 1.301030  

---

 Product to be subtract-  
 ed is - 2.752575 666  

---

 Remainder is - 2.369216 234  
 Line of least resist. = 10 1.000000  
 10 pounds of powder 1.000000  
 To 216 cubic feet, *compl.*  
*arith.* - 7.665546  
 To which add the *const.*  
*log.* - 9.894870  

---

 And the sum is the lo-  
 garithm charge re-  
 quired - 1.929632 = 85lb.

## PROBLEM II.

Given the nature of the soil, the line of  
 • least resistance, and the charge, to  
 find the diameter of the excavation.

## RULES.

1. Find the solidity of the earth to be  
 raised, by a proportion from the nature  
 of the soil, and multiply it by 1.27.—  
 Divide the product by the line of least  
 resistance, and to the quotient add the  
 square of the line of least resistance:  
 reserve the sum.

2. Multiply the square root of the  
 sum reserved by twice the line of least  
 resistance, and add the product to the  
 said sum, and from the result subtract  
 three times the square of the line of  
 least resistance; so will the square root  
 of the remainder be the diameter of the  
 required excavation.

## EXAMPLE I.

Let a mine be charged with 100  
 pounds of powder, in a soil which re-  
 quires eleven pounds of powder to raise  
 216 cubic feet, and let its line of least  
 resistance be ten feet: what will be the  
 diameter of the excavation?

By the nature of the soil 11lb. : 216  
 feet : : 100lb. : 1964 feet, which is the  
 solidity of the earth to be raised.

1. Therefore multiply - 1964  
 By - 1.27  

---

 The product is - 2494.28  

---

Which divided by the line of  
 least resistance, 10, is - 249.428

# M I N

To which add the square of the  
 line of least resistance 100.000

And the sum to be reserved is 349.428  
 2. The square root of 349.428  
 is 18.7, which multiplied by  
 twice the line of least resist-  
 ance, 20, gives - 374.  

---

This added to the sum reserved  
 gives - 723.428  
 From which subtract 3 times  
 the square of least resistance 300.  

---

And there will remain 423.428  
 The square root of which is, 20.5 feet,  
 being the required diameter of the  
 excavation.

## By Logarithms.

	Numb.	Logar.	Numb.
Cubic feet = 216	2.334454		
Powder 11lb. <i>co. ar.</i>	8.958607		
Charge = 100	2.000000		
Line of least resist. 10,			
<i>co. ar.</i> -	9.000000		
Constant logarithm	0.103804		
	2.396865		249.4

To which add the square  
 of line of least resist-  
 ance - 100.0  

---

Sum to be reserved is 2.543323 349.4

Half of which logar. 1.271661  
 Twice line of least re-  
 sistance, 20, - 1.301030  

---

Product to be added is 2.572691 373.8

The result is - 723.2  
 From which subtract  
 thrice the square of  
 the line of least re-  
 sistance - 300.0  

---

And there remains 423.2  
 Half of which logar. is 1.313273 20.57  
 feet, the diameter of the excavation  
 required.

## Loading and stopping of MINES.—

The gallery and chamber being ready to  
 be loaded, a strong box of wood is  
 made of the size and figure of the  
 chamber, being about 1-3d or 1-4th  
 bigger than is required for containing  
 the necessary quantity of powder;

against the sides and bottom of the box is put some straw; and this straw is covered over with empty sand bags, to prevent the powder from contracting any dampness: a hole is made in the side next the gallery, near the bottom, for the saucisson to pass through, which is fixed to the middle of the bottom, by means of a wooden peg, to prevent its loosening from the powder: or to hinder the enemy (if he should reach the entrance) from being able to tear it out. This done, the powder is brought in sand bags, and thrown loose in the box, and covered also with straw and sand bags; upon this is put the cover of the box, pressed down very tight with strong props; and, to render them more secure, planks are also put above them, against the earth, and wedged in as fast as possible.

This done, the vacant spaces between the props are filled up with stones and dung, and rammed in the strongest manner: the least neglect in this work will considerably alter the effect of the mine.

Then the auget is laid from the chamber to the entrance of the gallery, with some straw at the bottom; and the saucisson laid in it, with straw over it: lastly, it must be shut with a wooden cover nailed upon it. Great care must be taken, in stopping up the gallery, not to press too hard upon the auget, for fear of spoiling the saucisson, which may hinder the powder from taking fire, and so prevent the mine from springing. The gallery is stopped up with stones, earth, and dung, well rammed, six or seven feet further from the chamber than the length of the line of least resistance.

*Globe of compression in MINES, from Belidor.* If you imagine a large globe of earth homogeneous in all its parts, and a certain quantity of powder lodged in its center, so as to produce a proper effect without bursting the globe; by setting fire to the powder, it is evident, that the explosion will act all round, to overcome the obstacles which oppose its motion; and as the particles of the earth are porous, they will compress each other in proportion as the flame increases and the capacity of the chamber increases likewise; but the particles of earth next to the chamber will communicate a part of their motion to

those next to them, and those to their neighbours; and this communication will thus continue in a decreasing proportion, till the whole force of explosion is entirely spent; and the particles of earth beyond this term will remain in the same state as they were at first. The particles of earth that have been acted upon by the force of explosion will compose a globe, which Mr. Belidor calls the *globe of compression*.

*Different sorts of MINES are as follow:*

*Fougasses*, are a sort of small mines, frequently made before the weakest parts of a fortification, as the salient angles and faces, not defended by a cross fire.

*Trefle MINES*, are mines with two chambers only.

*T-MINES*, so called from their great resemblance to that letter. They are double mines, having four lodgments.

*Double T-MINES*, have eight lodgments, and four doors.

*Triple T-MINES*, have twelve lodgments, and six doors.

*Double Trefle MINES*, have four lodgments, and eight doors.

*Triple Trefle MINES*, have six lodgments, and twelve doors.

*MINES sans cervelle*, Fr. literally signifies a mine without brains. This expression is used among miners to describe any unthankful piece of ground, which has no consistency within itself, either at the top of the gallery, or on its sides, and is rendered firm by various expedients.

*MINERS*, are generally soldiers: most of the foreign regiments of artillery have each a company of miners, commanded by a captain and two lieutenants. When the miners are at work in the mines, they wear a kind of hood, to keep the earth that falls, out of their eyes. In the English service the artificers are ordered for that purpose.

*MINERVA*, (*Minerve*, Fr.) according to the heathen mythology, the goddess of wisdom, of war, and of the arts; she was also looked upon as the goddess of peace. She is generally represented with a helmet on her head, a shield on her arm, with a lance and an olive branch in her hand; several mathematical instruments, and the figure of an owl near her, as the emblem of wisdom.

**MINING**, in military affairs, is the art of blowing up any part of a fortification, building, &c. by gunpowder.—The art of *mining* requires a perfect knowledge both of fortification, and geometry; and by these previous helps, the engineer may be qualified to ascertain correctly the nature of all manner of heights, depths, breadths, and thicknesses; to judge perfectly of slopes and perpendiculars, whether they be such as are parallel to the horizon, or such as are visual; together with the true levels of all kinds of earth. To which must be added, a consummate skill in the quality of rocks, earths, masonry, and sands; the whole accompanied with a thorough knowledge of the strength of all sorts of gunpowder.

Mining is become one of the most essential parts of the attack and defence of places: so much artillery is used, that nothing above ground can withstand its effects; the most substantial ramparts and parapets can resist but a short time; the outworks, though numerous, serve only to retard, for a time, the surrender of the place.

We are told in history, that mines were made long before the invention of gunpowder; for the ancients made galleries or under-ground passages, much in the same way as the moderns, from without, under the walls of the places, which they cut off from the foundation, and supported them with strong props: then they filled the intervals with all manner of combustibles, which being set on fire burnt their props; and the wall being no longer supported, fell, whereby a breach was made.

The besieged also made under-ground passages, from the town, under the besieger's machines, by which they battered the walls, to destroy them; which proves Necessity to have been the inventress of mines, as well as of other useful arts.

The first mines, since the invention of gunpowder, were made in 1487, by the Genoese, at the attack of Serezanella, a town in Florence; but these failing, they were for some time neglected, till Peter Navarro, being then engineer to the Genoese, and afterwards to the Spaniards in 1503, against the French, at the siege of the castle del Ovo, at Naples, made a mine under the

wall, and blew it up; in consequence of which the castle was taken by storm.

Mr. Valliere relates the same story, but differs in the name of the engineer: he says it was Francis George, an Italian, who, serving at Naples in quality of architect, proposed to Peter Navarro, the Spanish governor, to take this castle by mining.

*Names of articles used in MINING.*

*Auget*, a kind of small trough, made of strong inch boards, about 4 inches square, in which the saucisson is laid in straw, to prevent the powder from contracting any dampness.

*Chamber*, the place where the powder is lodged, being first put in cubical boxes made for that purpose.

*Excavation*, } the pit or hole made by  
*Entonnoir*, } a mine when sprung.

*Focus*, the center of the chamber where the powder is lodged.

*Fougass*, a kind of small mine.

*Fourneau*. See *Chamber*.

*Miners Tools*, are augers of several sorts, levers of different sorts, needles for working in rocks, rakes, spades, shovels, wheel-barrows, sledge-hammers, masons' hammers, pick-axes, picks, mat-rocks, chissels, plummetts, rules, a miner's dial, &c.

*Line of least resistance*, is a line drawn from the center of the space containing the powder, perpendicular to the nearest surface.

*Gallery*, the passage leading to the powder.

*Saucisson*, is a pipe or hose made of coarse cloth, whose diameter is about an inch, and filled with gunpowder; then laid in the trough or auget, which extends from the chamber to the entrance of the gallery, that the miner who sets fire to it, may have time to retire before it reaches to the chamber.

**MINION**, a piece of ordnance, of which there are two kinds, the large and ordinary; the large minion has its bore 3½ inches diameter, and is 1000 pounds weight; its load is 3¼ pounds of powder; its shot three inches in diameter, and 3¼ pounds weight; its length is eight feet, and its level range 125 paces. The ordinary minion is three inches diameter in the bore, and weighs about 300 pounds weight: it is seven feet long, its load 2¼ pounds of powder,

der, its shot near three inches in diameter, and weighs three pounds four ounces, and shoots point blank 120 paces.

MINISTER, according to Johnson, is one who acts not by any inherent authority of his own, but under another. Thus in England all ministers act under a supreme authority, which is vested in the King, Lords, and Commons, to whom they are responsible. In military matters, there is not only a war minister, but a secretary at war, who likewise acts conjointly with the secretary of state. All dispatches and papers of consequence relating to the army must first pass through the secretary of state, and the war minister, before they are laid before parliament, or otherwise acted upon by the secretary at war.—The common arrangements of corps, directions with respect to marching, &c. are transmitted to the secretary at war, and to the quarter-master-general's office, without previously passing through the secretary of state, or war minister.

MINISTRE de la Guerre, Fr. minister of the war department. The appointment of minister and secretary at war, among the French, first took place in the reign of Henry the Second in 1549.

As this public officer is considered by the French in a very different light than he is with us, it may not be irrelevant to give the following extract from a late French publication:—"The minister of the war department is a statesman (*homme d'état*), whose functions are of the most important and most extensive nature, both with respect to the sovereign by whom he is entrusted with their discharge, and in regard to all the chiefs, and all the corps of which the armies and garrison-towns are composed. To answer his sovereign's intentions, and thereby to be useful to the country at large, it is necessary that a minister of war should be known for his military talents, be distinguished for a peculiar aptitude at arrangement, and for a strict and rigid adherence to the dictates of justice and impartiality. He must not only possess the knowledge and the feelings of a soldier, but have also the regularity and the method of a man of business."

Let us add, he should be accessible to merit, impartial in the distribution of places, and rigidly honest in the appropriation of public monies.

MINUTE, a hasty sketch taken of any thing in writing. Hence minutes of a general or regimental court-martial.

MINUTES of council in the military department, the notification of orders and regulations, which are directed to be observed by the army in India, is so called. These minutes receive the sanction of the governor-general in council, and are the result of previous communications from the Hon. Court of Directors in Europe. They answer to the French word *résultat*, which was prefixed to all orders and regulations that were occasionally issued by the military boards, or conseils de guerre, for the government of the army. The term *judgment d'un conseil de guerre*, corresponded with our minutes of a general or regimental court-martial, and expressed not only the minutes but the sentence of the court.

MINUTE, the 60th part of each degree of a circle; and, in computation of time, the 60th part of an hour.

La MINUTE, Fr. the original of a sentence or decree.

MIQUELETS, Fr. a banditti that infest the Pyrenean mountains, and are extremely obnoxious to travellers.

The MIQUELETS are armed with pistols in their waist-belts, an arquebuss and a dagger at their side. These men are frequently employed by the Spaniards in time of war; but their service is confined to the mountains, which they climb with wonderful agility.

MIQUELETTI, a small body of mountain fusileers, belonging to the Neapolitan army.

MIRE, Fr. in the French artillery, a piece of wood, about four inches thick, one foot high, and two feet and a half long, which is used in pointing cannon.

Coins de MIRE, Fr. wedges made of wood, which serve to raise or depress any piece of ordnance. They are likewise used for the same purpose in mortars.

MIRZA, Ind. Sir, Lord, Master.

To MISBEHAVE, in a military sense, to act in any manner unbecoming

coming the character of an officer or soldier.

*To MISBEHAVE before the enemy*, to abandon the colours, or shamefully give way in action, &c. See **MUTINY** *ACT*.

**MISCELLANEOUS**, an item or charge in the estimates of the British army, so distinguished, as *Miscellaneous Services*.

**MISERICORDE**, *Fr.* a short dagger, which the cavalry formerly used, for the purpose of dispatching an enemy who would not ask quarter or mercy.

*La MISINTELLIGENCE*, *Fr.* this word is generally used by the French to express a want of intelligence, or of proper information.

**MISRAK**, a Turkish sabre. See **SPAHS**.

**MISSI DOMINICI**, afterwards called among the French *Juges des Exempts*, certain persons or commissioners, who, under the reign of **LOUIS-LE-GROS**, king of France, watched the conduct and behaviour of the dukes and counts, and reported accordingly.

**MISSILE**, { any weapon which is  
**MISSIVE**, { either thrown by the hand, or which strikes at a distance from the moving power.

**MISSING**, an expression used in military returns, especially in field reports, after an engagement, to account for the general loss of men.

**MITRAILLE**, *Fr.* small pieces of old iron, such as heads of nails, &c. with which pieces of ordnance are frequently loaded.

*Tirer à MITRAILLE*, *Fr.* to fire with grape-shot. This term is frequently used by the French, to express the bribery which is practised in war time by one nation upon another, for the purpose of fomenting civil insurrections. Hence *tirer à mitraille d'or*.

**MITRAILLES**, a discharge of grape-shot from pieces of ordnance.—This was a new mode of punishment devised under the revolutionary government of France, and was principally practised during the reign of Robespierre, in the commune of Lyons. Cannon, loaded with grape-shot, were fired on citizens, bound hand and foot; and such as were only wounded by the shot, were afterwards put to death by the sword

or sabre. Bonaparte, under his protector Barras, made use of this mode to quell the refractory sections of Paris; he was called, from this circumstance, *le petit mitrailleur*, the little grape-shooter.

**MITRE**, { a mode of joining two  
**MITER**, { boards, or other pieces of wood together at right angles.

**MOAT**, a wet or dry ditch, dug round the walls of a town, or fortified place. When an enemy attacks a town, which has dry moats round it, the rampart must be approached by galleries under ground, which galleries are run beneath the moat; when the place is attempted through wet moats, your approaches must be made by galleries above ground, that is to say, by galleries raised above the surface of the water. The brink of the moat next the rampart is called the scarp, and the opposite one the counterscarp.

*Dry-MOAT*, that which has no water, It should invariably be deeper than the one that is full of water.

*Flat-bottomed MOAT*, that which hath no sloping, its corners being somewhat rounded.

*Lined MOAT*, that whose scarp and counterscarp are cased with a wall of mason work made aslope.

**MODEL**, a mould; also a diminutive representation of any thing. Thus models of warlike instruments, fortifications, &c. &c. are preserved in the Royal Laboratory at Woolwich.

**MODERN**, something of our own times, in opposition to what is antique or ancient.

*Modern Tactics, and Modern Art of War*, that system of manœuvre and evolution, which has been adopted since the invention of gunpowder and firearms.

*Ancient Tactics, and ancient Art of War*, the system which was pursued by the Greeks and Romans, &c. before the invention of gunpowder and firearms.

**MOGNIONS**, from the French *Maignon*, signifying the stump of a limb.—A sort of armour for the shoulders.

**MOGO**, a name given to a hatchet or tomahawk, by the natives of New Holland. See *Grant's Voyage*.

**MOGUL**, the Emperor of India, from whom the nabobs originally receive their appoint-

appointments, as governors and superintendants of provinces.

**MOGUL Tartars**, a nation so called, that made considerable conquests in India.

**MOHUR**, *Ind.* a golden coin, which sometimes varies in its value, but generally goes for fifteen or sixteen rupees.

**MOIENNE**, *Fr.* a piece of ordnance, which is now called a four-pounder, and which is ten feet long, was formerly so called.

**MOINE**, *Fr.* a half-sheet of paper, folded into two or four parts, with which is covered the train of gunpowder that serves to set fire to the saucisson.

**MOINEAU**, a French term for a little flat bastion, raised upon a re-entering angle, before a curtain which is too long, between two other bastions. It is commonly joined to the curtain, but sometimes separated by a fosse, and then called a detached bastion. They are not raised so high as the works of the place.

**A MOIS Romain**, or Roman month, considered as a tax or contribution, which is collected from all the circles, amounts to eighty-three thousand, nine hundred and sixty-four German florins, when it is paid in specie, and to 2681 cavalry, and 12,795 foot soldiers, when the quota is given in effective forces.

This tax grows out of an old custom, which originally prevailed when the Emperors went to Rome to be crowned, and which served to defray their expences thither.

**MOISSON**, *Fr.* harvest. This word is used in various senses by the French, particularly in two, of a poetical and figurative kind, viz. *Il a vu cinquante Moissons*: he has lived fifty years; literally, has seen fifty harvests.

**MOISSON de lauriers**, *Fr.* a succession of victories, &c. literally, a harvest of laurels.

**Moisson de gloire**, is taken in the same sense.

**MOISSONNER des lauriers**, *Fr.* to reap laurels.

**MOISSONNER les hommes**, *Fr.* to kill off, &c. To mow down men.

**MOLLER**, *Fr.* literally means to wax soft. It is used figuratively among the French, to signify, in a military sense, the yielding or giving way of armed men,

viz. *les troupes mollissent*, the troops give way.

**MOLLESSE**, *Fr.* in a figurative sense, signifies want of firmness or resolution. *Je crains la mollesse de vos conseils*; I mistrust the pliant tendency of your advice or counsel.

**MONDE**, *Fr.* in a military sense, means men or soldiers, viz.

*Ce capitaine n'avoit que la moitié de son monde*; that captain had only half his complement of men.

*On a perdu beaucoup de monde*, *Fr.* they have lost a considerable number of men.

*Il a un monde d'ennemis sur les bras*, *Fr.* he is assailed by a multiplicity of foes.

*Aller à l'autre monde*, *Fr.* this expression bears the same import in English that it does in French, viz. to die—literally to go into the other world.

*Le Nouveau Monde*, *Fr.* this term is frequently used to denote America.—Hence *L'Ancien et le Nouveau Monde*, means the two continents.

**MONEY-Matters**. An expression in familiar use to express all pecuniary concerns. It cannot be too strongly recommended to every responsible military man to be scrupulously correct on this head. More than half the breaches of friendship and common acquaintance that occur in life, may be traced to irregularity; but in no instance are its effects so fatal, as when the soldier is wronged, or is induced to think so, by the omissions, &c. of officers or sergeants.

**MONIES**, in a military sense, are such sums as are issued for public service, and are more specifically distinguished by the appellation of army estimates. It is usual for the secretary at war to move for the estimates of the army.

**Bed-Money**, all officers serving in Ireland, have an allowance of this description. It amounts to 15s. 6d. per annum. For broken periods it is calculated at three half-pence per diem.

**Beer-Money**, an allowance of one penny per diem, given to private soldiers in lieu of small beer.

**Bounty-Money**. See RECRUITING.

**Emery, Oil, and Brick-dust-Money**, a certain allowance which is made to soldiers in the British service, to enable them

them to keep their arms in good condition; in which are included brushes, pickers, turnscrows, and worms. The *actual* expenditure for these articles, certified upon honour by the colonel, or commanding officer, is allowed by government; provided the amount does not, in any half year, exceed the rate of 1s. 4½d. per man for each effective rank and file. For further particulars concerning this allowance, see James's *Comprehensive View*, page 3, &c.

*Grass MONEY*, a certain sum, so called, which was formerly stopped from the dragoons, for answering the expences customarily borne by the regiments. Out of this money the serjeant, corporal, drum and dragoon, were furnished with such necessaries as were not (by the regulation of the clothing) supplied by the colonel, and paid two shillings a year to the surgeon for medicines; out of which also, such losses might be made good as happened by exchange of money, in the remittance of their pay. It was directed by the warrant issued on the 28th of June, 1721, in the reign of George the Second, that the captains should find the dragoons with certain necessaries at specified rates, both in the house, and at grass, taking the same at all hazards, equally in all regiments; and they were required to account with them for the remainder, within fourteen days after the horses were taken up from grass.

*Levy MONEY*, the money which is paid for recruiting the army is so called. By general orders issued 16 June, 1804, it was raised to the following: cavalry, 16l. 11s. per man; infantry, 19l. 19s. and boys, 10l. 15s. each.

*Lodging MONEY*, a sum allowed to officers to provide lodgings, when they cannot be accommodated in barracks, or government houses. The several sums, according to their different ranks, and the regulations relating thereto, will be found accurately stated in the *Treatise on Military Finance*.

*Marching MONEY*, commonly called *marching guinea*, a specific sum, which is issued by the receiver-general of each county, when the militia is first embodied for service; and which is accounted for by the several captains of companies to the individuals who compose them. It is called *marching guinea*, from that

sum being paid to every man before he quits his county, and marches on general home service.

*Passage MONEY*, an allowance which is made to officers in the British service, to enable them to pay the expences of voyages to and from the East and West Indies.

*Regimental MONIES*, all sums issued to paymasters for the subsistence, &c. of the men belonging to a regiment, are so called; for the regular distribution of which, colonels, or captains of companies, are responsible. *La comptabilité*, among the French, corresponds with this explanation.

*Revenue MONEY*, an allowance which was formerly made to held officers in India. It was discontinued in 1797.

*Smart MONEY*, the money which is paid by the person who has taken the king's shilling, in order to get released from an engagement entered into previous to a regular enlistment. The sum is generally twenty shillings, which must be given before the oath is administered; otherwise both parties would be criminally implicated: one for deserting, and the other for conniving, aiding, and abetting. The custom of taking smart money is certainly founded upon a just principle, but that principle has been often perverted, and the most dishonest advantages taken of ignorant young men. In the Regulations for carrying on the recruiting service, the following order has been issued:

"Art. XX. It being contrary to law, and highly injurious to the recruiting service, to permit money to be taken by any non-commissioned officer or soldier, under the name of *smart-money*, and in consequence thereof to discharge any man who has received enlisting-money, except such man shall have been carried before a magistrate within the four days prescribed by the Mutiny Act, and in his presence shall have declared his dissent to such enlisting; recruiting officers are therefore to report any non-commissioned officer or private soldier guilty of this offence, to the inspecting field officer of the district, who will forthwith cause such non-commissioned officer or soldier to be brought to trial for the same, by a detachment court-martial.

*Utensil MONEY*, an annual allowance given

given to non-commissioned officers and privates, in Ireland, amounting to about 10½d. each.

**MONEY for the repair of arms**, a specific allowance which is made by government to every captain of a company, for the charge and repair of arms. This allowance is given in proportion to the number of men each company contains, viz. to every captain of a company, which shall consist of 76 men, or upwards, fifty-five pounds ten shillings per annum; for less than 76, but more than 50, forty-seven pounds seven shillings and sixpence, per annum: to every captain of a company, which shall consist of 50 men only, or of any number less than 50, thirty-eight pounds five shillings, per annum. See observations on this subject in James's Comprehensive View, page 9, &c.

**MONNOIE ORSIDIONALE**, *Fr.* a sort of base metal, made into current coin during a long siege. Of all expedients, this is perhaps the worst, as it usually creates feuds and quarrels between the garrison and the inhabitants. See *Désordre*.

**MONOMACHY**, (*monomachie*, *Fr.*) a single combat, or the fighting of two, hand to hand. It is derived from the Greek. A duel may properly be called monomachy.

**MONSON** *ou* **MOUSON**, *Fr.* a word derived from the Arabic, signifying the wind of any particular season, or one that blows regularly. See *Monsoons*.

**MONSOONS**. In India the year is divided into two seasons. From the month of October to March, the winds blow from the north, and during the rest of the year from the southern points of the compass: these seasons are by mariners called monsoons; the change from the one to the other is generally preceded by an interval of about twenty days, in which calms, or light and uncertain winds prevail: the setting in of the northern monsoon generally falls out some time in the month of October, as that of the southern in the month of April. On the coast of Coromandel the northern monsoon sometimes begins with a violent tempest or hurricane; and if the monsoon sets in with moderation, it is often productive of tempestuous weather, at different intervals, until the middle of December, and sometimes

later; so that it is held dangerous for any vessels to remain on the coast after the 15th of October, or to return to it before the 20th of December.

**MONTAGNES**, *Fr.* hills, mountains, &c. In a military sense the term is peculiarly applicable to that species of warfare which is carried on in a mountainous and intersected country. We have already given a general outline of this species of warfare under the head *guerre de montagne*: nevertheless the following observations may not appear superfluous or irrelevant in this place. The chevalier Folard has written largely, and with no inconsiderable degree of method, on that part of a war among hills, &c. where an army might run the risk of being surrounded or shut up.—He observes, that a body of men may be drawn into snares by the well-concerted movements of an able and active enemy, most especially in a country which is intersected by rivers, and occasionally broken with hills and eminences. Although disasters of this sort are manifest proofs of a want of ability in the person who holds the chief command, they become infinitely more disgraceful when a general runs headlong into a snare, as Euripidas did, without having sufficient courage to attempt a daring enterprize; for it certainly remains with ourselves to determine, whether we chuse to move into an impracticable country; and it equally rests with us to avoid stratagems and snares.

All this, however depends upon a knowledge of the country into which the war is carried; and as it is impossible to be in possession of the requisite information without some extraneous means, every general ought to lay it down as a maxim, not to advance into a mountainous country, without having a good number of intelligent and faithful guides. These, in addition to some able topographers, will prevent the possibility of being surprised, and make him thoroughly master of all the passes, &c.

It is not, however, sufficient to be in possession of the heights that immediately command a valley into which an army has moved; in proportion as you advance, you must be certain, that the enemy who retreats before, is not insensibly winding round a second range

of hills, to get upon your flanks, or ultimately fall upon your rear.

It moreover frequently happens, that some vallies have not any outlets, and that others become so narrow, that an army is under the necessity of marching by single files, in order to reach a more open piece of ground, or to get at some important pass for the purpose of intercepting or obstructing the march of an enemy.

When it is found necessary to retreat, or to march over a country, as Hannibal did over the Alps, it is of little consequence what steps or measures you take, with regard to those parts which you are abandoning; but when you advance against an enemy, and are determined to dispute his march through a valley or hollow way, you must adopt every precaution to secure your rear and flanks, lest, as we have already observed, your antagonist should take advantage of the various passes and intricate bye-ways, which are found in a mountainous country; and it must always be remembered, that many coups de main, and daring enterprises, may be undertaken by four or five hundred active partizans, which an army would find impracticable.

An able general cannot have a better, or more favourable field to exercise his military genius in, than that which is afforded by a mountainous country. All the chicane and stratagem of war may be resorted to; and however weak an army might be, yet such are the manifold resources of this peculiar kind of contest, that there is scarcely any thing which may not be attempted, provided the officer, who commands, has a thorough knowledge of the country, is fertile in expedients, and has a calm determined mind. Many instances might be adduced to illustrate these observations; we shall be satisfied with stating, that the Prince of Conti, in the campaign of 1744, which he so ably conducted, owes a considerable part of his reputation to the scope afforded to his talents by the locality of Piedmont. This country, indeed, as well as Switzerland, seems to have been cut out as the peculiar theatre of great military talents. But neither the Prince of Conti, nor the First Consul of France, Bonaparté, (now Emperor,) would have succeeded in the brilliant manner, which they most

unquestionably have done, had not the science of topography seconded the natural advantages of that mountainous part of Europe.

**MONTE, Fr.** This word is used among the French to express what we mean by *carry*; as, *un vaisseau monté de cinquante pièces de canon*: a ship that carries fifty guns, or a fifty gun ship.

**Mont-joy-Saint-Denis, Fr.** a sort of war-hoop which was practised during the reigns of the first kings of France. A French writer observes, that so many traditions and accounts have been given of its origin, and those so contradictory among themselves, that the least said is the best. This cry or war-hoop was adopted under *Louis-le-gros*, and was wholly laid aside under Henry the 4th. See *Cri des Armes*.

**MONIER un Cavalier, Fr.** to equip a cavalry-officer. We also use the term, but chiefly in the passive sense—as an officer well mounted; that is equipped with a good horse and the necessary furniture, &c.

**MONTER à l'assaut, Fr.** See **MOUNT** the breach.

**MONTER la garde, Fr.** See to **MOUNT** guard.

**MONTER la tranchée, Fr.** See **To mount** the trenches.

**MONTER un Vaisseau, Fr.** to embark on board a ship.

**MONTER, Fr.** This word likewise means to rise from one rank to another, in the way of promotion, as from cornet or ensign to become lieutenant, from lieutenant to become captain, or from having the command of the youngest company, to be promoted to that of the oldest.

**MONTH, considered as a military period, in the British service, consists alternately of 30 and 31 days, commencing on the 24th, and ending on the 25th day (inclusive), of each month, properly so called.**

**MONTHLY Abstract.** See *Pay*.

**MONTHLY Return.** See *Return*.

**MONTHLY Report.** See *Report*.

**MONTHLY Inspection.** See *Regimental Inspection*.

**MONT-Pagnote, ou Poste des invulnérables, Fr.** an expression which is derived from *Pagnote*, a coward, a poltroon. It signifies any eminence or place from whence the operations of a siege, or the

actual conflict of two armies, may be seen without personal danger to the curious observer. It is a term of reproach: *C'est un Général qui voit le combat du Mont-Pagnote*; he is one of those généraux that look on, whilst others fight.—During the American war a particular body of men, who seemed to side with the British, were called *Invulnérables*.

**MONI-PAGNOTE**, in fortification, an eminence where persons post themselves out of the reach of cannon, to see a camp, siege, battle, &c. without being exposed to danger. It is also called the post of the invulnérables.

**MONTRÉ**, *Fr.* the review, or muster of the men. *Le régiment a fait montre devant le commissaire*. The regiment has passed muster before the commissary. *Les officiers mirent leur valets dans les rangs, et les firent passer à la montre*. The officers put their servants in the ranks, and made them pass muster.

**MONTRE** likewise signified, in the old French service, the money which was paid to soldiers every month, when they passed muster. *Il a reçu sa montre*; he has received his monthly pay.

**MONTURE**, *Fr.* the complement of men, and number of cannon, on board a French ship of war.

**MONTURE d'un fusil, d'un pistolet**, *Fr.* the stock of a gun or pistol.

**MONUMENT**, (*Monument*, *Fr.*)—in a military sense, any public edifice, pillar, or mark of distinction, which is exhibited to perpetuate the memory of some illustrious character.

**MOOTIANA**, *Ind.* soldiers employed to collect the revenue.

**MOQUA**, **MUCK**, a frenzied riot of some Mahometans, who have returned from Mecca, against those who have not professed Mahometanism. This horrid custom was practised during the late war, by the Malays, both at the island of Ceylon, and at the Cape of Good Hope. In the latter place indeed, the fanaticism of one of these blind enthusiasts went so far, that he stabbed a soldier who stood centinel at the governor's gate. His intention was to have destroyed the governor. He that runs the *Moqua*, or *Muck*, gets intoxicated with bang, or opium, loosens his hair, (which is generally bound up under a handkerchief) then takes a dagger (called a crease) in his hand, whose blade is usually half

poisoned, and in the handle of which there is some of his mother's or father's hair preserved, and running about the streets kills all those he meets, who are not Mahometans, till he is killed himself; pretending to believe, that he serves God and Mahomet, by destroying their enemies. When one of these madmen is slain, all the Mahometan rabble run to him, and bury him like a saint; every one contributing his mite towards making a noble burial.

**MORAILLE**, *Fr.* barnacles. An instrument made commonly of iron for the use of farriers, to hold a horse by the nose, to hinder him from struggling when an incision is made.

**Le MORAL**, *Fr.* This word is frequently used among the French, as a substantive of the masculine gender, to express the moral condition of man. It likewise means the prepossession or assurance which we feel in conscious superiority, viz. *Quand les Anglois se battent sur mer, ils ont le moral pour eux, les François l'ont sur terre*.

**MORASS**, in military drawings, denotes moor, marshy, or fenny low grounds, on which waters are lodged.

**MORATTOES**, *Mahrattas*, a considerable Hindoo tribe in Hindostan. Their army is chiefly composed of cavalry, and they excel in the management of their horses. The only weapon which is used by them in war is a sabre, extremely well tempered, and carefully chosen. Their dress, when accoutred for action, consists of a quilted jacket of cotton cloth, which descends half way down their thighs, and of a thin linen vest, which is fitted close to the body, and is always worn under the jacket. They wear upon their head a broad turban, which is made to reach to the shoulders, for the double purpose of covering the neck from the heat of the sun, and of shielding it against the enemy's sabre. Their thighs and legs are covered with a loose kind of trowsers, or cotton over-hose. They are extremely temperate, and pay the most minute attention to their horses.

It is now a century that the Morattoes have made a figure, as the most enterprising soldiers of Hindostan; and as the only nation of Indians, which seems to make war an occupation by choice; for the Raipouts are soldiers by birth. Of late years they have often been

been at the gates of Delhi; sometimes in arms against the throne: at others, in defence of it against the Affghans or Pitans. The strength of their armies consists in their numerous cavalry, which is more capable of resisting fatigue than any in India; large bodies of them having been known to march fifty miles in a day. They avoid general engagements, and seem to have no other idea in making war, but that of doing as much mischief as possible to the enemy's country.

**MORDRE** (*la poussière*, Fr. literally means to bite the dust; a figurative expression, which is used both in French and English, to express the act of being killed in battle.

**MOREAU**, Fr. a species of bag in which the drivers of mules use to carry their hay. It is likewise the name of a celebrated French general, who by his able retreat out of Germany, during the most disastrous period of the French Republic, has acquired more real reputation, as a general, than any of his cotemporaries, or perhaps any commander of ancient celebrity. We have to lament, that the character of such a man should latterly have been shaded, by a want of manhood and intrepidity, which Pichegru and George possessed.

**MORGLAY**, a deadly weapon.

**MORION**, Fr. *Donner sur le morion*. This was a species of punishment which was formerly inflicted upon French soldiers for crimes that were not capital. They were shut up in a guard-house, and received a certain number of strokes with a halbert. The gantelope was substituted in its stead; but neither one nor the other are practised in the present French army.

**MORISON**. See *Helmet, Casque, &c.*

**MORT d'Eau**, Fr. low water.

**MORTARS**, are a kind of short cannon, of a large bore, with chambers: they are made of stone, brass, or iron.— Their use is to throw hollow shells, filled with powder; which, falling on any building, or into the works of a fortification, burst, and their fragments destroy every thing within reach. Carcasses are also thrown out of them. These are a sort of shells, with 5 holes, filled with pitch and other combustibles, in order to set buildings on fire; and sometimes baskets full of stones, the size of a

man's fist, are thrown out of them upon an enemy, placed in the covert-way during a siege. The very ingenious general *Desaguliers* contrived to throw bags, filled with grape-shot, containing in each bag, from 400 to 600 shot of different dimensions, out of mortars; the effect of which is extremely awful and tremendous to troops forming the line of battle, passing a defile, or landing, &c. pouring down shot, not unlike a shower of hail, on a circumference of above 300 feet. They are distinguished chiefly by the diameter of the bore. For example, a 13-inch mortar is that, the diameter of whose bore is 13 inches. There are some of 10 and 8-inch diameters; and some of a smaller sort, as coehorns of 4.6 inches, and royals of 5.8 inches.

All English mortars are fixed to an angle of 45 degrees, and custom has prevailed to lash them strongly with ropes to that elevation. In a siege, shells should never be thrown with an angle of 45 degrees, excepting in one case only; that is, when the battery is so far off that they cannot otherwise reach the works: for when shells are thrown out of the trenches into the works of a fortification, or from the town into the trenches, they should have as little elevation as possible, in order to roll along, and not bury themselves; where-by the damage they do, and the terror they cause to the troops, is much greater than if they sink into the ground. On the contrary, when shells are thrown upon magazines, or any other buildings, with an intention to destroy them, the mortars should be elevated as high as possible, that the shells may acquire a greater force in their fall, and consequently do more execution. We are the only nation that fix mortars to an elevation of 45 degrees.

The use of mortars is thought to be older than that of cannon; for they were employed in the wars of Italy to throw balls of red-hot iron, and stones, long before the invention of shells. It is generally believed, that the Germans were the first inventors, and that they were actually used at the siege of Naples, in the reign of Charles VIII, in 1495. History informs us, with more certainty, that shells were thrown out of mortars at the siege of Wachtendonk, in Guelderland, in 1588, by the Earl of

**Mansfield.** Shells were first invented by a citizen of Venlo, who, on a festival, celebrated in honor of the Duke of Cleves, threw a certain number, one of which fell on a house, and set fire to it; by which misfortune the greatest part of the city was reduced to ashes. Mr. Malter, an English engineer, first taught the French the art of throwing shells, which they practised at the siege of Motte, in 1634. The method of throwing red-hot balls out of mortars, was first put in practice, with certainty, at the siege of Stralsund, in 1675, by the elector of Brandenburg; though some say in 1653, at the siege of Bremen.

**Land-MORTARS**, are those used in sieges, and of late in battles, mounted on beds; and both mortar and bed are transported on block-carriages. There is also a kind of land-mortars, mounted on travelling carriages, invented by Count Buckeburg, which may be elevated to any degree; whereas ours, as we have already stated, are fixed to an angle of 45 degrees, and are firmly lashed with ropes.

**Partridge MORTAR**, is a common mortar, surrounded by 13 other little mortars, bored round its circumference in the body of its metal. The center one is loaded with a shell, and the others with grenades. The vent of the large mortar being fired, communicates its fire to the small ones; so that both shell and grenades go off at once. The French used them in the war of 1701, and more especially at the siege of Lisle, in 1708, and at the defence of Bouchain, in 1702.

**Hand-MORTARS** were frequently used before the invention of coehorns. They were fixed at the end of a staff of 4½ feet long, the other end being shod with iron to stick in the ground: while the bombardier, with one hand, elevated it at pleasure, he with the other hand fired.

**Firelock-MORTARS**, *Bombards*, are small mortars, fixed at the end of a firelock: they are loaded as all common firelocks are; and the grenade, placed in the mortar at the end of the barrel, is discharged by a flint-lock; and, to prevent the recoil hurting the bombardier, the bombard rests on a kind of halberd, made for that purpose. They were first invented by major-general Siebach, a German, about the year 1710.

*Names of the several parts of a MORTAR.*

Grand Divisions exterior, viz.—The whole length of the mortar, muzzle, chase, reinforce, breech, trunnions.

Small divisions exterior—The vent; dolphins, vent astragal and fillets, breech ring and ogee, reinforce ring and ogee, reinforce astragal and fillets, muzzle astragal and fillets, muzzle ring and ogee, muzzle moldings, shoulders.

Interior parts. Chamber, bore, mouth, vent.

*Chamber in MORTARS*, is the place where the powder is lodged. There are different sorts, and made variously by different nations. The Spaniards use chiefly the spheric; the French, Germans, and Dutch, the conic, cylindric, and the concave or bottled; the Portuguese, at present, the parabolic; and the English make them in the form of a frustum of a cone. Each nation has its reasons, good or bad, to prefer their make before that of others: among which we are of opinion, that the concave and cylindric chambers are the best.

*Sea-MORTARS*, are those which are fixed in the bomb-vessels, for bombarding places by sea: they are made somewhat longer, and much heavier than the land mortars.

*Land-MORTAR-BEDS*, are made of very solid timber, and placed upon very strong timber frames, fixed in the bomb ketch; to which a pintle is attached in such a manner, that the bed may turn round. The fore part of these beds is an arc of a circle, described from the same centre as the pintle-hole.

*Stone-MORTARS*, serve to throw stones into the enemy's works, when near at hand; such as from the town into the trenches in the covert-way, or upon the glacis; and from these trenches into the town. The bore is terminated by two quadrants of a circle, terminated by the reinforce and lines drawn from the ends of the cylinder, made to lodge the tompons parallel to the axis of the mortar. The bottom of the conic chamber is terminated by an arc of 60 degrees, and the round part of the outside is a semi-circle.

*Chambers in MORTARS*, are of different sorts and dimensions. Mr. Belidor mentions four; namely, the cylindric, the spheric, the conic, and the concave

concave or bottled; to which a fifth may be added, the parabolic, invented by count de Mippe Buckeburg.

*Cylindric chambers.* This kind of chamber is, in our opinion, for all sorts of mortars under a 19-inch diameter, the best. They are the only kind of chambers that may be conveniently loaded with cartridges. Though experience demonstrates, that concave chambers will throw the shell furthest of any with the same charge, yet, in this case, where but little powder is required, their entrance would become too narrow, and consequently inconvenient to clean; whereas, when they are cylindric, the difference between the advantages of the one and the other will be but little, and not attended with any inconveniences.

*Conic chambers,* are generally made in a conical form at the bottom, so that the sides produced, meet the extremities of the diameter at the mouth; it being imagined, we suppose, that the powder acts in right lines parallel to the sides of the chamber; but, as that is not the case, we conclude, contrary to Belidor and others, that the conic chambers are the worst of all.

*Spheric chambers,* are much inferior to the cylindric or concave; for it is well known by the properties of geometry, that when a cylinder and a frustum of a cone occupy equal spaces, the surface of the cone is always greater than that of the cylinder. Hence, if the entrance of these chambers be not made very narrow, contrary to practice, as demonstrated by Mr. Muller, in his second edition of artillery, page 38, of the introduction, and the examples that follow, we conclude that these and the conic chambers are the worst.

*Concave chambers.* The advantage of these kinds of chambers consists in this, that their entrance may be made narrower than that of any other form; and practice has sufficiently proved it. Yet, when the entrance is so small as not to admit a man's hand, they are not easily cleaned: for which reason all 13 and 10-inch mortars should have concave chambers, and the others cylindric ones.

*Parabolic chambers.* These chambers, being the widest of any, may therefore be included among the worst; as it is not the inward figure of the chamber, but its entrance, which produces the

effect; because the smaller it is, the nearer it reduces the effect into the direction of the shell. It has, however, one advantage, namely, that the shells will have no windage.

MORTAR, in *military architecture*, a composition of lime, sand, &c. mixed up with water, that serves as a cement to bind the stones, &c. of any building. Mine sand makes weak mortar, and the rounder the sand, the stronger the mortar; and if the sand is washed before it is mixed, so much the better.

The proportion of lime and sand for making mortar is extremely variable. Some use three parts of pit-sand, and two of river-sand, to one of lime; others, a proportion of sand to quick-lime, as 36 to 35. It should be well mixed, and beat every 24 hours for a week together, letting it then lie for a week more; and when it is used, must be beat and mixed again. By this means it will make good mortar, though the lime is but indifferent.

MORTAR for *water-courses, cisterns,* &c. is made of lime and hog's lard; sometimes mixed with the juice of figs, and sometimes with liquid pitch, which is first slaked with wine; and, after application, it is washed over with linseed oil.

MORTAR for *furnaces,* &c. is made with red clay wrought in water, wherein horse dung and chimney-soot have been steeped; by which a salt is communicated to the water, that binds the clay, and makes it fit to endure the fire. The clay must not be too fat, lest it should be subject to chinks: nor too lean or sandy, lest it should not bind enough.

MORTAR, made of terras, pozolana, tile-dust, or cinders, is mixed and prepared in the same manner as common mortar; only these ingredients are mixed with lime instead of sand in a due proportion, which is to be in equal quantities. As this mortar is to be used in aquatic buildings, the lime should be the very best.

In fortifications, docks, or piers of harbours, you should lay all the works under water with terras-mortar, and the rest of the facings, both within and without, with cinder or tile-dust mortar, for about two feet deep.

MORTAR *battery.* We are informed that a floating mortar battery, for the bombardment of the enemy's ports, has been

been invented by Mr. Congreve, son of General Congreve, of the artillery, which is proof both against shells and red hot balls. It is said to be so contrived, that though provided both with masts and sails for any voyage, yet it can be securely disposed of in less than a quarter of an hour, so that the battery then presents nothing but a mere hull, with sloping sides, upon the water, which is rowed by forty men under cover of the bomb-proofs, and may, by the peculiar construction of the masts and rigging, be brought under sail again as expeditiously as dismantled. The rudder and moorings are *entirely* under water, and protected by the bomb-proof, so that no disappointment as to them can possibly arise. The battery is armed with four large mortars for bombardment, and four 42-pounder carronades for self-defence, though, from being covered with plates and bars of iron, she can neither be set fire to, nor carried by boarding. Four such vessels, though they are not more than 250 tons burthen each, and draw less than 12 feet water, would throw upwards of 500 shells into any place in one tide, and with the greatest effect and precision, both because from their construction they have nothing to apprehend from approaching the enemy's batteries, and because, from the peculiar contrivance of the mortar-beds, the elevation of the mortars is not affected by the rolling or pitching of the vessel. Several of our most eminent naval men have seen and approved of the contrivance; and, it is said, that Ministers have attended to this gentleman's plans, and have it in contemplation to institute, with all expedition, vigorous and regular bombardments of such of the enemy's ports as contain any considerable accumulation of their flotilla.

**MORTELLA, MORTELLO, or MORTILLA TOWER**, a small castle erected for the defence of a coast. According to Captain Glose, the word is derived from *Morta*, from whence mote or moat which anciently signified a castle. Thus *morta de Windsor* is used for Windsor Castle, in the agreement between King Stephen and Henry Duke of Normandy. So that *Mortella* may readily be considered as the diminutive of *Morta*.

There are, however, some very respectable authorities which differ from the above etymology, from which we have selected the following:

**MORTELLO, MERTOLA**, or much more probably **MARTELLO TOWERS**, from the Italian "*Sonare le Campana a Martello*," to sound the alarm bell; which, in parts of Italy (as the Carillons are in Flanders, &c.), is struck by hammers. Thus also, *Beacon-Points* in Corsica and Greece, are called *Martello Cape*. In old French also, the word, for the same thing (now *marteau*), was *Martel*; and "*Martel en tete*," the old adage for a rumour of annoyance and alarm. Though this might derive too from the popular abhorrence of Charles Martel's administration! that demon of taxation! the proverbial curse of his country, for oppressions and impositions the most abominably vile! *Mortello* has no discoverable affinity to any place, language, or known man. For *Mertola*, there is, only, the name of a place in the West of Spain.

The effectual resistance which can be made by a small party, in one of these towers, is sufficiently proved by the following extract of a letter from Lord Hood, dated Victory, St. Fiorenzo, February 22, 1794:

"On the 7th, Commodore Linzee anchored in a bay to the westward of Martella Point, with the several ships and transports under his command.—The troops were mostly landed that evening, and possession taken of a height which overlooks the tower of Mortella. The next day, the General (Dundas) and Commodore being of opinion that it was advisable to attack the tower from the bay, the Fortitude and Juno were ordered against it, without making the least impression, by a cannonade continued for two hours and a half; and the former ship being very much damaged by red hot shot, both hauled off. The walls of the tower were of a prodigious thickness, and the parapet, where there were two eighteen-pounders, was lined with bass junk, five feet from the walls, and filled up with sand; and although it was cannonaded from the height for two days, within 150 yards, and appeared in a very shattered state, the enemy still held out; but a few hot shot setting fire to the bass, made them call for quarter.

## M O T

ter. The number of men in the tower was thirty-three; only two were wounded, and those mortally."

**MORTES-Payes**, Fr. Soldiers that were paid for the constant duty of a town or fortified place, both in time of peace and war. Infantry regiments, which were occasionally stationed in citadels and garrisoned towns, took the right of the *Mortes-payes*, and had the precedence in chusing lodgings.

**MORTIERS** *Pierriers*, Fr. See **STONE MORTARS**.

**MORTIER** *Perdreau ou à Perdreau*, Fr. See **PARTRIDGE MORTAR**.

**MORTIER à la Cohorn**, Fr. A small mortar which is used only to throw grenades. It is so called from that celebrated engineer, who first adopted it.

**MORTISE**, a hole cut in wood, so that another piece may be fitted into it.

**Les MORTS**, Fr. The dead on a field of battle are so called.

**MOT**, Fr. Parole, watchword.—This word bears the same import in French that it does in English. See **PAROLE**.

*Donner le Mor*, Fr. To give the parole, or watchword.

*Aller prendre le Mor*, Fr. To go for the parole or watchword.

*On l'envoie porter le Mor*, Fr. he was sent with the parole or watchword.

In the French service *parole* and *countersign* are frequently comprehended under the word *mot*, viz. *Le mot qu'on avoit donné le jour du combat, étoit Saint Louis et Paris*; which according to the English method of giving out orders would have stood thus:—Parole St. Louis, countersign Paris. See **Mots**.

**Mot du guet**, Fr. See **GUET**.

**Mot de Ralliement**, Fr. A word given to any armed body of men, who either attack or are attacked, and which serves as a rallying point amongst them. At the battle of Malplaquet the commanding officer of the regiment of Navarre gave out in orders as a *mot de ralliement*, *Notre dame de frappe-fort*, or our holy lady (meaning the virgin) that strikes home. The virgin was the regimental patroness; and the term had such an effect upon the soldiers, that they fought with unusual intrepidity. So true is the remark, that a disposition to pleasantry among the French, manifests itself on the most trying, and most melancholy occasions.

## M O T

**MOTHIR** *al Mooluc*. In Indian fortification, barricadoes, intrenchments, or breastworks, are so called.

**MOTION**, is defined to be the continued and successive change of place. There are three general laws of motion: 1. That a body always perseveres in its state of rest, or of uniform motion in a right line, till by some external force it be made to change its place: for as a body is passive in receiving its motion, and the direction of its motion, so it retains them without any change, till it be acted on by something external.— 2. The second general law of motion is, that the change of motion is proportional to the force impressed, and is produced in the right line in which that force acts. 3. The third general law of motion is, that action and re-action are equal, with opposite directions, and are to be estimated always in the same right line.

**MOTION**. A word bearing the same signification in the British service, as *tems* does in the French. It is peculiarly applicable to the manual and platoon exercise; as, *draw ramrod*, which is done in two motions:—*Tirez la baguette en deux tems*. Motion, in a military sense, is distinguished from movement, inasmuch as the former applies specifically to something done by an individual, with an instrument of war, as handling the musquet; whereas the latter is generally understood to mean the different changes, &c. which are made in evolutions, &c. Motion is the particular adjunct of the manual, and movement that of evolution. The French make the same distinction with respect to *Maniement*.

**MOTION**, (*Mouvement*, Fr.) generally so called, a continual and successive change of place.

**MOTION equal or uniform**, (*mouvement égal, ou uniforme*) that by which a body runs equal spaces in equal times; such are the motions of celestial bodies.

**MOTION absolute**, (*mouvement absolu*, Fr.) is a mutation or change of absolute space, and its celerity is measured according to absolute space.

**MOTION relative**, (*mouvement relatif*, Fr.) is a change or mutation of relative place, and its celerity is measured according to relative space.

**MOTION equally accelerated**, (*mouvement*

*ment uniformément accéléré*, Fr.) is such whose velocity equally increases in equal times.

**MOTION** *equally retarded*, (*mouvement uniformément retardé*) is such whose velocity equally decreases, in equal times, till the body comes to rest.

**MOTIONS** *of an army*, (*mouvements d'une armée*, Fr.) are the various changes which it undergoes in marching from one place to another; these are more generally understood by the term movement.

**MOTIONS** *militaires*, Fr. This term was formerly used among the French to signify the various evolutions which an army or regiment might be put through. It has been succeeded by *évolutions militaires*, which seems a more comprehensive expression.

**MOTIONS** *of the firelock during the manual and platoon exercise*. Motion in this sense is expressed by *tens* among the French. These consist of those prescribed methods which have been explained under *Manual*.

It is observed in the General Regulations, page 22, that every recruit in the British service, must be taught and practised in the following motions of the firelock until he be perfect in them; they being necessary for the ease of the soldier in the course of the exercise:—*Supporting arms, carrying arms, ordering arms, standing at ease, attention; shouldering from the order*; and, we presume, *securing arms*, especially as it is now introduced in the new manual.

The recruit must be accustomed to *carry* his arms for a considerable time together; it is most essential he should do so, and not be allowed to support them so often as is practised. We certainly agree with the sensible compiler of the General Rules and Regulations when he says, that long *carrying* arms is not a position of too much constraint. The new mode of carrying (which is with extended arm), is certainly less fatiguing than supporting, since the former leaves the circulation of the blood free, and the latter binds the soldier's arm at the elbow. The French allow great latitude in carrying the musquet, especially in marching and manœuvring. The men are frequently permitted to *slope arms*.

**MOTION** *compound* (*mouvement com-*

*posé*, Fr.) is the motion of one body impelled by two different powers.

**MOTION** *of projection* (*mouvement de projection*, Fr.), that by which bodies are impelled through the air, or through any other fluid. A shell which is forced out of a mortar by means of inflammable gunpowder has a motion of projection.

**MOTION** *of vibration, or vibrating motion* (*mouvement de vibration*, Fr.), is the circular motion of a body, which is generally round or spherical.

**MOTION** *of undulation, or undulating motion*, (*mouvement d'ondulation*, Fr.) a circular motion which is perceptible in water, when any hard substance is thrown into it.

**MOTIONS** *of an enemy*, (*mouvement d'un ennemi*, Fr.) The different marches, positions, &c. which an enemy takes, are so called.

*To watch the MOTIONS of an enemy* (*guêter un ennemi*, Fr.) To keep a good look-out by means of a regular communication between head quarters, and the outposts of your army. On a large scale, the business of an army of observation is chiefly confined to this species of service. On a more limited one, the duty is frequently entrusted to partisans and light troops.

**MOTION** *of a bomb or ball*. The progress which a bomb or ball makes through the air may be said to consist of three sorts, after it has been delivered out of the mortar, or emitted from a gun or musquet. These are:—

*The violent MOTION*, or first explosion, when the powder has worked its effect upon the ball, so far as the bomb or ball may be supposed to move in a right line.

*The mixed MOTION*, or yielding impulse, when the natural weight of the bomb or ball begins to overcome the force which was given by the gunpowder.

*The natural MOTION*, or exhaustion of the first impulse. This occurs when the bomb or ball is falling to the ground.

*To MOTION a thing*, to propose it in a military or civil meeting.

**MOTION**, Fr. This word has been adopted by the French, to convey the same meaning that it does in English, namely, a proposition; hence *appuyer la motion dans une assemblée*; to support a motion in a public assembly or meeting.

meeting. *Délibérer sur la motion*, to deliberate upon the motion. *Retirer sa motion*, to withdraw one's motion. *Rejeter la motion* to throw out the motion.

**MOTS d'ordre et de ralliement**, Fr. In a recent publication written by Paul Thiébault, adjutant general on the French staff, the following explanation is given of paroles and countersigns, which may be considered as the free translation of *Mots*, with this exception, that the *mot de ralliement* seems peculiarly used in the French service.—Among us the parole and countersign only are practised, and their distinct import seems so little understood, that we shall not hesitate to give the whole article from the French.

The *Mots d'ordre et de ralliement*, consist of three distinct and separate words, which are chosen for the specific purpose of enabling the soldiers belonging to the same army, to be in perfect intelligence with one another, especially during the night.

These three words are composed in the following manner, viz. *Le Mor d'ordre*, or what we call the parole, must be taken from the name of some deceased person, to which must be added that of some town or country.

The *mot de ralliement* must consist of a substantive, which does not relate either to the name of a man, the name of a town, or the name of a country.

These three words are given out every morning from head quarters, and are delivered, sealed up, to the officers of the different guards, and to those persons who are entrusted with the command of an outpost, or have the charge of a patrol.

The *Mor d'ordre*, or parole, must never be confided beyond officers and non-commissioned officers; the *mot de ralliement* may in some cases be given to sentinels that are stationed at some distance from the outposts; but those should invariably consist of old soldiers, whose fidelity and courage can be depended on.

The *mot d'ordre*, or parole, as well as the *mot de ralliement*, is always given out from head quarters; nor ought any general or commanding officer to take upon himself to alter either, except un-

der circumstances so peculiarly urgent, that the good of the service would justify the change. Among these circumstances may be considered, the desertion of a sentinel from the out-post, and the strong presumption, that the enemy has been made acquainted with the words, &c. Whenever this necessity occurs, all the commanding officers who have any communication with that quarter from whence the parole was issued, should instantly be made acquainted with the alteration.

With respect to the manner in which these words are to be delivered out, and the frequency of their circulation, the whole must depend upon circumstances. When an army or body of troops lies at some distance from the enemy, they are usually forwarded to the different quarters, camps, or cantonments, for five, ten, or fifteen days together. When close to an enemy, they are given out, as we have already observed, every day. When there is no ground to apprehend a surprize or attack, one word will be sufficient for each day: but, in critical cases, the parole must be changed two or three times during the night. If several corps are cantoned together, the *mot d'ordre* or parole, must be sent to the officer commanding in the cantonment. When the troops are encamped, it is generally sent to the commanding officer of each regiment, and seldom to the commandant of each brigade.

The *mot*, or parole, must always be given out during the day, except in cases of emergency; and it must never be delivered to any person, unless the individual who is entrusted with it be fully convinced, that he is authorised to receive it. It ought indeed to be given personally to him only to whom it is addressed by name—*Manuel des Adjudans-Général*, p. 112-13-14.

**MOTTO**. Any sentence, either with or without a badge by which any regiment is particularly distinguished; as, for example, the 3d of foot, or Buffs, have a griffin embossed as their badge, and the motto, *Veteri frondescit honore*. The various military orders have also different mottos. See GARTER, BATH, THISTLE, &c. also DEVISE, Fr.

**MOUCHARD**, Fr. a domestic spy, an informer. Among the French it more particularly means a person who is employed

## M O V

ployed to watch the motions of any marked man. Creatures of this infamous, although perhaps necessary, class, were constantly attached to the police of France. The term is known amongst us. These Gentlemen have been called, humourously enough, *Reporters*. In a military sense, neither the term nor the practice can be properly understood; at least we should hope so, as it is beneath the high mind of a soldier to *fetch and carry*.

**MOVEABLE PIVOT.** When the *pivot flank* of any body of men describes in the wheel a smaller circle than the *wheeling flank*, the wheel is said to be made on a moveable pivot.

**MOVEMENT, (mouvement, Fr.)**—Under this term are comprehended all the different evolutions, marches, countermarches and manoeuvres which are made in tactics for the purpose of retreating from, or of approaching towards an enemy. It also includes the various dispositions which take place in pitching a camp, or arranging a line of battle. The science of military movements forms one of the principal features in the character of a great commander. If he be full of resources in this important branch, he may oftentimes defeat an enemy without even coming to blows; for to conceal one's movements requires great art and much ingenuity.

**MOVEMENT.** According to the Regulations, printed by authority, every inspecting general is directed to report minutely and comparatively on the performance by each battalion of the great leading points of movement. He is particularly to observe and specify

*Whether or not*

The original formation is according to order. The marches are made with accuracy, at the required times and length of step, and on such objects as are given.

The proper distances in column and echelon are at all times preserved.

The wheelings are made just, and in the manner prescribed.

The formations into line are made true, without false openings, or necessity of correction.

The officers are alert in their changes of situation, exact in their own personal movements, and loud, decided,

## M O V

and pointed, in their words of command.

The march in line is uniformly steady, without floating, opening, or closing.

The march in file, close, firm, and without lengthening out.

The officers, and under officers, give the aids required of them with due quickness and precision.

Hurry and unnecessary delay, are equally avoided.

In the firings the loading is quick, the levelling is just, the officers animated and exact in their commands.—See p. 270, Infantry Regulations.

**MOVEMENTS.** In cavalry movements the following great leading points should be attended to by every inspecting general, independent of the circumstances which relate to the dress and general appearance of man and horse, the exercise on foot, &c. &c.

He must particularly observe and specify in his communications to the commander in chief,

*Whether or not*

The original formation of squadrons and regiments be according to order.

The marches made with accuracy, at the paces required, and on such objects as have been given.

The proper distances in column are at all times preserved.

The wheelings are made quick, just, and in the manner prescribed.

The formations into line are made true in the intended direction, without false openings, or necessity of correction; or that corrections, when necessary, are instantly made.

The changes of position are made with due celerity and justness.

The officers are alert in their changes of situation, exact in their own personal movements, and loud, decided, and pointed in their words of command.

The march in line is uniformly steady, without opening, floating, or closing.

The flank march is compact, firm, and without improperly lengthening out.

The officers and under officers give the aids required of them with due quickness and precision.

N. B. Hurry and delay in military movements, are two extremes which should be equally avoided.

In the firings, the loading is quick, the

the levelling is just, and the officers firm in their command.

The officers, non-commissioned officers, and men ride well, and the horses are active, vigorous, and well broken.—See p. 341, Cavalry Regulations.

Movements, in a general sense, may be considered under the following heads, viz. 1st, Offensive movements; the great advantage which attends this movement, consists in the measure having been previously determined upon, and a consequent preparation made for rapid execution before the design is obvious.—Much, however, will depend, upon the justness of the distances, and of the march in column, having been so taken as to allow of decisive operations.—Manœuvre will chiefly operate where an enemy is inferior in number, inexpert in movement, weakly posted, and where the weak point is found out, and is attacked before he can move to strengthen it.

*Counter Movements of defence*, are movements calculated to defeat any premeditated attack. According to the Regulations they may be briefly explained, by observing, that if the flank of one body is thrown forward, that of the other may by similar means be thrown back. If one body prolongs its line to outflank, the other may by the same movement maintain its relative situation. Whatever change of position is made by one body, the other may counteract it by a similar change. If the wing of one body is refused, the wing of the other may be advanced to seize an advantage.

*Movements of previous formation*, are military dispositions which every general must have carefully digested, before he advances upon a direct line of offensive operations. A body of troops, which has a considerable march to make previous to the attack, must always approach an enemy in one, or more columns, at open or other distances, according to circumstances.—Some general knowledge of an enemy's situation, determines the manner in which he is to be approached, the composition of the columns, the flank of each which leads, and their combination in forming. A nearer view determines a perseverance in the first direction, or a change in the leading flanks, and direction of the columns, in order

to form in the most speedy and advantageous manner.

*Movements of attack*, are made by bodies of men advancing in line or column to attack an opposing enemy.—When a considerable body of troops is to act offensively, it must form in line at latest within 1200 or 1500 paces of a posted enemy, unless the ground particularly favour, and cover from the fire of the artillery, the enfilade of which is what chiefly prevents bodies in column from approaching nearer; and that space, under the unceasing fire of their own artillery, troops in line will march over in 18 minutes.

Movements of attack, when they are made from a parallel position, must be either in line, or by a flank of the line in echelon, that flank being reinforced, and the other refused; or from a new and advantageous position taken up, and not provided against by the enemy.—From *oblique* position the attack is directed against a comparatively weak point of the enemy. Attacks from the center are more liable to be enfiladed, and are sooner guarded against than from the flank.

*Movements of retreat*, are combinations of columns of march, covered by positions, and a strong rear guard. Troops are occasionally taken out of the retiring columns of march, to occupy positions and heights; they remain till the rear has passed, and then become the rear guard; this they continue to be, till they find other troops in like manner posted; these last in their turn become also the rear guard, and in this way are the troops of columns in such situations relieved. A rear guard will fall back by the *retreat in line*—the *chequered retreat*—the *passage of lines*—the *echelon* changes of position. See page 376, *Infantry Regulations*.

*Movements in echelon of the line*.—Echelon, or diagonal movements, especially of a great corps, are calculated not only to disconcert an enemy, but likewise to enable the army, which adopts them, either to make a partial attack, or a gradual retreat. The attack may be formed from the center, or from either of the wings reinforced.—If successful, the divisions move up into line to improve the advantage: if repulsed, they are in a good situation to

protect the retreat. In advancing, the several bodies move independent, act freely, and are ready to assist: in retreating, they fall gradually back on each other, and thereby give mutual aid and support. Echelon movements, in fact, comprize within themselves all the essential principles of extension and compression, which are found in close or open column, with the additional advantage of being better adapted to throw a considerable line into an oblique position, of presenting a narrow front, with the means of increasing it at pleasure, unexposed to the enemy's fire, and of diminishing it with the same facility and safety.

*Echelon MOVEMENTS on an oblique line*, are best calculated to outwing an enemy, or to preserve the points of appui of a wing; possessing this advantage, that such movement may not be perceptible to the enemy, as it consists of short and independent lines, which, when seen at a distance, appear as if a full line.

Echelon movements by half battalions or less, are made by their directing flank, which is always the one advanced from, or wheeled to. Echelon movements by whole battalions, are governed by their advanced serjeants.—Echelon movements by several battalions, are made in line, each by its own center, and the whole by the battalion next the directing flank. See page 324, *Infantry Regulations*.

*MOVEMENTS that are made in face of an enemy.* (*Mouvements de vant l'ennemi*, Fr.) There is no operation in war which requires so much nicety, precision, and judgment, as that of retreating in the presence of an enemy. Every movement from the direct line of battle is more or less critical; but when a regiment is obliged to retire under the eye, and perhaps the fire of a pursuing foe, the utmost presence of mind is required in the officers who command, and the greatest steadiness in the men. In a situation of this sort it becomes the peculiar duty of the major, to see that every change of manœuvre, and every movement, be made with promptitude and accuracy. For although he is subordinate to others, and must, of course, follow superior directions, yet so much of the executive duty rests with him,

that his character and abilities, as an officer, will be more conspicuous on these occasions than in any other. The movements of a corps which retreats, consist in retrograde marches, in line, by alternate companies, in column, by wings, or in square.

*Eventail or Fan MOVEMENT.* This movement is performed on the march, and must be begun at a distance behind the line, proportionate to the body which is to oblique and form. It may be applied to one battalion, but hardly to a more considerable body, which would find great difficulty in the execution. It gives a gradual increase of front during a progressive movement. With justness it can be made on a front division only, not on a central or rear one: in proportion as the leading platoon shortens its step, will the one behind it, and successively each other, come up into line with it. As soon as the colours of the battalion come up, they become the leading point. Although it is an operation of more difficulty, yet if the leading division continues the ordinary, and the obliquing ones take the quick step, till they successively are up with it, a battalion column which is placed behind the flank of a line, may, in this manner, during the march, and when near to the enemy, gradually lengthen out that line. For the manner in which it is performed, see page 170, of *Rules and Regulations*, Part III.

*Vourff or Quick MOVEMENT.* This movement is frequently resorted to when the head of a considerable open column in march arrives at or near the point from which it is to take an oblique position, facing to its then rear, and at which points its third, fourth, or any other named battalion, is to be placed.

The justness of the movement depends on the points in the new direction being taken up quickly, and with precision. On the previous determination that a certain battalion, or division of a battalion, shall pass or halt at the point of intersection; and that every part of the column which is behind that battalion, shall throw itself into open column on the new line behind the point of intersection, ready to prolong or to form the line whenever it comes to its turn.

This movement will often take place in the change of position of a second line,

line, and is performed by all those that are behind the division, which is to stop at the point where the old and new lines intersect. And at all times when the open column changes into a direction on which it is to form, and that the division which is to be placed at the point of entry can be determined, it much facilitates the operation to make every thing behind that division gain the new line as quick as possible, without waiting till the head of the column halts.

For elucidation, &c. see pages 311 and 312, Part IV. of Rules and Regulations.

**MOUFLE**, *Fr.* a sort of stuffed glove. It is common among the French to say, *Il ne faut pas y aller sans moufles*; figuratively meaning, that no dangerous enterprise ought to be undertaken without sufficient force to carry it into execution.

**MOUILLAGE**, *Fr.* anchorage.

**MOUILLER**, *Fr.* to anchor; to let go the anchor.

**MOULDS**, vessels used in casting shot for guns, muskets, carbines, and pistols: the first are of iron, used by the foundries, and the others by the artillery in the field, and in garrison.

*Laboratory Moulds*, are made of wood, for filling and driving all sorts of rockets, and cartridges, &c.

**MOULDINGS**, of a gun or mortar, are all the eminent parts, as squares or rounds, which serve for ornaments: such as the breech-mouldings. The rings, &c. are also called mouldings.

**MOULE**, *Fr.* See **MOULD**.

**MOULIN de fusée volante**, *Fr.* a piece of round wood used in fireworks.

**MOULIN**, *Fr.* a mill.

**MOULIN à bras portatif**, *Fr.* a species of hand-mill, which was invented in France by Le Sieur de Lavault, and which has been found extremely useful to troops on service. Ten of these mills may be conveniently placed on one wagon.

**MOULINET**, *Fr.* a capstan, turnstile, &c.

**MOUND**, in old military books, is a term used for a bank or rampart, or other defence, particularly that which is made of earth.

**MOUNTEE**, an alarm to mount, or go upon some warlike expedition.

*Half or small MOUNTINGS*. The

shirt, shoes, stock, and hose, or stockings, which were formerly furnished by the colonels or commandants of corps every year. This mode of distribution, which engendered a multiplicity of abuses, has been abolished by his Royal Highness the Duke of York: in lieu of which a regulation has taken place, that (if honestly attended to) must be highly beneficial to the soldier.

By a regulation, dated April the 9th, 1800, in lieu of the small articles of clothing, which were annually given, by the colonels of regiments, to non-commissioned officers and private soldiers, and were called *small or half mounting*, two pair of good shoes, of the value of five shillings and sixpence each, have been substituted. These shoes are to be provided in conformity to a pattern lodged at the office of the comptrollers of the accounts of the army; and patterns of the shoes are to be approved and sealed by the general officers of the Clothing Board, at the same time, and in like manner, as for the clothing: one pair is to be delivered out at the annual period of clothing, and the other pair at the end of six months from that time; and in order to prevent the injury that the shoes might sustain, from remaining a long time in store in the East and West Indies, they are to be forwarded to corps on those stations at two different periods, instead of sending the whole quantity with the clothing.

Should the price of good shoes at any time exceed five shillings and sixpence per pair, the difference, which shall be declared by the Clothing Board at their first meeting, on or after the 25th of April in each year, is to be charged to the respective accounts of the non-commissioned officers and soldiers receiving them, but with respect to the 5th battalion of the 60th regiment, the difference is to be taken between four shillings and sixpence paid to the colonel, and the actual price declared as above mentioned.

The allowances, directed to be given by the colonels, in lieu of the former small articles, called *half-mounting*, are to be regularly credited to the men, and to be expended for their use, in such articles as are suitable to the respective climates in which they are serving.

Non-

Non-commissioned officers and soldiers of infantry, dying or discharged before the completion of a full year, from the usual day of delivering the annual clothing of their regiments, have no demand whatever on account thereof.

A recruit, who comes into the regiment after the proper time of the delivery of the clothing, is entitled to a pair of shoes at the next delivery of that article.

The compensation money to be given to each serjeant in the infantry in lieu of half-mounting is - - - 0 14 0

To each corporal, drummer, } 0 11 0  
and private - - - }

To MOUNT, is a word variously made use of in military matters, as

To MOUNT Cannon, to place any piece of ordnance on its frame, for the more easy carriage and management of it in firing. Hence to dismount is to take cannon from any serviceable position.

To MOUNT a Breach, to run up in a quick and determined manner to any breach made in a wall, &c.

To MOUNT Guard, to do duty in a town or garrison, in a camp, or at out quarters.

To MOUNT, to place on horseback, to furnish with horses; as, twelve thousand men have been well mounted, without any considerable expence to the country. A cavalry regiment may be said to be well or ill mounted; in either of which cases, the commanding officer is generally blameable or praise-worthy.

To mount likewise signifies the act of getting on horseback, according to prescribed military rules: as, to prepare to mount, is when the left hand files move their horses forwards in the manner described under *unlink your horses*. The whole then put their firelocks into the buckets, and buckle them on, doubling the strap twice round the barrel, come to the front of the horses, fasten the links, throw them over the horses' heads with the left hand round the horses' heads, take their swords, and buckle them tight into the belt, take the bit reins up, then take a lock of the mane, and put it into the left hand, the left foot into the stirrup, and the right hand on the cantle of the saddle, waiting for the word *mount*: when they spring

smartly up, and look to the right of the rear. At the next signal, they must throw the leg well over the cloak, and place themselves well in the saddle, with the right hand leaning on the off holster. The men must be careful not to check the horses with the bits in mounting. In mounting and dismounting, the files that move forward must take care to keep their horses straight, and at the prescribed distances from each other; and when mounting, as soon as the gloves are on, belts right, &c. the left files must dress well to the right, putting the horses straight, and leaving distance enough for the right files to come in.

To MOUNT a gun, is either to put the gun into its carriage, or else, when in the carriage, to raise the mouth higher.

MOUNTAINS, called *Great and Little St. Bernard*, a part of the Alps, situated in the Glacieres of Switzerland, which has been rendered famous in modern history by the passage of the French army under Bonaparte, then First Consul. The following account is extracted from a late French publication, and cannot fail of being interesting to our military readers, as it is told in the plain and simple language of a soldier, who was present during the whole of this astonishing campaign. On the 16th of May, 1800, the van-guard, commanded by General Lannes, climbed up the mountain: the Austrians, although greatly inferior in number, defended themselves, step by step, and never disappeared till they perceived another corps of the French army descending the mountain of the Little St. Bernard, menacing their rear, and absolutely interrupting their retreat.

The first division of the army, under General Watrin, followed the movement of the vanguard.

Until this period of time, neither artillery nor ammunition had crossed either eminence; the whole was collected at St. Peter, (a small village at the foot of the mountain) where the park of artillery was established. It appeared at first impossible to transport this heavy and embarrassing ordnance across the mountain; however it was natural to consider the question, *what is an army in the present day without artillery?*

*tillery?* Its necessity in this respect was manifest and imperious.

The artillery corps immediately set about dismounting the cannons, caissons, forges, &c. piecemeal. Gassendi, inspector of ordnance, gave directions for hollowing a number of the trunks of trees in the same manner that wood is hollowed for troughs. The pieces of cannon were deposited in those machines, and after having been drawn up these almost inaccessible heights, by five or six hundred men, according to the weight of metal, were left to slide down the steep declivities. The wheels were carried up on poles; and sledges made expressly for the purpose at Auxonne, conveyed the axle-trees, and the empty caissons; and lastly, mules were loaded with ammunition in boxes made of fir.

The exertion of a whole battalion was requisite for the conveyance of one field piece, with its proportion of ammunition: one half of the regiment could only draw the load, while the other half was obliged to carry the knapsacks, firelocks, cartridge-boxes, canteens, kettles, and more especially five days' provisions, in bread, meat, salt, and biscuit.

Such was the commencement of the march of the French army across the Alps.

**MOUNTING and DISMOUNTING**, *when the horses are to be led away.* It frequently happens, especially in retreating or advancing, that it may be necessary to cover the defiling of a regiment by dismounting a squadron or part of one, to flank the mouth of a defile. This is generally effected by lining the hedges, &c. and keeping up a hot fire upon the enemy. It follows, of course, that the horses cannot be linked together, but they must be led away (in a retreat) to the most convenient spot in the defile for the men to mount again. In advancing they must be led to a spot where they will not impede the defiling of the regiment, but where they will be at hand for the dismounted parties to mount.

**Guard MOUNTING**, (*à la garde montante*, Fr.) the hour at which any guard is mounted obtains this appellation, viz. *The officers will assemble at guard mounting.*

**MOURGON**, Fr. a man belonging to the galleys, who plunges into the sea

to pick up any thing that may have fallen overboard.

**MOURIR**, Fr. to die.

**MOURIR d'un bel epic**, Fr. a French phrase, which signifies to fall under the hands of an enemy of great skill and reputation.

**MOURNE**, that part of a lance or halbert, to which the steel or blade is fixed.

**MOUSER**, an ironical term, which is sometimes used in the British militia to distinguish battalion men from the flank companies. It is indeed generally applied to them by the grenadiers and light bobs, meaning, that while the latter are detached, the former remain in quarters, like cats, to watch the mice, &c. In the line, and among the guards, they are called *buffirs*.

**MOUSQUET**, Fr. musquet. This word, which signifies an old weapon of offence that was formerly fired by means of a lighted match, has been variously used among the French, viz. *gros mousquet*, a heavy musquet; *un petit mousquet*, a short musquet; *un mousquet léger*, a light musquet.

*Recevoir un coup de MOUSQUET*, Fr. to receive a musquet shot.

*Porter le MOUSQUET dans une compagnie d'infanterie*, Fr. to stand in the ranks as a foot soldier.

**MOUSQUET BISCAYEN**, Fr. a long heavy musquet which is used in fortified places to annoy reconnoitring parties.

**MOUSQUETADE**, Fr. a musquet shot. *Il fut tué d'une mousquetade*; he was killed by a musquet shot. This term is generally used to express a smart discharge of musquetry: *On a entendu une vive MOUSQUETADE*: they have heard a brisk discharge of musquetry.

*Essayer une MOUSQUETADE*, Fr. to stand or support a discharge of musquetry.

**MOUSQUETAIRES**, Musketeers, Fr. a body of men so called during the old government of France. It consisted of two companies selected from the young men of noble extraction. The first company was formed in 1622, by Louis XIII. out of another company, called his Majesty's Carabineers. The king was captain, so that the person who commanded had only the rank of captain lieutenant. The company remained up-

on this footing until 1646, when it was reduced at the instigation of Cardinal Mazarine, who, from personal motives, had taken a decided aversion to it. Louis XIV. restored it in 1657, by the same appellation, and increased the establishment to 150 musketeers. They were commanded by one captain-lieutenant, one sub-lieutenant, two ensigns, and two quarter-masters.

The second company, when first created was attached to Cardinal Mazarine, as his personal guard; but the officers received their commissions from the king. An alteration took place in the management of this company in 1660, the men being incorporated with the rest of the troops that were destined for the immediate protection of his majesty's person. In consequence of this change they did duty on foot, but were again mounted, in order to accompany the expedition against Marsal, which took place that year.

Louis XIV. named himself captain of this company, as well as of the first; and from that period both companies became subject to the same regulations, with no other difference, than that of precedence as first and second company. From the year 1663, the establishment of each company was 300, exclusive of the officers. They were subsequently reduced to a lower establishment. Having originally been raised to serve on foot or horseback, the mousquetaires were allowed drums and fifes when they acted as infantry troops; and trumpets when they acted as cavalry. In 1663 hautboys were substituted for fifes and trumpets. It is supposed that mounted drummers were first used among the Mousquetaires du Roi. Previous to the Revolution each of these companies consisted of one captain-lieutenant, two sub-lieutenants, two ensigns, two cornets, two aid-majors, eight quarter-masters, four brigadiers, sixteen sub-brigadiers, six standard-bearers, one ensign or colour-bearer, one hundred and eighty musketeers, six drummers, four hautboys, one commissary, one chaplain, one quarter-master-serjeant, one surgeon, one apothecary, one blacksmith, one saddler, and three treasurers.

This corps was raised, not only for the purpose of attending his majesty on foot or horseback, and of going on ser-

vice, as circumstances might require, but it was further intended to be a sort of military school for the French nobility. Several princes, almost all the general officers, and marshals of France, were indebted to this establishment for the first elements in military science.

The officers belonging to these companies, clothed, armed, and mounted themselves, without putting government to the expence of one shilling. Their uniform was a scarlet coat, faced with the same, and a scarlet waistcoat. Those attached to the first company had gold buttons and button-holes, and their coats were edged with gold. Those attached to the second company, had the same ornaments in silver: their hats, in which they wore a white feather, were laced according to the same distinction, as were likewise their horse cloths and holsters. Instead of the musquet, which they formerly carried, they were latterly armed with a carbine, two pistols in the saddle-bow, and a sword calculated for infantry or cavalry duty. The brigadiers and sub-brigadiers, were armed in the same manner. The quarter-masters, when mounted, had only a sword and two pistols, but on foot they each carried a halbert or pike, which they used as the serjeants belonging to infantry regiments were directed to do.

The cloaks and great coats of the mousquetaires were made of blue cloth laced with silver. The quarter-masters, brigadiers, and sub-brigadiers, wore the same, with more or less lace, according to the rank they held. These cloaks, &c. were distinguished from those worn by the rest of the army; having white crosses sewed before and behind, with red streaks running into the corners or reentrant angles. The first company was marked with red, and the second with yellow streaks. The uniform of the superior officers, (who were generally called *officiers à hausse-col*, or officers wearing gorgets or breast-plates,) was embroidered in gold or silver, according to the company which they commanded. The troop horses of the first company, were of a white or dapple grey colour; those of the second company were black. Each company had a flag and two standards; so that when the mousquetaires served on foot, the flag or colour was unfurled, and the standards were cased;

cased; and when they were mounted, the standards were displayed, and the colours cased. The standards belonging to the first company represented a bomb falling upon a besieged town, with this motto: *Quo ruit et lectum*: those of the second company bore a bunch of arrows, with these words underneath: *Alterius Jovis altera tela*. The mousquetaires received their colours from the king's hands.

The mousquetaires never served on horseback, except when the king travelled: on those occasions they stood next to the light horse. Their duty when on foot, was the same as that of the royal regiment of guards.

When they did duty on foot at the palace, they were provided with a handsome table at the expence of the civil list. The two companies always mounted guard without being mixed with any other troops; whereas the rest of the household did duty by detachment.

The musketeers did not take rank in the army, but they enjoyed the same privileges that were attached to the body guards, gendarmes, and light horse.—They were frequently called *mousquetaires gris*, and *mousquetaires noirs*, from the colour of their horses.

**MOUSQUETON**, *Fr.* a fire-arm which is lighter and shorter than the common firelock; usually carried by dragoons. The French guards, during the monarchy, had their mousquetons highly polished and ornamented with gold, &c.

**MOUSSE**, *Fr.* moss.

**Mousse**, *garçon de bord*, *Fr.* a cabin-boy. *Powder monkey*, on board our ships of war, corresponds with the term *mousse*. According to a French writer, these boys were so hardly used in the old French navy, that, whether they deserved punishment or not, some captains of ships directed them to be chastised regularly once a week.

**MOUSTACHE**, *Fr.* this word was originally derived from the Greek, adopted by the Italians, subsequently by the French, and then used by us. It literally means the hair which is allowed to grow upon the upper lip of a man; and which is better known amongst us by the familiar term whiskers. The French use it in a figurative sense, viz.

*Enlever sur la moustache; jusque sur la moustache de quelqu'un*, *Fr.* to seize

or take possession of any thing under the very nose, or in the presence of a person. *Les ennemis sont venus pour défendre cette place, on la leur a enlevée sur la moustache*, the enemy drew near to defend the town, but it was taken under their very noses.

*Donner sur la MOUSTACHE*, *Fr.* to give a slap on the face.

**MOUTARDE**, *Fr.* means literally mustard. The word, however, is frequently used by the French in a figurative sense, viz. *s'amuser à la moutarde*, to be uselessly employed, or busy about nothing. It is likewise used to express impatience: *la moutarde lui monte au nez*, *Fr.* he grows restless and impatient; a defect, to which no general or commanding officer should give way.

*C'est de la MOUTARDE après diner*, *Fr.* This expression is in general use among the French, and signifies, that assistance, &c. is brought when there is no longer need of it. When commissaries, &c. make up a lame account for monies received, it is common to say, *et le reste en moutarde*.

**MOUTH**. See *Muzzle*.

**MOUTH of FIRE**. The entrance into the garrison of Gibraltar, by the grand battery and the old mole, is so called by the Spaniards, on account of the formidable appearance of the ordnance from the lines.

**MOUTONNIER**, *Fr.* sheep-like; gregarious. The notorious Marat used to say, during the effervescence of the French revolution, *Tout peuple est moutonnier*, the nation or people at large are always gregarious, and ready to follow a leader.

**MOUVEMENTS**, *Fr.* movements, commotions, broils.

**MOUVEMENTS de Tête**, *Fr.* motions of the head. For the English explanation of these motions, see *Eyes*. The French express them in the following manner: *Tête à droite*, eyes right.—*Tête à gauche*, eyes left.—*Fixe*! eyes front.

**MOUVEMENTS des troupes sous les armes**, *Fr.* By these are understood the different changes of position, and the various facings which soldiers go through under arms.

**MOUVEMENTS de pied ferme**, *Fr.* that exercise, consisting of the manual and facings, which a soldier performs, without

out quitting his original ground. The left foot on this occasion becomes a standing pivot.

**MOUVEMENS ouverts**, Fr. movements, or evolutions, which are made at open order.

**MOUVEMENS serrés**, Fr. movements, or evolutions, which are made at close order.

**MOUVEMENS opposés**, Fr. opposite movements, or evolutions.

**MOUVEMENT**, Fr. See *Movement*.

**MOUVEMENT**, Fr. See motion for its general acceptance.

**MOYENNE**, Fr. a piece of ordnance formerly so called. See *Minion*.

**MOYEN**. The bastions which are constructed on the angles are called Royal Bastions. Some engineers have distinguished those bastions by the name of *Moyens Royaux*, or medium royals, whose flanks contain from ninety to one hundred toises.

**MOYENNE Ville**, Fr. a term given by the French to any town in which the garrison is equal to a third of the inhabitants, and which is not deemed sufficiently important to bear the expence of a citadel; more especially so, because it is not in the power of the inhabitants to form seditious meetings without the knowledge of the soldiers who are quartered on them.

**MOYENS côtés**, Fr. in fortification, are those sides which contain from eighty to one hundred and eighty toises in extent: these are always fortified with bastions on their angles. The *Moyens côtés*, are generally found along the extent of irregular places; and each one of these is individually subdivided into small, mean, and great sides.

**MUD-WALLS**. The ancient fortifications consisted chiefly of mud or clay, thrown up in any convenient form for defence against sudden inroads.

**MUET**, Fr. See *Mute*.

**To MUFFLE**, to wrap any thing up so as to deaden the sound, which might otherwise issue from the contact of two hard substances. When the French effected their passage over the march Albarredo, on their route to the plain of Marengo, they were so much exposed to the Austrians, that in order to get their artillery and ammunition over, without being betrayed by the noise of the carriage wheels, and the clattering

of the horses' shoes, both were muffled with bands of hay and straw, and dung was spread over the ground. In this manner they crossed that stupendous rock. Thirty men were put to the drag ropes of each piece, and as many were employed to draw up the caissons.

**MUFFLED**. Drums are muffled at military funerals or burials, and at military executions, particularly when a soldier is shot for some capital crime.

**MUGS**, a banditti of plunderers from an Indian nation.

**MULAGIS**, Turkish cavalry, consisting of a small number of chosen men, who are personally attached to the *Begleberg*, or viceroy, in Turkey. The *begleberg* is head or chief of a militia, which is called after him, and is commanded by subordinate beglers. There are 24 beglers, or viceroys, under the Grand Signor, who are extremely rich.

**MULATTO**, (*mulâtre*, Fr.) in the Indies, denotes one begotten by a negro man on an Indian woman, or by an Indian man on a negro woman. Those begotten of a Spanish woman and Indian man are called *Metis*, and those begotten of a savage by a *Metis*, are called *Jambis*. They also differ very much in colour, and in their hair.

Generally speaking, especially in Europe, and in the West Indies, a mulatto is one begotten by a white man on a negro woman, or by a negro man on a white woman. The word is Spanish, *mulata*, and formed of *mula*, a mule, being begotten, as it were, of two different species.

Mulattoes abound in the West Indies; so much so, that on the dangerous symptoms of insurrection, which appeared among the blacks after the success of Toussaint in St. Domingo, a proposal was made to government by a rich planter, to raise a mulatto corps, as an intermediate check upon the blacks.—After six months suspense, the memorial was rejected by the war minister, Henry Dundas, now Viscount Melville.

**MULCT**. A soldier is said to be mulct of his pay when put under fine or stoppages for necessities, or to make good some dilapidations committed by him on the property of the people or government.

**MULTANGULAR**, is said of a figure, or body, which has many angles.

**MUL-**

**MULTILATERAL**, having many sides.

**MULTIPLE**, one number containing another several times; as 9 is the multiple of 3, 16 that of 4, and so on.

**MUNIMELL**, a strong hold, fortification, &c.

**MUNIR** *une place*, Fr. to throw stores, ammunition, and provisions, into a place which is likely to be besieged.

**MUNITION**, Fr. This word is used among the French to express not only victuals and provisions, but also military stores and ammunition.

**MUNITIONS de bouche**, Fr. victuals or provisions, (such as bread, salt, meat, vegetables, butter, wine, beer, brandy, &c. which may be procured for soldiers) are so called by the French. Corn, oats, hay, straw, and green forage, for cavalry, bear the same appellation. See *Subsistence*.

**MUNITIONS de guerre**, Fr. military stores, such as gunpowder, shot, balls, bullets, matches, &c. See *Stores*.

**MUNITIONNAIRE** *ou entrepreneur des vivres*, Fr. military purveyor, or commissary of stores. Annuary Bourguignon, from Niort, a town of Poitou, was the first *Munitionnaire* and *entrepreneur général*, or purveyor-general, among the French. He was appointed in the reign of Henry III. in 1574. See *Purveyor*.

**MUNITIONNAIRE pour la marine**, Fr. the head of the victualling office was so called among the French. There was a person on board every ship of war, called *Commis* or Clerk, who acted under his orders. The appointment of the latter was somewhat similar to that of a purser in the British navy.

**MUNSUB**, *Ind.* a title which gives the person invested with it, a right to have the command of seven thousand horse, with the permission of bearing amongst his ensigus that of a Fish; neither of which distinctions is ever granted, excepting to persons of the first note in the empire.

**MUNUS**, a gift; an offering. It was customary among the Romans, when a military funeral took place, for the friends of the deceased to throw his clothes and arms into the pile the instant the body was consigned to flames; this was looked upon as the last offering to

his memory. Sometimes they threw gold and silver with the arms and accoutrements. When the remains of Julius Cæsar were burned, all the soldiers who attended threw their helmets, &c. into the burning pile. We, in some degree, follow this custom, by placing upon the pall the hat or cap, side-arms, &c. of the deceased; but we are too wise to destroy the articles, although not sufficiently prudent (especially in populous towns) to burn the body.

**MUR**, Fr. a wall.

**Mur Crénelé**, Fr. a wall which has small intervals or spaces at the top, that serve more for ornament or ostentation than for real defence. This method of building prevailed very much in former times.

**Mur de face**, Fr. outside wall of any building.

**Mur de face de devant**, Fr. front outside wall; it is likewise called *Mur Antérieur*.

**Mur de face de derrière**, Fr. the wall which forms the backside of a building is so called: it is likewise named *Mur postérieur*.

**Murs latéraux**, Fr. the side walls of a building.

**Gras Murs**, Fr. all front and partition walls are so called.

**Mur de pierres sèches**, Fr. a wall that is built of stone, without mortar or cement. Walls of this construction are seen in several counties in England, particularly in the west country.

**Mur en l'air**, Fr. Every wall is so called that does not rise uniformly from a parallel foundation. Walls built upon arches are of this description.

**Mur mitoyen**, Fr. partition wall.

**Mur d'appui**, Fr. a wall of support. Any wall that is built to support a quay, terrace, or balcony, or to secure the sides of a bridge, is so called. *Mur de parapet*, or parapet wall, may be considered as a wall of support.

**MURAGE**, money appropriated to the repair of military works, was anciently so called.

**MURAILLE de retêtement**, Fr. the wall which surrounds a fortified place is so called.

**Charger en MURAILLE**, Fr. to charge or attack an enemy, in a firm, compact, and steady line.

**MURAILLE de la Chine**, Fr. See *Wall*.

**MURAL-Crown.** See **Crown**.  
**Couronne MURALE, Fr.** See **Mural Crown**.

**MURATORES**, individuals, among the Romans, who were employed during the games that were performed in the Circus. It was their business to see that the chariots started at given times, that they preserved their order or ranks, and kept their allotted distances.

**MURDRESSES**, in *ancient fortification*, a sort of battlement with interstices, raised on the tops of towers to fire through.

**Ville MURÉE, Fr.** a walled town.

**MURRIION.** See *Morion*.

**MURDERERS**, or *murdering pieces*, small pieces of ordnance, having chambers, and made to load at the breech. They are mostly used at sea, in order to clear the decks when an enemy has boarded a vessel.

**MUSCULUS.** Kennett in his *Roman Antiquities*, page 237, says, "the *Musculus* is conceived to have been much of the same nature as the *Testudines*; but it seems to have been of a smaller size, and composed of stronger materials, being exposed a much longer time to the force of the enemy; for in these *Musculi*, the pioneers were sent to the very walls, where they were to continue, while with their dolabre or pick-axes, and other instruments, they endeavoured to undermine the foundations. Cæsar has described the *Musculus* at large in his second book of the civil wars.

**MUSICK**, a general term for the musicians of a *regimental band*.

**MUSICIANS.** It has been often asked, why the dress of musicians, drummers, and fifers, should be of so varied and motley a composition, making them appear more like harlequins and mountebanks, than military appendages?—The following anecdote will explain the reason, as far at least as it regards the British service:—the musicians belonging to the guards formerly wore plain blue coats, so that the instant they came off duty, and frequently in the intervals between, they visited alehouses, &c. without changing their uniform, and thus added considerably to its wear and tear. It will be here remarked, that the clothing of the musicians falls wholly upon the colonels of regiments; no allowance being specifically made for

that article by the public. It is probable, that some general officer undertook to prevent this abuse, by obtaining permission from the king to clothe the musicians, &c. in so fantastical a manner, that they would be ashamed to exhibit themselves at public-houses, &c.

**PHYRGIAN MUSIC**, a martial sort of ancient music, which excited men to rage and battle: by this mode Timotheus stirred up Alexander to arms.

**Modes of Music.** There were three modes among the ancients, which took their names from particular countries, namely, the *Lydian*, the *Phrygian*, and the *Doric*.

**MUSKET,** } the most serviceable  
**MUSQUET,** } and commodious firearm used by an army. It carries a ball of 29 to 2 pounds. Its length is 3 feet 6 inches from the muzzle to the pan. The Spaniards were the first who armed part of their foot with muskets. At first they were made very heavy, and could not be fired without a rest: they had match locks, and did execution at a great distance. These kinds of muskets and rests were used in England so late as the beginning of the civil wars.

**MUSKETS** were first used at the siege of Rhege, in the year 1521.

**MUSKET BASKETS.** These are about a foot, or a foot and an half high, eight or ten inches diameter at bottom, and a foot at the top; so that, being filled with earth, there is room to lay a musket between them at bottom, being set on low breast-works, or parapets, or upon such as are beaten down.

**MUSKETEERS**, soldiers armed with muskets; who, on a march, carried only their rests and ammunition, and had boys to bear their muskets after them.—They were very slow in loading, not only by reason of the unwieldiness of the pieces, and because they carried the powder and ball separate, but from the time required to prepare and adjust the match: so that their fire was not so brisk as ours is now. Afterwards a lighter kind of match-lock musket came in use; and they carried their ammunition in bandoliers, to which were hung several little cases of wood, covered with leather, each containing a charge of powder; the balls they carried loose in a pouch, and a priming-horn, hanging by their side

side. These arms were about the beginning of this century, universally laid aside in Europe, and the troops were armed with firelocks.

**MUSKETOONS**, short thick muskets, whose bore is the 38th part of their length: they carry five ounces of iron, or  $7\frac{1}{2}$  of lead, with an equal quantity of powder. The term musketoon is also applied to a fire-arm resembling a horse pistol, of a very wide bore, and sometimes belt-mouthed.

**MUSRAT**, the noseband of a horse's bridle.

**MUSSUK**, *Ind.* a skin in which water is carried.

**MUSTACHES**, whiskers, worn by the Germans, Russians, and other foreign troops.

**MUSTER**, in a military sense, a review of troops under arms, to see if they be complete, and in good order; to take an account of their numbers, the condition they are in, viewing their arms, and accoutrements, &c. This word is derived from the French *montrer*, to shew.—At a muster every man must be properly clothed and accoutred, &c; and answer to his name. The French call it *appel nominatif*.

**MUSTERS**. By section the fourth of the Articles of War, it is enacted, that musters shall be taken of the regiments of life guards, horse guards, and foot guards, twice at least in every year, at such times as shall have been or may be appointed, and agreeably to the forms heretofore used therein.

The musters of every other regiment, troop, or company, in the service, are to be taken at such times, and in such manner, as is directed by the late regulations touching regimental and district paymasters, and the mode of mustering, paying, and settling the accounts of the army.

All commanding officers, and others concerned in the mustering, as well of the regiments of life guards, horse guards, and foot guards, as of the other forces, are enjoined to give the utmost care and attention to the making up of the muster rolls with strict exactness and accuracy.

Every officer who shall be convicted before a general court-martial of having signed a false certificate, relating to the absence of either officer, non-commissioned officer, or private soldier, will be cashiered.

Every officer who shall knowingly make a false muster of man or horse, and every officer and commissary, or muster-master, who shall wittingly sign, direct, or allow the signing of the muster rolls, wherein such false muster is contained, shall, upon proof made thereof, by two witnesses before a general court-martial, be cashiered, and suffer such other penalty as he is liable to by the act for punishing mutiny and desertion.

Any commissary or muster-master, who shall be convicted before a general court-martial, of having taken money, by way of gratification, on the mustering any regiment, troop, or company, or on the signing the muster-rolls, shall be displaced from his office, and suffer such other penalty as he is liable to by the said act.

Every colonel, or other field officer, commanding a regiment, troop, or company, and actually residing with it, may give furloughs to non-commissioned officers and soldiers, in such numbers, and for so long a time, as he shall judge to be most consistent with the good of our service; but no non-commissioned officer or soldier, shall, by leave of his captain, or inferior officer, commanding the troop or company, (his field officer not being present) be absent above twenty days in six months; nor shall more than two private men be absent at the same time from their troop or company, unless some extraordinary occasion shall require it; of which occasion the field officer present with and commanding the regiment is to be the judge.

It is strictly forbidden to muster any person as a soldier who does not actually do his duty as a soldier, &c. See **LIVERY**.

**MUSTER-master-general**, *Commissary-general* of the **MUSTERS**, one who takes account of every regiment, their number, horses, arms, &c. reviews them, sees that the horses are well mounted, and all the men well armed and accoutred, &c.

**MUSTER-ROLL**, (*état nominatif*, Fr.) a specific list of the officers and men in every regiment, troop, or company, which is delivered to the inspecting field officer, muster-master, regimental or district paymaster, (as the case may be) whereby they are paid, and their condition is known. The names of the officers

cers are inscribed according to rank, those of the men in alphabetical succession. Adjutants of regiments make out the muster rolls, and when the list is called over, every individual must answer to his name. Every muster-roll must be signed by the colonel, or commanding officer, the paymaster and adjutant of each regiment, troop, or company: it must likewise be sworn to by the muster-master or paymaster, (as the case may be) before a justice of the peace, previous to its being transmitted to government.

**MUSTI**, one born of a Mulatto father or mother, and a white father or mother.

**MUTILATED**, in a military sense, signifies wounded in such a manner as to lose the use of a limb. A battalion is said to be mutilated, when its divisions, &c. stand unequal.

**MUTINE**, or **MUTINEER**, a soldier guilty of mutiny.

See **MUTINER**, *Fr.* to mutiny; a term which is particularly applicable to soldiers, who cabal together to the ultimate subversion of good order and discipline. It is wisely observed by the French writer of this article, that however just the ground of discontent may be, no time must be lost in instantly quelling the first symptoms of disobedience. The leaders, or primary instigators, must be summarily proceeded against, and not allowed to mix with their fellow soldiers until the cause has been thoroughly examined, and effectual measures have been adopted to obviate any mischievous consequence. In order to prevent soldiers from mutinying, their commanding and subordinate officers must, under all circumstances, be scrupulously correct towards them; and if the condition of things should be such, as to render it impossible to grant redress in the first instance, solemn promises must be made, and those promises religiously attended to. It ought always to be remembered, that the dreadful example of a barrack or garrison being in a state of mutiny, may be extended to all the inhabitants of the town and adjacent villages. On this account no troops should be placed in barracks, or stationed in citadels, without the strictest attention having previously been given to the character of

each individual officer belonging to them: the latter must be resolutely just, without unnecessary harshness or severity.

**MUTINERIE**, *Fr.* mutiny; the act of mutinying.

To **MUTINY**, in a military sense, to rise against authority. "Any officer or soldier who shall presume to use traitorous or disrespectful words against the sacred person of his Majesty, or any of the royal family, is guilty of mutiny."

"Any officer or soldier who shall behave himself with contempt or disrespect towards the general or other commander in chief of our forces, or shall speak words tending to their hurt or dishonour, is guilty of mutiny."

"Any officer or soldier who shall begin, excite, cause, or join in any mutiny or sedition, in the troop, company, or regiment, to which he belongs, or in any other troop, or company, in our service, or on any party, post, detachment, or guard, on any pretence whatsoever, is guilty of mutiny."

"Any officer or soldier who, being present at any mutiny or sedition, does not use his utmost endeavours to suppress the same, or coming to the knowledge of any mutiny, or intended mutiny, does not, without delay, give information to his commanding officer, is guilty of mutiny."

"Any officer or soldier, who shall strike his superior officer, or draw, or offer to draw, or shall lift up any weapon, or offer any violence against him, being in the execution of his office, on any pretence whatsoever, or shall disobey any lawful command of his superior officer, is guilty of mutiny. See the *Articles of War*."

**MUTINY-Act**, an act which passes every year in the House of Commons, to answer some specific military purposes; and by which the army is continued on a peace or war establishment. For amendments in the Mutiny Act, passed in the 45 Geo. 3. see *Regimental Companion*.

**MUTON**, a spear or fish-gig used by the natives of new Holland. See *Grant's Voyage*.

**MUZZLE** of a gun or mortar, the extremity at which the powder and ball are put in.

**MUZZLE-RING** of a gun, that which

which encompasses and strengthens the muzzle or mouth of a cannon.

**MYRIAD**, denotes the number ten thousand.

**MYRIARCH**, the captain, or commander of ten thousand men.

**MYRMIDONS**, in antiquity, a people of Thessaly, of whom it is said in fabulous history, that they arose from pismires, upon a prayer put up to Jupiter, by Æacus, after his kingdom had been depopulated by a pestilence. In Homer, and in Virgil, the Myrmidons are Achilles's soldiers. The term myrmidon is used in modern times to express any rude ruffian, or soldier of all work.

**MYRMILLONES**, a sort of combatants among the Romans, who had on the top of their cask or helmet, the representation of a fish; and in their engagements with the Retiarii, if they were caught and wrapped in the net, it was not possible for them to escape.

**MYSORE**, an extensive country in the East Indies, which borders on the Carnatic to the S. W. bounded on the east by the south part of the Carnatic, and the kingdom of Trichinopoly. It extends west within thirty miles of the sea coast of Malabar. Seringapatam is the capital.

## N

**NABOB**, *Ind.* a corruption from Nabwah, the plural of Nail. The title means deputed, but it is often assumed in India without a right to it. As the real signification and import of this word are not generally known, we shall extract a passage out of Mr. Orme's History of the Carnatic, that will place them in the clearest point of view:

"Most of the countries which have been conquered by the Great Mogul in the peninsula of India, are comprised under one vicerealty, called from its situation Decan, or South. From the word Soubah, signifying a province, the viceroy of this vast territory is called Soubadar, and by Europeans improperly Soubah. Of the countries under his jurisdiction, some are entirely subjected to the throne of Delhi, and governed by Mahomedans, whom Europeans improperly call Moors; whilst others remain under the government of their original Indian princes or rajahs, and are suffered to follow their ancient modes, on condition of paying tribute to the Great Mogul. The Moorish governors depending on the Soubah, assume, when treating with their inferiors, the title of Nabob, which (as we have already observed) signifies deputy: but this in the registers of the throne (of Delhi) is synonymous to Sou-

badar, and the greatest part of those who style themselves nabobs are ranked at Delhi under the title of Phous-dar, which is much inferior to that which they assume. The Europeans established in the territories of these pseudo-nabobs (if we may be allowed the expression) following the example of the natives with whom they have most intercourse, have agreed in giving them the title they so much affect.

"A nabob ought to hold his commission from Delhi, and if at his death a successor has not been previously appointed by the Great Mogul, the Soubah has the right of naming a person to administer the nabobship until the will of the sovereign is known; but a nabob thus appointed by a Soubah is not deemed authentically established until he is confirmed from Delhi. The Soubah receives from the several nabobs the annual revenues of the crown, and remits them to the treasury of the empire. The nabobs are obliged to accompany him in all military expeditions within the extent of his vicerealty, but not in any without that extent. These regulations were intended to place them in such a state of dependence on the soubah, as should render them subservient to the interests of the empire, and at the same time leave them

in a state of independence, which would render it difficult for the soubah to make use of their assistance to brave the throne.

"Nabobs, however, have kept possession of their governments in opposition both to the soubah and the throne; and what is more extraordinary in the offices of a despotic state, both soubahs and nabobs have named their successors, who have often succeeded with as little opposition as if they had been the heirs apparent of an hereditary dominion." *History of the Carnatic*, Book I. p. 35, 36, 37.

**NABOBSHIP**, the office of nabob. The Carnatic is one of the most considerable nabobships dependant on the soubah of Decan. From its capital it is likewise named the province of Arcot; but its present limits are greatly inferior to those which bounded the ancient Carnatic before it was conquered by the Great Mogul; for we do not find, that the nabobs of Arcot have ever extended their authority beyond the river Godegama to the north, the great chain of mountains to the west, and the borders of the kingdoms of Trichinopoly, Tanjore, and Mysore, to the south. The sea bounds it to the east. It was not before the beginning of last century that this country was entirely reduced by the Moors. For further particulars respecting nabobs, see pages 27 and 28. in the *Dissertation* prefixed to the *History of the Carnatic*.

**NACELLE**, *Fr.* A small boat that has neither mast nor sail. It is properly called a ferry boat.

**NADIR**, in astronomy. is that point in the heavens which is directly under our feet, and is diametrically opposite to the zenith, or point over our heads. The word is pure Arabic, signifying the same thing. The zenith and the nadir are the two poles of the horizon, each 90° distant from it, and consequently each in the meridian.

**NAGARA**, *Ind.* The drum made from a hollow cylinder of teak wood, and the ends covered with goat skin: it is suspended from the left shoulder to the right side, and beat with a stick made of teak wood.

**NAGER**, *Fr.* To swim.

*Se sauver à la NAGE*, *Fr.* To save himself by swimming.

*L'Art de NAGER*, *Fr.* The art of swimming. As this important branch of military and naval education has been little attended to in our island, we think it our duty, under this general head, to give the following extract out of a French publication, and to subjoin to it a very interesting article, with which we have been furnished by a correspondent, who, to our personal knowledge, has practically proved the validity of his arguments.

The Greeks and the Romans, although they held military discipline and evolutions on shore in higher estimation than naval tactics, nevertheless taught their children, in their infancy, to swim. This art, indeed, constituted one of the principal exercises among the latter in the field of Mars or *Campus Martius*.

It were to be wished (continues our French author), that modern speculators in natural philosophy, instead of devoting the whole of their time and attention to the idle and fantastic idea of governing the regions of the air, would enter seriously into the study of this important and necessary art. I do not, however, wish to be understood to mean by this reflexion, that indiscriminate and hazardous bathing should be adopted by our youths. I am well aware of the dangers of such a suggestion. My object is to induce the government of the country to make a suitable establishment for the instruction of young men, and to provide able adepts in the art for that purpose. Innumerable instances might be brought forward to prove the utility of this art. When the island of Ré was besieged and blockaded by the English in 1637, Thoiras, who was governor of the place, dispatched three swimmers to make the Duke of Angoulême acquainted with the critical situation in which he stood. The distance across was upwards of six miles or two French leagues. One of the swimmers was taken by the English; the second was drowned on his return; but the third reached the Duke, communicated the object of his mission, and brought back his answer. When Cyzicum (the ancient Dindymis, formerly a large and strong place) was closely besieged by Mithridates, Lucullus (the Roman general) sent instructions

structions to the inhabitants by a swimmer, who faithfully executed his mission.

**NAGEUR**, *Fr.* a swimmer.

**NAGEURS de l'Armée**, *Fr.* swimmers attached to an army.

**Compagnies de NAGEURS**, *Fr.* troops or companies consisting of swimmers.

**NAGGUR**, *Ind.* the principal drum in Asiatic armies, commonly allowed to persons of high dignity.

**NAIB**, *Ind.* a deputy. The governor of a town under a nawaub or nabob is so called in India.

**NAIC**, or **NAICK**, *Ind.* a subaltern officer in the Sepoys.

**Drill NAIC**, or **NAICK**, *Ind.* a subaltern officer belonging to the native infantry in India, answering to our drill corporal. Every battalion of native infantry has two drill havildars or sergeants, and two drill naicks, called *non-effective*, attached to it.

**NAIL**, (*clou*, *Fr.*) an iron pin.

**NAILS** of various sorts are used in artillery. See **CARRIAGE**.

**Garnish NAILS**, in travelling carriages, have pointed heads like diamonds, with a small narrow neck: they serve to fasten the plates with roses, to cover the side pieces from the ends of the trunnion plates to five or six inches beyond the centre of the carriage.

**Diamond-headed NAILS**, small nails, whose heads are made like a flat diamond, and serve to fix the plates upon travelling carriages.

**Rose-bud NAILS**, are small round-headed nails, driven in the centre of the roses of the plates.

**Counter-sunk NAILS**, those that have flat round heads, sunk into the iron plates, so as to be even with the outside of it.

**Streak NAILS**, are those which fasten the streaks to the felloes of the wheels.

**Box-pin NAILS**, small nails without heads, to pin the nave-boxes to the naves.

**Stub NAILS** are driven on the outside of the nave-hoops to keep them in their places.

**Flat-headed NAILS**, to fasten the locker or any sort of hinges.

**Dog NAILS**, have flat round heads; and one part of the shank next to the head is also round.

**To NAIL**, *spike*, or *cloy* cannon, (*en-*

*clouer le canon*, *Fr.*) to drive an iron spike into the touch-hole, by which means the cannon is rendered unserviceable for the present. When circumstances make it necessary to abandon cannon, or when the enemy's artillery are seized, and it is not however possible to take them away; it is proper to nail them up, in order to render them useless; which is done by driving a large nail or iron spike into the vent of a piece of artillery, to render it unserviceable. There are various contrivances to force the nail out, as also sundry machines invented for that purpose, but they have never been found of general use; so that the best method is to drill a new vent, or touch-hole.

One Gaspar Vimercalus was the first who invented the nailing of cannon. He was a native of Bremen, and made use of his invention first in nailing up the artillery of Sigismund Malatesta.

**NAIRES**, *Ind.* the military tribe of the Malabar coast. Many affirm that they are the oldest nobility in the world. Their pride, on this supposition, is greater than that of the Rajpoots. In 1755, the King of Travancore, with the assistance of a French officer, called Lauvigny, disciplined 10,000 Naires in the method of European infantry.

**NAKARCONNA**, *Ind.* the place where all the drums and war music are kept.

**NAKOUDA**. Captain or pilot so called in India.

**NANA**, *Ind.* the title which is given to the king of the Morattocs. It more properly signifies the acting head of the government, and general of the forces.

**NAP'É de feu**, *Fr.* See **Jets de Feu**.

**NARROW**, of small breadth.

**NARROW Front**. A battalion, &c. is said to assume a narrow front, when it goes from line into column, upon the principles of compression.

**The NARROW**, a channel which runs between the Margate sands and the Main.

**NASR-JUNÇ**, *Ind.* victorious, or triumphant in war.

**NATATION** (*natation*, *Fr.*) Although we have touched upon this article under *Nager*, we shall now enter more fully into the subject. This art consists wholly in being able to support the body towards the surface of the water,

water, so as to float, and to advance by means of a combined and regular action performed by the hands and feet.—Man is the only animal that learns to swim. The brute creation has an aptitude, more or less, by instinct.

The method which is frequently adopted to teach men to swim is so erroneous, that instead of making any progress in the art, beginners almost always experience the most disheartening circumstances. The chief obstacle is the danger of suffocation to which an individual is exposed when he first gets beyond his depth. The water suddenly rushes into his mouth, ears, and nose, and before he can recover from the surprise which it inevitably creates, personal apprehension seizes his mind, and throws every motion of his body into confusion.

There is only one infallible remedy which can be applied to this difficulty; and by which the most unexperienced may be taught to swim both fast and well. A robust and hearty young man ought to learn the art (as far at least as regards the mere circumstance of keeping himself afloat), by attentively following the first instructions, which are not generally known in this country, and which we are not at liberty to publish. Persons of less bodily strength and disposition to learn, will become masters of it in the course of a second or third lesson. The whole secret, in fact, consists in being able to keep the head above water, by a concord of movement in the feet and hands; and when this union is once acquired, a man may exercise himself with ease and gratification.

The art of swimming was reckoned, in ancient times (both among the Greeks and Romans), so essential a part of education, that it was proverbial to say, in speaking of an ignorant man, he has neither *learned to read nor to swim*.

Everard Digby, our countryman, and Nicolas Winman, a German, have both written treatises on this art. Boselli, in his publication, entitled, *De motu Animalium*, has also touched upon the subject, and may be consulted.

In order to swim with ease, and for a length of time, it is necessary that a man should have recourse to frequent practice. He will soon be able to keep afloat, and by that means preserve a

free and uninterrupted respiration, from having his mouth and nostrils constantly above water. He makes use of his feet and hands with the same facility and ease that a good seaman does his oars; and by constantly having those limbs in concert, he not only prevents his body from sinking, but glides through the waves without the least apprehension of danger. Nor are any extraordinary efforts necessary on this occasion; for it is ascertained, upon the truest principles in Hydrostatics, that the body of a man is nearly equal in weight or gravity to the proportionate volume of water in which it is immersed; so that it is, almost of itself, in equilibrium, and consequently requires very little aid to support it.

There is no country, perhaps, better calculated for improvements in this art than Great Britain and Ireland; and none in which common sense prescribes more forcibly the necessity of having its youth early instructed. It is manifest, that although every sea officer is exposed ten times a day to the danger of being drowned, very few of that class know how to swim. We have, indeed, recently experienced, in the loss of the brave and gallant Captain Jarvis, the truth of this observation. Without therefore entering into innumerable proofs of the advantages to be derived to our navy, and to mankind in general, from a knowledge of the art of swimming, we will confine ourselves to its utility as far as regards a land force.

It is well known that the French have paid particular attention to this branch of military knowledge, and that there are not only individuals attached to their armies, who can swim with perfect ease, but that companies, called *compagnies de nageurs*, have been formed, and are still encouraged in their service. Their dress is adapted to the functions they are destined to perform, such as passing a river, &c. in order of battle, or in detached parties, &c. for the purpose of surprising an enemy's advanced posts, or of affording assistance, (by dragging light cables across,) to large bodies of their own men who might be ordered to pass in pontoons.

During the campaign, which was carried on some years back between the Turks and the Austrians, a Frenchman,

man, whose name was Le Febvre, and who had formerly belonged to the gendarmes of France, submitted a plan to Joseph the Second, and proposed the formation of a corps of swimmers, to consist of horse, foot, and artillery.—His offer was very graciously received by the emperor, but the sudden termination of hostilities caused the plan to be left unnoticed by the House of Austria, and was afterwards adopted by the French during all their campaigns in Switzerland, Italy and Germany. Our correspondent states, that in 1799 a detachment of French swimmers passed the river Linth in the neighbourhood of Zurich, took the advanced posts of the Cossacks by surprise, and cut them to pieces. The victory, indeed, which was afterwards gained by Massena over the Russians, was entirely owing to the protection which this corps of swimmers afforded, when a considerable division of French troops effected their passage over the Linth. It is well known, that the Russian general Prince Corsacow, made a most disorderly retreat out of Zurich, after having lost his military chest, his magazines, stores, &c. and upwards of 5000 men. See the particulars of this event in General Massena's dispatches, where he speaks in the highest terms of the corps of swimmers.

In 1800, whilst the French army, under the command of Moreau, was watching the right bank of the Danube, that French general followed the example of Massena, and was equally successful. Two companies of experienced swimmers crossed the river during the night, and whilst one was engaged in driving in the Austrian advanced posts, the other was employed in dragging some pontoons across, and thus enabled a whole battalion to get over.

The Austrians, being suddenly attacked throughout the whole extent of their cantonnments, made a precipitate retreat, and before the close of the following day the whole of the republican division were on the right bank of the Danube.

The present French government have paid particular attention to this important and necessary art. Bonaparte is so convinced of its utility, that he has ordered whole regiments, both horse

and foot, to be exercised in swimming, and to cross the river Seine, which runs through Paris, in complete order of battle. If the intrinsic merits of the art of natation itself, indeed, did not recommend the adoption of some plan, we should think it sufficient ground to go upon by saying, that the French have judged it necessary to form companies of expert swimmers, and that other governments ought to be prepared to meet them in their own way. For although, by the natural vivacity of their natures, the inhabitants of that extraordinary country may learn the art with greater facility than other men, it cannot be denied, but that Englishmen would at least equal them in every point of view.

An establishment of this sort would be attended with very little expence to the public, since out of six moderately sized battalions, three hundred swimmers might be constantly formed, who, at the close of the campaign would join their several troops or companies. The clothing of these men would consist of a worsted jacket and pantaloons, with sandals made of leather and flannel or woollen cloth. Their weapon would be a long light pike fixed by means of an iron ring to a leathern waist belt. The pike, whilst the man is swimming, floats upon the water, and is of considerable use to him. So that after he has been ten minutes out of the water, and on the march, his dress would be dry, or nearly so. On the top of his cap a small compartment is made to hold a pistol with cartridges, and a piece of dry linen.

The chief, and indeed the only essential requisite in the art of natation, is to be able to remain a considerable time in the water without being fatigued, or rendered unfit for immediate action. Some men will swim with extraordinary rapidity, but they cannot stay thirty minutes in the water, without being exhausted. The best method is that which the French call *nager à la brassée*, to swim with the arms extended to their full length upon the surface of the water, and kept in complete unison with the motion of the legs. In order to hold in breath, the head must be kept just above the water, and the body as horizontal as possible, without

any extraordinary effort to support it, as too much exertion only tends to fatigue and ultimately to exhaust the swimmer. In crossing a river, you must endeavour to keep with the stream as much as possible; and when in opposition to it, you must get through with a steady movement of the legs and arms. The French use various expressions to describe the different modes of swimming, viz. *à la nautique*, *à la coupe*, *à la planche*, *et debout*, which we call treading the water: but the best method (because it is the most simple and the least fatiguing) is *à la brassée* or at extended arms.

We should not do justice to the correspondent, who has obligingly furnished us with this article, were we to omit stating, that in 1798 he swam across the Lake of Constance from Überlingen (an imperial city of Fürstentum, in Germany, 12 miles north of Constance) to Danksdorf, and returned again without having touched the ground. A record of this extraordinary effort is kept in the town house of Überlingen. We have also seen the same officer swim from Westminster through Blackfriars Bridge and the main arch of London Bridge, at ebb tide, and make his way through the shipping, &c. close to Greenwich.

We are perfectly convinced within ourselves (and indeed the example of the ancients, as well as the practice of the modern French bear us through) that the formation of a school of military natation would be very beneficial to Great Britain. A small corps of swimmers could, in the space of six weeks or two months, at furthest, be rendered not only masters of the art themselves, but be made capable of teaching others. The head, or principal teacher could instruct a chosen number of men, to be distributed among the several regiments, horse and foot, for the purpose of training up the allotted quota. Some convenient spot, with an appropriate building, might be fixed upon by government for this institution; either upon the banks of the Thames, or in the neighbourhood of High-Wycomb.

The most expert swimmers should regularly return to the several regiments from which they had been taken,

and there instruct a certain number, in order to have a company or detachment of that description always ready for service. It is impossible not to allow, that both in private as well as in public life, a knowledge of this art is highly advantageous; and that a corps of swimmers, well managed and ably conducted, might be rendered useful in every species of service. Our most active and most inveterate foes pay particular attention to this improved branch of military knowledge, and we ought, therefore, to adopt some plan that may put us upon a footing with them. The old Roman adage is applicable on this occasion—*Pas est ab hoste doceri*.

Extract of a letter, written by General Moreau when he had the chief command of the army of the Rhine, during the late war, to the minister of the war department.

Neresheim, 24th June.—I herewith transmit to you a copy of my dispatch to the First Consul, with a correct detail of the battle of Hockstedt. Marshal Kray is forced to abandon Ulm. This successful event on our part is of considerable moment; but great exertions were required to secure it. You will be able to form some opinion of the difficulties we had to encounter, when I state, that although we had neither the advantage of a bridge, nor a single pontoon to cross on, the passage of the river was rendered easy by the intrepidity of a small body of swimmers.

(Signed), MOREAU.  
Certified as correct, (signed) CARNOT.

After having given a detailed account of the state of the two armies, the French general states, that eighty swimmers having crossed the river, and been supplied (by means of two very small boats dispatched after them) with musquets and cartouch boxes, took possession of the two villages of Grensheim and Blenheim, and seized several pieces of ordnance, which were instantly served by some cannoniers that had effected their passage on ladders thrown across the chasm of the broken bridge. These men stood their ground with wonderful steadiness and courage, whilst a detachment of sappers and pontooneers were occupied, under the enemy's fire, in

in repairing the bridges, across which fresh succours were thrown, in order to meet the reinforcements of the enemy; who was no longer at a loss to ascertain the precise object of our attack.

General Grenier likewise made the necessary dispositions to cross the Danube at Guntzburgh; but the Austrians, who had previously destroyed the center arches of the bridge, threw up a sort of temporary fortification on the part that remained, with straw steeped in pitch and other combustible materials, which were to be set on fire the instant the attack should be made. They did not, indeed, omit doing this as soon as they saw the detachment of swimmers plunge into the river. The latter were so eager, that several volunteered to extinguish the fire under a discharge of heavy ordnance and musquetry; but that was not practicable.

General Moreau, speaking of this detachment of swimmers in another part of his dispatches, concludes by saying, "The behaviour of the corps of swimmers, under the command of Citizen Degrometrie, who was adjutant of the 94th demi-brigade, is a proof of intrepidity, of which are there few instances or examples."

The following account is also on record, and was transmitted to Paris by a French officer, who was then serving in Germany.

One of the detachment of swimmers, having crossed the Danube, suddenly took possession of a howitzer, and instantly threatened to fire upon a guard consisting of twenty men, unless they surrendered and gave up their arms: the latter took to their heels, leaving their firelocks behind them, and the swimmer, with a reinforcement of some of his naked comrades, seized the musquets of the Austrian fugitives, and dislodged a guard which had occupied a *tête-de-pont*.

In order to give our military readers a more accurate idea of the importance of the *coup de main* which was executed by the detachment of swimmers, we shall make another extract from General Moreau's official communication.

"The movement, which to me appeared absolutely necessary, was not only difficult, but extremely hazardous. We were unluckily destitute of every

species of pontoon equipage, &c. and the enemy had not only destroyed the bridges, but also sunk his boats, pontoons and rafts."

This was the position of the army on the 13th day of June; which position had been gained by dint of hard fighting, and by forcing the enemy to fall back on Ulm.

We have already stated, that eighty swimmers, naked, or rather slightly clothed, and afterwards armed with musquets and cartouch-boxes, had crossed the river. In consequence of their success, the 94th demi-brigade immediately followed, took possession of the villages of Grensheim, Blenheim, Langenau, and Sharingen, where General Marigny was slightly wounded.

General Grenier, on the other hand, had crossed the Danube at Gunzburgh.

These different movements, which were begun by a small body of swimmers, gradually led to the memorable battle of Hohenlinden, the success of which secured to France so marked a superiority over the Austrians in Germany, and completed Bonaparte's triumph in Italy.

In offering these extracts to our readers, we are aware of the high colouring which was invariably given to the official dispatches of France during her revolutionary career. The proof, however, of the utility of a corps of swimmers in any country, cannot be weakened by the manner in which partial occurrences may be represented.

**NATION**, a people; also a country. As the English nation, the French nation. It is more generally used in the first sense; as, *The nation at large seems disposed to resist every attempt that the French might make to invade the country.*

**NATIONAL**, that which concerns, or belongs to a whole nation.

**NATIONAL troops**, are those born in our own dominions, in opposition to foreigners.

**NATIVE**, in general, denotes a person born in a certain place, but it refers more particularly to the proper residence of the parents, and where the person has his education.

**NATIVE Cavalry**, a body of troops so called in India, in contradistinction to the king's regiments. According to the regu-

regulations printed at Calcutta in 1797, each regiment was directed to have six troops, consisting of two captains, one captain-lieutenant, six lieutenants, three cornets, two sergeants, six subidars, six jemidars, eighteen havildars, eighteen naicks, six trumpeters, 420 troopers, six puckallies. The staff consists of one adjutant, one quarter-master, one paymaster, one assistant surgeon, one serjeant-major, one quarter-master serjeant, one drill havildar, one drill naick, one trumpeter-major, six pay-havildars, six farriers, and one native doctor.

Each regiment to be commanded by a field officer.

**NATIVE Infantry**, a body of troops under the immediate direction of the Presidency of Bengal, composed of the natives of India. According to the regulations published at Calcutta, in 1797, it is directed, that the battalions of native infantry should be formed into regiments of two battalions each, with ten companies in each battalion, the regiment to consist of one colonel, two lieutenant-colonels, two majors, (junior lieutenant-colonel, and junior major, to be without companies) seven captains, one captain-lieutenant, 22 lieutenants, 10 ensigns, two sergeants, 20 subidars, 20 jemidars, 100 havildars, 100 naicks, 40 drums and fires, 1600 privates for Bengal, 1800 privates for Madras and Bombay, 20 puckallies. The staff consists of two adjutants, one paymaster, one surgeon, two mates, one serjeant-major, one quarter-master serjeant, two native doctors, one drum-major, one fife-major, two drill havildars, and two drill naicks.

The peace establishment of these corps was ordered to consist of four regiments, to be commanded by two lieutenant-colonels to the two first, and two majors to the 3d and 4th regiments; a brigade major to be allowed to the cavalry.—The whole, when raised, were to be commanded by a colonel commandant.—But, at the period mentioned, only two regiments of native cavalry were raised, and twelve regiments of native infantry.

It was further directed, that upon the completion of the native cavalry, the promotion of officers should proceed by seniority in their respective regiments, until they arrived at the rank of captain, and afterwards to rise in the whole corps

to the rank of major, and to the command of regiments. The promotion to major, and command of regiments, was subjected to the same principle, as in the infantry, in regard to being unfit.—But if field officers of cavalry were superseded in consequence of being unfit to command, they were to be allowed to retire with the pay of lieutenant-colonel of infantry.

The promotions in the native infantry were to take place according to seniority in their respective regiments, to the rank of lieutenant-colonels, and afterwards to colonels, and command of regiments, with the following proviso:

That should the senior lieutenant-colonels appear to the government at the Presidency, either upon representation of the commander in chief, or by any other means, to be unfit for the command of regiments, they are to be passed over, and junior officers promoted. But the reasons for such supersession are to be entered on the records, for the information of the Court of Directors.

The same principle was directed to be applied to the European infantry, to the promotion of officers of artillery to the command of battalions, and of corps; to the chief engineers, to the colonels commandants, and officers to command regiments of cavalry, and to the rank of major-generals from that of colonels.

It was further ordained, that should any captains or subalterns obtain leave from that period to exchange, from one regiment to another, they were to come into the regiment to which they were removed as youngest of their respective ranks, according to the practice in the king's service.

It was also ordered, that each regiment of native cavalry, and native infantry, in the absence of the colonel, should be under the general command of the senior lieutenant-colonel, who was to have the particular command of the first battalion, and the junior lieutenant-colonel that of the second battalion.

The same regulation prevails in the Indian, or native corps, with respect to the appointment of pay-masters, that exists in the king's service.

About the same period, a very satisfactory

factory regulation took place in favour of the European and native or company's troops, to prevent the growth of much existing jealousy between them and the king's troops. The Right Hon. Henry Dundas, (now Viscount Melville,) one of his Majesty's principal secretaries of state, undertook to recommend to his majesty to give every officer of the company a king's commission, of the same date with that which he received from the company, with a retrospect founded on the date of the king's commission they then held, so as to prevent supersession by the various promotions which had recently taken place by general brevet in the king's army.

**NATURAL FORTIFICATION**, consists in those natural obstacles which are found in some countries, and which impede or prevent the approach of an enemy. Thus a place, the avenues to which are easily closed, or which is surrounded by impassable rivers or marshes, is defended by natural fortification.

**NAVAB**, *Ind.* See *Nabob*.

**NAVAGE**, *Fr.* an obsolete French term, which formerly signified a fleet.

**NAVAL**, *Fr.* This word is used to convey the same meaning among the French that it does with us, viz. *armée navale*, naval armament; *combat naval*, sea fight, or naval combat; *forces navales*, naval forces. It is remarked in the *Dictionnaire de l'Academie Françoise* that *naval* when used in the masculine gender, is not susceptible of the plural number.

A **NAVAL**. According to Shakespeare, this term signifies the same as fleet or navy.

**NAVAL armament**, the fitting out a fleet, with all kinds of provisions and military stores, for actual service.

**NAVAL camp**, in military antiquities, a fortification, consisting of a ditch and parapet on the land side, or a wall built in the form of a semi-circle, and extended from one point of the sea to the other. This was beautified with gates, and sometimes defended with towers, through which they issued forth to attack their enemies. Towards the sea, or within it, they fixed great pales of wood, like those in their artificial harbours; before these the vessels of burthen were placed in such order, that

they might serve instead of a wall, and give protection to those without; in which manner Nicias is reported by Thucydides to have encamped himself. When their fortifications were thought strong enough to defend them from the assaults of enemies, the ancients frequently dragged their ships on shore. Around these ships the soldiers disposed their tents, as appears every where in Homer: but this seems only to have been practised in winter, when their enemy's fleet was laid up, and could not assault them; or in long sieges, and when they lay in no danger from their enemies by sea, as in the Trojan war, where the defenders of Troy never once attempted to encounter the Grecians in a sea fight.

**NAVAL crown**, in Roman antiquity, a crown conferred, among the Romans, on persons who distinguished themselves in sea engagements. A. Gellius says, in general, the naval crown was adorned with prows of ships. Lipsius distinguishes two kinds; the first he supposes plain, and given to the common soldiers; the other rostrated, and only given to generals, or admirals, who had gained some important victory at sea.

**NAVAL officers**, are admirals, captains, lieutenants, masters, boatswains, midshipmen, gunners, &c.

**NAVAL engagement**, implies, in general, either a sea fight between single ships, or whole fleets of men of war, or galleys, &c.

**NAVE**, in gun carriages, that part of a wheel in which the arms of the axle-tree move, and in which the spokes are driven and supported. See *Wheel*.

**NAVE-hoops**, are flat iron rings to bind the nave: there are generally three on each nave.

**NAVE-boxes**, were formerly made of brass; but experience has shewn that those of cast iron cause less friction, and are much cheaper: there are two, one at each end, to diminish the friction of the axle-tree against the nave.

**NAVES Plicatiles**, pontoons which were anciently used by the Romans, and which were made of skins and hoops that took to pieces.

**NAUFRAGE**, *Fr.* shipwreck.

**NAVIGATION**, the theory and art of conducting a ship by sea, from one port to another, or of disposing and influencing

**fluencing** her machinery, by the force of the wind, so as to begin and continue her motion at sea.

**NAVIRE** *de guerre*, Fr. a man of war.

**NAVIRE marchand**, Fr. a merchant-man. It is likewise called *vaisseau marchand*.

**NAULAGE**, **NAULIS**, Fr. passage money or freight given for goods or persons carried by sea, or passage over a river.

**NAULISER**, Fr. to freight or hire a vessel.

**NAUMACHIE**, or sea fights, owe their original to the time of the first Punic war, when the Romans first initiated their men in the knowledge of sea affairs. After the improvement of many years, they were designed as well for the gratifying the sight as for increasing their naval experience and discipline; and therefore composed one of the solemn shows, by which the magistrates or emperors, or any affectors of popularity, so often made their court to the people. It will be observed from this passage out of Kennett's Roman Antiquities, page 269, that the necessity which Rome was under of fighting Carthage upon her own element, first gave rise to naval manœuvres. But the overgrown empire of the former, and the subsequent corruption of her people, soon converted these powerful auxiliaries to the legions, by whom she had conquered the universe, into instruments of pleasure and debauchery. Lampridius, in the life of the emperor Heliogabalus, relates that, in a representation of a naval fight, he filled the channel, where the vessels were to ride, with wine instead of water. A story scarcely credible, though we have the highest conceptions of that wretch's prodigious luxury and extravagance. The frequent threats which a powerful neighbour of these islands has put forth, and the similitude which she affects to draw between herself and Great Britain, to Rome and Carthage, may probably lead to great naval exertions. But if England be only true to herself, the naumachies of France will have little effect upon the natural bulwarks of the country.

**NAUTICAL planisphere**, a description of the terrestrial globe upon a plane,

for the use of mariners: but more usually called *chart*.

**NAVY**, implies, in general, any fleet, or assembly of ships. It is, however, more particularly understood of the vessels of war that belong to a kingdom or state. The term is also used to denote a collective body of officers and seamen. They are called the royal navy.

**Navy-board**, together with its civil and military departments, consists of a lord high admiral, or lords commissioners for executing this office; one first lord commissioner, and six other lords commissioners, with a number of inferior officers, and clerks.

**Surveyor of the NAVY**, an officer who enquires into the state of all stores, and sees that the king's ships are regularly supplied with them.

**Treasurer of the NAVY**, an officer who receives money out of the exchequer to pay all charges of the royal navy, by order from the principal officers of it. It is particularly directed, by statute, that all monies received on this head shall be lodged in the bank of England, and be drawn out for the immediate and open purposes of the navy only.

**NAWAUB**, *Ind.* See **NABOB**.

**NEABUT**, *Ind.* a deputyship, or lieutenancy: from *nab*, a deputy.

**NECESSARIES**, in a military sense, are such articles as are ordered to be given to every soldier in the British service, at regulated prices. Those to be provided by stoppage from the pay of the soldiers of regiments of dragoon guards, dragoons, and fencible cavalry, are:—An extra pair of breeches of the same quality, and to be in wear with those furnished by the colonel.

A pair of breeches slings.

A stable jacket, trowsers, and foraging cap.

A nose bag, watering bridle and log.

Three shirts.

One night cap.

One stock and clasps.

Three pair of worsted stockings.

One pair of long black gaiters.

Two pair of shoes.

One pair of shoe clasps.

Three shoe brushes.

Two combs, razor and soap.

One clothes brush, worm and picker.

Many

Mane comb and sponge, curry comb and brush.

Horse picker and scissors.

Emery, oil, pipe-clay, whiting and blacking.

Button stick and hook.

Powder bag, powder and puff.

Carbine lock case.

A pair of saddle bags.

The actual expenditure for horse cloths and surcingles, not exceeding *one shilling and eight pence per annum* for each man, will be defrayed by the public.

The necessaries to be provided by stoppage from the pay of the soldiers of regiments of foot, militia, and fencible infantry, are:—

One pair of shoes.

One pair of black cloth (long) gaiters.

Three shirts.

Three pair of worsted or yarn socks.

Worsted or yarn mitts during the winter.

One black stock.

One foraging cap.

One knapsack.

One clothes brush.

Three shoe brushes.

Black ball.

Hair ribbon and leather

Two combs.

Straps for carrying the great coat.

*N. B.* The breeches, and any other articles of clothing or necessaries, which it may be requisite to have *replaced* from the soldier's stoppages, are to be made exactly of the same material and pattern as those originally furnished by the colonel.

**NECK of LAND.** This term is probably meant to signify what Bailey describes under *Land-Cape*, which he calls a narrow point of land, that runneth farther into the sea than the rest of the Continent. The French call it *langue de terre*, which, literally taken, is a tongue of land, or narrow slip that runs to the extremest point of a promontory or isthmus. The French also use *langue de terre* to express any slip of ground which runs through a wider space. Hence *une langue de terre labourable qui traverse la prairie*, an arable tongue or slip of land, which runs through the meadow. Whereas *gorge*, which is the literal translation of neck, is only used among the French to express a narrow space or hollow, as *gorge de montagnes*. See also *gorge*, in **FORTIFICATION**.

**NECK of a gun**, that part which lies between the muzzle mouldings and the cornish ring.

**NECK of the cascade**, that part which lies between the breech mouldings and the cascade.

**NEESHUNGPAT, Ind.** a violent assault without bloodshed.

**NEGATIVE.** This term is sometimes used to express the result of measures or enterprizes, which, though not entirely successful, are not productive of serious or mischievous consequences. † Hence *Negative Success*.

**NEGATIVE Penalties**, certain laws, whereby persons are excluded from honours, dignities, &c. without incurring any positive pains.

**NEGLECT of DUTY.** Officers of soldiers convicted of neglect of duty, are punishable at the discretion of a court martial.

**NÉGOCIATEUR, Fr.** a confidential person, who is entrusted by his sovereign, or any other reigning power, with some affair of state.

**NEGRE, NEGRESSE, Fr.** See **NEGROES**.

**NEGRILLON, Fr.** a little negro.

**NEGROES**, blacks, moors. A kind of, slaves brought from Guinea, and other parts of Africa, and sent into the colonies of America, to cultivate sugar, tobacco, indigo, &c. and to dig in the mines of Peru or Mexico.

**NELLI-COTAH**, a fort situated about forty miles to the south of Tiuvilly, in the East Indies. This fort has been rendered memorable by the intrepid manner in which it was carried by the English in 1755. The detachment consisted of 100 Europeans, and 300 sepoy, with two field pieces. These troops (to quote Mr. Orme's words in his History of the Carnatic, page 336, Book V.) set out at midnight, and performed the march in eighteen hours: the polygar, startled at the suddenness of their approach, sent out a deputy, who pretended he came to capitulate, and promised that his master would pay the money demanded of him in a few days; but suspicions being entertained of his veracity, it was determined to detain him as a pledge for the execution of what he had promised, and he was accordingly delivered over to the charge of a guard. The troops were

so much fatigued by the excessive march they had just made, that even the advanced centinels could not keep awake; and the deputy perceiving all the soldiers who were appointed to guard him, fast asleep, made his escape out of the camp, and returned to the fort; from whence the polygar had sent him only to gain time, in order to make the necessary preparations for his defence. This being discovered early in the morning, it was determined to storm the place, of which the defences were nothing more than a mud wall with round towers. The troops had not brought any scaling ladders, but the outside of the wall was sloping, and had many clefts worn in it by the rain, so that the assault, although hazardous, was nevertheless practicable. It was made both by the Europeans and the sepoy with undaunted courage, in several parties at the same time; each of which gained the parapet without being once repulsed, when the garrison retired to the buildings of the fort, where they called out for quarter; but the soldiers, as usual in desperate assaults, were so much exasperated by a sense of the danger to which they had exposed themselves, that they put all they met to the sword, not excepting the women and children; suffering only six persons out of four hundred to escape alive: sorry we are to say, that the troops and officers who bore the greatest part in this shocking barbarity, were the bravest of Englishmen; having most of them served under Colonel Lawrence, on the plains of Tritchinopoly: but those who contemplate human nature, will find many reasons supported by examples, to dissent from the common opinion, that cruelty is incompatible with courage.

NERF, *Fr.* See *SINEW*.

NESHAUNBURDAR, *Ind.* an ensign.

NETHERLANDS, that part of Lower Germany which lies next to the sea, and so called from being situated between France, Lorrain, Germany, and the Ocean.

They were formerly divided into 17 provinces, four of which were dukedoms, viz. Brabant, Limburg, Luxemburg, and Guelderland; seven were earldoms, viz. Flanders, Artois, Hainault, Holland, Zealand, Namur, and Zutphen;

and five baronies, viz. West Friesland, Mechlin, Utrecht, Overysell, and Groningen.

These were originally governed by distinct lords or princes, but were all united under Philip the Good, Duke of Burgundy, who left them to his son Charles, surnamed the Hardy, who being killed at Nancy, in 1747, the 17 provinces fell to his only daughter, Mary of Burgundy, who by marrying with Maximilian the First, carried them into the house of Austria.

The kings of France pretended a right to Artois, Flanders, &c. In the reign of king Philip II. of Spain, William of Nassau, Prince of Orange, and several other discontented noblemen, gave beginning to those disturbances which terminated in the loss of Holland, and the other countries known by the name of the *United Provinces*, occasioned by the dread of the Inquisition, the insupportable rigour of the government of the Duke of Alva, and the violent encroachments of the Spaniards upon the liberties and privileges of the countries.

The Netherlands, comprehending Holland, have undergone material alterations during the progress of the French revolution. Brabant and Flanders, which belonged to the house of Austria, have been annexed to the French Republic, and form one of its departments. Holland, upon the expulsion of the Stadtholder, was allowed to call itself an independent country in alliance with France, and is now distinguished by the name of the Batavian Republic. How long the constitution of either country, particularly of Holland, may remain in its present state, time only and events must determine. We do not presume to offer an opinion on the subject, remaining satisfied in believing, that should any change take place, Prussia will not be forgotten in the political arrangement of that part of Europe.

NETTOYER, *Fr.* clean; to clear; scour, &c.

NETTOYER les Magazins, *Fr.* in artillery, signifies to remove the different pieces of ordnance, for the purpose of having them carefully examined, &c. and to have the stores and ammunition so arranged as not to receive damage. This duty is generally performed by small parties of soldiers, under the command of sergeants, who are detached from

from the different guards of a garrison town. In the old French service, the *commissaire d'artillerie* superintended the execution of this necessary duty, and the soldiers who were employed, got relieved from any further attendance as part of the guard, the instant their work was done.

**NETTOYER**, *ou enfler*, Fr. to scour, or enfilade.

**NETTOYER la courtine**, Fr. to scour, or fire through the whole extent of the curtain.

**NETTOYER le rempart**, Fr. to scour the rampart.

**NETTOYER la tranchée**, F. to scour or clear the trenches. This is effected by means of a vigorous sally which the garrison of a besieged place make upon the besiegers, when they beat in the guard, drive off the artificers and workmen, level the parapet, break up and choke the line of circumvallation, and spike or nail the cannon.

**NEUTRAL**, neither of the one nor the other.

**NEUTRALITÉ**, Fr. See **NEUTRALITY**.

**Garder la NEUTRALITÉ**, Fr. to be neutral.

**Accorder la NEUTRALITÉ**, Fr. to allow others to be neutral, or to grant neutrality.

**Observer la NEUTRALITÉ**, Fr. to observe a strict neutrality.

**Violer la NEUTRALITÉ**, Fr. to violate the laws of neutrality.

**Demeurer dans la NEUTRALITÉ**, Fr. to remain in a state of neutrality.

**NEUTRALITY**, the state or condition of one who is neuter, a middle condition between a friend and an enemy.—In a military sense, remaining strictly indifferent, whilst other powers are at war, without assisting any party, with arms, ammunition, or men. When a country, calling itself neutral, furnishes a quota or contingent to any nation that is at war with another, it cannot be said to observe the strict laws of neutrality.—Of all precarious and difficult situations that perhaps is the most so, in which a weak nation is placed, when two powerful nations wage war on each side, and the exact laws of neutrality are expected to be observed by the intermediate country. History does not furnish a single instance of inviolable adherence to them under such critical circumstan-

ces. Bayle, speaking of neutrality, exclaims, *heureux les pacifiques quant à l'autre monde, mais dans celui ci ils sont misérables!* happy are the peaceable with respect to the next world, but they are miserable in this! In trying to derive advantages from the dissensions and broils of others, they insensibly become the victims of both parties. The French writer humourously says, *Ils veulent être marteaux, cela fait que continuellement ils sont enclumes à droit et à gauche*: they would fain be hammers, instead of which they become anvils, and get beaten both right and left. This happened to the Venetians in 1701, who endeavoured to remain neutral during the campaigns that took place between the French and the Imperialists. The observance of a strict neutrality is unquestionably a matter of extreme difficulty, and requires uncommon ability. Few princes possess those qualities of the head and heart that distinguished Hieron, king of Syracuse, who so dextrously managed his neutrality in the war between Rome and Carthage. His subjects were considerably benefited by the conduct he observed, whilst his own reputation was not a little increased by the sound policy which dictated it.

During the progress of the French revolution, instances have occurred in which a wise neutrality might have been made productive of great national good. But, alas! there are few statesmen, who have ability or political virtue enough, to resist the intrigues or views of those cabinets, who being themselves, (unavoidably perhaps,) involved in war, leave nothing untried to drag their neighbours into the same troubled state. Montesquieu has observed, with his usual good sense, that nations seldom know how to avail themselves of natural advantages. What becomes a matter of hard necessity in one country, is frequently found to exist in another, from crooked and interested policy, or from ignorance in administration. Some countries are calculated to be neutral; some to avail themselves of insular situations; and to impose by maritime operations; and others, to make up for the natural disadvantages of continental position, by means of standing armies.

The former can almost always preserve their neutrality, especially if they pay due attention to their navy; the latter, on the contrary, must, more or less, be continually exposed to the jealousies of contending powers. Under these circumstances, it is certainly sound policy to declare openly for one side or the other; for, however sincerely disposed to observe the strictest neutrality, an intermediate or neighbouring country might feel, those who are actually engaged in war, will always question its conduct; so that it must either sacrifice its real interests by taking a decisive part with those who are so situated, that they can harass and invade the country, or join in an armed neutrality, whose system is equally precarious.—It has, indeed, been remarked, (with what justice we leave politicians to determine) that no power, being, or affecting to be neuter, should be allowed to arm itself, because it is impossible to have perfect confidence in a quarter from whence hostilities may commence according to the exigency of circumstances, (so properly called by the French, *la force des circonstances*;) or the alluring prospects of ambition. In which of these predicaments we might with propriety place Sweden and Denmark, may be matter of conjecture.—During the late war, they were called upon by Great Britain to give an unequivocal declaration of the principles of their armed neutrality, and from the resistance they made, it is fair to conclude, that the influence of their continental neighbours had got the better of that neutral system which they pursued during the French revolution. How far they will be benefitted, time must prove. As countries, dependent almost wholly upon a commercial intercourse with Great Britain, their assumption of that armed aspect which then excited the jealousy of the latter, may perhaps ultimately turn out short-sighted policy. Much, however, depends upon the final issue of that gigantic convulsion which has shaken Europe to her center. As long as England can maintain her superiority at sea, Sweden and Denmark will be more or less endangered by every measure they adopt. They are equally so while France has sufficient ascendancy to secure Prussia, (after having com-

pletely paralyzed Austria) and to turn the scale of Russian politics in her favour. It is more than probable, that the armed neutrality of the North (not unjustly called by us the armed confederacy) sprung originally from a secret understanding with the agents of France, and manifested itself more strongly on the dereliction of Russia. Great Britain of course took the alarm; and, as a French writer very justly observes on the subject of armed neutrality, sent her fleets, on the failure of amicable negotiation, to ascertain the point at the gates of Copenhagen. Whether a measure, which was certainly bold and hazardous, will be productive of any good effect, it is impossible for us to determine. We only state what has happened, and account for the conduct of Great Britain with regard to Denmark and Sweden, on the right which every belligerent power possesses, of exacting from an armed neutral country a decisive explanation of its conduct and intentions. We do not in this place affect even to give an opinion with regard to the manner which has been adopted, the precariousness of the attempt, but most especially on the tardiness of the execution. We barely state, that when a neutral country thinks fit to arm itself, any one of the powers actually engaged in war, may force that country to declare itself; because the latter, by remaining in an armed state, may at any time turn the scale of things, and side with the victorious party.

We have already observed, that there is not perhaps in human politics, a rule of conduct which is so intricate, and of course so difficult to be observed, as that of neutrality. *La loi des plus forts*, or the law of the strongest, so often tramples down natural rights, that necessity drives those to the adoption of questionable measures, who would otherwise remain strictly neutral; whilst others again, from being contiguous to contending armies, resort to various pretences, in order to remain in an armed condition for the purpose of taking advantage at a critical moment. Of this description was the system of armed neutrality which Pope Leon X. is recorded to have pursued. When Francis I. king of France, was engaged in a

war with the Swiss Cantons, respecting the Milanese, his Holiness resolved to remain neuter, or at least affected to be so, although he was strongly invited by both parties to take an active and decisive part. He drew his troops towards the frontiers of the Milanese, under a pretext of covering the ecclesiastical states, but in reality for the purpose of being at hand when the two armies should come to a decisive engagement, of unexpectedly falling upon the victorious army, at the close of an obstinate and bloody battle, of driving it out of Italy, becoming master of Lombardy, and finally establishing himself as the arbiter of the country. But all these imaginary triumphs of the Pope soon disappeared. His troops, which had already reached the frontiers of the Milanese, no sooner learned, that the Swiss had been totally routed by the French, than they were panic-struck, and dispersed in the greatest disorder; as if they were conscious of being engaged in a crooked and illegal cause.

Ancient history affords us several examples of this species of neutrality.—During the civil wars between the adherents of Vespasian and those of Otho and Vitellius, various means of duplicity were resorted to. We likewise read of the same sort of conduct having been observed by the inhabitants of Corcyrus when they went to war with the Corinthians; and modern history is full of similar instances of specious neutrality. For farther particulars on this interesting subject, especially on the conduct to be observed by neutrals in war, see from page 531 to 533, of the English translation of Hugo Grotius, by William Evans, B. D.

**NICK-NAME**, (*Sobriquet*, Fr.) a surname, which is used in ridicule or good humour, to distinguish an individual. Nicknames among military men are familiarly used in a collective sense. Thus the light infantry are called *Light Bobs*, the grenadiers *Two Rows*, and the battalion-men *Flat-Foots*; and in many instances whole corps have been particularized in this manner. The 28th of foot were familiarly called the *Slashers*; and a very respectable general officer in the British service used to be nicknamed General *No-Flint*, from a circumstance which occurred during the

American war, when he commanded a species of forlorn hope. During the campaigns of 1793 and 1794, in Flanders, &c. the 15th regiment of light dragoons were called *Young Eyes* by the guards, who received, or rather gave themselves the nick-name of *Old Eyes*.

**NIGHER**, *Ind.* any fortified city, measuring at least eight coss, or eight English miles, in length and breadth.

**NIQUIBS**, *Ind.* men whose military functions among the Sepoys, correspond with those of corporals in the king's service.

**NITHING**, a coward, or poltroon.

**NITRE**. See *Saltpetre*.

**NIVEAU**, *Fr.* a level.

**NIVEAU de la campagne**, *F.* the level surface of a country is so called, in contradistinction to the talus or slope of any rising ground.

**De NIVEAU**, *Fr.* level, even.

**NIVEAU d'eau**, *Fr.* a water level.—This instrument is extremely simple, and of great use to engineers in the construction of works.

**NIVEAU de charpentier**, *Fr.* a carpenter's rule or level.

**NIVEAU de paveur**, *Fr.* a pavior's level.

**NIVELER**, *Fr.* to level.

**NIVELER les eaux**, *Fr.* to find the true level for conveying water.

**NIVELER le terrain**, *Fr.* to find the true level of ground, and to ascertain the relative elevations of places.

**NIVELEUR**, *Fr.* a leveller: it is likewise sometimes used to express a trifer; but it does not signify a leveller in the political sense which we apply the English word in these days; nor does it mean a *Leveller* belonging to a set of people in Oliver Cromwell's army, who were for having an equal share in the administration of the government between the nobility and the commonalty.

**NIZAM**, *Ind.* a title which is bestowed by the Great Mogul on one of his principal viziers, on his being appointed to the command and administration of certain provinces. The word means, an adjuster, a regulator, an arranger, or manager, &c.

**NIZAM ul Mooluc**, *Ind.* the protector of the country.

**NIZAMUT**, the office of Nizam.

**NOBILITY**, (*Noblesse*, *Fr.*) from the Latin, *Nobilitas*. This word has been

been variously defined. It is, however, generally understood to signify *Illustrious Descent*, and *Conspicuousness of Ancestors*, with a succession of arms conferred on some one (and from him to his family) by the Prince, by law, or by custom, as a reward for the good and virtuous actions of him that performed them. The only true purchase of nobility must, therefore, consist of great and good actions; which, in proportion as they dignified and ennobled the original owner, become objects of important trust with every descendant; who either reflects them back by a laudable imitation, or shamefully abuses the tenure by dishonourable practices.

To be merely descended from a noble family, is of little consequence in the eyes of true thinking men; and still less so, when the heir discovers no other proofs of his nobility, than shew and ostentation.

NOBILITY likewise means a quality that dignifies, or renders a person noble; particularly that raises a person possessed of it above a peasant or a commoner.—The quality or degree of a nobleman; also the whole body of noblemen separated from the commonalty.

Nobility also means Name, Reputation, Renown. N. Bailey in his fourth edition of the New Universal Etymological Dictionary, has the following curious passages on this word:—

NOBILITY. The Italians thus satyrised nobility: the dukes and earls of Germany, (every son of a duke being a duke, and every daughter of a duchess being a duchess) the Dons of Spain, the Monsieurs of France, the bishops of Italy, (every city having a bishop) the nobility of Hungary, the Lords of Scotland, the Knights of Naples, and the younger brethren of England, make all together a poor company. He then classes nobility under five specific heads, viz.

*Divine* NOBILITY, which is also called Heavenly, or Theological Nobility, and relates to the supposed original of the soul.

*Human or worldly* NOBILITY, which regards blood, and a genealogy of many ancestors. This nobility is purely accidental, and depends upon our birth. This is called political or hereditary, and becomes the right of individuals;

be their merit, virtue, and capacity, what they may.

*Moral* NOBILITY, refers only to virtue, is purely personal, and depends on our own free will. It is also called *Philosophical*; but is not hereditary, except by the influence of example, which renders it the general inheritance of all good men.

*Native* NOBILITY, is such as has been acquired by some merits or deeds, and has been conferred by the Prince, &c.

*Nature* NOBILITY, is what passes from father to son, and makes the son noble, because his father was so. Of this species of nobility consists the British House of Lords; to which occasional additions are made by purchased peerages.

NOBLES, } are the grandees of  
NOBLEMEN, } any kingdom or nation, by whatsoever title they are distinguished. Honorary distinctions have been very ancient. The Greeks distinguished their people into three ranks, viz. *Noblemen*, *Land-holders*, or *Farmers*, and *Tradesmen*. The first were indulged with great privileges, and wore the figure of a grasshopper, as a badge of honour, in their hair. The Romans wore a half moon upon their shoes.

Among the Romans, those persons were called Nobles who preserved the statues of their ancestors in their courts or cabinets. The faces of these statues were painted to resemble life. But it was necessary to be descended from the ancient magistrates, called Curules, to be entitled to have these statues. They were exhibited to the public on festival days; and when any of the family died, they were carried in solemn procession before the corpse; so that under these circumstances, an individual might be a Patrician without being actually of noble blood or extraction.

That person was called Noble in France, who first received a letter patent constituting him such, and who thus gave rise to the nobility of his descendants.—Those born of him bore the title of *gentilhomme*, or gentleman. *Un ancien gentilhomme*, or gentleman of some standing, was stiled *homme de condition*, or person of condition. Those gentlemen who were descended from illustrious houses were called, *Men of Quality*, *Gens de Qualité*.

In

In England those only are called Nobles or Noblemen, who have the title of Duke, Marquis, Earl, Viscount, Lord, or Baron; which titles either descend to individuals from family-right, are gratuitously conferred upon them by the Prince (who is called the fountain of honour), or are obtained by the price of gold. The hereditary tenure becomes equally solid in all these instances, though not equally estimable, unless the title be itself ennobled by some great and good actions of the possessor. By those, and those only, can a purchased title be converted into sterling gold out of base metal.

**NOBLESSE.** See *Nobility*.

**NOBLESSE Militaire**, Fr. military nobility. Although most of our orders may be considered as appendages which confer a sort of military nobility, especially that of the garter, which was instituted by king Edward III. on the 19th of January, 1344, yet we cannot be strictly said to have amongst us, that species of military nobility or distinction that was peculiarly known in France, &c. under the immediate title of *Noblesse Militaire*. In order to reward military merit, an edict was issued by the French court at Fontainebleau, in November, 1750, and enregistered on the 25th of the same month by the parliament of Paris, whereby a *Noblesse Militaire*, or Military Nobility, was created; the acquisition of which depended wholly upon martial character, but did not require any letter patent for the purpose of ennobling the individual.

By the first article of this perpetual and irrevocable edict, as it was then stated, it was decreed, that no person, serving in the capacity and quality of officer in any of the king's troops, should be liable to the land or poll tax, so long as he continued in that situation. In Great Britain and Ireland, subalterns *only* are exempted from the powder tax; but they are liable to all other imposts. 2dly. That by virtue of this edict, and from the date thereof, all general officers, not being otherwise ennobled, but being actually and *bonâ fide* in the service, should be considered as noble, and remain so, together with their children born, or to be born in lawful wedlock. 3dly. That in future the rank of general officer should of itself be sufficient to confer the full right of no-

bility upon all those who should arrive at that degree of military promotion; and that their heirs and successors, as well as their children, actually born and lawfully begotten, should be entitled to the same distinction; and that all general officers should enjoy all the rights and privileges of nobility from the date of their commissions. In articles IV, V, VI, and VII, it was specifically provided upon what conditions those officers, who were not noble, and were inferior in rank to that of *Maréchal de Camp*, or Major-general, but who had been created Chevaliers or Knights of the royal and military Order of St. Louis, and who should retire from the service after having been in the army during thirty years without intermission, were to be exempted from the payment of the land or poll tax, and how the same privilege was to be transferred to their sons, provided they were in the service. By the eighth article, it was enacted, that those officers who had risen to the rank of captain, and were Chevaliers or Knights of the order of St. Louis, but who were disabled by wounds, or diseases contracted in the service, should not be obliged to fill up the period of thirty years as prescribed in the recited Articles. By Article IX. it was provided, that when any officer, not under the rank of captain, died in the actual exercise of the functions, or bearing the commission of captain, the services he had already rendered should be of use to his sons, lawfully begotten, who were either in the service, or were intended for it.

It was specified in Articles X. and XI. that every officer, born in wedlock, whose father and grandfather had been exempted from the land or poll tax, should be noble, in his own right, provided he got created a Chevalier or Knight of St. Louis, had served the prescribed period, or was entitled to the exemption mentioned in Article VIII. that if he should die in the service, he would be considered as having acquired the rank of nobility, and that the title so obtained should descend, as matter of right, to the children, lawfully begotten, of such officers as had acquired it. It farther specified, that even those who should have been born previous to their father's being ennobled, were entitled to the same privilege.

Article XII. pointed out the method by which proofs of military nobility were to be exhibited in conformity to the then existing edict.

Articles XIII. and XIV. provided for those officers, who were actually in the service at the promulgation of the edict, in proportion as the prescribed periods were filled up. This provision related wholly to the personal service of officers; as no proof was acknowledged or received, relative to services done by their fathers or grandfathers, who might have retired from the army, or have died prior to the publication of the edict.

The XVth, or last article, was a sort of register, in which were preserved the different titles that enabled individuals to lay claim to military nobility.

The whole of this edict may be seen, page 206, in the 3d volume, *Des Elémens Militaires*.

**NOEUD de l'artificier**, Fr. a particular knot which artificers or fireworkers make use of to bind fusées together.

**NOEUD de charruc**, Fr. a particular knot or stress, which is used in the artillery when ropes are passed under carriages, for the purpose of raising any piece of ordnance that has been overturned.

**NOEUD d'Epaule**, Fr. shoulder-knot: it signifies also the same as *Aiguillette*, a tagged point.

**NOM de guerre**, Fr. See *Guerre*.

**NOMADES**, a tribe of wandering Arabs belonging to Mesopotamia, (the ancient name of Dialekr), a province in Asiatic Turkey. They live on plunder.

**NOMINAL**, by name. Hence

**NOMINAL Call**, which corresponds with the French *appel nominatif*; and, in a military sense, with our *roll call*.

**NOTÆ**, a peculiar method among the Romans of writing expeditiously. The invention is given to *Tyro*, who was Cicero's bondman. This art consists in being able to take down, correctly, every sentence that is spoken, let the enunciation be ever so rapid.

We call it *tachygraphy*, from the Greek compound, signifying *swift* and *write*.

**NOTIFICATION**, the making any thing known. Hence, a War-Office notification, respecting the appointment of an officer, &c.

**NOTIFICATION-Book**, among army agents, a book in which a regular entry is made of officers recommended for commissions in the army; also of such as are appointed by a notification from the War-Office.

**NOURRICE**, Fr. a nurse; a female who attends the sick. This word is likewise used by the French to express the means of subsistence, &c. which are supplied by the agricultural part of a kingdom. Hence *Une province est la nourrice d'une ville*; the town is fed by the country round it. *La Sicile est la nourrice de Rome*. Sicily is the nurse of Rome; meaning thereby, that the latter was supplied with corn, &c. by the former.

**NOURRIR**, Fr. to feed. The French say familiarly, *La soupe nourrit le soldat*; broth feeds the soldier.

**NOYAU**, Fr. a long piece of iron, which is placed in the middle of a cannon mould, in order that the liquid metal may be poured round it, and the piece obtain an equal thickness on all sides.

**NOYAU**, Fr. likewise means the whole of the vacant space or bore of a cannon, under which are comprehended the diameter of the mouth, the vacant cylinder, the breech, and the vent.

With respect to bombs, grenades, and hollow balls, that which is called *Noyau* consists of a globular piece of earth, upon which the cover of bombs, grenades, and hollow balls is cast. The metal is poured in between this cover and the *noyau*, after which the *noyau* or core is broken, and the earth taken out.

**NOWARRA**, *Ind.* an establishment of boats, which is kept at Dacca, for a defence against the Mugs and other plunderers.

**NUDDEE**, *Ind.* the name for a rivulet.

**NULLA**, *Ind.* This term likewise signifies a rivulet, and means the place which was once the bed of a river.

**NUMEROS**, Fr. round pieces made of brass, or other metal, which were numbered, and used in the old French service in the detail of guards. See *Maron*.

**NURSE**, a person, generally a female, whose whole business is to attend the sick in the general or regimental hospital. She is under the immediate direction

direction of the surgeon. According to the Regulations published by authority in 1799, there is to be one decent, sober, woman nurse, who shall receive at the rate of one shilling *per diem*, whose duty will be to prepare the slops and comforts for the sick, and occasionally to assist in administering medicines, cooking the victuals, washing, &c. and for every ten men confined to bed by fever, an additional nurse and orderly-man should be allowed. All the patients, who are able, are every morning and evening to assist in cleaning and airing the hospital, carrying away dirt, &c. and by every means to assist the helpless.

The additional allowance to the sergeants, orderly-men, and nurse, in regiments of the line, to be made by the paymaster; and in regiments of militia and fencibles, the surgeons are to pay them out of their allowances.

In every regimental hospital, a room

should be appropriated to the accommodation of such convalescents, whose state of health will admit of their being placed on full diet. This hospital to be regularly visited by the surgeon once, twice, or oftener in the day, as circumstances may require.

A non-commissioned officer to be appointed to the particular charge of the Convalescent Hospital, with an orderly-man, and when the convalescents are numerous, more orderly-men are to be attached to it, to keep it clean.

It is particularly ordered, that none of the hospital tables and orders, which are to be hung up in a conspicuous place in every regimental hospital, shall be defaced by any person whatever, nor taken down, but by the surgeon or serjeant, the latter of whom will explain the allowance ordered for those patients who are not themselves in a situation to read the table for the distribution of diet.

## O

**O.** This letter is generally used in the British service to signify orders, viz.

B. O. Brigade orders.

D. O. District orders.

GL. O. General orders.

GN. O. Garrison orders.

R. O. Regimental orders.

**OATH**, a solemn asseveration made in the presence of a magistrate, and taken, on the Bible, in Great Britain and its dependencies, whereby an individual binds himself to observe certain conditions, or swears to specific facts which he knows of his own knowledge. Soldiers from time immemorial have been accustomed to take oaths of fidelity. These oaths were, however, observed with greater solemnity among the ancients than they are administered in modern armies, except upon very particular occasions. In the latter, indeed, it seldom or ever happens, that oaths are taken by bodies of soldiers assembled for the purpose.—Oaths are

taken by men newly enlisted, but those oaths are individually administered, and separately taken.—The military oath, on the contrary, among the Romans, was of a more general and impressive nature. Kennett in his *Roman Antiquities*, page 188, gives the following account of it:—"The levies being finished, the tribunes of every legion chose out one whom they thought the fittest person, and gave him a solemn oath at large, the substance of which was, that he should oblige himself to obey the commanders in all things to the utmost of his power, be ready to attend whenever they ordered his appearance, and never to leave the army but by their consent. After he had ended, the whole legion, passing one by one, every man, in short, swore to the same effect, crying, as he went by, *Idem in me*. The same by me.

**OATH of Allegiance**.—See *Allegiance*.

**OATHS** on general and regimental courts.

**courts-martial.** According to the amendments introduced into the last Mutiny Act, passed in 45 Geo. III. it is enacted, "That in all courts-martial (other than general courts-martial), which shall be held by virtue of this act, or of any articles of war, established by his Majesty, in pursuance thereof, every member assisting at such trial, before any proceedings be had thereupon, shall take the prescribed oaths upon the Holy Evangelists.

**OATS,** a grain which constitutes a principal portion in the feed of horses. The distribution of this article ought to be narrowly watched by every officer commanding a troop; since it is notorious, that government is frequently charged for quantities which are not delivered, by which means, the horse suffers, and the public are imposed upon.

**OBEDIENCE,** (*Obéissance*, Fr.)—submission to the orders of a superior. The first principle which ought to be inculcated and impressed upon the mind of every officer and soldier is obedience to all lawful commands. It is the main spring, the soul and essence, of military duty.

*Prêter obéissance*, Fr. to swear allegiance, fidelity, &c.

*Remettre dans l'obéissance*, Fr. to recall to duty.

**OBEDIENCE of Orders**, an unequivocal performance of the several duties which are directed to be discharged by military men. All officers and soldiers are to pay obedience to the lawful orders of their superior officers.

**OBÉIR**, Fr. See **ONLY**.

**OBELISK,** (*Obélisque*, Fr.) a huge, solid piece of marble, or fine stone, four square, and all of one piece, growing smaller from the bottom, and ending in a point at the top, like a pyramid, set up for a monument, &c. Obelisks are sometimes made of different pieces of stone, &c.

**TO OBEY**, in a military sense, is, without question or hesitation to conform zealously to all orders and instructions which are legally issued. It sometimes happens, that individuals are called upon (by mistake, or from the exigency of the service) out of what is called the regular roster. In either case they must cheerfully obey, and after they have

performed their duty, they may remonstrate.

**OBJECT**, in a military sense, signifies the same as point, with respect to mere movements and evolutions. Thus in marching forward in line, &c. the leader of a squad, company, or battalion, must take two objects at least, upon which he forms his perpendicular movement, and by which the whole body is regulated. In proportion as he advances, he takes care to select intermediate and distant objects or points, by which his march is governed. See *Marching in line*.

**OBLATE**, any rotund figure flattened as the piles. Hence the term *Oblate Spheroid*.

**OBLIQUATION**, } a deviation from  
**OBLIQUITY**, } the parallel or perpendicular line.

**OBLIQUE**, or *second flank*. The face of a bastion discovered from a part of the curtain, is so called.

**OBLIQUE projection**, is that wherein the direction of the striking body is not perpendicular to the body struck, which makes an oblique angle with the horizontal line.

**OBLIQUE deployments**. When the component parts of a column that is extending into line, deviate to the right or left, for the purpose of taking up an oblique position, its movements are called oblique deployments. See *Regulations*, Sect. 138, page 318.

**OBLIQUE fire or defence**, that which is under too great an angle, as is generally the defence of the second flank, which can never be so good as a defence in front. See *Oblique Firing*, at the word *Firings*.

**OBLIQUE percussion**, is that wherein the direction of the striking body is not perpendicular to the body struck, or is not in line with its center of gravity.

**OBLIQUE position**, a position taken in an oblique direction from the original line of formation. See *Rules and Regulations*, Sect. 195, page 325.

**OBLIQUE radius**, a line extending from the center to the exterior side of a polygon.

**OBLIQUE step, to the left**, is made in ordinary time, and consists in carrying the left foot 19 inches in the diagonal line to the left, bringing the right foot 30 inches forward, so that the heel may

be 13 inches before the left foot; thus obtaining a general obliquity of about an angle of  $25^{\circ}$ . In obliquing to the right the same is precisely done by the reverse feet; the original squareness of the body to its proper front being preserved in both cases throughout.

To **OBLIQUE**, in a military sense, is to move forward to the right or left, by stepping sideways in either of those directions, according to the following words of command:—

**Right OBLIQUE.** When the squad is marching in front, and receives the word *To the Right Oblique*, each man, the first time he raises the right foot, will, instead of throwing it straight forward, carry it 19 inches in the diagonal direction, to the right, gaining thereby about 13 inches to the side, and about 13 inches to the front, without altering his personal squareness of position. The greatest attention is to be paid to the shoulders of every man in the squad, that all may remain parallel to the line on which they first were placed, and that the right shoulders do not fall to the rear, which they are very apt to do in obliquing to the right, and which immediately changes the direction of the front.—On the word *Forward*, the incline ceases, and the whole march forward.

In obliquing to the left, the same rules are to be observed, with the difference of the left leg going to the left, and the left shoulder being carefully kept up.

Obliquing to the right is to be practised sometimes with the eyes to the left; and obliquing to the left, with the eyes to the right; as being absolutely necessary on many occasions; for if one of the battalions of a line in advancing be ordered to oblique to the right, or to the left, the eyes must still continue turned towards its center.

Oblique movements, though they may be made by a squad, or division, in quick time, must be executed by a larger body in ordinary time.

To **OBLIQUE in file**. When any body of men is ordered to oblique to the right or left by files, the center and rear rank men (supposing the line to stand three deep) will continue looking to their leaders of the front rank. Each file is to consider itself as an entire rank, and

to preserve the same front, and position of the shoulders, during the oblique, as before it began. The Regulations, from which these passages are extracted, observe, that as this is a very useful movement, recruits should be often practised in it. Pages 29 and 30.

*Pas OBLIQUE*, Fr. oblique step.

*OBLIQUE à droite*, Fr. right oblique.

*OBLIQUE à gauche*, Fr. left oblique.

*Feux OBLIQUES à droite et à gauche*, oblique firings to the right and left.

*Marcher OBLIQUEMENT*, Fr. to oblique, or march in an oblique direction.

**OBLIVION.** See AMNESTY.

**OBLONG**, (*oblong*, Fr.) any figure which contains more in length than in breadth is so called.

*OBLONG Square.* See SQUARE.

**OBSÉDER**, Fr. to besiege, to beset, to get possession of.

**OBSÉQUIES**, (*obsèques*, Fr.) See BURIALS.

**OBSERVATION.** See *Army of Observation*.

To be under **OBSERVATION**, to be carefully watched and looked after.—*Etre vu de près; être suivi de près.*

**OBSERVATOIRE**, Fr. See OBSERVATORY.

**OBSERVATORY**, a building, public or private, which is erected and provided with all sorts of instruments, proper for astronomical observations, &c. The most noted observatories in Europe are:—

1. That of Tycho Brahe, a nobleman of Denmark, at Uraniborg, in the island of Wern, between the coasts of Schonen and Zealand, in the Baltic.

2. The observatory at Paris, which was erected by Louis XIV. This building stands in the Faubourg St. Germain, and is so constructed as to answer the four cardinal points of the world, east, west, north, and south.—The foundation is laid 80 feet below the ground, and the edifice carried as much above it. It contains three stories in height, and has a terrace at top, from whence the whole horizon appears flat. The stair-case of this observatory deserves notice, from the singularity of its construction, being in the form of a screw, and so contrived, that from the bottom there is a full sight of the stars that pass the zenith of this place.

3. The royal observatory at Greenwich, which was founded by Charles the Second.

4. The observatory at Pekin, in China, which was erected by the late Emperor, at the intercession of the Jesuits.

To OBSERVE, to watch closely, &c. Hence to observe the motions of an enemy, is to keep a good look out by means of intelligent and steady spies or scouts, and to be constantly in possession of his different movements. No man can be said to have the talents of an able general, who neglects to observe his enemy in all directions; for if it be his intention to attack, you may thwart him by previous manœuvres; and if you are liable to be attacked yourself, you may assume the best possible position, and prevent surprise, &c.

OBSESSION, the act of besieging.

OBSDIONAL, belonging to a siege.

OBSDIONAL Crown, (*Couronne obsidionale*, Fr.) a crown so called among the ancient Romans, which was bestowed upon a governor or general, who, by his skill and exertions, either held out, or caused the siege to be raised of any town belonging to the Republic. It was made from the grass which grew upon the spot, and was therefore called *Gramineus*, from the Latin word *Gramen*, signifying grass.

Monnoie OBSDIONALE, Fr. any substitute for coin, which has a value put upon it that is greater than its intrinsic worth; and a currency given, to answer the convenience of the inhabitants of a besieged place. *On a employé le cuir à faire des monnoies obsidionales*. The inhabitants made use of leather as a substitute for coin.

OBSTACLES, (*obstacles*, Fr.) in a military sense, are narrow passes, woods, bridges, or any other impediments, which present themselves when a battalion is marching to front or rear. These are passed, by the formation, march, and deployment, of the close column. Such parts as are not interrupted still move on in front; such parts as are interrupted, double by divisions as ordered, behind an adjoining flank or flanks, and in this manner follow in close column in their natural order. As the ground opens they successively deploy, and again perfect the

line. The columns are always behind the line, and march closed up. The formed part of the battalion, whether advancing or retiring, continues to move on at the ordinary pace, and in proportion as the obstacles increase or diminish, will the formed or column parts of the line increase or diminish.

The general attentions directed to be observed on these occasions are, that the columns formed shall be of sub-divisions, if the ground will admit. The first sub-division that is obliged to double, will be directed to which hand by the commander of the battalion; the others, as they successively double, will, in consequence, place themselves behind it, and behind each other, and the hand first doubled to, will be that which presents the opening most favourable to the subsequent march, and formation, and which the commanding officer will always hold in view, and order accordingly. The interrupted body will double to one or both flanks, according to circumstances, and the order it receives. Obstacles that impede a flank will occasion a single column to be formed from the flank towards the center. Obstacles that impede the center, or a central part of a wing, will, if considerable, occasion two columns to be formed, from the center towards the flanks. The columns will follow a flank of such part of the line as is not impeded; and either in doubling into column, or extending into line, the rear divisions will conform to the movements of their then leading one. No part less than the front of the column doubles or moves up, and when half or more of a battalion must be thrown into one column, it will be ordered by companies.

OBSTACLES whose fronts are parallel to the line. When such occur, the divisions impeded must all at once double behind such one, or two other divisions as clear them of the obstacle.

OBSTACLES whose first points continue to increase as the line advances. In these cases the doubling is successive, beginning with that division which is first interrupted, and continuing as it becomes necessary, till the column can advance in clear ground.

OBSTACLES passed, or diminished.—When obstacles are of such a nature as to allow the complete extension at  
once

once into line: the whole column performs it by the commands and deployments of the close column on the front division, which then makes part of the line. But when obstacles diminish by degrees only, then the divisions of the column must come up into line successively as the ground opens, and the remainder of the column must, in diminishing, shift towards the obstacle, in the same manner as it before shifted from it in increasing.

**OBSTACLES** *that are passed in presence of an enemy.* Under these circumstances, if the battalion, in advancing, should be obliged to fire, it halts in the situation it is then in, executes such firings as are ordered, and again advances.

If the battalion, in retiring, is pressed by the enemy, the part in line, will *halt! front!* the part in column will move on till the last division arrives in line, and will then *halt, front.* The firing that is ordered, will be executed; and when it is again proper to retire, the whole will face about, the part in line will *march*, and the columns will also be put in march when the line arrives at their head.

**OBSTACLES** *whose points of opening are narrow, and continue so, more or less.* In such cases, the interrupted division will be ordered to face either to one or both flanks, and closely to follow in file such parts of the battalion as are not broken: the filing will increase as the obstacles increase, but as they diminish, file after file will successively and quickly move up to their place till the whole are again formed; and during this operation the leading file will always remain attached to the flank of the part in line. The same rules that direct the doubling in column, direct the doubling by files; when a subdivision files it will be from the flank only; when a company files, it may be from both flanks; and if a larger front than two companies is interrupted, it then doubles into column. Where the obstacles are of small extent, but frequently occurring, this mode is the readiest that can be applied in advancing; but in retiring it cannot be of use, if the enemy be at hand to press upon the battalion; and therefore the passing by column is to be looked upon as the general method.—

For further explanations on the important operations of passing obstacles, we refer our military readers to pages 233, 234, 35, 36, 37, and 39, of Rules and Regulations, as published by authority.

**OBSTINATE**, in a military sense, determined, fixed in resolution. Hence obstinate resistance.

**OBSTINATELY**, persevering. The two armies fought so obstinately, that night only could separate the combatants.

**OBSTINÉMENT**, *Fr.* obstinately, stubbornly, inflexibly, with unshaken determination.

**S'OBSTINER**, *Fr.* to persist in any thing.

**OBSTRUCTION**, any difficulty or impediment, opposing the operations of an army, &c.

**OBTUSE**, (*obtus*, *Fr.*) not pointed, dull.

**Obtuse angle**, (*angle obtus*, *Fr.*) any angle which contains more than 90 degrees, is so called, and is therefore named *irregular*.

**OBTUSANGULAR**, having angles larger than right angles.

**OBUS**, (*haubitz ou obusier*, *Fr.*) *hobits*. A species of small mortar, resembling a mortar in every thing but the carriage, which is made in the form of that of a gun, only shorter. It has been frequently used at sieges; and is well calculated to sweep the covert-way, and to fire ricochet shots. They were usually loaded with carbouches. Belidor writes upon the subject at some length, in his *Bombardier Francoise*, page 39.

**OC**, an arrow which is used among the Turks.

**OCCASIO**, *L.* among the Romans, an allegorical divinity, the goddess of time, who presides over the most favourable moment for success in any enterprise. She is represented as stark naked, with a long lock of hair upon her forehead, and bald behind. And also standing on a wheel, with wings on her feet, and is said to turn herself very swiftly round; by which is intimated, that we should lay hold of the present opportunity. Among modern nations no people pay greater attention to the instruction which is conveyed by this allegory than the French do. It is common amongst them to say:—*L'Occasion*  
*est*

*est chance.* Occasion or opportunity is bald—Alluding to the Roman allegory; and in the same figure, *il faut prendre l'occasion par les cheveux.* You must seize Time (by which is meant Occasion or opportunity) by the forelock.

OCCASION, *Fr.* has the same signification, in military matters, that *affair* bears among the French.

*Une occasion bien chaude, Fr.* a warm contest, battle, or engagement.—It further means, as with us, the source from whence consequences ensue. *Les malheurs du peuple sont arrivés à l'occasion de la guerre.* The misfortunes of the people have been occasioned by the war, or the war has been the occasion of the people's misfortunes. The French make a nice distinction, which may hold good in our language, between cause and occasion, viz. *Il n'en est pas la cause*—*Il n'en est que l'occasion, l'occasion innocente.*—He is not the cause, he is only the occasion, the innocent occasion of it. *Il s'est fâché pour une légère occasion;* he took offence, or grew angry on a very slight occasion, or for a very slight cause.

*Se servir de l'occasion, Fr.* to take advantage, or make a proper use of time and opportunity. A French writer has very properly observed, that to seize with dexterity occasions as they occur, is a certain proof of courage and ability, especially in the general of an army.—Opportunity or occasion, according to Tacitus, is the mother of events. *Opportunos magnis conatibus transitus rerum.* One complete and decisive victory leads us to a multiplicity of enterprises and great designs, all of which grow out of the first triumph.

A full and decisive victory, by which the country is left entirely at the mercy of the conqueror, must necessarily throw the inhabitants into confusion, and open fresh avenues to conquest; for one opportunity or occasion, well embraced and executed upon, becomes the source of many others. There is not, perhaps, in human contingencies any thing which spreads itself so rapidly, or ought to be so little neglected. An enterprise which grows out of another, though it be in reality more arduous to get through than the one which produced it, becomes more easy in its execution: and yet, how many brave and skilful generals have existed, who could not make a pro-

per use of opportunity? In reading over their gallant exploits, one would be led to believe, that all their knowledge consisted in merely knowing how to fight. We have seen them with unexampled intrepidity, doing every thing that man dares to do, in the field of battle: we have seen them make a decisive blow, and place victory within their grasp; and when they were in the actual possession of all they fought for, we have seen them suddenly relax, give their enemies time to breathe, and finally lose all the fruits of their victory. The courage and promptitude which they manifested in a decisive battle, were the effects of a transitory impulse, which was soon wasted and extinguished.

Hannibal, so much celebrated for his bold enterprise against the Romans, was guilty of this error. After the battle of Cannæ it rested entirely with himself to march to Rome. He had only to follow up his first blow, to take advantage of the consternation of the Romans, and to pursue them to their capital. By so doing he would have made use of the glorious occasion which fortune had thrown into his hands by the first victory, and would not have been driven to the necessity of endeavouring to obtain the original object of his enterprise, by fighting several battles that proved abortive of it. Adherbal, on this account, after having failed in his attempt to persuade Hannibal to pursue his first good fortune, and to march to the gates of Rome, is recorded to have used the following expression: *Vincere scis Hannibal; sed victoriâ uti nescis.* Hannibal, thou knowest how to conquer; but thou dost not know how to make use of a victory.

Gustavus Adolphus made the same mistake. Had he, after having won the battle of Leipsick, hung upon the rear of the discomfited Imperialists, pushed and harassed them to the gates of Vienna, there is little doubt of the consequences which must have ensued.

The Emperor Ferdinand was as weak in effective forces at the capital, as the Romans were at Rome, and the same consternation prevailed among the inhabitants. Had Gustavus profited by his first success, and converted the means, which so glorious an occasion offered, into prompt and vigorous pursuit, he would not indeed have reaped additional

al laurels in the plains of Outzen, where he fell at the head of his victorious Swedes, but he must have reached Vienna, and there have dictated his own terms.

Carthalon, among the ancients, was on the contrary, an instance of how much may be done by acting up to circumstances, and by judiciously making use of fortune as occasion offers. He was not satisfied with having surprised the Roman fleet, taken off a considerable number of ships, and burned others, but he instantly availed himself of his first good fortune, attempted another enterprise, and succeeded.

We could enumerate various instances of both kinds, which have occurred during the late contest with the French, but it is not within our province. Future historians will undertake the task, and what might appear injudicious in us, will be esteemed in them as the dictates of impartial truth. That favourable opportunities and occasions have presented themselves during the progress of the French revolution, whereby a happy issue might have been brought about, even by vigorous and well directed measures, no man in his senses will affect to controvert. *Sed heu spes inanes et irritus hominum labor!*

**OCCASIONAL**, (*elle*, Fr.) this adjective is used in a different sense among the French, to what it is with us, viz. *cause occasionnelle*; any thing that occasions an event.

**OCCIDENT**, *Fr.* the west.

**OCCUPÉ**, *Fr.* to be taken possession of. *Les environs furent occupés par des troupes légères*; the neighbouring places were taken possession of by some light troops.

To **OCCUPY**, is to take possession of any work or post, or to remain stationed at any place.

**OCCQUE**, a Turkish weight, equal to 2lb. 11oz.

**OCTAEDRE**, *Fr.* one of the five regular bodies which is terminated by eight equilateral equal triangles.

**OCTAGON**, (*octogone*, *Fr.*) a figure or polygon that has eight equal sides, which likewise form eight equal angles. The octagon, in fortification, is well calculated in its ground for the construction of large towns, or for such as have the advantage of neighbouring rivers, especially if the engineer can so place the

bastions, that the entrance and outlet of the rivers may be in some of the curtains. By means of this disposition no person could come in or go out of the garrison without the governor's or commandant's permission, as the centinels must have a full view from the flanks of the neighbouring bastions.

**OCTAVON**, (*one*, *Fr.*) any male or female that is born of a quarteron and a white woman, or of a white man and a quarterone.

**OCTOEDRICAL**, having eight sides.

**OCTONS**, *Fr.* a mathematical instrument, which contains 45 degrees or the eighth part of a circle.

**OCTOSTYLE**, the face of a building containing eight columns.

**ODA**, the different corps or companies into which the janizaries are divided, bear this appellation. The word itself means a room, and the companies are so called from messing separately.

**ODEN**, or **ODIN**, a deity so called in ancient times among the Swedes and Goths. He was their god of war, in the same manner that they acknowledged *Thor* to be their *Jupiter*, and *Frigga* their *Venus*.

**ODOMETER**, (*odometre*, *Fr.*) an instrument by which you may ascertain how much ground you go over on foot, or in conveyance.

**OELL**, *Fr.* in architecture, any round aperture, which is made in a building.

**OELL de dome**, *Fr.* an opening made at the top of an edifice.

**OELL de bœuf**, *Fr.* a round window or aperture, which is made in a wall or roof. The black spot in the center of a target is likewise called *œil de bœuf*, or bull's eye.

**OELL de pont**, *Fr.* the opening, or vacant space, under the arch of a bridge.

*Coup d'OELL*, *Fr.* See *COUP*.

**OEUVRE**, *Fr.* in architecture this word admits of various significations in the French language, and may be connected with different prepositions, all of which determine the signification, viz.

*Dans OEUVRE*, *Fr.* Within. *Trente toises de long dans œuvre*, thirty toises in length within doors.

*Hors d'OEUVRE*, *Fr.* Without. *Un escalier hors d'œuvre*, a stair-case without doors.

*Sous OEUVRE*, *Fr.* from the bottom. *Repre-*

*Reprendre un mur sous auvre*, to build up a wall from the foot or bottom.

*Dans OEUVRE et hors d'OEUVRE*, Fr. within and without.

**OIN**, or **OING**, Fr. cart-grease, such as is used to the wheels of ordnance-carriages, &c.

**OFF**, an adverb which is frequently conjoined with verbs; and, in a military sense, is used as follows:

*To kill off*, a term well known in this country, by its curious application during the late war, but rendered obsolete in the present, by the passive complexion of hostilities.

*To march off*, to quit the ground on which you are regularly drawn up, for the purpose of going upon detachment, relieving a guard, or doing any other military duty.

*To tell off*, to count the men composing a battalion or company, so as to have them readily and distinctly thrown into such proportions as suit military movements or evolutions.

**OFFENCES**, all acts that are contrary to good order and discipline, omissions of duty, &c. may be called military offences. The principal ones are specified in the Articles of War. No officer or soldier can be tried twice for the same offence; unless in case of an appeal from a regimental to a general court martial; and the appeal must then be grounded upon some pecuniary wrong; nor can any officer or soldier be tried for any offence committed more than three years before the date of the warrant for trial; except in cases where the offenders were not amenable to justice in that period, when they may be brought to trial any time within two years after the impediment ceased.

**OFFENSIVE War**. Military acts of aggression constitute what is called an offensive war. Those who assail an opposite or adverse army, or invade the dominions of another power, are said to wage an offensive war.

**OFFENSIVE Weapons**, are such as are fit for the purpose of carrying on offensive war, as cannon, mortars, swords, pistols, muskets, &c.

**OFFENSIVE Fortification**. See *Approaches, Sieges*, &c.

**OFFICE**, in a military sense, signifies any place or apartment which is fixed

or appointed for officers, clerks, &c. to attend in, for the discharge of their respective employments; as, War-office—Adjutant General's Office—Commander in Chief's Office—Ordnance Office—Barrack Office—Paymaster General's Office, &c. &c.

**OFFICE and Board**, are sometimes synonymous terms; as, Transport Board or Office—Barrack Board or Office—Ordnance Board or Office. Sometimes the term office is inapplicable to places where military business is transacted, viz.—Clothing Board—Board of General Officers, &c. The word *Conseil* is used by the French in the latter sense, the term *Bureau*, in almost all others.

**OFFICE** of the Inspecting-general of recruiting, of which the depot is in the Isle of Wight.

**OFFICE** of the Commissary-General of stores, &c. to the forces at home.

**OFFICE** of the Commissary-General of musters.

**OFFICE** of the Judge-Martial and Advocate-General.

**OFFICE** of the Physician-General.

**Surgeon-General's OFFICE**—Apothecary-General's OFFICE, &c.

**OFFICE for auditing public accounts**, consists of five commissioners, two inspectors-general of accounts, twenty-two clerks, two extra clerks, one solicitor, one office-keeper, and two messengers. The office is in Somerset House.

Upon the suppression of the office of auditors of the impress in 1783, this commission was created by parliament to supply their place and discharge their duties, in a manner more expeditious and less burthensome to the public.

The present establishment consists of five commissioners, as above specified, two of whom, being comptrollers of the accounts of the army, have only 500*l.* per annum each, although they execute the same duties as the other three commissioners, each of whom has an annual salary of 1000*l.* The salaries of the other officers are unknown. The total expense of this establishment, in the year 1797, appears to have been 8,650*l.* No fees or emoluments whatever are allowed.

It has been found, that the annual sum of 6000*l.* granted by the act of the 25 Geo. III. c. 52, (which together with 4000*l.*

4000*l.* voted for the commissioners makes a total of 10,000*l.* per annum) for the better auditing the public accounts, for the officers, clerks, and other persons, in lieu of all fees and gratuities whatsoever; and for stationary, coals, candles, and other incidental charges to be incurred in the office, was adequate to the payment of the present established numbers of such officers and clerks, according to the salaries allotted to each of them. It further appeared to the Committee of the House of Commons, that the number of persons so employed, was sufficient for the ordinary duties of the office, in the examination of the usual periodical accounts. It was at the same time represented, that the salaries of some of their clerks were not adequate to their labour, and to the trust reposed in them, when compared with the necessary expence of living in London; and the extraordinary accounts in consequence of the late war, required not only the labour of a greater number of persons than could be supplied from the existing establishment, but demanded also that such persons should be able and efficient, and some of them at least conversant in the knowledge of foreign languages, coins, exchanges, weights, and measures. In consequence of these representations, the establishment has been considerably increased.

*Barrack-Office.* The barrack department is at present upon a very large and extensive footing. It was originally formed in May 1793, at the commencement of the late war, and gradually increased until it was erected into an establishment completely distinct from all others, by a warrant from his Majesty, dated the 24th of March, 1794. Since that period it has also been further enlarged, owing to the additional number of temporary barracks and prisons, which were ordered in the autumn of 1796.

The barrack-master-general and the deputy barrack-master-general, are appointed, with fixed salaries, by warrant from the king. The salaries of all the other servants have, in the first instance, been fixed by the secretary at war, but they are appointed, and their numbers increased, by the sole authority of the barrack-master-general, who has also a discretionary power of making such extra allowance to any of the officers of

the department, beyond their fixed salaries, as he shall think proper; with a controul over the whole department, with regard to the appointments, as well as expenditure, in the secretary at war, from whom all such appointments originate; but several of the persons holding active stations in the general department, have other appointments and avocations, which must necessarily call them from the discharge of their duty in the barrack service, and thereby occasion a greater number of officers upon the establishment, and an increase of expence to the public beyond what otherwise might be necessary. No officer in the barrack department is allowed to take any fee or emolument on the receipt or issue of the public money, or to derive any advantage whatever on the purchase or issue of stores.

Among the advantages stated to accrue to the public, from the establishment of barracks, it is certainly no inconsiderable one, that the expence of keeping troops in barracks is less than keeping them in quarters; in proof of which, certain calculations were laid before the committee of the House of Commons, on the 19th of July, 1797, according to which it appeared, that there was a saving of 3*s.* 0*d.*  $\frac{1}{4}$  per annum on each man, and of 4*l.* 7*s.* 11*d.*  $\frac{1}{4}$  on each horse, which, calculating on 53,852 non-commissioned officers and private men, and 7337 horses then in barracks, amounted to 40,591*l.* 6*s.* 6*d.* which sum the barrack-master-general represented to be fully sufficient to cover the expence incurred on account of the barrack-masters, the wear and tear of bedding, &c. and the repairs of building; and as the expence of the barrack-office itself is defrayed by funds arising from certain arrangements made by the barrack-master-general, which could not otherwise be brought to the credit of the public, it was judged fair to state, that, taking the whole of the expence of the department, it was then, (and may be now) full as cheap to keep troops in barracks as in quarters.

The military hospitals are considered to be within the barrack department.—All buildings belonging to this establishment, are erected according to settled plans made by the surveyors of the office; and the buildings are paid for by measure of fair valuation, accord-

ing to the rates usually given for such work, at or in the vicinity of the places where the same is executed. The money for carrying on and completing all buildings belonging to the barrack establishment, is provided for by parliament.

The appointments in this department have been considerably increased since 1796, and are likely to be more so.—With respect to any reduction, that must necessarily depend on the extent to which the barrack service may be carried upon a peace establishment; the branch of expence which has been the consequence of this establishment, will necessarily be only of a temporary nature, as the barrack-master general himself has stated to the committee of the House of Commons, that the barrack-office, as it then stood, and now stands, was not to be considered as a settled establishment. As to the extent to which the establishment may in future be carried, that must depend upon the circumstances of the country, and the future arrangement and regulation of the army.

Such is the substance of what was laid before the committee of the House of Commons on the 19th of July, 1797.—Since that period the barrack establishment has continued to increase: how far it may hereafter prove beneficial to the country, time and events must determine.

This office, which at present is kept in Spring Garden, consists of

One barrack master general, at 41. a day.

One deputy barrack master general, at 11. 10s. a day.

One assistant to ditto, at 39 li. 5s. per annum.

One agent, who receives for himself and clerks, 530l. per annum.

Two architects and surveyors, salaries unknown.

We cannot forbear mentioning in this place, that although most of the public accountants are sworn, barrack masters sign and give in their returns, &c. *on honour*, only.

*Commander in Chief's OFFICE*, at the Horse Guards, Whitehall, consists of one commander in chief, with the rank of field marshal, at 3,457l. 10s. per ann.

Six aids-de-camp, at 172l. 17s. 6d. per annum.

One military secretary, at 172l. 17s. 6d. per annum.

One private secretary, with two assistants, salaries unknown.

One chaplain, at 115l. 5s. per annum.

One surgeon, at 172l. 17s. 6d. ditto.

Six clerks, one housekeeper, and one chamber keeper.

*OFFICE of the Comptrollers of Army Accounts.* The comptrollers of the army accounts, whose duty tends to regulate and check the expenditure of public money, under the head of army services, consist of a board, to which accounts relating to the extraordinaries of the army are referred previous to payment. Among other objects there are two principal payments which fall immediately under the examination of these officers: they are distinguished by the terms, money paid *without account*, and money paid *subject to account*.

The claims of persons for services to be paid without account, are subject to a strict examination before the comptrollers of army accounts, in such questions as come under their cognizance. Specific services, which require no subsequent examination, are so paid, viz. 1. Services, or pay at rates authorised by some previous instrument. 2. Subsidies and pay of foreign troops. 3. Purchases, or services which undergo a competent examination before payment. 4. Balances of settled accounts. The persons so receiving do not become public accountants, i. e. are not liable to account a second time; and finally, before the commissioners for auditing the public accounts. Persons receiving money on account are, public military officers, commissaries and contractors at home and abroad, who, in addition to an examination of their claims before advances are made, account finally also as public accountants before the commissioners.

With regard to the regulations and checks applied to control the expences known by the term *Extrordinaries of the Army*, those which originate at home, are different from those which are wholly paid abroad, being paid in a different manner, and being subject to regulations and checks not only different in their form, but probably in some degree in their efficacy, from those applied to foreign expenditure.

The particular expences, under the head

head of Extraordinaries of the Army incurred at home, are, 1st, on account of stores and provisions purchased at home for the use of troops serving at home or abroad. When these articles are supplied by contracts on advertisements from the Treasury, the tenders are referred to the comptrollers, and the lowest bidder being ascertained, the terms of the contract are settled by them; in the doing which every care is taken to ensure the due execution of the service, and to prevent frauds and abuses. 2. On account of bread, wood, straw, and forage, which are now supplied for the use of the camps in Great Britain, by small local contracts made by commissaries appointed for this purpose, and acting under instructions prepared by the comptrollers of the army accounts; one condition whereof has been, that the property in the article contracted for should remain in the contractor till the same is delivered to the troops. 3. On account of bread, for troops in barracks, which is supplied on a commission of two and a half per cent. on the value, the person supplied being obliged, before he can obtain any payment, to make oath, that he has not, directly or indirectly, received any part of it arising from the price of the article. 4. A farther head of this species of expenditure arises from the bills of the apothecary-general for medicines and surgeon's instruments supplied by him for the use of every corps serving at home, or abroad. 5. The remaining article (independent of all casual claims for supplies furnished, or services performed for the armies serving abroad, or at home, which are referred to the comptrollers of army accounts) arises from the supply of the invalid clothing.

All and every voucher proving the validity of claims for the supply of the above articles, namely, the certificates of *quality*, of *price*, from the proper officers, the receipts of the parties to whom they are officially delivered, with every species of proof connected with the case, must be produced to the comptrollers of the army accounts.—These vouchers, &c. are carefully examined by them before they advise any advance to be made on account, or any final payment to be directed for performance, of any of the above services.

The instrument directing any such payment is a warrant addressed to the paymaster general, and signed by three commissioners of the Treasury.

The extraordinaries of the army incurred abroad are; 1st. the contingent and extraordinary expences of his Majesty's governments, the charges of fortifications, pay of militia, &c. abroad.—These several expences are defrayed by the means of bills, drawn by the governors (to whom instructions for their conduct are duly given) on the Treasury, accompanied by a specification of the nature and particulars of the expenditure. Before these bills are accepted, they are referred, with their explanation, to the office of the secretary of state, to ascertain, that regular cognizance has been had of the nature and necessity of the service for which the expence was incurred. The quarterly accounts of the governors are referred to, and examined by the comptrollers of the army accounts, who report their remarks thereon to the Board of Treasury. These accounts undergo a second examination, and are finally passed by the commissioners for auditing the public accounts.

A second species of expenditure, under this head, arises from casual claims for foreign troops, under treaties, and for extraordinary services performed. These treaties are registered in the office of the comptrollers of the army accounts, and all claims depending thereon are referred to them for their report by the Treasury. In this case, the comptrollers compare the claim with the terms of the treaty; with the schedule of the persons composing each corps; with the rate of pay annexed to each rank; and with the muster rolls certified by the British commissary of musters. The sums, from time to time due, are certified to the Treasury before payment is made.

The third and last head of army services consists of the extensive and multifarious extraordinary expences of active armies abroad.

Since the commencement of the present war, the whole system of conducting these extraordinary expences of armies serving abroad, has undergone a careful revision. Among other wise suggestions it has been recommended,

1st. That no military officer should himself have a property, or interest, in any article which his duty obliged him to provide for the public service. The object of this suggestion has, in some instances, been fulfilled; but it still remains: with the commander in chief, and with those persons particularly concerned with army matters, to recommend its adoption in the clothing of the different regiments, regular as well as militia.—The property which the colonels manifestly hold in this article, exposes the most honourable character to unmerited imputations, and affords ample means to the base and selfish of growing rich at the expence of public virtue. 2. That no payment should be made by the military officer belonging to any department (such as quarter, or barrack master general, inspector of hospitals, commanding engineers, &c.) but that every expence should be paid by the deputy paymasters general, in pursuance of a warrant from the commander in chief. 3. That all vouchers, proving any payment, should be subject to a careful and speedy examination by persons appointed for the purpose, on the spot where the expence was incurred.

All the extraordinary expences of an army serving abroad, are conducted by the means of a commissary general, who receives and has charge of all provisions and stores sent for the use of the troops from this country; who purchases, or provides, under the direction of, or in concurrence with, the commander in chief (without whose authority no service can be performed, or expence incurred) such articles as may be more conveniently obtained on the spot, and who is responsible for all monies, provisions, or stores, whether actually used, damaged, lost, destroyed, or plundered, with the condition of procuring proper certificates to prove every mode of their consumption, before he can be discharged therefrom.

A commissary of accounts also attends each army where the numbers are of sufficient importance, with a proper establishment, for the purpose of examining and controlling accounts on the spot; both acting under specific instructions.

All monies, for the ordinary services

of the army, are obtained by the means of bills drawn by the deputy paymaster abroad on the paymaster-general, which bills are negotiated by the commissary-general, who is obliged to note the rate of exchange on the bill.

All monies, for extraordinary, are obtained by drafts of the commissary general on the Treasury, which, on their arrival, are accepted, if drawn conformably to the rules laid down, as being in payment for services ordered by the commander in chief, and the value of which have been previously examined and ascertained by the commissaries of accounts on the spot.

The commissaries of accounts make returns of their examination; and on these documents the comptrollers of the army accounts found the best enquiry into the expenditure which the nature of the subject admits of.

The commissaries general and commissaries of accounts, are appointed by warrant under the king's sign manual, directing them to obey all instructions given them for the execution of their duty by the lords commissioners of the Treasury; which instructions, since the commencement of this war, have been prepared by the comptrollers of the army accounts, under the orders, and subjected to the inspection of the treasury. Instructions are also given by the secretary of state for the war department, to all commanding officers abroad, to conduct the service on which they are employed, with the utmost regard to public economy, and punctuality in their accounts.

The present establishment of this office is composed in the following manner:—

Two comptrollers at 1000l. per ann. each.

One secretary, 700l. ditto.

*Civil department.*

One first accountant and chief clerk 500l.

One second ditto, 300l.

One third ditto, salary not specified.

*Military department.*

One first clerk, one second clerk, one third clerk, salaries not specified.

One chamber keeper, one messenger, one necessary woman, salaries not specified.

OFFICE of Ordnance, or Board of Ordnance.—

**Ordnance.**—It belongs to the office of ordnance to supply all military stores for the army and navy, to defray the expence of the corps of artillery, corps of engineers, and other military corps attached to the ordnance service; and also the charge of repairing and building fortifications, at home and abroad; excepting field works abroad, and excepting also those fortifications which commanders in chief may deem it expedient to erect without previous instructions from home; in which two cases the bills are paid by the Treasury, and placed to account in the extraordinaries of the army. All contingent expences, attending ordnance stores, as well as camp equipage for the artillery, and the article of tents for the privates of the whole army, are included in the payments of the ordnance.

The hire of vessels for the transportation of ordnance for foreign service, has, since the establishment of the transport board, been transferred to that office; and the building of barracks belongs now to the barrack department, except when barracks are ordered to be built within a fortification.

The master general, who, in his military character, is commander in chief over the artillery and engineers, has, in his civil capacity, the entire control over the whole ordnance department: he can alone do any act, which can otherwise, if he does not interpose, be done by the Board. He can order the issue of money, but that order must be executed in the usual mode, by three board officers.

The lieutenant-general, who is second in command over the artillery and engineers, is, in his civil capacity, the first in rank among the members of the Board; which comprehends four other principal officers; the surveyor-general, the clerk of the ordnance, the store-keeper, and the clerk of deliveries.—During the absence of the master-general, or the vacancy of the office, the whole executive power devolves on the Board; and it belongs to them, though they are subject to the interposition of the master-general, to make contracts for stores, and for performance of services, and to direct the issue of stores and of money. The signatures of three members of the Board, of whom the

clerk of the ordnance must be one, are necessary for the payment of money.

The principal store-keeper at the Tower, is also a board officer, and has the custody of the stores delivered in there: and the store-keepers at the out-ports and garrisons, have, in like manner, the charge of the stores issued to them. In general, a store-keeper and his securities are considered as personally liable to pay for any deficiency in their stores. At the appointment of every new store-keeper at the out-port, it is the practice of office to take an account (or a *remain* as it is termed) of the stores left by the predecessor. The quantity reported by the officer employed in taking the remains to be actually delivered over, is compared by the ledger-keeper with the quantity which it appears, by ledgers of articles formed from the journals of receipts and issues, that the predecessor ought to have had in his possession; and in case a deficiency arises, which cannot be satisfactorily accounted for, it is ordered by the Board to be made good by the predecessor, or his representatives. Remains of stores are ordered to be taken, in like manner at all places at home, once in seven years, as also at the expiration of a war. In foreign parts a remain is taken only on the appointment of a new store-keeper.—The store-keepers abroad send home annual accounts of their receipts and issues. When an expedition takes place, a commissary is specially appointed to take the charge of ordnance stores, who is liable himself, or by his securities, to make good any deficiency in the same manner as a store-keeper. In the event of the capture of ordnance stores by the enemy, the commanding officer's certificate of the quantity captured, is the voucher, on the faith of which alone the board of ordnance are accustomed to give credit to the commissary.

Whenever any business, either of receipt or issue, is going forward, the clerk is ordered personally to attend, and he must be present at the opening of the store early in the morning.

Fortifications are erected by the commanding engineer, pursuant to an order from the master-general, for carrying a project into execution, according to an approved plan and estimate. The esti-

mate is usually formed in the first place by the engineer, who is afterwards to execute the work; and its accuracy is examined into by a committee of engineers at home, the expediency of the measure being submitted to the master-general. All fortifications, works, and repairs are carried on by measurement, and by contract, except where the soldiers of the corps of royal military artificers have been employed; and even in such cases the materials worked up by the soldiers are usually supplied by contract. It belongs to the storekeeper at the place where the fortifications are carried on, to make the payments. Money is imprested to him for this purpose on account, in consequence of a letter from the engineer to the Board, in which he mentions the particular service. The store-keeper having been made debtor for the sums imprested, is afterwards discharged by producing vouchers for his disbursements, which consist of the receipt of the person receiving the money, together with the signature of either one, or two witnesses, who are usually persons in the ordnance service. The store-keeper's own affidavit of the payment is also required. In respect to the payment of those services, which are not under the direction of the engineer, but under that of the store-keeper, the clerk of the survey, and the clerk of the cheque of the place, who "are called the respective officers," a joint application is made by them to the Board.

In the case of the works, or services abroad, the payment is made by the means of bills drawn on the board of ordnance, by the store-keepers of the regular establishments, and by the commissary and paymaster, (who are usually the same person) attending the detachment of artillery, which is with his majesty's forces. Those who draw are made debtors for their drafts, and account afterwards in the same manner, and are subject to the same checks as a storekeeper at home. It is further required of every accountant abroad, who draws bills, that he should take an oath, that he has made public advertisements of his intention to draw the sum which he had in contemplation: and that he has accepted the lowest proposal offered to him, and that he has not, either di-

rectly or indirectly, received any fee, or gratuity for drawing the bills. When any bill, drawn from abroad, is evidently improper, the acceptance is not refused; but the bill is accepted on the credit of the drawer, in order, as it is obvious, to save the charges attending its return. The drawer, on entering his office, having given security for the faithful discharge of it, it is assumed, that if a bill accepted on his credit should be afterwards disallowed on account of the service being, on investigation, deemed improper, the money is to be recovered from him, or his securities.

The sums voted for the ordnance consist of the three following heads:—1st. The ordinary, which comprehends the provision for the ordinary establishment, civil and military, for the year ensuing. 2dly; The extraordinary, which comprehends every service known beforehand, of a temporary and contingent nature, being a provision for the ensuing year also; and 3dly, the services unprovided for, consisting of services which either have been actually paid in the past year, as is generally the case, or which are supposed to have been paid, but which were not foreseen when the estimate for the past year was made up. Among these unforeseen expences are included various exceedings, which have happened in the individual services voted in the past year's ordnance estimates; to which are added, such sums as may be necessary to make up the deficiency of the sum directed to the ordnance use from the naval service.

The present establishment of the ordnance department consists of the following persons, with their appropriate salaries, viz.

The master-general, who, in his civil capacity, receives 1,500*l.* per annum, besides a sum for patent salary, about 180*l.* a year; and a military pay of 1*l.* 6*s.* a day, as captain-general of the company of gentlemen cadets.

The lieutenant general, including 100*l.* for house rent, receives 800*l.* besides a small sum in like manner for patent salary.

The surveyor-general, including 100*l.* for rent, receives 800*l.*

The clerk of the ordnance, including 100*l.* for rent, receives 600*l.* The profits of this appointment in 1792, amounted

mounted to 188l. 3s. 6d. and in 1796, to 1,209l. 3s. 6d. including fees.

The storekeeper, including 100l. for house rent, receives 500l. The profits of this appointment in 1796, were 438l. 19s. 9d. making in the whole 938l. 19s. 9d.

The clerk of the deliveries, including 100l. for house rent, receives 500l. and in 1796 he received for fees, 433l. 12s. making together, 933l. 12s.

The salary of the board officers has been established at their present rate for a considerable number of years, with the exception of 100l. a year, which has been added to the office of surveyor general, ditto to the storekeeper, and 60l. to the clerk of deliveries.

The Board commonly meets about three times a week in winter, and twice a week in summer, at the ordnance office, Westminster. Three officers constitute a board. The master general and lieutenant general seldom fail to attend, except when absent on military duty.—Some of the other officers take alternate months of attendance; and there is no one of them who is not frequent in his attendance at the board. The board officers have no regular hours and places of attendance on the duties of their own individual office, but interfere at their option, and as far as each of them may judge necessary, in the regulation of their respective departments of the Tower, where their chief clerks reside.

The treasurer receives, including 60l. for house rent, 560l.

The secretary to the master general receives, including 100l. for house rent, 300l. and in 1796, he received for fees, 453l. 15s. making together, 753l. 15s.

The secretary of the board receives 510l.

The solicitor, in lieu of his attendance, and for conducting causes, 300l.

The general hours of attendance of the clerks in the ordnance offices, are from ten to four, besides other hours if necessary. They are promoted usually by rotation, entering, for the most part, as junior clerks at 70l. per annum.—All salaries of clerks in the ordnance of above 100l. per annum, are subject to a deduction of 1s. 6d. in the pound; and all from 50l. to 100l. to a deduction of 6d. The land tax duty, to which

these salaries would otherwise be liable, is defrayed, by a particular order, at the expence of the public: which order is said to have been made many years ago, in consideration of the lowness of the salaries.

All fees are expressly prohibited, except those taken by the clerk of the ordnance, the principal storekeeper, and the clerk of deliveries already mentioned. Officers of the ordnance are prohibited from holding a share in ordnance contracts or agencies, with the exception of agencies to any officer of artillery, or engineers. There are no sinecure places under the board of ordnance; nor is it conceived, that there are any persons in the ordnance service who hold other offices under government.

There is no regular fund for superannuated officers under this establishment; but the expence of that head of service is annually provided for by parliament in the ordinary of the ordnance, under the heads of superannuated and disabled men, half pay of reduced officers, widows' pensions, and allowances to officers for good services; the whole of which amounted in 1797, to 19,610l. 13s. 2d. The greatest rate of allowance lately given to the civil servants, for the greatest length of service, has been two thirds of the amount of the salary; a rate which appears to be very generally adopted in other departments.

The whole amount of the establishment of the office of ordnance, as it stood at Christmas 1796, was 51,618l. 10s. 2d. besides certain allowances for house-rent, coals, and candles; besides also a per centage on the remittance of money to storekeepers, of 25s. per cent. in some cases 20s. and 10s. in others, but in general of 2d. in the pound.

The additions consist, 1st. of new officers in London, and also at Guernsey, Jersey, New Brunswick, and the West India islands, and some other places, of which the salaries amount to 12,966l. 10s. A sum exceeding 700l. appears to be on account of a new appointment of officers at the powder mills.—2dly, of an increase of the existing salaries, and of allowances, amounting to 5,531l. 11s. 2d. making together 18,498l. 1s. 2d. from which, however, is to be deducted, on account of diminutions in the establishment since 1782, the sum of 4,293l.

4,293l. 2s. 6d. making the actual increase, on a comparison of the two establishments, to be 14,204l. 18s. 8d.

The committee of the House of Commons, from whose report we have made these copious extracts, conclude by observing that the estimates for works abroad have been much oftener exceeded than those at home; that the frauds are more numerous; that the difficulties of prosecuting there are considered as greater; that additional precautions to prevent imposition in the drawing of bills are necessary; and that the taking of a periodical remain, as is done at home, is there omitted. The enormous frauds practised by so many servants, in various West India islands, while the vouchers, sent home continued to be fair and regular, create a reasonable jealousy and suspicion, in respect to the manner of conducting this branch of the public service, in those possessions in general which are distant; and the money, asked for extraordinary services in those parts, should obviously, therefore, be voted only after having given due consideration to the case in question, and after full explanation of the extent of the projected service.

With respect to the establishment of the office of ordnance, and of the salaries and duties of its servants, it appears obvious, that from many things which have been stated, it is not so much on any general regulations, or instructions, however strict and prudently framed, that parliament must depend for the proper application of the money voted for ordnance service, as on the disposition strictly to execute those orders; on the proper choice of the inferior servants, and the careful superintendence of them; on the integrity, vigilance, and knowledge of business of the principal officers of the board of ordnance; and more particularly of the master-general, in whose hands almost all the patronage, and ultimately all the power, are placed.

The civil branch of this office consists of one master-general, one lieutenant-general, one surveyor-general, one clerk of the ordnance, one principal store-keeper, one clerk of the deliveries, one treasurer and paymaster, one secretary to the master-general, two clerks under ditto, one secretary to the board, two

clerks under the lieutenant-general, one chief clerk under the surveyor-general, seventeen clerks under ditto, one chief clerk under the clerk of the ordnance, sixteen clerks under ditto, one chief clerk under the store-keeper, sixteen clerks under ditto, one chief clerk under the clerk of the deliveries, fifteen clerks under ditto, one chief clerk under the secretary to the board, nine clerks under ditto, one chief clerk under the treasurer and paymaster, eight clerks under ditto, one clerk to the chief engineer, one solicitor, one assistant ditto, one architect, one clerk of the works, one clerk to ditto, one superintendant of shipping, one clerk to ditto, one purveyor of shipping, one clerk of the cheque, one master furbisher at the Tower and Hampton Court, one assistant clerk under ditto, one armourer, one store-keeper of saltpetre, one engine-keeper, one clock-maker, one barge master, fourteen porters, messengers, &c. at the Tower, and secretary's office, Westminster. Salaries unknown.

*Officers belonging to the Military Branch of the Ordnance.*

*Corps of Royal Engineers.*

One master-general, one lieutenant-general, one chief engineer and colonel, five colonels, six lieutenant-colonels, fifteen captains, thirteen captain-lieutenants, twenty-seven first lieutenants.

*Officers belonging to the Royal Military Academy at Woolwich.*

One governor, one lieutenant-governor, one inspector, one professor of mathematics, one professor of fortification, one mathematical master, one arithmetical master, two French masters, one assistant fortification-master, two drawing-masters, one fencing-master, one dancing-master, two model-makers, one clerk. Salaries unknown.

We have been as explanatory upon this important branch of the public service as our source of information would allow; and have exceeded the proposed limits of our undertaking by entering into the details of the ordnance office, because we humbly conceive, that too much light cannot be thrown upon a department, whose utility is confessed, whose expenditure is immense, and whose responsibility is at once so chequered and mysterious. We lament, that it should not be within our grasp  
to

to take the same general and extensive view of other offices.

**PAY-OFFICE, and Paymaster General of the Forces.** From a return which was made to a committee of the House of Committee on the 19th of July, 1797, it appeared, that the establishment of the pay-office, previous to the act of the twenty-third of his present Majesty, consisted of the paymaster and deputy-paymaster-general, cashier, and other clerks and officers, making in the whole eight: that there were also eight junior clerks employed, with an office-keeper, two messengers, and a housekeeper, being in the whole twenty. It appeared also, that there were ninety deputy-paymasters abroad, six of whom were employed on a salary of 30s. per diem, and three at 3l. per diem each.

The nett receipt of the whole establishment of the paymaster-general, his officers and clerks, (exclusive of the salary paid to the deputy paymasters abroad) was

	£.16,973	1	8
Payments to deputy-paymasters abroad }	6,533	0	0

£.23,561 1 8  
of which 11,573l. 19s. 1d. consisted of fees and gratuities paid to certain officers exclusively. In pursuance of the pay-office act, at present no fees, perquisites, or gratuities are taken in the pay-office of the army. The establishment, made immediately on the passing of the act, consisted of the paymaster, and deputy paymaster-general, and six principal clerks and officers, making in the whole eight; and also of eight junior clerks, a storekeeper, two messengers, and a housekeeper, the nett salaries of whom amounted to 11,000l.—Since that period, there has been an addition of two clerks, and increase of salary to two others as assistants, in the departments of the accountant and cashier; the increase in point of salary being 340l. The total thereof, independently of the salaries of the deputy paymasters abroad, was 11,340l. in 1796.

In consequence of the pay-office act, the paymaster-general has been deprived of any profit that might accrue from the custody of the public money.

The paymaster-general has not any active control over the public expendi-

ture; it being his duty to make payments ministerially, and without discretion, in pursuance of the warrant directed to him by the secretary at war or the treasury, or by both, as the case may be, or in payment of the drafts of the deputy paymasters abroad, for the ordinary services of the army. The pay-office must therefore be looked upon as an office of mere account; and as affecting the public expenditure only, so far as it performs its duty, as an office of account, with expedition and regularity.

The materials and documents, which compose a considerable part of the account of the paymaster-general, originate from persons over whose conduct he has no controul. There is a regular succession in preparing them from the regimental paymaster to the agent, and from the agent to the secretary at war, who finally delivers them at the pay-office. The pay office act directs, that the following several accounts and documents should be delivered in at certain periods:—

1. Regimental paymasters were directed to transmit their accounts of the subsistence, &c. paid by them to effectives, every two months to the agent, but now every month, and of certain contingent expences within three months after the 24th of June and the 24th of December in each year. By a late regulation they are further directed to give in a statement of possible expenditure between one period and another.

2. The next description of persons in the succession, whose conduct is regulated by the pay-office act, are the regimental agents, who are therein directed to transmit their accounts of all regular regiments serving in Great Britain, and of the embodied militia, to the secretary at war, within six months after the 24th of December in each year. The accounts of regiments, serving abroad, are also subject to positive regulations, when the agents have received the necessary documents relating to them.—From the evidence, however, given by Mr. Greenwood (a partner in the house of Messrs. Cox and Co. army agents, Craig's-Court, Charing-Cross,) before the committee of the House of Commons, in 1797, it appeared, that within his experience, the regimental paymas-

ters, whether serving abroad, or at home, had not, generally speaking, transmitted their accounts within the periods fixed by the pay-office act. In consequence of this examination, and from a manifest defect in the system altogether, fresh regulations respecting regimental paymasters have been made.—These, we make no doubt, will be gradually improved; so that in process of time the actual payment of the British army will correspond with the estimates laid before the Commons.

3. The remaining office through which the regimental accounts pass, on their way to the paymaster-general, is that of the secretary at war, who by the pay-office act is directed to examine and settle, or cause to be examined and settled, the annual accounts, and to transmit the same, together with certificates of the several charges allowed in the same accounts, and the balance of the same, within three months after the receipt of the said accounts respectively, to the office of the paymaster-general of his Majesty's land forces.

After the account of a regiment is made up by the agents, and examined at the war-office, the debenture warrant is addressed by the secretary at war to the paymaster-general, which states the amount of the charges allowed to be due to the regiment, and directs him to make out a debenture complete for the regiment, being an account of what is due to it, both under the authority of the establishment, and for contingent services allowed. This debenture warrant is accompanied by a state of charges which is an account in four columns, the two first of which state severally, "The sums expended or due;" and the "sums received." The latter state severally what is "received over, or received short," under each head of service. The account being balanced, the statement of sums expended, or due, is certified and signed by the secretary at war. On the receipt of this warrant at the pay-office, the debenture is made out, founded on the statement delivered to them, and being transmitted by the pay-office to the secretary at war, the clearing warrant under the king's sign manual, is issued countersigned by the secretary at war, and three lords of the treasury, which directs the final pay-

ment of the account by the paymaster-general, (where money is due to the regiment) and is among his vouchers before the commissioners for auditing public accounts.

That no larger balance of the public money might remain in the hands of the paymaster in office than was necessary to answer the demands of the public service, it was recommended in 1797, to take away from the paymaster-general of the forces, the custody of the public cash, and place it in the Bank of England, by which means this treasury would be converted into an office of mere account, and the paymaster general, instead of being the banker of the army, would be the instrument only through whom the army services are paid, without having the power of applying the public money to any other purposes whatever. It was further observed, that all official books and papers are, and should be considered, as the property of the public, and as such left and deposited in the pay-office, for the use and information of posterity.

The establishment of a regiment, with the king's regulations, and warrants, is the instrument that regulates the pay of the army, and is consequently the basis of all the documents which enter or go out of the pay-office under that head of service.

In the pay-office, this sum, constituting the full pay, &c. of a regiment, was formerly divided into six parts, according to the establishment, the king's warrants and regulations:—1. Subsistence. 2. Widow's allowance. 3. Poudage. 4. Hospital. \*These two last being deductions from the pay of one shilling in the pound, and one day's pay for miscellaneous services, and Chelsea hospital. 5. Off-reckonings, being the fund allotted to the colonel for clothing, from the pay of the non-commissioned officers and privates. 6. Clearings, being the arrears of officers, and whatever may remain due to the regiment.

In consequence of the great inconveniences which grew out of the system of arrears, &c. the following general principle was recommended by the commissioners appointed to examine the public accounts of the kingdom in 1797, that the establishment should contain the

the real full pay of every person described therein, and nothing more: and that five separate funds, independent of the establishment, should be created, viz. 1. Clothing. 2. Recruiting. 3. Widows. 4. Chelsea. And 5. Miscellaneous services; in lieu of those then existing; to be balanced annually at the pay-office, as soon as possible after the expiration of the year, and before the supply for the subsequent one was voted, as a guide to the secretary at war in forming his estimates. They recommended also, that the regimental paymaster and surgeon, instead of being paid by a deduction from the subsistence of the non-commissioned officers and privates, should be provided for in some more convenient form; (see regimental paymasters, surgeons, ditto.)—That subsistence should be issued to effectives only, and according to muster; which is now done on the 24th of every month, by the regimental paymasters. That one fund should be formed for clothing the whole army, to be managed by the clothing board, and not by the colonels of regiments. Such board consisting of a certain number of general officers, chosen annually by the board of general officers.

Since that period a fresh regulation, bearing date the 19th of April, 1800, has taken place relative to the clothing of the army. It is therein directed, that the clothing should be viewed by two permanent inspectors of clothing, instead of being viewed, as heretofore, by a general officer of the clothing board. The said inspectors, or the inspectors for the time being, are to view and compare with the sealed patterns the clothing of the several regiments of cavalry and infantry, as soon as the same shall have been prepared by the respective clothiers; and if the said clothing appear to be conformable to the sealed patterns, they are to grant two certificates of their view and approval thereof; one of which certificates is to be delivered to the clothier, to be sent with the clothing to the head-quarters of the corps, and the other to be lodged with the clothing board, as the necessary voucher for passing the assignment of the allowance for the said clothing.—The clothing board join to the colonel's assignment their certificate to the pay-

master-general, that the clothing has been viewed and approved, and desiring him to pay the assignee the sum mentioned in the assignment. The commissioners recommended as an essential part of their plan, that the colonel should receive a liberal equivalent for any emolument he had derived from this source, by an increase to his subsistence.

The commissioners, with a view of saving expence, and preventing unnecessary labour, gave it as their opinion, that the accounts of the paymaster-general should be finally passed in the office of the comptrollers of the army accounts, and not in that of the auditors of the imprest.

With respect to balances in the hands of paymasters in office, the paymaster is directed to address his memorial to the treasury, praying that money may be lodged for army services (specifying the same) in the Bank of England, to be placed there on account of the paymaster-general of his majesty's forces. Such money to be liable, in the hands of the bank, to answer the drafts of the paymaster for the army services, duly specified, and not otherwise.

The paymaster is also directed, in the monthly memorials to the treasury, to state the balances due to him at the bank on the preceding month's account, oftener, if required so to do, together with an account of all the demands with which such balances are chargeable; such balances, on death, resignation, or removal of any paymaster, to vest in his successor, and be liable to the same demands.

The paymaster is also directed, within twelve months after the accounts enabling the said paymaster to complete certain specified accounts shall be received, to make up, or cause to be made up, an annual account of the ordinary and extraordinary services of the army.

The account of the paymaster-general of his majesty's forces, from the 25th of December in each year, to the 24th of December following, is to be transmitted, with proper vouchers, to the commissioners for auditing the public accounts, two of whom must be comptrollers of the army accounts.—This account was formerly lodged with

the office of the auditors of the imprest; but it became subject to the examination already mentioned, by stat. 25 Geo. III. c. 22. The same statute, with a view of rendering the pay of the army simple, expeditious, and intelligible, directs that all estimates, debentures, warrants, and accounts, belonging to the army, should be made out from the 25th of December in each year; and enacts that the establishment should be divided under their several heads of service; and that the secretary at war should form estimates of the charge of pensions to officer's widows, clothing, agency, and allowance to agents by the subsistence of non-effectives, called warrant men, the actual pay of commissaries, non-commissioned officers, and privates, allowances to captains, paymasters, and surgeons, and of all expences defrayed by poundage and one day's pay: the paymaster is also directed to form his memorials to the treasury for clothing, and issue his drafts on the bank in respect thereof, in equal payments, on the 24th of June, and the 24th of December, in each year, in favour of the persons having regular assignments from the colonels, &c. commanding regiments.

Although it has been strongly recommended by the commissioners, that a more speedy and regular settlement of army accounts should be produced, by introducing a greater simplicity in their form, &c. one of the principal heads of service which requires amendment, has hitherto been left unnoticed; it relates to the whole clothing of the army, which is still managed by the respective colonels of regiments (both regular and militia) and not by the means of a single fund under the management of the clothing board, accompanied by a liberal indemnity to the colonels. The committee of the House of Commons felt it more necessary to make this remark, finding by the evidence of Mr. Greenwood, the army agent, and also by a return from the war-office, that the money for clothing both regular and militia regiments, was issued not to effectives only, and according to muster, but for the numbers on the establishment of the regiment.

The clothing for the militia regiments is not subject to the inspection of the

clothing board, or of any board whatever before the same is delivered to the regiments. It was suggested, that no reason had occurred why this part of the public expenditure should not be liable to the same inspection and control as is applied to a case which appears, at least while the militia is embodied, to be nearly similar. The sum allotted for the clothing of the militia differs materially from that allowed to regular regiments, in the case of the sergeants, corporals, drummers, fifers, and privates. The curious may form some idea of the profits which accrue to militia colonels, by referring to pages 98, 99, 100, &c. of a pamphlet, intitled, *A Comprehensive View of the Interior Economy of Infantry Regiments, &c.*

With respect to deputy paymasters abroad, it was recommended by the committee to discontinue a practice which could not be justified on any ground where sufficient security can be obtained from persons qualified, and willing to execute the office in person. This related to persons being employed to act as deputies by others of the same description. The commissioners of accounts observed on this subject, that with the exception of the deputy paymaster at St. Domingo, and possibly the deputy paymaster at Madras, all the deputy paymasters, though deputies themselves, execute their office by deputy, being themselves engaged in very different employments under government.

This department is composed of two paymasters-general, at 2000l. per ann. two deputy paymasters-general, at 500l. per ann. One accountant-general, at 1200l. per ann. One cashier, at 1000l. per ann. One ledger-keeper, at 800l. per ann. One cashier of half-pay, at 700l. One computer of off-reckonings, at 600l. One entering clerk; fourteen clerks; one keeper of the stores; one office-keeper and messenger; one second messenger; one housekeeper; eight deputy paymasters abroad; salaries unknown. Among the latter are included, the deputy paymasters that attend expeditions; as may be seen in the Royal Calendar, page 200.

OFFICE for Sick Prisoners of War; consists of 4 clerks at 300l. 150l. 120l. and 100l. per ann. according to seniority; two

two messengers, one housekeeper, one porter.

*Ship-Letter Office.* During the continuance of the British army in Holland, a mail was made up every Tuesday and Friday night, and forwarded to Yarmouth, where two packets, taken from the Cuxhaven station, were appointed to convey them to the Helder. A gentleman (the deputy comptroller of the foreign office) was sent to the head quarters as army postmaster, and in like manner made up two mails per week, but they were sometimes detained for dispatches.

On application from the Duke of York the letters of soldiers (being subscribed by the commanding officer) were suffered to pass at the reduced charge of one penny, although that sum was not paid, at the time of the letter being put into the post-office as the act of parliament on the subject requires.

The following particulars, relative to this useful and humane establishment, were issued from the general post-office, on the 20th of September, 1799.

" Notice is hereby given, that letters addressed to persons serving with the army under the command of Field Marshal his Royal Highness the Duke of York, will be received at the ship letter office twice, instead of once in the week, viz. on Tuesday and Friday from ten in the morning until ten o'clock at night, and not on Thursday as mentioned in the advertisement from this office of the 10th instant.

" And that such letters will be regularly forwarded in vessels from Yarmouth to the Helder Point on the same days as the mails are sent to Cuxhaven.

" Letters by this conveyance will be chargeable with an half-rate of postage, under the act of the 39th of his present majesty, of sixpence each single letter, one shilling double, one shilling and sixpence treble, and so on in proportion, excepting single letters to and from private soldiers and sailors, which are chargeable with one penny only, under the act of the 35th of his present majesty.

" And that newspapers will also be forwarded at a rate of three-pence upon each, provided such paper is sent without cover, or in covers open at the sides.

" Two mails from the army may be expected to arrive in each week.

" By command of his majesty's post master general.

" F. FREELING, *Secretary.*

*Transport-Office.* The transport office is a newly created board, and was instituted in July, 1794, at first for the superintendence of the transport service only; but to that employment has since been added the management of the prisoners of war, in health at home, and abroad.

The establishment consists at present of five commissioners, a secretary, six clerks, a surveying officer, an inspecting officer, two storekeepers, six messengers and porters, and a housekeeper, with eleven clerks in the department of prisoners of war.

The immediate duty of this office, so far as related to the transport service, used to be performed by the commissioners of the navy; except in some instances, where the ordnance, or other departments hired the transports wanted for their own immediate service; and the present transport board have pursued the modes of engaging transports which were practised by the navy board when the transport service was under its directions; but it was thought expedient to constitute a distinct board, to transact the business of that extensive branch of the naval service; and from the unparalleled extent to which that service has been carried during the late war, it is highly proper that every possible check and control should be put over so vast an expenditure of money.

How far (to use the words of the committee) this board has contributed to lessen the amount of the expenditure in this article, or to forward the due execution of the service, beyond what the commissioners of the navy might have done, if it had continued under their direction, is a point upon which the committee had not the means of forming any opinion; but as the board was constituted for the express purpose of directing the transport service, and of regulating the care and custody of the prisoners during the war, it is presumed that the duration of the establishment will not be longer than the continuance of the war; at the termination of which, no reason appeared to the committee, why

why the transport service might not be put wholly under the direction of the commissioners of the navy, as recommended by the commissioners of inquiry in their report on that office, and the expence of a separate board for the transport service be saved, without any detriment to the public.

Without hazarding an opinion upon these general observations, we shall briefly add, that, by means of the transport office, many important objects, which relate to the public as well as to individuals, have been facilitated, that formerly were subject to the most embarrassing and expensive delays.

The present establishment consists of five commissioners, one secretary, one chief clerk, five clerks, and seven extra clerks.

*Clerks for the department for prisoners of war.*

*Home department.* One chief clerk, one assistant to chief clerk, three clerks, and one extra clerk. Salaries unknown.

*Foreign department.* One chief clerk, one translator, one assistant to chief clerk, three extra clerks, one office-keeper, four messengers, one porter, and one housekeeper. Salaries unknown.

**WAR-OFFICE.** The establishment of the war-office, at Christmas, 1796, according to the last public document on that head, consisted of the secretary and deputy secretary at war, a first clerk, and three principal clerks, and eight persons or their assistants, placed at the head of different departments of the office. The amount of the salaries of these offices, (independent of emoluments) at Christmas, 1796, was 5991l. 12s. The following persons had their salaries increased in consequence of the war, viz.

Deputy secretary at war	£.500	0	0
Examiner of army accounts	300	0	0
Salary of an assistant to ditto 400l.	720	0	0
Ditto to another 320l.			
Clerk for the entry of Com- missions	118	12	0
Clerk for the accounts of de- serters	49	0	0
Clerk for widow's pensions	114	8	0
Salary to the examiner of army muster rolls	200	0	0
	£.2,002	0	0

To counterbalance this  
charge against the pub-

lic, a decrease took place at the same period in the salaries of the principal clerks

74 2 0

The total of the actual }  
increase is - } £.1,027 18 0

The number of other clerks at the war-office in 1782, was twelve. The total of their salaries was 1,190l. 13s. The number of other clerks in 1796, was twenty-one, and the total salaries was 1,810l. The increase of persons of this description, since 1782, has been nine, and in the total of their salaries 619l. 7s.

The number of retired clerks, in 1782, was two, and their salaries 400l. The number of retired clerks in 1796, was four, and their salaries 455l. 2s. making the increase in number of retired clerks two, and the total of the increase of their salaries 55l. 2s.

With respect to the emoluments which certain persons in the war-office receive under the head of fees, it appeared upon examination before the committee of the House of Commons, "that no document is to be found at the war-office, authorizing the several and respective fees, which may be demanded therein; nor does any officer belonging to the department, or retired therefrom, know of any orders having been given on the subject."

In a schedule of the fees paid at the war-office, and a paper describing the application thereof, it appeared, that (with the exception of an occasional arrangement made in favour of two retired principal clerks) they have been exclusively paid in certain proportions to the following clerks and officers:—

1. Deputy secretary at war. 2. First clerk. 3. Principal clerk. 4. Ditto. 5. Ditto. 6. Clerk for the entry of commissions. 7. Clerk for accounts of deserters. 8. Clerk for business of widows' pensions. 9. Examiner of army accounts. 10. Assistant to the examiner of army accounts. It appeared on examination, that during the years 1792, and 1796, (being respectively periods of peace and war) the amount of all fees received and distributed at the war-office, was in the year 1792, 4,991l. 3s. 4d. In the year 1796, 42,731l. 11s. 11d. The total of the salaries in the year 1796, was 8,559l. 1s. which, together with

with the fees above stated, makes the sum of 51,290l. 15s. 11d.; of which there was paid by the public, 46,127l. 7s. 3d. and by individuals, 5,163l. 8s. 8d. subject to deductions of 52l. for taxes, leaving the total net receipt in the year 1796, 51,238l. 15s. 11d.

A table is annexed to the report made by the committee of the House of Commons in 1791, stating the receipt of the abovementioned officers and clerks, on an average, from 1782, to 1796, both inclusive, consisting of the salaries and fees (distinguishing each) received by the same officers and clerks in the year 1796, including also the salaries and fees allotted to two retired principal clerks. With respect to the emoluments which were received by the retired clerks, an explanatory letter was written on that head by Mr. Lewis, under secretary at war, in which the claims of these gentlemen to public remuneration, were stated.

It likewise appeared, that there were emoluments not arising from places in the War Office, but received by officers belonging to this department, amounting in the whole to 4,611l. 6s. to which is to be added, the pay of an individual as captain in the navy, and of another as second lieutenant colonel in a marching regiment.

In consequence of the several statements which were laid before the committee of the House of Commons, relative to the fees and gratuities of various offices, but especially of those received at the War Office, it was recommended, that the whole fees and gratuities received in them, should constitute one general fund in the hands of the chief clerk of each office, towards defraying the expence of the office, and that the salaries of the under secretaries, clerks, and other officers, together with every other attendant expence, be paid thereout quarterly, as far as the said fund will produce.

It likewise met the approbation of the committee, as a general principle, that those persons who have retired through age or infirmities, should receive a liberal compensation for their past services; but this compensation was recommended to be limited in its extent, and to be given in conformity to certain regulations which were proposed

respecting the future application of the fees paid at the War Office.

With respect to the nature of the accounts which come into the War Office and the form of the examination which they undergo there, it has been stated to the House of Commons, that the first head consists of the annual accounts of the ordinary and incidental charges of established regiments; the second may not inaccurately be defined regimental extraordinaries, or incidental expences more properly belonging to established corps than to the army in general, which latter are known by the term, "Extraordinaries of the Army." All claims made by the regimental agents come under the inspection of the "Examiner of Army Accounts," to whose office they are transmitted of course, in virtue of a general delegation of that duty to him by the secretary at war: after his examination and report, the secretary at war, in many instances, orders partial issues of money by letter to the paymaster general. No final payment is made, except under the authority of a warrant countersigned by the secretary at war, and, in most instances, by three lords of the treasury. The regimental agents account finally to the secretary at war. They are likewise accountable to him and to the commander in chief, for every species of mismanagement or misconduct with respect to the officers and soldiers, &c.

The forms under which all payments derived from the establishment are conducted, consist of the following papers:—

1. The establishment of a regiment.
  2. The warrant from the War Office to make out debentures, with the state of charges annexed.
  3. The debenture made up at the pay-office.
  4. The final or clearing warrant.
  5. The pay-office state.
- This department consists of:—  
 One secretary at 2480l. per annum.  
 One deputy secretary and first clerk at 3200l. per annum.  
 Four senior clerks, seven clerks, salaries unknown.  
 One paymaster of widows' pensions.  
 One deputy ditto.  
 One examiner of army accounts, at 1500l. per annum.

Three assistants, one messenger, one office keeper, one store keeper.

For a minute and specific account of this office, see pages 205, 228, 236, 237, 241, of the Reports from the Select Committee of the House of Commons in 1797.

The War Office department has no concern in framing or executing the interior and local regulations of the militia forces. These are made, altered, and amended by the lords-lieutenants of counties, after having been submitted to parliament.

*OFFICE of Secretary of State for the War Department.*—The office of secretary of state for the war department, was first established on the 11th of July 1794, the whole business of the war department having from the commencement of the war in 1793, down to that period, been transacted by Mr. Dundas, in addition to the ordinary business of the home department.

The accumulation of affairs occasioned by the war, had, however, as it is stated, rendered it necessary to add four clerks to the ordinary establishment, and to employ two others, belonging to particular branches, almost constantly and exclusively, and had in such manner overloaded every individual then existing in the office, that the necessity of a separate establishment for managing the affairs of war exclusively, was soon felt, and produced the present additional office of secretary of state for the war department. Notwithstanding the resignation or dismissal of those ministers who first created this establishment, the necessity for its continuance has been equally felt, and Mr. Dundas is succeeded by Lord Hobart, as secretary of state for the war department.

It is here necessary to acquaint the reader, that the matter which relates to our principal offices in the military department, has been extracted out of the journals of the House of Commons.—Some alterations have occurred since the inquiry in 1797, (of which the present speaker was chairman,) and a complete revision of the whole system will, most probably, take place, in consequence of the new military commission that has been instituted. The inquisitive reader will, however, find under

War-department, a more specific and more recent account of that office.

In thus quitting the subject, as to its general view, we cannot help mentioning, that much trouble would be obviated, were the names and designations of the several offices marked in large legible characters, at the entrance of each department. This mode has already been adopted in Somerset House.

*Delays of OFFICE.* The disappointments and embarrassments to which many individuals, but most especially military men, are exposed, through the tardy progress of official business, and which have obtained a sort of proverbial curse under this term, shew the necessity of regulations being made out in the clearest manner; and when made out, of their being speedily and faithfully complied with. If procrastination be the thief of time, delays in office are secret abettors of it.

*Insolence of OFFICE,* a self-assumed importance, against which little minds are never proof, and of which great minds are almost always the unfortunate victims. Clerks in office and petty secretaries are subject to this weakness.

*OFFICER.* Amongst the ancients, the profession of arms was not a distinct and separate avocation, to which men devoted the whole of their application and their lives: the great generals of the Greeks and Romans were the ministers of the state, and the leaders of popular assemblies. Pericles was the most distinguished orator of his time; Xenophon was excellent as an historian, and in every branch of prose composition. All the great generals of the different Grecian states appear to have been men highly endowed; strangers to no branch of literature or learning then known. The first Scipio was the protector of genius, the patron of the arts, the friend of talents. Pompey was distinguished as a public speaker: Quintilian says of Cæsar, that he was the only man who could have rivalled Cicero in eloquence, and that *Tanta in eo vis est, id acumen, ea concitatio, ut appareat illum eodem animo dixisse quo bellavit*. It, therefore, does not appear to have been the opinion of those two, the greatest nations that have ever trodden the earth, that military pursuits ought only to be followed

followed by lesser and more ignoble minds; that a man might be little in the other avocations of human life, and great in the field of battle. That happy discovery had not yet been made, that an army was the sink of the state, a drain for the trash and refuse of its population of every description; the asylum of the idle, the ignorant and the profligate; the temple of blockheads, where the chief priest might be the most contemptible of the human kind. Send your son into the army, for he is fit for nothing else, has, in a certain country, become a common phrase.—Fortunately for that nation, she has not yet to contend for her existence. Predatory war in Asia, or the attacks of islands, when you are masters of the sea, do not require natural abilities of the first magnitude, or extensive military knowledge to conduct them; but the hour may yet arrive, when a great general may be wanting; when the war-hoop may be heard at our door and the battle be in our plains. • In the moment of peril our Deliverer will probably not be found in that wretched class of men, who are unfit for all other professions.

Let us invoke the manes of the illustrious dead of all nations, who have filled the world with the glory of their military exploits, to interfere with the splendour of their sacred and departed names, and to rescue the profession of arms from the scoffs of folly, and the malignant revilings of men who conceive they belong to graver professions; as if there could be any profession so grave, as that of those who are charged with defending the state. As long as the glory of nations, and the fate of empires shall depend upon the fate of battles, so long may the army be justly denominated the most serious of human avocations, the most grave of all professions; and that, in the conduct of whose members governments ought to feel the most sincere and lively interest. Does then the army require no attainments?—To be an officer, is no previous mental discipline necessary, no study, no reflexion, no power of comparison?—To teach others, ought you to be untaught yourself? From what has been seen and heard in other countries, one would suppose, that it

was imagined military skill was a certain legerdemain trick, the art of a conjuror, which might as well be known and practised by a fool as by a wise man. How often has it been dinncd into our (not offended, because ignorant ears, that such and such an individual though not a sensible man, is a most excellent officer! The time has at length arrived, that such wretched prejudices, contradicted by the experience of all ages and all nations, should cease.

There is no profession that requires greater knowledge and capacity than the army. A British officer is often employed at such a distance from his own country, and has so few opportunities of communicating with his government, that he must teach himself to depend more on the resources of his own mind, than the general of any other nation. He is likely to be occupied with many things not strictly military, the whole responsibility of which, the exigencies of public affairs may require him to take upon himself. There is no service in which extensive views and great knowledge and information will be found so essentially necessary on particular occasions, as in ours. We would therefore give the best possible education to an officer; we would instil into his young mind, that if he wished to distinguish himself in his profession, he must commence by laying the foundation of his superiority as a man. To laugh at learning, and to hug our ignorance, is the miserable fashion of coxcombs, and the imitation of those who never were born to be eminent in any profession, or to be excellent in any human pursuit. An officer, because he is learned in the closet, is not less brave in the field. Knowledge would not only be useless, but mischievous, if it did not tend to strengthen the understanding, purify the heart, and elevate the mind. On this subject there is a fine observation of Addison in the Spectator: he says, "that the mind which lays fallow, even for a single moment, vegetates weeds and brambles, which afterwards require the labour of weeks, months, and years to eradicate." Certainly there can be no better preparation for the performance of great actions, than the continued exertion of

the mind. Men, who have the habits of thinking early, transfer those habits from one subject to another. Many of the officers employed on the staff of the French army had been educated as physicians and lawyers. They consequently possessed that tone and energy of understanding, which belonged to men who have exerted all the powers of their minds. They adapted their old and early habits to their new profession.

A considerable number of the officers who made a figure in the civil wars of England, had been brought up to the Bar. Some men have certainly particular aptitude for particular pursuits; yet general powers of thinking, comparing and combining, may be applied with the greatest effect to things in their own nature entirely different.—But the difficulty is to enable a man, who has never thought at all, except on trifling subjects, to expand his mind, and to arrive with promptness, decision and exactitude, at some of the most arduous combinations of the human intellect. We would wish to raise officers in their own estimation; but above all, to eradicate some foolish opinions which have been adopted by the public on this important subject, without due consideration. We shall be asked by some pedant, perhaps a military one (because there are pedants in all professions, and bigots in all religions), whether we would make a scholar of an officer—we say yes; and defend ourselves by the practice and the example of the ancients, and by the precept of intuitive reason, all of which tell us, that though knowledge may be power, yet ignorance cannot be strength. The army is at times the most active of all professions, but there are long intervals of leisure and inaction which cannot be filled up by the mere routine of military duty. The vacant mind preys upon itself, and acquires those listless lounging habits which are a curse to the possessor, and the constant theme of ridicule to those who do not estimate the importance of the army to the state, and who know nothing of a soldier but that he is dressed in red or blue. Temperance, courage, perseverance, moderation in prosperity, constancy in adversity, are the virtues of an

officer. What is the best mode of acquiring, practising, and confirming these noble qualities, so that at length they become inherent in us, and constitute, as it were an inseparable part of our nature? Why, study and reflection; together with examples, drawn from books and history. A man is unfortunate if books do not make him wiser; but he must have pursued a very ill-arranged course of studies indeed, if he has not become better for their perusing. We should recommend reading, above all things, to officers, because it is apt to inspire young men with that necessary respect for morals and virtue, which tends in the highest degree to elevate the character, and is the pure source from whence great actions generally spring.

Various are the disputes, how and where officers are to be educated, and what they ought to know? In our opinion there can be little doubt upon the matter: give them the best possible education, and teach them every thing which is necessary to be known by an accomplished gentleman in a free country. All knowledge expands the mind; and it cannot be doubted, that the highest branches of the military duties can only be practised with success and effect by men of the greatest reach of thought, and quickness of intellect. Away with those silly notions, that the practice of the profession of arms only belongs to inferior men. Ignorance, prejudice, and trade may maintain the position, but history, truth, and philosophy all contradict it. An officer must be cool and collected, and rise above himself in those moments of peril and danger which appal other men. He must become more fearless as the causes of fear increase; he must possess a mind of the greatest possible extension, which embraces the entire of a subject in one grasp, and can think, decide, and act in the same moment. These moral and intellectual qualities, these powers of mind are certainly not the portion of ordinary men, but of those fortunate beings who are born under the influence of the most auspicious planets. They are innate, they may be improved by study, labour, and reflexion, but they are implanted by the hand of Nature alone. We think it can be proved from the example of the ancients, that the

men who performed the most glorious achievements in war, were often the distinguished writers, the splendid orators of the æras in which they flourished.

We certainly want a fixed standard by which we can estimate the comparative degree of merit of distinguished generals in different ages in different countries. The King of Prussia thought, that Caesar and Hannibal were the greatest generals who appear in the annals of warfare, and that the contest for superiority lay between them. Without any servile submission we incline to be of the same sentiment. But at all events it must be allowed, that the great generals of antiquity were more distinguished as men, than those of modern times. From whence it appears to follow, that military knowledge has not gained ground by making the army a distinct and separate profession.—There are many and long intervals of leisure in the life of an officer, which cannot be filled up by the more constant recurring details of petty duties. Unoccupied minds can produce those weeds and noxious herbs of which Addison speaks. The best preparation for actual warfare is, that the mind of the officer should be tutored by study and application, and the body of the soldier strengthened by exercise, and labour, useful to the state, and necessary for the purpose of preserving his own health and vigour. Instead of spending their whole lives perouetting on a parade, and performing evolutions which are practised every where but in a field of battle, the generals of the ancients found time for all employments, and their soldiers executed the most stupendous works; the remains of which are still the admiration of posterity.

We have dwelt so long on the example of the Greeks and Romans, in order to persuade officers that learning, science, and eloquence, are not incompatible with their profession, and the main pursuit of their lives; but on the contrary, that they are the ornaments which have added lustre to the character of the most illustrious warriors, who have appeared in the most military ages of the world. Perhaps we have digressed too much on this subject; but we think we have perceived that there is a bearing

and an inclination to form conclusions on this question, which may ultimately become extremely injurious to the public, and tend to impress opinions on the officers of the army, highly detrimental to themselves and the service in which they are engaged. Many causes have operated to damp the military spirit in England; the clamour and jealousy which existed against standing armies for many years after the Revolution, the wealth poured in by trade, the superior rewards offered by all other professions, the enormous increase of the taxes and all the necessities of life, the consequent reduction of the pay (which now, for a century, except in the inferior ranks, has always remained the same). Till the very end of the reign of the Stuarts, the European armies were full of the nobility and gentry of England. In an action in the Dutch war, the Duke of York's ship was crowded with volunteers of the first fashion; three of whom were killed near his person. Amongst this class of men, at present, there appears to be little ambition to acquire military fame. An attachment to party, a speech delivered with effect in either House of Parliament, is a more sure road to power and influence, than half a dozen victories. In other countries the army, though it does not lead to wealth, has always been considered as the first of the professions, and makes some compensation for the various mortifications and privations to which officers are every where more exposed than any other class of the community. Every means ought to be taken to excite a military spirit in England: there are difficulties in the way, and serious ones too. Our commerce, our manufactures, our navy, occupy so much wealth, time, and attention, that our army must naturally be in the background. Men of ambition and talents will not pursue an inferior line, where they may pass their whole lives without having a single opportunity of exertion or arriving at those distinctions in the state, which fall to the lot of men in other trades and professions. In peace they are neglected by the government: in war they pass years in pestilential climates without the prospect of wealth, the hope of glory, or where industry is

unavailing and talent is buried; where they drag a miserable existence without consolation, and die unknown, unpitied, and unmourned by that country to whom they have made a sacrifice of their time, their fortune, their health, and ultimately of their lives.

Having received this article from one of the best informed sources, we give it to our military readers without any alteration or comment of our own. We shall only conclude by observing, that commanding officers, and indeed all officers, should invariably recollect what has been so well said of Gustavus Adolphus, king of Sweden. He finished his course (to use the historian's own words) as a hero ought to do, *with his sword in his hand, the word of command between his lips, and victory in expectation*, concluding all with this religious ejaculation, *My God! My God!*

**OFFICERS**, in a military sense, are of several denominations and ranks, viz.

**Commissioned OFFICERS**, are those appointed by the king's commission; such are all from the general to the cornet and ensign, both inclusive; and in the Blues, or Royal Horse Guards, the quarter-master bears the King's commission.

**Warrant OFFICERS**, those who have no commissions, but only warrants from such boards, or persons, who are authorized by the king to grant them.

**Non-commissioned OFFICERS**, are serjeant-majors, quarter-master serjeants, serjeants, drum and life majors, who are appointed by the commanding officers of regiments, and by them may be reduced without a court martial. But it is not in the power of any captain of a company, or other subordinate officer, to reduce a serjeant without the sentence of a general or regimental court martial.

**General OFFICERS**, are those whose command is not limited to a single company, troop, or regiment; but extends to a body of forces, composed of several regiments: such are the general, lieutenant general, major general, and in some armies brigadier general.

General officers, having regiments, may be summoned to attend the board at the Horse Guards, either for the purpose of inspecting the patterns for clothing, or of deciding upon any other

point which concerns the interior economy of the service. They are summoned from the judge advocate's office, to whom they must apply for leave of absence in case of sickness. Their letter of excuse is transmitted by him to the adjutant general, who lays it before the board.

**Field OFFICERS**, are such as command a whole regiment; as the colonel, lieutenant-colonel, and major.

**Staff OFFICERS**, are the quarter-master-general, and the adjutant-general, brigade officers, and aids-de-camp, also the quarter-masters, adjutants, the physicians, surgeons, and chaplains.

**Subaltern OFFICERS**, are lieutenants, cornets, and ensigns.

**Flag OFFICERS**, are admirals who hoist flags at the mast heads.

**Sea OFFICERS**, are, in general, all those who have any command in the navy.

The following observations, which more specifically relate to guards, are so generally applicable to every other military situation on service, that we recommend them to the serious attention of every officer.—

It is the duty of all officers, to take notice of any negligence, or impropriety of conduct, in the men, whether on duty or off duty, although the person or persons offending, should not belong to their particular regiments. They are immediately to report all neglects of duty to the officer commanding the guard; and they are enjoined to confine, and to report to the commanding officer of the regiment to which they belong, any non-commissioned officers or soldiers, they may detect in disorderly practices, or who appear out of their quarters, conducting themselves either in point of behaviour or appearance, in a manner unbecoming soldiers.—*Regulations and Orders*, p. 20.

**Brevet OFFICER**, one who in doing duty with other corps takes rank according to the commission which he holds from the king, and which is superior to the one for which he actually receives pay, or by which he can do duty in his own. A captain for instance, in the twenty-third regiment of foot, who has the rank of brevet-major in the army, may, when that corps does brigade duty, command every captain on

on service with him. The word *brevet* is taken from the French, and in the instance before us means rank without pay. During the French monarchy there were various instances in which individuals held posts of honour during the king's pleasure, or during their own natural lives. Hence *ducs à brevet*, dukes by brevet; or to use an expression more familiar to us, persons who received the patent letter of a dukedom during their natural lives.—*Brevet* likewise signified a sum attached by order of the king to the sale of a commission or place for the benefit of a deceased person's wife, heirs, or creditors: this was called *brevet de retenue*. So that the word *brevet*, though limited to one sense amongst us, was applicable to rank and emolument among the French. Hence *breveter* signified to give a person a commission, place, or employment; to invest him with honorary rank; or to authorize him to receive a pension. *Brevet de capitaine*, signifies the commission, or rank of a captain.

We have already given an account of the civil officers belonging to the several military departments under their specific heads. The following are connected with Chelsea and Woolwich.

*Civil OFFICERS belonging to the Royal Laboratory at Woolwich:—*

One comptroller, one chief fire master, one assistant fire master, one inspector of gun-powder manufactures, six clerks, one extra clerk, one surgeon, one inspector of artillery, one assistant ditto, one clerk and draftsman, one clerk, one proof master, one searcher, one instrument keeper, one modeller, one assistant, one constructor of artillery carriages, one assistant to ditto, one second assistant, and two clerks.

*OFFICERS belonging to the Royal Military Repository at Woolwich:—*

One superintendent, one modeller, one clerk, one draftsman, one astronomical observer at Greenwich, salaries unknown. To these may be added, the officers belonging to the different outposts and garrisons that are subject to the British government. The names and appointments may be seen in pages 202 and 203 of the Royal Calendar, commonly called the *Red Book*.

*Commissioners and OFFICERS of the Royal Hospital at Chelsea:—*

The *civil department* consists of—The president of the council. First lord of the treasury. The two secretaries of state. The paymaster general of land forces. The secretary at war. The two comptrollers of army accounts. The governor and lieutenant governor. Salaries unknown.

The *military department* consists of—Governor at 500l. per ann. Lieutenant governor at 400l. per ann. Major 250l. Adjutant 100l. Treasurer, who is the paymaster general for the time being, salary unknown. Deputy treasurer, one clerk, two chaplains, one secretary and registrar, two clerks, one agent and paymaster to the out-pensioners, one physician at 100l. per ann. one comptroller, one steward, one surgeon at 100l. per ann. two surgeon's mates, one apothecary, one truss maker, one whistler, one wardrobe keeper, one comptroller of coal yard, one organist, one clerk of the works, one master lamp-lighter, one master butler, one master cook, one second cook, two under cooks, one scullery-man, one gardener, one master barber, one engine keeper, one clock keeper, one canal keeper and turncock, one sexton, one usher of the hall, one porter, one cellarman, two sweepers, one matron, one master mason, one master smith, one master painter, and one plumber.

*Field OFFICERS belonging to the several regiments of militia in Ireland:—*

By an act passed on the 24th of March, 1801, the number of field officers of this description has been increased by adding one additional lieutenant colonel, and one additional major to such of the Irish regiments as consist of eight companies, or upwards, and one additional major to such of the said regiments as consist of seven companies or under. \*The following counties consist of eight companies and upwards:—*Antrim, Armagh, North Cork, South Cork, City of Cork, Donegal, City of Dublin, Galway, Kerry, Kilkenny, King's County, County of Limerick, Londonderry, Louth, Meath, Monaghan, Roscommon, Tipperary, Tyrone, Waterford, and Wexford.* The *Carlisle, Cavan, Clare, North Downshire, South Downshire, County of Dublin, Fermanagh,*

**OFFICIERS à la suite d'un regiment.** Fr. officers nominally attached to a regiment. Of this description were the gentlemen appointed by the German princes who were in alliance with France. It is mentioned, as a fact, that before the French Revolution took place, there were 42 lieutenant colonels *à la suite du régiment Deux Ponts*; the Prince of that name having been permitted to extend this strange brevet to any number, provided the officers so distinguished, never went into the town where the regiment lay, or interfered with regard to quarters, &c. •

The other class consisted of noblemen and gentlemen, who were appointed by the Court of Versailles, and received their brevets from the war minister. These were called *officiers à la suite de toute l'armée*; or officers bearing brevet rank without being attached, even nominally, to any specific corps.

**OFFICIER dans la marine.** Fr. an officer in the marine service.

**OFFICIER marinier.** Fr. See *Officier sur mer*.

**OFF-RECKONINGS**, a specific account so called, which exists between government and the colonels of British regiments for the clothing of the men. This account is divided into two parts, viz. gross off-reckonings, and net off-reckonings.

**Gross OFF-RECKONINGS** consist of all the pay of the non-commission officers and private men above the subsistence.

**Net OFF-RECKONINGS** are the produce of the gross off-reckonings, reserved for the clothing of the men, after the warrant deductions of one shilling in the pound, and one day's pay of the whole regiment for Chelsea hospital, and also the deduction of two-pence in the pound for the agent, are made at the pay office. The balance of the pay of the officers, over and above their subsistence, after the warrant deductions are made, and the respited pay, if there is any, is charged to the officer, is called *clearings*; which are paid by the paymaster to the agent, who pays them to the officers, and there finds his two-pences.

Colonels of regiments either pay the clothier ready money, or allow him interest for forbearance. But no colonel can make a valid assignment of the off-

reckonings, till the clothier has exhibited to a board of general officers, appointed by his Majesty for that purpose, the patterns of each species of clothing he is to provide; which patterns are left with the secretary to the clothing board, at the office of the comptrollers of the army, and compared with sealed patterns, already approved by the king; and if found conformable thereto, are sealed by all the general officers, who compose that board, in testimony of their approbation; and when the clothier has completed his clothing, ready to be delivered, the inspector of clothing is directed to view the said clothing, who certifies, in writing, that he has found it conformable to his Majesty's instructions in quantity and quality; which certificate, together with the colonel's assignment of the off-reckonings, is produced by the clothier to the board of general officers, who pass the assignment; but the contract between the colonel and clothier is not laid before any officer whatsoever; nor is any account brought afterwards of the expence of that clothing. Clothiers provide clothing for complete regiments, as to the establishment.

There are several other articles of expence defrayed out of the clothing fund, as the charge of package, of carriage by land or water, of insurance, when sent abroad, of interest, more or less, as the off-reckonings are paid, of fees of offices, of clothing lost by desertion, of small accoutrements, colours, drums, and other contingent charges. The subsistence of the men, allowed for clothing lost by deserters, is paid to the respective colonels; and the off-reckonings only are included in the assignment.

**OFFUSQUER**, Fr. literally means to darken, or conceal. *Ce bâtiment est offusqué par les maisons voisines.* This building is darkened, or concealed from the eye, by the neighbouring houses. It likewise signifies, in a figurative sense, to be out-done or out-matched. *Il se sent offusqué.* He feels himself out-done.

**OGNON**, Fr. literally means an onion. The word is sometimes used in a familiar manner by the French to express persons standing in a row. *Ils étoient tous en rang d'ognon.* They all stood, like onions, in a row.

OGEF, } in pieces of ordnance, an  
OGIVE, } ornamental moulding, in  
the shape of an S, taken from architec-  
ture, and used in guns, mortars, and  
howitzers. See CANNON.

OGIVE, (*Ogive*, Fr.) In Gothic vaults those arches are stiled ogives, or ogees, which cross one another diagonally. The French likewise call them *croisées d'ogives*.

OIL. Every soldier is supplied with a given quantity of oil and emery, for the purpose of cleaning his arms, accoutrements, &c. This is paid for by the captains of companies, who charge the actual expenditure every half year, under the head, "Emery, Oil, Crocus, &c."

OLISANT, a small horn which was formerly used by the Paladins and Knights-errant, when they challenged their enemies to fight, and set them at defiance.

OLYMPIAD, in *chronology*, the space of four years; for on the 5th the olympic games were celebrated in honor of Jupiter Olympius, near Olympia.—The Greeks began to use this epoch a little before the building of Rome.

OLYMPIC Games, were instituted by Hercules, A. M. 2856, in honour of Jupiter Olympius, at Olympia, a city of Elis, in Peloponnesus. They were celebrated every four years, about the summer solstice. The design of them was to accustom the young military men to running, leaping, and every other military exercise.

OMBRE, (*sécher à l'ombre*, Fr.) This term is in use among the French founders of artillery, when they put the clay or putty, which serves to form the cannon moulds, out to dry, without making any fire for the purpose.

OMRA, or OMHRA, *Ind.* plural of *amerr* a lord. They are persons of considerable consequence in the dominions of the Great Mogul. Some of them are commanders of 1000 horse, others 2000, and so on to 12,000: their pay being regulated according to the number of their horses. The governors and great officers of state are chosen out of this body.

ON, a preposition frequently used in the British service. It precedes those words of command which direct the change or formation of bodies of men upon points that are fixed, viz.

By companies *on* the left backwards wheel. The left pivot man of each company faces at this cautionary word, and remains a fixed point, *on* which the rest wheel back when they receive directions so to do. When the column of companies is to be wheeled into line, the word *on* is equally understood to direct the moveable parts of each company towards the given pivot which faces, and remains a fixed point. General Dundas in his drill instructions, says, *To the left wheel into line*; but in the third part of the Regulations *To* is wholly omitted, and the commanding officer uses the term *Left wheel into line*, et vice versâ. We humbly conceive, that the preposition *on* is here understood; for it is evident, that in breaking into column the component parts of a line wheel as much *from* a given point, as they *do to* a given one, when the column returns into line. Whereas by using *on*, or understanding it to be used, when, for the sake of abbreviation, it is omitted, we preserve the true meaning of the preposition, keep the men in the recollection of the necessary adhesion, and shew, that whether you wheel backwards or forwards, from line into column, or from column into line, there is one invariable fixed point *on* which you move. Perhaps it might be as well to say, *on* the right or left forwards wheel into line, in lieu of *to*.

ONAGRA, (*Onagre*, Fr.) a warlike machine, which was used by the ancients to throw stones of different sizes. It is mentioned by Vegetius.

\* ONDECAGON, a figure of eleven sides and angles.

ONSET, assault, storm, attack.

OPEN, in military movements and dispositions is frequently used, but it is seldom applicable to any operations in face of an enemy; the ranks, &c. on such occasions being generally compact and close. In formation, the word *open* is opposed to *close*, viz. open column, open distance, open order. It also constitutes part of a word of command; as *rear ranks take open order*; in opposition to *rear ranks take close order*.

OPEN distances in column. (*Distances entières en colonne*, Fr.) The intervals in these cases are always equal in depth to the extent in front of the different component parts of the column.

**OPIN flank**, in fortification, that part of the flank, which is covered by the orillon. See *Fortification*.

**OPENING of trenches**, the first breaking of ground by the besiegers, in order to carry on their approaches towards the place.

**Line of OPERATION**. All the forward movements of an army for the purpose of attacking an enemy, penetrating into a country, &c. may be properly called a line of operation. There is so intimate and so necessary a connection between this line and the line of communication, that no army can be in security, let its temporary successes be what they may, without a strict and unremitting attention being given to their relative points of continuity and correspondence. The line of operation in a siege is partial and extremely limited, so is that of communication; but upon the large scale of war these two lines are of considerable extent and importance. No man, in fact, can be called a good general, or even an officer, who carries his views so far forward as to venture upon a long line of operation, without having previously secured his line of communication, by a perfect knowledge of the countries through which he moves, and having his flanks so thoroughly covered, that he may fall back or retreat according to circumstances.

**OPÉRATIONS de guerre**, Fr. See *Military Operations*.

**Military OPERATIONS**. Military operations consist in the resolute application of preconcerted measures, in secrecy, dispatch, regular movements, occasional encampments, and desultory combats or pitched battles.

**OPINIATRE**, Fr. a term among the French, signifying obstinate; foolhardy. They apply it to a Governor of a town which is besieged by superior forces, and which cannot hold out.

**OPINION**. In military proceedings which regard the interior government of an army, this word signifies decision, determination, judgment formed upon matters that have been laid before a court-martial, or court of enquiry.—Hence, the court-martial having duly weighed the whole matter before them, are of *opinion*, that — is not guilty of any part of the charge preferred against him.

**OPINION**. Officers on courts-martial give their opinion by seniority, beginning with the youngest in rank.

**OPINION**, abstractly considered, may be defined an assent of the understanding, with some fear or distrust of the contrary. In a political sense, it is the acquiescence of the mind to certain principles. In some instances opinion and principle are synonymous terms.—Hence, French revolutionary opinions, or revolutionary principles.

**A war of OPINION**, (*Guerre d'opinion*, Fr.) This expression has grown into familiar use since the commencement of the French Revolution, and was never, perhaps, so strongly illustrated as by the perseverance or infatuation, call it which we please, of the French people. They have shown, that the influence of opinion is paramount to every consideration in life. Friend, parent, and relation, have given way to the superior calls of public duty, growing out of and sanctioned by public opinion.

**OPINION**, Fr. This word is variously used among the French, and as we have already observed, is now generally attached to the contest in which they have been engaged for the maintenance of certain principles that seem to have altered their character. The nation at large had, in fact, taken up an opinion, grounded upon certain principles, which were diametrically opposite to those their forefathers had implicitly followed for 1400 years. On the policy or impolicy of the new creed or opinion, we shall not presume to offer our sentiments. The subject has been amply discussed amongst us, and continued for some years, to be as obstinately supported by them. When Great Britain formed a part of the well known coalition, the preservation of the balance of Europe was the ostensible, perhaps the real cause on our part for entering into hostilities against France; so that the war in 1792, &c. might not improperly be called a war of policy or political necessity, as far as it regarded the coalesced powers; but it has unquestionably been, all along, a war of opinion on the other side.—That the opinion of the French nation is more variable than their climate, the stupendous elevation of the present emperor sufficiently proves. The French familiarly say, *Il faut respecter l'opinion publique*;

*publique ; le pouvoir, l'empire, l'influence de l'opinion.*—Public opinion must be respected or attended to; the power, the dominion, the influence of opinion. *L'opinion est la reine du monde.* Opinion is the queen of the world.—When the allied armies, under the command of the Duke of Brunswick in 1792, were within a few days march of Paris, it was observed by a firm adherent to the royal cause: *Que malgré l'air imposant d'une telle force, ou combinaison, on avoit tout à craindre pendant qu'il existoit un ennemi à combattre, aussi terrible qu'étoit l'opinion.* That notwithstanding so formidable a force or combination, every thing was to be apprehended so long as that terrible enemy, opinion, remained to be combated against.

OPIUM, a juice, partly of the resinous, partly of the gummy kind. According to Dr. Johnson's extract from Hill, it is brought from Natolia, Egypt, and the East Indies, produced from the white garden poppy, with which the fields of Asia Minor are in many places sown. The first effect of opium is making the person who takes it cheerful; it removes melancholy, and dissipates the dread of danger. The Turks always take it when they are going to battle: it afterwards quiets the spirits, eases pain, and disposes to sleep. A remarkable instance of the powerful influence of opium over the natives of the East is related by Mr. Orme, in his history of the Carnatic, page 270. His words are:—The enemy remained quietly until noon, when having sufficiently intoxicated themselves with opium, they began to swarm out in great numbers; but the field pieces (which were served by Europeans) kept them for some time at a distance; every shot doing execution. During the cannonade a party of the nabob's sepoys crossed the river, and taking possession of a small choultry, (an open house for the accommodation of travellers, so called in India) at a little distance to the right of the other, began to fire from this untenable post, upon which a body of 300 Morattoe horse galloped up to attack them; but before they arrived the sepoys took flight; several of them were cut to pieces, and the rest re-crossing the river ran into the city: the Morattoes

encouraged by this success,\* (and still flushed with the opium) now galloped up towards the entrenchment of the great choultry, where they were suffered to come so near, that several of them made use of their sabres across the parapet before the troops within gave fire, which then began, and seconded by that of the four pieces of cannon on the other side of the river, killed and wounded a great number of men and horses, and obliged the enemy to retire in confusion; in this instant an officer unadvisedly took the resolution of quitting his post, and passed the river, in order to give Captain Dalton, (who commanded the detachment) some information concerning the artillery; some of the soldiers seeing this, imagined that he went away through fear, and concluding that things were worse than appeared to them, followed his example, and ran out of the entrenchment; which the rest perceiving, a panic seized the whole, and they left the post with the greatest precipitation, notwithstanding they had, the minute before, given three huzzas, on the retreat of the Morattoes: a body of 3000 Mysore horse, who were drawn up on the bank, immediately galloped into the bed of the river, and charging the fugitives with fury, cut down the whole party excepting 15 men: flushed with this success, they made a push at Captain Dalton's division on the other side. All these motions succeeded one another so rapidly, that he had hardly time to put his men on their guard; more especially as many of them had caught the panic, from having been spectators of the massacre of their comrades; however, some of the bravest hearkening to his exhortations, stood firm by the artillery: their behaviour encouraged the sepoys, who made a strong fire from behind the low wall in their front, which accompanied by the grape shot of the four field pieces, soon abated the ardour of the enemy, and obliged them to retreat, leaving some horses, whose riders fell within 20 yards of the muzzles of the guns: Captain Dalton then advanced a little way into the bed of the river, where he remained until he had collected the dead and the wounded. Not a man who escaped could give any reason why he quitted his post, all of them acknowledging

knowledging that at the time when they took flight, only one man in the entrenchment was wounded, and that they had nine barrels of ammunition.

**OPPORTUNITY.** In addition to what has been said respecting occasion, which is nearly similar to opportunity in its import, we shall extract the following account of the latter, which was also honoured as a goddess among the Pagans. Opportunity was represented by them as a naked woman, with a long lock of hair, but bald behind, to intimate, that opportunity, if not laid hold on when it offers, soon slips away; also standing with one foot on a wheel, and the other in the air, holding a sail in one hand, and a razor in the other; her feet likewise being winged, and the wheel in continual motion, to shew that opportunity is always inconstant and in motion.

To **OPPOSE**, to act as an adversary against another, to resist, &c. It likewise signifies to place as an obstacle.

**OPPUGN.** To oppugn, is to attack by force of arms. The term is not used.

**OPPRESSOR.** (*Oppresseur*, Fr.) Although the terms *oppressor* and *tyrant* may appear synonymous, there is, nevertheless, a shade of difference between them. Oppressor means more immediately that prince, general, or governing power, which levies contributions, and imposes taxes, beyond the means of the wretched and degraded victims to superior force.

**ORANGE**, a term applied to those persons who adhered to the Stadholder. Hence, orange party. The troops of the Prince of Orange were taken into British pay in Sept. 1799. Also a faction which has prevailed for some time in Ireland.

**ORB**, in tactics, is the disposing of a number of soldiers in circular form of defence. The *orb* has been thought of consequence enough to employ the attention of the famous marshal de Puysegur, in his *Art of War*, who prefers this position, to throw a body of infantry in an open country, to resist cavalry, or even a superior force of infantry; because it is regular, and equally strong, and gives an enemy no reason to expect better success by attacking one place in preference to another. Caesar drew up his army in this form, when he fought against Labienus. The whole army of

the Gauls was formed into an *orb*, under the command of Sabinus and Cottus; when fighting against the Romans. The *orb* was generally formed 6 deep.

**ORDER**, the arrangement or disposition of things in their proper place; custom or manner, rule or discipline; as order of march, &c.

**ORDER of battle**, the arrangement or disposition of the different component parts of an army in one or more lines, according to the nature of the ground, for the purpose of engaging an enemy, by giving or receiving an attack, or in order to be reviewed, &c.

**Parade ORDER.** When a regiment of horse or foot, a troop, or company, is drawn up with the ranks open and the officers in front, it is said to be in parade order.

**Close ORDER.** When a battalion or company is commanded to take close order, at the word *march*, the ranks (supposing the men to stand three deep) close within one pace, marching one and two paces, and then halting. So that close order in ranks comprehends an interval of one pace between each.

**Open ORDER.** When a battalion or company is commanded to take open order, on the word *march*, the dressers front, and the center and rear ranks fall back one and two paces, each dressing by the right the instant it arrives on the ground. So that *open order* comprehends an interval of two paces between each rank.

**Extended ORDER**, is preparatory to rank entire, and is frequently practised in light infantry manœuvres. In order to execute this movement the files of a battalion or company, standing two deep, open from a given point, leaving just space enough for one man. Sometimes, (and indeed almost always, when the ground will permit,) extended order is taken by facing the battalion or company to the right or left, and by marching to either flank, until the whole has gradually doubled its original front.—This mode is extremely simple, and consists in nothing more than open order of files from the right or left. The battalion or company, after it has obtained all its relative distances, and been halted, is fronted, and each rear rank man springs into the vacancy on the word of command—*Form rank entire*.

*Entire,*

*Entire*, when applied to rank, means a straight line composed of half files.— See *rank entire*.

*Extended order* may likewise be taken without facing to the right or left.— This is effected by every file moving sideways to a given distance; say one pace, or twenty-two inches, (which extent of ground a man generally covers,) from the centre file. The word of command in this case would be, Battalion or company, side step to the right and left, *march*,—*halt*. The center file stands fast.

*Watering ORDER*. In cavalry arrangements, the men are in their stable dresses; horse-cloths on the horses, and snaffle-bridles; the horses are watered, walked and trotted for exercise.

*ORDER Arms*, a word of command, on which the soldier brings the butt of his musquet to the ground, the barrel being held perpendicular in a line with the right side.

*ORDERS*, in a military sense, all that is lawfully commanded by superior officers. Orders are given out every day, whether in camp, garrison, or on a march, by the commanding officer; which orders are afterwards given to every officer in writing by their respective sergeants.

*After ORDERS*, instructions which are given, subsequent to the regular communication of orders, through the brigade-majors, &c. All orders, whether general, garrison, or regimental; that are issued after the first distribution of military directions, are so called.

*Beating ORDER*, an authority given to an individual, empowering him to raise men, by beat of drum, for any particular regiment, or for general service. It consists of a warrant which is originally signed by the king, and from which copies are taken and signed by the secretary at war, and countersigned by the under-secretary.

*Brigade ORDERS*, orders which are issued by the generals commanding, through the brigade-majors, to the several adjutants of regiments, for the government of corps that do duty together, or are brigaded.

*Commander in Chief's ORDERS*. Such orders as issue directly from the commander in chief's office for the government of the army at large, or for any

specific purpose. These orders are sanctioned by the king, and are irrevocable elsewhere.

*District ORDERS*, orders which are issued by the general commanding a district.

*Garrison ORDERS*, such orders and instructions as are given by the governor or commanding officer of a town or fortified place.

*General ORDERS*, are such as are issued out by the general who commands, who gives them in writing to the adjutant-general, who first sends exact copies to the general officers of the day, and distributes them at his own quarters to all the brigade-majors, who daily go to head-quarters for that purpose: where they write down every thing that is dictated to them; from thence they go and give the *orders*, at the place appointed for that purpose, to the different majors or adjutants of the regiments which compose that brigade, who first read them to their colonels and lieutenant-colonels, or majors, and then dictate them to the sergeants of companies. This is more frequently done by the serjeant-major. The different sergeants write them correctly down in their respective orderly-books, and bring them to all the officers belonging to the company.

*Regimental ORDERS*, such orders and instructions as grow out of general or garrison orders, or proceed immediately from the commanding officer of a regiment.

*Sailing ORDERS*, final instructions which are given to ships of war.

*Standing ORDERS*, certain general rules and instructions which are to be invariably followed, and are not subject to the temporary intervention of rank; of this description are those orders which the colonel of a regiment may judge fit to have inserted in the orderly books, and which cannot be altered by the next in command, without the colonel's concurrence.

*Pass ORDERS*, written directions to the sentries, &c. belonging to outposts, &c. to suffer the bearer to go through the camp, or garrison, unmolested.

*Military ORDERS*, are companies of knights, instituted by kings and princes; either for defence of the faith, or to confer marks of honour on their military subjects. They are chiefly as follow:

ORDER

**ORDER of the Bear**, a military order in Switzerland, erected by the Emperor Frederic II. in 1213, by way of acknowledgment for the service the Swiss had done him, and in favour of the Abbey of St. Gal. To the collar of the order hung a medal, on which was represented a bear, raised on an eminence of earth.

**Amaranth**, an order of military knight-hood, instituted in Sweden, by queen Christina, in 1645, at the close of an annual feast, celebrated in that country, and called *Wirtschaft*. Their device was the cypher of *Amarant*, composed of two A's, the one erect, the other inverted, and interwoven together; the whole inclosed by a laurel crown, with this motto, *Dolce nella memoria*.

**Argonauts of St. Nicolas**, was the name of a military order instituted by Charles III. king of Naples, in the year 1382, for the advancement of navigation, or, as some authors say, merely for preserving amity among the nobles. They wore a collar of shells, inclosed in a silver crescent, whence hung a ship with this device, *Non credo tempore*.

**ORDER of Calatrava**, a Spanish military order. It was instituted in 1130, by Don Sautio, of Toledo. The habit of these knights is a black garment, with a red cross upon the breast.

**ORDER of Alcantara**, a Spanish military order. It was established by Ferdinand II. king of Leon and Castile, in 1170. They wore a green cross upon their garment.

**ORDER of St. James**, instituted by Ferdinand II. in 1175. These knights had the privilege of wearing their hats in the chapter, in the presence of their sovereign.

**ORDER of St. Michael**, instituted in 1169, by Lewis XII. in honour of the important services done to France by that archangel at the siege of Orleans, where he is supposed to have appeared at the head of the French troops, disputing the passage of a bridge, and to have repulsed the attack of the English, whose affairs ever after declined in that kingdom. The order is a rich collar, with the image of that saint pendent thereto; with this inscription, *Inmensi tremor oceani*.

**ORDER of the Holy Ghost**, instituted by Henry II. of France, in 1378. The

number of knights are 100, besides the sovereign, who is always grand master.

**ORDER of St. Louis**, instituted by Louis XIV. in the year 1693. Until the revolution of France, this order remained entirely in the possession of military men, ever since its institution, and was of singular use in keeping up the spirit, and rewarding the services, of those who had distinguished themselves. The number of knights was unlimited, being given to every man of merit. The order was a golden cross, with eight points, which hung pendent to a broad crimson ribbon. The motto *Bellica virtutis primum*. It is worn by the exiled emigrants, and is occasionally bestowed upon individuals by the surviving descendant of the Capet family, commonly called Louis XVIII.

**ORDER of Mount Carmel**, instituted by Henry IV. in 1608.

**ORDER of St. Lazarus**, is of a very early institution, but has been often neglected, and as often revived, till Louis XV. united the order of St. Carmel and St. Lazarus in April, 1722.

**ORDER of the knights of Malta**. See MALTA.

**ORDER of the knights of the Garter**. See GARTER.

**ORDER of the knights of the Bath**. See BATH.

**ORDER of the Golden Fleece**, instituted by Philip Duke of Burgundy, surnamed the Good, in 1429. See FLEECE.

**ORDER of the Annunciation**, instituted by Amadeo, Count of Savoy, surnamed the Green, in memory of Amadeo, the first earl, who had valorously defended the island of Rhodes against the Turks. The collar belonging to this order is of gold, and on it are these four letters, *F. E. R. T.* which means, *Fortitudo ejus Rhodum tenuit*, with the figure of the Annunciation hanging to it.

**ORDER of the Knights Templars**, instituted at Jerusalem about the year 1118. At first there were but nine of the order, and the two principal persons were Hugo de Paganis, and Jeoffroy of St. Omer's. The knights of this order, after having performed many great exploits against the infidels, became rich and powerful all over Europe; when, on the 22d of May, 1312, the pope, by his bull, pronounced the extinction of the order, and

and united their estates to the order of St. John of Jerusalem. They took the name of templars, because their first habitation stood near the temple, dedicated to our Saviour at Jerusalem.

**ORDER of the knights of St. Jago**, instituted by king Ramiro, of Spain, in commemoration of a victory obtained against the Moors, A. D. 1030. Their ensign is a red cross in form of a sword.

**ORDER of the knights of the band**, erected by Alphonso, king of Spain, in the year 1268. Their name proceeded from the knights wearing a red scarf, or lace of silk, the breadth of three inches, which hung on their left shoulder.

**ORDER of the knights of the Redemption**, erected in the kingdom of Arragon, by king James, who conquered the island of Majorca in the year 1212. Their garments are white, with a black cross thereon.

**ORDER of the Teutonic knights**, established towards the close of the 12th century, and thus called, as chiefly consisting of Germans, anciently called Teutons.

**ORDER of the knights of St. Stephen**, instituted in the year 1561, by Cosmo, duke of Florence. They wear a red cross with a border of gold.

**ORDER of merit**, instituted by Frederick III. king of Prussia, as a reward to those officers whose behaviour deserved some marks of distinction. The ensign of this order is a golden star of eight rays, enamelled with blue, which is worn appendant to a black ribband, edged with silver: the motto, *Pour le mérite*.

**ORDER of St. Alexander Newski**, or the red ribbon, which was instituted by Peter I. Emperor of Russia; but the Czarina Catharine I. conferred it in the year 1725.

**ORDER of the stole**, an order of knights instituted by the kings of Arragon.

**ORDER of the golden stole**, a Venetian military order, so called from a golden stole, which those knights wore over their shoulder, reaching to the knee, both before and behind, a palm and a half broad. None are raised to this order but patricians, or noble Venetians. It is uncertain when this order was instituted.

**ORDER of Maria Theresa**. This or-

der was instituted in June, 1757, by the Empress Queen of Hungary. In 1765, an intermediate class, styled knights commanders, was added to the two classes that originally composed the order. See *THEFFA*.

**ORDER of the Crescent**, (*ordre du croissant*, Fr.) this order was first instituted by Mahomet II. Emperor of the Turks, who declared himself chief and head of it. It is given by the emperors to those only who have filled important places of trust, or who have distinguished themselves in battle. The insignia or marks consist of a gold crescent, with simple or green enamel, encircled by precious stones or diamonds. The motto is *Donec totum impleat orbem*, until it shall fill the whole universe. The motto which is attached to the order of Malta, exhibits a modest and ingenious contrast to this ostentatious sentence. The cross is placed between the two horns of the crescent, with these words, *Ne totum impleat orbem*, lest it should fill the whole universe. Admiral Lord Nelson, Lord Hutchinson, Lord Keith, &c. received this order from the Grand Mogul, in consequence of their naval and military exploits in Egypt.—There was also an order of this description in the early periods of France. It was called *l'ordre militaire du croissant et de l'étoile de Sicile*, the military order of the crescent, and of the star of Sicily. Two princes belonging to the House of Anjou, viz. Charles, brother to Louis, the ninth king of France, and René, duke of Anjou, count of Provence, and king of Sicily, each separately created an order of this description. The insignia or marks consisted of a gold chain, in which were interwoven stars and fleurs de lices, and from which was suspended a gold crescent, with this motto, *Donec totum impleat*, until it shall fill the whole. The present emperor of the French seems to approach nearer than any of his discarded predecessors towards the accomplishment of this gigantic lust after power.

**ORDER of the Iron Crown**, (*ordre de la couronne de fer*, Fr.) this new order of knighthood has been lately instituted by the French Emperor Napoleon, on his coronation at Milan, as King of Italy. Although the history of the crown itself,

itself, which belonged to the ancient kings of Lombardy, is, not absolutely necessary to our view of the order, we shall, nevertheless, briefly state, that it consists of five hundred knights, one hundred commanders, and sixty great officers. The honorary degrees are as follow: two hundred of the order of knighthood, and twenty-five places of commanders are to be conferred upon an equal number of those French officers and soldiers, by whose courage and perseverance, in a succession of battles, the kingdom of Italy has been established.

The motto is, *Dieu me l'a donné, gare à qui la touchera*, God has given it unto me; woe to him who shall touch it.

This crown had been carefully preserved in a small town called Monza on the Lambro, ever since the dissolution of the old kingdom of Lombardy, and during the different revolutions which occurred in Italy. According to Busching, the ancient kings of Lombardy, and after them, the emperors of Germany, were usually crowned in this place. The iron crown was merely put over the head of the sovereign, as it was too small to be worn. The lower circle or hoop, inside, was iron, and was said to have been originally made out of one of the large nails taken from the cross, on which Jesus Christ was crucified.—The rest is solid gold, ornamented with diamonds and precious stones. Theodelinde, one of the queens of Lombardy, built a church, dedicated to St. John, where this crown was deposited, together with her majesty's fan and hair-comb. Venerable relics of royal vanity, and sometimes thought not unworthy of popular adoration!!!

Perhaps the day is not distant, when we may hear of an imperial and royal order of the fan, to be conferred upon some female courtiers and courtesans; and another of the comb, for the lord chamberlain, groom of the stole, &c. &c.

*Quousque abuteris patientiâ nostrâ?*

The republican armies of France uniformly spared this remnant of ancient royalty. To those readers who would wish to go more minutely into the history of this article, we recommend the perusal of the several works which

treat of Lombardy. Among the different authors may be found the following: *Jornandes de Getarum sive Gothorum Origine*; *Paulus Warnefred, de Gestis Ianobardorum*; *Hugo Grotius, &c.*

**ORDERLY Officer.** See *Officers of the Day*.

**ORDERLY serjeant,** } are appointed to  
**ORDERLY men,** } attend general,  
or other officers that are entitled to have them.

**ORDERLIES,** the non-commissioned officers and private men who do orderly duty are so called.

Orderly serjeants when they go for orders are sashed.

Orderly corporals and orderly men wear their side arms, and carry a small osier switch or cane in their hands.

In the dragoons, orderly men, on foot, have their sword-belts and bayonets; and on horseback, are dressed the same, only with gloves and boots, and spurs, of course, with the sword-belt and sword. They likewise have their pistols. When an orderly dragoon or foot soldier is sent from one quarter to another, the time of his setting out must be specified on the back of the letter which he carries; the dragoon must take care to bring his horse in cool, unless he has been sent on any pressing occasion.

**ORDERLIES in general.** It is the duty of the serjeant-majors to see that the orderlies are properly dressed and accoutred, before they are inspected by the adjutant, who parades them every morning in front of the main guard, &c. When private soldiers are chosen for orderlies in mixed duty, the credit of the corps from which they are taken, requires that they should be the best set up, and the best behaved men belonging to it. All orderlies, whether horse or foot, must return to quarters perfectly sober.

**ORDERLY non-commissioned officers,** are those who are orderly, or on duty for the week; who, on hearing the drum beat for orders, are then immediately appointed to receive them, and to take down in writing, in the orderly book, what is dictated by the adjutant or serjeant-major; they are then immediately to show those orders to the officers of the company, and afterwards warn the men for duty.

**ORDERLY book.** Every company has such

such a book in which the serjeants write down both general and regimental orders, for the specific information of the officers and men. This book is provided and paid for by the captains of companies.

**ORDERLY Drum.** The drummer that beats orders, and gives notice of the hour for messing, &c. is so called.

**ORDINAIRE, Fr.** The soldiers messing together is so called among the French.

**ORDINAIRE du soldat, Fr.** the two daily meals which soldiers are obliged to take at established hours, and at messes.

**ORDNANCE, (ordonnance, Fr.)** a name given to all that concerns artillery, or engineering: thus, the commander in chief originally called master-general of the *ordnance*; and the next officer, lieutenant-general of the *ordnance*, instead of *artillery*. This post is of much greater antiquity in France than with us; for history informs us, that the first masters in chief of all the artillery were appointed in 1177, under Louis the Xth; those appointed before that epoch were—

Guillaume de Dourdan, master of the ordnance in the Louvre, under Philip IV. who was appointed in 1291.

Guillaume Châtelain, master of the ordnance in Montargis, in 1291.

Guillebert, master of the ordnance in the Louvre, in 1294.

Étienne Amigard, in 1297; Jean Amigard, in 1298, at the Louvre; Jean Gautier, in 1299; Etienne de la Chambré, in 1295; Pierre le Vaché, in 1296; Benoît Fabry, in 1307; Adam, in 1314; Lambert Amigard, in 1322; Jean du Lion, in 1394, who was, in 1358, called sovereign master of the artillery under king John, surnamed the Good.

In 1397, John de Soisy was appointed master-general of artillery; and in 1599, Maximilian de Bethune, marquis de Rosny, duke de Sully, and marshal of France, was nominated first grand-master and captain-general of artillery. In 1755, the functions of the grand-master of the artillery were united to those of the war-minister, and fell under the immediate authority of the king. The war-minister undertook the civil department of the ordnance, and M. De Valliere was the last general director.

*Board of ORDNANCE*, is of a very early, but uncertain date; however, in the year 1518, we find Sir Philip Hoby stiled master of the ordnance; and in 1588, Ambrose Dudley, Earl of Warwick, was master of the ordnance. In 1683, the care of the board of ordnance was committed to five principal officers, besides the master-general, then George Lord Dartmouth, viz. a lieutenant-general, surveyor-general, clerk of the ordnance, store-keeper, and a clerk of deliveries. At present the board of ordnance consists of the same. This board regulates and orders every thing relating to the artillery and garrisons.

*Master-General of the ORDNANCE*, is an office of the greatest trust, honour, and dignity: it is one of the most laborious employments in war, and requires the greatest ability, application, and experience. This officer has the sole command of the royal regiment of artiller assisted by a lieutenant-general. the great power invested in the master-general by the king, he alone constitutes a board.

In 1518, Sir Philip Hoby was stiled master of the ordnance in Great Britain.

In 1587, we find Ambrose Dudley, earl of Warwick, stiled master of the ordnance, who had under him a master-gunner and a trench-master.

In 1596, the 29th of March, the earl of Essex was master of the ordnance.

In 1603, the earl of Devon was first called general of the ordnance.

In 1609, the 27th June, the earl of Totness, ditto.

In 1617, 5th May, lord Vere.

In 1623, 26th August, Sir Richard Morrison.

In 1628, Sir Thomas Stafford.

In 1634, 2d Sept. the earl of Newport.

In 1660, 22d January, Sir William Compton.

In 1664, 21st Oct. Sir Thomas Chicheley, knt. first called master-general of the ordnance.

In 1681, 28th Jan. lord Dartmouth.

In 1689, 28th April, David Schomberg, esq.

In 1693, 28th July, lord viscount Sydney.

In 1702, 29th June, the earl of Marlborough.

## O R D

In 1711, 10th Jan. earl Rivers.  
In 1712, 5th Sept. duke of Hamilton.

In 1714, 4th Oct. John duke of Marlborough.

In 1722, 30th June, William earl of Cadogan.

In 1725, 3d June, John Duke of Argyll and Greenwich.

In 1730, 10th May, John duke of Montagu.

In 1755, 10th May, Charles duke of Marlborough.

In 1757, 30th Nov. John lord visc. Ligonier.

In 1763, 30th Nov. marquis of Granby.

In 1772, 30th Nov. George lord visc. Townshend, now marquis Townshend.

In 1782, March 30th, duke of Richmond.

In 1783, April 12th, marquis of Townshend.

In 1783, Dec. 27th, duke of Richmond.

In 1795, marquis Cornwallis.

In 1801, the earl of Chatham.

*Honours due to the master-general of the ORDNANCE.* The same respect shall be paid to him from the troops, as is paid to generals of horse and foot. He is, on all occasions, to have the march beat to him; and to be saluted by all officers, the colours excepted.

*Lieutenant-general of the ORDNANCE,* is an office of great trust, honour, and dignity; is the next in command under the master-general, and always an officer of the greatest abilities. This office is not of such early date as that of the master general; for in 1597, it was first established, and has continued as follows, viz.

In 1597, Sir George Carew, knight.

In 1635, Sir William Haydon.

In 1636, 28th June, Colin Legge, esquire.

In 1670, 21st Nov. David Walter, esquire.

In 1672, 7th Dec. \*George Legge, esquire.

In 1681, 28th January, Sir Charles Musgrave.

In 1687, 1st August, Sir Thomas Tichbourn.

In 1688, 26th April, Sir Hugh Goodrick.

In 1702, 29th June, James Granville, esq.

## O R D

In 1705, 2d May, Thomas Earle, esquire.

In 1712, 21st June, James Hill, esq.

In 1714, 20th Sept. Thomas Earle, esquire.

In 1717, 19th March, Thomas Micklethwaite, esq.

In 1718, 22d April, Sir Charles Willis.

In 1719, 22d April, Field-marshal Wade.

In 1748, 22d April, Sir John Ligonier.

In 1757, 30th Nov. lord George Sackville.

In 1753, 10th Sept. Marquis of Granby.

In 1763, May 11th, George lord visc. Townshend, now marquis Townshend.

In 1767, Oct. 24th, Right Hon. Henry Seymour Conway.

In 1772, Oct. 22d, Sir Jeffery Amherst, Knight of the Bath, late Lord Amherst.

In 1782, April 3d, Sir William, now Lord Howe.

In 1804, General Trigge.

In 1805, General Ross.

*Surveyor-general of the ORDNANCE,* is the third person who constitutes that board: it is a civil employment, of great trust, comprising the superintendence of the artillery proofs, military buildings, &c.

Surveyor, Sir Charles Frederick.

In 1782, April 23d, Hon. Thomas Pelham.

In 1783, April 23d, John Courtenay, esq.

In 1784, March 30th, Hon. James Luttrell, now Lord Carhampton.

In 1789, April 5th, Hon. G. C. Berkeley.

In 1795, General A. Ross.

In 1804, Colonel James Hadden.

*ORDINARY TIME,* is the slowest time in marching that is now permitted to be used by infantry, and consists of a pace which is 30 inches from heel to heel, and of which only 75 are to be taken in a minute.

*ORDONNANCE, Fr.* a warrant.—This word is variously used among the French, viz.

*ORDONNANCE, Fr.* the disposition or arrangement of troops for battle.

*Compagnes d'ORDONNANCE, Fr.* particular

ticular troops or companies which were independent of any regiment, and which existed under the French monarchy. The *gendarmes du roi* formed the first troop or company of this description. The *chevaux-légers de la garde*, or the light horse of the body guard, were also of the same class.

*Homme d'ORDONNANCE*, *Fr.* an orderly man.

*ORDONNANCE d'une armée pour la disposer au combat*, *Fr.* See ORDER OF BATTLE.

*Habit d'ORDONNANCE*, the regimental dress or uniform of an officer or soldier.

*ORDONNANCES*, *Fr.* Orderly men, whether on foot or horseback.

*ORDONNER*, *Fr.* This word not only signifies to ordain, direct, &c. but it also means to range troops in order of battle.

*ORDRE*, *Fr.* Parole and countersign so called.

*Aller à l'ORDRE*, *Fr.* to go for the parole or countersign.

*Récevoir l'ORDRE*, *Fr.* to receive or get the parole or countersign.

*ORDRE que l'on donne à la tranchée*, *Fr.* Parole and countersign together with specific orders, which are given out every night in the trenches.

*Donner l'ORDRE*, *Fr.* to give out the parole or countersign.

*Prendre l'ORDRE*, *Fr.* to receive the parole or countersign.

*Envoyer l'ORDRE*, *Fr.* to send or transmit the parole or countersign.

*Porter l'ORDRE*, *Fr.* to carry the parole or countersign.

*Surprendre l'ORDRE*, *Fr.* to surprize or way-lay the person who is entrusted with the parole or countersign.

*Livrer l'ORDRE*, *Fr.* to give the parole or countersign.

*ORDRE de Bataille*, *Fr.* See ORDER OF BATTLE.

*ORDRE Mince*, *Fr.* A disposition or order of battle, in which troops make an extended line with little depth.

*ORDRE profond*, *Fr.* A disposition or order of battle, in which troops take up a short space in extent and occupy great depth; as in column, &c.

*ORDRE oblique*, *Fr.* A disposition in which troops are so ranged, that they can give or receive battle from one of the wings, by refusing or throwing back

the other. This is most readily obtained by a movement in echelon.

*ORDRES Militaires*, *Fr.* military orders.

*ORDRES du Général*, *Fr.* general orders.

*Nouveaux ORDRES*, *Fr.* fresh orders.

*ORDRES de mouvement*, *Fr.* marching orders.

*ORGANIZATION of Troops*, the act of putting troops into such uniform state of discipline, as may fit them to co-operate on any service.

*ORGUES*, thick long pieces of wood, pointed and shod with iron, clear one of another, hanging perpendicularly each by a rope, over the gate of a strong place, to be dropped in case of emergency.

Their disposition is such, that they stop the passage of the gate, and are preferable to *herres* or *portcullisses*; because these may be either broken by a petard, or stopped, by different contrivances, in their falling down. But a petard is useless against *orgues*; for if it break one or two of the pieces, others immediately fall down and fill up the vacancy.

*ORGUE* (*un orgue*, *Fr.*), a term used to express that arrangement or disposition of a certain quantity of musquet barrels in a row, which by means of a priming train of gunpowder, may be subjected to one general explosion.—This machine has been found extremely serviceable in the defence of a low flank, a *tenaille*, or to prevent an enemy from crossing the ditch of a fortified place.

*ORGUEIL*, *Fr.* in mechanics, the appui or rest round which a lever turns.

*ORIENT*, *Fr.* the east.

*ORIFLAMME*, *Fr.* the ancient banner belonging to the abbey of St. Denis, which the counts du Vexin, who possessed the perpetual advowson of the abbey, always bore in the different wars or contests that formerly prevailed between the abbot and some neighbouring lords. When the Vexin country fell into the hands of the French kings, they made the oriflamme the principal banner of their armies, in honour of St. Denis; whom they chose for the patron and tutelary saint of France.

*ORILLÓN*. See FORTIFICATION.

*ORME*, *Fr.* elm. This wood was considered

sidered of so much consequence by the old French government (and perhaps is equally so by the present), that a specific order was made out in 1716, enjoining all persons letting or holding land in French Flanders, Artois, and Hainault, to plant elm trees, in order that there might be a constant supply in future of carriages and wainage for the artillery.

**ORNAMENTS** *Military*, those parts of the dress of a soldier which are more for appearance or distinction than for absolute use; as gorgets, plates for cross belts, pouch ornaments, &c.

**ORTHEL**. See *Berm* in **FORTIFICATION**.

**ORTHOOGON**, any rectangular figure.

**ORTHOGRAPHIE**, *Fr.* See **ORTHOGRAPHY**.

**ORTHOGRAPHY**, the art of drawing or sketching out a work according to its breadth, thickness, elevation, and depth.

**OSIER**, a young willow twig, with which hurdles are made.

**OSTAGE**, *Fr.* See **HOSTAGE**.

**OTTOMAN**, a name generally given to the Turks, and to the Turkish empire, from Ottoman, who was one of their most celebrated emperors.

**OVATION** the offering of a sheep in sacrifice, instead of a bull, for some victory obtained. It was an inferior sort of triumph allowed by the Romans to the generals of their armies for lesser victories, as over slaves, &c. or when the war had not been declared pursuant to military usage. According to Kennett, in his *Roman Antiquities*, page 221, the word ovation is said to have derived its name from shouting *ovion!* to Bacchus; but the true original is *oris*. The shew generally began at the Albanian mountain, whence the general, with his retinue, made his entry into the city: he went on foot with many flutes or pipes, sounding in concert as he passed along, wearing a garment of myrtle as a token of peace, with an aspect which excited love and respect rather than fear.

Gellius has observed, that this honour was conferred on the victor, when either the war had not been proclaimed in due method, or not undertaken against a lawful enemy, and on a just account; or when the enemy was but mean and in-

considerable. But Plutarch has delivered his judgment in a different manner: he believes, that heretofore the difference betwixt the ovation and the triumph was not taken from the greatness of the achievements, but from the manner of performing them; for they who, having fought a set battle, and slain a great number of the enemy, returned victors, led that martial, and, as it were, cruel procession of the triumph: but to those commanders who, without force, by benevolence and civil behaviour, had done the business, without shedding human blood, custom gave the honour of this peaceable ovation. For a pipe is the ensign or badge of peace; and myrtle, the tree of Venus, who, beyond any other deities, has an extreme aversion to violence and war. Vide *Plut. in Marcell.* For a full account of this ceremony, as well as of the Roman triumph, see *Kennett*, page 224.

**OVERFLOW**. See **INUNDATION**.

**To OVERLAP**, to overspread any preceding object. In marching by echelon, for the purpose of forming upon any given point, but particularly in wheeling from column into line, troops may lose their relative distances by not taking ground enough; when this occurs, the rear division, company, or section, unavoidably clouds upon its preceding one, and it is then said to overlap. When this happens on service, the troops, so shut out, must remain as serresfiles, or reserve, to fill up the intervals that will necessarily present themselves in action. But whether so or not, the line must, on no account, be deranged by moving it to right or left.

**OVERLANDRES**, *Fr.* small barges that ply upon the Rhine and the Meuse.

**To OVER-RUN**, in a military sense, to ravage, to lay waste. A country which is harassed by incursions, is said to be over-run.

**OVERSEER**, an officer in the ordnance department, who superintends the artificers in the construction of works, &c.

**OVERSEER**, an officer who has the care of the parochial provision of the poor. The overseers of the poor of every parish or place, are directed, by act of parliament, to certify and return to the justices of the peace at the next Michaelmas quarter session the several quotas

quotas that every parish or division within a city, town, or place, pays to the land tax for that year. From these several quotas a fund is annually established to defray part of the expences for raising the militia.

**OVERSLAGH**, as a military phrase, which is derived from the Dutch, to skip over, will be better explained by the following table.—For instance, suppose four battalions, each consisting of

eight captains, are doing duty together, and that a captain's guard is daily mounted: if in the Buffs, the second captain is doing duty of deputy adjutant general; and the fourth and seventh captains in the king's are acting, one as *aid-de-camp*, the other as brigade major; the common duty of these three captains must be *overslashed*, that is *skipped over*, or equally divided among the other captains.

Table of Explanation.

Regiments.	No. of Captains.	Heads of each Column.							
		1	2	3	4	5	6	7	8
Royal	8	1	3	8	12	15	19	23	26
Queen's Royal	8	2	6	9	13	16	20	24	27
Old Buffs	8	3		10	14	17	21	25	28
King's Own	8	4	7	11		18	22		29
Total	32								

N. B. The three blanks shew where the overslashes take place.

**OVERTHROW**, total defeat, discomfiture, rout.

**OUEST** *ou occident*, Fr. one of the four cardinal points of the world, or the west.

**OURAGAN**, *Fr.* a violent tempest.

**OUTBAR**, to shut out by fortification.

**OUT-GUARD**. See **OUT-POSTS**.

**OUTLS**, *Fr.* tools of every description that are used by the artificers and workmen belonging to the artillery, &c.

**OUTLS à mineur**, *Fr.* tools used in mining.

**OUTLINE**, the line by which any figure is defined.

**OUTPART**, at a distance from the main body. See **OUT-POSTS**.

**OUT-POSTS**, a body of men posted beyond the grand guard, called outposts, as being without the rounds or limits of the camp. See **POSTS**.

**OUTRANCE** *à outrance*, *Fr.* to the utmost; to the last extremity. Hence *combat à outrance*, a contest or fight which is maintained to the utmost point

of exertion. The French still say, *Se battre à outrance*, to fight to the last extremity.

**OUTRE en outre**, *Fr.* through and through.

**OUTSIDE**, in fencing, that part which is to the right of the line of defence.

**OUTSIDE GUARD**, a guard used with the broad sword and sabre, to defend the outside of the position. See **BROADSWORD**.

**OUTWALL**. See **REVEMENT**.

**OUTWARD FACE**, a word of command for troops to face to the right and left from their center.

To **OUTWING**, to extend the flanks of an army or line in action, so as to gain an advantageous position against the right or left wing of an enemy. This manœuvre or evolution is effected by the *movement on an oblique line*. See **MOVEMENTS**.

**OUT-WORKS**, in fortification, are works of several kinds, which cover the body of the place, as ravelins, half-moons, tenailles, horn-works, crown-works,

works, counter-guards, envelopes, swallow-tails, lunettes, covert-ways, &c.

These outworks not only cover the place, but likewise keep an enemy at a distance, and hinder his gaining any advantage of hollow or rising grounds; as such cavities and eminences may serve for lodgments to the besiegers, facilitate the carrying on approaches, and enable them to raise their batteries against the town. When out-works are placed one before another, you will find a ravelin before the curtain, a horn-work before the ravelin, and a small ravelin before the curtain of the horn-work; those works which are nearest to the body of the place must be the highest, though lower than the body of the place, that they may gradually command those without them, and oblige the enemy to dislodge, if in possession of them.

**OUVERT, Fr.** open.

*Pays OUVERT, Fr.* A country is so called when there are neither rivers, mountains, or forts, &c. to defend it.

*Ville OUVERTE, Fr.* a town which has no gates or fortifications, or which has had them demolished.

*Force OUVERTE, Fr.* main strength, or open arms.

*Guerre OUVERTE, Fr.* open war.

**OUVERTURE des portes, Fr.** the opening of the gates in a fortified town or place, according to specific military rules. The method in all regular governments is too well known to require any particular explanation.

**OUVERTURE et fermeture des portes chez les Turcs, Fr.** There are certain laws and regulations among the Turks, by which the janizaries are entrusted with the keys belonging to the gates of every fortified town or place in which they do garrison duty. The gates are always opened at day-break by two or four janizaries. There is a capigy or porter stationed at each gate. Whenever he opens the gate, he repeats, in an audible tone of voice, certain words in the praise of God and the sultan, after which he returns the key or keys to the janizaries, who carry them to the governor or commandant of the place.—The closing of the gates is done with the same solemnity.

**OUVERTURE de la tranchée, Fr.** the opening of the trench or trenches.

**OUVRAGES, Fr.** works. See FORTIFICATION.

**OUVRAGE à corne, Fr.** hornwork.—See FORTIFICATION.

**OUVRAGE à couronne, Fr.** crowned work. See FORTIFICATION.

**OUVRAGES détachés, pièces détachées, Fr.** See DEHORS.

**OUVRAGES de Campagne, Fr.** field works.

**OUVRAGES détachés et de circonstances, Fr.** outworks which are suddenly erected by way of parapets, &c. over practicable breaches, and which are continued inwards when the garrison of a besieged place is resolved to hold out.

**OUVRAGES dégradés, Fr.** works belonging to the besiegers or to the besieged, which have suffered or been demolished by the artillery.

**OUVRIR, Fr.** to open.

• **OUVRIR les rangs, Fr.** to take open order.

*En arrière OUVRER vos rangs, Fr.* rear ranks take open order.

*S'aligner à rangs OUVERTS, Fr.* to align or dress in line at open order.

*A jour OUVRANT, Fr.* at break of day.

*A portes OUVRANTES, Fr.* at the opening of the gates.

**OUVRIERS, Fr.** All sorts of artificers and workmen employed in fortification, &c. are so called.

**OXFORD BLUES.** See HONSGUARDS.

**OXYCRAT, Fr.** A certain portion of vinegar to five or six times its quantity of water. This mixture is frequently used on service, and in hot weather, to allay the burning heat of any inflamed part. It is likewise employed to cool cannon, during an engagement, in very hot firing.

**OXYGENE,** the chemical base of vital air with which nitre is found to abound, and to which gunpowder owes its rapid and perfect combustion.

*King's or Queen's OWN,* a term which has been attached to some particular regiments ever since the Revolution in 1688. Thus the Fourth, which landed with William III. is always called the Fourth or King's Own, and the Second Regiment of Foot, the Queen's Own. We have had instances during the present and the late war of militia battalions having adopted the term of King's Own. This occurred when his present majesty visited Portsmouth after

ter the battle of the 1st of June, 1794. The Marquis of Buckingham (who was colonel of the militia of that name, and which was doing duty in conjunction with the South Gloucester) solicited permission for his corps to become royal, and to bear the appellation of King's Own. The facings, which before were yellow, were consequently changed to garter blue. By which circumstance the county of Buckingham sends out a very fine corps of men, who being

called the King's Own, and thereby approaching the regulars without actually being so, seem to have left their ancient comrades of the militia, without obtaining any footing in the line. Another militia regiment (which has often done duty at Windsor, and has been humourously called his majesty's yellow guards,) has also changed its facings to royal blue, with the same mark of distinction.

## P

**PAAT**, *Ind.* a promissory note.

To **PACE**, as a horse does: *aller à pas*, Fr. There are four kinds of paces in the manège, the walk, trot, gallop, and amble. The last, more particularly, is called a pace, or easy motion, wherein the horse raises the two feet of the same side together.

**PACHA**. The captain pacha, among the Turks, is the chief admiral and superintendant general of the marine.—He generally commands in person. The sailors and soldiers of the military marine were formerly called *Lavans* or *Lavantis*; the soldiers are now called *Galiondjis*. The sailors are Turks from the maritime towns, or Greeks from the Archipelago: they are in constant pay. The soldiers, or *Galiondjis*, are all Mussulmen, and only receive pay when they are in actual service. We recommend to our military readers an important work, which has lately been published at Paris, and from which they will derive considerable information respecting the Turks. It is intitled, *Travels in the Ottoman Empire, Egypt, and Persia*, by Citizen Olivier, member of the French National Institute.

**PACHOLECK**. See **ULAN**.

**PACKET-BOATS**, small vessels that sail from the different sea-ports in England, and carry passengers, mails, &c. to and from our foreign possessions; and keep up a regular intercourse with

foreign powers that are at peace with Great Britain.

**PADDY**, *Ind.* rice in the husk, whether dry or green. Also a familiar term or nickname, which is given to a native of Ireland; as John Bull is applied to an Englishman, and Sawney to a Scotchman.

**PADSIA**, *Ind.* a king.

**PAGEANT**, in ancient military history, a triumphal car, chariot, arch, or other like pompous decoration, variously adorned with colours, flags, &c. carried about in public shows, processions, &c.

**PAGES**, *mousses ou garçons*, Fr.—Young lads of the description of English cabin boys, who learn navigation, and do the menial offices, on board a French ship.

**PAGOD**, *Ind.* a general name given by the Portuguese to the temples in the east. It also denotes a coin. See **PAGODA**.

**PAGODA**, *Ind.* the place of worship among the Hindoos. It is likewise the name of a gold coin of the value of eight rupees. The English and Dutch coin pagodas. There are also silver pagodas struck at Marsingua, &c. with the figure of some monstrous idol.

**PAILS**, made of wood, with iron hoops and handles, hold generally four gallons, and serve in the field to fetch water for the use of artillery works, &c.

**PAIL**

**PAILLASSES**, *Fr.* straw beds, commonly called *paillasses*. These are furnished by the barrack department for the accommodation of British soldiers in barracks.

**PAILLE**, *Fr.* straw.

*Les soldats vont à la PAILLE*, *Fr.* the soldiers are going to the forage yard or dépôt. This term is likewise used to signify the indulgence which is occasionally granted to soldiers for exercise or necessary evacuations. Thus when a battalion has gone through its manual, &c. the commanding officer gives the word *à la paille*.

*Rompre la PAILLE avec quelqu'un*, *Fr.* a figurative term, signifying to quarrel or fall out with any body, in an open and unreserved manner.

**PAILLE**, *Fr.* it likewise signifies any flaw in metals. *Cette lame est fine, mais il y a quelques pailles*; this blade is finely tempered, but there are some flaws in it. *La lame de son épée se cassa à l'endroit où il y avoit une paille*. The blade of his sword broke where there was a flaw.

**PAILLER**, *Fr.* *Palearius*. An ancient body of French militia. The soldiers belonging to it were probably so called either from the circumstance of their wearing straw in their helmets, in order to know one another in action, or because they were accustomed to set fire to their enemy's habitations, &c. with bundles of straw, which they always carried with them for that purpose. The inquisitive may be more fully satisfied on this subject by referring to *Ducange's Glossary*.

**PAIN de Munition**, *Fr.* Ammunition bread. In the folio edition of Marshal Saxe's reveries, page 16, we find the following important observations on the subject of ammunition bread. He states that bread never should be given to soldiers on active service, but that they should be accustomed to eat biscuits, for the following reasons:—Biscuits will keep a considerable number of years, and every soldier can conveniently carry with him in his haversack a sufficient quantity for seven or eight days. Those officers who have served among the Venetians, will readily prove the justness of this remark. But there is a species of biscuit, or hard-baked bread, that never crumbles, (called *sou-*

*kari* by the Russians) which is preferable to any thing of the kind. It is square, and about the thickness of a nut, and takes up less room than either bread or biscuits:

Purveyors, who are interested in the business, maintain a different opinion. They tell you that bread is best for troops. Every man of experience knows the contrary; for it is notorious, that contract, or ammunition bread, is not only made of unwholesome ingredients, but that it is seldom more than half baked; which, together with the water it contains, increases the weight, and consequently enhances the value. Add to this, that purveyors must unavoidably increase the expence of the army, by being obliged to employ a great number of bakers, baker's men, wagons, and horses. Independent of the expence, it is evident, that the operations of an army must unavoidably be clogged by the necessity of providing quarters for these people, of having a quantity of hand-mills, and of employing a certain number of effective men to form detachments for their security.

It is impossible to calculate the train of robberies and inconveniences which grow out of this system, and the embarrassments it occasions to a general; but above all, the diseases which bread, supplied in this manner, will always engender, and the fatigue that the troops must necessarily undergo to get their rations. Were all these mischiefs obviated, there is still another evil in reserve, which no precaution can set aside. This is the certainty that an enemy may be under, with respect to your intentions and motions, by narrowly watching the establishment and disposition of your ovens. Were I, continues the marshal, to adduce instances and facts to corroborate these observations, I might dwell considerably at large upon the subject. I do not hesitate to say, that much ill success, which is attributed to other causes, proceeds entirely from the provision and distribution of ammunition bread. He even goes farther, for he asserts unequivocally, that soldiers ought sometimes to be enured to almost every species of privation, and instead of being provided with biscuit, occasionally to receive grain, which they must be taught to bake upon iron pallets,

pallets, after having bruised and made it into dough. Marshal Turcane has observed upon the same subject in his memoirs. Marshal Saxe, indeed, does not scruple to say, that although there might be plenty of bread, he would, in conformity to the opinion of many good officers, suffer his men to feel the want of it. I have, adds the latter, been eighteen months successively on service with troops who, during the whole of that period, never tasted bread, and yet never once complained or maimured. I have, on the contrary, been frequently with others that had never familiarized themselves to that privation, and who, on the first appearance of want, were disheartened; in consequence of which the very nerve of enterprize and hardihood was broken, and nothing great could be undertaken.

PAIN, *Fr.* See PRACE.

PAL, *Fr.* See QUINTAIN.

PALADIN, *Fr.* a name given to those ancient knights who were either what the French call *comtes du palais*, counts of the palace, or were princes lineally descended from Charlemagne, and other old kings.

PALANKEEN, *Ind.* a vehicle borne on the shoulders of four men, by means of a bamboo pole extending from each end: it carries one person in a reclining posture: it has a canopy which is supported by a pole raised along the centre, from whence it is pendent on either side.

PALEAGAS, *Ind.* See POLYGARS.

PALANQUE, *Fr.* a kind of fortification so called in Hungary. It is made of stakes driven into the ground, interlaced with twigs, and covered with earth, and serves to stop the progress of an advancing enemy.

PALÆSTRA, in Grecian antiquity, a public building, where the youth exercised themselves in the military art, wrestling, running, playing at quoits, &c.

PALAS. See CLICK.

PALATINATE, (*palatinat*, *Fr.*) the county or seat of a count palatine, or chief officer in the palace, or court of an emperor, or sovereign prince.

PALATINE, (*palatin*, *Fr.*) This post of dignity has various significations.—In Germany, electors, princes and counts are sometimes so called. Hence

an elector palatine. In Hungary the viceroy is termed palatine; and in Poland it is usual to distinguish the governor of a town by this title. Several great noblemen and lords were likewise called palatines under the first kings of France. Some counties in England are also distinguished by this word, as county-palatine of Cheshire, &c. &c.

PALEÉ, *Fr.* the row of piles upon which a wooden bridge is constructed, is so called.

PALESTRE, *Fr.* a wrestling place, or exercising ground. It comes from the Latin, and was originally derived from the Greek.

PALFREY, (*palfrei*, *Fr.*) Before carriages were invented, the horses on which ladies rode for pleasure were called palfries. The French also say, *palfrei*, *cheval de parade*.

PALIS, *Fr.* the rows of small pointed stakes, which serve for any species of inclosure, are so called. The term *palisade* is derived from it.

PALISSADER, *Fr.* to surround any spot with stakes or palisades.

PALISADES, or PALISADOES, in fortification, stakes made of strong split wood, about nine feet long, six or seven inches square, three feet deep in the ground, in rows about 2½ or three inches asunder, placed on the covert-way, at three feet from, and parallel to, the parapet or side of the glacis, to secure it from surprise.

They are also used to fortify the avenues of open forts, gorges, half-moons, the bottoms of ditches, and, in general, all posts liable to surprise. They are usually fixed perpendicularly, though some make an angle inclining towards the ground next the enemy, that the ropes which may be cast over in order to tear them up, may slip off.

Turnieg PALISADES, are an invention of Mr. Coehorn, in order to preserve the palisades of the parapet of the covert-way from the besiegers shot. They are so ordered, that as many of them as stand in the length of a rod, or about ten feet, turn up and down like traps, so as not to be in the sight of the enemy, till they just bring on their attack; and yet are always ready to do the proper service of palisades.

PALISSADES, *Fr.* See PALISADES.

PALISSADES *de camp*, *Fr.* several

pieces of wood, so arranged and tied together, that they may with great dispatch be fixed in the ground, which is marked out for the encampment of an army.

**PALISSADES** *ferrées*, pallisades that are shod with iron. They are used in shallow streams and marshes, to prevent small craft from plying, or persons from crossing them on foot.

**PALKEE**, *Ind.* See **PALANKEEN**.

**PALL**, a covering thrown over the dead. It is always used in military burials.

**PALLAS**, a name in the Heathen mythology, which is given to Minerva, who was looked upon as the goddess of war.

**PALUDAMENTUM**, (*chlamys*), among the ancients, a garment worn in time of war, by the principal men of Rome, especially the generals, who were called for that reason *paludati*. The soldiers having only short coats, called a *sagum*, were denominated *sagati*.

The *paludamentum* was open on the sides, coming down no lower than the navel, and had short sleeves. It was either of a white, purple, or red colour, and sometimes black. Kennett, in his Roman Antiquities, page 313, says, the old *paludamentum* of the generals was all scarlet, only bordered with purple; and the *chlamydes* of the emperors were all purple, commonly beautified with a golden or embroidered border.

**PAN**, the side of a rectangle or irregular figure.

**PAN**, likewise means the distance which is comprized between the angle of the epaule and the flanked angle in fortification. See *Face of a BASTION*.

**PAN**, a name well known among the shepherds of antiquity, and frequently used by modern writers in their rural fictions. It military history it signifies a man who was lieutenant-general to Bacchus in his Indian expedition. He is recorded to have been the first author of a general shout, which the Grecians practised in the beginning of their onset in battle. See **PANIC**.

**PAN**, that part of the lock of a musquet, pistol, &c. which holds the prining powder.

**PANACHE**, ? *Fr.* a plume, or **PANNACHE**, } bunch of feathers.

**PANACHES** *flottans*, *Fr.* nodding plumes.

**PANACHE** likewise signifies in architecture, the triangular part of an arch that contributes towards the support of a turret or elevation which is raised above the dome of any particular edifice.

**PANCARTE**, *Fr.* an ancient exercise or tournament, which was performed in the Roman amphitheatre, when strong athletic men were opposed to all sorts of enraged animals.

**PANCERNES**, a body of Polish cavalry, which is divided into hussars and pancernes. These troops constitute, almost wholly within themselves, the strength of that country.

**PANDOURS**, Sclavonians who inhabit the banks of the Drave, a considerable river of Germany, which rises in the Tyrol, and empties itself into the Danube, near Esseeck, in Hungary; and those of the Save, a river of Germany, which rises in Carniola, and falls into the Danube at Belgrade. They wear a long coat, have four or five pistols placed in a belt round their waists, and they are armed with a sabre and a poniard. They always act as irregulars, when employed on service. They derive their name from a village called Pandut, in Lower Hungary. The Pandours were originally a corps of infantry named Ruitza; and their chief occupation or duty was to clear the high roads of thieves, &c. They first made their appearance in Germany, under the command of Baron Treack, in 1741.

**PANICK**, *PANICK fear*, (*terreur panique*, *Fr.*) sudden consternation which seizes upon men's fancies without any visible cause; a needless or ill-grounded fright. The reason why these terrors are attributed to Pan, was, as some say, because when Osiris was bound by Typho, the appearance of Pan and the satyrs throw him into a fright; or because he frightened all the giants that waged war against Jupiter; or as others say, because when Pan was Bacchus's lieutenant-general, in his Indian expedition, and was being encompassed in a valley, with an army of enemies, far superior to them in number, he advised the god to order his men to give a general shout, which so surprised the opposite army, that they immediately fled from their camp. And hence it came to pass, that all sudden fears impressed upon men's

men's spirits, without any just reason, were, by the Greeks and Romans, called *panic terrors*. (See Polyænus Strateg. book 1.) The custom of shouting seems to have been used by almost all nations, barbarous as well as civil; and is mentioned by all writers who treat of martial affairs. Homer has several elegant descriptions of it, particularly one in the fourth Iliad, where he resembles the military noise to torrents rolling with impetuous force from mountains into the adjacent vallies.—We have likewise had our war-hoops.

PANIER *à mine*, Fr.—See *Bourriquet*.

PANIER, Fr. baskets. Figuratively, *un panier percé*, a leaky vessel, or one who cannot keep a secret. A dangerous man in society; and in military concerns, one who ought to be particularly guarded against where discretion and confidence are necessary.

PANNE, Fr. literally means shag, plush, &c. and is properly a sea term, signifying to *lie to*, *mettre en panne*. It is likewise used in a military sense, to express the steady posture of troops who are drawn up for battle, and wait an enemy's attack. *La troupe est restée en panne*. The squadron remained immoveable.

PANNEAU, Fr. Trap, snare.

*Donner dans le PANNEAU*, Fr. to be ensnared, entrapped, or outwitted.

PANNELS, in artillery, are the carriages which carry mortars and their beds upon a march.

PANNONCEAU, Fr. an ancient term, which was used to signify ensign or banner.

PANOPLY, complete armour or harness.

PANSEMENT, Fr. the dressing of wounds.

PANSER, Fr. to dress a wound.

PANSER, Fr. in farriery, signifies to rub down, and otherwise to take care of a horse.

PANTHEON, in architecture, a temple of a circular form, dedicated to all the gods. The name has been adopted among modern nations from the pantheon of ancient Rome, built by Agrippa in his third consulate, and dedicated to Jupiter Ultor, or Jupiter the Avenger. There is a chapel in the escorial in Spain, called pantheon, of marble and

jasper inlaid: the whole inside is of black marble, excepting the luthern, and some ornaments of jasper and red marble. The pantheon at Paris, during the progress of the French revolution, has been appropriated to national purposes; the names and busts of the most distinguished statesmen and generals being preserved therein as marks of public gratitude, and objects of public emulation. There is a building in London that bears the name of pantheon, but that is all. It is private property, and the only public use to which it has been appropriated, has been that of operational speculation, masquerades, or frivolous entertainments.

PANTOGRAPH, Fr. a mathematical instrument, which serves to copy all sorts of drawings. The French have paid great attention to the improvement of this instrument, of which a minute description may be found in *Cours de Mathématiques*, by Pere Deschalles. But the Sieur Panglois brought it to such perfection in 1750, that it is become universally useful.

PANTOMETER, (*pantomètre*, Fr.) an instrument used to take all sorts of angles, distances and elevations. It was invented by the ancients, but has been greatly improved since.

PAPIER, *de cartouche*, Fr. paper used for cartridges.

PAPIER gris, ou PAPIER brouillard, Fr. whited-brown paper.

PAPIERS *et enseignemens*, Fr. All the papers and manuscripts which are found on board a ship are so called.

PAQUEBOT, Fr. a modern French term, derived from packet-boat, which see.

PARABOLA, in geometry, a figure arising from the section of the cone, when cut by a plane parallel to one of its sides.

From the same points of a cone, therefore, only one parabola can be drawn; all the other sections within these parallels being ellipses, and all without hyperbolas.

*Properties of the PARABOLA.* The square of an ordinate is equal to the rectangle of the abscissa, and four times the distance of the focus from the vertex.

The perpendicular on the tangent, from the focus, is a mean proportional  
4 L 2 between

between the distance from the vertex to the focus, and the distance of the focus from the point of contact.

All lines within the parabola, which are drawn parallel to the axis, are called diameters.

The parameter of any diameter is a right line, of such a nature that the product under the same, and the abscissa, are equal to the square of the semi-ordinate.

The squares of all ordinates to the same diameter, are to one another as their abscissas.

**CARTESIAN PARABOLA**, is a curve of the second order, expressed by the equation  $xy = ax^2 + bx^2 + cx + d$ , containing four infinite legs, being the 66th species of lines of the third order, according to Sir Isaac Newton; and is made use of by Descartes, in the third book of his geometry, for finding the roots of equations of six dimensions by its intersections with a circle.

**DIVERGING PARABOLA**, a name given by Sir Isaac Newton to five different lines of the third order, expressed by the equation  $yy = ax^3 + bx^2 + cx + d$ .

**PARABOLE, Fr.** See **PARABOLA**.

**PARABOLOIDE, Fr.** See **PARABOLIC CONOID**.

**PARADE**, originally consisted of a square court before cathedrals, surrounded with piazzas or porticoes for persons to walk under, being supported with pillars. It is now used, in a military sense, to signify any place where troops assemble, and may be distinguished in the following manner:

**General PARADE**, the place where soldiers belonging to different corps are drawn up, according to seniority, to mount guard, or to be exercised, &c.

**Regimental PARADE**, the place where any particular regiment or corps is formed in line, &c.

**Private PARADE**, any spot selected, in general by each captain of a troop or company, for the inspection of his men, previous to their being marched off to the regimental parade. This parade is likewise called *company* or *troop parade*. When troops are encamped, the general and regimental parades are usually in front of the line of tents; each regiment having its quarter-guard opposite, and the space between being sufficient to allow of the free exercise of the battalion. The companies have their pri-

vate parades in the several streets of the camp.

**PARADE, in camp**, is that spot of ground in the front of each encampment, between the camp colours, on the right and left wings, from which a straight line or narrow trench ought to be drawn, called by the French *bande li-nière*, and which may be made to answer two purposes, viz. that of keeping the parade free, and of carrying off rain, &c. &c.

**Morning PARADE**. In every garrison town, fortified place and camp, as well as in every town through which soldiers pass, or occasionally halt, a certain hour in the morning is fixed for the assembling of the different corps, troops, or companies, in regular order.

**Evening PARADE**. The hour generally fixed for the evening parade is at sunset. When troops are encamped, the signal for evening parade is given from the park of artillery, by the discharge of a piece of ordnance, which is called the evening gun.

**To PARADE**, to assemble in a prescribed regular manner, for the purposes of being inspected, exercised, or mustered.

**To PARADE**. This word is frequently used as an active verb, with respect to military matters, viz. *to parade the guard*, &c. It has likewise been adopted in the united kingdom to express the act of calling out a person in an affair of honour. The Irish familiarly say—*I shall parade the gentleman to-morrow morning in the Phoenix Park*.

We sincerely wish the practice could in some instances be reduced to a mere parade; and, in others, that it were rendered sufficiently serious to check its frequency.

**PARADE, Fr.** The French make use of this term in various ways.

**PARADE, Fr.** show, ostentation.

**Lit de PARADE, Fr.** bed of state.

**Cheval de PARADE, Fr.** a horse finely caparisoned, and kept for show.

**PARADE, Fr.** in fencing, the act of parrying a thrust or blow.

**PARADE, Fr.** the place or ground where soldiers parade.

**Se mettre en PARADE, Fr.** to take one's ground.

**Faire la PARADE, Fr.** to do parade duty.

**Monter**

*Monter la PARADE, Fr.* to take part in the regular line of parade.

*Manquer sa PARADE, Fr.* in fencing, to miss one's parry.

*Etre hors de PARADE, Fr.* to parry wide, or stand exposed.

*PARADIS, Fr.* that part of a harbour in which vessels may ride with the greatest safety.

*PARALLELES, Fr.* Parallel lines in fortification are so called.—See *Parallels*.

*PARALLELS*, at a siege, the trenches or lines made parallel to the defence of the place besieged: they are also called lines of communication, and boyeaux.

*PARALLELS*, or places of arms, are deep trenches 15 or 18 feet wide, joining the several attacks together. They serve to place the guard of the trenches, in readiness to support the workmen when attacked. There are usually three in an attack; the first, about 300 toises or 600 yards, from the covert-way; the 2d and 3d, nearer to the glacis.

*PARALLELOPEPID, (Parallélopé-  
pide, Fr.)* one of the regular bodies of solids, comprehended under six rectangular and parallel surfaces, the opposite ones whereof are equal.

*Tirer une PARALLELE, Fr.* verbatim, to draw a parallel. To make a direct communication between one trench and another.

*PARALLELISM, (parallélisme, Fr.)* the situation or quality whereby any thing is denominated parallel.

*PARALLELISM of a march.* In order to preserve the parallelism of a march in the movement of troops, each battalion must be kept perpendicular to the direction it marches upon, the whole of the several battalions in one straight line, and their several marching directions parallel to each other. The first battalion or line becomes the regulating one, and must be regarded as inflexible; and from the moment that its direction is ascertained, the commander of each other, and their directing sergeants, are to consider their movements subordinate to it, and to conform accordingly. It is the helm which guides the line, and must not change cadence; nor will it lengthen or shorten its step, but from unavoidable necessity, and by particular order.

The instant communication of the word *march* is particularly important,

that the advanced sergeants of the whole may step off together, and thereby maintain their line parallel to the one they quitted, and which becomes the principal guide for their battalions; each preserves its six paces from its advanced serjeant; this distance is to be kept by, and depends on, the replacing officer next to the colour, who covers the directing serjeant; and if these trained sergeants do step equally, and in parallel directions to each other, they must be dressed themselves in line, and of consequence the centers of their following battalions. See page 337, &c. of *Rules and Regulations*.

*PARALLELISM and distance to be observed in the formation and movement of any considerable body of troops.* In page 361 of *Rules and Regulations*, it is laid down as a general maxim, that no considerable body should ever be formed without a proportion of it being placed in *reserve* or in *second line*, and more or less according to circumstances. The movements of such second line will always correspond with those of the first, and it will always preserve its parallelism and distance.

If the first line makes a flank or central change of position, the second must make a change also on such point as will bring it into its relative situation.

The march of the second line in front, is regulated by its own division or battalion of direction, which moves relatively to that of the first line. In forming in line it will march upon its own points which are parallel to, and ascertained in consequence of those of the first.

When the lines break in columns to the front, the second will generally follow those of the first. When the march is to the flanks, the second line will compose a separate column, or columns. When the march is to the rear, the second line will lead in columns.

The distance betwixt the lines, may be in general supposed equal to the front of two battalions, and an interval.

The second lines are seldom composed of as many battalions as the first: they are often divided into distinct bodies, covering separate parts of the first line, and consequently preserving a relative parallelism and distance.

Second lines will not always remain extended,

extended, they will often be formed in column of battalions, or of greater numbers, ready to be moved to any point where their assistance is necessary.

Whenever the first line breaks, and manœuvres by its right to face to the left, or by its left to face to the right; the movements of the second line are free and unembarrassed, and it may turn round the manœuvring flank of the first line, and take its new position behind it, by extending itself parallel to that direction, how oblique soever it may be.

The central movement generally required from the second line to conform to that of the first, is equivalent to that line marching in two columns of platoons, from near the center obliquely to the front, and from that situation forming to both flanks.

The movements of the central columns being well understood, those of the battalions of the wings, are similar in two lines.

The officer commanding the second line, must always be properly informed of the nature of the change to be made by the first, that he may readily determine his corresponding movements.

It requires much attention to conduct heads of battalion columns of both lines nearly parallel to their lateral ones, and perpendicularly, or diagonally to front or rear, according to the nature of the movement. To determine with precision, and in due time, their points in the new line, that wavering and uncertainty of march may be avoided. In great movements to allow the soldier every facility of motion without increasing the distances of divisions, and to require the most exact attention on entering the new line, and in forming. To avoid obstacles in the course of marching, but as soon as possible to re-enter the proper path of the column; while out of that path, the colours of that battalion column may be lowered, (as a mark for the neighbouring column, not to be then entirely regulated by it) and again advanced when it regains its proper situation.

All the battalions of a second line, must at the completion of every change of position, find themselves placed in the same relative situation with respect to the first, as they were in before the commencement of the movement.

All changes of position of a first line

are made according to one of the modes already prescribed: in general, in critical situations, they are made on a fixed flank, or central point, and by the echelon march of platoons; but the movements of a second line being protected, more complicated, and embracing more ground, are made by the march of battalion columns regulated by a certain determined division of the line.

In all cases where a change of position is made on a flank or central point of the *first line*, the movement of its *corresponding* point of the second line determines the new relative situation of that second line.

*Movements PARALLEL with a line of fire.* Movements are said to be parallel with a line of fire, when one or more lines march either in the rear of troops engaged with an enemy, or in face of an enemy, who is advancing to attack. The greatest accuracy and order are required on both occasions, particularly on the latter; for if the second line, which is the line of support, does not preserve its perpendicular direction with respect to every leading point, and its relative parallelism and distance with the line engaged, according to circumstances, it will not only run the risk of becoming useless itself, but will, in all probability, endanger the line it covers, should any sudden necessity occur for a change of position.

**PARALLELOGRAM**, (*Parallélogramme*, Fr.) a plain figure bounded by four right lines, whereof the opposite are parallel one to the other. It likewise means an instrument composed of five rulers of brass or wood, with sliding sockets, to be set to any proportion, for the enlarging or diminishing any map or draught.

**PARALYSER**, *Fr.* to paralyse; a term frequently used by the French since the revolution, to express the bad effects of a factious spirit, &c. *Un seul factieux quelquefois paralyse toute une administration*; one factious man will sometimes render the designs of a whole administration abortive.

**PARAMETER**. See GUNNERY and PROJECTILES.

**PARAPET**, in fortification, an elevation of earth, designed for covering the soldiers from the enemy's cannon,

or small shot: its thickness is from 18 to 20 feet; its height 6 on the inside, and 4 or 5 on that side next the country: it is raised on the rampart, and has a slope called the superior talus, or glacis of the parapets, on which the troops lay their arms to fire over. The slope renders it easy for the soldiers to fire into the ditch. It has a banquette or two on the inside for the troops who defend it, to mount upon, in order to discover the country, the ditch, and counter-scarp, and to fire as they find occasion.

**PARAPET** of the covert-way, is what covers that way from the sight of the enemy; which renders it the most dangerous place for the besiegers, because of the neighbourhood of the faces, flanks, and curtains of the place.

**PARAPETS en forme de crémaillère**, Fr. Parapets which are so constructed within, in the form of a saw, that one of the faces of the redans, or teeth, is perpendicular and the other parallel to the capital. The chevalier Clairac, in his *Ingénieur de Campagne*, has given a particular account of these parapets: but the merit of invention does not entirely rest with him, since the Marquis de la Fond, director of the fortified places upon the coast of French Flanders, and M. de Verville, chief engineer at Rocroi, have likewise mentioned them.

**PARASANG**, (*Parasange*, Fr.) an ancient Persian measure, containing usually thirty, sometimes forty, and sometimes fifty stadia or furlongs.

**PARC**, Fr. See **PARK**.

**PARC d'artillerie**, Fr. See **PARK of Artillery**.

**Le Commissaire du Parc**, Fr. the commissary belonging to the park.

**Le Parc des munitions et des vivres**, Fr. the park of stores and provisions.

**PARC de l'Hôpital**. See **HOSPITAL**.

**PARC des vivres ou quartier des vivres**, Fr. park of provisions.

**PARCOURIR**, Fr. in a military sense, to run over the ground during an action. This word is particularly applicable to those movements which are made by general officers, officers commanding brigades, &c. for the purpose of encouraging their soldiers in the heat of an engagement.

**PARCOURIR de rang en rang**, Fr. to run up and down the ranks, or from rank to rank,

**PARDON**, forgiveness, remission. In military matters this word must be understood in two senses, viz. in a limited one, when it affects a culprit who has been sentenced by a general court-martial, to receive bodily punishment; and in a more extensive one, when the punishment is the consequence of a regimental decision. In the former case, the king only, through the commander in chief, can pardon or remit the punishment; in the latter, the colonel, or commanding officer, has a discretionary power.

**PAREIL**, Fr. to parry.

**PARER**, Fr. This word has various significations in the French language. Those which more immediately belong to military matters are—

**PARER à toutes feintes**, Fr. to parry to all feints.

**PARER un coup**, Fr. to ward off a blow; also to parry in fencing, as *parer une botte*, *parer une estocade*, to parry a thrust; *parer et porter en même tems*, to parry and thrust at the same time: it also means to weather; as *parer le Cap*, to weather or double the Cape.

**PARISH**, according to Johnson, the particular charge of a secular priest. Our realm was first divided into parishes by Honorius, Archbishop of Canterbury, in 636. The several parishes are obliged to furnish a certain number of men for the militia, &c.

**PARISH-business**. Although this phrase is generally understood to mean every species of conversation which may relate to military matters, and is consequently discountenanced at regimental messes, we are nevertheless of opinion, that, in strictness, it ought only to comprehend the details of any particular regiment. It must be obvious to every thinking man, that however ill-placed a discussion of the private concerns of a regiment at table may be, especially in the presence of strangers, a total exclusion of military subjects is equally to be condemned; for on what topics can officers converse with more satisfaction at a military mess, than on those which relate to the higher branches of their profession? We must, nevertheless, acknowledge, with the Latin author—*Est modus in rebus, et certi denique fines*.

**PARK of artillery**, should always be

be placed, if possible, within a short distance of water carriage; and leave the most ready communication with every part of the line of the army. Its form must depend on its situation. Ten feet are usually allowed in front for one carriage and its interval, and near 50 feet from the hind wheels of the front row to the fore wheels of the second; this interval should allow sufficient room for putting the horses to the carriages, and for a free passage along the line. In parks not on immediate service, it is customary to arrange the guns with their muzzles to the front; but where the guns are likely to be wanted at a short notice, appearances must not be studied, and the gun-carriages must be parked with their shafts to the front, ready to receive horses to them. A quarter guard is placed in front of the park, and the non-commissioned officers and gunners' tents on the flanks, at about 20 paces distance; and 40 paces to the rear the subaltern officers; at 10 more to the rear the captains, and 10 more the commanding officer. The mess tent is 15 in the rear of the officers. At a convenient distance, in the rear of the whole, are the horses, picketed in one or more lines, with the drivers on their flanks. The horses are sometimes picketed in lines perpendicular to the front, and on the flanks of the carriages, between the men and the carriages.—*Bombardier.*

**PARK of provisions**, a place in a camp, on the rear of every regiment, which is taken up by the sutlers, who follow the army with all sorts of provisions, and sell them to the soldiers.

**PARLEMENTER**, *Fr.* to parley. The French familiarly say, *Ville qui parlement est à demi rendue*; a town whose governor parleys may be said to be half given up.

**PARLEY**, oral treaty, talk, conference, discussion by word of mouth.

To **PARLEY**, in military matters, to enter into conference with your enemy. This is done by means of a flag of truce. See **TRUCE**.

To **beat a PARLEY**, is to give a signal for holding such a conference, by beat of drum, or sound of trumpet.

**CHAMADE.**

**PAROI**, *Fr.* a machine made in

shape of a table, which is nailed upon planks four inches thick and ten feet long, to six feet in breadth, with its side or edge, six inches thick, towards the country, into which are driven, horizontally, long stakes with sharp points. This machine is used in sieges, being placed upon rollers so as to have it run up and fixed upon the parapet, for the purpose of resisting a scaling party.

**PAROLE**, in a military sense, the promise made by a prisoner of war, when he has leave to go any where, of returning at a time appointed, or not to take up arms, if not exchanged.

**PAROLE.** An apology almost appears to be necessary for giving an article under this head in an English Dictionary, addressed to English officers; for it is impossible that any individual of so respectable a profession could throw such a stain upon himself, his country, and his service, as to forfeit his parole or word of honour, after it has once been given. Surely it must be inscribed in all their hearts, that the word and honour of an officer are sacred, and that once pledged they cannot be recalled. Governments are concerned in inculcating these principles, because they tend to soften the horrors of war, and to fortify that sense of rectitude and truth, which, though it is the duty of the man, is still the fringe and ornament of the real soldier's character. A breach of parole in European armies, amongst civilized nations, has always been held to be infamous. A person who has once been guilty of it, has no right to be treated as an officer, or to expect quarter, should he again fall into the hands of the enemy.

**PAROLE**, means also a word given out every day in orders by the commanding officer, both in camp and garrison, in order to know friends from enemies.

**PARQUER**, *Fr.* this word, which signifies to lodge and place any thing in a convenient and safe manner, is frequently used by the French both in an active and passive sense. Perhaps it may not be improper, at least in military matters, to adopt it with the same latitude amongst us, viz.

On **PARQUER l'artillerie**, ou *l'artillerie fut parquée en tel endroit*, *Fr.* you will

will park the artillery in such a quarter, or the artillery was parked in such a quarter.

*Les gens de l'artillerie se parquèrent, ou furent parqués, du côté de la rivière,* Fr. the train of artillery parked itself on the banks of the river, or was parked upon the banks of the river.

*L'artillerie parquoit en tel lieu,* Fr. The artillery parked on such ground.

**PARRAIN**, Fr. means, literally, a godfather. In a military sense, it formerly signified a second or witness who attended at single combats to see fair play. *Les combattans se trouvoient dans le lieu du combat, chacun avec son parrain;* the combatants met upon the ground, each attended by his second or witness.

**PARRAIN**, Fr. in military orders, the person who introduces, or presents a newly elected knight. The term is also used to signify the comrade who is selected by a soldier condemned to be shot, to bind the handkerchief over his eyes.

**PARRYING**, the action of warding off the push or blow aimed at one by another.

**PART**, Fr. a part; share; concern.

*Étré à la PART*, Fr. a marine term among the French, signifying, to share in the prizes which are made against an enemy.

**PARTHENIÆ**, a word derived from the Greek, signifying virginity. In military history it refers to a particular circumstance which occurred among the ancients. The Spartans having been at war with the Messenians for twenty years, and having by those means very much depopulated their country, and apprehending that if this war continued, it might eventually strip Sparta of all its male inhabitants, they sent some of their young men from the army into the city, with licence to be familiar with as many unmarried women as they would; and the children begotten by them in this manner were called Partheniæ, on account of the uncertainty who were their fathers. At the end of the war these children were deemed bastards, and were denied the bearing of any office in the government, &c. This unjust exclusion enraged them so much, that they conspired with the slaves to destroy all the nobility; but on the discovery of their plot, they were driven out of the city. After

which, being headed by Phalantus, a bold and enterprising son of chance, they travelled into Magna Græcia in Italy, and built Tarentum. *Bailey.*

**PARTI**, Fr. A particular detachment or body of troops; horse or foot, which is destined for some specific expedition. Hence partisan. See **PARTY**.

**PARTI-Bleu**, Fr. any party of armed men who infest a country, and have no regular permission to act offensively.

*Prendre le PARTI*, Fr. to take a part.

*Prendre son PARTI*, Fr. to come to a determination.

*Prendre son PARTI dans les troupes*, Fr. to list in a regiment.

*Tirer PARTI*, Fr. to take advantage.

*Ne point prendre de PARTI*, Fr. to remain neuter, or not to take any part.

*Esprit de PARTI*, Fr. party spirit.

*Se déclarer d'un PARTI*, Fr. openly to avow some particular party. The French say, figuratively, *Il faut être toujours du parti de la vérité;* we should always side with truth.

*Parti* likewise signifies profession or employment, viz. *Le parti de l'épée, le parti des armes;* the military profession.

*Prendre PARTI dans l'épée*, Fr. to embrace a military life.

**PARTIALITY**, unequal state of the judgment, and favour of one above the other, without just reason. If any member of a general court martial expresses a previous judgment, in partiality either to the prisoner or prosecutor, before he is sworn, it is to be deemed a good cause of challenge; and he should not be allowed to sit in judgment on the case.

**PARTIE SECRETE**, Fr. a secret and confidential service which is entrusted to one or more individuals.

**PARTISAN**, has been applied to a halberd or pike, and to a marshal's staff. See **BATON**.

**PARTISAN**, in the art of war, a person dexterous in commanding a party; who, knowing the country well, is employed in getting intelligence, or surprising the enemy's convoy, &c. The word also means an officer sent out upon a party, with the command of a body of light troops, generally under the appellation of the partisan's corps. It is necessary that this corps should be composed of infantry, light horse, and hussars.

**PARTY**, in a military sense, a small number or detachment of men, horse, or foot, sent upon any kind of duty; as into an enemy's country, to pillage, to take prisoners, and oblige the country to come under contribution. Parties are often sent out to view the roads and ways, get intelligence, seek forage, reconnoitre, or amuse the enemy upon a march; they are also frequently sent upon the flanks of an army, or regiment, to discover the enemy, if near, and prevent surprise or ambuscade.

Parties escorting deserters are to receive the following allowances, being the same as have been granted to those of other forces, in consideration of the unavoidable extraordinary wear of their clothing and necessities on that duty, viz.

Distances from quarters.	For each man.		
	<i>l.</i>	<i>s.</i>	<i>d.</i>
Between 8 and 20 miles	0	1	0
20 50	0	2	0
50 100	0	4	0
100 150	0	5	0
150 200	0	6	0
Above 200	0	7	6

In the like proportion, allowances are to be made for parties of four, five, and six men, but no higher. This is however to be understood as a regulation of allowance merely, it not being the intention of government thereby to restrain any commanding officer from employing larger parties on the escort duty, if he should think proper, but that whatever may be the actual number of the parties, the allowances are to be in the proportion of

Three men for an escort of	from 5 to 8 deserters.
Four - - -	from 9 to 12.
Five - - -	from 13 to 16.
Six - - -	from 16 to 20.

Exact returns of the said duty, as performed by each corps, are to be made up, agreeably to the form hereunto annexed, as soon as may be after every 24th of June and 24th of December, for the half years immediately preceding, and are to be transmitted to the office of the secretary at war, in order that the allowances thereon may be settled and directed.

**Watering PARTY.** See **WATERING**.

**Firing PARTY**, those who are selected to fire over the grave of any one

interred with military honours, if below the rank of brigadier general; for the specific number of which the party is to consist, &c. see **BURIALS**.

**Working PARTIES.** These consist of small detachments of men under the immediate command and superintendence of officers who are employed on fatigues which are not purely of a military nature. They are generally called fatigue duties, being different from those of parade, or of exercise in the field. They principally consist in digging canals, repairing roads, working on fortifications, except such as may be constructed in the field, or upon actual service. An addition is made to their pay, as a reward for their labour, and a compensation for their extraordinary wear of necessities; half of which should always be paid into the hands of the captains, and commanding officers of companies, for this latter purpose. It has been judiciously observed in a note to the treatise on Military Finance, that British troops might in time of peace, be employed much oftener than they are on works of this nature, with equal advantage to the public and to themselves. This remark becomes more forcibly apposite since the adoption of canals through the country.

**PAS**, *Fr.* pace; a measure in fortification. The French divide their *pas*, or pace, into two kinds—*pas commun*, or ordinary pace, and *pas géométrique*, or geometrical pace. The ordinary pace consists of two feet and a half; and the geometrical pace contains double that extent, being five royal feet, or five *pieds du roi*. The itinerary distance which the Italians call a mile, consists of one thousand geometrical paces; and three miles make a French league.

*Pas oblique*, *Fr.* oblique step.

*Pas ordinaire*, *Fr.* ordinary time.

*Pas ordinaire direct*, *Fr.* front step in ordinary time.

*Pas précipité*, *Fr.* double quick time.

*Pas de charge*, *Fr.* charging time.

*Pas cadencé*, *Fr.* cadenced step.

*Pas de course*, *Fr.* the quickest step that is taken in military movements; as in charging bayonets, &c.

*Pas intermédiaire*, *Fr.* in cavalry movements, an easy trot; corresponding with the ordinary step in infantry manœuvres.

*Double le Pas, Fr.* to double your step or pace; to go faster.

*Forcer le Pas, Fr.* to make a forced march.

*Pas alongé, Fr.* a lengthened step.

*Alonger le Pas, Fr.* to step out.

*Diminuer le Pas, Fr.* to step short.

*Hâter le Pas, Fr.* to slacken your pace; to go slower.

*Marcher à grands Pas, Fr.* to move rapidly.

*Marcher à petits Pas, Fr.* to step short, or move leisurely.

*Retourner sur ses Pas, Fr.* to go back.

*Avoir le Pas, Fr.* to have the precedence.

*Pas de souris, Fr.* degrees or steps which are made in different parts of the circumference of the counterscarp.—They serve to keep up a communication between works when the ditch is dry, and are generally made in the reentrant angles of the counterscarp, and in the reentrant angles of the outworks. There are likewise steps or degrees of this sort at some distance from the glacis.

*Pas, Fr.* any strait or channel of water between two separate lands.

*Pas de Calais, Fr.* the straits between Calais and Dover.

*Pas* likewise signifies any narrow pass. *Le pas des Thermopyles*; the straits of Thermopylae.

*Défendre le Pas, Fr.* to defend the pass or strait.

*Francher le Pas, Fr.* to determine upon a thing after some hesitation.

*Pas d'ane, Fr.* a sword-guard which covers the whole hand, or basket hilt. *Une garde à pas d'ane.* *Pas d'ane* likewise means a curb or snaffle.

*PASHA, (Pacha, Fr.)* This word ought to be written and pronounced *Bashaw (Bacha, Fr.)* It is a title or mark of distinction which is annexed to the situation of grand-vizier in the Ottoman empire. There are bashaws of a subordinate class, who are governors of provinces, and who formerly assumed the title of king; being nevertheless tributary to the grand sultan. There are likewise degrees of distinction among these subordinate bashaws.

*PASS, in a military sense,* a strait, difficult, and narrow passage, which shuts up the entrance into a country.

*Pass,* a voucher for the absence of a

non-commissioned officer or soldier, in the following form:

By———commanding the Fourth or the King's own Infantry, whereof———is colonel.

Permit the bearer hereof———in———company of the abovementioned regiment, to pass from hence to———and to return to quarters at or before———o'clock.

Given under my hand at———this———day of———

*To all whom it may concern.*

*PASS, PASSADO, in fencing,* a push or thrust upon your adversary.

*PASS (passade, Fr.), in fencing,* a leap or advance upon the enemy.

*To PASS, to march by open order of columns,* for the purpose of saluting a reviewing general. Each division or company (on its march) will open its ranks at 50 paces distance from the general, and again close them, after it has passed 30 paces. The whole march in ordinary time, till the leading division arrives at the spot where the left of the battalion originally stood. The commanding officer then halts the regiment; the music ceases to play, and the different divisions with supported arms march in quick time until they have completed the third wheel from the ground of original formation; when arms are ordered to be carried, the music plays, and as each division completes the third wheel, the officers shift to the right, and the whole pass the general.

*PASS of arms, in ancient chivalry,* a bridge, road, &c. which the knights undertook to defend, and which was not to be passed without fighting the person who kept it. He, who was disposed to dispute the pass, touched one of the armorics of the other knight who held the pass, that were hung on pales, columns, &c. erected for the purpose; and this was a challenge which the other was obliged to accept. The vanquished gave the conqueror such prize as was agreed on.

*PASS-parole, a command or word* which is given out at the head of an army, and from thence passed from mouth to mouth, till it reach the rear.

*PASS-port, a letter of licence* which is given by a prince or governor, granting safe conduct to travel, enter, and

go out of his territories without molestation: this is properly given to friends and neutral persons; and the safe conduct to enemies.

**PASS**, *All's Well*, a term used by a British sentry after he has challenged a person that comes near his post, and has received from him the proper parole, watchword or countersign. See **ROUNDS**.

**PASSADE**, *Fr.* See **PASS**.

**PASSADE**, in the *manège*, is a horse's walking or trotting in such a manner, that he raises the outward hind leg and the inward fore leg together; and, setting these two on the ground, raises the other two alternately, never gaining above a foot of ground at a time.

*Demander la PASSADE*, *Fr.* This term is used among the French to express the act of soliciting charity out of the usual way of persons begging, or who have not been accustomed to ask alms. *Donner la passade à un pauvre soldat*; to give alms to a poor soldier. *Il y avoit sur le chemin beaucoup de soldats qui demandoient la passade*; there were many soldiers on the road who asked charity.

**PASSAGE**, (*passage*, *Fr.*) This word, as to its general import, does not require explanation. It is familiar to every body. In a military sense it may be variously understood for passages made over rivers or through defiles, which should always be secured when an army is on its march. Dragoons or light cavalry are generally employed upon this service, being by the celerity of their motions, better calculated to get the start of an enemy. Passes through mountainous countries, and passages over rivers, may likewise be secured by means of light field pieces and flying artillery. The latter are particularly calculated for defiles. Entrenching tools, &c. must be carried with them.

If it be found expedient to cross a river, a sufficient number of pontoons, must accompany the detachment. Should the river be fordable, and a body of infantry have been brought up in time to act with the cavalry, the former must instantly make good its footing on the opposite side, carrying intrenching tools, &c. for the purpose of fortifying the *tête du pont*, and thereby securing the passage of the river. Rivers are crossed either by surprize, or by main force.

When the passage is to be effected by surprize, such movements and feints must be resorted to, as may induce the enemy to direct his means of opposition to a distant quarter from the one you have in contemplation. Every precaution must be taken to prevent him from getting the least intelligence respecting your boats or pontoons; and on this account you must frequently counter-march different bodies of troops to divert his attention. When the passage is to be effected by main force, you must take such a position as will enable you to command the one occupied by the enemy, and you must select that part of the river where there are small islands or creeks, under cover of which the boats and barges may ply.

Those spots upon the banks of a river are best calculated for this enterprise, where the stream forms a reentrant angle; because it is more easy, in cases of that sort, to plant your batteries in such a manner as to afford a cross fire against the opposite bank. The instant you have dislodged the enemy, by means of a superior force of artillery (which you must always provide for the purpose in question) a strong detachment composed of grenadiers, and other chosen troops, must cross in boats or barges, in order to stand the first shock of the enemy, under a well supported fire of artillery.

When this detachment has made good its footing, the boats or barges must instantly row back for fresh troops, whilst the pioneers, artificers, and workmen, who accompanied the grenadiers, throw up temporary redoubts, and are protected by the fire of the troops that have landed. As soon as the works are sufficiently advanced, and an adequate number of men has been distributed in them to secure the post, the bridge must be undertaken. Its head or tête must be made as strong as possible, to keep the enemy in check, should he return and endeavour to dislodge the advanced guard.

The main body must be put in motion shortly after the departure of the first detachment, in order to support the latter, should the enemy succeed in making a bold push to defeat it, and thereby prevent the numberless disadvantages which must ensue, if the army were

were permitted to cross the river, or to pass the defile without opposition.

When the passage of a large river can be happily effected by means of a bridge, considerable advantages may be derived from it; most especially when the army is thereby enabled to reach a defile or pass, the possession of which enables a general to distribute his troops in desultory quarters. Marshal Turenne, in his famous passage over the Wesel in 1672, has afforded us a strong instance of this advantage. Marshal Saxe has written largely upon this important operation; and every general officer ought to be thoroughly versed in the ways and means of executing it under all the varying circumstances that occur in the locality of ground, the peculiar nature of rivers, and the possible resources of an enemy, that is determined to dispute his passage.

Soldiers should be frequently practised in the different evolutions which are required to pass a bridge in a safe and military manner. Bridges; defiles, &c. being obstacles that retard the movements of an army, whose object is to advance, we refer our readers for a full elucidation of the subject, to the extracts that have been made from the Rules and Regulations under the article OBSTACLE.

**PASSAGE, Fr.** a term which relates to the reception of a knight, in the Order of Malta.

**PASSAGE** of bridges or defiles when a battalion or line stands on narrow ground.

A battalion, standing in narrow ground, may sometimes be ordered to march in file for the purpose of forming open column, and passing a defile, either before or behind that flank, before or behind the other flank, or before or behind any central point of that line.

*According to Regulations, Sect. 96.*

1. *If before the right flank*—The right platoon will move on, the rest of the battalion will face to the right, and march in file, the divisions will successively front and follow the leading one, and each other.

2. *If behind the right flank*—The whole face to the right and march, the right division instantly countermarches to the rear, fronts, and moves forward, followed in the same manner by every

other division, till the whole is in column.

*Different from the Regulations.*

We humbly conceive the following method of passing in open column, would save a great deal of time which is unnecessarily lost by countermarching each division separately, as they successively arrive on the ground where the right division stood before it marched off to the rear.

1st. Countermarch the whole of the divisions at the same time, and on the same ground which they severally occupy in the line.

2d. Face the whole (except the right division) to the left, which moves forward on the word *march* from the chief. The divisions as they successively arrive on the ground from which the first division marched, will halt, and *front*, follow the leading one and each other, till the whole are in column.

*According to Regulations.*

3. *If before any central point, or the left flank*—The battalion makes a successive countermarch from the right flank towards the left, and when the right division arrives at the point from whence it is to advance, it again countermarches to its right, a space equal to its front, then faces and moves on, and is thus successively followed by part of the battalion. The other part of the battalion beyond the point of advancing, faces inwards, when necessary, makes a progressive march in file, then fronts, and follows by divisions as it comes to the turn of each, till the whole are in column.

*Different from the Regulations.*

Instead of passing according to the above method, much time may be gained, by the divisions on the right of the defile facing to the left, (commencing with the right division) march in file till opposite, and in full front of the division which is opposite the defile, or where the column is to advance from, then front, march forward, followed by the other divisions; the divisions on the left of the defile will face inwards, and when necessary, make a progressive march in file, followed as before, till the whole are in column.

*According to the Regulations.*

4. *If behind the center or left flank*, The right part of the battalion countermarches

*marches* from the right by files successively by the rear; and the other part of the battalion, as is necessary, makes a progressive march by files from its right to the central point, and there begins to countermarch: at that point the leading, and each other division, fronts into column, and moves on.

*Different from the Regulations.*

To avoid loss of time in countermarching the divisions on the left as they successively arrive at the point they march from. You must countermarch those divisions first on the ground they severally stand on, then face to the left; and when it comes to their turn march in file, front, and follow in column, as they progressively and successively arrive opposite the point where the right division entered the defile.

It must be observed, that in all *countermarches* of divisions on the ground they severally stand on, when passing to the rear, the division which stands opposite the point from which they are to march, must *countermarch* at the same time with the other divisions.

**PASSAGE** of lines. In narrow grounds, where there are redoubled lines, and in many other situations, it becomes necessary for one battalion to *pass* directly through another, in marching either to front or rear. This must particularly happen, when a first line, which has suffered in action, retires through, and makes place for a second line which has come forward to support it; or, the second line remaining posted, when the first falls back, and retires through it, and thus alternately till a safe position is attained. • For the manner in which the passage of lines is effected according to system, see Rules and Regulations, page 337, Part IV.

**PASSAGE** of the traverse, an opening out in the parapet of the covert-way, close to the traverses, that there may be a ready communication with all parts of the covert-way.

**PASSAGE**, in the *mauége*, an action wherein the horse raises a hind and a fore leg together; then setting these two on the ground, he raises the other two; and thus alternately, never gaining above a foot of ground at a time.

**PASSAGER**, *Fr.* to passage, a term used in the *mauége*.

**PASSAGER** *un cheval*, *Fr.* to make a horse passage. It is likewise used as a

neutral verb, viz. *un cheval passage*, a horse passages.

**PASSANDEAU**, *Fr.* an ancient piece of ordnance, which carried an eight pound ball, and weighed three thousand five hundred pounds.

**Chemin PASSANT**, *Fr.* a thoroughfare.

**PASSAVANT**, *Fr.* a pass. This term is not used in a military sense, but relates chiefly to commercial matters.

**PASSE**, *Fr.* See Pass.

**PASSES-Balles**, *Fr.* boards or machines made of iron or brass, used in disparting cannon, and fitted to every species of calibre.

**PASSE-Mur**, *Fr.* this is the same as *coulervine*, and signifies a piece of artillery which is longer than common ordnance. There was a remarkable one at Nancy, which was upwards of 22 French feet in length, and carried an 18-pound shot. The *passee-mur* or *coulervine*, has been laid aside some time, because it was found not to carry so far as ordinary cannon. The one above-mentioned is still to be seen at Dunkirk.

**PASSE-Vogue**, *Fr.* any extraordinary effort that is made in rowing, is so called.

**PASSE-par-tout**, *Fr.* a large saw, the teeth of which are irregularly made for the purpose of cutting forest trees asunder.

**PASSE par-tout**, *Fr.* a master key.

**PASSE-Parole**, *Fr.* this expression is used among the French in an absolute sense, and signifies to give the parole, order, or countersign. When troops are on service, or upon duty, they have frequent occasion to adopt it, especially during the rounds. *Avance, passee-parole*. Advance, and give the parole or countersign.

**PASSE-Volant**, *Fr.* any man that is not really in the service, and who stands to be mustered for the purpose of completing the supposed number of effectives in a regiment, or on board a ship of war. They are likewise called *soldats prêtés*, borrowed soldiers. During the existence of the old French government, the strictest regulations were made to prevent the gross impositions that were sometimes practised by means of *pusse-volans* or faggots.

**PASSE-Volant** is also called *faux soldat*.

**PASSE-Volans**, likewise mean those wooden pieces of ordnance which are made to resemble real artillery, and fill up the vacant places in a ship. These were first adopted by the French, in consequence of a regulation which was made by M. de Fouchartrain, when he became minister of the marine department. He gave orders that no vessels, except such as carried 16 guns, should sail to and from America. In order to comply, at least in outward appearance, with this regulation, the merchants had recourse to *pass-volans*, or wooden substitutes. More advantages than one are indeed derived from this invention, which has been adopted in every civilised country.

**PASSE-chevaux**, Fr. ferry for horses.

**PASSER**, Fr. to pass. This word has various significations both in French and English, but chiefly in the former language.

**PASSER en revue**, Fr. to muster.

**PASSER à compte**, Fr. to allow in reckoning.

**PASSER au fil de l'épée**, Fr. to put to the sword; to kill man, woman and child.

**PASSER par les baguettes**, Fr. to run the gauntlet.

**PASSER à la revue**, Fr. to pass muster; or to be eligible as a recruit or soldier. The French also say, *passer à la montre*.

**PASSER par les armes**, Fr. to be shot at the head or in front of a regiment drawn up in battle array.

**PASSER par les verges ou par les baguettes**, Fr. to be flogged or whipped up and down two ranks of soldiers faced inwards; each soldier having his musquet grounded, and giving the culprit a lash upon his naked shoulders as he passes.

**PASSER à la montre**, Fr. to pass muster.

**PASSER par la main du bourreau**, Fr. to be flogged, or otherwise punished, by the public hangman.

**PASSER la rivière, passer la ligne**, Fr. to cross the river, to cross the line.

**PASSER par les courroies**, Fr. to be picketted.

**PASSER un homme à un officier**, Fr. to allow an officer the pay and subsistence of a private soldier for the maintenance of a servant. The term is also used to express the receipt of any public allowance for sinecure places.

**PASSER sur le ventre à une armée**, Fr. to defeat an army; to overthrow it.

**PASSEUR**, Fr. a ferryman.

**PATACHE**, Fr. this word sometimes means an advice-boat; but it more generally signifies an armed tender, or a revenue cutter.

**PATAUGER**, Fr. this word literally means to walk in muddy water. An army is said to do so, when its route is through hollow swamps and marshy grounds.

**PATE**, Fr. in fortification, a sort of horse-shoe, that is, a platform, or terre-pleine, irregularly built, yet generally constructed in an oval form. It is surrounded by a parapet, without anything to flank it, and having no other defence than what is front or fore-right. *Pates* are usually erected in marshy grounds to cover the gate of a fortified town or place.

**PATE de grenades**, Fr. an earthen pot filled with gun-powder, and grenades with iron spikes upon them.

**PATERERO**, a small cannon managed by a swivel.

**PATIENCE**, the power or faculty of suffering; endurance; the power of expecting long, without rage or discontent; the power of supporting faults or injuries without revenge; long suffering. In military life patience is an essential requisite. Without patience half the toils of war would be insupportable; with patience there are scarcely any hardships but what coolness, courage, and ability may overcome. It is one of the greatest virtues, indeed, in an officer or soldier patiently to support, not only the rigour of discipline, but the keen and vexatious circumstances of disappointment. Rousseau says, *la patience est amère, mais son fruit est doux*.—Patience is a bitter root, but its fruit is sweet.

**PATOMAT**, Ind. a two mast vessel: each mast carries one sail of four unequal sides. It likewise means a messenger.

**PATRICIAN**, from the Latin *Patricius*, one descended from a noble family. The term was used among the Romans, to distinguish the higher class of the inhabitants of Rome, from the lower, who were called plebeians. Romulus, as soon as the city of Rome was tolerably well filled with inhabitants, made

made a distinction of the people according to honour and quality; giving the better sort the name of *patres* or *patricii*, and the rest the common title of *plebei*. See Kennett's *Roman Antiquities*, pages 97, 98, &c.

**Order of St. PATRICK.** There is only one order of knighthood which belongs to Ireland; it is that of St. Patrick, and was created by his present majesty King George III.

**PATRIOT**, a sincere and unbiassed friend to his country; an advocate for general civilization, uniting, in his conduct through life, moral rectitude with political integrity. Such a character is seldom found in any country; but the specious appearance of it is to be seen every where; most especially in Europe. It is difficult to say how far the term can be used in a military sense, although it is not uncommon to read of a *citizen soldier*, and a *patriot soldier*. Individually considered, the term may be just, but it is hardly to be understood collectively. A celebrated English writer has left a treatise, intitled, the *Patriot King*; by which he means the first magistrate of a country who acts up to the genuine principles of its constitution.— It is devoutly to be wished, (human nature being so constituted as to require coercion) that the application of military force could always be in the hands of a patriot king, who is the first soldier in the land, and would of course be entitled to the appellation of a *patriot soldier*. The convulsed state of Europe is such, that no country can do without soldiers. When they are employed to defend, or protect their native land, they may be truly called *patriot soldiers*, whether of the regular militia, or volunteer establishment.

**PATRIOTISM**, (*patriotisme*, Fr.) a French writer observes, that patriotism is a virtue which many men affect to possess, without having one single attribute that forms its character. Real patriotism confines the whole of its views through life, whether civil or military, to glorious and good actions, but it never descends to cruelty or injustice.

**PATROL**, any party or round of soldiers, to the number of five or six, with a serjeant to command them.— These men are detached from the main guard, picquet, or quarter-guard, according to circumstances, to walk round the

streets of a garrison town, &c. for the purpose of taking up disorderly persons, or such as cannot give an account of themselves. It is their duty to see, that the soldiers and inhabitants of the place repair to their quarters and dwelling-houses, (in conformity to specific directions which are given out to that effect) and that alehouses and suttler's booths are shut up at a seasonable hour. They are likewise to take up every person they meet without a light, and that cannot give the watchword or countersign when he is challenged. All such persons must be conducted to the guard-house, and a report be made of them to the commandant or governor of the place, by the town-major.

**PATROIS** are formed out of the infantry as well as the cavalry. When a weak place is besieged, and there is reason to apprehend an assault, strong patroles are ordered to do duty; those on foot keep a good look out from the ramparts, and those that are mounted take care of the outworks.

**PATRON**, one who countenances, supports, or protects. Every superior officer, from the commander in chief to the lowest non-commissioned officer, may, in a military sense, be called a patron; for it is the duty of all persons in authority, to countenance, support, and protect every executive member in the service. Partialities, on the other hand, (whatever may be their sources) are the bane of order and good discipline. In proportion as merit finds patrons among the good and great, indolence and inability should be discountenanced and degraded.

Kennett, in his *Roman Antiquities*, page 97, has the following passage, on the origin of the word:—

Romulus, as soon as his city was tolerably well filled with inhabitants, made a distinction of the people according to honour and quality; giving the better sort the name of *patres* or *patricii*, and the rest the common title of *plebei*.— To bind the two degrees more firmly together, he recommended to the patricians some of the plebeians, to protect and countenance; the former being stiled *patroni*, and the latter *clientes*.— The patrons were always their clients' counsellors in difficult cases; their advocates in judgments; in short, their advisers and overseers in all affairs what-

ever. On the other side, the clients faithfully served their patrons, not only paying them all imaginable respect and deference, but if occasion required, assisting them with money towards the defraying of any extraordinary charges. But afterwards, when the state grew rich and great, though all other good offices continued between them, yet it was thought a dishonourable thing for the better sort to take any money of their inferiors. (*Vide Dionys. lib. 2, Liv. lib. 1. Plutarch in Romulo.*) Hence the origin of patrons. But the case is altered in modern times with respect to pecuniary interest. Gold, or something more solid in the sale of liberty and good sense, buys a patron now.

**PATRON**, *Fr.* among the French, the captain of a trading vessel is so named. There were likewise sea-faring men called *officiers maritimes*, who served on board the French ships of war, and who were entrusted with the management of sloops and barges. These were generally called patrons.

**PATRONS**, (*galère patrons, Fr.*) the galley which was second in rank at Marseilles, was so called. It was commanded by the lieutenant-general of the galleys, who took precedence in that line, in the same manner that the vice-admiral of the French fleet did, among ships of war.

**PATROUILLE**. See **PATROL**.

**PATROUILLEURS des deux côtés**, *Fr.* flankers, or *patroles* detached on each side of a column, battalion, &c. to prevent surprises.

**PATTE**, *Fr.* a term used in mining. When a well or excavation is made in loose or crumbling earth, and it becomes necessary to frame it in, the rafters must be laid horizontally to support the boards in proportion as the workmen gain depth. The ends of the rafters that are first laid, run ten or twelve inches beyond the borders of the well, for the purpose of sustaining the platform.—These supports are called *oreilles*; consequently, that every subsequent frame may be supported, the second is attached or made firm to the first, by means of the ends of boards which are nailed together. In this manner the third is joined to the second, and the fourth to the third. These ends are called *pattes* or handles.

**PATTE d'Oie**, *Fr.* a term used in mining to describe three small branches which are practised, or run out, at the extremity of a gallery. They are so called from their resemblance to the foot of a goose.

**PATTERN**, (*echantillon, Fr.*) a part shewn as a sample for the rest. In a late regulation relative to the inspection of the clothing of the British army in general, it is particularly directed, that the regular inspectors, or the inspectors for the time being, do view and compare with the sealed patterns the clothing of the several regiments of cavalry and infantry, as soon as the same shall have been prepared by the respective clothiers; and if the clothing appear to be conformable to the sealed patterns, the said inspectors are to grant two certificates of their view and approval thereof, one of which certificates is to be delivered to the clothier, to be sent with the clothing to the head quarters of the corps; and the other to be lodged with the clothing board, as the necessary voucher for passing the assignment of the allowance for the said clothing.

A **PATTERN Regiment**, a phrase of distinction, which is applied to a corps of officers and soldiers, who are remarkable for their observance of good order and discipline.

**PATURE**, *Fr.* See **FORAGE**.

**PATUREUR**, *Fr.* forager, one who goes on a foraging party.

**PATUREURS**, *Fr.* men who take their horses to grass, or go for green forage.

**PAU**, *Fr.* When the Mogul-Tartars conquered the northern part of China, in the year 1232, they are said to have invariably used at the several sieges, a battering or propellent machine of this name. There were two sorts: one served to throw large stones, and was called *ché-pau*, or *stone-pau*; and the other *ho-pau*, or *fire-pau*. Father Gaubil, the jesuit and missionary in China, seems at a loss to determine whether these *pau*s were real pieces of ordnance, similar to those used in Europe, or merely stone-mortars: yet he appears satisfied, that the Chinese knew the use of gunpowder 1300 years before it was discovered in Europe. They had at first pieces of hollow wood in the shape of cannon, out of which they

## P A V

shot stones. Father Gaulal says, "I have read in several authors, that the Chinese made use of gunpowder from time immemorial, and as the faculty of invention has never been called in question with respect to the Chinese, it is not improbable, that the Europeans should have taken advantage of their discovery, and acted upon it."

PAVALUNGE, *Ind.* the name of a year.

PAUDSHAU, *Ind.* king.

PAVECHEUR, or PAVESIER, *Fr.* an old militia which was formerly so called, from the men who composed it being armed with *parois*, or large shields.

PAVESADE, *Fr.* a sort of sail-cloth or tarpauling, which is hung round a galley during action, in order to intercept the view of the enemy.

PAVESADES, *Fr.* large portable hurdles, behind which the archers and bowmen were formerly posted. According to Froissart, these hurdles were used long before the reign of Philip Augustus, king of France. Father Daniel, the jesuit, in his *Histoire de la Milice Francoise*, describes them as bearing the figure of a shield; but the chevalier Follard, in his *Commentaire sur Polybe*, informs us, that they were mantlets which were disposed in parallel or oblique lines, from the camp to the nearest works belonging to the *corps de place*; behind which the soldiers and officers, &c. could, in safety, make a small fosse or ditch that was sufficiently deep to preserve them straight and firm. Hurdles constructed in this manner, were used during the operations of a regular siege; but when it was found expedient to assault a place, those of less dimension were adopted. Father Daniel describes the *retranchement portatif*, which was used many centuries before the days of Philip Augustus, under the latter head.

PAVILION, in military affairs. See TENT.

PAVILION, *Fr.* pavilion, tent, &c. It also signifies that particular quarter in a barrack which is occupied by the officers.

PAVILLON, *Fr.* flag, standard, or colours.

*Baisser le PAVILLON*, *Fr.* to strike, to yield; to lower the colours, as the ships of all nations are accustomed to do when they meet a British man of war: and as our most inveterate foe

## P A U

must do, when she comes in contact with a British broadside.

*Paisseau PAVILLON*, *Fr.* flag-ship.

PAVILLON, *Fr.* this word likewise signifies the swell or broad part of a speaking trumpet.

PAULLETTE, *Fr.* a certain tax or pecuniary consideration, which all persons, who held public situations under the old government of France, were obliged to pay at the commencement of every year, to the king. This enabled them to sell or dispose of their appointments, and to leave the amount to their heirs, if they happened to die in the course of the year. It is so called from *Parlet*, the name of the person who first suggested the measure.

PAVOIS, *Fr.* an ancient weapon of defence. It was the Cypcus or broad shield of the Greeks and Romans.

PAUSE, a stop, cessation, or intermission. It is essentially necessary for all officers to accustom themselves to a most minute observance of the several pauses which are prescribed during the firings. According to the Regulations, the pause betwixt each of the firing words, *make ready*, *present*, *fire*, is the same as the ordinary time, viz. the 75th part of a minute, and no other pause is to be made betwixt the words.

In firing *companies by wings*, each wing carries on its fire independent, without regard to the other wing, whether it fires from the center to the flanks, or from the flanks to the center. If there are five companies in the wing, two *pauses* will be made betwixt the fire of each, and the *make ready* of the succeeding one. If there are four companies in the wing, three *pauses* will be made betwixt the fire of each, and the *make ready* of the succeeding one. This will allow sufficient time for the first company to have again loaded and shouldered, at the time the last company fires, and will establish proper intervals betwixt each.

In firing by grand divisions, three *pauses* will be made betwixt the fire of each division, and the *make ready* of the succeeding one.

In firing by wings, one wing will make ready the instant the other is shouldering. The commanding officer of the battalion fires the wings.

In firing companies by files, each company fires independent. When the right file

file presents, the next makes ready, and so on. After the first fire, each man as he loads comes to the receiver, and the file again fires without waiting for any other; the rear rank men are to have their eyes on their front rank men, and be guided by, and present with them—See page 267.

When troops march to music, a *pause* in the mind before the latter strikes off, will contribute greatly to that uniformity of step, without which no line can move correctly. In some regiments the music does not play until one step has been taken.—See *STILL off*.

PAY, or *pay of the army*, is the stipend or salary allowed for each individual serving in the army: first established by government in the year 1660.

PAY of the British Officers. Although much has been written, of late, on this important branch of the public service, nothing materially new has appeared since the publication of a pamphlet in 1775, entitled, *Observations on the Prevalent Abuses in the British Army*. They are supposed to have flowed from the pen of an eloquent lawyer, who was then in the army, and whose private virtues, as well as public talents, have since raised him in the estimation of every well-wisher to the constitution and liberties of Great Britain. We lament that the limits of our undertaking should be too much circumscribed, to admit all the sensible and appropriate observations which appear in the pages of this well-written pamphlet. The following passage relates to Pay only.

“PAY of the British Officers. An English officer, in the opinion of the multitude, bears the same proportion to a gentleman, as a poor knight of Windsor does to a companion of the Order of the Garter.

“The situation of an officer, whose services have not been rewarded by promotion, is truly deplorable. Overthrown behind in his circumstances, by unavoidable expences, incompatible with his finances, and his income at the same time so small, that the most rigid self-denial cannot allot a part for accumulation, his misery is irrevocable, and the most slight misfortune or imprudence, his ruin: he must either shut himself up from happiness and society,

or involve himself deeper; he must either fret away his time in the hectic of sensibility, or pine in the gloom of despondence. If, by uncommon circumspection, he avoids this Scylla and Charybdis of poverty, he may exist, but he cannot be said to live: no recreation, in the walk of a gentleman, is within his compass: in the mean time, youth and infirmities creep on apace, with the dragging retrospect of a youth spent without pleasure, and without profit, and the dismal prospect of an old age of want and obscurity.

“I appeal to all officers who have no private property, and who, consequently, have not been promoted, whether or not I have drawn a faithful portrait of the profession.”

In another place he says, pages 18, 19, 20, with much feeling and dignified pride, “Men who have virtue and talents for executing work which is put into them, he is to have not always fertile and progressive inventions, but treat every thing as impossible and chimerical which presents any glaring difficulties; and the world would stand still, and every species of improvement be at an end, if nature did not provide another set of men, of irritable and restless dispositions, fretful under grievances, and ambitious of being the instruments of public advantage. It is this disposition, and perhaps this ambition, which lead me to address myself to the officers of the British army; to demonstrate to them how shamefully, from the present miserable establishment of their pay, and other glaring abuses, they are cut off from their share in the prosperities of Great Britain;—to shew to them, how far this insulting misfortune is owing to their absurd neglect of their own advantages, and to endeavour to rouse them to a spirited, yet constitutional demand, of the just rights of her most useful and laborious citizens. At first view, this may appear to be a dangerous subject, and highly incompatible with the arbitrary principles of military government. What is termed remuneration in a citizen, is supposed to be mutiny in a soldier; but mutiny I apprehend to be confined to the breach of discipline and subordination in an inferior, towards a superior in military command. Soldiers do not give up

their general rights as members of a free community; they are amenable to civil and municipal laws, as well as to their own martial code; and are, therefore, entitled to all the privileges with which a free form of government invests every individual; and, it is to their virtue that all the other parts of the community must ultimately trust for the enjoyment of their peaceable privileges. For, as Mr. Pitt (*the late Lord Chatham, and father to the present minister*) in his strong figurative eloquence expressed himself in parliament: "To the virtue of the army we have hitherto trusted; to that virtue, small as the army is, we must still trust; and without that virtue, the lords, the commons, and people of England, may intrench themselves behind parchment up to the teeth, but the sword will find a passage to the vitals of the constitution."

"There is nothing really dangerous in this seemingly alarming truth. The people of England have been often imposed upon by dark and designing men, to regard the army with a jealous and malignant eye, as the sure tool of arbitrary power, and the foe of liberty. The faults of individuals have been unthinkingly charged on the whole body, and the execution of civil justice too often requiring military force (the most hateful and reluctant duty of an English soldier), has sown the seeds of discord and suspicion between two branches of the community, equally necessary and respectable; between the law and its protectors, between the people and their brethren and defenders. But notwithstanding this jealousy, so much to be lamented, there is nothing reasonably to be feared from a standing army of double the number of the present. The army is, I believe, as zealous for the real prosperity and freedom of Great Britain, as any other collective body in the nation; it is by her own corrupt representatives, that the axe has been laid to the root of her liberties."

"The great and principal reason why the deaf ear has still been presented to the petitions of the army, is, because no disagreeable consequences have resulted from the neglect of them. Parliament sees, equally with ourselves, the

justice and urgency of our expectations; the legislators of Great Britain know very well, that the officers in the army cannot support that appearance which is expected from gentlemen, and that the whole establishment of the pay is mean and scandalous; but we have never proved to them, that it is requisite in policy to redress grievances; we have trusted alone to the force of truth and justice, which seldom have pleaded successfully in any public assembly of men, unless necessity and interest supported them; and so far are these from being our advocates in the present case, that our own folly turns them as arguments and weapons against us.

"When inflation thus prevails over common sense, and the vanity of youth is sowing thorns for the pillow of age; when the glitter of a brass gorget effaces even the solid lustre of gold; and the sash, that too just emblem of an empty purse, is preferred to the scarf or toga; is it wonderful that parliament should not redress the grievances of the army?"

"A member of the H— of C— can no more live without a place or pension, than a peeress without a macaroon, or a chambermaid without her perquisites. The trades observe this, and raise the prices of their commodities; the money-dealers lower the interest of their funds; the manufacturers double the wages of their labour; the husbandman refuses to plough the land, and the mariner the sea; till the farmer and the merchant keep up the proportion between the value of money and the necessities of life. The soldier alone, with hollow eye and haggard cheek, smiles contented on his scarlet, hated by the populace, as the supposed tool of despotism, yet neglected by government as the voluntary and unworthy slave.

"The crown, indeed, very wisely avails itself of the spirit, or rather folly, of the times; and as a nurse, with a bad breast, hushes a starving infant with a rattle, it rings all the changes on buckram and buttons, and buttons and buckram, to please the warriors of Blackheath and Wimbledon, and to spread wider the contagion of the scarlet fever, which is nearly synonymous with the *gaol distemper*.

"Butcher's meat and bread are, at present

present, four times the prices they were when the pay was first established, and every absolute necessary of life in the same proportion; from the decrease of the value of money, the extensive commerce and riches of the kingdom, and the great taxes which have since been laid on every article of universal consumption. A shilling and eighteen pence per day (our author speaks of 1775) is now the common rate of labour: mechanics, and journeymen-tradesmen of all denominations, exact at least two shillings and half-a-crown from their employers; and so inadequate are these additional prices to the expenses of living, that population decreases, and the kingdom is enervated by continual and alarming emigrations. As luxury stalks on with more progressive strides, the wants of mankind are multiplied; they, in consequence, refuse their labour till these new wants are supplied; well knowing, that the different necessities and luxuries of life, to which their labour is directed, cannot stand still, but must wait on their nod: this change is not prejudicial to their employers, who charge it, with interest, on manufactures and commodities, which they sell reciprocally to each other, and to landholders; which last, to supply the deficiencies and the calls of new luxuries, raise their farms, and put them into the hands of opulent monopolizers: these, uniformly attached to their own interests, make up, in their turns, for the extraordinary rents, and the increased expence of cultivation and utensils, by raising the corn to exorbitant prices; which, when the poor are unable to purchase, they transport to foreign countries, notwithstanding the constant laws which pass to prevent them.

"In this active and mutable scene, in this fermentation of commerce, amidst the innumerable inventions and chicaneries of men, to evade poverty, and to acquire riches, whilst the natural progress of society is fabricating continual changes, and these changes have obliged men, of all denominations, to fall into new channels of operation; in this long chain of human necessities, which have increased and fattened on each other, still rising, but rising in

equable proportions (as a tune is still the same, though played on a higher key), what must be the lot of one link which sticks fast in so rapid a wheel? Like a ship which is aground in a tempest, it must be speedily destroyed. To say that this is unfortunately the case of the British army, is not to have discovered a wonderful enigma; it is indeed the stranded and dismasted hulk; who, while the fleet around, with the use of sails and rudders, fight safely against the tumultuous conflict, is dashed against the rocks into ten thousand pieces. Page 25.

"It is only upon the useful and valuable part of the army that all its grievances fall. To the stripling of the peaceable parade, it is the limbo of vanity; to the veteran of the field, it is a path sown with thorns. The gay young ensign, with support and interest, is like a vessel in port, sleeping on the peaceful bosom of the waters, and flaunting with her streamers: the old and neglected officer is the dismasted hulk, driving with the blast, and fighting with the billows." Page 31.

In page 67 we find the following passage, which forms a part of a proposed petition to the House of Commons, and which is couched, not only in terms the most respectful, but is also dictated by that strong attachment to constitutional rights; for the support of which the supposed author has, on many occasions, displayed so much eloquence.

"The great riches, which, through the extension of commerce and conquest, have flowed in upon Great Britain from so many sources, the consequential decrease of the value of money, the progress of luxury, with many other co-operating causes, have so entirely changed the system of things since the first establishment of the pay: the prices of all the absolute necessities of life have augmented in so prodigious a ratio; so many new wants have arisen, by custom confirmed into necessities, that what was originally granted by the nation, as a proper independence to support the dignity of the army, is now absolutely incompatible with the fulfilment of such intention, in all the military degrees under a regiment; and is, in the subaltern ranks, altogether inadequate to the single article of subsistence,

sistence, independent of the many expences unavoidably incurred, in compliance with the regulations of military parade, without which an army cannot exist.

"The truth of these circumstances is of such public notoriety, that we think it unnecessary to enlarge upon them, more especially before this august assembly, where every individual must be perfectly acquainted with points, which so nearly concern the public welfare.

"We cannot help seeing, with chagrin and mortification, that the salaries of all the servants of the nation in civil trusts; the emoluments of every species of public business have, in some measure, kept pace with the changes of the times (the army alone excepted); and that, in consequence of such distribution, there is no equitable proportion observed between civil and military trusts of equivalent importance to the state; vast sums being annually appropriated to the support of the holders of the former, in all the luxuries of life, while the latter are suffering all the rigours of necessity and poverty.

He then concludes, in the true tenour and constitutional meaning of a well-grounded application:—"It is the absolute sting of necessity, and not any mutinous or ill-gal spirit, which dictates this plain and pointed memorial. We are deeply impressed with the sense of the sacred ties which link men together under the authority of the laws; and we pray, that the unfettered language of truth may not be mistaken for the gauntlet of defiance, which we never can throw down but to the enemies of our country."

*Full Pay.* The pecuniary allowance which is made to officers and non-commissioned officers, without any deduction whatsoever. Since the abolition of arrears, which took place in 1797, commissioned and warrant officers, &c. (those belonging to the guards excepted) receive their full pay, or daily subsistence. The private soldiers are subject to temporary deductions, for the purpose of appropriating part of their pay and allowances to the expence of their messes, including vegetables, &c. and to a stoppage, not exceeding 1s. 6d. per week, for necessaries; which stoppage

is to be accounted for monthly, as stated in the Regulations of 1st September, 1795, and the remainder being 1s. 6d. must be paid weekly to each soldier, subject to the accustomed deduction for washing, and for articles to clean his clothing and appointments.

The full pay of the British army is given in advance on the 25th of every month, and accounted for to government by the several district and regimental paymasters, through army agents appointed for that purpose.—Non-commissioned officers and private soldiers, serving as marines, are not liable to any deduction whatsoever from their full pay, on account of provisions.—See Warrant, dated 6th of February, 1799. It will be further observed, that although the army is now paid its full pay, in consequence of the abolition of the distinction between subsistence and arrears, that pay is nevertheless subject to the usual deductions on account of poundage, hospital, and accy.—See Warrant, dated 25th of January, 1798. This will explain the mutilated appearance of the different rates of pay. Thus, a captain of infantry, who is nominally supposed to receive 10s. per diem, gets only 9s. 5d. the 7d. going for the above deductions. The full pay of the subaltern officers has been very judiciously increased, but that of the captains, &c. remains as it was in the reign of Queen Anne.—For the several rates of full pay, &c. see *Military Finance*.

*PAY (solde, Fr.)* Troops were not paid among the Romans till 340 years after the foundation of Rome. Antecedent to that period, each soldier found his own clothes and subsistence, which was done without much inconvenience or expence, because no wars were entered into that rendered it necessary to march armies to any distance from the capital. But when Rome extended her conquests beyond the boundaries of Italy, it then became expedient and unavoidable to pay those men that went upon foreign service. The pay was, at first, very small, and gradually increased with the increase of Roman Empire. It would be superfluous to enter into any detail on this head; it may be barely necessary to state, that the pay and subsistence of troops should be so settled as  
always

always to afford the soldier sufficient to be comfortable. The Romans made it a rule, as we do in our service, to provide food, clothes, fire-arms, and tents, for their troops; as also corn for the cavalry; and reasonable deductions were made for that purpose. See *PAY of the British Army*.

*PAY of the army in India.* The payments are made at Bengal, in Sonant rupees at 2s. 6d. Madras, in pagodas at 8s. Bombay rupees at 2s. 6d.

[N. B. 30 cash = 1 fanam; 40 fanams = 1 pagoda.] For further particulars see *Arrangement for the Army in India*, published by Stockdale in 1796.

*Half-PAY, (demi-solde, demi-paye, Fr.)* a compensation or retaining fee which is given to officers who have retired from the service through age, inability, &c. or who have been placed upon that list in consequence of a general reduction of the forces, or a partial drafting. &c. of the particular corps to which they belonged. The half pay becomes due on the 25th of June, and on the 25th of December in each year, but it is seldom issued until three months after the expiration of each of those periods. The only public deduction from the half pay is the poundage, two and an half per cent.—See *Military Finance*.

*Irish Half-PAY.* Every officer upon the Irish establishment, when reduced to half-pay, must swear to, and sign the following certificate:—

County of { \_\_\_\_\_ of foot, came  
 { this day before me, and  
 made oath, that he is no otherwise provided for by any commission or employment, civil or military, in his majesty's service, than by half pay on the establishment of Ireland, and is on no other establishment of half pay.

Officer's { Sworn before me this  
 Name. { Day of

N. B. To be sworn in January, April, July, and October, in every year.

*Vacant-PAY.* When an officer sells out of the British Army, and takes what are called commissions in succession as part of the purchase money, he becomes entitled to pay and interest on the same for six months, or until they have been disposed of, within that period. This pay or allowance is called *vacant pay*; and it is necessary for the

person who holds such commissions, to write a letter to the agent of the regiment, directing him to apply to the secretary at war for the same. The form of this letter may be seen in the *Regimental Companion*.

N. B. The increase of the subaltern's subsistence by warrant, does not affect the vacant pay.

*PAY-MASTER, (tresorier, Fr.)* is he who is intrusted with the money, and has the charge of paying the regiment. He has no other commission in the line. His pay is 15s. per day.

When a person is recommended by the colonel of a regiment to be paymaster, the following form is necessary:—

A. B. situation in life,  
 2 sureties, and 4 referees.

*District PAY-MASTER*, an officer appointed for the better management of the interior concerns of the army, when the regiments, &c. are on home service.

*PAYMASTER-General of the forces.*

Right Hon. Henry Fox, (afterwards Lord Holland).

June 8th, 1765, Right Hon. Charles Townshend.

August 2d, 1766, Right Hon. Lord North, (afterwards Earl of Guildford), and George Cooke, Esq.

Dec. 3d, 1767, Right Hon. Thomas Townshend, vice Lord North.

June 5th, 1768, George Cooke, Esq. died.

June 11th, 1768, Right Hon. Richard Rigby.

March 30th, 1732, Right Hon. Edmund Burke.

July 27th, 1782, Right Hon. Isaac Barré.

April 8th, 1783, Right Hon. Edmund Burke.

Dec. 30th, 1783, Right Hon. W. Grenville (now Lord Grenville), to whom was added

March 27th, 1784, Lord Mulgrave.

August 15th, 1789, Marquis of Graham, (now Duke of Montrose), vice Mr. Grenville.

Feb. 20th, 1801, Thomas Steele, esq. Right Hon. George Canning, esq.

March 20th, 1801, Sylvester Douglas, Esq. now Lord Glenbervie.

1804, Hiley Addington.

Right Hon. George Rose, Right Hon. Lord Charles Somerset.

**PAYMASTER of Marines.** We have already mentioned under the article *Marine*, that there is one paymaster appointed to superintend the distribution of all monies which are issued for the corps of marines.

**Deputy PAYMASTER of Marines.** The deputy paymaster, at each division, is to pass his accounts with the paymaster at the end of every month, and to deliver a general account of all monies received and paid within that time, accompanied by vouchers, except in such instances where the nature of the disbursements will only allow of quarterly vouchers.

The deputy paymaster, at each of the divisions, is not to issue subsistence or arrears to commissioned officers (or their attornies) till they have received official information from the marine pay-office in London, that such officers (or their attornies) are duly entitled thereto.

The deputy paymaster, at such of the divisions, is to issue money to the first squad sergeant once every week, to pay subsistence and consolidated allowances to such non-commissioned officers and privates as may be at quarters, on his producing an account of money due to each company for the time, attested by the commanding officer, adjutant, and first squad sergeant, which will enable the deputy paymaster to transmit regularly, every week, to the marine pay-office in London, a list tied up according to form.

The deputy paymaster, or the person whom he shall appoint as his clerk, shall constantly attend the muster, which will enable him to transmit a correct monthly statement to the marine pay-office in London, of monies issued for subsistence and consolidated allowance to non-commissioned officers and privates.

The deputy paymaster, at each of the divisions, is to pay contingent, barrack, and infirmary expences incurred, on receiving the commanding officer's warrant for so doing, and must take receipts for the amount.

When marines are removed from one division to another, the deputy paymaster, at the place from whence they depart, is to send an attested list of each man's debt to the deputy paymaster at the head quarters to which they are ordered, who is to give him credit for the amount, and which will be allowed him

by the paymaster in London, on a correct copy of the debts being transmitted with the said deputy paymaster's monthly statements.

The deputy paymaster, at each of the divisions is to issue money to officers ordered from quarters to recruit (on receiving the commanding officer's warrant for so doing, and not otherwise) which sums will be allowed him by the paymaster in London, on the officer's receipt being transmitted with the deputy paymaster's monthly statement; and on their being recalled, an account of money paid them will be sent by the paymaster to the deputy paymaster of the division to which they belong, who will settle the same, and give the said recruiting officer credit for what may be due to him, sending back to the paymaster a re-stated account with a receipt for the credit; and where it appears the officer is indebted to the public, an acknowledgement of that debt must be signed by the officer.

All correspondence to, and from, the deputy paymasters is to be carried on through the marine pay-office in London; and any applications and representations relative to divisional business, if they appear of sufficient importance to the paymaster of marines, are to be forwarded to the secretary of the admiralty, accompanied with such observations as may, to the best of his judgment, tend to place the matter in a clear light.

*Army-PAY-OFFICE*, at Whitehall.

*Navy-PAY-OFFICE*, in Somerset-House.

**PAY-Bills.** These bills are distinguished according to the nature of the service for which they are given. Every captain of a troop or company receives a regular weekly account from his sergeant, of money to be advanced for the effectives of such troop or company; and on the 21th day in each month he makes out a monthly one for the paymaster, who makes out a general abstract for the agent. The paymaster-general's estimate is likewise called the pay-bill.

**PAY-Lists.** The monthly accounts, which are transmitted by the several regimental and district paymasters to their agents on the 25th of each month, are so termed.

**PAY-Rolls**, the same as **PAY-Lists**.

**PAY-Serjeant**.—See **SERGEANT**.

**PAYE**, *Fr.* the pay of the troops; the money which every captain of a troop or company receives, at the close of the month, for the non-commissioned officers and privates under his command;—we call it monthly distribution.

**PAYER-Gaut**, *Ind.* the lower pass. **Gaut** is the general term for pass.

**PAYS**, *Fr.* country, locality, ground.

**PAYS**, *Fr.* This word is variously applied by the French in a figurative sense: *Parler, ou juger, à vue de Pays*, to speak or decide at random.

**Gagner Pays**, (*vuider le pays*, *Fr.*) to leave a country; to go voluntarily into exile. *Gagner pays* likewise means to gain ground. *Avancer pays* may be used in the same sense.

*Battre-Pays*, *Fr.* to speak wide of the subject.

*Tirer-Pays*, *Fr.* a familiar phrase among the French, signifying to escape.

**Pays conquis**, *Fr.* This term was applied by the French to those countries and tracts of territory which had been ceded to France by treaty; as Lorraine: or had been conquered by force of arms; as Ypres, Tournay, Gand, Ostend, and several other towns, from the reign of Louis XIII.

**Pays-coupés**, *Fr.* confined, inclosed, or intersected countries. Marshal Saxe has observed, that it is impossible to lay down any specific rule relative to the management of troops in countries of this description. An intelligent and able officer will be governed by the nature of the ground in which he is to act; and as under these circumstances, the contest will consist chiefly of a war of posts, and of desultory engagements, (in which the most obstinate will be generally the most successful,) it will be incumbent upon every military man to recollect, that he must never advance, without having previously secured means for a retreat, and being constantly guarded on his flanks, to prevent the fatal consequences of surprise and ambuscade. Although the latter precautions are principally attended to by the general of an army, every partisan or officer commanding a detachment, should be more or less alive to the many mischiefs which must ensue from carelessness and inattention. It would be super-

fluous to point out what troops are best calculated to act in a close or intersected country. Every military man must know, that mountainous and close countries, or intersected lands, are best adapted to infantry manoeuvres, and that cavalry can only act, with safety and effect, in an open country. The solidity of this observation has probably been the cause of so much improvement in light artillery, and in rifle corps. The latter, indeed, by the use which has been made of their particular weapon, and the desultory execution of it on service, have sufficiently shewn, that no army ought to move without them.

**Pays-somme**, *Fr.* a low piece of land or ground; but which has, nevertheless, no water.

**PAYSANS**, *Fr.* peasants.

**PEACE** has been represented allegorically as a beautiful female, holding in her hand a wand or rod towards the earth, over a hideous serpent, and keeping her other hand over her face, as unwilling to behold strife or war. By some painters she has been represented holding in one hand an olive branch, and leading a lamb and a wolf yoked by their necks, in the other; others again have delineated her with an olive branch in her right hand, and a cornucopia, or horn of plenty, in her left.

A very celebrated temple was erected for the goddess of peace at Ronic, which was furnished with most of the rich vases and curiosities taken out of the temple of the Jews at Jerusalem. In this temple she was represented as a fine lady, endowed with a great deal of sweetness and good nature, crowned with laurel interwoven, holding a caduceus, or Mercury's snake staff, in one hand, and a nosegay of roses and ears of corn, in the other.

The temple of Peace, built by Vespasian, was 300 feet long, and 200 broad. Josephus says, that all the rarities which men travel through the world to see, were deposited in this temple.

**PEACE**, (*tranquillité*, *Fr.*) rest, silence, quietness; the direct opposite to war; and when the latter prevails, the ultimate object of every contest.

**PEACE establishment**, signifies the reduced number of effective men in the British army, according to the various for-

mations of corps. Thus one regiment may be 1200 strong in time of war, and only 600 in time of peace. Whence arises the distinction between *war* and *peace* establishments. The standing army of Great Britain, according to law, consists of that force only which is kept up in time of peace, and which is confined to a specific number of regiments. Every regiment, beyond the regulated number, during a war, is liable to be reduced; and all within it are said to be out of the break.

PEDEA, *Ind.* a foot soldier.

PEASANTS, persons who till the ground, and are otherways employed in agricultural occupations. Many advantages may be derived to an army by a proper attention being given to this class of men. They can, in general, afford excellent information respecting the situation, soil, and resources, of a country; and they make excellent guides, provided you can secure their fidelity by paying them well, and by taking proper hostages. Peasants are very useful in apprehending deserters, especially when an army is in the neighbourhood from which recruits may have been drawn.—They are likewise of the greatest utility in fatigue-duties; in the formation of lines, &c.

PECTORAL, (*Pectoral*, Fr.) a breast plate. This word is derived from the Latin, *Pectorale*. Among the Romans the poorer soldiers, who were rated under a thousand drachms, instead of the lorica or brigantine (a leathern coat of mail) wore a *pectorale*, or breast-plate of thin brass, about 12 fingers square. Some modern troops, such as the cuirassiers, &c. wear pectorals for the direct purposes of defence and bodily protection; but in general small ornamental plates with clasps, have been substituted.

To PECULATE, to rob the public.

PECULATION. (*péculat*, Fr.) the crime of pilfering any thing, either sacred or public, particularly public money, by a person who has the management or custody thereof. This crime is punishable in the heirs of the original delinquent. Under peculation may be considered not only the monies which are embezzled or misapplied by commissioned, non-commissioned, and warrant officers, but the public stores, pro-

visions, arms, and ammunition, &c. which may be sold for private emolument. The articles of war, are very specific on this head, (see Sect. XIII.) and the occasional examples which have been made by government, of a crime that cannot be too scrupulously watched, or too heavily punished, ought to deter individuals from sacrificing public integrity to private views. They ought to remember, that like the sword of Damocles, an exchequer writ hangs over the head of every man whose accounts have not been finally audited and passed, and that it may fall on the next generation, although he may escape himself, unless he or his descendants get their quietus in a bill of indemnity.

PECUNIA, money; a deity in the heathen mythology; and (though not a goddess personified among them) the most powerful ascendant the moderns know. The Romans held that she presided over riches, and that she had a son named *Argentinus*, whom they adored in the hopes of growing rich.

PECUNIA. The Roman officers and soldiers were accustomed to leave their pecuniary savings where the eagles were lodged, conceiving that spot to be the most secure, because it was held to be the most sacred among soldiers. From this conception Vegetius has drawn the following conclusion:—*Miles deinde qui sumpsit suos scit apud signa depositos, de descendo nil cogitat, magis diligit signa, pro illis in acie fortius dimicat.* The soldier, of course, who has lodged his property or savings with the standards, never thinks of deserting; but is, on the contrary, more attached to those standards, and fights for them in battle with increased strength and intrepidity. The standard-bearer had always the charge of these pecuniary deposits; but as this standard-bearer, to use the words of a French author, was not always proof against corruption, these sacred deposits sometimes shared the fate of other pledges which were equally sacred, or ought, at least, to be so. Modern agents and paymasters may learn, from this article, that if a soldier is honestly done by, his courage and fidelity will always equal, nay, frequently exceed, the duties of his profession.

**PECUNIUS**, a deity of the ancient Prussians, in honour of whom they kept a fire lighted with oak perpetually burning. A priest constantly attended, and if the fire happened to go out by his neglect, he was instantly put to death.—When it thundered, they imagined that their grand priest conversed with their god, and for that reason they fell prostrate on the earth, praying for seasonable weather.

**PEDERERO, PATTARERO**, a Portuguese term, signifying a small sort of cannon, which is particularly used on the quarter deck of ships, to fire or throw forth stones, or broken iron, upon boarding parties. This word has been adopted both by the French and English.

**PEDOMETER** (*Pédomètre*, Fr.) a mathematical instrument, composed of various wheels with teeth, which by means of a chain fastened to a man's foot, or to the wheel of a chariot, advance a notch each step, or each revolution of the wheel, and the number being marked at the edge of each wheel, the paces may be numbered, or the distance from one place to another be exactly measured.

**PEGS**, (*chevilles*, Fr.) pointed pieces of wood, used to fasten the cords of a tent.

**PEIADAK**, *Ind.* a guard to accompany a prisoner at large.

**PEISA**, *Ind.* cash.

**PEISHWAI**, a minister or supreme magistrate in the Mahratta empire, to whom the civil authorities of the state are delegated.

**PEER**, *Ind.* Monday.

**PELE-MELE**, *Fr.* a French adverb, from which is derived the English term Pellmell, signifying, confusedly, in disorder, in heaps, &c.

**PELICAN**, *Fr.* an ancient piece of artillery which carried a six pound weight of ball, and weighed two thousand four hundred pounds.

**PELLE de bois simple**, *Fr.* a wooden shovel.

**PELOTE à feu**, *Fr.* Pelote literally means the bottom of a pincushion, a ball, &c. It is here used to signify a species of combustible ball, which serves to throw light in a fossé or elsewhere. The composition is pitch one part, sulphur three parts, to one pound of salt-

petre. The whole is well mixed together, and incorporated with tow, from which the pelotes are made. The words *peloton* and *platoon*, are formed from *pelote*, signifying any thing collected or put together, as a worsted ball, &c. may be.

**PELTON**, *Fr.* platoon.

*Rompre le PELTON*, *Fr.* a platoon being generally considered as a subdivision, *rompre le peloton* signifies to break into sections.

*Former le PELTON*, *Fr.* to double up or form subdivision.

**PELTON de Moteur**, *Fr.* a platoon or company set up as a model to others. It was customary, during the monarchy of France, and the same custom most probably prevails at present, to have in the different garrisons a select body of this description. It consisted of a given number of men, who were chosen out of the several companies of a regiment, as being remarkable, not only for their size and appearance, but also for their expertness in the evolutions and exercise of the musket. Whenever any alteration took place in the manœuvres or firings, by order of the war-minister, these were first practised by the pattern platoon, troop, or company. All the serjeants and corporals belonging to other corps, were obliged to be present at these drills or exercises, in order to become thoroughly masters of the new rules and regulations, and to be enabled to instruct the soldiers of their respective regiments. A squad of officers, under the direction of the major, (as the former were under that of the adjutant or serjeant-major, according to circumstances,) was also formed under the same principles. We have no such general order amongst us. We frequently say a *pattern-regiment*, but this is an expression of mere courtesy; a compliment paid to some particular corps, and by no means implying a necessity that others should follow its example. The 52d, for instance, may be called a *pattern-regiment*, but it does not therefore follow, that the 2d or the 6th, or any other regiment, should be drilled and exercised after the manner of the 52d. We would even venture to predict, that unless General Moore commanded the district, deviations would occur. In addition to this article, we think it right

to state what was universally done, during the French monarchy. When officers, who had been absent on leave, during the winter months, returned to quarters on the first of May, they were obliged to go through the whole drill, from the muck, &c. until the first of June. They were exercised on the ramparts, or on the barrack parade, by the major of the regiment, in the presence of the soldiers. This will account for the knowledge, as far as technical acquirement goes, which is to be found in almost every French officer of the old school.

PELTONNÉ, *éc.* Fr. formed into a platoon.

PELTONNER, *Fr.* to gather together, to get into groupes.

SE PELTONNER, *Fr.* to form into a platoon.

PELTA, in antiquity, a kind of buckler, small, light, and more manageable than the Parnia which was used by the Amazons, according to Virgil, and resembled the moon in his first quarter, according to Servius.

PELTA. This small shield or buckler was also used by the Macedonians, Cretans, Africans, and ancient Spaniards. Those who carried shields of this description were called Peltatos.

PENAL (*Pénale*, *Fr.*), any decree or law which subjects individuals, &c. to penalties. Hence *code pénal*; *les lois pénales*: the penal code; the penal laws. Of late years the British service has been considerably relieved from the inconveniences and injuries which it suffered in consequence of an unnatural exclusion of a great proportion of the native strength of the country, on account of religious notions.

PENALTY, in a military sense, signifies forfeiture for non-performance, likewise punishment for embezzlement, &c. An officer found guilty of embezzling His Majesty's stores is cashiered, and forfeits one hundred pounds: any person who harbours, conceals, or assists any deserter from His Majesty's service, forfeits five pounds for each of-

delinquen-  
are embezzled  
missioned, non-  
rant officers, but

ALUM, in mechanics, any  
suspended in such a manner  
beate backwards and for-  
some fixed point, by the

A pendulum is any body suspended upon, and moving about, a point as a center. The nature of a pendulum consists in the following particulars:

1. The times of the vibrations of a pendulum, in very small arches, are all equal.
2. The velocity of the bob in the lowest point, will be nearly as the length of the cord of the arch which it describes in the descent.
3. The times of vibrations in different pendulums, are the square roots of the times of their vibrations.
4. The time of one vibration is to the time of descent, through half the length of the pendulum, as the circumference of a circle is to its diameter.
5. Whence the length of a pendulum, vibrating seconds in this latitude will be found to be 39 inches and 2-10ths; and of one half second pendulum 9.8 inches.
6. An uniform homogeneous body, as a rod, staff, &c. which is 1-3d part longer than a pendulum, will vibrate in the same time with it.

From these properties of the pendulum we may discern its use as an universal chronometer, or regulator of time. By this instrument, also, we can measure the distance of a ship, of a battery, &c. by measuring the interval of time between the fire and report of the gun; also the distance of a cloud, by counting the seconds or half seconds, between the lightning and the thunder. Thus, suppose between the lightning and thunder we count ten seconds; then, because sound passes through 1142 feet in one second, we get the distance of the cloud=11420 feet. Again, the height of any room, or other object, may be measured by a pendulum vibrating from the top thereof. Thus, suppose a pendulum from the height of a room, or other object, vibrates once in three seconds; then say, as 1 is to the square of 3, viz. 9, so is 39.2 to 352.8 feet, the height required. Lastly, by the pendulum we discover the different force of gravity on divers parts of the earth's surface, and thence the true figure of the earth.

PENDULUM. Pendulums for military purposes are best made with a musquet ball, and a piece of silk, or other small line. Their length must be measured from the center of the ball to the end of the loop on which they are to swing. In a cylinder, or other uni-  
form

# P E N

form prism or rod, the center of oscillation, from whence they must be measured, is at the distance of one-third from the bottom, or two-thirds below the center of motion.

# P E N

**Rule.**—To find the length of a pendulum to make any number of vibrations, and vice versa. Call the pendulum, making sixty vibrations, the standard length; then say, as the square of the given number of vibrations is to the square of 60; so is the length of the standard to the length sought. If the length of the pendulum be given, and the number of vibrations it makes in a minute be required; say, as the given length is to the standard length, so is the square of 60, its vibrations in a minute, to the square of the number required. The square root of which will be the number of vibrations made in a minute.

**PENINSULA** (*Péninsule, Presqu'île, Fr.*), any space of ground, which has water on all sides, except one; and which is joined to the continent by a slip of land, called an isthmus.

**PENNANT, PENNON**, a small flag or colour.

**Gentlemen PENSIONERS** (*Gentilshommes Pensionnaires, Fr.*) a band of gentlemen, who guard the king's person in his own house, and for that end wait in the presence chamber. They were first instituted by Henry VII. They are usually forty in number. Their officers are, a captain, lieutenant, standard bearer, and clerk of the cheque. Their

ordinary arms are gilt pole axes. Their pension is 100*l.* per annum.

**PENSION**, (*pension, Fr.*) a salary.—An allowance given for present or past services, revocable at the will of the donor, in some instances, and, in others, extended to families.

**Military PENSIONS** (*Pensions militaires, Fr.*), annual allowances or pensions, which are given to officers for military services, and which are frequently continued to their widows and children. With us, these pensions are sometimes accompanied by other marks of public gratitude: in which cases they are voted by parliament, or given by bodies corporate.

**PENSIONS for officers' widows**:—Colonel's widow, 80*l.* lieutenant-colonel's, 50*l.* major's, 40*l.* captain's, 30*l.* lieutenant's, 26*l.* ensign's, 20*l.* cornet's, 20*l.* adjutant's, 20*l.* quarter-master's, 20*l.* and chaplain's, 16*l.* paymaster of the regiment or district, 26*l.* surgeon of the regiment, 26*l.* Staff surgeon and apothecary, 26*l.* physician and purveyor, 30*l.* assistant and veterinary surgeon, 20*l.* deputy purveyor, and hospital mate occasionally, 16*l.*

The widows of all commissioned officers belonging to the British service, are entitled to receive a certain annual allowance, according to the several ranks

ranks of their husbands. Instructions to this end are signed by the king, and lodged with the paymaster general.—The widows of warrant officers are not included in the regulation. It has sometimes, however, happened, that the king has granted a pension of 16*l.* a year to the widow of a quarter master of dragoons, who is a warrant officer, when His Majesty has thought such widow a proper object of his bounty.

When a widow applies for a pension, a certificate is required, signed by the colonel and agent of the regiment, to which her husband belonged, together with an affidavit of her own annexed; in which she swears, that she is the real widow of the officer mentioned in the said certificate; whereupon the king grants a warrant, which is countersigned by the secretary at war, for the pension, agreeable to the regulation; and when this is granted, the widow receives her pension clear, without deduction. As often as the widows receive their pensions, they are obliged to make oath (except in a few instances where the oath has been dispensed with) that they continue the widows of such officers; and that they have no provision, or other pension, from the government, either in Great Britain or Ireland: which oath is all that is required of them, if they come themselves; but if they empower any other persons, by letter of attorney, to receive pensions, those persons must bring a certificate from the minister and churchwardens of the parish, where the widows live, testifying, that such widows are living, and, to the best of their knowledge, continue the widows of such officers.

The whole annual fund is issued to the paymaster within the compass of sixteen months; and the payments are issued every four months after eight are due to those who demand them. It however sometimes happens, though rarely (for officers seldom die rich), that some widows, who are rich, do not apply above once in two or three years. In the report from the committee appointed to consider the state of His Majesty's land forces and marines, so far as related to the distribution of the money, granted by parliament for the pay, &c. of the said forces, which was made as far back as the 6th of June,

1746, we find the above particulars, with the following additional observations:—It appeared on the examination of a witness before the said committee, that no widow had ever been denied her pension on account of the deficiency of the fund; but there were often more claimants than one, as widow to the same officer; and that there was then a dispute of that nature depending; in which case, as often as it happened, the money was reserved in the paymaster's hands, till the contest was decided.

In time of peace a warrant is usually made out annually in June or July, to place such widows upon the pension, as apply and are entitled; and lists are made out of those who had so applied. In time of war those lists are made out more frequently.

The widows of marine officers are upon the same establishment, and the fund for them is blended with that for the others by the paymaster. When widows receive the pension without making the affidavit required by the king's instructions, specific warrants must be made out for that purpose. From 1728 to 1716, pensions paid in this manner amounted to 314*l.* per annum.

For further particulars and certificate, see *Military Finance*.

**PENTACAPSULAR**, having five cavities.

**PENTADROUS**, having five sides.

**PENTAGON**, in fortification, a figure bounded by five sides, or polygons, which form so many angles, capable of being fortified with an equal number of bastions. It also denotes a fort with five bastions.

**PENTAGRAPH**, (*Pentagraphe*, Fr.) an instrument whereby designs, &c. may be copied in any proportion, without the person, who uses it, being skilled in drawing.

**PENTANGLE**, a figure having five angles.

**PENTANGULAR**. See **PENTAGON**.

**PENTAPOLIS**, in geography, a country consisting of five cities. This name was given, particularly, to the valley wherein stood the five infamous cities destroyed by fire and brimstone in Abraham's time. The most celebrated Pentapolis was the Pentapolis Cyrenaica in Egypt, whose cities were Bere-

## P E R

Berenice, Arsinoe, Ptolemais, Cyrene, and Apollonia.

**PENTASPAST** (*Pentapaste*, Fr.), an engine that has five pullies.

**PENTATHLON**, the five exercises performed in the Grecian games, viz. *leaping, running, quolting, darting, and wrestling.*

**PENTHOUSE**, a shed hanging forward in a sloping direction from the main wall of a place.

**PEONS**, *Ind.* foot soldiers. People of colour, so called in the Spanish islands; a set of vagabonds who casually visit the islands from the continent, and who are ready to join in any disorder that affords a prospect of plunder. The majority of the slaves in Trinidad, &c. consist of these people. These men are chiefly employed to assist in collecting the revenues. Most persons in India keep servants, who wear a belt with the master's name: these are likewise called *Peons* or *Puns*.

**PEON** also means an allowance which is paid in money to the troops at Madras only. It is called *Peon* and *Oil Money*.

**PEOPLE of Colour**. Blacks, and Mulattoes, &c. so called. They form part of the British territorial army, and are distributed, in corps, among our West India islands.

**PEPLEGMENON**, an order of battle which was used amongst the Greeks, and consisted in a centre being so formed by the two wings of an army, as to stand advanced against an opposing enemy.

**PERAMBULATOR**. See **PEDOMETER**.

**PERCER**, *Fr.* This word has various significations in the French language. It also means to make one's way, or to rise from the lowest, to the highest station. Hence, *Il a percé tout le regiment; toute l'armée*: he rose or made his way through the whole regiment; the whole army.

**PERCH**, in mensuration, is ten feet long. See **MEASURE**.

**PERCH**, a measure which contains sixteen feet and a half.

**PERCUSSION**, the impression which a body makes in falling or striking upon another, or the shock of two moving bodies. It is either direct or oblique.

*Direct Percussion*, is where the im-

## P E R

pulse is given in the direction of a right line perpendicular to the point of contact.

*Oblique Percussion*, when it is given in the direction of a line oblique to the point of contact.

*Center of Percussion*, that point wherein the shock of the percutient bodies is the greatest.

**PERCUTIENT**, striking against or upon.

**PERDREAUX**, *Fr.* a quantity of grenades, which are cast out of a mortar with one shell.

**PERDU**, a word adopted from the French, signifying to lie flat and closely in wait. It likewise means the forlorn hope.

*A corps perdu*, *Fr.* desperately.

*A coup perdu*, *Fr.* at random.

*Coup perdu*, *Fr.* random shot.

**PEREMPTORY**, whatever is absolute and final, not to be altered, renewed, or restrained. *Peremptory execution*, what takes place immediately.

**PERE**, *Ind.* See **PIER**.

**PERFIDIOUS**, (*perfidie*, *Fr.*) treacherous, false to trust, guilty of violated faith. Hence a *perfidious foe*. War, however melancholy in its effects, and frequently unjustifiable in its cause and progress, is nevertheless, among civilised nations, so far governed by certain principles of honour, as to render the observance of established laws and customs an object of general acquiescence. When two or more countries are engaged in a hostile contest, whatever belligerent party grossly deviates from those rules, is deservedly stamped with infamy, and justly called "a perfidious foe."

**PERFIDIOUSLY**, treacherously, falsely, without faith.

**PERFIDY**, want of faith, treachery.

**PERGUNNA**, *Ind.* a district.

**PERILÉMINENT** *ou imminent*, *Fr.* eminent or imminent danger. The French sometimes use the words *eminent* and *imminent* in the same sense viz. to signify great or ready to come upon us, hanging over us. The French also say, *Péril évident*, evident danger; that is, certain danger. *Affronter, craindre, éviter, braver le péril*, to face, to fear, to avoid, to brave danger; *S'exposer au péril*, to expose oneself to danger; *S'engager dans le péril*, to engage or embark oneself in danger; *Etre en péril*, to

to be in danger; *Courir au péril*, to run into danger; *Se charger d'une commission militaire à ses risques et périls*, to undertake a military commission or project at one's own risk and peril.

**PERIMETER**, (*Périmètre*, Fr.) in geometry, the extent that bounds any figure or body. The perimeters of figures or surfaces, are lines; those of bodies are surfaces. In circular figures, &c. we use circumference or periphery instead of perimeter.

**PERIOD**. This word is frequently used in military accounts, to express the intermediate time for which money has been issued to officers or soldiers.

**Broken PERIOD**, a term used in the returns and financial statements of the British army, when the regular distribution of pay is interrupted, or the effective force is lessened by the absence of one or more individuals, or by any other cause. A correct and faithful statement of broken periods is essentially necessary in every well regulated regiment, as not only the service, but the public purse may be materially injured by the neglect, or embezzlement of individuals. Adjutants and paymasters cannot be too scrupulously minute on this important head.

**PERIPHERY**, the circumference, as of a circle.

**PERIR**, Fr. This word is used to express the calamitous situation of an army, which has been frequently defeated, or otherways injured and broken down. Hence *les combats ont fait périr une partie de l'armée*, part of the army perished, or was destroyed in action.

**PERISTYLE**, a circular range of pillars for the support or ornament of any building, &c. used in the ancient amphitheatres.

**PERKERNUCKA**, *Ind.* petty officers are so called in India.

**PERMANENT Fortification**, is defined to be the art of fortifying towns, &c. so as to resist the attacks of an enemy that makes regular approaches.

**PERMANENT Rank**, a rank in the army, which does not cease with any particular service, or locality of circumstances; in opposition to *local or temporary rank*. See **RANK**.

**PERPENDICULAR**, in fortification, (*perpendiculaire*, Fr.) according to Vau-

ban's system, it is a line raised in a perpendicular direction on the center of the exterior side of any given polygon. In mean fortification, which prevails more than any other system, the perpendicular contains 30 toises in the exagon, and in polygons that have a greater number of sides; but it contains fewer when the polygons have a less number. The perpendicular is used by this engineer to determine the other lines and angles belonging to a fortification. In proportion as the perpendicular is increased, the extent of the flanks is augmented.

**PERPENDICULAR Fortification**, is that in which all the component parts flank each other at straight angles. Pagan, and other engineers, made the flanks perpendicular to the lines of defence.

**PERPENDICULAR**, (*perpendiculaire*, Fr.) When any star is vertical, it is said, in astronomy, to be perpendicular, because its beams fall directly upon us.

**PERPENDICULAR**, in geometry; when any right line is perpendicular to all the lines it meets with in a plane, it is said to be perpendicular to that plane.

**PERPENDICULAR direction**, in marching, is the regular and straight progress of one or more men over given points. Without the strictest attention is paid to this essential principle in all movements, the greatest irregularity, and, ultimately, the greatest confusion must ensue. Perpendicular and parallel movements constitute, indeed, the whole system of good marching. When several columns, divisions, or companies, advance, the different pivots must be strictly perpendicular and parallel to each other, otherwise the distances will be lost, and the ultimate object of forming a correct line must be defeated.

**PERPENDICULE**, Fr. a plummet.

**PERPETUAL screw**, a screw which is acted upon by the teeth of a wheel, and which continues its action for an indefinite length of time; or so long as the teeth of the wheel continue to act upon it.

**PERPLEXE**, Fr. perplexed. A French author, from whose work we have

have frequent occasion to quote, makes the following comment or observation on this word: A general, or a sovereign who does not possess talents enough to extricate himself out of a perplexed situation, or state of things; who gives way to anxiety, and secludes himself because he is at a loss to know what to do, from wanting resolution and manly daring: such a man, if a general, is not fit to command an army; and if a king, unworthy to govern a people.

**PERQUISITES**, all manner of profits arising from an office or place, independent of the actual salary or revenue. In a military sense, perquisites are certain advantages and emoluments which are allowed to persons in responsible situations. Of this description may be considered the clothing of regiments, which exclusively belongs to colonels of corps, and which, for the sake of the dignity of the British army, ought to be transferred to a clothing board.

**PERRIERE**, *Fr.* an iron bar, which is sharp at one end, and which is used in casting ordnance.

**PERRIERES**, *Fr.* See **CLIDE**.

**PERSIAN Language**, *Ind.* there are two sorts; the ancient, called Zeban-e-Pehlavy; the modern, called Zeban-e-dery.

**PERSPECTIVE**, is the art of drawing the resemblances or pictures of objects on a plane surface, as the objects themselves appear to the eye, &c.

**PERSPECTIVE Elevation**. See **SCENOGRAPHY**.

**PERSPECTIVE Militaire**, *Fr.* military perspective, or the art of drawing objects for military purposes, by sketching them on paper from any point, taken at will, from the distance of the perspective, with which all the lines that are drawn on the horizontal or inferior part of the plane must correspond at equal distances. In a figurative sense, military perspective may be considered as containing those remote but enticing points of human emulation, towards which every military man directs his views and talents, in order to secure, by good conduct and brilliant actions, high rank and unblemished reputation in arms.

**PERSONAL**, relating to one's private actions or character. It ought invariably to be impressed upon the minds

of officers, that nothing tends so much to disunion, &c. as personal remarks or applications.

**PERSONAL INSULT**, (*injure personnelle*, *Fr.*) a direct affront which is given to a person in such a manner, that it is impossible to misconstrue the intention. Insults of this description seldom occur in the army, as their consequences are generally fatal.

**PERSONNALITÉ**, *Fr.* The French use this word to express the character and quality of what may be personal.—*Juger sans personnalité*, to judge without personal prejudice. It also signifies self-conceit, self-occupation, egotism, *c'est officier est d'une personnalité odieuse*, that officer is full of himself even to disgust.

**PERTE**, *Fr.* loss.

*La PERTE d'une bataille*, *Fr.* the loss of a battle.

*Pure PERTE*, *Fr.* the French use this term in the same sense that we do, viz. *pure loss*, i. e. downright loss. Thus, when two powers, at war with each other, are in perpetual conflict and bloodshed, during a whole campaign, without coming to any thing decisive, they may be said to fight *en pure perte*, or with downright loss on both sides.—So England and France may be said hitherto to have fought *en pure perte*.

**PERTUIS**, *Fr.* a narrow pass. See **DÉTROIT**.

**PERTUISANE**, *Fr.* a halbert which has a longer and broader iron at the end than the common halberts have.—Pertuisanes were formerly given, in the French service, to the infantry, in order to enable them to withstand the shock of cavalry. They were laid aside in 1670, and confined to the invalids, who continued, and perhaps still continue, to use them in France, during the monarchy.

**PERUST**, *Ind.* a small weight or measure, equal to four koodups or puls.

**PERWANNA**, *Ind.* an order, warrant, or letter, signed by a nawaub or nabob.

**PESHTA**, or **PAISHWA**, *Ind.* prime minister, the acting head of the Morat-toe states.

**PESTLE**, an instrument used in the fabrication of gunpowder. See **GUNPOWDER MILL**.

**PETARD**, or **PETARDO**, an engine

to burst open the gates of small fortresses: it is made of gun-metal, fixed upon a board two inches thick, and about  $2\frac{1}{2}$  feet square, to which it is screwed, and holds from 9 to 20 pounds of powder, with a hole at the end opposite to the plank to fill it, into which the vent is screwed: the petard, thus prepared, is hung against the gate by means of a hook, or supported by three staves fastened to the plank: when fired it bursts open the gate. Its invention is ascribed to the French Huguenots in 1579, who, by means of petards, took Calais in the same year.

Petards are of four different sizes: the first contains 12lbs. 13oz. second 10lbs. 11oz. third 1lb. 10oz. fourth 1lb. The blind fuse composition for them is of mealed powder, 7lb. wood ashes 3oz.

PETARDEAUX, *Fr.* pieces of wood covered with wool and pitch, which are used to stop the holes that are made in the sides of a ship by cannon ball, during an engagement.

PÉTARDER, *Fr.* to fire petards.

PÉTARDIER, the man who loads, fixes, and fires the petard. It likewise signifies, among the French, the man who makes or throws a petard.

PÉTARDIER, *Fr.* also means an artillery officer, who is ordered to blow up the gates of a fortified place.

PÉTAUX, *Bibaux, Tuffes, Fr.* according to Montrelet and Froissard, two French writers, these were foot soldiers armed with large pikes, who lived on plunder. A. T. Gaigne, author of the *Nouveau Dictionnaire Militaire*, published in 1801, says, that the name of *pétaux* was formerly given to those peasants who were enlisted by force.

PETEL, *Ind.* the head of a village.

PETER, *Fr.* in a military sense, to explode, to make a loud noise.

PÉTEROLLES, *Fr.* squibs, such as children make and use in the streets for their diversion.

PETITE-Guerre, *R.* See GUERRE, for its definition.

PETITE-Guerre, or a war of posts, is carried on by a light party, commanded by an expert partizan, and which should consist of 1000 or 2000 men, separated from the army, to secure the camp or cover a march; to reconnoitre the enemy or the country; to seize their posts, con-

voys, and escorts; to plant ambuscades, and to put in practice every stratagem for surprising or disturbing the enemy; which is called carrying on the *petite-guerre*. The genius of these days, and the operations of the last war, have placed the service of such a corps in a most respectable light, as it is more fatiguing, more dangerous, and more desultory than any other.

To form a corps capable of carrying on the *petite-guerre* to advantage, prudence requires that it should consist of 1000 men at least, without which a partizan cannot expect to support the fatigues of a campaign, and seize the most important occasions that every where offer, and which a too great inferiority must make him forego.

It is no less important, that this corps should be composed of infantry and cavalry; and as it is most incontestible that the cavalry should be the most active in carrying on the *petite-guerre*, it were to be wished, that they were likewise the strongest, so as to have 600 cavalry and 400 infantry in a corps of 1000 men, making four companies of infantry, and twelve troops of cavalry. Each company of infantry to consist of 1 captain, 1 first and 2 second lieutenants, 4 sergeants, and 96 men, including 4 corporals, 4 lance-corporals, and 2 drummers. Each troop of cavalry to consist of one captain, 1 first and 1 second lieutenant, a quarter-master, two sergeants, and 48 horsemen; including 1 corporals, a trumpeter, and farrier.

The commanding officer should have the naming of the officers of this corps, or at least the liberty to reject such as he is convinced are not qualified for such service. To support the honour of this corps, upon a solid and respectable footing, the strictest subordination must extend from the chief to all the officers, and the most rigid discipline, vigilance, patience, bravery, and love of glory, ought to pervade the whole corps.

PETITION. See MEMORIAL.

PETRARIA. See MANGON.

PETRE. See NITRE, SALTPETRE.

PETRINAI, or POITRINAL, *Fr.* a species of fire-arms between the arquebuse and the pistol, which was used among the French, during the reign of Francis I. There is mention made of it.

in an account of the siege of Rouen, which was undertaken by Henry IV. in 1592. It was shorter than the musquet but of a heavier calibre, and not unlike our blunderbuss; being slung in a cross belt, so as to rest upon the chest of the person who discharged it. From this circumstance it obtained the name of *Poitrinal*.

**PETRONEE.** See **PISTOL**.

**PETTAH**, *Ind.* a town adjoining to a fort, which is in general surrounded by a fence of bamboos, a wall, and a ditch.

**PETTICOAT**, the loose piece of garment which hangs from the waist of a Highlander is sometimes so called.

**PETTICOAT-Interest**, a figurative expression, in common usage among the civil, as well as the military, servants of government. The influence of woman, if tradition be correct, is coeval with the first origin of man, and the primary cause of his first fall. From that period down to the present day, female ascendancy has never ceased to prevail. Sometimes, indeed, it has been the medium of much good; at others, of incalculable mischief to mankind: but at no time has it ever been wholly inactive. Even in those countries, and under those laws, particularly under the salique law, (where, one would imagine, the interposition of woman could have little or no weight,) the secret spring of the most important movements may be traced to this mistress of the human heart: nor is even the seraglio a stranger to its influence. How many brave men, because they have either not been known, or if known, have not proved agreeable to the mistress of a king, or of a minister, or to the dirty pander of them both, have been doomed to obscurity; whilst an unfledged stripling, perhaps, has stepped into the situation which nature and talents had destined for the former. This is, indeed, a melancholy perversion of the allowed influence which the fairest part of creation ought to have in human affairs; but it must be acknowledged, on the other hand, that there have been women, and probably there may still be some, (even in this degenerate age,) who have employed their powers for purposes the most refined, and the most honourable. With such women *petticoat-interest* becomes a blessing to

community; and that such only should exist ought to be the prayer of every brave and aspiring officer.

**PEUPLER**, *Fr.* literally means to people. This expression is used in a military sense by Bélair, author of *Eléments de Fortification*, in the following manner:—*Il faut peupler la surface d'un glacis de Pierriers*. The surface of a glacis ought to be well covered with pedereros. See page 388.

**PHALANGE**, *Fr.* See **PHALANX**.

**PHALANX**, a word taken from the Greek. In antiquity, a square, compact battalion, formed of infantry, set close with their shields joined, and pikes turned across. It consisted of 8000 men, and Livy says, it was invented by the Macedonians; and hence called the Macedonian phalanx.

**PHALANX**, (*phalange*, *Fr.*) According to Mauvillon, in his *Essai sur l'influence de la poudre à canon dans l'art de la guerre moderne*, the phalanx, among the Greeks, consisted of heavy armed troops, called the Hoplites, who stood in the centre. A complete phalanx consisted of 16,384, drawn up in sixteen ranks, and each rank containing 1024 files. This phalanx, in order of battle, occupied 3072 feet in front, and 48 in depth, consisting of 16,000 odd hundred men. Mauvillon describes the ancient phalanx as having been executed in three different ways: the Macedonian phalanx, by the leading file coming to the right about, and remaining stationary. The other files moved behind him by the right, and as soon as they had marched a given number of paces, in order to arrive at a proper distance, they stood in their original order, after having faced about.

The second kind of phalanx was called the Lacædemonian, and was thought preferable to the first; because the phalanx, instead of filing to the rear, marched forwards to the direction where it was to face. The leading file, in facing, marched by those that were in his rear; and they, as their turn came, also faced and followed their leading files. When the head file had thus gone over twice the depth of ground that was occupied by the phalanx, it halted. The serrefile came to the right about, and the whole stood in their proper direction.

The third evolution, which was called

the Cretan, Persian, or Choréus, was performed in this manner: the leading file faced to the right, and counter-marched: each succeeding file did the same, turning upon their own ground; and when they had marched over the depth of ground which was occupied by the phalanx, and stood where the serc-files had been stationed, the whole halted, and the evolution was thus completed. This was reckoned the best mode, because, in addition to all the advantages of the Lacædæmonian, it was executed in half the time that was necessary to the other two.

**PHALARICA**, a javelin, or long dart, of a particular construction, which was formerly used by the inhabitants of Saguntum, when they so valiantly stood the siege of it. Saguntum was the ancient site of Morviedro, an old town of Valencia, in Spain, which was taken by Lord Peterborough in 1706. This weapon was very thick, and had a sharp piece of iron, four feet long, attached to it. It was used either as a weapon of close attack and defence, or as a fire-arm; being, in the latter case, wrapped up in tow and pitch, and when set fire to, cast out of the balista against the enemy's wooden towers and other machines, for the purpose of consuming them. They were sent with so much force, that they pierced through armed bodies of men, and rendered all attempts to extinguish the flames useless and unavailing. It is also mentioned by Virgil as a pike or dart to be thrown by the hand.

**PHALERA**, a collar which was worn by the Romans as a mark of distinction. It was different from the *torques*; the latter being round and close to the neck, and of massive gold; whereas, the former was flat, hung upon the breast, and was merely adorned with a few gold knobs. The phalera was indiscriminately given to all officers who had distinguished themselves in action. According to Persius, phalera also signified the trappings and ornaments of a horse.

**PHAETON**, (*Phaëton*, Fr.) the allegorical history of this young god contains one of those instructive lessons, which ought always to be present to the mind of every man, who either aspires to rule a country, or is ambitious to command an army: nor is the fable

without an applicable moral—to most public characters.

**PILAROS**, (*Phare*, Fr.) a light-house or pile raised near a port, where a fire is kept burning in the night to direct vessels near at hand. The Pharos of Alexandria, built at the mouth of the Nile, was anciently very famous; whence the name was derived to all the rest.—Oranum says, Pharos anciently denoted a strait, as the Pharos or Pharo of Messina.

**PILARSALIA**, so called from Pharsalus, anciently a town in Thessaly, now Turkey in Europe, which lies a little to the south of Larissa. This spot was rendered memorable in history by the battle that was fought between Pompey and Cæsar, when they contended for the empire of the world. Plutarch has given the following account of the engagement:—

“Both armies were now arrived at the fields of Pharsalia, conducted by the two greatest generals alive; Pompey, at the head of all the Roman nobility, the flower of Italy and Asia, all armed in the cause of liberty. Cæsar at the head of a body of troops firmly attached to his interests, men who had faced every appearance of danger, were long inured to hardships, and had grown from youth to age in the practice of arms. Both camps lay in sight of each other. In this manner they spent the night; when next morning, as Cæsar's army was going to decamp, word was brought him, that a tumult and murmur were heard in Pompey's camp, as of men preparing for battle. Another messenger came soon after with tidings, that the first ranks were already drawn out. Cæsar now seemed to enjoy the object of his wishes. *Now*, cried he to his soldiers, *the wished-for day is come, when you shall fight with men, not with want and hunger.* His soldiers, with joy in their looks, went each to his rank, like dancers on a stage; while Cæsar himself, at the head of his tenth legion, (a body of men that had never yet been broken,) with silence and intrepidity waited for the onset. While Cæsar was thus employed, Pompey on horseback viewed both armies; and seeing the steady order of the enemy, with the impatience of his own soldiers, he gave strict orders, that the vanguard should make a stand, and  
keeping

keeping close in their ranks, receive the enemy. Pompey's army consisted of 45,000 men, Cæsar's not quite half that number. And now the trumpet sounded the signal for battle on both sides, and both armies approached each other.

While yet but a little space remained between either army, Caius Crastinus, a devoted Roman, issued from Cæsar's army at the head of 120 men, and began the engagement. They cut through the opposite ranks with their swords, and made a great slaughter; but Crastinus still pressing forward, a soldier ran him through the mouth, and the weapon came out at the back of his neck. In the mean time Pompey, designing to surround Cæsar, and to force his horse, which amounted to only 1000, to fall back upon his infantry, gave orders that his own cavalry, consisting of 7000 men, should extend itself, and then attack the enemy. Cæsar expecting this, had placed 3000 foot in reserve, who rushed out fiercely, and, attacking Pompey's horse, let fly their javelins in the faces of the young delicate Romans, who, careful of their beauty, turned their backs, and were shamefully put to flight. Cæsar's men, without pursuing them, flanked the enemy, now unprotected by their horse, and soon a total rout began to ensue. Pompey, by the dust he saw flying in the air, quickly conjectured that his cavalry was overthrown, and overpowered by the event, retired to his camp in agony and silence. In this condition he sat pondering in his tent, till roused by the shouts of the enemy breaking into his camp, he cried out, *What, into the very camp!* and without uttering any thing more, but putting on a mean habit, to disguise his flight, he departed secretly." During the seven years war, Frederick the Great, king of Prussia, was much in the same situation. He had retired to his tent, and had given up every thing for lost, when the daring enterprise of Ziethen, who commanded the Death Hussars, turned the fortune of the day; and though he lost an incalculable number of Prussians, he secured the victory, and thereby restored to his master both his kingdom and his crown. Perhaps a comparison might be drawn between Caius Crastinus and Desaix; each

having contributed most essentially to the issue of two battles, which are not unlike each other, either in the manner they were fought, or in the events they produced. Cæsar gained an empire, and Bonaparte obtained the ascendancy of Europe.

PHATUK, *Ind.* a gaol or prison. It likewise means a gate.

PHAGUN, *Ind.* a month, which in some degree agrees with February and March.

PHILEBEG, or *Kilt*, from the Gaelic, *Filleadh beg*, which signifies a little plaid. This part of the Highland dress corresponds with the lower part of a belted plaid, and is frequently worn as an undress by Highland officers and soldiers. The philebeg or kilt may be considered as a very good substitute for the belted plaid, as it is not, at present, thought necessary for the Highlander to carry his clothing for the night, as well as by day, about his person. This was the case in ancient times, when the breacan answered both purposes. The philebeg is a modern invention, and is the garment which some, who have endeavoured to establish the antiquity of *Trous*, confound with the *Breacan Filleadh*.

*The PHILOSOPHER'S STONE* (*la pierre philosophale des militaires*, Fr.) inasmuch as it regards military men. Although, strictly speaking, this article may be considered (to use a common phrase) as far fetched, and in some degree extraneous to a Military Dictionary, we are nevertheless persuaded, that a certain attention to Ethics cannot be injurious to any set of men. We think, on the contrary, that in a profession, where, of all others, nice honour, unstained integrity, and proud notions of rectitude, ought to be eminently conspicuous, the means of securing those enviable qualities cannot be too often impressed upon the young military mind. Our French author has expressed himself on this subject in the following manner; and we shall leave our English readers to reap the benefit of his observations.

"It is a truth well known, that there have been, and that there still are, very wealthy individuals, who have gone into the deepest researches of chemistry, with no other prospect in view than  
that

that of adding to their riches; and it is equally true, that they have always missed, and always will miss, the object of their ambition; leaving their impoverished children to bewail the absurdity of their attempt. There are other men who seek the philosopher's stone in the dirty precincts of the Alley; who enter into the wildest speculations, and form connexions with the most unprincipled, and the most debased;—making bargains in a state of intoxication, or after a rich repast; which ultimately lead them to the hospital, or to the side of some river, in order to lose, with life, the remembrance of their weakness. There is also another class of individuals, who do not, indeed, ruin themselves (being already in possession of enough not to stand in need of adventitious or hazardous speculations), but whose sole ambition is to swell their store of wealth, and who deny themselves the common necessities of life, because avarice is settled in their hearts. These men cannot be said to have found the philosopher's stone; which, in my humble opinion, consists wholly in that easy affluence that has been obtained by merit, and by industrious talents; which renders the possessor of it affable and condescending to all his fellow creatures, without exception; scrupulously attached to his several duties in society, respectful to his superiors, uniformly just to his neighbour, engaging in his manners, and not only delicate in his demeanour towards the fair sex, but polite and gentlemanlike to mankind at large; which makes him full of honour and honesty, stedfast to his trust and faithful to his engagements, firm in adversity, and not too much elated by good fortune; which teaches him to mix application and innocent amusement together, and to avoid bad company, however alluring it may seem, and to keep aloof from all those dirty little schemes and projects, which are incompatible with the noble profession of arms, and which must be disgraced and rendered contemptible when it sinks into the society of low minded, and mere money-getting jobbers. Such is the course of life, and such the rule of conduct (continues our author), which in my judgment, will never fail to put young officers in possession of the only true philosopher's

stone; and by means of which they will get through life with ease, comfort, and reputation. Hope, and unmolested rest (the sure concomitant of a good conscience!) are the support of man through all the vicissitudes of life. Let it, therefore, be inculcated upon the mind, and engraven on the heart of every young officer, that to be happy, he must not only be just, but also be honourable. The duty which he owes to his profession is sacred, and the least blemish in his character, must bring it down to the common level of every mercenary calling."

**PHIRMAUND**, *Ind.* This word is sometimes written *Firmaun*, and signifies a royal commission, mandate, or allowance.

**PIOUSDAR**, *Ind.* The same as *Fousdar*, the superintendent of a large district. It more immediately signifies the commander of a large body of forces.

**PIOUS-DAN**, *Ind.* the commander of a body of forces.

**PIANISTE**, *Fr.* a person infected with the venereal disorder.

A **PIC**, *Fr.* perpendicularly.

**PICE**, *Ind.* a copper coin, used in most parts of India, but differing greatly in value.

**PICAROON**, a pillager, one who plunders.

**PICK**,  
**PICK-AXE**, } A sharp pointed iron  
**PICKER**, } tool, used in trench-  
ing, &c. to loosen the ground.

**PICKER** likewise means a small pointed piece of brass or iron wire, which every soldier carries to clear the touch-hole of his musquet. The brass pickers are the best, because they are not liable to snap or break off.

**PICKET**, (*piquet*, *Fr.*) an out-guard posted before an army, to give notice of an enemy approaching. See **GUARD**.

**PICKET**, a kind of punishment so called, where a soldier stands with one foot upon a sharp pointed stake: the time of his standing is limited according to the offence.

**PICKETS**, in fortification, stakes sharp at one end, and sometimes shod with iron, used in laying out the ground, of about three feet long; but, when used for pinning the fascines of a battery, they are from 3 to 5 feet long.

**PICKETS**, in artillery, are about 5 or 6 feet

## P I C

6 feet long, shod with iron, to pin the park lines, and to lay out the boundaries of the park.

**PICKETS**, in the camp, are also stakes of about 6 or 8 inches long, to fasten the tent cords, in pitching the tents; also, of about 4 or 5 feet long, driven into the ground near the tents of the horsemen, to tie their horses to.

**PICKET Ropes**, commonly called breast lines: these are ropes which are twisted at given intervals round the several picket stakes, and serve to confine the horses within a proper space of ground. They are called breast-lines, because the pickets or stakes should always be long enough to adhere firmly to the soil, when driven in, and to stand breast high. When the pickets are too short, unruly horses, or any horses indeed not accustomed to stand at picket, will either drag them up, or throw their legs over the breast lines, and get entangled. Heavy cavalry ought to have pickets of 6 feet; the common stakes are from 4 to 5 feet.

**PICOREE**, *Fr.* an obsolete French term, signifying a party of soldiers who go out in search of plunder.

**PICORER**, *Fr.* to go out in search of plunder. Obsolete.

**PICOREUR**, *Fr.* a marauder.

**PICQUEERING**, **PICKERING**, **PICKEROONING**, a little flying skirmish, which soldiers make, when detached for pillage, or before a main battle begins.

**PICKS-HOYAX**, *Fr.* Different sorts of pick-axes used by the pioneers.

**PICTS**, a people which in ancient times inhabited a part of Scotland, and, together with the Scots, made frequent incursions into England. Their depredations were checked by the Romans, when the emperor Severus landed an army in Britain, and delivered the poor natives from their miserable tyranny. An excellent historian calls this act of the Roman emperor, the greatest honour of his reign. See *Rise and Progress of the Roman Empire*, in Kennett's *Antiquities*, p. 22.

**Picts Wall**, in antiquity, a celebrated piece of Roman work, begun by the emperor Adrian, on the northern bounds of England, to prevent the incursions of the Picts and Scots. At first it was only made of turf, strengthened with palisadoes, till the emperor Severus,

## P I E

coming in person, into Britain, built it with solid stone, reaching eighty miles from the Irish to the German sea, or from Carlisle to Newcastle upon Tyne, with watch towers garrisoned at the distance of one mile from each other. It was ruined several times by the Picts, and often repaired by the Romans. At last, Oetius, a Roman general, rebuilt it of brick; and the Picts ruining it the year following, it was no longer regarded but as a boundary betwixt two nations. It was eight feet thick, and twelve high from the ground; it ran on the north side of the rivers Tyne and Irthing up and down several hills; the remains of which are, to this day, to be seen in Cumberland and Northumberland.

**PIECE** (*Pièce*, *Fr.*) This word is variously used, in a military sense, by the French and English, viz.

**PIECES of Ordnance** are all sorts of great guns and mortars.

**Battering PIECES** are the large guns which serve at sieges to make breaches, such as the 24-pounder, and the culverin, which carries 18lb. ball.

**Garrison-PIECES**, are mostly heavy 12, 18, 24, 36, and 42-pounders, besides wall guns.

**Field PIECES** are twelve pounders, demi-culverins, six pounders, sakers, minions, and three pounders, which move with an army, and are parked behind the second line when it encamps, but are advanced in front, in the intervals of battalions, &c. and on the flanks in the day of battle.

**Regimental PIECES**, are light 6-pounders: each regiment has generally two of these pieces.

**PIECE** is likewise used to express a soldier's musquet.

*Un homme armé de toutes PIÈCES*, *Fr.* a man armed at all points, or cap-a-pied.

**PIÈCES d'honneur**, *Fr.* the insignia or marks of honour. These consist of the crown, sceptre, and sword.

*Une PIÈCE d'artillerie, une PIÈCE de canon*, *Fr.* These terms are used by the French to signify cannon in general.

**PIÈCES de Batterie**, *Fr.* See **BATTERING PIECES**.

**PIÈCES de Campagne**, *Fr.* See **FIELD PIECES**.

**PIÈCES de vingt-quatre**, *Fr.* twenty-four pounders.

**PIÈCES**

**PIECES de trente-six, Fr.** thirty-six pounders. When pieces are not specifically named, the term is used in the same general sense by the English, as, one hundred pieces of cannon, or artillery: *cent pièces d'artillerie*; but when the calibre is mentioned, we substitute the word pounder for piece: as, *une pièce de vingt-quatre*, a four and twenty pounder.

**Démonter les PIECES, Fr.** to dismount cannon.

**Enclouer les PIECES, Fr.** to spike cannon.

**Rafranchir les PIECES, Fr.** to sponge or clean out cannon.

**PIECE de canon brisé, Fr.** The French formerly made use of cannon that could be taken to pieces, and so rendered more portable. This species of ordnance was distinguished as above.

**PIECE versée en panier ou en cage, Fr.** A piece of ordnance is said to be in this situation, when it is so completely overturned, as to have the wheels of its carriage in the air. Various methods have been proposed by able engineers to raise cannon that have been overturned. See *Saint Remi, Manuel de l'Artilleur*; and a late publication, intitled, *Aide Mémoire à l'usage des Officiers d'Artillerie de France*.

**PIECES légères, Fr.** light pieces. See FIELD PIECES.

**PIECES à la Suédoise, Fr.** field pieces originally invented, and since used among the Swedes.

**PIECES nettes, Fr.** ordnance pieces or fire-arms, which have been proved, and are found perfectly sound.

**PIECES de Chasse, Fr.** a marine term, signifying the cannon that is placed on the stern and forecastle of a ship. We call them chase guns.

**PIECES détachées, Travaux avancés en dehors, Fr.** Those works which cover the body of a fortified place, towards the country; of this description are ravelins, demi-lunes, hornworks, tenailles, crownworks, queues d'hironde, enveloppes, &c.

**To be cut to PIECES, (être écharpé, Fr.)** The French say, *Un tel régiment a été écharpé*; such a regiment has been cut to pieces.

**A PIED, Fr.** on foot.

**PIED à pied, Fr.** foot by foot; gradually. *Faire un logement pied à pied*; to establish a lodgment foot by foot.

**Forcer les ouvrages pied à pied**; to make regular approaches, or to besiege a town by opening trenches, &c. instead of insulting it by a direct attack.

**Troupes retenues sur PIED, Fr.** troops kept upon full pay.

**Etre en PIED, Fr.** to be kept upon full pay, in contradistinction to *reformé*, or being reduced.

**PIED de Roi, Fr.** a measure containing twelve French inches, or one hundred and forty lines.

**PIED Quarré, Fr.** The French square foot contains the same dimensions in length and breadth, giving one hundred and forty inches of surface.

**PIED de toise quarrée, Fr.** the sixth part of a square toise. The square toise contains thirty-six feet, the square foot consequently comprehends six feet, and must be considered as a rectangle.

**PIED Cube, Fr.** the same measure according to three dimensions. It contains 1728 cubic inches.

**PIED Rhenan or Rhinlandique, Fr.** the German foot. See MEASURE.

**PIED courant, Fr.** the extent of a foot considered as to length only.

**PIED marin, Fr.** literally, sea leg.— See *Marin*.

**PIED de mur ou de muraille, Fr.** that lower part of a wall which is otherwise called *Escarpe*, and is contained between its base and top.

**PIED de rempart, Fr.** that extent of ground which lies between the fosse and the houses in a fortified town or place.

**PIED droit, Fr.** a side post or stay made of stone or wood, which is used by miners, in order to keep up or support any thing with effect.

**PIED ferme, Fr.** This word literally signifies firm foot. The French say, *Attendre l'ennemi de pied ferme*; to expect the enemy, or wait his attack with steadiness and composure. They also say, figuratively, *Combattre de pied ferme*; to fight steadily without quitting ground, or giving way.

**Lacher le PIED, Fr.** to give way.

**Gagner au PIED, Fr.** to take to one's heels, or to run away.

**PIED poudreux, Fr.** an expression of ridicule among the French, which is applied to any soldier that deserts from one regiment to another.

**Au PIED de la lettre, Fr.** literally.

**PIEGE, Fr.** snare.

PIERRE,

## P I L

**PIERRE**, *Fr.* a stone.

**PIERRE à feu**, *Fr.* flint.

**PIERRE à fusil**, *Fr.* a flint.

**PIERRÉE**, *Fr.* a drain, a water-course.

**PIERRIER**, *Fr.* a swivel, a pedrero.

**PIERRIERE**, *Fr.* a quarry.

**PIERRIERES**, *Fr.* heaps of large stones which are hastily collected together near a fortified place, and are covered with earth, in order to conceal them from a besieging enemy. If grass should have grown upon it, the enemy will, in all probability, consider it as a mere eminence or commanding spot of ground, and will, of course, endeavor to get possession of it. The instant he makes the attempt, a heavy discharge of ordnance must be directed from the rampart against this heap, for the purpose of scattering the stones amongst the assailants, and necessarily forcing them to retire. Perhaps it might add to this species of defence, were temporary works thrown up in front of the heap, and a mine laid underneath.

**PIERS**, the columns on which the arch of a bridge is raised.

**PIES**, *Fr.* knights that were created by Pope Pius IV. in 1560, with the titles of Counts Palatines. They took precedence, at Rome, of the knights of the Teutonic order, and of those of Malta.

**PIETINER**, *Fr.* to move the feet with great quickness. It likewise signifies to mark time, but not technically so.

**PIETON**, *Fr.* a foot soldier.

**PIEUX**, *Fr.* This word is sometimes used in the plural number to signify palisades.

**PIGNON**, *Fr.* the gable end of a building.

**PIKE**, in war, an offensive weapon, consisting of a wooden shaft, 12 or 14 feet long, with a flat steel head, pointed, called the spear. This instrument was long in use among the infantry; but now the bayonet, which is fixed on the muzzle of the firelock, is substituted in its stead. The Macedonian phalanx consisted of a battalion of pikemen.

**PIKEMEN**, soldiers armed with pikes.

**PIKESTAFF**, the wooden pole or handle of a pike.

**PILA**, a small standard which was

## P I L

used among the Romans, when the shields were piled together, over which it floated.

**PILANI**, Roman soldiers who were armed with a sort of spontoon, the iron of which was thick and long, called pilum.

**PILE**, (*pieu*, *Fr.*) a beam of wood, pointed, and frequently shod with iron, which is driven into the ground to form a solid foundation for buildings.

**Pile**, any heap; as a pile of balls, shells, &c.

**Piles of shot or shells**, are generally piled up in the king's magazines, in three different manners: the base is either a triangular square, or a rectangle; and from thence the piles are called triangular, square, and oblong.

**RULES for finding the Number in any PILE.**

*Triangular PILE.*

Multiply the base by the base  $+ 1$ , this product by the base  $+ 2$ , and divide by 6.

*Square PILE.*

Multiply the bottom row by the bottom row  $+ 1$ , and this product by twice the bottom row  $+ 1$ , and divide by 6.

*Rectangular PILES.*

Multiply the breadth of the base by itself  $+ 1$ , and this product by three times the difference between the length and the breadth of the base, added to twice the breadth  $+ 1$ , and divide by 6.

*Incomplete PILES.*

Incomplete piles being only fragments, wanting a similar small pile on the top, compute first the whole pile as if complete, and also the small pile wanting at top; and then subtract the one number from the other. *Bombardier.*

**Pile de boulets**, *Fr.* see *Pile of shot or shells.*

**To Pile arms**, to place three muskets, with fixed bayonets, in such a relative position, that the butts shall remain firm upon the ground, and the muzzles be close together in an oblique direction. This method has been adopted to prevent the injury which was formerly done to musquetry, when the practice of grounding the firelock prevailed. Every recruit should be taught how to pile arms before he is dismissed the drill.

PILLER, *Fr.* a buttress.

PILLAGE, (*pillage*, *Fr.*) the act of plundering.

To PILLAGE, to spoil, to waste, to plunder.

PILLAGER, a plunderer; one who gets a thing by violent or illegal means.

PILLAR, in a figurative sense, support. A well-disciplined army may be called the pillar of the state; an ill-disciplined one, the reverse.

PILLARS and ARCHES. It was customary among the ancients, particularly among the Romans, to erect public buildings, such as arches and pillars, for the reward and encouragement of noble enterprises. These marks were conferred upon such eminent persons as had either won a victory of extraordinary consequence abroad, or had rescued the Commonwealth from any considerable danger. The greatest actions of the heroes they stood to honour, were curiously expressed on the sides, and the whole procession of a triumph was sometimes cut out. The arches built by Romans were only of brick; those of Camillus of plain square stone; but those of Cæsar, Drusus, Titus, Trajan, Gordian, &c. were all entirely marble. As to their figure, they were at first semicircular; whence probably they took their names. Afterwards they were built four square, with a spacious arched gate in the middle, and little ones on each side. Upon the vaulted part of the middle gate, hung little winged images, representing victory, with crowns in their hands, which, when they were let down, they put upon the conqueror's head as he passed under the triumph.—Fabricii Romæ, cap. 15.

The columns or pillars were converted to the same design as the arches, for the honourable memorial of some noble victory or exploit, after they had been a long time in use for the chief ornaments of the sepulchres of great men, as may be gathered from Homer, *Iliad* 16.

The pillars of the emperors Trajan and Antoninus, have been extremely admired for their beauty and curious work. We find them thus particularly described in page 53, of Kennett's Roman Antiquities.

The former was set up in the middle of Trajan's forum, being composed of 24 great stones of marble, but so cu-

riously cemented, as to seem one entire natural stone. The height was 114 feet, according to Eutropius, (*Hist. lib. 8.*) though Martian (*lib. iii. cap. 13.*) seems to make them but 128. It is ascended by 135 winding stairs, and has 10 little windows for the admission of light. The whole pillar is incrustated with marble, in which are expressed all the noble actions of the emperor, and particularly the Decian war. One may see all over it the several figures of forts, bulwarks, bridges, ships, &c. and all manner of arms, as shields, helmets, targets, swords, spears, daggers, belts, &c. together with the several offices and employments of the soldiers; some digging trenches, some measuring out a place for the tents, and others making a triumphal procession, (*Fabricius, cap. 7.*) But the noblest ornament of this pillar, was the statue of Trajan on the top, of a gigantic bigness, being no less than 20 feet high. He was represented in a coat of armour proper to the general, holding in his left hand a sceptre, in his right a hollow globe of gold, in which his own ashes were deposited after his death, (*Cassius, par. I. C. 2.*)

The column or pillar of Antoninus was raised in imitation of this, which it exceeded only in one respect, that it was 176 feet high; (*Martian, lib. vi. cap. 13.*) for the work was much inferior to the former, as being undertaken in the declining age of the empire. The ascent on the inside was 106 stairs, and the windows in the sides 56. The sculpture and the other ornaments were of the same nature as those of the first; and on the top stood a colossus of the emperor naked, as appears from some of his coins.—See Martian *idem*.

Both these columns are still standing at Rome, the former most entire. But Pope Sixtus I. instead of the two statues of the emperors, set up St. Peter's on the column of Trajan, and St. Paul's on that of Antoninus.—*Cassius, Part. I. C. 11.*

Among the columns and pillars we must not pass by, (to use Mr. Kennett's words) the *Milliarium aureum*, a gilded pillar in the forum, erected by Augustus Cæsar, at which all the highways of Italy met, and were concluded. (*Martian, lib. iii. cap. 18.*) From this they counted their miles, at the end of every mile

mile setting up a stone; whence came the phrase *Primus ab urbe lapis*, and the like. This pillar, as Mr. Tasseil informs us, is still to be seen.

*Pompey's Pillar*, so famous in history, is also still to be seen in Egypt; notwithstanding the incursions of the French, and the subsequent victory of the English in that country. It is made entirely of granite, and measures from the earth (as it stands,) to the pinnacle, ninety feet. Had Bonaparte conquered the country, he would probably have imitated what Paulus Æmilius did at Delphi, and ordered his statue to be placed upon it. The Pillar at Delphi was square, and of white marble, and on it was to have been placed a golden statue of Perseus. When the latter was conquered, Æmilius observed, that the conquered ought to give way to the conqueror. Perhaps the gratitude of the Ottoman court will, some day, pay a fair tribute to the memory of Sir Ralph Abercrombie.

*PILON*, *Fr.* a weapon, the use of which has been recommended by Marshal Saxe, in his plan for forming several battalions four deep. The two first ranks are to be armed with muskets, the third and fourth with large half pikes or pilons, having their muskets slung across their shoulders.

The authority of Marshal Saxe is certainly too respectable to be hastily called in question; we are nevertheless of opinion, that a weapon which is eight or nine feet long must be extremely cumbersome and unwieldy, not only in long marches, but likewise in the heat of battle. We may also ask, in conformity to that general's own sentiments, how any soldier (who must have his musket slung across his shoulders, whilst he uses the pilon or long pike) can act in broken and narrow passes?

*PILON*, *Fr.* a drumstick.

*PILOAGE*, *Fr.* pile-work. This is essentially useful in marshy grounds, &c.

*PILOTS*, *Fr.* a pile; a large stake.

*PIUM*, a species of javelin which was used by the Romans. They dated these weapons with so much force, that, according to tradition, two men have been pierced through, together with their shields or bucklers. The head of an arrow was likewise so called by the Romans.

*PIN*, an iron nail or bolt, with a round head, and generally with a hole at the end to receive a key: there are many sorts, as axle-tree pins, or bolts, bolster-pins, pole-pins, swing-tree-pins, &c.

There are likewise *musquet pins*, which are small pieces of iron or wire that fasten the stock. Soldiers are very apt to take out these pins in order to make their pieces ring; but they should not, on any account, be permitted to do so.

*PINASSE*, *Fr.* a pinnacle.

*PINCES*, *Fr.* crows; instruments which are used by miners. The French distinguish them in the following manner:—*Pince simple*; *Pincer à talon*; *Pince à pied de biche*; and *Pince à main*.

*PINDARES*, *Ind.* plunderers and marauders who accompany a Mahratta army.

*PINDARONS or Marauders*, *Ind.* armed men in the East Indies who serve without pay, and subsist entirely by plunder.

To *PINION*, to bind the hands or arms of a person so as to prevent his having the free use of them.

*PINK*, a sort of small ship, masted and ribbed like other ships, except that she is built with a round stern, the bends and ribs compassing, so that her sides hudge out very much.

*PINTLE*, in artillery, a long iron bolt, fixed upon the middle of the limber-bolster, to go through the hole made in the trail-transom of a field-carriage, when it is to be transported from one place to another.

*PINTLE-plate*, is a flat iron, through which the pintle passes, and nailed to both sides of the bolster, with 8 diamond-headed nails.

*PINTLE-washer*, an iron ring through which the pintle passes, placed close to the bolster for the trail to move upon.

*PINTLE-hole*, is of an oval figure, made in the trail-transom of a field-carriage, wider above than below, to leave room for the pintle to play in.

*PIOBRACH*, the Gaelic word for an air played upon the bagpipe. It is now more strictly applied to the ancient Highland martial music. It is allowed by all persons who have heard the *pio-brach*, that it exceeds every other sort of music known in these kingdoms. It

speaks forcibly to the mind, and is wonderfully descriptive of the various feelings to which the human heart is subject.

Promancers, are either simple or compound; some of them consist of a march, &c. and are beautifully varied, and highly characteristic.

It is a great instance to be regretted, that the origin of this species of music has not been more accurately traced; the more so, because we are inclined to think, with an oblique correspondent who has furnished some interesting particulars respecting the Highland drums, &c. that many words, &c. which have been ascribed to the ancient Romans, and to their degenerate successors, owe their origin and etymology to the hardy inhabitants of North Britain.

**PICCHE**, *Fr.* a mattock, pick-axe.

**PLOCHER**, *Fr.* to dig.

**PIONEERS**, in war time, are such as are commanded in from the country, to march with an army, for mending the ways, for working on entrenchments and fortifications, and for making mines and approaches: the soldiers are likewise employed in all these things.

Most of the foreign regiments of artillery have half a company of pioneers, well instructed in that important branch of duty. Our regiments of infantry and cavalry have 3 or 4 pioneers each, provided with aprons, hatchets, saws, spades, and pick-axes.

**PIONNIERS**, *Fr.* pioneers.

**PIPE**, a tube; a musical instrument; a liquid measure, containing two hog-heads.

**PIPER**, from the Gaelic *piob mhor*, which signifies great pipe. The highland bagpipe is so called, and is an instrument well calculated for the field of battle.—When the bagpipe is skilfully performed, its martial noise has a wonderful effect upon the native Scotch, particularly the Highlanders, who are naturally warlike. The pair of pipes which were presented by Sir Eyre Coote to the 71st regiment, during its gallant services in the East Indies, are a memorable instance of the high estimation in which this native instrument has been uniformly held.

**Tail PIPER**, a small brass pipe fixed at the swell of the musquet, which receives the ramrod.

**Trumpet PIPE**, a small brass pipe

near the muzzle of the firelock, through which the ramrod is let down. It is called the trumpet-pipe from its resemblance to the mouth of a trumpet. The Prussians have no pipes to their muskets: the ramrod being received into a cylinder which runs parallel with the barrel.

**PIPE-Clay** and **Whiting**, a composition which soldiers use for the purpose of keeping their cross-belts, &c. clean. Every soldier belonging to the infantry of the line, and to the fencible infantry serving at home, is stamped 1s. 4d. per annum to supply himself with pipe-clay and whiting.

**PIQUE**, *Fr.* a pike. Before the use of muskets, it was customary, among the French, to make use of this word by way of command or designation;—Hence, *faire disfilé les piques*, to make the pikes, or a body of men armed with pikes, break off or detach; *le régiment est de tout de piques*, the regiment consists of so many pikes, or men armed with pikes.

**PIQUEE**, *Fr.* a stake. See **PICKET**.

**PIQUET**, *Fr.* picket: a punishment so called in cavalry corps. See **PICKET**.

**PICKET**, *Fr.* a certain number of men, horse, or foot, who do duty for 24 hours to prevent surprises. See **PICKET**.

**PIQUET ferré par le bas et bien pointu**, *Fr.* a picket or stake with a sharp iron ferrel at the end of it. It is used by engineers when they trace a plan, and wish to mark out the angles.

**Lever le Piquet**, *Fr.* to call in the picket. It also signifies, figuratively, to decamp or march off the ground.

**PIQUEUR**, *Fr.* a man employed in the different workshops belonging to the artillery to superintend the works, and to keep an account of the several materials. There are other persons subordinate to these, whom the French call *chasseurs*, from *chasse-en-avant*, sort of overseers, whose business is to see the jobs expeditiously finished.

**PIQUICAINS**, *Fr.* irregular and ill-armed soldiers, of which mention is made in the history of the reign of Philippe Auguste. They were attached to the infantry.

**PIQUETIER**, *ou Piquenaire*, *Fr.* a pikeman, or one who is armed with a pike.

**PIRA-**

PIRAMIDE, *Fr.*—See *PARADO*.  
 PYRAMIDES *de feu*, *Fr.*—See *Jets de feu*.

PIRATE, *Fr.* a pirate.

PISTE, *Fr.* the track or tread a horseman makes upon the ground he goes over.

PISTOL, a species of small fire arms, of which there are various sorts and sizes, viz.

*Highland Pistol.* The old Highland pistol appears singular enough in the present day. Some, that have been preserved, exhibit marks of excellent workmanship. The stock is metal, and the butt end so shaped, that when fired off, the pistol can be used as a very serious weapon at close quarters. The Highland pistol, though never used by any of the British regiments, is still worn by every person who wishes to be considered as fully dressed and accounted in the ancient garb. It is suspended from the left side of the waistbelt.

*Horse-Pistol*, so called from being used on horseback, and of a large size.

*Management of the Pistol on horseback for military purposes.* Every recruit when he joins the horse-drill should be made perfectly acquainted with the handling of his pistol according to rule, and of firing correctly at a mark. To this end he must be taught to draw, load, fire, and return his pistol, by word of command, viz.

1st. The right glove is to be taken off, and the goat-skin thrown back.

*Draw your right Pistol.* This is done at two motions; 1st. the man must seize the handle of the pistol with his right hand, the back towards the body. 2d. Draw it out of the holster with a brisk motion, dropping the butt of the pistol on the right holster, and keeping the muzzle upwards.

*Load your Pistol.* The pistol is to be dropped smartly into the left hand; open the pan, prime, cast about, and load; as soon as loaded, seize the pistol by the butt, and come to the same position as in the second motion in drawing; the bridle hand must be kept as steady as possible. In loading the pistol, the barrel is to be kept to the front.

*Return your Pistol.* This is done in two motions: 1st. turn the muzzle into the holster, with the back of the hand towards the body, and press home

the pistol. 2d. Quit the right hand briskly.

*Cock your Pistol.* Drop the pistol into the left hand, cocking with the thumb of the right, and as soon as done come to the second position, viz. muzzle upwards.

*To the Right Present.* Come smartly to a present, looking well along the barrel to the object you are presenting at, and turning your body as much as is necessary to aim well, but taking care not to displace your bridle hand.

*Fire!* Pull briskly at the word, and as soon as fired go on with the loading motions; when loaded, come to the position as in the first direction, viz. muzzle upwards.

*Cock your Pistol*, as already explained.

*To the Left Present.* This requires particular attention, as the men will be apt to bring their right shoulders too forward, and by that means displace their bodies and the bridle hand.

*Fire!* as already explained.

*Cock your Pistol.* *To the Front Present.* You must raise yourself in your stirrups, in order to take a proper aim; you must then look well along the pistol, and wait for the word *Fire*.

*Fire!* As soon as you have fired, you must drop into your seat, and go on with the loading motions, as before directed.

*Return your Pistol*, as already explained.

*Draw your Left Pistol.*—See *Draw your Right Pistol*.

*Pocket-Pistol*, a small pistol, which may be conveniently carried in the pocket.

PISTOLET, *Fr.* a pistol. It derives its name from *Pistoria*, an episcopal town of Tuscany, in Italy; about 30 miles N. W. of Florence, where the first pistols were made; in the same manner that bayonet takes its appellation from Bayonne, an episcopal city of Gascony, in France; or, as some pretend, from Bayon, a town of Lorraine, in France; and as others again assert, from Bayona, a town of Galicia in Spain, seated on a small gulph of the Atlantic Ocean. The *Reitres*, who were armed with them, were called *Pistoliers*, Pistoleers, as musquet-bearers were named *musquetiers*, musqueteers.

P I R

**PISTOLET D'Arçon**, Fr. a pistol attached to the bow of a saddle, commonly called a horse-pistol.

**PISTOLIER**, Fr. This word is used among the French to signify an expert marksman with a pistol.

**PITANS**, *Ind.* according to Mr. Orme, in his history of the Carnatic, the Pitans are supposed to be the descendants of the northern Indians, who were early converted to Mahomedanism. They have been reckoned the best troops, and, of course, the most dangerous enemies of the throne of Delhi. They are naturally fierce.

**PITAN Nabobs**, certain chiefs in India so called, viz. of Cudapah, Canoul, and Savanore.

**PITAUX**, Fr. This word is sometimes written petaux, and was formerly used to distinguish those peasants that were pressed into the service, from soldiers who were regularly enlisted.

*To PITCH*, (*asseoir*, Fr.)

*To PITCH a camp*, (*asseoir un camp*, Fr.) to take a position, and to encamp troops upon it according to the principles of castrametation.

*To PITCH a tent*, to place a certain regulated quantity of canvas upon poles, so as to afford a temporary cover, against the inclemencies of the weather for one or more officers or private soldiers. In order that the men may become expert in pitching and striking tents, they ought to be practised whilst in camp to do either.

**PITCHANDAH**, *Ind.* a fortified pagoda on the north bank of the Cobroon, one mile east of Seringham. It was taken possession of, and immediately abandoned by the English army in July 1751.—See pages 178, 179, of Orme's History of the Carnatic.

**PITONS**, Fr. nails with round eyes. They likewise signify pins with iron rims.

**PITONS d'assut**, Fr. iron pins which are used to keep the plate-bands of the carriage of a cannon tight and compact.

**PIVOT**, (*Pivot*, Fr.) in a military sense, that officer, serjeant, corporal, or soldier, upon whom the different wheelings are made in military evolutions.—There are two sorts of pivots distinguished according to the position of the troops who are governed by them, viz.

*standing pivot* and *moveable pivot*. When a battalion, for instance, stands in open column of companies, the *right in front*, the last man upon the left of the front rank of each company, is called the *inner*, or *standing pivot*; and the first man upon the right ditto, is called the *outer*, or *wheeling flank*. So much depends upon the accurate position of the different pivots, that no movement can be thoroughly correct unless the most scrupulous attention be paid to them.—Officers in particular ought to recollect, (what is so sensibly pointed out in the General Rules and Regulations) that when they are posted upon the flanks, they become essentially necessary to the preservation of that perpendicular and parallelism of a march, without which direction the best digested manœuvres must be ultimately rendered useless.—They must constantly bear in mind, that it belongs to the mounted field officers to watch the aggregate, and that they themselves, being incorporated parts of the different divisions, are to move successively forward, with no other object in view than the perpendicular point before them. For if they once turn to the right or left, or become anxious about the movements of others, instead of being the means of insensibly correcting any errors that might casually occur, they will deviate themselves, and at every step increase the irregularity. On this account, the instant an officer has wheeled his division, he must resume his perpendicular position, look steadfastly on his leading pivot, preserve his relative distance, and keep his person perfectly square. He ought likewise to be particularly correct in stepping off when the wheel is completed.

*Moveable Pivot*, one which during the wheel of its division advances in a circular direction, instead of turning on the spot where it originally stood. Thus when divisions, &c. are successively wheeled, without being first halted, the pivot upon which they wheel is said to be *moveable*.

In the drill, single ranks are frequently wheeled on a moveable pivot. In which case, both flanks are moveable, and describe concentric circles round a point which is a few paces from what would otherwise be the standing flank; and eyes are all turned towards the directing

recting pivot man, whether he is on the outward flank, or on the flank wheeled to.

**Pivot-Flanks**, the flanks upon which a line is formed from column. When the right of the battalion is in front, the pivot flanks are on the left of its several companies, platoons, &c. and vice versa, when the left is in front.

**Pivot-flank officer**, the officer who is on the first flank. In all wheelings during the march in column the officer on that flank upon which the wheel is made must consider himself as the pivot.

**Platoon Pivots**, the men upon whom a battalion marches in column of platoons, is wheeled up into line, or backward into column, when the line has been formed according to a given front.

**PLACAGE**, *Fr.* in fortification, a kind of revetment, which is made of thick plastic earth, laid along the talus of such parapets as have no mason work, and which is covered with turf.

**PLACARD**, } or, as it is in the ori-  
**PLACART**, } ginal Dutch language,  
*Placaat*, a term used abroad for a proclamation, edict, &c. put up in all public places, by government authority; whereby their subjects are ordered to do, or forbear, something expressed therein. See **MANIFESTO**.

**PLACARD**, *Fr.* any bill, or public paper, that is posted up. It likewise means a libel.

**PLACARDER**, *Fr.* to post up; to libel.

**To PLACE**, to appoint; as to place an officer in the 17th foot. It also signifies to post or distribute; as, to place a sentinel; to place a picket. This word is confined to a particular situation, but is not used as a general word amongst us. The French say, *Placer un jeune homme*; to provide for a young man: *Placer dans l'armée*; to provide for in the army. Although, technically speaking, it be correct to use the expression, *to displace*; yet in this case the word means, to put out of some particular situation; as, to displace an officer from the 33d regiment. But we do not say to displace from the army, nor can we, with propriety or usage, say, to place in the army.

**PLACE**, *Fr.* Every species of fortified place is so called.

**PLACE**, *Fr.* The French say, when any number of men have fallen in action, *Il est demeuré tel nombre d'hommes sur la place*; such a number of men remained, or were left upon the spot.

**PLACE**, *emplacement*, *Fr.* any spot or scite which suits the plans of an architect to build upon.

**PLACE**, in fortification, signifies in general terms, a fortified town, a fortress. Hence we say it is a strong place.

**PLACE of arms** (*Place d'armes*, *Fr.*). This term has various significations, although it uniformly means a place which is calculated for the rendezvous of men in arms, &c.

1st. When an army takes the field, every strong hold or fortification which supports its operations by affording a safe retreat to its depots, heavy artillery, magazines, hospitals, &c. is called a *place of arms*.

2dly. In offensive fortifications, those lines are called *places of arms*, or *parallels*, which unite the different means of attack, secure the regular approaches, &c. and contain bodies of troops who either do duty in the trenches, protect the workmen, or are destined to make an impression upon the enemy's outworks.

There are *demi-places of arms* between the *places of arms*. These are more or less numerous in proportion to the resistance made by the besieged.

**PLACE**, *Fr.* This word is frequently used by the French, in a military sense, to signify ration, viz.

*Une Place de bouche*, *Fr.* one ration of provisions.

*Deux Places de fourrage*, *Fr.* two rations of forage.

**PLACES of arms** belonging to the covert way. These are divided into two sorts, viz. *saliant* and *rentrant* places of arms. There are likewise places of arms composed of traverses, which are practised or made in the dry ditches of military towns, in a perpendicular direction to the faces of the half moons and the tenailles.

**PLACE of arms in a fortified town.** (*Place d'arms d'une ville de guerre*, *Fr.*) The place of arms is always in the middle of the town, generally in the market place, if it be central. The ground must be sufficiently spacious for

for the parade of the garrison, or at least for the greatest part of it; for it is there that the several guards are paraded, and the troops sometimes exercised; especially when the barracks are too confined, or when it is not thought expedient to march them beyond the gates for that purpose.

*Place of arms of an attack, or of a trench*, are deep trenches 15 or 13 feet wide, joining the several attacks together: they serve for a rendezvous and station to the guard of the trenches, to be at hand to support the workmen when attacked. It is customary to make 3 places of arms, when the ground will permit: the first, and most distant from the place, is about 500 toises, or 600 yards, from the glacis of the covert-way; the second is within 140 toises, or 230 yards; and the third at the foot of the glacis. See PARALLALS.

*Place of arms of a camp*, was, strictly speaking, the bell tents, at the head of each company where the arms were formerly lodged; likewise a place chosen at the head of the camp, for the army to form in line of battle, for a review, or the like.

*Place of arms of the covert way*, is a part of it, opposite to the re-entering angle of the counterescarp, projecting outwards in an angle.

*Place marécageuse*, Fr. a marshy place. A place of this description may be easily fortified, and at little expence; nor does it require many troops for defence. Among other advantages, that of not being exposed to an enemy's mines, is by no means the least considerable. On the other hand, piles must be sunk in almost every direction; and should it be invested, it is almost impossible to succour it. Add to these inconveniences, the danger to which the garrison must be constantly exposed of being visited by some contagious disorder.

*Place élevée dans un plat pays*, Fr. places that are put in a state of defence in a flat open country. These places are almost always secured by regular fortifications: the soil is good, and there is always plenty of earth adapted to every species of military work; there is abundance of water; and should an enemy attempt to carry them by insulting the works, entrench-

ments may be easily thrown up to check him. Add to this, that it would require two or three armies, at least, to cut off the various supplies which can be procured from the country round. On the other hand, the goodness and abundance of the soil are equally beneficial to the besieging army. For the troops are thereby enabled to throw up entrenchments, to build redoubts, erect batteries, and by thus securing their approaches, to annoy the besieged at all hours, and in all ways.

*Place située sur le penchant d'une montagne*, Fr. a place situated or built upon the declivity of a hill. It is very difficult to fortify a spot of this sort.— Whatever is erected upon it, must be commanded by the higher ground, and the body of the place be, of course, exposed to every attack.

*Place située dans une vallée*, Fr. a town, fortress, or hold that is built in a valley. Places so situated must be in constant jeopardy, as by getting possession of the heights, the enemy can always command them.

*Place située sur les bords d'une grande rivière*, Fr. a place, &c. built upon the banks or borders of a large river. Places constructed in a situation of this sort, are preferable to all others, provided they have a free and uninterrupted communication with the principal quarter from whence stores, provisions, and ammunition may be drawn. They may be regularly fortified towards the interior of the country, and it will require little or no artificial means to secure them on the side of the river.

*Place de guerre*, Fr. any town or place that is regularly, or irregularly fortified.

*Place basse*, Fr. In fortification the lower flanks according to certain systems are so called.

*Place forte*, Fr. a strong hold or place which presents at all points so many difficult obstacles against a besieging army, that it cannot be carried (except by surprise) unless the regular means of reducing it be resorted to.

*Places contremurées*, Fr. all fortresses, &c. are called *places contremurées*, or *countermined*, which independently of their open and visible means of defence, &c. have subterraneous fortifications that are alongside the revet-

ments

ments of the works, under the glacis, or beneath the neighbouring ground, to interrupt the approaches, and destroy the works of a besieging army.

**PLACE haute**, Fr. According to the systems of some engineers (which have not been followed of late years) the *place haute*, or high place, is that which stands the highest of three platforms that were constructed in the shape of an amphitheatre along the flanks of the bastions. It stands on a level with the terreplein of the bastion. The cannon which is destined to play against a besieging enemy is placed upon it. Pagan, Blondel, and others, who have copied from these systems, did so from an idea, that considerable advantages might be derived from a powerful and concentrated discharge of artillery and musquetry. Not conceiving that it was possible to construct casemated flanks free of smoke, they built three or four open flanks, one above the other. But they were soon rendered useless and untenable by the shells that fell, and the fragments that flew about in consequence of the demolition of the mason work. Casemated ramparts, on the contrary, have been known to stand proof against the heaviest discharge of bombs, &c. to take up little room, and to afford ample space for a wide range of artillery, that is kept under cover.

**PLACES en première ligne**, Fr. those parts of a country which are most exposed, and most likely to be attacked by an enemy.

**PLACES en seconde ligne**, Fr. those parts or places which lie between the center of a country and its borders. Those indeed which are again closer to the center, are called *les troisièmes places de lignes*.

**PLACES d'armes du chemin couvert**, Fr. salient and reentrant spaces which flank the branches belonging to the covert way, and in which men are posted for their defence. We call it also *place of arms without*, or that space of ground which is allowed to the covert way, in order to have cannon planted on it, for the purpose of annoying the enemy in his approaches, and of forcing him to retire.

**PLACES non revêtues**, Fr. All fortified towns or places are so called, when the ramparts that surround them are

only lined with placcage or simple turf. In this case the ramparts, so lined or covered, ought to be fraised and palisadoed above the berme or foot path, to prevent surprizes. Hedges made of good quickset, well interwoven with other wood, and carefully attended to, will save the expence of palisadoes, which in marshy soils soon rot, and require to be replaced.

**PLACES revêtues**, Fr. All fortified towns or places are so called, whose ramparts are lined or covered with brick or stone. It frequently happens, that the revetement does not reach the terre-pleine of the rampart, especially when the parapets are thick and solid; in which case the revetement is more easily covered by the glacis. Parapets are no longer lined.

**To be PLACED**. This expression is frequently used in naval and military matters, to signify the appointment or reduction of officers. Hence to be placed upon full or half pay. It is more generally applicable to the latter case.

**PLACER**, Fr. to fix, to settle.—This word is used among the French, as with us, to express the act of providing for a person by appointing him to a desirable situation, viz. *Placer un jeune homme dans un régiment*; to get a young man a commission in a regiment.

**Un cheval bien PLACÉ**, Fr. A horse is said, among the French, to be well placed, when his forehead runs perpendicularly down between the nostrils.

**PLAFOND**, Fr. the ceiling.

**PLAFONNER**, Fr. to ceil or adorn the upper part of a room, &c.

**PLAGE**, Fr. flat shore, or extent of coast, where there are no creeks, &c. for vessels to ride in.

**Belted PLaid**, the ancient garb of the Scotch Highlanders, and still worn by some of our Highland regiments.

The belted plaid consists of twelve yards of tartan, which are plaited, bound round the waist by a leathern belt, the upper part being attached to the left shoulder.

In the regulations relative to the clothing and half mounting of the British infantry it is directed, that in a Highland corps serving in Europe, in North America, or at the Cape of Good

Hope, each serjeant, corporal, drummer, and private man, shall have six yards of plaid once in two years; and a purse every seven years.

**PLAIE**, *Fr.* a wound.

**PLAINE**, *Fr.* scutcheon of a lock; apron of a cannon.

**PLAINE Campagne**, *Fr.* the open field. Hence, *La bataille s'est donnée en plaine campagne*; the battle was fought in the open field.

**PLAN**, *ground plot*, or *ichnography*, in fortification, is the representation of the first or fundamental tract of a work, shewing the length of its lines, the quantity of its angles, the breadth of the ditches, thickness of the rampart, parapets, and the distance of one part from another; so that a plan represents a work, such as it would appear if cut equal with the level of the horizon, or cut off at the foundation: but it marks neither the heights nor depths of the several parts of the works: that is properly *profile*, which expresses only the heights, breadths, and depths, without taking notice of the lengths. As architects, before they lay the foundation of their edifice make their design on paper, by which means they find out their faults, so an engineer, before he traces his works on the ground, should make *plans* of his designs upon paper, that he may do nothing without serious deliberation.

Exact plans are very useful for generals or governors, in either attacking or defending a place, in chusing a camp, determining attacks, conducting the approaches, or in examining the strength and weakness of a place; especially such plans as represent a place with the country about it, shewing the rivers, fountains, marshes, ditches, valleys, mountains, woods, houses, churches, defiles, roads, and other particulars, which appertain to it.

**PLAN of comparison**, a geometrical sketch of any fortress and adjacent country within cannon shot, in which the different levels of every principal point are expressed.

\* **PLAN**, *Fr.* See **PLAN**.

*Lever le PLAN de quelque place de guerre*, *Fr.* to draw the plan of a fortified town or place.

**PLAN relevé**, ou *plan en relief*, *Fr.* a plan or representation of all the out-

works and inside buildings belonging to a fortified town or place.

**PLANCHES**, *Fr.* boards, planks.

**PLANCHES d'entrevoûte**, *Fr.* boards or planks that are laid between the joists or posts of a building.

**PLANCHETTE**, *Fr.* a small board or copper-plate, which is used in practical geometry.

*Lever à la PLANCHETTE*, *Fr.* to give an exact representation of any space of ground, with its appurtenances, on copper, or on a piece of paper which is pasted upon wood. In order to do this, a person must be well versed in practical geometry.

**PLANCHEYER**, *Fr.* to board or floor.

**PLANCONS**, *Fr.* literally, twigs, or small round pieces of wood. A term used in hydraulics. See *Belidor*.

**Geometrical PLANE in perspective**, (*Plan en perspective*, *Fr.*) a plain surface parallel to the horizon, placed lower than the eye.

**Horizontal PLANE in perspective**, (*Plan horizontal en perspective*, *Fr.*) a plane which lies parallel to the horizon, and on which the eye is supposed to be placed.

**Verticle PLANE in perspective** (*Plan vertical ou plan à vue d'oiseau*, *Fr.*) a plain surface which passes through the eye, and is perpendicular to the geometrical plane.

**PLANIMETRY**, (*Planimétrie*, *Fr.*) that part of geometry which considers lines and plain figures, without any reference to heights or depths in opposition to stenometry, or the mensuration of solids.

**PLANISPHERE**, (*Planisphère*, *Fr.*) a representation of the globe or sphere on paper, for geometrical and astronomical purposes.

**To PLANT**, in a military sense, to place, to fix; as to plant a standard.—It likewise signifies to arrange different pieces of ordnance for the purpose of doing execution against an enemy or his works. Hence to plant a battery. Johnson applies it to the act of directing a cannon properly. The French use the word generally as we do, except in the last mentioned sense. They say, *mettre le canon en batterie*. In others the term bears the same signification, with occasional deviations when they apply it figuratively, viz.

**PLANTER le piquet chez quelqu'un**, Fr. to quarter oneself upon any body.

**PLANTER là quelqu'un**, Fr. to leave a person abruptly, or, as we familiarly say, to leave another in the lurch.

**PLANTER quelque chose au nez de quelqu'un**, Fr. to reproach a person with any thing, or, as we familiarly say, to throw it in his teeth. *Il lui planta sa poltronnerie au nez*; he reproached him openly for his cowardice, or he threw his cowardice in his teeth.

**PLANTÉ**, Fr. to be fixed: to be stationary. *Un soldat bien planté sur ses pieds*; a soldier that is well set up.

**PLANTER un bâtiment**, Fr. to lay the first stones, or the foundations of a building.

**PLAQUE**, Fr. the shell of a sword. See PLACAGE.

**PLAQUES de Plomb**, Fr. sheets of lead. These are used for various purposes. In the artillery, to cover the vent of a cannon; and on board ships of war, to stop the holes, &c. that are made by cannon shot.

**PLAQUER**, Fr. to lay one plank over another; to cover any space with earth or turf, &c.

**PLASM**. See MORTON.

**PLASTEL**, a piece of greased leather or rag used by riflemen, &c. to make the ball fit the bore of the piece.

**PLASTER**, in building, a substance made of water and some absorbent matter, such as chalk or lime, well pulverised, with which walls are overlaid.

**PLASTRON**, a piece of leather stuffed, used by fencing masters, to receive thereon the pushes made at them by their pupils.

**PLASTRON**, Fr. a breast plate, or half cuirass. In the old French service the gens d'armes, the heavy cavalry, the light horse, &c. were obliged to wear breast plates on all occasions at reviews, &c. The hussars were an exception to this order, which took place on the 28th of May, 1733. In the original order, dated the 1st of February, 1703, it was particularly specified, that in order to be accustomed to their weight, the above-mentioned corps should wear half cuirasses in time of peace. The captains of troops were obliged to keep the half cuirasses belonging to their men in constant repair.

**PLAT**, etc, Fr. flat, level, low. The flat side of any thing; as, *Plat de sabre*.

**PLAT Pays**, Fr. a flat or low country. It is generally used among the French to signify that extent, or space of country, on which scattered houses and villages are built, in contradistinction to towns and fortified places. It is likewise used in opposition to a mountainous country: *Les soldats de la garnison vivoient au dépens du plat pays*; the soldiers of the garrison lived upon the adjacent villages or country.

**Punir à l'Plat de Sabre**, to punish a man by striking him with the flat side of a sabre blade. The French likewise say, *des coups de plat d'épée*; blows given with the flat side of a sword.— This mode of punishing is frequently adopted in foreign services, particularly among the Germans. M. de St. Germain, minister of the war department under Louis XVI. attempted to introduce it in France, but it was resisted by the army at large.

**Battre à PLATE couture**, Fr. to gain a complete and decided victory, or to beat an enemy so as to kill or take almost every man he had to oppose.— Hence, *Une armée battue à platte couture*; an army completely routed and undone.

**PLAT de l'équipage d'un vaisseau**, Fr. a dish or mess, consisting of seven rations or portions put together, and served out for the subsistence of seven men, on board French ships of war.

**Etre mis au PLAT des malades sur mer**, Fr. to be put upon the sick list on board a king's ship; or to receive such rations as are ordered to be served out to the sick.

**PLATAIN**, Fr. flat coast; a spot near the sea which is well calculated for a descent: as, *Le platain de d'Angoulin*, and the *Platain de Chatelaillon*, near Rochelle.

**PLATEAU**, Fr. a flat piece of wood, which is sometimes used to place mortars on, &c. This word also signifies the moulding which goes round a piece of ordnance, in three different places, to render its diminution towards the muzzle less abrupt to the eye.

**PLATEBANDES**, Fr. cap squares; a particular part of a piece of ordnance, which, though of a flat form or figure, rises beyond the rest of the metal,

tal, and is always cast before the moulding. There are three sorts of platebands upon a regular piece of ordnance, viz. cap-square and moulding at the breech; cap-square and moulding of the first reinforce; cap-square and moulding of the second reinforce.

**PLATEBANDS d'affûts**, Fr. iron cap-squares, which serve to keep the trunnions fast between the cheeks of a piece of ordnance.

**PLATEFORME de pilotage**, Fr. a platform made upon piles. When the pilework, in a piece of marshy ground, &c. has been completed, planks are placed upon it and secured together by iron pins; so that if it be necessary to establish a post or erect a battery, there may be foundation enough for the purpose. Forte-Ronge, at the entrance of Calais Harbour, has been constructed in this manner; and it has been found sufficiently strong to withstand the explosion of the *catamaran*.

**PLATFORM**, (*plateform*, Fr.) the upper part of every brick or stone building which is arched and has more floors than one, is so called. Hence the platform of a tower, or of a redoubt. All pieces of ordnance that are planted on a rampart, or are disposed along the lines of a besieging army, &c. have their platforms.

**PLATFORM**, in gunnery, is a bed of wood on a battery, upon which the guns stand; each consisting of 18 planks of oak or elm, a foot broad,  $2\frac{1}{2}$  inches thick, and from 8 to 15 feet long nailed or pinned on 4, 5, or 6 beams, from 4 to 7 inches square, called sleepers.—They must be made higher behind than before by 6 or 9 inches, to prevent too great a recoil, and to advance the gun easily when loaded. They are from 18 to 20 feet long, 8 feet before and 14 or 15 feet behind, and the direction left to the officers of the royal regiment of artillery.

Platforms are usually made of wood, and sometimes of stone. Platforms for mortars are made quite level.

**PLATES**, or *prise-plates*, in artillery, two plates of iron on the cheeks of a gun-carriage, from the cope square to the center, through which the prise-bolts go, and on which the handspikes rest, when used in raising the breech of the gun, &c.

**Breast-PLATES**, the two plates on the face of the carriage, on the other cheek.

**Breast-PLATES**, the clasps, with ornamented heads, by which the cross-belts in the army are attached.

**Train-PLATES**, the two plates on the cheeks at the train of the carriage.

**Dulidge-PLATES**, the six plates on the wheel of a gun-carriage, where the fel-lies are joined together.

**PLATINE de lumière**, Fr. the same as *plaques de plomb*, as far as it regards cannon. With respect to musquets and other fire-arms, it means that part of the hammer which covers the pan.

**Platine**, (according to the author of the *Nouveau Dictionnaire Militaire*, published in 1801,) when applied generally, signifies the whole of a lock belonging to a musquet or fire-arm.

**PLATOON**, in military affairs, was formerly a small body of men, in a battalion of foot, &c. that fired alternately. A battalion was then generally divided into 16 platoons, exclusive of the grenadiers, which formed 2 or 4 platoons more, or less as occasion required. At present the battalion is generally divided into wings, grand divisions, divisions, (or companies) subdivisions, and sections; and the word platoon is seldom used, except to denote a number (from 10 to 20) of recruits assembled for the purpose of instruction, in which case it may be considered synonymous with company.

**PLATRAS**, Fr. rubbish, such as ashes, pieces of broken brick, mortar, &c. It is used by refiners, for the purpose of distilling saltpetre into proper vessels.

They likewise extract saltpetre out of this rubbish, after having pounded it well together, and pressed it through a wash.

**PLATRER**, Fr. to plaister, to patch, to daub over.

**PLAY**, is occasionally applied to military action; as the cannon *play* upon the enemy, &c.

**PLEBEIAN**, from the Latin *plebeius*, any person of the situation, or condition of the common people. The term is chiefly used in speaking of the ancient Romans, who were divided into senators, knights, and plebeians, or common people.

**PLEDGET**,

## P L O

**PLEDGET**, the same as bolster, compress, in surgery, a kind of flat tent, which is laid over a wound to imbibes the superfluous humours that ooze out, and to keep it clean.

**PLEIN du Mur**, Fr. the main part or body of a wall.

**Cour PLÉNIÈRE**, Fr. an open court, to which every body has access. In the ancient times of France, when the *Grand Monarque* signified his intention of being present at a solemn assembly of his nobles, &c. or having magnificently tournaments, public notice was given that a *cour plénière*, or open court, would be held. This was done, in order to allow sufficient time for foreign princes to appear in person.

**PLEUVOIR**, Fr. to rain; to pour.—The French say figuratively, (when there is a heavy discharge of musquetry directed against any particular quarter.) *il y pleut des mousquetades*; *les coups de mousquet y pleuvent*; musquet-shots pour upon that quarter; musquet-shots rain or come down in torrents.

**PLIER**, Fr. to give way.

*Une aile qui plie*, Fr. in a military sense, the wing of an army which gives way. When this occurs, it behoves a wise and executive general to send immediate support, for the whole army is endangered by the least impression on that quarter.

**PLIER à la première charge**, Fr. to give way, or fall back at the first onset.

**PLIER et retourner à la charge**, Fr. to give way at first, but to return again to the charge.

*Plier* also signifies to step out of the ranks, or to deform the alignment.—Hence *plier le pied*, to step out in a disorderly manner.

**PLINTH**, the square member which serves as a foundation to the base of a pillar.

**PLOMB**, Fr. lead; a plummet, or small piece of lead which is attached to some packthread, so that it may be suspended in a perpendicular direction. It is used by miners. The packthread by which it hangs is called *fouet* or whipcord.

*Plomb* also comprehends, in its signification, all sorts of shot, except cannon-shot, used in fire-arms. The French

## P L U

say, *la ville a été forcée de capituler, faute de plomb*, (i. e. *balles de mousquet*) *et de poudre*, the town was forced or obliged to capitulate through the want of shot and gunpowder.

**A PLOMB**, Fr. the perpendicular position of any body or substance. *Une muraille est à plomb*, a wall built in a straight perpendicular direction.

**Donner à plomb**, Fr. to fall vertically, as the rays of the sun do in certain latitudes.

*Etre à plomb*, Fr. to stand upright.

**Marcher à plomb**, Fr. to march with a firm, steady pace.

This word is sometimes used as a substantive, viz. *perdre son aplomb*, to lose one's balance.

*Manquer d'aplomb*, Fr. to be unsteady.

**PLONGÉE**, Fr. a term used in artillery to express the action of a bomb, &c. which from the highest point of the curve it describes, takes a downward direction to strike its object.

**PLONGÉE du Rampart**, Fr. the slope of the upper part of the parapet, belonging to the rampart, is so called. The slope is likewise named *talus supérieur*, or upper talus.

**PLONGEONS**, Fr. artificial fireworks, which are shot into water, and rise again without being extinguished.

**PLONGEONS**, Fr. plungers or divers. Men of this description ought always to accompany an army, for the purpose of swimming under bridges of boats, &c. and making apertures in their bottoms.

**PLONGER**, Fr. literally to plunge: a term used to signify all discharges which are made by cannon, musquetry, from any height, such as the rampart, &c. into the fossé, or upon the adjacent country.

**PLUIE de feu**, Fr. literally a shower or rain of fire. It signifies a certain quantity of artificial fireworks, whose discharge falls in regular sparks, without ever deviating into a serpentine direction.

**PLUME**, the iron plates of which the pieces of ancient armour were composed, for the defence of the chest, arms, thighs, and legs. They were so called from their resemblance to the feathers of a bird. Hence the cuirasses

rases themselves, or coverings for the thighs, &c. were called *plumatae*.

**PLUMB, PLUMMET**, a leaden or other weight let down at the end of a string or piece of catgut, to regulate any work in a line perpendicular to the horizon, or sound the depth of any thing. It is of great use to the artilleryist, as well as to the engineer.

The instrument is also used by masons, &c. to draw perpendiculars with, in order to judge whether walls, &c. be upright, planes horizontal, &c. Pilots, at sea, likewise ascertain their soundings by it. In the forming of recruits it is particularly advantageous; as may be seen in the following extract from page 15, sect. 17, of the Rules and Regulations.

Plummets which vibrate the required times of march in a minute, are of great utility, and can alone prevent, or correct uncertainty of movement; they must be in the possession of, and be constantly referred to by each instructor of a squad. The several lengths of plummets, swinging the times of the different marches in a minute, are as follows:

	Steps in a minute.	In.	Hund.
Ordinary time -	75	24	96
Quick time -	108	12	03
Quickest, or wheel- ing time -	120	9	80

A musket ball suspended by a string which is not subject to stretch, (and must of course be kept constantly dry) and on which are marked the different required lengths, will answer the above purpose, may be easily acquired, and should be frequently compared with an accurate standard in the adjutant's or serjeant-major's possession. The length of the plummet is to be measured from the point of suspension to the center of the ball.

Accurate distances of steps must also be marked out on the ground, along which the soldier should be practised to march, and thereby acquire the just length of pace.

**PLUMBATE**, leaden balls which were shot out of cross-bows by the Roman soldiers.

**PLUME**, feathers worn by soldiers in the hat or helmet.

**PLUMET**, *fr.* plume, feather. An

ornament which is worn by military men in their hats. It succeeded the pannache or bunch of feathers, that formerly adorned the helmets.

**PLUNDER**, hostile pillage, or spoils taken in war.

**PLUS**, in algebra, commonly denotes majus, more: its character is +. Thus 5+7 is read 5 plus 7, and is equal to 12.

**PLUSII**, a kind of stuff with a sort of velvet nap or slag on one side, consisting of a woof of a single woollen thread, and a double warp; the one of two woollen threads twisted, the other goat's or camel's hair; though there are plushes entirely of worsted, others of hair, and others again of silk, cotton, &c. White plush breeches have been often worn by English dragoons. They resist moisture, and are easily cleaned.

**PLUTEUS**, a defensive machine, which was used by the ancient Romans. It was composed of wicker hurdles laid for a roof on the top of posts, which the soldiers, who went under it for shelter, bore up with their hands. Kennett, in page 238, of his Roman Antiquities, observes, that some will have them, as well as the vineæ, to have been contrived with a double roof; the first and lower roof of plunks, and the upper roof of hurdles, to break the force of any blow, without disordering the machine. The plutei, however, were of a different figure from the vineæ, being shaped like an arched sort of waggon; some having three wheels, so conveniently placed, that the machine would move either way, with equal ease. They were put much to the same use as the *musculi*. Father Daniel, the Jesuit, in his history of the French militia, makes mention of this machine. He quotes a passage out of a poem, intitled the Siege of Paris, by Abbon, the Monk; the meaning of which is, that the Normans brought up a large quantity of machines, that were called *plutei* by the Romans, and that seven or eight soldiers could be put under cover beneath them. He further adds, that these machines were covered with bull hides.

The moderns have imitated these *plutei* by adopting mantelets. The chevalier Folard mentions having seen one at the siege of Philippeville, of a triangular figure, made of cork, interlaced between

tween two boards, and supported by three wheels that turned upon a pivot.

PNEUMATICS, the doctrine of the air, or the laws whereby it is condensed, rarefied, gravitated, &c.

PNEUMATIC Engine, denotes the air pump.

PNEUMATIQUE, *Fr.* pneumatics.

PENÆ *Militares*, military punishments. Although, under the word *punishment*, we have touched upon this article, we shall, nevertheless, copy from a modern French author, what he says upon the punishments of the ancients; leaving wiser men to determine, whether the soldiery of any country can be kept in good order and discipline, without bodily chastisement. Some attempts have lately been made to prove they might. *Sed heu spes inanes et irritus hominum labor!*

Military punishments, observes this writer, were sufficiently numerous among the Greeks and Romans. In cases of mutiny or desertion of standards, they were decimated; that is, every tenth man was put to death. Those who were detected in thieving, either lost the right hand, or were bled to the point of death. Deserters were, individually, whipped in the public streets, and then sold for slaves. The seditious were dismissed the service, with marks of infamy. Cowards were degraded with ignominy. The centurion, when guilty of indiscipline, &c. was deprived of the vine-branch which he carried as an emblem of authority, and with which he chastised the soldiers. Soldiers that quitted their ranks, were liable to be punished with the *vilis*, or centurion's rod. They were sometimes deprived of all nourishment, except that of a small quantity of barley; at others, they were driven ignominiously and unarmed out of the limits of the camp, and thus exposed to the enemy. When a consul entered into a disgraceful treaty, he was tied hand and foot, and in this manner sent back to the nation with whom he had signed the contract. There were various other modes of punishing officers and soldiers, and we lament, that human nature should be so constituted, as to render it necessary to have recourse to any thing which looks like inhumanity. The modern French, perhaps, have fewer punishments

amongst them than any other nation; but what they want in variety, they make up in summary execution. The character of a soldier ought, most unquestionably, to be considered as having features in it, which should raise him above the commonality of mankind.—

The exercise of the cane and cut-o-nine-tails, seems ill-suited to the high notions which even a private soldier in the ranks should cherish. We know that under the old government of France, a blow was always looked upon as the sure forerunner of death. The officer never quitted the man who had thus degraded him, until one or the other was destroyed; and the private soldier, if struck by a superior, had recourse to suicide, as the only reparation left for his tarnished honour. With his comrades, he decided the contest, and avenged his character by his sabre.— And yet, notwithstanding this proud sense of manhood in the individual, the aggregate body, (as may be seen under the article *Punitions Corporelles*,) not only submitted to see a comrade stripped, but even lashed him up and down the ranks with switches. Nor did Rome, in her most enlightened period, think it unwise to strike, and ignominiously to expose those men who were the terror of other nations. With respect to the British empire, it is, certainly, matter of doubt, whether the example of modern France would sit the temper and disposition of its inhabitants. By the frequency of capital punishments and executions, death has been, and still continues to be, rendered so familiar to the multitude, that, in many instances, dissolution appears less terrific than bodily correction or exposure. Let any man, for example, visit Newgate, after the Spring sessions of the Old Bailey, and become a calm and reflecting spectator of the drop; he will there see melancholy proofs of the truth of this assertion; he will there also discover, that offences in the minor classes of delinquency, are punished with death by the civil code, when those of a much more mischievous tendency are only chastised by corporal punishment in the military. But he will also conclude, at least the writer of this article has so concluded from personal observation, that the loss of life is not the greatest loss

loss which Englishmen consider. There is a high spirit, an innate shame in almost every inhabitant of these islands, which makes degradation worse than death in some cases, and always afflicts and punishes in others. Solitary confinement has been tried by some humane individuals, to whose lot the command of battalions has fallen; and by others, extraordinary duties and public exposure before their comrades, have been resorted to. But while this mode of punishment has succeeded, once or twice perhaps in some particular corps, the necessity of bodily chastisement has often been manifest elsewhere. Under all these varying circumstances, we shall probably conclude, by saying (to those who fondly, and not unkindly, hope to see soldiers what they have never yet been found,) in the words of Mr. Burke: "If you expect such obedience, amongst your other innovations and regenerations, you ought to make a revolution in nature, and provide a new constitution for the human mind." *Burke's Reflexions on the Revolution in France.*

**POIDS**, *Fr.* weights.

**POIDS de Marc**, *Fr.* avoirdupois weight.

**POIDS Romain**, *Fr.* troy weight.

**POIDS à peser l'eau**, *Fr.* waterpoise.

**Etre de POIDS**, *Fr.* to weigh.

**Avec POIDS et mesure**, *Fr.* with care and circumspection.

**POIGNARD**, *Fr.* dagger, poniard.

**Coup de POIGNARD**, *Fr.* a stab.

**POIGNARDER**, *Fr.* to stab.

**POIGNÉE**, *Fr.* handful. *Poignée d'hommes*, a handful of men; a small number.

**POIGNÉE**, *Fr.* handle of a sword.

**La POIGNÉE**, *Fr.* the handle.

**POIL**, *Fr.* hair. *Monter un cheval à POIL*, to ride a horse without a saddle.

*Un brave à trois POILS*, *Fr.* a figurative expression to describe a bully, or gasconading fellow.

**POINÇON**, *Fr.* a puncheon, bodkin. It is likewise an instrument which is used in the making of artificial fireworks, being called *poinçon à arrêt*, from a piece of iron running cross-ways near the point, to prevent it from entering too far.

**POINT**, a steel instrument of various

use in several arts. Engravers, etchers, wood-cutters, stone-cutters, &c. use points to trace their designs on copper, wood, or stone.

**POINT**, particular place to which any thing is directed. Hence, to concentrate all your forces, and to bring them to bear upon one *point*. There is not, perhaps, in the whole science of war, a more difficult thing than to watch the motions, &c. of your enemy, in such a manner as to be able to discover his weak points, and in so doing, to bring your whole strength to bear upon them. In this consists half, if not all, the ability of an executive general. But no man can be said to possess this indispensable talent in warfare, who has not a military mind. See **MILITARY MIND**.

**POINT**, in geometry, according to Euclid, is a quantity which has no parts, being indivisible; and according to others, that which terminates itself on every side, or which has no boundaries distinct from itself. This is a mathematical point, and is only conceived by the imagination; yet here, in all magnitude begins and ends, its flux generating a line, that of a line a surface, &c. A line can only cut another in a point.

**POINT**, in perspective, denotes various places with regard to the perspective plane, viz. *point of sight*, or *of the eye*, or *principal point*, is a point in the axis of the eye, or in the central ray, where the same is intersected by the horizon.

**POINT**, or points of distance, in perspective, is a point or points, for there are sometimes two of them placed at equal distances from the point of sight.

**Accidental POINTS**, or **Contingent POINTS**, in perspective, are certain points wherein such objects as may be thrown negligently, and without order, under the plan, do tend to terminate.—For this reason they are not drawn to the point of sight, nor the points of distance, but meet accidentally, or at random in the horizon.

**POINT of the Front**, in perspective, is when we have the object directly before us, and not more on one side than the other, in which case it only shows the forside; and if it be below the horizon, a little of the top too, but nothing of

of the side, unless the object be polygonous.

*Third Point*, is a point taken at discretion in the line of distance, wherein all the diagonals, drawn from the divisions of the geometrical plane, concur.

*Objective Point*, a point on a geometrical plane, whose representation is required on the perspective plane.

*Point of concurrence*, in optics, is that wherein converging rays meet; more commonly called the focus.

*Point of dispersion*, is that wherein the rays begin to diverge; usually called the virtual focus.

*Point*. This term is frequently used in a military sense, as *point of intersection*, *intermediate point*, &c.—The several applications of which may be seen in the General Rules and Regulations.

*Covering Point*, a point which, in changes of position, mutually concerns the movement of one line with another.

When a change of position is made on a flank or central point of the first line, the movement of its *covering point*, of the second line, determines the new relative situation of that second line.

To find this point, it is necessary to premise, that if a circle is described from any point (A) of a first line (AB) with a radius equal to the distance betwixt the two lines; then its covering point (a) at that time in the second line will be always in the circumference of that circle, at such place as the second line becomes a tangent to the circle.—Should the first line, therefore, make a change of position (AR) either on a flank or central point (A); its covering point (a) will move so as still to preserve and halt in its relative situation (a, 2), and by the movement and halt of that point preceded by the one (d) of *intersection*, every other part of the second line, either by following them, or by yielding from them, is regulated and directed. Betwixt the old and new situation of the covering point (a), and equidistant from each, lies the point (d), where the old and new positions of the second line intersect, and which is a most material one in the movement of that line.—See Cavalry Regulations, page 263.

*Point of Honour*. See HONOUR.

*Point of Appui*, the point upon which a line of troops is formed. When the

right stands in front, and the column is marching to form, the first halted company, division, &c. is the point of appui; and when the right is in front, the distant point of formation is the left.

*Point of Intersection*, the point where two lines intersect each other.

*Intermediate Point*. In marching forward that is called an intermediate point which lies between the spot marched from, and the spot towards which you are advancing. In forming line, the center point between the right and left is the intermediate point. It is of the utmost consequence to every body of troops, advancing or retreating, but especially in advancing towards the enemy, to find an intermediate point between two given, and, perhaps, inaccessible objects. The line of march is preserved by these means in its perpendicular direction, and every column may be enabled to ascertain its relative point of entry in the same line.

*Point of Alignment*, (*point d'alignement*, Fr.) the point which troops form upon and dress by.

*Point of Formation*, a point taken, upon which troops are formed in military order.

*Perpendicular Point*, the point upon which troops march in a straight forward direction.

*Relative Points*, the points by which the parallelism of a march is preserved.

*Point of passing*, the ground on which one or more bodies of armed men march by a reviewing general.

*Point to salute at*, the spot on which the reviewing general stands. This, however, is not to be understood literally, as every infantry officer, when he arrives within six paces of the general, recovers his sword and drops it, keeping it in that situation until he shall have passed him a prescribed number of paces. The cavalry salute within the breadth of the horse's neck, the instant the object is uncovered.

*Point of War*, a loud and impressive beat of the drum, the perfect execution of which requires great skill and activity. The point of war is beat when a battalion charges.

*Point-blank* (*point en-blanc*, Fr.) in gunnery, denotes the shot of a piece levelled horizontally, without either

## POI

mounting or sinking the muzzle. In shooting thus, the bullet is supposed to go in a direct line, and not to move in a curve, as bombs and highly elevated random shots do. We say supposed to go in a direct line, because it is certain, and easily proved, that a shot cannot fly any part of its range in a right line strictly taken; but the greater the velocity, the nearer it approaches to a right line; or the less crooked its range.

**POINT d'intersection**, *Fr.* See *Point of Intersection*.

**POINT intermédiaire**, *Fr.* See *Intermediate Point*.

**POINT du jour**, *Fr.* break of day; dawn.

**POINT de vue**, *Fr.* prospect, sight, aim.

**De POINT en blanc**, *Fr.* point-blank.

**A POINT**, *Fr.* in time.

**A POINT nommé**, *Fr.* seasonably.

**De POINT en Point**, *Fr.* thoroughly; completely.

**POINTE de Terre**, *Fr.* a point of land; a cape.

**La POINTE**, *Fr.* the point of the sword.

**POINTER**, *Fr.* to point; as, *pointer un canon*, to point a cannon.

**POINTEUR une troupe ennemie**, *Fr.* to fall unexpectedly upon a body of the enemy, and to throw it into disorder by a sudden attack with the bayonet, pike, or sword.

**POINTEUR**, *Fr.* the man who points a gun.

**POINTEURS**, *Fr.* levellers. Officers in the old French artillery, who were subordinate to the extraordinary commissaries; but who were never employed except upon field service.

**Cardinal POINTS**, (*points cardinaux*, *Fr.*) the North, South, East, and West. A tent cannot be properly pitched, unless these four points are minutely attended to. The weather-cords derive all their stay by being correctly carried to those points.

**POINTS d'appui**, *Fr.* basis, support. The general signification of this term expresses the different advantageous posts, such as castles, fortified villages, &c. which the general of an army takes possession of in order to secure his natural position. In a more limited sense, they mean those points which are taken up in movements and evolutions. See *Point d'appui*.

## POL

**Vertical POINTS**, (*points verticaux*, *Fr.*) two points in the globe, one of which is directly over our heads, and the other under our feet. They are called in astronomy, the *zenith* and the *nadir*.

**Collateral POINTS**, (*points collatéraux*, *Fr.*) two points in the globe where the sun rises and sets, called East and West, which the French likewise name *orient*, and *occident ou levant*, and *couchant*.

**POINTING of a gun or mortar**, is the placing either one or other, so as to hit the object, or to come as near it as possible.

**POIRE A POUDBRE**, *Fr.* a powder-horn.

**To POISON a Piece**, (*enclouer une piece*, *Fr.*) in gunnery, to clog or nail it up.

**POISSON d'eau de vie**, *Fr.* a quarter of brandy; a spirit formerly exported to other nations by France, but since her revolution, chiefly consumed by her soldiery.

**POTREIL**, armour for the breast of a horse.

**POIX**, *Fr.* pitch.

**POIX résine**, *Fr.* rosin.

**POLACRE**, *Fr.* a lapped coat.

**POLACRE**, or *Polaque*, *Fr.* a Levanter vessel, which carries a smack sail on the mizen mast, and square sails on the main-mast and bowsprit.

**POLAIRE**, *Fr.* polar.

**POI BOWNICK**, according to the last published Military Dictionary in France, the colonel of a Polish regiment is so called.

**POLE**, in a four-wheel carriage, is fastened to the middle of the hind axle-tree, and passes between the fore axle-tree and its bolster, fastened with the pole-pin, so as to move about it; keeping the fore and hind carriages together.

**POLE**, (*polc*, *Fr.*) one of the two points upon which the globe turns.—One is called Arctick, and the other Antarctic pole; i. e. the Northern and the Southern.

**POLES**, in castrametation, long round pieces of wood, by which a *marquée* or tent is supported. There are three sorts, viz.

**Ridge-POLE** a long round piece of wood, which runs along the top of an officer's

officer's tent or marquée, and is supported by two other poles, viz.

**Front-POLE**, a strong pole which is fixed in the front part of an officer's tent or marquée, and is kept in a perpendicular position, by means of two strong cords, called weather-cords, that run obliquely from each other, across two other cords from the rear pole, and are kept fast to the earth by wooden pegs.

**Rear-POLE**, a strong pole which is fixed in the back part of an officer's marquée or tent, and is kept in the same relative position as has been described above.

**Fire-POLES**, or *Rods*, artificial fire-works. They are generally of the length of ten or twelve feet, and of the thickness of two inches at most. One of the ends of the fire-pole is hollowed out with three or four flutes to the length of two or three feet. Into one of these flutes are fixed rockets or squibs. Paper crackers are fixed in the others. After holes have been bored through the body of the pole, in order that the rockets may have communication with the crackers, they must be neatly wrapped in paper, the more effectually to deceive the spectators.

**Picket POLES**, round pieces of wood, shod with iron, and driven firmly into the earth, to fasten cavalry by, when at picket. The poles for the heavy horse should be longer than those which are commonly used. See **PICKETS**.

**POLEAXE**, an axe fixed to the end of a long pole.—See **BATTLE AXE**.

**POLICE**, *Fr.* in a military sense, among the French, this term comprehends the inspectors, the treasurers, the paymasters, the commissaries, the provost marshal, &c.

**POLICE d'assurance**, *Fr.* a policy of insurance.

**POLICY in war**.—See **STRATAGEM**.

**POLITICAL**, relating to policy, or civil government.

**POLITICS**, (*Politique*, *Fr.*) a part of ethics which consists in the governing of states, for the maintenance of the public safety, order, and good morals.

**POLK**, *Fr.* a Polish term, signifying a regiment, from whence is derived Polbowick, Colonel.

**POLLAM**, *Ind.* a measure equal to twenty ounces: forty make a viz in weight in Madras.

**POLL-Money**, commonly called poll-tax, or capitation. A tax imposed by parliament on each person, or head, according to some known mark of distinction; thus, by Stat. 18 Car. II. every duke was assessed 100*l.* marquis 80*l.* baronet 30*l.* knight 20*l.* esquire 10*l.* and every single private person 12*d.* This was only a revived tax, as appears by former acts of parliament, particularly that anno 1380, when it was imposed upon women from the age of twelve, and men from fourteen. The income tax, which was originally proposed and carried in the British House of Commons by William Pitt, two years before he was dismissed from office, bears an affinity to the poll-tax, as far as it regards men of property. It is not so general as the original one, but what it wants in universality it amply makes up in progressive quantity. The army is not exempted from it.

**POLTROON**, (*Poltron*, *Fr.*) a coward, a dastard, who has no courage to perform any thing noble. The etymology of poltron, or poltroon, as it is usually pronounced, is curious. Both in ancient and modern times frequent instances have occurred of men, who had been forcibly enlisted, having rendered themselves unfit for service by cutting off their thumbs or fingers. When this happened among the Romans, they were called *pollice trunci*. The French, (as they do in most of their words that are derived from the Latin) contract these two, and by an elision make poltron or poltroon, from whence we have adopted the term.—Another, and, in our opinion, a more correct derivation, comes from the Italian *Poltrone*, which takes its derivation from *Poltro*, a colt; because of that animal's readiness to run away; or *Poltro*, a bed, as pusillanimous people take a pleasure in lying in bed. This last word is derived from the high Dutch *Polster*, which signifies a bolster or cushion. This contemptible character is so little calculated for a military life, that the slightest imputation of cowardice is sufficient to render an individual unworthy of serving among real soldiers: Poltroon and coward stand, in fact, foremost in the black catalogue of military incapacities. Every young man, therefore, ought well to weigh, examine;

amine, and digest the necessary qualifications for a profession, which, above all others, exacts a daring spirit, and an unqualified contempt of death. It is possible, however, that the very man who might have forgot himself in one action, and behaved disgracefully, should make ample amends by his future conduct. We have a strong instance of this sort in the life of Themistocles, as related by Plutarch. His words are:—"The brave Leonidas defended the pass of Thermopylae with three hundred men, till they were all cut off except one man, who escaped to Sparta, where he was treated as a coward, and nobody would keep company or converse with him: but he soon after made glorious amends at the battle of Plataea, where he distinguished himself in an extraordinary manner."

According to Tacitus, the old Germans were in the habit of smothering cowardly and even sluggish soldiers. They were buried alive in mud, and covered over with a huddle. Hence, perhaps, the general term, of dirty coward.

**POLIGARCHY**, (*Polygarchie*, Fr.) a government composed of many chiefs or leaders.

**POLYGARS**, *Ind.* Chiefs of mountainous and woody districts in the peninsula, who pay only a temporary homage.

**POLYGON**, (*Polygon*, Fr.) is a figure of more than four sides, and is either regular or irregular, exterior or interior.

*Regular* **POLYGON**, is that whose angles and sides are equal. It has an angle of the center, and an angle of the polygon. The center of a regular polygon is the center of a circle which circumscribes the polygon; that is, whose circumference passes through all the angles of the figure.

*Irregular* **POLYGON**, is that whose sides and angles are unequal.

*Exterior* **POLYGON**, that whose lines touch the points of the flanked angles, when a place is fortified inwards.

*Interior* **POLYGON**, that outward fortification which makes the angles of the gorge; so that the whole bastion is without the polygon.

**POLYEDRE**, Fr.—See *Polyedron*.

*Lunettes* **POLYEDRES**, Fr. Magnifying glasses.

**POLYEDRICAL**, } having many  
**POLYEDROUS**, } sides.

**POLYEDRON**, a solid figure or body consisting of many sides.

**POLYGRAPHIE**, Fr.—See *Polygraphy*.

**POLYNOMIAL**, (*Polynome*, Fr.) an algebraical term, signifying a quantity made up of many others by means of the sign + and the sign —.

**POLYORCÈTE**, Fr. a term used among the French to distinguish great warriors. It literally signifies the taking of strong towns. Marshals Saxe and Lowendahl, *les grands Polyorcètes* of the last century.

**POLYSPASTON**, or what the French call *poutie multipliée*, a species of crane which consists of several pulleys. It is also named *corbeau d'Archimède*. Demetrius Poliorcetes made use of this engine at the siege of Rhodes. Diogenetus the architect, who came after him, improved it considerably; and Collias, who had returned to Rhodes from Arado, brought it to the greatest perfection in those days. It had sufficient power to raise huge turrets, and even whole galleys into the air.

**POLYTECHNIQUE**, } a word  
*École Polytechnique*, } derived from the Greek, and used by the French to distinguish an establishment in which all sciences are taught. The military school, which existed during the French monarchy, is comprised in this institution.—See *Military School*.

**POMADA**, an exercise of vaulting the wooden horse, by laying one hand over the pommel of the saddle.

**POMERIUM**, in ancient architecture, that space of ground which lay between the walls of a fortified town and the inhabitants' houses. The term is still used among modern architects, particularly by the Italians, as Peter Cataneo, and Alghisi, to describe the breadth of the terre pleine of the rampart, its inward talus, and the vacant space which is usually left between this talus and the houses of the town.

**POMMEAU**, Fr. See *Pommel*.

**POMMEL**, (*Pommeau*, Fr.) a piece of brass or other substance, at top, and in the middle of the saddle bow, to which are fastened the holsters, stirrup leathers, &c. Also, the knob at the extremity

## P O N

trernity of the handle that balances the blade of the sword.

**POMMES**, *Fr.* round pieces of wood which are variously used for ornament, &c.

**POMMES de pavillon et d'enseigne**, *Fr.* the piece of wood which is fixed at the top of the colour staff, &c.

**POMPE**, *Fr.*—See **PUMP**.

**POMPE à feu**, *Fr.* a steam-engine. Mr. Watts, of this country, has brought the steam-engine to the highest point of utility.

**POMPE de mer**, *Fr.* a sea-pump, or a pump used on board a ship.

**POMPER**, *Fr.* to pump.

**PONANT**, *Fr.* the west. In the French sea service, *ponant* signifies that part of the ocean which is separated from the seas in the Levant by the straits of Gibraltar.

**Officier PONANTIN**, *Fr.* one who sails upon the ocean.

**Armée PONANTINE**, *Fr.* the army of the west.

**PONCEAU**, *Fr.* a small bridge of one arch, which is thrown across a canal or rivulet.

**PONCER**, *Fr.* to rub pounce upon any thing.

**PONCER**, *Fr.* This word also signifies to impress any drawing, plan, or figure, upon a sheet of paper, by means of a needle and some charcoal, or coloured dust; which is effected by pricking through the different features, lines, &c. of the upper sketch or drawing, at small intermediate distances, and then forcing the charcoal, which is wrapped up in a piece of fine linen, through the different holes, upon the blank paper underneath.

**PONTIARD**, a little pointed dagger, very sharp edged.

**PONT**, *Fr.* a bridge; a deck.

**PONT d'or**, *Fr.* a figurative expression which the French use, when they suffer an enemy, whom they have defeated, to retire without molestation. Hence, *faire un pont d'or à son ennemi*, to suffer your enemy to escape.

**PONT flottant**, *Fr.*—See **FLOATING bridge**.

**PONT-levis**, *Fr.*—See **DRAW-bridge**.

**PONT-tournant**, *Fr.* a moveable bridge. It is of the nature of a draw-bridge, with this difference, that it turns upon a pivot, and goes entirely round.

## P O N

**PONT de bois**, *Fr.* a wooden bridge.

**PONT de jonc**, *Fr.* a bridge of rushes.

**PONT de sortie**, *Fr.* a sally-bridge.

**PONT dormant**, *Fr.* a wooden bridge, which is generally laid upon the fosse of a fortified town, for the purpose of maintaining a constant communication between the main body of the place and the outworks and country round. These bridges are not thrown entirely across the fosses, but terminate within twelve or fifteen feet of the revetement; the space from thence is supplied by draw-bridges. When the *ponts dormans* are very long, a swing bridge is constructed in the center of it. When the ditches are wet, and so constantly supplied with water, that the depth of it is generally the same, bridges of boats may be used instead of *ponts dormans*. And in cases of attack, floating bridges may be substituted in lieu of both.

**PONT à bascule**, *Fr.* a bridge which is supported by an axle-tree that runs through its center, and which is lifted up on each side as occasion requires.

**PONT à coulisse**, *Fr.* *Coulisse* literally signifies a scene, such as is used in theatres, which can be shifted at will. We may, therefore, not improperly call it a sliding or shifting bridge. This bridge is used for the purpose of conveying troops, on foot, across a fosse or a river of moderate breadth. It must be very light and portable; constructed with boards, and measuring about six feet in breadth. The planks are numbered, so that the instant it is found necessary to effect a passage, they may be put together by means of running grooves. When the planks are thus arranged, the pontooners, to whom these matters are always entrusted, throw two thick beams across the fosse or river, so as to be parallel to each other, and about five feet asunder, to allow the floor or platform half a foot on each side. Small iron wheels or casters are fixed underneath the two sides of the floor or platform, in such a manner, that the whole may be instantly slid into the deep grooves that have been previously made in the transverse beams. This construction is extremely simple, and very practicable in war. The sliding bridges may also be used, to advantage, in crossing rivers of

of larger dimensions. In these cases there must be two of the kind, and they are united in the middle by means of two piles, or strong stakes of wood, driven into the bed of the river, and upon which the transverse beams can rest from each side. It is here necessary to observe, that in a war of posts, and in a broken and mountainous country, an ingenious and active officer may, at the head of a body of pontooners, be of the greatest service to a general, and even sometimes determine the issue of a battle. When the Austrian and French armies first met, near the memorable village of Marengo, a large detachment of Bonaparte's army would have been drowned in the Scrivia, had it not been for the presence of mind and the activity of the officer who commanded a body of pontooners. The republican troops, having been thrown into disorder, were flying in all directions, and as the Scrivia had been considerably swollen by the rain which fell the preceding night, they would have been cut off. *Ponts à coulisse*, or sliding bridges, with the assistance of some boats, were hastily established, and they not only escaped the pursuit of the victorious Austrians, but added to the strength of the French army, which had also given way. For the particulars of this transaction see Berthier's Report.

*PONT à roulettes*, Fr. a bridge on rollers or on casters.—See *PONT à Coulisse*.

*PONT à quatre Branches*, Fr. a bridge which consists of four abutments, and is constructed in such a manner as to unite, at one given point, the navigation of four different canals, by means of an arch that has four openings for the passage of barges and boats. A bridge of this description was erected in 1750, when the junction was made of the Calais and Airdres canals, on the new road which leads from Calais to St. Omers.

*PONT aqueduc*, Fr. a bridge over which a canal flows; as the *Pont du Gard* in Languedoc in France.

*PONT de bateau*, Fr. a bridge of boats. When a river is either too broad, too deep, or too rapid, to allow stone or pile-work to be used, a number of boats or barges must be moored and

lashed together, at given distances, over the whole breadth of the river: and when this has been done, a solid floor or platform is constructed on them for the passage of cannon, wagons, &c.

*PONT à fleur d'Eau*, Fr. a bridge which lies upon the surface of the water. It is generally made for the purpose of keeping up a communication with the different works in a fortified place, when the ditches are filled with water. The floor is level with the water. The bridge is raised upon wooden trestles.

*PONT de Communication*, Fr. a bridge, which serves to keep up a regular communication between the different quarters or cantonnments of an army, which is divided by a river, or by several strong currents. Several bridges of this description are built in time of war, in order to receive and to throw in supplies as they may be required.

*PONT de Fascines*, Fr. a bridge made of hurdles or fascines. It is generally six toises in breadth, and is used at sieges when the fosses are filled with water. When the besiegers have resolved to storm a breach, the approach to which is interrupted by water, they throw one, two, or three beds of fascines across, fastened together and kept steady by means of wooden piles. Stones and earth are next thrown upon the fascines, to keep them steady in the water. An *epaulement* is then made towards the side of the revetement of the place, and the bridge is finally constructed with thick planks. The *epaulement* serves to protect the workmen or artificers from the fire of the besieged.

*PONT de Pontons*, Fr. see *PONTOON-bridge*.

*PONT de Cordes*, Fr. a bridge of ropes, or a bridge constructed with ropes. A French writer says, "I have not been able to discover, in any work, not even in the *Dictionnaire Raisonné des Sciences*, a description of this bridge; yet it is well known, that by the means of this construction, which owes its origin to two Catalonian priests, and to which we are indebted for the knowledge of a passage over the Legra, the Count D'Harcourt gained a victory over the Spaniards in the plain of Lorens, on the 22d of June, 1745. These bridges are made with strong

strong ropes twisted and interwoven together; and they are extremely useful in passing deep ravines and hollow ways.

**PONTS de Tranchées**, Fr. This term is used among the French to signify those parts of a trench which have been left unfinished through the flight or destruction of the artificers employed upon it; or because they have been too much wounded to continue at their work. In these cases the persons, who have the management of the sap, detach men from the quarters, where they may be least wanted, in order to complete the undertaking.

**PONT suspendu**, Fr. a hanging bridge. This sort of bridge is generally made for the purpose of securing a communication between two countries, which are otherways separated by precipices or steep rocks. The bridge is supported by a quantity of strong chains, which are fastened at each of the two extremities. An undertaking of this kind must seem, at first sight, impracticable; but it has frequently succeeded in Europe, as may be seen in Piedmont and Savoy. In the latter country, indeed, there is a hanging bridge, which is built of stone on iron chains. See **HANGING Bridge**.

**PONT volant**, Fr. a flying bridge. This sort of bridge has a helm to it, by which the ferryman can guide it from one side of a river to the other. The one at Cologne, in Lower Germany, is large enough for four or five hundred men to cross at a time. See **FLYING Bridge**.

**PONT-levis à Bascule**, Fr. a draw-bridge, swung in such a manner, that the frame (half of which is concealed within what is called *cage de la bascule*, or hold of the swipe,) and the other half (which is properly the *tablier du pont*, or frame itself,) covers all the exterior side of the gate, or entrance into the place.

**PONTS-levis en zig-zags**, Fr. draw-bridges constructed in a zig-zag manner, before the gates of fortified towns or places, to prevent the enemy from enfilading the entrance.

**Tête de PONT**. See **TETE**.

**PONTÉ**, Fr. covered in, as a vessel is which has a deck.

**PONTON**, Fr. lighter.

**PONTONIER**, Fr. lighterman.

**PONTON** or **PONTOON**, a kind of flat-bottomed boat, whose carcass of wood is lined within and without with tin: they serve to lay bridges over rivers for the artillery and army to march over. The French pontoons, and those of most other powers, are made of copper on the outside: though they cost more at first, yet they last much longer than those of tin; and, when worn out, the copper sells nearly for as much as it cost at first; but when ours are rendered useless, they sell for nothing. Our pontoons are 21 feet long,  $\frac{1}{2}$  feet broad, and depth within 2 feet 1.5 inches.

**PONTOON-carriage**, is made with two wheels only, and two long side-pieces, whose fore-ends are supported by a limber; and serves to carry the pontoon, boards, cross timbers, anchors, and every other thing necessary for making a bridge.

**PONTOON-bridge**, is made of pontoons, slipped into the water, and placed about five or six feet asunder; each fastened with an anchor, when the river has a strong current, or to a strong rope that goes across the river, running through the rings of the pontoons. Each boat has an anchor, cable, baulks, and chests. The baulks are about 5 or 6 inches square, and 21 feet long. The chests are boards joined together by wooden bars, about three feet broad, and 12 feet long. The baulks are laid across the pontoons at some distance from one another, and the chests upon them joined close; which makes a bridge, in a very short time, capable of supporting any weight.

**POOLBUNDY**, Ind. a dam to prevent inundations.

**POONA**, Ind. a day fixed for the Zemindars to bring in their balances for the year.

**POONEA**, Ind. the Indian name of a month.

**POOR**, indigent, necessitous, oppressed with want.

**Poor in resources and expedients**, of a limited conception; of a narrow understanding; unequal to an arduous enterprise.

**POOR** or **PORE**, Ind. when it terminates a word, means city; as *Viziapore*, &c.

**POOSE**, Ind. the name of a month following

following *Ughun*: it in some degree accords with December and January.

**POOSHITAY Bunde**, Ind. embankments of rivers. It likewise means bridges thrown over rivers.

**POOSKUT**, Ind. a small weight, measuring eight *koonchys*, or sixty-four handfuls; one *koonchy* being equal to eight handfuls.

**POPULATION**, *Populacy*, *Population*, Fr. the state of a country with respect to numbers of people.

**POPULATION and strength of the European Powers**. As the strength of every country must grow out of its population, more or less considered, we have collected the following short abstract of the population and strength of Europe.

*Russia* has a population of 25,000,000. In 1773 her peace establishment was composed of 130,000 effective men, trained to European discipline; but this force is now augmented to 400,000, including 60,000 Cossacks.

*France* has 32,000,000 of inhabitants. Since the revolution she has maintained 400,000 soldiers, and has augmented her army to 600,000 men during the war.

*Austria* has 18,000,000 of inhabitants. Since the Turkish war she has never reduced her military establishment below the force of 350,000 men, and has increased it in time of war to 400,000.

*Prussia* has 9,000,000 of inhabitants. She maintains, by a peculiar system, in time of peace 250,000 exercised soldiers, and can augment her army, in time of war, to 360,000, perhaps 400,000 men.

*Sweden* has a population of 3,200,000 inhabitants, and an army of about 48,000 men, which she can augment to 100,000, in time of war, with the aid of a militia.

*Denmark* has a population of 2,600,000, with an army of 70,000 men, including a well armed and a peculiar sort of militia, commanded by regular and well informed officers, and

attached to regular regiments. In time of war this force is greatly increased.

*Spain* has 9,000,000 of inhabitants. She maintains, in time of peace, 70,000 men, and has, in time of war, a force of 120,000, including a well composed militia; but her regular force is seldom complete.

*Holland* has 3,000,000 of inhabitants; an army of 16,000 men; but in the war of the succession she had a force of 102,000 men in her pay, and of which there were 65,000 men in the field, as appears by Lord Bolingbroke's dispatches. The Dutch always employed mercenaries. The decay of this force opened the Low Countries to the French.

*Great Britain*. Including Ireland her population consists of 15,000,000 of inhabitants.—She has the greatest capacity of any country to form an army, commensurate with her rank and resources; but she creates, by a false system, a feeble artificial force with great difficulty; and precipitates a reduction of that force, at the conclusion of every war, to the obliteration of her military character, and the dissolution of awakened energies.

*Portugal* has 2,220,000 inhabitants, with an army of 40,000 men, and 100,000 militia, who serve without pay; but whom General Dumourier represents as being formidable to the Spaniards by their peculiar mode of carrying on warfare; but when General Stuart went to Portugal he found only 11,000 regular soldiers, instead of the number he had expected to find, viz. 60,000.

With respect to our own country it is necessary to observe, that, on an average, the population of the British Isles (including Ireland, which has considerably increased) has risen from 8,100,000 to 15,000,000 in a century. It has been computed that 186,000, or thereabouts, die annually in England; and that 255,426 are born, leaving the annual increase 99,426.

*Distinct summary of the Population of the British Empire, not including our Foreign Possessions.*

	Houses inhabited.	Families.	Males.	Females.	Total.
England - -	1,467,370	1,778,120	3,937,935	4,343,499	8,331,434
Wales - -	103,053	118,303	257,178	284,368	541,546

*Tête de PORC.* See *Coin de Manœuvre Militaire*: also *Tête*.

*PORÉE, Fr.* See *Sécher à l'Ombre*.

*PORISTICK method*, in mathematics, is that which determines when, by what means, and how many different ways, any problem may be resolved.

*PORPHYRE, Fr.* porphyry. A fine red marble.

*PORT, Fr.* a harbour.

*Fermer les PORTS, Fr.* to lay a general embargo upon shipping. During the French monarchy this practice frequently occurred for the purpose of securing able bodied seamen.

*PORT, Fr.* this word is likewise used to express the tonnage of a vessel.

*PORTAL, (portail, Fr.)* the front or façade of a large building, where the principal gate stands.

*Tirer à bout PORTANT, Fr.* to fire at an object which lies as far off as a cannon or musquet can carry.

*Tuer à bout PORTANT, Fr.* to kill or do execution as far as a piece can carry.

*To PORT, Fr.* to carry.

*PORT arms*, a word of command which was adopted during the late war, and is universally practised in the British army. It consists in bringing the firelock diagonally across the chest from the *carry*. This position of the musquet affords a great facility to the person who inspects the touch-hole, &c. In dismissing guards, preparing to charge, &c. soldiers are ordered to *port arms*.—

The French, as we have already observed, do not practice this method. Their word of command, *haut les armes*, corresponds with our *recover*.

*PORTCLUSE*, or *PORT-cullice*, in fortification, is an assemblage of several large pieces of wood, joined across one another like a harrow, and each pointed with iron at the bottom. They are sometimes hung over the gate-way of old fortified towns, ready to let down in case of a surprise, when the gates could not be shut.

*Port-fire*, in artillery, a composition put in a paper-case to fire guns and mortars, instead of a lint-stock and match. See *Laboratory Works*.

*PORTGLAVE, Fr.* \*See *Porte-Epée*.

*PORT de l'arme, Fr.* the carriage of the firelock.

*PORT, Fr.* a gate. *Portes d'une ville*, the gates of a fortified town.

*PORT.* This word is used, both in French and English, to signify the court or residence of the Emperor of the Turks, and to distinguish it from that of the Grand Signor. The French say, *la Porte Ottomane*, the port, or Ottoman court.

*PORTE-arquebuse, Fr.* the king's gun-bearer.

*PORTE-baguette, Fr.* the pipe of a musquet or pistol, into which the ramrod runs. It also signifies the cylinder of a Prussian musquet, which is parallel with its barrel.

**PORTÉ-drapéau**, } Fr. the person who  
**PORTÉ-enseigne**, } carries the colours.  
**PORTÉ d'écluse**, Fr. a flood-gate. The two folding parts are joined together, and form an angle in the centre.

**PORTÉ-épée**, Fr. a sword-bearer. It likewise means a sword-belt.

**PORT-étendard**, Fr. the standard-bearer.

**PORTÉ-fcu**, Fr. a machine made of wood or copper, by which fire is communicated to gunpowder in a shell, fuse, or piece of ordnance. It is sometimes made of paste-board. Where there is any ground to apprehend that a cannon will burst, the priming made of a certain composition, is put into the paste-board case, by which means the cannoner has time to retire before any accident can happen.

**PORTÉ-feu**, Fr. is likewise used among artificers to signify all sorts of fuscées or matches, by which fire is communicated to many quarters at once.—They last according to the nature of the composition with which they are made up.

**PORTÉ-feu brisé**, Fr. in artificial fire-works, a species of cartridge which is bent into a curve by means of a sloping piece of wood.

**PORTÉ-gargousse**, ou *lan'crne de gargousse*, Fr. a wooden case, in which cartridges are conveyed to load ordnance-pieces. There are two to each piece.

**PORTÉ-masse de la maison du roi**, Fr. mace-bearer or tip-staff belonging to the king's household. A situation which was held during the French monarchy, and signified the same as *huissier d'armes*, which see.

**PORTÉ-mousqueton**, Fr. a swivel.

**PORTÉ-oriflamme**, Fr. in the ancient French armies, the officer who held the first post of dignity was so called. See **ORIFLAMME**.

**PORTÉ-pipe**, Fr. a pipe-bearer among the Turks.

**PORTÉ d'une place de guerre**, Fr. the gate of a fortified place. This gate is always made in the center of the curtain, in order to be well protected on the flanks and faces. See **PORTES**.

**PORTÉ respect**, Fr. a figurative expression which is attached to an armed body whose appearance impresses terror, or inspires awe.

**PORTÉ de secours**, Fr. the gate in a

citadel, which has an outlet towards the country, is so called. By means of this gate the garrison can always receive succours or reinforcements, in cases of civil insurrection, or under circumstances of surprise.

**PORTÉ-voix**, Fr. a speaking trumpet.

**À la PORTÉE**, Fr. within the reach or range. Hence **à la portée d'un canon**, within the reach or range of a cannon.

**PORTÉE du fusil**, Fr. by this expression the French generally understand the distance which a musquet-shot goes to its ultimate destination. It is supposed to vary from 120 to 150 toises.

**PORTÉE des pièces**, Fr. the flight or reach of cannon.

**PORTÉE à toute volée**, Fr. the flight of a cannon shot when it makes an angle of 45 degrees with the horizon, or level of the country. In this manner it completes the greatest possible range.

**PORTÉE de but en blanc**, Fr. the forward direction and flight, which a ball describes from the mouth of the piece to its ultimate object. It has been generally found by experience, that the distance so described could not exceed 300 toises. Beyond that, the ball has been known to deviate. According to Belidor, pieces of ordnance will carry farther in the morning and at night, when the weather is cool and rarefied, than in the middle of the day, or at noon, when the heat of the sun prevails. This circumstance is amply discussed in his *Bombardier François*; and his observations were proved to be correct, by experiments made in June, 1744, at Ussonne. These experiments commenced at seven o'clock in the morning, and lasted till twelve. It was remarked, that the shells, which were thrown out of three mortars, gradually fell short of their original range. Besides the *portée à toute volée*, and the *portée de but en blanc*, or the full range and the point blank shot, there is the *ricochet*, which Marshal Vauban invented, and which see under the term *Ricochet*.

**PORTER**, Fr. to carry. It is a marine term; as *porter toutes ses voiles*.—To carry all her sails. It is likewise used as a word of command, viz. *Portez vos armes*, carry arms.

**PORTER**, Fr. This word is also applied

plied among the French, (and our word *carry* frequently corresponds with the various significations,) to the different directions or motions which belong to all fire-arms and missile weapons. They likewise say, in speaking of a gun-shot wound, that it is dangerous, because the ball (*a porté sur l'os,*) has reached or hit the bone.

**PORTER** *une botte*, Fr. to make a thrust or pass.

**PORTEREAU**, Fr. a dam.

**PORTES** *d'une ville de guerre*, Fr. openings which cross the ramparts of a fortified town or place, and are generally arched over. These openings are usually made in the middle of the curtain, between two bastions. They are from nine to ten feet broad, and from thirteen to fourteen feet high. The gates are, mostly decorated with trophies of war: and in some instances a very superfluous magnificence is exhibited.

*Fausse* **PORTES**, Fr. false gates or imaginary inlets. These are almost always made in the reverse, or behind the orillon, in order to conceal and render easy any projected sallies against the besieging parties; or for the purpose of suddenly falling upon the advanced posts of an enemy.

**PORTEURS** *d'eau*, Fr. water carriers. In India they are called *beasties*. Amongst the Turks, the *sakkas*, or water-carriers, are taken from the lowest rank of soldiers belonging to the *Capiculy* infantry. The number of these men depends upon the nature of the service on which the Turks are employed. They are under the orders of the officers who command companies; and although their situation is not only the most degrading, but the most laborious in the army, they may, nevertheless, become soldiers. Their dress consists of brown leather; and, from the continual fatigue which they undergo, their appearance is wretched in the extreme.

The Turks have more men of this description in their service, than are found in any other; not even India excepted. For, independent of the state of their climate, and the consequent necessity of having water brought from distant parts of the country, they use large quantities in ablution; every Turk takes care to wash himself from

head to foot before he says his daily prayers.

**PORT-FIRE**, a composition of meal-powder, sulphur, and saltpetre, driven into a case of paper, to serve instead of a match to fire guns.

**PORT-FOLIO**, in a general acceptance of the term amongst us, is a species of large leathern case, made like a pocket-book, and calculated to carry papers of any size. Among the French it not only signifies the same thing, but likewise a box made of paste-board, in which are contained the several papers that relate to any particular department. The adjutants, quarter-masters, &c. belonging to the staff, should be provided with port folios for the purpose of keeping their reports, &c. in regular order.

**PORT-GLAIVE**, from the French *porteur* and *glaiue*. One who carries the sword before a prince or magistrate.

**PORT-HOLES**, in a ship, are the embrasures or holes in the sides of a ship, through which the muzzles of cannon are run.

**PORTIERES**, Fr. two pieces or folds of wood which are placed in the embrasures of a battery, and which close the instant the piece has been fired. They serve to cover the cannoners from the aim of the enemy, and to resist the discharge of musquetry. They are, however, seldom or ever used except when the batteries stand close to the counterscarp.

**PORTICO**, (*portique*, Fr.) in architecture, a kind of ground gallery, or piazza, encompassed with arches supported by columns, without any immediate relation to doors or gates, where people walk under cover. The roof is commonly vaulted, sometimes flat. The ancients called it *lacunar*.

**PORTMANTEAU**, (*valise*, Fr.) a cloak bag to carry necessities in a journey. It is sometimes made of leather.

**PORTMOTE**, a court held in port towns, as swanimote is in the forest.

**PORT-ROPES**, in a ship, such ropes as serve to haul up and let down the ports on the port-holes.

**PORTULAN**, Fr. a book or chart which gives a description of the situation, &c. of seaports.

**POSCA**. See **OXYCRAT**.

**POSER**, Fr. to lay down. It is used

as a word of command in the French artillery, &c. viz. *posez vos lévriers*; lay down your levers.

**POSER** *une sentinelle*, Fr. to post a sentry.

**POSER** *un corps-de-garde*, Fr. to post or establish a guard in any quarter.

**POSER** *des gardes*, Fr. to post different guards or sentries.

**POSER** *les armes*, Fr. to lay down arms.

**POSER** *les armes à terre*, Fr. to ground arms.

**POSES**, Fr. the sentinels that are posted.

**POSES**, (*grandes poses*, Fr.) a French military term, signifying the extraordinary sentinels or guards, which after retreat beating are posted in a fortified town or place, for the safety of certain specific quarters. The corporals who post the sentinels are directed to instruct them not to suffer any person to go upon the ramparts, unless he belong to the night patrol or rounds, &c.—These extraordinary guards are relieved at daybreak.

**Priming POSITION**, the position in which the musquet is held at the time of putting the powder into the pan.—By the Regulations for the Mammal and Platoon Exercise, published in 1804, it is directed, that the priming position shall be the same for all ranks, viz. the top of the cock opposite the right breast, and the muzzle of the piece elevated to the height of the peak of the cap.

**POSITION** (*position*, Fr.) This word is variously used in a military sense, both by the French and English. It is applicable to locality; as the *army took an excellent position*, or drew up on very advantageous ground, and in a very advantageous manner. Frederick the Great of Prussia has laid it down as a maxim, that no army should take up a position in rear of a forest, since it is thereby prevented from observing the movements of the enemy, and from counteracting their plans. See pages 325, and 331, in the Rules and Regulations.

**POSITION of the soldier without arms.** The equal squareness of the shoulders and body to the front, is the first and great principle of the position of the soldier: the heels must be in a line, and closed; the knees straight, without

stiffness; the toes turned out, so that the feet may form an angle of about 60 degrees; the arms hang near the body, but not stiff; the flat of the hand, and little finger, touching the thigh, and the thumbs as far back as the seams of the breeches; the elbows and shoulders are to be kept back; the belly rather drawn in, and the breast advanced, but without constraint; the body to be upright, but inclining rather forwards, so that the weight of it may bear chiefly on the fore part of the feet; the head to be erect, and neither turned to the right nor to the left; the eyes alone will be glanced to the right. See page 3, Rules and Regulations.

**POSITION of the soldier with arms.** The body of the soldier being in the position above described, the firelock is to be placed in his left hand against the shoulder; his wrist to be a little turned out; the thumb alone to appear in front; the four fingers to be under the butt, and the left elbow to be rather bent inwards, so as not to be separated from the body, or to be more backward or forward than the right one. The firelock must rest full on the hand, not on the end of the fingers: and be carried in such manner as not to raise, advance, or keep back, one shoulder more than the other; the butt must therefore be forward, and as low as can be permitted without constraint; the fore part a very little before the front of the thigh; and the hind part of it pressed by the wrist against the thigh; it must be kept steady and firm before the hollow of the shoulder; should it be drawn back, or carried too high, the one shoulder would be advanced, the other kept back, and the upper part of the body would be distorted and not square with respect to the limbs.

The position in which a soldier should move, determines that in which he should stand still. Too many methods cannot be used to supple the recruit, and banish the air of the rustic. But that excess of setting up, which stiffens the person, and tends to throw the body backward instead of forward, is contrary to every true principle of movement, and must therefore be most carefully avoided.—See page 21, General Rules and Regulations.

**POSITION in marching.** In marching, the soldier must maintain, as much as possible, the position of the body as directed in Sect. I. page 3, of the General Rules and Regulations. See likewise **MARCH.**

**Change of POSITION,** the positive or relative movement of a body of troops on any given point. See Part IV. General Rules and Regulations, Page 308.

**New POSITIONS that a regiment or line can take with respect to the old one, are,**

**Parallel POSITIONS,** or nearly so to the old one.

**Intersecting POSITIONS** by themselves, or their prolongation, some part of the old line or its prolongation.

**New parallel POSITIONS** being necessarily to the front, or rear of the old one, the regiment will, according to circumstances, take them up by the diagonal march; the flank march of divisions after wheeling into column; or the movement in open column to the new line, and its subsequent formation in it.

**New intersecting POSITIONS,** which themselves cut the regiment, will, in cavalry movements, be taken up by the diagonal march; or the flank march ranks by three's of divisions. All other new positions, which themselves, or their prolongation, intersect the old line, or its prolongation, will in general be taken up by the march in open column, and its subsequent formations, when it arrives at the line; some such positions will, however, allow of and require being made by the echelon march, or by the flank march of divisions. In general, the regiment will break to the hand which is nearest to the new position, be conducted to its nearest point in the new line, and form on it as directed. See pages 80, 81, Cavalry Regulations.

**POSITION of the officer.** See **SWORD.**  
**POSITION du soldat sans armes,** Fr. position of the soldier without arms.

**POSITION du soldat avec les armes,** Fr. position of the soldier with arms.

**POSITION de l'extension,** Fr. in fencing, position of extension.

**POSSEDER,** Fr. to possess, to be in possession of.

**POSSE,** an armed power, called out

on any particular emergency; as the *posse comitatus*, who in England are called out by the respective lords lieutenant of counties.

**POSSESSION,** to take possession, is the act of occupying any post, camp, fortress, &c. which might facilitate the operation of an army, or which previously belonged to the enemy.

**POST,** in war, a military station; any sort of ground, fortified or not, where a body of men can be in a condition of resisting the enemy.

**Advanced POST,** a spot of ground, seized by a party to secure their front, and the posts behind them.

**POST of honour,** the advanced guard is a post of honour: the right of the two lines is a post of honour, and is always given to the eldest regiment: the left is the next post, and is given to the next eldest, and so on. The center of the lines is the post the least honourable, and is given to the youngest regiments. The station of a centinel before the colours, and the door of the commanding officer, is a post of honour.

**Advantageous POST.** Every situation is so called which an enemy occupies in such a manner, that not only mere force of arms, but great military skill, and many stratagems are required to dislodge him. We have various instances in history of how much may be done on both sides, when one army has taken up an advantageous post, and another finds it necessary to drive him from it. This subject has been amply discussed in a French work, intitled, *Stratagèmes de Guerre*, page 71, &c.

**POSTS of exercise in the rear,** the relative stations which officers take in the rear, when the ranks of a battalion are opened for the purpose of going through the manual and platoon exercises. It is likewise a cautionary word of command, viz. *The officers will take post in the rear.*

**To POST,** In the disposition of troops, to place the officers, music, drummers, files, and pioneers, according to their several ranks and appointments, either for inspection, or exercise in the field.

**To POST,** to station, to place, as a sentry, &c.

**To be POSTED,** in military tactics, to be formed ready for action. Thus when

when troops are brought up in column, and ordered to deploy, it frequently happens, that some part of the line is refused, in order to flank an enemy, or to cover a weak position, the part that is aligned is said to be posted.

To Post up, (*afficher*, Fr.) to hold up to public censure or ridicule.

To be POSTED, in a familiar sense, signifies to be publicly announced as an infamous or degraded character. Hence to post a man as a coward, is to stick his name up in a coffee-house or elsewhere, and to accuse him of a want of spirit, &c. The French use the phrase *afficher* in the same sense. They likewise say figuratively *afficher sa honte*; to publish or post up one's own disgrace; meaning thereby, that some persons are so totally regardless of decency and decorum, as to express sentiments which are unbecoming the character of an officer, or a gentleman.

POSTAGE of Letters. Non-commissioned officers and private soldiers are privileged to send or receive letters, from any part of the kingdom, on payment of one penny only for the postage.

In the instructions to postmasters, (dated General Post Office, Feb. 1th, 1799,) concerning the exemptions granted to seamen in the navy, and privates in the army, in respect of the postage of their letters, it is specified, that

"No single letter sent by the post from any seaman or private, employed in his Majesty's navy, army, militia, fencible regiments, artillery, or marines, shall, whilst such seamen or private shall be employed on his Majesty's service, and not otherwise, be charged with an higher rate of postage than the sum of one penny for the conveyance of each such letter; such postage to be paid at the time of putting the same into the post office of the town, or place from whence such letter is intended to be sent by the post.

"Provided that no such letter shall be exempted from postage, unless there shall be written thereon, in the handwriting of, and signed by the commanding officer, for the time being, of the ship or vessel, or of the corps, regiment, or detachment to which such seaman or private shall belong, the name of such

commanding officer, and of the ship, vessel, corps, regiment, or detachment commanded by him.

"No single letter, directed to any such seaman, or private, upon his own private concerns, only whilst such seaman, or private, shall be employed on his Majesty's service, and not otherwise, shall be charged with a higher rate of postage than one penny for each such letter, which penny shall be paid at the time of the delivery thereof.

"Provided that no such letter shall be exempted from the rates of postage chargeable upon letters, unless any such letter shall be directed to such seaman, or private, specifying the ship, vessel, regiment, troop, corps, company, or detachment to which he may belong; and provided also, that it shall not be lawful for the deputy-postmaster of the town or place to which such letter shall be sent to be delivered, to deliver such letter to any person except to the seaman or private to whom such letter shall be directed, or to any person appointed to receive the same, by the commanding officer of the ship, &c. to which the seaman, or private to whom such letter shall be directed, shall belong.

"The exemptions do not extend to letters sent to or received from countries independent of England: they do extend to the West India islands, and British America.

"All postmasters are desired to take particular notice, that double letters to and from soldiers and sailors and their families, are liable to the full double rates, the same as letters in general; and some postmasters having conceived that letters containing money orders might pass under the exemptions of this act, they are desired to understand that such letters are chargeable with full double rates also.

"Recruiting serjeants, who may carry on a correspondence with their officers on the recruiting service, cannot send or receive their letters on that service, under the exemptions granted by this act.

"The above exemptions granted by the legislature do not extend in the navy to any other than seamen, and not to officers of any description whatever; and in the army, only the pri-

vates, with serjeants and serjeant-majors are included. Many officers both in the army and navy, having construed the act to extend to their own correspondence, it is hereby publicly stated that such a construction is altogether inapplicable.

“ Francis Freeling, secretary.”

The act in its literal meaning includes in this indulgence all non-commissioned officers, although they are excluded by this official interpretation.

According to a letter issued from the post-office, dated 18th Sept. 1799, to all postmasters, in addition to the rates above-mentioned, these letters are chargeable with inland postage, to and from London, excepting single letters to and from soldiers and sailors, and it is to be left to the option of the writers to pay the postage or not on putting them into any post-office.

N. B. Letters sent to officers in Egypt were charged eight-pence inland postage.

POSTE, *Fr.* a word generally used in the plural number to signify small shot, viz. *Son fusil étoit chargé de douze ou quinze postes*; his gun or musquet was loaded with twelve or fifteen shot.

POSTR, *Fr.* This word is always used in the masculine gender when it relates to war, or to any specific appointments; as *poste avancé*, an advanced post. *Poste avantageux*, an advantageous post.—*Mauvais poste*, an unfavourable post.—The French say figuratively, *un poste est jaloux*, thereby meaning, that a post is extremely open to an attack, and that the troops in it may be easily surprised.

POSTE *avantageux*, *Fr.* See *Advantageous post*.

POSTE *jaloux*, *Fr.* a military post is so called, when it is likely to be surprised, from its situation.

POSTE *d'alarme*, *Fr.* alarm-post. See *ALARM*.

POSTE *des invulnérables*, *Fr.* See *MONT Pagnotte*.

POSTER, *Fr.* to place or post, as *poster des gardes*, to place or post sentries or out-guards.

POSTES, *Fr.* machines which are made of osier branches, standing six feet in length upon three in breadth; about six inches thick, and covered on each side by two pieces of thick strong

pasteboard. Each machine is made fast to a large stake, which is fenced with iron, and driven deep into the earth. There are two openings or loopholes in each post, through which sentries may fire upon the enemy, when he approaches towards a post which has been established on the high road, for the purpose of attempting a surprize or coup de main. This machine was invented by General Serneport, then Governor of Boulogne sur mer, and it was used by the Duke de Guise, with great success, when he besieged and took Calais in 1558.

POSTES *de campagne*, *Fr.* Every construction or groupe of buildings that will admit of being defended, and is consequently tenable, is called a *poste de campagne*, or field-work. Of this description are churches, houses, country-houses, farm-houses, villages, redoubts, &c. in which a sufficient number of men may be stationed for the purpose of holding out against an enemy, until succours can arrive. Chevalier Folard has written upon this subject; and since him, F. Gaudi, with comments and illustrations by A. P. J. Belair, chief of brigade in the Republican French army. We recommend the latter production, which appeared in 1793, to the perusal of every British officer. The work is intitled, *Instruction adressée aux officiers d'Infanterie pour tracer et construire toutes sortes d'ouvrages de campagne*. See likewise, *Aide Memoire pour les officiers d'artillerie*. We think it due to the exertions of an officer in our own service to mention a late work, entitled *Duties of an Officer in the Field*, &c. by Baron Gross, of the Dutch brigade. This gentleman seems to have availed himself of what has appeared in foreign treatises, and to have added some very sensible remarks of his own.

Officers should never lose sight of the many advantages which may be derived from a knowledge of field fortification, and a competent skill to choose a good position, and a tenable post. There is scarcely any building, especially in an intersected country, and in a war of posts, which may not be rendered highly serviceable to one side, and detrimental to the other. Acrc, though dignified by the name of a town, when considered in a military point of view,

view, was nothing more than a post: yet by the gallant defence which was made there, (against Bonaparte and his whole army,) Sir Sidney Smith, and a few brave seamen and marines, not only covered themselves with glory, but were the primary causes of the final rescue of Egypt out of the hands of the French. History is full of instances of valour, and of consequent success, on this head. The defence which Charles the XIIth, of Sweden, made, in his own dwelling, when he had only eight men to stand by him, is, perhaps, unexampled: that also of Marshal Saxe, in 1705, is equally memorable.

*Petits POSTES séparés*, Fr. small detached posts.

*POSTES intermédiaires*, Fr. intermediate posts, or men so stationed between different corps, that, in cases of urgency, they may, with ease, advance to the support of that which is more immediately threatened by the enemy.

*POSTERN*, more frequently called a sally-port, is a small door in the flank of a bastion, or other part of a garrison, to march in and out unperceived by an enemy, either to relieve the works, or make sallies.

*POSTICHE*, Fr. any thing fictitious put in room of something that has been real and natural. In military matters, among the French, it serves to distinguish supernumerary or auxiliary soldiers that are taken from one or more companies, to strengthen any particular body of men.

*POSTILION*, Fr. an express-boat which is kept in French sea-ports for the purpose of carrying and bringing intelligence.

*POT*, Fr. a vessel used in the making of artificial fireworks, &c.

*Pot*, Fr. a pot; an utensil of first necessity, for culinary or private domestic purposes.

*Stink-Pot*, a vessel filled with combustible matter, which is thrown on various occasions, when men come into close action. The consequences of its explosion are sometimes fatal, and always dangerous.

*Por à aigrette*, Fr. an artificial fire-work, the center of which contains a certain quantity of powder, which, upon being inflamed, communicates itself to

several other branches, and exhibits the appearance of an aigrette, or cluster of rays, such as issue from diamonds arranged in a particular manner. The aigrette takes its name from a bird so called, whose feathers serve to make up an ornament for the head. It was given in diamonds, as a particular mark of distinction, by the Grand Signor, to Lord Nelson, after his glorious conduct in the battle of the Nile. Lord Hutchinson and Sir Sidney Smith have deservedly received the same marks of distinction.

*Por à brai*, Fr. an iron pot in which pitch or tar is melted.

*Por de Chambre*, Fr. literally means a chamber-pot; which, to those who can afford to have one, may also be called an utensil of first necessity. Each officer has one in barracks, but the soldiers have not any, for obvious reasons. This word has given birth to a phrase among the French, which has been transferred to us, and was lately used (we hope not ludicrously, for the discussion was serious) in a grave British assembly by a British general.—Vide Parliamentary Report and the Militia-Bill, March 28th, 1805. We shall quote the term.—

*Guerre des Pots de chambre*, Fr. a war of chamberpots, or a contest about trifles.

*Por à feu*, Fr. a fire pot; a hand grenade.

*Por d'une fusée volante*, Fr. the carcass of a fusée.

*Por en tête*, Fr. a head-piece made of iron, which is proof against musquet-shot. This head-piece is sometimes placed in the crown of the hat, and is otherwise used by sappers.

*POTEAU*, Fr. a stake, post.

*POTÉE*, Fr. putty.

*POTENCE*, Fr. Troops are ranged *en potence* by breaking a straight line, and throwing a certain proportion of it, either forward or backward, from the right or left, according to circumstances, for the purpose of securing that line. An army may be posted *en potence* by means of a village, a river, or a wood. The derivation of the word may be variously explained, viz.—From *Potence*, a gibbet. *Potences*, crutchets or supports. *Potence* likewise means a piece of wood which is thrown across two

two uprights; also a cross table, as *table en potence*; and a measure to ascertain the height of a house or man.

The disposition *en potence* is frequently necessary in narrow and intersected ground.

*Double-Potence*, *Fr.* two sides of a square, of more or less extent, thrown opposite to each other from another side. Thus, in narrow ground, the two flank companies may be filed from the battalion, and facing inwards, constitute together the *double Potence*.

*Triple Potence*, *Fr.* if the term can be used, signifies three sides of a square, and is, in fact, the *double Potence* taken collectively.

*Quadruple Potence*, *Fr.* the complete square.

*POTENTAT*, *Fr.*—See *POTENTATE*.

*POTENTATE*, a sovereign prince, whose power is rendered formidable by the various means of authority which are vested in him.

*POTERNE*, *Fr.* a postern gate, a sally port.

*POTRINE*, *Fr.* likewise signifies a secret gate. Gates of this description are made behind the orillons at the extremities of the curtain, in the angle of the flank, and in the middle of those curtains where there are no gates. The sewers generally run under the poternes. Belidor, in his *Art of Engineering*, recommends small arched magazines to be constructed on the right and left of the paths that lead to these gates.

*POTESTAS* or *Imperium*, a command among the Romans, which came direct from the people, and without which authority no general could carry on the war. Of this description was the command given to Fabius, and afterwards divided by the people between him and Minucius. See *PRESUMPTION*.

*POUCH*, (*gihurue*, *Fr.*) a case of black stout leather with a flap over it, which is generally ornamented by a brass crown, &c. for the battalion-men; a fuse for the grenadiers, and a bugle-horn for the light infantry. The pouch hangs from a buff cross belt, over the left shoulder, and is worn in that manner, by the infantry, for the purpose of carrying their ammunition. The pouches in use among the cavalry are smaller.

*Pouch-flap*, the outside covering of

the pouch. It is made of the toughest blackened calf-skin, and ought always to be substantial enough to turn the severest weather.

*POUCE*, *Fr.* an inch.

*Poudre*, *Fr.*—See *GUNPOWDER*.

*Poudier*, *Fr.* The French say, figuratively, when a country is surrounded by enemies—*Ce pays sent la Poudre à Canon*, this country smells of gunpowder.

*Poudre muette*, *poudre sourde*, *Fr.* a species of gunpowder which is free from noise or detonation.

*Poudre fulminante*, *Fr.* a species of gunpowder which makes a greater noise than the common sort. This powder is composed of three parts saltpetre, two parts salt of tartar, and one part sulphur.

*Poudre à gros grains*, *Fr.* gunpowder which is used for artillery pieces. It is likewise called *Poudre à Canon*.

*Poudre à mousquet*, *Fr.* gunpowder used for musquets, and other fire-arms.

*Poudrier*, *Fr.* a gunpowder-maker. It also signifies an hour-glass.

*POVERTY*, a goddess adored by the Pagans, and familiar to Christians. She was revered, as a deity, by the heathens, because they feared her, and was very justly considered as the mother of industry and fine arts. Among military men, poverty is seldom felt whilst the active duties of the profession are executed with zeal and good sense, and the individuals entrusted with them, are not only paid with punctuality, but are secured in their honest hopes of promotion. Economy is the basis on which every soldier should build his views of personal comfort and independence; and if he attend to the perpetual calls of service, he will not fail to realize them. For a life of real service affords no scope for extravagance; and when a good soldier becomes unequal to the hardships it imposes, the nation should provide for him.

*POUF*, *Ind.* a word used among the Africans and blacks to describe the explosion of fire-arms.

*POULEVRIN*, *Fr.* fine grains of gunpowder which have been pounded, and serve for priming.

*POULIE*, *Fr.* a pulley.

A *POUND sterling*, a money in account value 20s.

**POUND NOTE**, a printed paper, which is issued from the Bank of England, and is ordered to be taken at the current rate of twenty shillings, making one pound sterling.

**POUNDAGE**, a rate in the pound sterling, which is allowed for collecting money. Army agents, &c. are entitled to poundage, which consists in a certain deduction from the pay of officers, non-commissioned officers and soldiers—Agents are not allowed any poundage on the pay of the privates in the militia.

**POUNDER**, a great gun or piece of ordnance, denominated according to the weight of the ball it carries, as a 6, 12, 24 pounder. For some particulars relative to an improvement in iron-field-artillery, discovered by Lieutenant-colonel Shrapnel, see page 392, Vol. II. Regimental Companion, 6th edition.

**POURIE**, *Ind.* a wooden sandal, which is used in India during the wet season.

**POURSUITE**, *Fr.* pursuit.

**POURSUIVANS d'armes**, *Fr.*—See **PURSUIVANTS d'armes**.

**POURSUIVRE**, *Fr.* to pursue.

**POURSUIVRE l'épée dans les reins**, *Fr.* to pursue with unrelenting activity.

**POURTOUR**, *Fr.* in architecture, the circumference of any place.

**POURVOIR**, *Fr.* to provide, to lay in store, &c.

**POURVEVEURS des rivières**, *Fr.* purveyors.

**POUSSE-balle**, *Fr.* a small cylindrical instrument made of iron, which is used to ram down a ball in a rifled barrel.

**POUSSÉ-CHÉ**, *Fr.* a bum-bailiff; a reptile well known to the navy and army of Great Britain, especially at the conclusion of a war; and he is likely to continue so, unless some addition be made to their pay.

**POUSSER**, *Fr.* to push, to press upon, to drive before you, viz. *Pousser aux ennemis*; to advance rapidly against the enemy. This expression is used in a neutral sense, and relates chiefly to the operations of cavalry.

**POUSSER un cheval**, *Fr.* to make a horse to full speed.

**POUSSER les frontières d'un état**, *Fr.* to break through the frontiers of a neighbouring state, and to continue the incursion; so that it may literally be said, that the frontiers are pushed forward. The modern French have done this to no small extent.

**POUSSER ses conquêtes**, *Fr.* to extend one's conquests.

**POUSSER ses succès**, *Fr.* to follow up a successful undertaking.

**POUSSIERE**, *Fr.* dust; the earth you tread on; it also signifies the dust which remains after the formation of gunpowder into grains.

**Mordre la Poussiere**, *Fr.* literally to bite the dust. Hence, *d'a fait mordre la poussière à son ennemi*, *Fr.* he has made his enemy bite the dust, or he has destroyed his enemy. The French also say, figuratively, of any man who has been in several engagements, *il s'est couvert d'une noble poussière*, he has covered himself with noble illustrious dust; i.e. he has distinguished himself on various occasions.

**POUTRE**, *Fr.* a beam.

**POTREILLE**, *Fr.* a small beam.

**POWDER**, commonly called gunpowder. (*Poudre à Canon*, *Fr.*) Although, under the latter term, we have entered, rather diffusely, into the investigation and the properties of this destructive composition; we have, nevertheless, omitted some additional observations, which we have selected since that article was worked off. Under the word *peu* we have also stated a curious opinion relative to its first discovery; we shall now extract, from a late French publication, some other particulars on the same subject. Speaking of the opinion of father Gaubil, the Jesuit, in favour of the Chinese, the writer says, "It is difficult to establish the truth or falsity of the assertion." It is not, however, immaterial (in order to arrive at the truth as near as possible), to mention what Sainte-Foix has said on gunpowder; and he is an author by no means apocryphal, but to be depended upon.

"In 1330," observes Sainte-Foix, "a monk of the order of St. Augustine, who was a great alchemist, having put a mixture of sulphur and saltpetre in his mortar, was suddenly struck by the explosion of all the ingredients, through a spark of fire having accidentally fallen upon them. Naturally disposed to investigate so extraordinary an effect, he set about tracing the cause, which soon appeared to him very clear, when he compared the hot and dry quality of the sulphur with the cold and moist one of the saltpetre; he therefore added

some

some pounded charcoal to them, for the purpose of ignition. Having thus established the principles of inflammation, he next observed with what violence the fire, if compressed, went into a state of detonation. He accordingly placed a certain quantity of the composition in a small tube, and communicated a secret, whose promulgation has, hitherto, proved so fatal to the human race."—See *Traité de l'Artillerie, par Diégo Velasco*. It has also been said, that gunpowder was known in Europe as far back as the year 1323, since there was a piece of ordnance in the arsenal, at Bamberg, about that period. Others again assert, that the English made use of cannon at the battle of Créci in 1338; and that Edward III. owed his victory to the tremendous, and, until then, unheard explosion which took place from a height in the neighbourhood of Créci. Our French author, in compliment, we presume, to the acknowledged humanity of the French people, takes care to tell us, that they were in possession of the secret, but that it was reserved for the barbarous and ferocious temper of the British to make use of it. *Credat Judæis!* He then adds, that he has discovered a much more interesting account of this composition than even the one furnished by Sainte-Foix, in a book which was published in 1586, and whose title is *de inventoriis rerum. Virgilius Polidorus*, who is the author of this curious treatise, after having described the different machines which were used by the ancients, thus expresses himself:—"A man, who seems to have been born for the destruction of his fellow creatures, had preserved a preparation of sulphur, for medical purposes, in a mortar, which he covered with a stone. It so happened, that whilst he was striking a piece of steel close to the mortar, a spark flew accidentally into a small aperture of the latter, and the instant it got in contact with the contents, a blaze suddenly issued forth, and, with a loud explosion, the stone was cast into the air. Led on by this discovery, the same person made a small iron pipe, and filled it with the powder. From this he obtained fresh discoveries, which at last gave him the idea to construct a machine that was first tried at Chiozza, when the Venetians were at

war with the Genoese. The reward, according to Polidorus, which this inventor got for his ingenuity and perseverance, is said to have been the total suppression of his name, in order to rescue it from the execration of all mankind. "Did he not merit, in fact," continues Polidorus, in the same strain of fine feeling, "to fall, like *Salmoncus*, a victim to his own invention?"

Notwithstanding these clouds, which have been successively thrown over the original inventor, it does not appear that his name has been wholly buried in oblivion, since, almost every author that has treated of gunpowder, gives the first discovery of it to *Berthold Schwartz*, a religious man, who resided at Eriburg, the capital of Brisgaw, in Germany, lying twenty-six miles South of Strasburg, and being the seat of an university.

President *Hannault* fixes the date of this fatal invention in 1380. This must certainly be a mistake of the press, (which we have inadvertently followed under the article *gunpowder*;) for all authors, who have written upon the subject, state it to have been discovered in 1330; and from what we have said, respecting the first use of cannon, it is probable that the original invention goes much higher.

It is also attributed to *Roger Bacon*, an Englishman, who lived in the thirteenth century. If this conjecture be correct, it is still more ancient. We know, from unquestionable authority, that the English (as we have already stated in the *liberal* words of a French writer,) were the first who used ordnance with gunpowder in 1347, at the memorable battle of Créci, where the French were so completely overthrown. We refer our readers to other works, which have been written on this composition, such as *Antoni, Robins*, &c. for further information respecting its nature and qualities.

**POWDER Horn**, a horn flask, in which powder is kept for priming guns. Light infantry have frequently a powder horn for carrying spare powder.

**POWDER-magazine**, a bomb-proof arched building, to hold the powder in fortified places, &c. containing several rows of barrels laid one over another. See **MAGAZINE**.

**POWDER-cart**, a two-wheeled carriage,  
4 C ?

riage, covered with an angular roof of boards. To prevent the powder from getting damp, a tarred canvass is put over the roof; and on each side are lockers to hold shot, in proportion to the quantity of powder, which is generally four barrels.

**POWDER-mill**, a building in which the materials are beat, mixed together, and grained: they are placed near rivers, and as far from any house as can be, for fear of accidents, which often happen. See **MILL**.

**POWER**, a natural faculty of doing or suffering any thing. Mr. Locke, in his Essay on the Human Understanding, considers power under two heads. One he calls active, and the other passive power.

**POWER**. This word sometimes signifies host, army.

**POWER of Attorney**, (*procurator, Tr.*) an authority given to a third person to act between one or more parties. When an officer is not on the spot to receive his half-pay, it is usual for him to empower some army-agent to act for him, either in Great Britain or Ireland, according to circumstances. General officers, when they obtain regiments, grant powers of attorney to their agents; but they are, to all intents and purposes, responsible to the public for the trust so delegated.

*To be in the Power of anybody*, in a figurative sense, to have committed yourself in such a manner, as to be under the necessity of keeping upon good terms with a person who might injure you by a disclosure of your secrets. To avoid putting yourself in the power of any man, *hear much, say little, and write less*. These are maxims which every public character ought to attend to; and which every general should cautiously follow during an active campaign, when there are so many occasions to communicate with spies, &c. and he is so frequently obliged to hold intercourse with suspected persons.

*To be in the Power of an enemy*, to have taken up, injudiciously, such a position as to expose you to a defeat whenever the enemy may think proper to attack you.

**Powers of lines and quantities**, are their squares, cubes, &c. or other multiplications of the parts into the whole, or of one part into another.

**Cow POX**, a disorder incident to cows, from which much benefit has been promised to the human race, by introducing what is called vaccine matter into the habit, and thereby preventing the fatal effects of the small pox. Doctors, however, disagree as to its efficacy. Doctor Moseley, of Albany House, who has combated the doctrine, as hitherto practised, speaks of it in the following manner: "There may be some good in the *cow-pox*, if we can bring it under proper management. If it be only a temporary security against the small pox, it may still be turned to some account, employed to prevent the destructive rage of the small pox in fleets, camps, and armies; and on board African ships, to guard against its ravages, which are sometimes dreadful, during their voyage to the West Indies; and on plantations there, for occasional purposes, when surprised by the small pox breaking out in an epidemic season." See page 120, second edition of a Treatise on the Lues Bovilla, or Cow-Pox.

**Small Pox**, a disease to which most infants, adults, &c. are exposed; and which has been rendered less malignant by inoculation. When recruits join a regiment they should be examined respecting this disease; and no time should be lost in inoculating them.

**Great Pox**, commonly called the French disease. Few men are more likely to catch this cruel disorder than soldiers; and in no case ought the attention of the regimental surgeon to be more imperiously engaged than in the speedy cure of it. In the gny, where the disease is often prevalent, the surgeons are entitled to receive a certain sum of money, which is stopped out of the pay of their venereal patients, for extraordinary trouble and attendance. No specific regulation exists in the army. Sometimes, indeed, the captains of companies have assumed a discretionary power with respect to their men, and the latter have submitted to the charge. One great evil has, however, grown out of both practices, namely, the men, to avoid the stoppage, have applied to country quacks, and very frequently taken nostrums of their own. Every officer of a company, who has the welfare of his soldiers at heart, should examine their linen at the week-

ly inspections, as the disorder generally manifests itself, particularly in its first stages, in stains upon the shirt.

It is generally believed, that the venereal malady was first brought into Europe in 1492, by the followers of Christopher Columbus, after his discovery of America. These people gave it to their countrywomen in Spain; the Spaniards extended it to Naples, and the French caught it during the siege of the latter place in 1495; and from France it was rapidly spread over the rest of Europe; so that its original nursery, on this side of the Atlantic, seems to have been a camp.

**PRACTICABLE**, a word frequently used in military matters, to express the possible accomplishment of any object. Hence, "a practicable breach."

**PRACTICE**, or *Gun-practice*. In the spring, as soon as the weather permits, the exercise of the great guns begins, for the purpose of shewing the gentlemen cadets at the royal military academy at Woolwich, and the private men, the manner of laying, loading, pointing, and firing the guns. Sometimes instruments are used to find the center line, or two points, one at the breech, the other at the muzzle, which are marked with chalk, and whereby the piece is directed to the target: then a quadrant is put into the mouth, to give the gun the required elevation, which at first is guessed at, according to the distance the target is from the piece. When the piece has been fired, it is sponged, to clear it from any dust or sparks of fire that may remain in the bore, and loaded; then the center line is found, as before; and if the shot went too high, or too low, to the right or to the left, the elevation and trail are altered accordingly. This practice continues morning and evening, for about six weeks, more or less, according as there is a greater or less number of recruits. In the mean time, others are shown the motions of quick firing with field-pieces.

**Mortar-PRACTICE**, is generally executed in the following manner: a line of 1500 or 2000 yards is measured in an open spot of ground, from the place where the mortars stand, and a flag fixed at about 300 or 500 yards; this being done, the ground where the mortars are to be placed is prepared

and levelled with sand, so that they may lie at an elevation of 15 degrees; then they are loaded with a small quantity of powder at first, which is increased afterwards, by an ounce every time, till they are loaded with a full charge: the times of the flights of the shells are observed, to determine the length of the fuzes.—The intention of this practice is, when a mortar-battery is raised in a siege, to know what quantity of powder is required to throw the shells into the works at a given distance, and to cut the fuzes of a just length, that the shell may burst as soon as it touches the ground.

**PRACTICE-Book**. See **BOOK**.

**To PRACTISE**, in a military sense, to go through the manual and platoon exercises, or through the various manœuvres, &c. for the purpose of becoming thoroughly master of military movements. Hence, to practise the nineteen manœuvres. Practice is likewise used, in imitation of the French, to signify the act of effecting or executing any military operation, viz. to practise a mine beneath the covert way, &c.

**PRÆFECTURÆ**, *Lat.* During the time of the Romans, there were certain conquered cities in Italy, which were exclusively governed by Roman magistrates whose laws and regulations they were obliged to obey. These magistrates were called *præfetti*. In imitation of the Romans, the modern French have established what they name *præfectures* and *præfets*. It also signifies, according to Adam Littleton, a lieutenancy, or captainship, or place of rule; a government, a district, a province, or place of jurisdiction.

**PRÆFECTUS**, *Lat.* See **PREFECT**.

**PRÆFECTUS Castrorum**, *Lat.* an officer among the Romans, whose rank and situation correspond with those of a *Maréchal de Camp* in the French service, and a quartermaster general in the British.

**PRÆFECTUS Classis**, *Lat.* the commander in chief of a naval armament among the Romans. His command lasted one year.

**PRÆFECTUS Prætorio**, *Lat.* the prefect, or chief officer in command, in the Roman prætorian bands, who had charge of the emperor's person; and who, from a very circumscribed situation, gradually

ally rose into the most important station.

**PRÆTOR, Lat.** After the expulsion of the kings, the consul was, at first, so called among the Romans. He possessed kingly power both for civil and military affairs. *Adam Littleton.*

**PRÆTORIANA CASTRA, Lat.** the main guard.

**PRÆTORIANI MILITARES, Lat.** the general's body guard. They originally consisted of a cohort, and were first established as a guard by Scipio Africanus.

**PRÆTORIAN BANDS,** a select body of troops among the Romans, which gradually obtained so much ascendancy, that they elected emperors at will, and dethroned them at pleasure. They became corrupted at last, and the power they had possessed was absorbed by the legions, or regular soldiers, who, as Junius somewhere says, came from the distant provinces, and gave away the empire. These bands, indeed, were originally chosen on account of their merit, (as all life and body-guards ought to be,) and when first instituted, always accompanied the commander in chief, or the general into action.

The consular guard and the legion of honour, established by the Emperor Napoleon, are, in some degree, imitations of these bands; and the janissaries of Constantinople have sometimes followed their example, in disposing of the Grand Signor's title.

**PRÆTORIUM, Lat.** (*Prætoire*;) the Roman general's tent or pavilion. It also signified what we call *head-quarters*.

**PRAME, Fr.** This word is sometimes written *Prium*: it is a sort of flat-bottomed boat or barge which is used on the canals in France, &c.

**PRAME,** in military history, a kind of floating battery, being a flat-bottomed vessel, which draws little water, mounts several guns, and is very useful in covering the disembarkation of troops.—They are generally made use of in transporting the troops over the lakes in America. These vessels are well calculated for the defence of large havens and seaports. Bétour, in his *Elémens de Fortification*, page 397, strongly recommends the use of prames in cases of inundation, &c. See the supplements

proposed by him in page 316, where he speaks of "*Bateaux insubmersibles*."

**Di PRATICA, Ital.** free intercourse; admitted to *pratique*. Persons who, having performed quarantine, are permitted to land in Italy, and mix with the inhabitants.

**PRATICABLE, Fr.** See **PRACTICABLE**. This word is in general use among the French, *viz.*

*Les chemins ne sont pas PRATICABLES, Fr.* the roads are not passable.

*Le gue n'est pas PRATICABLE dans ce moment-ci.* The river is not fordable at this moment; verbatim, the ford is not practicable at this moment.

**PRATIQUE, Fr.** practice. The term likewise signifies, among the French, commerce, intercourse, traffic, &c.

*Avoir PRATIQUE avec des insulaires, Fr.* to trade, or have intercourse with the inhabitants of islands.

*Une PRATIQUE éclairée, Fr.* a project undertaken and put into execution upon solid principles.

*Une PRATIQUE avengle, Fr.* a plan ill-digested, and executed without discernment or ability.

**PRATIQUES, Fr.** in the plural, this term signifies the same as *mal-practices*, or secret intelligence with an enemy, *viz.*

*Entretenir des PRATIQUES avec le commandant d'une place, Fr.* to hold communication, or keep up a secret correspondence with the commandant of a fortified place.

*PRATIQUER des intelligences, Fr.* to collect; to gather useful information.

*Il avoit PRATIQUE dans cette place des intelligences qui lui ont donné le moyen de la surprendre, Fr.* he had gathered such information, by holding secret intelligence with the inhabitants, as to be able to surprize the place.

**PRATIQUER, Fr.** in architecture, to contrive, to make, to render convenient.

*Donner PRATIQUE à un vaisseau, Fr.* to allow a vessel to enter into port and unload. This expression is used in the Mediterranean under circumstances of quarantine, and comes from *Pratica*.

**PRATIQUER, Fr.** to practise. *Pratiquer une homme*, to try a man; to put his abilities to the test. It likewise signifies to gain over, to suborn.

**PRE-**

**PRECEDENCE**, priority. Priority in rank or precedence in military life, arises from the date of an officer's commission, or the corps in which he serves.

**PRECEDENT**, any act which can be interpreted into an example for future times, is called a precedent. Persons in high official situations are extremely scrupulous with respect to precedents, especially in military matters.

**PRÉCIPITER**, *Fr.* to precipitate; to urge or hasten on; to do any thing prematurely. This word appears to be used by the French in almost all the senses to which we attach it, especially in military matters.

**PRÉCIPITER sa retraite**, *Fr.* literally signifies, to precipitate one's retreat. It may be taken in a good or bad sense, to signify the act of flying away blindly or rashly, without judgment or discretion; or of urging your retreat under circumstances of impious necessity, yet with proper caution and foresight. So that to precipitate, both in French and English, signifies, *faire très promptement, ou trop promptement*; to do any thing very promptly, or too promptly.

**PRECISION**, exact limitation, scrupulous observance of certain given rules.

**Precision of march**. On the leading platoon officer of the column much of the precision of march depends; he must lead at an equal, steady pace; he must lead on two objects either given to him, or which he himself takes up on every alteration of position; this demands his utmost attention; nor must he allow it to be diverted by looking at his platoon, the care of whose regularity depends on the other officers and non-commissioned officers belonging to it. The second platoon officer must also be shewn, and be made acquainted with the points on which the first leads; he is always to keep the first officer and those points in a line, and those two officers, together with the placed mounted officers, thus become a direction for the other pivot officers to cover. In marching in open column, the covering serjeants are placed behind the second file from the pivot officers, that the officers may the more correctly see and cover each other in column.

**PREDAL**, or } *War*, a war carried  
**PREDATORY**, } on by plunder and  
rapine; such as the French republic has

been carrying on since the year 1793, against the Continental powers, levying enormous contributions on all the conquered towns or states.

**PREDESTINARIAN**, a person who believes in predestination. Every Turk may be considered as a predestinarian. A Turkish soldier is taught to believe that if he falls in battle he will instantly go to heaven. This is a comfortable idea even for Christian soldiers. How far it ought to be encouraged, doctors and able casuists must determine.

**PREFECT**, (*prefet*, *Fr.*) a governor or commander of any place or body of men. Among the Romans, this was a title of great importance, both in civil and military situations. During the existence of the republic the *Præfectus Legionis* had a considerable command. The two *Alæ*, or great divisions of the allies, had each a *Præfect* appointed them by the Roman Consul, who governed in the same manner as the *Legionary Tribunes*. For a specific account see pages 193, 194, 195, of Kennett's *Roman Antiquities*. There was likewise, during the time of the Roman Emperors, an officer called the *Præfect* of the *Pictorian Band*, or body guards. The French have adopted the word in their new constitution. The functions of a modern French *prefect* correspond almost wholly with those of a governor under the old regime or system.

**PREFÉMENT**, the state of being advanced to a higher post.

**PRÉFETS du Palais de la cour des premiers Rois François**, *Fr.* these persons were formerly called *comtes du palais et préfets du prétoire*. They had once the sole direction of the government; managing all state affairs, as well with respect to the exterior as to the interior relations of peace or war. A *Préfet du Palais* was also called *Major-dome*; under which title Charles Martel is mentioned by several old writers. It was afterwards changed into *Sénéchal*; in which capacity we find *Thibaud*, Count of Blois, who is sometimes stiled *Major-dome*, and at others *Sénéchal*.

**PRÉFETS de Soldats**, *Fr.* See **PREFECT**.

**PREJUDICE**, (*préjugé*, *Fr.*) prepossession, judgment formed beforehand without examination. A celebrated French writer calls it an opinion taken

up without judgment. *Le préjugé est une opinion sans jugement. Voltaire.* It is used in two instances, viz. for and against a person.

**PRELIMINARY**, (*préliminaire*, Fr.) previous, introductory, &c. Preliminary, as a substantive, signifies an introductory measure, a previous arrangement. Hence the "preliminaries of peace."

**PRENABLE**, Fr. that may be taken. There is no place but what may be taken by famine.

**PRENDRE**, Fr. a French military term. It is variously used, and accords generally with our word *to take* viz.

**PRENDRE une ville d'assaut; par famine**, &c. Fr. to take a town by assault; by famine, &c.

**PRENDRE à droite, ou à gauche**, Fr. to go to the right or left.

**PRENDRE à travers**, Fr. to run across.

**PRENDRE les devants**, Fr. to anticipate, to get the start of any body.

**PRENDRE le pas**, Fr. to take precedence.

**PRENDRE la droite**, Fr. to take the right.

**PRENDRE terre**, Fr. to land.

**PRENDRE le large**, Fr. a term used figuratively, to signify the act of running away.

**PRENDRE la clé des champs**, Fr. literally, to take the key of the country, or to run over it.

**PRENDRE son élan**, Fr. to dart forth, to spring forward.

**PRENDRE un rat**, Fr. a figurative expression used among the French, when a musquet or pistol misses fire, viz. *Il voulut tirer, mais son pistolet pris qu'un rat*, literally, he would have fired, but his pistol only caught a rat.

**PRENDRE du temps**, Fr. to take time in executing a thing.

**PRENDRE son temps**, Fr. to do a thing with perfect convenience to one's self.

**PRENDRE la parole**, Fr. to speak first.

**PRENDRE sa revanche**, Fr. to make up for any past loss or disadvantage.—We familiarly say, to take one's revenge.

**PRENDRE à partie**, Fr. an expression peculiar to the French, in judicial matters, which signifies to attack a judge,

for having prevaricated and taken the part of one side against another, without any regard to justice. It likewise means to impute misconduct or criminality, and to make a person responsible for it.

**SE PRENDRE de vin**, Fr. to get drunk. Excess of drinking was so little known before the revolution, among French officers and soldiers, that the greatest disgrace was affixed to the habit. It is recorded, that when Marshal Richelieu had determined to storm a place in the Mediterranean, he gave out the following order:—"Any soldier who shall appear the least intoxicated, shall be excluded from the honour and glory of mounting the assault to-morrow-morning." Every man was at his post, and not a single instance of intoxication occurred. Such was the *esprit de corps* and the *amour propre* which prevailed in all ranks, that the dread of corporal punishment had less effect than the being deprived of an opportunity to shew courage and resolution.

**PRENDRE langue**, Fr. a figurative expression among the French, which signifies to get intelligence by secret means. Thus, a spy that is sent into an enemy's camp, may be said to go in order to hear what passes, and to pick up information.

**L'oiseau PRENEUR**, Fr. a term peculiarly applicable to a ship that has taken a prize.

**PRÉPARATIFS de guerre**, Fr. war-like preparations. A French writer, under this article, very judiciously observes, that the necessary arrangements which must be made before an army takes the field, and sometimes before an open declaration of war takes place, ought to be managed with extreme caution and great secrecy; although it is impossible to prevent the neighbouring powers from being totally ignorant of what is going forward. It is recorded that Henry the IV<sup>th</sup> of France, having conceived a vast military project, kept it a profound secret for several years, and made the necessary preparations with extreme caution, before he put it into execution.

When Louis the XIV<sup>th</sup> resolved to invade Italy, in 1663, he dispatched commissaries, purveyors, &c. the preceding year, under various pretences,

to buy up corn, to secure forage for his cavalry, and to provide every thing that might be wanted in the train of artillery; and in 1667, when he formed the plan of entering Belgium in person, he arranged all matters relative to the interior government of France during his absence, examined into the state of the finances, filled his treasury with money, augmented, by insensible degrees, the different regiments of his army, and by means of these and other sage precautions, secured the conquest of his object. In fact, well digested plans and cautious arrangements previous to the execution of a military project, however apparently tedious, are the sure forerunners of a prompt and decisive victory. It was a maxim among the Romans, and it is still one among the Turks, *De faire de grosses et courtes guerres*. To make war upon a scale which is previously vast and heavy, that its issue may be ultimately short and effectual.

He is a wise man, and of course a wise king, who keeps the following maxim constantly in his mind:—*si vis pacem, para bellum*. If you wish to secure peace, be always ready to go to war. The Turks are, perhaps, the only people who adhere to this Roman adage. Their troops are always ready for action; or, as a French writer says, —*Le biscuit est prêt, de sorte qu'ils n'ont qu'à se mettre en route*, the biscuit is at hand, so that they have nothing to do but to move, or begin their route.

PREPARATIVE, having the power of preparing, qualifying, or fitting. This word is used, in a military sense, to give notice of any thing about to be done. Hence

PREPARATIVE, a beat of the drum, by which officers are warned to step out of the ranks when the firings are to commence.

When the Preparative is beat, for the firings, the officers in the front rank step out nimbly two paces from the vacancies between the divisions, platoons, companies, or sub-divisions, face to the left without word of command, and look right of companies, &c. When the Preparative has ceased, they severally commence the firing. When the general is beat, they fall back into the front rank.

To PREPARE, to take previous measures.

PREPARE for action, a word of command used in the British artillery.

PREPARATORY, antecedently necessary; giving that knowledge in any art or science which is necessary to qualify individuals for a superior class or branch. Hence preparatory schools.

PREPARATORY academics. The junior department of the Royal Military College, is preparatory to the senior. The first elements of military science are taught in the former, and officers get qualified in the highest branches of the profession when they enter the latter.

PRESENCE of mind, ready conception of expedients, producing promptitude of action under difficult and alarming circumstances. Archduke Charles, in 1796, when the Austrians were precipitately retreating, dismounted and placing himself at the head of the grenadiers, exclaimed, "There is the enemy," pointing to the French, "you have mistaken the road—there shall be no retreat where I am."—And he beat the French.

PRESENCE of mind. There is a very remarkable instance of that species of presence of mind which gives a sudden turn to public opinion, and, as it were, electrifies the human mind. When a dangerous mutiny broke out among the Roman legions, on a proposed expedition against the Germans, Caesar suddenly exclaimed, "Let the whole army return ignominiously home, if it think proper, the tenth legion and myself will remain and combat for the republic." If, as, Plutarch observes, excited his troops to fresh ardour, he led them against the Germans; and being informed that the enemy had been warned by their soothsayers not to engage before the next moon, he took an immediate occasion to force them to battle, in which he, as usual, obtained a victory. On a subsequent occasion this great man discovered a promptitude of conception and a presence of mind which have since been imitated by a modern general, but have never been surpassed in ancient or modern history.

Having led his army against the Nervii, the most uncivilized, and the most fierce of all the nations bordering upon the

the Roman army, he met a resistance, which, as it was not expected, somewhat shook the firmness of his troops. The Nervii, by a sudden onset, at first routed his cavalry; but perceiving the danger to which his army was exposed, Cæsar himself snatched up a buckler, and forcing his way through his own men, he, with the assistance of his tenth legion, changed the fortune of the day, and cut the enemy almost entirely off. For, as Plutarch states, out of 60,000 soldiers, not above 500 survived the battle.

*En PRÉSENCE, Fr.* in sight.

*All PRÉSENT*, a term used when an officer takes his serjeant's report, and makes the necessary enquiry respecting the state of his troop or company.

*To PRÉSENTER, (Présenter, Fr.)* This word is used in various senses. Those which are more immediately applicable to military usage are as follow:—

*To PRÉSENTER*, to offer openly; to exhibit; to give in ceremony; as to present the colours.

*To PRÉSENTER arms*, to bring the firelock to a certain prescribed position, for the purpose of paying a military compliment. See *MANUAL*.

*To PRÉSENTER*, to level; to aim; to bring the firelock to a prescribed position, for the purpose of discharging its contents.—See *PLATOON Exercise*, under *MANUAL*. The French use the term *Présent* in almost all the senses that we do. There is an exception in the phrase *Présent, Feu*, instead of which they say, *Joue, Feu*. The word *joue*, which signifies check, being expressive of the particular position of the musquet when the soldier takes aim. It corresponds with *Présent* in this particular case.

*PRÉSENTER les armes, Fr.* to present arms, to bring the firelock to any position that may be prescribed in military exercise. In the things it signifies *make ready*, viz. *Présenter les armes*, make ready; *Joue*, present; *Feu*, fire. In the manual and other exercises of the piece, it corresponds with our term.

*PRÉSENTER la baïonnette, Fr.* to charge bayonet.

*PRÉSENTER la baïonnette à la cavalerie, Fr.* to receive the cavalry with charged bayonets; literally, to present bayonet against the cavalry.

*PRESIDENCY*, the seats of govern-

ments are so distinguished in India.—There are four presidencies, viz. Bombay, Calcutta, Fort St. David, and Madras.

*PRESIDENT of a general or regimental court martial.* The officer, oldest in rank, who sits, in conjunction with other officers, for the trial of military offences is so called. The court consisting of an odd number of members, when their opinions are equal, the president has the casting vote.

The commander in chief for the time being, is, by virtue of his appointment, perpetual president of the supreme board of the royal military college in Great Britain. And the resident governor, or, in his absence, the lieutenant-governor of that establishment, is perpetual president of the collegiate board.

*PRESQU'ILE, Fr.* See *PENINSULA*.

*PRESS-money*, money given to the soldier when taken or pressed into the service: but as the entrance into the British service is a voluntary act, it is now more properly called bounty or instilling money.

*PRESTATION de serment, Fr.* the taking an oath.

*PRESUMPTION and VANITY.* (*Presumption et Vanité, Fr.*) Under the latter word Bailey very justly includes emptiness, unprofitableness, vain-glory, and pride; and of all follies, bordering upon vice and crime, it is, perhaps, the most dangerous in a military character. We lament that the limits of this publication will not allow us room to illustrate the truth of this observation, by transcribing out of Plutarch, in the life of Fabius Maximus, more than what is given respecting the conduct of Minucius, who was his colleague, and who fought conjointly with him against Hannibal. We shall, however, quote enough to exhibit a serious lesson to aspiring, self-imagined heroes.

After Fabius had been named dictator, in consequence of the danger to which Rome was exposed by the victories of Hannibal; Minucius, who acted under him, increased that danger, during his absence, by presumptuously fighting contrary to his orders. Although Fabius expressed much dissatisfaction, yet Metilius, who was tribune and a secret friend to Minucius, had address sufficient to persuade the people

ple to make Minucius the Dictator's colleague.

Fabius (to use Plutarch's words), being under apprehensions that the rashness of Minucius might hurry him and the army into some dangerous enterprise, returned back with all possible secrecy and speed, and found Minucius so elated with his new dignity, that, not satisfied with a joint authority, he required that they should have the command of the army every other day by turns. Fabius rejected this proposal; and thinking it less dangerous to divide the army, and that each general should command his part, took the first and fourth legion, and delivered the second and third to Minucius; each also had an equal share in the auxiliary forces.

Minucius, on being thus exalted, could not forbear boasting, that, from a regard to him, the people had humbled the dictatorial power: to which Fabius replied, "Consider Minucius, it is Hannibal, and not Fabius you are to combat; but if you must needs contend with your colleague, let it be by shewing, that he who is honoured and favoured by the people, is not less concerned for their welfare than he whom they have treated ill and disgraced." But Minucius considering this as the raillery of an old man, immediately drew off his part of the army, and encamped by himself.

Hannibal, who was attentive to everything, was not ignorant of what had passed. Between his army and that of the Romans was an eminence that seemed an advantageous post, and round it was a large plain, that appeared, at a distance, perfectly smooth and even, though it had, in reality, many hollows and ditches. Had Hannibal thought proper, he might easily have taken possession of the above eminence, but he reserved it as a bait for the Romans. Observing that Fabius and Minucius were divided, he, in the night, lodged a number of men in the ditches and hollow places; and, early in the morning, sent a small detachment to seize the post, in order to tempt Minucius to dispute the possession of it. This design succeeded: Minucius sent out a body of light-armed troops, then some horse, and at last perceiving Hannibal himself advancing to the assistance of his forces, marched

with the remainder of his army, and, with great resolution, attacked those posted on the rising ground. The engagement continued equal for some time; but Hannibal no sooner perceived the whole army advanced within the toils he had laid for them, than he gave the signal, and his men instantly rushed out of the ditches and low places; and, attacking Minucius's rear, made great slaughter. The Roman army was instantly thrown into the utmost terror and confusion. Minucius, filled with amazement, looked round on his officers, and saw that none of them could maintain their ground, as the soldiers every where began to fly; but even in this there was no safety, for the victorious Numidians, who had spread themselves every way, cut to pieces all whom they found scattered about the plain.

In the meanwhile Fabius, foreseeing what would happen, had caused his troops to take to their arms; and, from an eminence near his camp, viewed all that passed; when, observing Minucius's army encompassed by the enemy, and hearing their distant cries, he, with a deep groan, striking his hand on his thigh, exclaimed, "O Heavens! how much sooner than I expected has Minucius ruined himself!" then commanding the ensigns to march, and the army to follow him, he called aloud, "Now let all who remember Arimencus hasten to his assistance: he is a brave man, and a lover of his country. If he has been too forward to engage the enemy, we will tell him of it hereafter." Fabius then marched at the head of his men, cleared the plain of the Numidians, and falling on those who were charging the Romans in the rear, cut to pieces all who opposed him; while the rest, fearing that they should be surrounded, as the Romans had been, saved themselves by flight: on which Hannibal, seeing such a sudden change, sounded a retreat, and drew off his men; while the Romans under Minucius were equally glad to retire in safety. It is said, that on this occasion Hannibal said to his friends,—"Did not I tell you that the cloud which hovered on the tops of the mountains would, one time or other, come down upon us with a storm?"

Fabius having suffered his men to

strip the dead bodies of his enemies, retired to his camp without saying a harsh thing of his colleague; who, having on his side assembled his troops, thus addressed them.

"Never to err, my fellow soldiers, in conducting great affairs, is above the power of human nature; but to improve by our faults is becoming a good and a prudent man. I have some reasons to accuse *Fortune*, but I have many to thank her; for in a few hours she has taught me what I had never before learnt, that I am unfit to command others, and have need of another to command me; and that we ought not to contend for a victory over those to whom it is our advantage to yield. For the future, therefore, the Dictator must be your commander: I will still, however, be your leader, in shewing you an example of gratitude, and in being the first to obey his orders." He then commanded all his men to follow him to the camp of Fabius, and on his entering it, marched towards the Dictator's tent. Fabius came out to meet him; when Minucius, fixing his standards before him, saluted him with a loud voice by the name of Father, and his soldiers saluted those of Fabius with the title of Patrons, a name by which those who are made free call those to whom they owe their liberty. When silence being made, Minucius said,— "You have this day, Fabius, obtained a double victory; one by your valour over your enemies, and another over your colleague by your humanity and prudence: by the one you have preserved us, and by the other we are instructed. Hannibal's victory over us is not more disgraceful than yours is honourable and salutary. I call you father, because I know no title more honourable; but I am more obliged to you than to my father, for to him I am only obliged for my own life, but to you I owe my own life, and the lives of all here present." We should not have made our extract so copious, had we not been induced to do so, by the noble manner in which Minucius made atonement for his vanity. We press the bad effects of his error, in the first instance, upon the attention of every young officer, because we know that there are manifold occasions to commit the one, and seldom or ever an oppor-

tunity occurs to put in practice the other.

**PRET, Fr.** the subsistence or daily pay which is given to soldiers. The French say,

*Payer le PRET*, to pay subsistence.

*Recevoir le PRET*, to receive subsistence.

*Toucher le PRET*, to touch subsistence or daily pay.

**PRET** also signifies a loan of money.

**PRETENDER, (prétendant, Fr.)** one who pretends to any thing, whether it be his own or the property of another. Hence the Pretender, who thought the Crown of England his own, on the ground of hereditary right; but whose lineal claim was set aside by the Parliament of Great Britain, in favour of a collateral Protestant branch.

**PRÉTER, Fr.** in military tactics, to expose, as

*PRÉTER son flanc à l'ennemi*, to expose one's flank to the enemy; to march in so unguarded a manner, or to take up one's ground so disadvantageously as to stand in continual danger of being out-flanked.

The French likewise say, figuratively, *préter le flanc*, to put one's self in the power of another.

*PRÉTER le collet à quelqu'un, Fr.* to fight body to body; or at close quarters.

**PRÉTOR, (préteur, Fr.)** among the Romans, the governor of a province, who had served the office of Pretor, or chief minister of justice in ancient Rome. The provinces so governed were called Pretorian.

**PRETORIAN, (prétorien, nc, Fr.)** appertaining to Pretor; as *Pretorian Band*, the general's guard among the ancient Romans.

**PRETORIUM, (prétoire, Fr.)** the hall or court wherein the Pretor lived and administered justice. It also denoted the tent of a Roman general, in which councils of war were held. The place where the Pretorian guards were quartered or lodged, was likewise called Pretorium.

**PREVARICATION**, according to the laws of England is, where a lawyer pleads booty, or acts by collusion, &c. It also denotes a secret abuse committed in the exercise of a public office, or of a commission given by a private person. The word is unknown in milita-

ry phraseology, and is only explained in this place to stand as a land-mark to the open ingenuous character of a soldier.

**PRÉVENIR l'ennemi**, Fr. to get the start of an enemy, or to anticipate his movement. This occurs when the general of an opposing army has reason to suspect, that his adversary intends to march against him, and the former, on the contrary, marches first against him; or when an enemy endeavours to get possession of an open post, and his adversary gets the start, by previously taking possession of it.

**PRÉVOST**, Fr. provost.

**PRÉVOST d'une armée**, Fr. provost-marshal belonging to an army.

**PREVOT de l'artillerie**, Fr. an officer under the old government of France, who only exercised the duties of his situation during actual service, and who always came in rear of the baggage.—There were some cases in which the power of life or death was absolutely vested in him; and in others, he was obliged to refer the sentence to the high bailiff belonging to the royal arsenal in Paris, as a last resort.

**PREVOT Général de la connétablie, gendarmerie et Maréchaussée de France, camps et armées du roi**, Fr. provost-general belonging to the jurisdiction of the high constable of France, &c. This place or commission is of very ancient date, having first taken place during the second race of French kings, and being as old as that of *connetable* or constable of France; with this only exception, that the appellation of *maréchaussée* was added after the suppression of the *connétablie* in 1667. The company, which immediately was attached to the provost-general and which the colonels, or *la colonelle*, took precedence over all others of the same description. This superior officer was, in his own right, provost-general throughout the king's camps and armies in war time. An independent company always attended the provost, in order to execute his orders, as well as those of the most ancient Marshal of France, who represented the constable since the suppression of that title. There was also a guard at the marshal's headquarters, which was constantly mounted by a given number of cavalry, and which was subject to the orders of the provost-general. The provost-general was

always present whenever a council was assembled by the Marshal of France, to settle disputes and differences which might arise between persons of distinction, noblemen or private gentlemen; and to determine generally upon points of honour. The sentence or opinion of this tribunal was final and decisive.

**PRÉVOT Général des Monnoies**, Fr. provost-general, or what we call master of the mint. Under the old monarchy of France, this person was vested with the same powers that were annexed to the title of *Prévot des Maréchaussées*, and had a seat at the council of the Marshals of France.

**PRÉVOT Général de l'île de France**, provost-general of the Isle of France, (so called from an insular spot formed by the Seine in the centre of Paris).—This officer had under his command a body of horse, divided into eight brigades, which were distributed round the neighbourhood of Paris, to secure the country round from the depredations of the capital. He had, like the other prévôts, a separate tribunal of his own. It were devoutly to be wished that, among our manifold imitations of the Germans, we could condescend so far to imitate the French, as either to employ some of our useless cavalry in and about the skirts of London, or to form some specific body of men, whose duty should be to patrol within the bills of mortality at least. In time of peace this plan might easily be adopted; and we could point out a corps, which might be rendered very serviceable. But we think such an establishment ought to be carried on a large and liberal scale. The community would be benefited by it; and if public money is to be expended, in time of peace or in time of war, how can it be more rationally employed than for the safety of those who contribute towards the public purse?

**PRÉVOTS Généraux des Maréchaussées**, Fr. provosts-general of the different marshals of France. Under the old government, provosts of this description were distributed through the different jurisdictions of the kingdom. It was necessary that each should have been previously employed under the provost-general, and have had the command of a troop of cavalry, with subordinate officers to conduct it in their absence. These officers consisted of one lieu-

lieutenant, (who commanded in their absence,) a certain proportion of *ex-empts*, brigadiers, and sub-brigadiers, and there was besides a tribunal, called the provost's tribunal, to which delinquents, &c. were amenable. These troops were drafted out of the *gendarmes*, and were under the controul of the Marshals of France.

**PRICES of Commissions.** See REGULATION.

**PRICKER**, a brass-wire, used for clearing the touch-hole of a musket, &c. a light horseman was formerly so called.

To **PRICK out**, an expression used among engineers, &c. signifying to mark out the ground where a camp, &c. is to be formed.

To **PRICK out the line of circumvallation**. This is done by the chief engineer and quarter-master-general whenever an army entrenches itself before a town, or takes possession of any given lot of ground, and begins to hut.

**PRICKING**, among mariners, to make a point on the plan or chart, near about where the ship then is, or is to be at such a time, in order to find the course they are to steer.

**PRIEST'S CAP**, (*bonnet de prêtre*, Fr. See FORTIFICATION, and BONNET.

**PRIME**, a word of command used in the platoon exercise. See MANUAL.

**PRIME and loud**, a word of command used in the exercise of a battalion, company or squad. See MANUAL.

**PRIME parade**, in fencing, is formed by dropping the point of your sword to the right, bending your elbow, and drawing the back of your sword hand to within a foot of your forehead, in a line with your left temple, so that your blade shall carry the thrust of your antagonist clear of the inside or left of your position.

**PRIME thrust**, a thrust applicable after forming the above parade, and delivered at the inside of the antagonist.—To obtain an opening for this thrust, it is necessary to step out of the line to the right as you parry, or else to oppose the sword of your antagonist with your left hand. The first method is most eligible.

**PRIME Hanging Guard**, with the broadsword, a position in which the hand is brought somewhat to the left,

in order to secure that side of the face and body. See BROADSWORD.

**PRIMING**, in gunnery, the train of powder that is laid, from the opening of the vent, along the gutter or channel, on the upper part of the breech of the gun, which, when fired, conveys the flame to the vent, by which it is further communicated to the charge in order to discharge the piece. This operation is only used on ship-board, at the proof, and sometimes in garrison; for on all other occasions, tubes are used for that purpose.

**PRIMING**, or *prime of a gun*, is the gunpowder put in the pan or touch-hole of a piece, to give it fire thereby.

**PRIMING-case**, a small tin case, about the size and shape of a cartridge, for the purpose of keeping a certain quantity of gunpowder, for priming, constantly ready and dry. It is to be hoped, that this rational and economical invention, which has been seen by the commander in chief, will be universally adopted.

**PRIMING position.** See *Platoon Exercise under Manual*.

**PRIMING-wire**, in gunnery, a sort of iron needle, employed to penetrate the vent or touch-hole of a piece of ordnance, when it is loaded, in order to discover whether the powder contained therein is thoroughly dry, and fit for immediate service; as likewise to search the vent and penetrate the cartridge, when the guns are not loaded with loose powder.

**PRIMPILARII, PRIMOPILARII, or PRIMIPILARES**, among the Romans were such as had formerly borne the office of *Primipulus* of a legion.—The banner was entrusted to his care. Among other privileges which the *Primpilarii* enjoyed, they became heirs to what little property was left by the soldiers who died in the campaign.

**PRIMPILARIE**, Fr. See *PRIMPILARII*.

**PRIMPULUS**, the centurion belonging to the first cohort of a legion. He had charge of the Roman eagle.

**PRIMITIVES**, Fr. Primitive colours are distinguished by this term among the French. They are, the yellow, the red, and the blue; white and black being the extremes.

**PRINCIPES**, (*princeps*, Fr.) Roman soldiers. They consisted of the strongest

est and most active men in the infantry, and were armed like the Hastati, with this difference, that the former had half-pikes instead of whole ones.

**PRINCIPAL**, in the militia, a person who has been regularly ballotted for, and is chosen to serve for a limited period. The act directs, that every such person shall be enrolled (in a roll to be prepared at a subdivision assembled for that purpose) to serve as a private militia-man for a limited period. But every person so chosen by ballot may produce for his substitute a man of the same county or riding, or of some adjoining county or riding, able and fit for service, who shall not have more than one child born in wedlock, and who shall be approved by any two or more deputy lieutenants. The necessities of the times have rendered it expedient to deviate from the strict letter of the law with respect to substitutes. Any able bodied man, Welch, English, Scotch, or Irish, Protestant, or Roman Catholic, may serve for a principal who has been regularly chosen and ballotted for.—That part of the oath, which confined the services of the individual to an exclusive acknowledgment of the established religion of Great Britain, is now wholly omitted. The oath runs:—I A. B. do sincerely promise and swear, that I will be faithful and bear true allegiance to his Majesty King George, and I do swear *I am a Protestant, &c.* By means of this omission, (which is done by courtesy, and ought to be sanctioned by law) persons of all persuasions may join their country's standard. Principals in the militia, who have served five years, may claim their discharge; but substitutes are obliged to continue as long as the militia remains embodied, receiving one guinea at the expiration of the term for which they originally enlisted, viz. five years.

**PRINCIPLE**, according to the schools, is that from which any thing is done or known.

**PRINCIPLE** also denotes the foundations of arts and sciences.

**Military PRINCIPLES**, the basis or ground-work upon which every military movement is made, and by which every operation is conducted.

**PRIS**, *Fr.* This word is variously used by the French, in a figurative and proverbial sense. *C'est autant de pris*

*sur l'ennemi.* An expression, signifying that some advantage, at least, has been gained.

*Une Ville PRIS*, *Fr.* a town which has been taken.

*PRIS* *des dehors d'une place*, *Fr.* The taking possession of an enemy's out-works.

**PRISAGE**, that share which belongs to the king or admiral out of such merchandises, &c. as are lawfully taken at sea.

*PRIS* *de possession d'une place conquise par les armes*, *Fr.* the taking possession of a place which has been conquered by force of arms. When a town surrenders under these circumstances, the walls of the place, and a bell belonging to each parish, become the property of the conqueror. The bells are intended to replace the damage which may have been done to the ordnance in carrying on the siege; but the inhabitants are always at liberty to redeem them, by paying down a stipulated sum of money.

*PRIS* *de corps*, *Fr.* arrest.

*PRIS* *sur soi*, *Fr.* The French say, *donner pris* *sur soi*, to let another take the advantage of one. Ignorant, presumptuous, and unexperienced officers, are much exposed to this fatal error.

*PRIS*, *Fr.* The French say, *lacher pris*, which literally means to lose one's hold. This expression is used, when a general of an army who, from his forces being either not sufficiently strong, or from having himself omitted to take the best advantage of ground, &c. is obliged to give way. Whenever this happens, it may be said, with much truth, that such a general ought not to be entrusted with the command of an army. The circumstances must be very peculiar indeed, which could exculpate him in the eyes of military men.

**PRISES**, *Fr.* See **PRIZES**.

*PRIS* *sur l'ennemi*, *Fr.* every thing taken from the enemy is so called.

**PRISONERS** *of war*, those of the enemy who are taken in or after a battle, siege, &c. they are deprived of their liberty at large, until exchanged, or sent on parole.

**PRISONNIERS** *de guerre*, *Fr.* prisoners of war.

*Pain* *des PRISONNIERS*, *Fr.* the bread which each state furnishes for the support of prisoners of war.

**PRIVATE**, a term used in the British service to express a common soldier. Thus, though a corporal constitutes one of the rank and file, he is not a private; but every man under him is so called.

**PRIVATE** is likewise a word frequently placed at the corner of a letter to distinguish it from a mere official document; or rather to confine the communication to the perusal of one person only.

**PRIVATE**, (*privé*, Fr.) not open; secret.

**PRIVATE CONVERSATION**, confidential communication with one or more persons; any thing said which is not to be made public. It also signifies, according to Johnson, familiar discourse, chat, easy talk; opposed to a formal conference. Hence, to repeat private conversation has, at all times, and by all civilized persons, been reckoned a gross breach and violation, not only of good manners, but of every principle of rectitude and honour.

**PRIVILEGE**, is any kind of right or advantage which is attached to a person or employment, exclusive of others.

**PRIVILEGES**. Among the different privileges which prevail in the British army, we ought to notice, that the Life Guards receive their promotions direct from the king, without passing through the commander in chief, as all other corps do. The appointment of colonel in the life guards gives the honorary title of Gold Stick, and the field officer of the day is the Silver Stick, through whom all reports, &c. are conveyed to the king. Although there is a lieutenant-general of the London district, the foot guards have the privilege of reporting to head-quarters direct.—The foot-guards enjoy the privilege of ranking, from the ensign, one step higher than the line. A lieutenant, for instance, ranks as captain, and can purchase as such into any marching regiment without having waited the regulated period; and a captain, having the brevet rank of lieutenant-colonel, may leap over all the majors of the line, by getting appointed to a marching regiment. The promotions of the guards, among themselves, are, however, extremely slow; and the only indemnification they have must be at the expence of the line.

**PRIVILÈGES des régimens**, Fr. certain privileges attached to regiments.

**PRIVY Council**, (*conseil privé*, Fr.) a council of state held by the king in person, with his counsellors, to concert matters for the public service.

**PRIVY Seal**, a seal which the king uses previously to such grants, &c. as are afterwards to pass the great seal; as also in matters of less consequence, as payments of money, &c. which do not pass the great seal.

**Lord PRIVY Seal**, the fifth great officer of the crown. He is a lord by office, and a member of the privy council.

**PRIX des emplois, ou charges militaires**, Fr. the price of commissions, or military employments. During the monarchy of France, a company in the French guards sold for 80,000 livres, 3250*l*.

A company in the six first regiments of infantry, went for 75,000 livres.—The six following, exclusive of the *régiment du roi*, went for 55,000 livres.—One in the regiment of Poitou, and as far down as the Penthievre, 40,000 livres; in the Penthievre, and from that to the last regiment inclusive, 30,000 livres.

A company in the Scotch gendarmes cost 180,000 livres; in the English, the Bourguignon, and Flanders, 150,000 livres. The other companies of gendarmerie went for 135,000.

The sub-lieutenants in the gendarmerie paid 100,000 livres, and those in the light horse, 95,000 livres. The ensigns and first cornets, including the guidon belonging to the Scotch gendarmes, gave 62,000 livres.

The guidons and second cornets, 30,000 livres.

There was no specific regulation for the purchase of a regiment of heavy cavalry or dragoons. Appointments in the état-major, or staff belonging to the cavalry and the royal regiments, (*les rayaux*) sold for 100,000 livres; in the dragoons, from 100,000 to 120,000 livres.

The troops or companies in cavalry regiments, in the royal corps, and in the état-major or staff, were fixed at 10,000 livres, and the rest at 8000.

A troop of dragoons sold for 7000 livres. No company or other appointment in the infantry, was allowed to be bought

## P R O

bought or sold. It will strike the military reader, that although the purchase of commissions was, in some degree, sanctioned by the old French government, it was nevertheless extremely limited, and confined to the upper ranks. The efficient part of the army, which is certainly the infantry, received its commissions gratis.

**PRIZE-FIGHTER.** See **GLADIATOR**.

**PRIZE-money**, officers and soldiers of the line doing duty on board ships of war, are entitled to prize-money as marines.

**PRIZE-money, share of**, (*part de prise, Fr.*) the proportion which is paid to the several individuals belonging to the navy or army, who, on the capture or surrender of a place, &c. become entitled to the produce of what is seized upon, according to the laws of war. By a late Act of Parliament, it is rendered illegal for any person to alienate his prize-money, in the same manner, that no half-pay officer can dispose of his allowance.

**PROA**, *Ind.* a sailing vessel is so called in India.

**PROBABILITY**, (*probabilité, Fr.*) is nothing but the appearance of the agreement or disagreement of two ideas by the intervention of proofs, whose connection is not constant and immutable, or is not perceived to be so; but is, or appears for the most part to be so, and is sufficient to induce the mind to judge the proposition to be true or false, rather than the contrary.

**PROBLEM**, (*problème, Fr.*) in the general acceptation of the term, a doubtful proposition, which will admit of several solutions.

**PROCÉDURE militaire**, *Fr.* military process. It consists in the investigation of all crimes and offences committed by soldiers which come under the cognizance of a military tribunal; in contradistinction to the authority which is vested in the civil magistrates.

To **PROCLAIM**, (*proclamer, Fr.*) to promulgate or denounce by a solemn or legal publication. Hence, to proclaim peace, which is used in contradistinction to the term *to declare*, which denotes war. Both French and English say, *déclarer la guerre*, to declare

## P R O

war; *proclamer la paix*, to proclaim peace.

**PROCLAMATION**, an instrument which is published by the king, with the advice of his privy council, whereby the country at large is advertised of something, and whereby the people are sometimes required to do, or not to do certain things. A proclamation has all the efficacy of law, because it is supposed to be in concord with the law already in being.

**PROCLAMATION of peace**, a declaration of the king's will openly published by the herald at arms in the most public places of London and Westminster.

**PROCONSUL**, among the Romans, a magistrate who was sent to govern a province with consular authority.

**PROCURATION**. See *Power of Attorney*.

**PRODIGION**. See **TREACHERY**.

**PRODUCE**, } (*produit, Fr.*) effect,  
**PRODUCT**, } fruit. In arithmetic, it is the quantity which grows out of the multiplication of two or more numbers or lines, one by another: 5 for instance multiplied by 4, will give the produce 20; and the produce of two lines, multiplied one by the other, is called the rectangle of these lines.

**PROFILE**, in drawing, side-ways, or side-view. A picture in profile represents a head or face set sideways.

**PROFILER**, *Fr.* the act of profiling, or designing with rule and compass.

**PROFILE**, (*profil, Fr.*) in architecture, the draft of a building, fortification, &c. wherein are expressed the several heights, widths, and thicknesses, such as they would appear were the building cut down perpendicularly from the roof to the foundation. It serves to show those dimensions which cannot be represented in plans, but are yet necessary in the building of a fortification: they are best constructed on a scale of 30 feet to an inch. It is also called *Section*, *Orthographical Section*, and by *Vitruvius*, *Sciagraphy*. It is sometimes used in opposition to *Ichnography*.

**PROFITER**, *Fr.* to take advantage of.

**PROFITER de la retraite d'un ennemi**, *Fr.* to take advantage of an enemy's retreat.

**PROGRAM**, (*programme, Fr.*) a word

word derived from the Greek, signifying any public edict, notice, or declaration. Any paper which is stuck up for public information. The French make use of the word on occasions of national ceremony.

**PROGRÈS**, *Fr.* progress; which Bailey thus renders, a proceeding or going forward in any undertaking; also a journey taken by a prince or nobleman. In a military sense, it signifies a series of conquests or advantages gained over an enemy. The French say, *ce général a fait de grands progrès dans cette guerre*, that general has made much progress, or has gained many advantages in this war. *Il a arrêté les progrès des ennemis*, he has stopped the progress, or checked the movements of the enemy.

**PROJECTILES**, (*projectiles*, *Fr.*) are such bodies as, being put in motion by any great force, are then cast off, or let go from the place where they received their quantity of motion; as a shell or shot from a piece of artillery, a stone thrown from a sling, or an arrow from a bow, &c. This line is commonly taken for a parabola, and the ranges are computed from the properties of that curve. The assumption would be just, in case the ball, in its motion, met with no resistance: but, the resistance of the air to swift motions being very great, the curve described by the shot is neither a parabola, nor near it: and by reason of the resistance, the angle which gives the greatest amplitude is not 45 degrees, as commonly supposed, but something less, probably  $43\frac{1}{2}$ . Hence the sublime mathematics are absolutely necessary in the investigation of the track of a shell or shot in the air, known by the name of *military projectiles*.

Galileo having discovered that bodies, projected in vacuo, and in an oblique direction to the horizon, do always describe a parabola, he concluded that this doctrine was not sufficient to determine the real motion of a military projectile; for, since shells and shot move with a great velocity, the resistance of the air becomes so great, with respect to the weight of the projectile, that its effect turns the body very considerably from the parabolic tract; so that all calculations grounded on the nature of this curve, are of little use on these

occasions. This is not to be wondered at, since Galileo, in his enquiry, paid no regard to any other force acting on bodies, than the force of gravity only, without considering the resistance of the air.

Every body, moving in a fluid, suffers the action of two forces: the one is the force of gravity, or the weight of the body; and it is to be observed, that this weight is less than the natural weight of the body, that being diminished by an equal bulk of the fluid in which the body moves. The other force is that of the resistance, which is known to be proportional to the squares of the velocity of the body; and when the body is a globe, as is commonly supposed, the direction of this force is diametrically opposite to that of the motion of the body. This force changes continually, both in quantity and direction; but the first force remains constantly the same. Hence, the point in question is, to determine the curve which a body, projected obliquely, must describe when acted upon by the two forces just now mentioned.

Although this question is easily reduced to a problem purely analytical, the great Newton, notwithstanding his ingenious endeavours, did not arrive at a complete solution of it. He was the first who attempted it, and having succeeded so well in the supposition, that the resistance is proportional to the velocity, it is almost inconceivable that he did not succeed, when the resistance is supposed proportional to the squares of the velocity, after solving a number of questions incomparably more difficult. The late Mr. John Bernoulli gave the first solution of this problem, from which he drew a construction of the curve, by means of the quadratures of some transcendental curves, whose description is not very difficult.

This great problem was, therefore, very well solved long ago; yet the solution, however good in theory, is such as has hitherto been of no use in practice, nor in correcting the false theory grounded on the parabola, to which the artillery is still obliged to adhere, notwithstanding he knows it to be insufficient. It is certain that that solution has been of no real advantage towards improving the art of gunnery: it has only served to convince the student in that art, of the

the error of his principles, drawn from the nature of the parabola, although he is still to abide by them. It is indeed something to know, that the common rules are erroneous: but unless we know how much they err in any case, the advantage is very little.

One may think it a work of infinite labour to establish rules for the flight of cannon-shot, agreeable to the real curve which a body describes in the air: for although, according to the hypothesis of Galileo, we want only the elevation of the piece, and the initial velocity, and it is therefore not difficult to calculate tables to show the greatest height of the projectile, and the point where it must fall in any proposed case; yet in order to calculate similar tables, according to the true hypothesis, care must be taken, besides the two particulars already mentioned, to have respect as well to the diameter of the projectile as to its weight: therefore the practitioner will be reduced to the necessity of calculating tables, as well for the diameter of each projectile, as for its weight; and the execution of such a work would be almost impracticable. We therefore refer the curious to Mr. Euler's *True Principles of Gunnery*, translated, with many necessary explanations and remarks, by the very learned and ingenious Hugh Brown.

**PROJECTION**, (*projection*, Fr.) in mechanics, the action of giving a projectile its motion. It is also used to signify a scheme, plan, or delineation.

**PROJET**, Fr. a rough draft; a sketch or plan of fortification, with its relative works. A *projet*, or rough draft, is distinguished from a real plan, or one that is to be put in execution, by a wash made of Indian gun, which is the only colour used on these occasions. The term is also used among French engineers to express what works are required to be made for the inward or outward defence of a fortified town or place. It likewise signifies, in diplomacy, a plan or statement of terms and conditions, which one country makes to another, for a final adjustment of differences.

**Contre-PROJET**, Fr. a rescript or answer to terms proposed.

**PROLONGATION**, (*prolongation*, Fr.) an extension of leave of absence, or a continuation of service. Militia-

men, after having served their five years, are entitled to a fresh guinea, for prolongation of service. When a truce between two armies is prolonged, it is called *prolongation d'une trêve*, the prolongation or extension of a truce.

**PROLONGE**, Fr. a long thick rope, which is used to drag artillery; hence called a drag-rope.

**PROMENADE**, Fr. walk; walking. See *Girard manœuvre de guerre*.

**PROMENER**, Fr. to walk or move on leisurely.

**PROMENER un cheval**, Fr. to walk a horse up and down.

**Se PROMENER à cheval**, Fr. to go out riding.

**PROMONTORY**, (*promontoire*, Fr.) an elevated piece of land, or a high rock which hangs over the sea.

**PROMOTION**, (*promotion*, Fr.) this word signifies, in military matters, the elevation of an individual to some appointment of greater rank and trust than the one he holds.

**PROMOUVOIR**, Fr. to promote.

**PROMU**, Fr. promoted.

**PROOF**, in arithmetic, an operation whereby the truth and justness of a calculation are examined and ascertained.

**Proof of artillery and small arms**, is a trial whether they will stand the quantity of powder allotted for that purpose.

Government allows 11 bullets of lead in the pound for the proof of muskets, and 29 in two pounds, for service; 17 in the pound for the proof of carabines, and 20 for service; 28 in the pound for the proof of pistols, and 34 for service.

When guns of a new metal, or of lighter construction, are proved, they are then, besides the common proof, fired 2 or 300 times as quick as they can be, loaded with the common charge given in actual service. Our light 6-pounders have been fired 300 times in three hours, 27 minutes, loaded with 1lb. 4oz. without receiving any damage.

**Proof of powder**, is the trial of its goodness and strength. There have been different inventions proposed and put in practice heretofore, for the proof of powder. See *Gunpowder* and *Epreuve*.

**Proof of cannon**, is made to ascertain their being well cast, their having

no cavities in their metal, and, in a word, their being fit to resist the effort of their charge of powder. In making this proof, the piece is laid upon the ground, supported only by a piece of wood in the middle, of about five or six inches thick, to raise the muzzle a little; and then the piece is fired against a solid butt of earth.

*Tools to prove cannon are as follow, viz. Searcher*, an iron socket with branches, from four to eight in number, bending outwards a little, with small points at their ends: to this socket is fixed a wooden handle, from eight to twelve feet long, and  $1\frac{1}{2}$  inch in diameter. This searcher is introduced into the gun after each firing, and turned gently round to discover the cavities within: if any are found, they are marked on the outside with chalk; and then the

*Searcher with one point* is introduced, about which point a mixture of wax and tallow is put, to take the impression of the holes; and if any are found of 1-9th of an inch deep, or of any considerable length, the gun is rejected as unserviceable to government.

*Relicver*, an iron ring fixed to a handle, by means of a socket, so as to be at right angles: it serves to disengage the first searcher, when any of its points are retained in a hole, and cannot otherwise be got out. When guns are rejected by the proof-masters, they order them to be marked  $\times$  which the contractors generally alter to *W P*, and after such alteration, dispose of them to foreign powers for Woolwich proof.

A most curious instrument for finding the principal defects in pieces of artillery, has been invented by lieutenant-general Desaguliers, of the royal regiment of artillery. This instrument, grounded on the truest mechanical principles, is no sooner introduced into the hollow cylinder of the gun, than it discovers its defects, and more particularly that of the piece not being truly bored; which is a very important one, and to which most of the disasters happening to pieces of artillery, are in a great measure to be imputed; for when a gun is not properly bored, the most expert artilleryist will not be able to make a good shot.

*PROOF of mortars and howitzers*, is made to ascertain their being well cast,

and of strength to resist the effort of their charge. For this purpose the mortar or howitzer is placed upon the ground, with some part of its trunnions or breech sunk below the surface, and resting on wooden billets, at an elevation of about 70 degrees.

The mirror is generally the only instrument to discover the defects in mortars and howitzers. In order to use it, the sun must shine; the breech must be placed towards the sun, and the glass over-against the mouth of the piece: it illuminates the bore and chamber sufficiently to discover the flaws in it.

*PROOF armour*, armour hardened so as to resist the force of an arrow, a sword, or other weapons in use before the discovery of gunpowder; and sometimes of shot itself.

*PROOF charge*, the quantity of gunpowder which is used in trying the several pieces of ordnance.

*PROPER*, in military matters, stands as a reduplicative, serving to mark out a thing more expressly and formally, viz.

*PROPER front of a battalion*. The usual continuity of line, which is given to the formation of a battalion, and which remains unaltered by the countermarch or wheelings of its divisions; or if altered is restored by the same operation.

*PROPER right*, the right of a battalion, company, or subdivision, when it is drawn up according to its natural formation.

*PROPER pivot flank*, in column, is that which, when wheeled up to, preserves the divisions of the line in the natural order, and to their proper front. The other may be called the *reverse flank*. In column divisions cover and dress to the proper pivot flank; to the left when the right is in front; and to the right when the left is in front.

*PROPLASM*. See *MOULD*.

*PROPORTION*, (*proportion*, Fr.) the relation which parts have among themselves, and to the whole.

*PROPORTIONS*, (*Proportions*, Fr.) in architecture, the several relations which all the works have to their parts, and which every one has separately to the whole edifice.

*PROPOSER une personne pour une charge*, Fr. to recommend a person for a situation.

**PROPO-**

**PROPOSITION**, (*Proposition*, Fr.) in geometry, the declaration of a truth which is proved by demonstration. Such are the propositions in Euclid's Elements. Propositions are divided into *Problems* and *Theorems*.

**PROPREFECT**, among the Romans, the prefect's lieutenant, whom he commissioned to do any part of his duty in his place.

**PROPRETE** *des soldats*, Fr. cleanliness required in soldiers.—See **SEK-JEANT**.

**PROPRETOR**, the same in his relative capacity as proconsul among the Romans. He was a magistrate who, after having discharged the office of pretor at home, was sent into a province to act in the same capacity.

**PROQUESTOR**, among the Romans, the questor's lieutenant, who discharged his office in his stead.

**To PROSECUTE**, to carry on.—Hence to prosecute the war.

**PROSECUTOR**, (*accusateur*, Fr.) the person who exhibits charges against a delinquent. When the king is concerned, the advocate-general assumes that character.

**PROSPECTIVE**, appertaining to viewing.

**PROSTYLE**, any building having pillars in the front only.

**PROTECTOR**. This word sometimes denotes the regent of a kingdom. Oliver Cromwell assumed this title on the death of Charles the First.

**PROTECTORES DOMESTICI**,—body guards, which were instituted about the decline of the Roman Empire: they did duty both on horseback and on foot.

**PROTESTANT**, an appellation first given in Germany to all who adhered to the doctrine published by Luther, in opposition to the Roman Catholic religion.

**PROTESTANT religion**, the established religion of Great Britain.

**PROTOSPATHAIRE**, the principal officer in the guards that did duty over the Emperor of Constantinople. The guards themselves were called Spatahaires, on account of the long sword with which they were constantly armed.

**PROVEDITOR**, (*Provéditeur*, Fr.) The Venetians had two appointments of

this description before the Revolution occasioned by the French.—One gave the supreme command of the armies on shore, the other that of the fleets.

Of these proveditors, there were three who had the direction of matters relating to policy throughout the Signory.

**PROVEDITOR-general of the sea**, an officer in Italy, whose authority extended over the fleet, when the captain-general was absent. He had particularly the disposal of the cash.

**PROVISIONS**, are properly those articles of food and sustenance which soldiers receive from the public, and which are paid for by deductions from their pay. On the 6th of February, 1799, a warrant was issued from the war-office, declaring the deductions to be taken, under various circumstances of service, out of Great Britain, and in general hospitals, at home and abroad, from the full pay of non-commissioned officers and soldiers. By this warrant the regulations, which are specified in the schedule annexed to a warrant of the 5th day of July, 1797, and in any subsequent ones issued from the office of the commander in chief, or secretary at war, are cancelled, and it is ordained, that there shall be taken a deduction of *sixpence a day* from the full pay of every serjeant, corporal, trumpeter, drummer, fifer, private man of the life guards, horse guards, dragoon guards, dragoons, foot guards, infantry of the line, militia, fencible infantry, and companies of invalids, when serving out of Great Britain, on stations at which provisions are supplied by the public; also when embarked in transports, or other vessels; (except while serving as marines, or during their passage to and from India at the expence of the East-India company;) also when prisoners of war, and maintained at the expence of Great Britain; and likewise when in general hospitals, either at home or abroad. A deduction of *three-pence halfpenny* is likewise to be made from the full pay of each serjeant, &c. when stationed in Jamaica, in New South Wales, at Gibraltar, (the loss by exchange at the latter place continuing as before) and while on their passage to and from India at the expence of the East India company.

These

These deductions commenced, in regard to the troops at home, on the 25th of February. 1799; and in regard to the troops abroad, on the 25th of April, 1799.

**PROVISIONAL**, (*provisionel*, Fr.) temporarily established.

**PROVISIONAL Cavalry**, a kind of militia cavalry, first raised by act of parliament in 1797; each county or district being divided into classes of ten householders in each. The person on whom the ballot fell was constrained to find a man and horse, &c. Like the militia they were commanded by officers having commissions from the lord lieutenant of the county.

**PROVISIONALLY**, (*provisoirement*, Fr.) by way of provision, or temporary arrangement. This word is frequently used, both in French and English, to distinguish the exercise of temporary functions from that of permanent appointments.

**PROVOCATOR**, (*Provoqueur*, Fr.) a challenger. Among the Romans, there was a particular gladiator of this appellation. He was armed with a sword, shield, head-piece, and cuissarts, made of iron.

**PROVOQUER**, Fr. to provoke; to draw on.

**PROVOQUER au combat**, Fr. to provoke or challenge to battle.

**PROVOQUER à se battre**, Fr. to provoke any body to fight.

**PROVOST-Marshal**, of an army, is an officer appointed to secure deserters, and all other criminals: he is often to go round the army, hinder the soldiers from pillaging, indict offenders, execute the sentence pronounced, and regulate the weights and measures used in the army, when in the field. He is attended by a lieutenant's guard, has a clerk, and an executioner.

**PROWESS**, valour, bravery in the field, military gallantry.

**PRUDENCE** (*La Prudence*, Fr.) Wisdom in managing and conducting affairs. This quality of the mind is, perhaps, as necessary an ingredient as the whole collective assemblage of talents and acquirements which constitute the character of an able general. It was an old saying among the Romans, *nullum in unum abest si sit Prudentia*, every divinity is with you, or

no divinity is absent, provided there be prudence at hand.

**PRYLIDES**, a military dance which was practised among the Greeks.

**PRYTANÉE**, Fr. from the Latin *prytaneum*, and originally from an institution at Athens for the support of those persons who had deserved well of their country. The name of the *Ecole Militaire* was altered by the Emperor Napoleon, when he was first consul of France, to that of *Prytanée*.

This institution is situated in the Rue St. Jacques, in the Faubourg St. Marcel. The grand building, which may be seen in the maps of Paris, serves as barracks for the flying artillery.

The *Prytanée*, as an establishment for the education of military characters, is remarkable for the liberality of its regulations with respect to religious tenets. Protestant as well as Catholic boys, &c. are received and educated there without being molested on the score of religion.

**P'SENT**, an abbreviation of the word *present*. It is used in platoon firings.

**PSILOI**, light armed men among the Greeks, who fought with arrows and darts, or stones and slings, but were unfit for close fight. They were in honour and dignity inferior to the heavy armed. Next to these were the *Peltastai*, a middle sort of foot soldiers between the *Hoplitai* and the *Psiloi*, being armed with spears, but far inferior in bigness to those of the heavy armed; their name is taken from their narrow shields, called *Pelte*. Potier's Greek Antiquities, Vol. II. C. 3.

**PTEROPHORES**, heralds or messengers among the Romans who brought tidings of a declaration of war, of a battle having been lost, or of some check sustained by the army. They generally wore feathers at the end of their pikes.

**PUBLICANS**, persons who keep alehouses, &c. for the accommodation of travellers. Troops upon the march, or in quarters, may be billeted on them, under certain regulations.

**PUCKA**, *Ind.* a putrid fever, generally fatal in twenty-four hours.

**PUCKALLIES**, *Ind.* leathern bags for

for carrying water. They are placed on the backs of oxen. The word is also used for water-carriers.

**PUDLAYS**, pieces of stuff to do the office of levers or handspikes.

**PUGILISM**, (*Pugilat*, Fr.) the art of boxing, which was held in high repute among the Greeks, and was constantly practised by them. Except in England, this art is not known among modern nations. With us it has had its parliamentary advocates.

**PURUR** *Din*, Ind. watches kept in the day; of which there are four; a similar number is kept in the night, called *Purur rat*.

**PUISARDS de sources**, Fr. openings or drain wells which are made in the earth, for the purpose of collecting water from the different sources, and of lodging it in a reservoir; from whence it may be conveyed, by means of an aqueduct, to the several spots that require it.

**PUISANT**, Fr. a well built of dry stones, or made in a wall to serve as a reservoir for water.

**PUISSANCE**, Fr. in algebra and geometry, powers of lines and quantities.

**PUISOIR**, Fr. a copper vessel which is used in making saltpetre.

**PUTTS**, Fr. a well.

**PUTS de mineur**, Fr. a perpendicular opening, about four feet square, which is made in the earth for miners to let themselves down, as deep as may be judged expedient, in order to push the subterraneous galleries beneath the covert-way, or under any other works constructed by the besieged or besieger.

**PULK**, a tribe, a particular body of men. This word is chiefly used in Russia; as a *Pulk* of Cossacks.

**PULVÉRIN**, Fr. priming powder.

**PULVIS fulminans**, the same as *poudre fulminant*, the thundering powder, a mixture of three parts of saltpetre, two of tartar, and one of brimstone; all finely powdered. A small part, even a single dram of this being put into a shovel over a gentle fire, till it melts by degrees and changes colour, will go off or explode as loud as a musket. But it will not do any injury, because its force tends chiefly downward.

**PULLEY**, in military mechanics.—See **MECHANICS**.

**PULWAR**, Ind. a light boat for dispatches.

**PUMICE-stone**, a spongy, light, crumbling stone which is cast out of mount *Ætna*, and other burning mountains. It is used in graving, polishing, &c.

**PUMMEL**.—See **POMMEL**.

**PUMP**, (*Pompe*, Fr.) a well known engine used in the elevation of water.

**PUNCH**, (*poinçon*, Fr.) an instrument for making holes. Every serjeant of a company, at least, and indeed every corporal of a squad, should be provided with a punch, as there is frequent occasion to fit on the cross-belts, &c.

**PUNCTO**, the point in fencing.

**PUNICK**, (*Punique*, Fr.) from punicus, of Puni, the Carthaginians, who were reckoned a perfidious people.

**PUNICK-faith**, (*la foi punique*, Fr.) falshood, treachery, perjury. The modern French have thought proper to attach this term to honest old England; and, in order to prove the absurdity and injustice of the application, have, in every act, (especially towards their prisoners,) exemplified the adage themselves.

**PUNISHMENT**, in the army, in general, signifies the execution of a sentence pronounced by a court-martial upon any delinquent; but in particular it means that kind of punishment which is often used by inflicting a certain number of lashes upon a reduced non-commissioned officer, or private man. There are various methods in different countries which have been adopted for the punishment of officers and soldiers, without ultimately depriving the public of their services. Those in the British are simple, and in general very summary; especially with regard to officers. In some foreign services it is usual to send an officer from his regiment to do duty in a garrison town, during which period he loses all the advantages of promotion. Hence *être envoyé en garnison*, to be sent into garrison, implies a species of military chastisement. Perhaps the method, which is adopted in our navy, of putting an officer at the bottom of the list of his own rank, might be beneficial in the army.

**PUNITIONS corporelles**, Fr. corporal punishments. In the old French service, military punishments or chastisements, which were not of a capital nature, were of two kinds. The picket

was for the cavalry, and the gauntelo, or passing through the rods, for the infantry. The rods, or *baguettes*, (which properly mean small sticks, or switches,) were generally osier or willow twigs. Previous to the execution of the sentence, a corporal, with two privates of the company to which the culprit belonged, were sent to get the rods. These they brought in a bundle to the guard-house, or to any place of security which was near the spot where the punishment was to be inflicted. The criminal, under an escort of two serjeants and four grenadiers, with fixed bayonets, went for the bundle, and as he passed through the interval of the line which was faced inwards, each soldier drew out one twig. The grenadiers at the head of the line took off their slings, which they used instead of rods. When the culprit reached the end of the line, he undressed himself naked to the waist. The right and left openings of the double line, faced inwards, were closed by the grenadiers that had escorted the prisoner, viz. two with one serjeant at the head of the right, and two with ditto at the head of the left. It sometimes happened, that a serjeant or corporal marched backwards in ordinary time; keeping the point of his pike directed at the chest of the man who received the lashes. The culprit was, however, generally allowed to make the most of his legs. Whilst he was receiving his punishment, the drummers of the regiment, who were equally divided and stationed behind the grenadiers that had formed the escort, beat the charge. If a French soldier was convicted of theft, or any flagrant dishonourable practice that injured the military character, he not only underwent this punishment, but he was conducted, in the most ignominious manner, to the outward gate of a frontier town; there expelled the country, and cautioned never to be found within its limits under pain of suffering death. The nicety of military honour and reputation, among French soldiers, used to be proverbial. They never survived a blow, even among themselves, nor would a private soldier exist under the disgrace of having been struck by an officer.

When a girl of the town, or a notorious prostitute, was taken up, and or-

dered to be punished in a camp or garrison, she went through the same process; the drums beating the *marionnetes*, a sort of rogue's march, during the execution of the sentence.

In the life of Gustavus Adolphus of Sweden, it is observed, that he was remarked for being strict to his officers and mild to the private men. It was a principle with him, that even a common soldier should rarely, if ever, receive corporal punishment; fully persuaded, that such a disgrace cast a damp afterwards upon his vivacity, and agreed not well with the notions which an high spirit ought to entertain of honour. It was his idea, that a man of bravery would sooner forgive a sentence of death, inflicted upon him by a court-martial, than pass by the scandal of corporal chastisement. His general rule, therefore, was to degrade or banish.—*Essay on the Military State of Europe in the former part of the 17th century*; vol. I. page 6, Life of Gustavus Adolphus.

*PUNITIONS Militaires, Fr.* See *Pæne Militaires*.

**PURCHASE.** Although the sale and purchase of commissions are countenanced by government, and the prices of those commissions are regulated by the king's authority, yet there are various ways through which young men of fortune and connexions may get over the heads of veteran officers. Notwithstanding the avowed existence of this deplorable system, it must be acknowledged, that its abuses have, in some degree, been provided against by a specific regulation, which says, that the names of the officers who intend to purchase shall be regularly transmitted, upon the back of each regimental return, every six months at least, to the commander in chief, in order that the same may be laid before his Majesty.

Purchase and sale are terms unknown in the navy; and we are happy to prognosticate, from the laudable exertions of the present commander in chief, that in the course of time, the word *purchase* will be erased from the vocabulary of military terms; as far, at least, as it regards the British service.

*Highland PURSE*, from the Gaelic *Sporan*, and sometimes called *Check-purse*,

*purse*, is a part of the Highland dress, which claims great antiquity. Something similar to it is to be found in the early history of those nations that inhabit the temperate regions.

The *purse* which is at present worn by our Highland regiments, consists of goat skin, and the tassels hanging from them are of the long hairs or bristles.

The Highlanders seem formerly to have displayed great ingenuity in making their purses, both with regard to the pockets, and to the different heads of animals with which they decorated the fronts.

*PURSE*, (with the grand signor), a gift, or gratification of 500 crowns.

*PURSE of money*, (in the Levant) about 112*l.* sterling. It is so called, because all the grand signor's money is kept in leather purses or bags of this value in the seraglio.

*PURSE-proud Fellow*, (*gros richard*, Fr.) a term in common use among the generality of mankind, but seldom known in military life. A creature whose only value is his weight of gold.

*PURSEVANT*, *PURSUIVANT*, from the French *poursuivant*, a sort of serjeant at arms, who is ready to go upon any special occasion, or to carry any special message. His general office is to apprehend a person who has been guilty of an offence.

*PURSINESS*, } (*pousse*, Fr.) a dis-  
*PURSIVENESS*, } ease in horses; a shortness of breath.

*PURSUIT*, (*poursuite*, Fr.) the act of following with hostile intention.

*PURVEYOR*, a person employed in the quarter-master or commissary-general's department. Likewise one belonging to a military hospital, whose duty it is to provide food and necessaries for the sick.

*To PUSH*, (*pousser*, Fr.) to make a thrust.

*To PUSH back*, to force an enemy to retreat.

*A PUSH*, (*un coup*, Fr.) as a push of the bayonet. *Un coup de la bayonnette*.

*PUSILLANIMOUS*, cowardly, wanting spirit.

*To PUT a horse*, in horsemanship, signifies to break or manage him.

*To PUT a horse upon his haunches*, to force him to bend them in galloping in the manege, or upon a stop.

*PUTTING-STONE*, a great stone, which formerly was laid at the gate of a laird in Scotland, and by which he tried the bodily strength of each man in his clan.

*PYKE*, *Ind.* a person employed as a guard at night.

*PYRAMID*, (*Pyramide*, Fr.) This word is originally derived from the Greek, and takes its name from a resemblance to the spiral ascendancy of fire. It is the same as obelisk.

*Geometrical PYRAMID*, a solid standing on a square basis, and terminating at the top in a point; or a body whose base is a polygon, and whose sides are plain triangles, their several tops meeting together in one point.

*PYRAMID*, (in architecture), a solid, massy edifice, which, from a square, triangular, or other base, rises in gradual diminution to a vertex or point.

*PYRAMIDAL numbers*, (in arithmetic,) the sums of polygonal numbers, collected after the same manner as the polygon numbers themselves are extracted from arithmetical progressions.

*PYRAMIDAL*, } appertaining to, like  
*PYRAMIDICAL*, } to a pyramid.

*PYRAMIDOID*, from the Greek, is what is sometimes called a parabolick spindle, and is a solid figure formed by the revolution of a parabola round its base, or greatest ordinate.

The *PYRAMIDS* of Egypt are enormous piles of building, within three leagues of Grand Cairo, and are called one of the seven wonders of the world.

The pyramids of Giza, the largest of which was originally built by Cheops, are supposed to have been erected about 14 years after the building of Solomon's temple, about 2661 years ago. The pyramids are known by various names, viz.

*PYRAMIDS of Giza*, (five in number) which are those already mentioned, and near which the French established a camp in 1799.

*PYRAMIDS of Saccara*, (three in number). These stand in the plain of Mummies, and are about 600 feet high.

*Dashour PYRAMIDS*, six in number, stand in the same plain, and appear somewhat lower. The French General Friant, in 1799, pursued Murad Bey across this plain, leaving the pyramids on his left.

*The Southern, or Great PYRAMID.*—This pyramid has been called by Bruce, the traveller, the False Pyramid. It stands in the plain of Mummies, and appears to be about 600 feet high.

*PYRAMIDS, in ruins.* Two pyramids of smaller size, which stand near the Fiaume Mountains, close to Joseph's canal.

*Battle of the PYRAMIDS,* so called from having taken place close to the large pyramids in the plain of Mummies, at Waardam, within a few miles of Grand Cairo. A previous engagement had been fought on the 15th of July, 1799, between the Mamelukes under Murad Bey, and the French army, commanded by Bonaparté in person. The second battle, called the Battle of the Pyramids, put the French in possession of Lower Egypt. The following short extract from the *Epitome of Military Events*, may not be uninteresting.

"The French army, which, during its last marches had suffered excessive fatigue, halted at Waardam, in order to recruit its strength, remount the artillery, and clean the muskets that were so subject to take rust from the moist vapours of the Nile. On the 21st of July, 1799, the second battle, called the Battle of the Pyramids, was fought.—General Désaix, with his advanced guard, at first made a corps of Mamelukes fall back; the order of battle of the other divisions was nearly the same as on the 13th, being drawn up by echellons, so as to flank themselves between each other; and the line of battle, which was itself flanked by two villages. Each division was concentrated into a compact body, and formed a square, having its baggage in the centre, and the artillery in the intervals of the battalions. This formidable disposition presented a double fire in flank and in front, and opposed an invincible obstacle to the impetuous, but unconnected charges of Murad Bey's cavalry. To return to the action of the 21st, General Désaix's advanced guard, and Regnier's division, formed the right wing of the army, and were at first charged with the greatest impetuosity, by one half of the Mameluke cavalry; the other half having remained to support the intrenchments of the village of *Embabé*.

Notwithstanding this determination

to anticipate the attacks of the French columns, the rash valour of the Mamelukes again failed against those compact bodies, bristling with bayonets, and keeping up, within half musket shot, a most galling fire. While these charges were taking place against his right, and the Mamelukes were retreating in disorder, Bonaparté directing the two divisions of his center against the intrenchments, ordered the village of *Embabé* to be turned by means of a ditch which masked this movement, and thus cut to pieces, or rather drove into the Nile, 1500 of the enemy's cavalry. In a map lately published by Heathes, the number is stated to have been 2000. The attack, which was extremely warm, was conducted by General Marmont.—Forty pieces of cannon, the camp of the Mamelukes, their rich spoils, together with upwards of 400 camels, fell into the hands of the conquerors. See pages 119 and 120 of the *Epitome of Military Events*.

In the year 1801 a detachment of the British forces in Egypt defeated the French close to the Pyramids, and took possession of Grand Cairo. This battle decided the fate of Egypt, and rescued that country out of the hands of the French.

*PYROBOLY*, the art of gunnery, &c.

*PYROBOLIST*, (*Pyroboliste*, Fr.) a maker of fire balls, &c.

*PYROETS*, in horsemanship, are motions either of one tread or pist, or of two treads or pists.

*PYROETS* of one tread, or what the French call *de la tête à la queue*, from the head to the tail, are entire and very narrow turns made by a horse upon one tread, and almost at one time, so that his head is placed where his tail was, without putting out his haunches.

*PYROETS* of two pists, are turns of two treads upon a small compass of ground, almost of the length of the horse.

*PYROTECHNIC*, of or appertaining to Pyrotechny.

*PYROTECHNIE*, Fr. See *Pyrotechny*.

*PYROTECHNY*, in military matters, the doctrine of artificial fireworks, and fire-arms, teaching the structure and service, both of those used in war, for

for the attacking of fortifications, &c. as cannons, bombs, grenadoes, gunpowder, wildfire, &c. and those made for diversion, as serpents, St. Catherine's wheel, rockets, &c.

**PYRRHICA**, a dance invented by King Pyrrhus. It was performed by the soldiers striking their shields together and in cadence, so as to resemble

the noise and action of a battle. This amusement was practised by the Greeks and Romans; on which occasions, the men and women were armed with wooden swords.

**PYXIS NAUTICA**, (*Boussole*, Fr.) a mariner's compass. It was invented by Goja of Amalphis, in the year 1300.

## Q.

**QUADRANGLE**, } a square  
**QUADRANGULAR**, } figure  
having four right angles.

**QUADRANT**, in gunnery, an instrument made of brass or wood, divided into degrees, and each degree into ten parts, to lay guns or mortars to any angle of elevation.

The common sort is that whose radii project the quadrant about twelve inches, and whose plummet suspends in its centre, by means of a fine piece of silk; so that, when the long end is introduced into the piece, the plummet shows its elevation.

The best sort has a spiral level fixed to a brass radius; so that, when the long end is introduced into the piece, this radius is turned about its centre till it is level: then its end shews the angle of elevation, or the inclination from the horizon; whereas the first shews that angle from the vertical.—**See LEVEL.**

**QUADRATE**, or to *quadrate a gun*, is to see it duly placed on its carriage, and that the wheels be of an equal height.

**QUADRATE**, a square having four equal and parallel sides.

**QUADRATICK Equations**, are such as retain, on the unknown side, the square of the root, or the number sought.

**QUADRATRICE**, Fr. **See QUADRANT.**

**QUADRATURE**, Fr. *quadrature*. The French pronounce this word *kadrature*.

**QUADRATURE**, (*quadrature*, Fr.) a square, or the squaring of any thing.

**QUADRATURE of the Circle**, in mathematics. **See MENURATION.**

**QUADRILATERAL**, (*Quadrilatère*, Fr.) having four sides.

**QUADRILLE**, Fr. This word is pronounced *Cadrille*. Small parties of horse, richly caparisoned, &c. which used formerly to ride, &c. in tournaments, and at public festivals. The quadrilles were distinguished from one another by the shape or colour of the coats which the riders wore. This word is derived from the Italian *Quadriglia*, or *Squadriglia*, being a diminutive of *Squadra*, a company of soldiers drawn up in a square.

**QUADRIVIAL**, having four roads or ways, meeting in a point.

**QUESTORES PROVINCIALES**, Lat. officers in high trust among the Romans, who always accompanied the consuls and the prætors into the different provinces. Their immediate business on these occasions, was to supply the troops with provisions and money.

**QUESTORES URBANI**, Lat.—These were also officers of high trust, among the ancient Romans, who not only received foreign tributes and domestic imposts, but also took charge of the Roman Eagles, which were lodged in the public treasury. Whenever the consuls undertook a military expedition, the standards were delivered to them by the *Questores Urbani*. Foreign ambassadors were likewise provided with appropriate places of residence.

their direction, and afterwards personally introduced to the Roman Senate.

**QUÆSTORES CANDIDATI**, *Lat.* During the reign of certain Roman emperors the *Quæstores Candidati*, who were officers that always attended their persons, stood proxies for, or delivered the sentiments of the consul, when the latter did not chuse to attend the Senate.

**QUÆSTORIUM**, the Exchequer, among the ancient Romans; also the tent, pavilion, or head quarters of the *quæstor*. It was there likewise that the military chest belonging to the army was deposited.

**QUAI**, *Fr.* See **QUAY**.

**QUAICHE**, or **CAICIE**, *Fr.* a decked vessel, a ketch.

**QUALIFICATION**, that which makes any person or thing fit for any thing. It is a term particularly used with respect to the militia of the three united kingdoms; the lords lieutenants, deputy lieutenants and officers belonging to that establishment being directed, under a specific penalty, to give in their several qualifications, as far as they relate to property (lauded or personal, as the case may be), within a prescribed period. For particulars see *Military Finance*.

Qualifications required to constitute an efficient soldier, are—bodily strength, activity, hardihood, active courage, passive courage, dexterity or skill, steadiness, discipline, watchfulness, cleanliness, good conduct (in which is included sobriety), enthusiasm, and contempt of death.

To **QUALIFY**, to fit for any thing. To give in the necessary qualifications for the exercising of a civil or military employment. In a general acceptation of the term, *To qualify* does not mean to give proofs of mental ability.

**QUANTIÈME**, *Fr.* a term used among the French to signify, not only the day of month, as *quel quantième du mois avons nous?* what is the day of the month? but likewise the numerical order in which an individual stands upon a muster roll, &c. viz. *Le quantième êtes vous dans votre compagnie?* How do you rank in your company? or, of what standing are you?

**QUANTITY**, the amount; bulk; weight; that property of any thing which may be increased or diminished.

**QUARANTINE**, (*Quarantaine*, *Fr.*) the time which persons, suspected of having any contagious disorder, are obliged to remain without mixing with the inhabitants of the sea port or town at which they arrive. It takes its name from *quarantaine*, the term of 40 days.

**QUARRÉ**, *Fr.* Although this word is written with a Q in all the French Dictionaries, (except in that published by the academy at Paris,) it ought nevertheless to stand *Carré*. In the first hurry of our compilation we omitted to notice this error, so that *Bataillon carré d'hommes*, signifies a square battalion. The French say, *Partie carrée*, a party consisting of four people. See **SQUARE**.

**QUARREAUX**, *Fr.* Darts or arrows which the bowmen anciently used, and which were so called from the iron at the end being square, with a sharp point.

**QUARRELS**, in a military sense, are disagreements between individuals of that serious nature, as to produce challenges, duels, &c. In Section the VIIth, Art. IVth of the Articles of War, it is specified, That all officers, of what condition soever, have power to quell all quarrels, frays, and disorders, though the persons concerned should belong to another regiment, troop, or company, and either to order officers into arrest, or non-commissioned officers or soldiers to prison, until their proper superior officers shall be made acquainted therewith; and whosoever shall refuse to obey such officer (though of an inferior rank) or shall draw his sword upon him, shall be punished at the discretion of a general court-martial.

**QUARREL**, } an arrow with a square  
**QUARRY**, } head.

**QUART**, *Fr.* a fourth.

**QUART de Cercle**, *Fr.* a quadrant, such as bombardiers use when they take the angles, and give what inclination they think necessary to a mortar. Also the fourth part of any given circumference containing ninety degrees.

**QUART de conversion**, *Fr.* a military movement by which a body of armed men are made to describe the quarter of a circle round the leading file of the right or left flank, and which becomes, of course, the point d'appui to the rest. See *Quarter-wheeling*.

*Demi-*

*Demi-QUART de conversion*, Fr. half-quarter-wheel.

*QUARTE*, Fr. in fencing. See CARTE.

**QUARTER**, in war, signifies the sparing of men's lives, and giving good treatment to a vanquished enemy.—Hence to *give quarter*.

To **QUARTER UPON**, (*loger*, Fr.) to oblige persons to receive soldiers, &c. into their dwelling houses, and to provide for them.

**QUARTERS**. Military stations are so called; as head quarters, home quarters, regimental quarters, &c.

**QUARTERS**, at a siege, the encampment upon one of the most principal passages round a place besieged, to prevent relief and convoys.

*Head QUARTERS of an army*, the place where the commander in chief has his quarters. The quarters of generals of horse are, if possible, in villages behind the right and left wings; and the generals of foot are often in the same place: but the commander in chief should be near the center of the army.

*QUARTERS of refreshment*, the place or places where troops that have been much harrassed are put to recover themselves, during some part of the campaign.

*QUARTER of assembly*, the place where the troops meet to march from in a body, and is the same as the place of rendezvous.

*Intrenched QUARTERS*, a place fortified with a ditch and parapet to secure a body of troops.

*Winter QUARTERS*, sometimes means the space of time included between leaving the camp and taking the field; but more properly, the places where the troops are quartered during the winter.

The first business, after the army is in *winter quarters*, is to form the chain of troops to cover the quarters well: which is done either behind a river, under cover of a range of strong posts, or under the protection of fortified towns. Hussars are very useful on this service.

It should be observed, as an invariable maxim, in *winter quarters*, that your regiments be disposed in brigades, to be always under the eye of a general officer; and, if possible, let the regiments be so distributed, as to be each under the command of its own chief.

In **QUARTERS**, within the limits prescribed.

*Out of QUARTERS*, beyond the limits prescribed. Officers, non-commissioned officers, and soldiers, who sleep out of quarters, without leave, are liable to be tried by a general or regimental court-martial, according to the rank they severally hold.

*QUARTER-master*, is an officer, whose principal business is to look after the quarters of the soldiers, their clothing, bread, ammunition, firing, &c. Every regiment of foot, and artillery, has a quarter-master, and every troop of horse one; who are only warrant-officers, except in the Blues.

*QUARTER-master-general*, is a considerable officer in the army, and should be a man of great judgment and experience, and well skilled in geography; his duty is to mark the marches, and encampments of an army: he should know the country perfectly well, with its rivers, plains, marshes, woods, mountains, defiles, passages, &c. even to the smallest brook. Prior to a march he receives the orders and route from the commanding general, and appoints a place for the quarter-masters of the army to meet him next morning, with whom he marches to the next camp; where, after having viewed the ground, he marks out to the regimental quarter-masters the space allowed each regiment for their camp: he chooses the head quarters, and appoints the villages for the generals of the army's quarters: he appoints a proper place for the encampment of the train of artillery: he conducts foraging parties, as likewise the troops to cover them against assaults, and has a share in regulating the winter quarters and cantonments.

*QUARTER-staff*, (*bâton à deux bouts*, Fr.) an old military weapon, made of strong even wood, bigger and heavier than a pike: it is 5½ feet long between the ferrules that keep fast the two pikes of iron stuck into the ends of the staff.

**QUARTER**, in the *manège*, as to work from quarter to quarter, is to ride a horse three times in upon the first of the four lines of a square; then, changing your hand, to ride him three times upon the second; and so to the third and fourth; always changing hands, and observing the same order.

**QUARTER-wheeling** is the motion by which the front of a body of men is turned round to where the flank stood, by taking a quarter of a circle.

**QUARTERING troops**, is to provide them with quarters.

**QUARTERON**, (*one*, Fr.) a quarteroon; one born of a white man and a mulatto woman, or of a mulatto man and a white woman.

**QUARTIDI**, Fr. the fourth day of the decade according to the distribution of the French republican year.

**QUARTIER**, Fr. For its general acceptation see **QUARTERS**.

**QUARTIER de cantonnement**, Fr. any space or extent of country in which troops are cantoned.

**QUARTIER de précaution**, Fr. a camp which is established on one of the chief roads or leading avenues of a besieged or masked place, for the purpose of intercepting any succours or provisions that might be brought to relieve it.

**QUARTIER d'un siège**, Fr. a station taken, or an encampment made in one of the leading avenues to a besieged town or place. When the *quartier d'un siège* was commanded by a general officer, during the French monarchy, it was called *quartier du Roi*, the king's quarters.

**QUARTIERS de sièges**, Fr. the different spots or places within the lines which are occupied by troops that are encamped under the orders of a general officer, subordinate to the commander in chief. These quarters must be on the flanks or wings, and on the center of the lines.

**QUARTIER des vivres**, Fr. the park of stores, provisions, &c. any place where the stores and provisions of an army are deposited.

**QUARTIER d'hiver**, Fr. winter quarters. Count de Turpin has written largely upon this subject. See *Essai sur l'Art de la Guerre*; likewise, *Suite de la Science de la Guerre*, tom. iv. p. 170.

**QUARTIER de rafraîchissemens**, Fr. those places are so called in which troops are permitted to halt and take up their quarters for any period, during a campaign.

**QUARTIER de fourrage**, Fr. foraging quarters. When the active operations of a campaign are necessarily inter-

rupted by the inclemency of the season, means are adopted to lessen the heavy expences of winter quarters, by remaining a certain time in foraging quarters. A wise general will take care to live as long as he can upon his enemy's country, in order to draw as little as possible from his own.

**QUARTIER du Roi, ou du Général**, Fr. head quarters, or the spot where the king or commander in chief resides. When an army takes up its ground in low marshy places, &c. the royal or head quarters are marked out in the most advantageous manner, so as to have the king's or general's person secure. When an army went into action or stood in battle array, it was customary among the French to say, *Le quartier du Roi est partout*, the king's station is every where. Nevertheless it was always judged prudent not to expose the royal person, or the commander in chief, too much. On this principle, head quarters were always established in a place which was surrounded by the best troops, and was supported by epaulements on the right and left, with the addition of a rear guard. Since the revolution these arrangements have been much changed. It cannot, however, be uninteresting to give a general outline of what was practised during the monarchy. The *quartier du Roi* or head quarters, when a town was besieged, were always fixed out of the reach of ordnance, and in a village that was well secured by entrenchments. Before the cannonade commenced, it was usual for the besieged to ascertain the exact station of head quarters, that their fire might not be directed towards them; nor did the real assault of the town take place from that direction. Wherever the king, or, in his absence, the commander in chief took up his quarters, the camp assumed its name from that particular spot or village.

**QUARTIER général de la tranchée**, Fr. head quarters, or principal station of the trenches. That spot is so called in which the commanding officer of the trenches takes post, and to which all reports of progress, &c. are, from time to time, conveyed. When the siege is somewhat advanced, it is usual to fix this quarter, near the outlet of the last parallel

## Q U A

parallel which leads to the head of the saps, in the principal line of attack.

**QUARTIER d'assemblée, Fr.** the ground on which troops assemble to commence their military routes, or to be otherwise prepared for active operations.

**Un QUARTIER bien retranché, Fr.** a quarter that is well entrenched.

**Un QUARTIER enlevé, Fr.** quarters taken possession of by force.

**Officiers de QUARTIER, Fr.** officers who were upon duty for three months, or during the space of one quarter of a year. This term was used in the old French service, to distinguish such officers from those who did duty throughout the year.

**Etre de QUARTIER, Fr.** to be upon duty for three months.

**QUARTIER généraux, Fr.** general head quarters.

**QUARTIER-maitre, Fr.** quarter-master. This term, with respect to foreign troops, corresponds with *maréchal des logis* in a French infantry corps.

**QUARTIER-maitre, Fr.** The situation of *quartier-maitre* among the French, corresponds with that of a regimental paymaster in the British service. Among the Germans he holds the rank of captain. The French also call him *quartier-maitre trésorier*. When he is first appointed, he receives the rank of lieutenant, and after a certain number of years, holds that of captain. He never does any sort of military duty, or, to use a French phrase, *Il n'est pas en bataille*. He generally rises from the ranks.

**QUARTIER-Mestre-Général, Fr.** quarter-master-general. Among foreign troops the same as *maréchal général des logis* in the old French service. There is a quarter-master-general in the Turkish service, whose immediate duty is to mark out the ground of encampment, the instant he has received orders to that purpose from the grand Vizir, or, in his absence, from the seraskier, who is the general in ordinary, and who is always with the army, whether the Grand Vizir be present or not.

**QUARTIER, Fr.** This word is also used by the French in many other significations, viz.—

**Mettre, donner l'alarme au QUARTIER, Fr.** to give the alarm in quarters.

## Q U E

This is either done by the enemy's advanced posts, or designedly contrived to keep soldiers on the alert.

**Donner QUARTIER, Fr.** to give quarter. See *Représailler*.

**Prendre QUARTIER, Fr.** to take quarter, or to surrender at discretion.

**Demander QUARTIER, Fr.** to ask quarter, or to throw one's self on the mercy of a conqueror.

**Ne point faire de QUARTIER, Fr.** to give no quarter, or to put to the sword.

**Officier de QUARTIER, Fr.** the officer who, during the old government of France, did duty for three months in the French guards.

**Promettre QUARTIER, Fr.** to promise quarter, or to spare the life of an enemy that surrenders at discretion.

**QUATRE, Fr.** four.

**To QUELL, to crush, to subdue.** Military force is sometimes resorted to by the civil magistracy to quell riots, &c. In which case, the riot-act must be read by a justice of the peace, and if the rioters or insurgents do not disperse, the magistrate may order the officer to do his duty, by firing, &c. upon them. When military law has been proclaimed, there is not any necessity for this preliminary caution.

**Vider une QUÉRELLE, Fr.** an expression among the French, which is used when two persons meet to determine their quarrel by fighting with sword or pistol. They also say *prendre querelle pour quelqu'un*, to take up the cause of another man, and to fight it out against those who may have injured or offended him.

**QUÉRELLE d'Allemand, Fr.** an expression used among the French, to signify a drunken quarrel.

**QUERELLES, Fr.** quarrels, feuds, &c.

**To go in QUEST of an enemy, to send out vedettes, patrols, &c.** for the purpose of ascertaining an enemy's motions.

**QUERRY.—See EQUERRY.**

**QUETE, Fr.** This word means literally *in quest*. In the days of ancient chivalry, the different journeys which were performed by knights newly received, either on their way to or from some grand tournament or grand festival, which was connected with the order, were said to be made *en quête*. It also signified (in our opinion more appropriately)

propriately), the excursions which were undertaken by the knights, when they went in *quest* of some brother knight who had fallen into the hands of an enemy. The whole dress and travelling equipage of one of these knights were very plain, and their manner of living extremely frugal. They were also remarkable for their sobriety. All their ambition went to the discovery of the object for which they were in *quest*. They were sometimes a whole year on one of these adventurous excursions; at the expiration of which they returned and gave a faithful account, at a meeting of their brother knights, of all they had seen or done. The French writer, from whom we have extracted this article, concludes it in the following curious manner.

"There are still men to be found who make it their business to go in *quest*, *d'aller en quête*; but their object is to rob and murder on the highway, by stopping inoffensive travellers. There are others again, who insinuate themselves into the good graces of honest and industrious individuals, for no other purpose than that of plundering them eventually. Hence the origin of *Chevaliers d'Industrie*. But to return to our authority, the knights described in this article, neither plundered community by infesting the public roads, nor murdered for the sake of gain."

QUEUE, from the French, which signifies tail; an appendage that every British soldier is directed to wear in lieu of a club. Regimental tails are ordered to be nine inches long; among the guards they are fourteen.

QUEUE D'ARONDE, a corruption of *Queue d'Yrondc*. It signifies a piece of wood which is so made that it resembles at each end a swallow's tail.

QUEUE d'Yrondc, ou d'Yrondelle, Fr. See SWALLOW'S TAIL.

QUEUE d'un bataillon, Fr. the rear or serre-file of a battalion, when it is countermarched by files; the front files passing to the rear.

QUEUE du Camp, Fr. literally means the tail or extremity of the camp. It is the line which is drawn in the rear of the camp, and which is directly opposite to the one in front, called the head of the camp.

QUEUE de Paon, Fr. literally means

a peacock's tail. It is used in architecture, to signify the different compartments or spaces which, in a circular figure, spread gradually from the center to the circumference.

QUEUE à queue, Fr. one after another.

Etre à la QUEUE, Fr. to be behind, or in the rear.

Avoir l'ennemi en QUEUE, Fr. to have the enemy close at one's heels.

QUEUE de la tranchée, Fr. that part where the opening of a trench first commences, and where the men are covered from the fire of the besieged. See Tail of the Trenches.

QUIBERON, or Quibron, a small peninsula of France, in Bretagne, in the bishoprick of Vannes, and to the north of Belleisle; as also a small island called the Point of Quiberon, separated from the peninsula by a channel, and the sea next it is called the Bay of Quiberon. This spot has been rendered remarkable by the expedition which took place in June, 1795. Upwards of 3000 regular troops (composed mostly of French emigrants that had served abroad, with the ill-judged addition of some French prisoners, taken out of English gaols) were landed upon the coast. This force was intended as a co-operation with the insurgents of La Vendée, and was afterwards to have been increased by the descent of an English army, under the command of the Earl of Moira. His lordship had, indeed, already been instructed to detach a covering body for that purpose; but the British did not land, having been driven from the French coast by stress of weather. We think it right to observe, on this occasion, that a direct invasion of France, by the British, was not within the plan of this unfortunate expedition, nor within the intentions of the worthy nobleman, when he volunteered a service, which ultimately cost him so many personal sacrifices.

QUICK, with celerity. It forms the cautionary part of a word of command when troops are ordered to move in quick time; as Quick—March.

QUICK Step, or Quick Time, is 108 steps of 30 inches each, or 270 feet in a minute, and is the step used in all filings of divisions.

QUICKEST-Step, or Quickest Time,

is 120 steps of 30 inches each, or 300 feet in a minute. In this step all wheelings are performed, as also the doublings up of divisions, and their increase or diminution in front.

**QUICK-Match**, in *laboratory works*. See *LABORATORY*.

**QUIETISM**, apathy, indifference.

**QUIÉTISME**, *Fr.* the state of those persons who did not take an active part in the French revolution.

**QUIÉTISTE**, *Fr.* a man who did not meddle with the revolution.

**QUIETUS**, a term used in public accounts, signifying a complete settlement between individuals and the government by which they have been employed. Until this has taken place, no public accountant can be secure in the enjoyment of one farthing he has earned; nor are his heirs exempt from the visitation of an exchequer writ. *Nullum tempus occurrit regi*.

**QUILLON**, *Fr.* the cross-bar of the hilt of a sword.

**QUITTING grape-shot**, in *gunnery*. See *Laboratory*, and *To make Grape Shot*.

**QUINCUNX**, (*quinconce*, *Fr.*) an ancient order of battle, in which the legion stood with five or more fronts upon different lines, with intermediate distances. This formation was somewhat similar to a chess-board.

**QUINQUANGULAR**, having five corners or angles.

**QUINTAINE**, } an instrument used  
**QUINTIN**, } in the ancient practice of tilting. It consisted of an upright post on the top of which a cross post turned upon a pivot; at one end of the cross-post was a broad board, and at the other a bag of sand. The practice was to ride against the board with a lance, and at such speed, as to pass by before the sand-bag could strike the tilter on the back. This word signifies the same as *paly*, *poteau*, or *jaquemart*. The latter word, according to the *Dictionnaire de l'Académie Française*, means a man in complete armour. It is also used by way of derision.

**QUINTAL**, *Fr.* one hundred weight. The quintal varies in different places, according as the pound consists of more or fewer ounces. The English quintal is 112 pounds, and is divided into quarters.

**QUINTANA**, *Lat.* Among the Romans, the quintana signified that part of an encampment, where the sutlers and camp followers, remained. The Turks imitate this mode of encampment to this day.

**QUINTE**, *Fr.* a low thrust in fencing, delivered at the outside of the position, with the nails turned up, as in low carte. When this thrust is forced over the blade from the guard in carte, it is termed *flanconade*.

**QUINTIDI**, *Fr.* the fifth day of the decade in the French republican year.

**QUINTUPLÉ**, fivefold.

**QUIRITES**. In ancient Rome, the common citizens were so called, as distinguished from the soldiery.

**To QUIT**, to leave, to abandon.— This word is variously used in military phraseology, viz.

*To QUIT your post*, } to retire with-  
*To QUIT your ranks*, } out having received any previous order for that purpose, from a station entrusted to your care. Any officer or soldier who, during the heat of an engagement, shall quit his ranks, may be shot, or otherwise dispatched upon the spot. A sentry who quits his post before he is regularly relieved, is ordered to suffer death, or such other punishment as may be inflicted by a general court-martial.

**QUIT your Arms**, a word of command which is not used, having been replaced by that of *Pile Arms*. It formerly signified to lay down the muskets; at which order, the soldiers grounded their arms, then stood up and remained till they were directed to face *Right About*, when they marched clear of their pieces, and dispersed. On the beat of the drum, they ran to their arms with a *hurra*; the officers having their swords drawn, and holding the point upwards.

**To QUIT the Siege of a Place**, (*abandonner la Siège d'une Place*, *Fr.*) to leave the different positions which have been taken for the purpose of reducing a garrison, in a fortified place, to the necessity of surrendering, or of storming it, and to withdraw the troops that have invested it.

**QUITTANCE**, *Fr.* receipt, acquittance.

**QUITTANCE de finance**, *Fr.* a term formerly used among the French, to ex-

press any sum paid into the king's treasury, for an appointment or place.

QUITTER, *Fr.* to quit.

QUITTER *l'épée*, *Fr.* figuratively to leave the profession of arms.

QUIVER, a case for arrows.

QUI *vive* ? } *Fr.* literally, who lives

QUI *va là* ? } there? Who goes there?

QUI *est là* ? } Who is there? Terms used by the French sentries when they challenge. They correspond with our word, Who comes there?

*Etre sur le Qui vive*, *Fr.* to be upon the alert.

Qui *trop embrasse mal étreint*, *Fr.* the man who undertakes too much, calculates badly. It literally signifies, he who embraces too much, binds or connects badly. This proverb is much used among the French, and comprehends a serious lesson to those would-be great generals and officers, who falsely imagine, that military reputation consists in rank only.

A QUIZ. This cant word is frequently used as a substantive to describe a strange, out of the way character. It is a term of ridicule.

To QUIZ. A cant word much in use among fashionable bucks or blades, as certain creatures are called. It signifies to turn another into ridicule, by some allusion to his dress or manners, some ironical word or quaint expression. In other terms, to take unwarrantable liberties with the natural defects, or harmless habits of unoffending individuals. This absurd and childish practice, (which grows out of ignorance, is supported by privileged assumption, and ought to be discouraged by every sensible man) has sometimes found its way into the British army. We need scarcely add, that it has frequently been the cause of the most serious quarrels, and is always contrary to good order and discipline. Commanding officers should, on all occasions, exert their authority, whenever there appears the least tendency to this unmanly, unofficer-like, and ungentleman-like custom. It ought constantly to be remembered, that the influence of evil is much stronger upon the commonality of mankind, than that of good. If an officer suffer himself to

be quizzed by a brother officer, he will, by degrees, become ridiculous to the soldiers; and if he resent it, as he ought to do in *primo linie*, by a manly explanation with the weak fool who attempts to be witty, without possessing one spark of real wit, it is more than probable, that much ill blood will be engendered between them. The Articles of War have, in some degree, provided against this evil. In Sect. VII. Art. I. it is there specifically stated, That no officer, non-commissioned officer, or soldier, shall use any reproachful or provoking speeches or gestures to another, upon pain, if an officer, of being put in arrest (or if a non-commissioned officer, or a soldier, of being imprisoned) and of asking pardon of the party offended, in the presence of his commanding officer.

A QUIZZER, a creature who, without possessing any real wit or humour, affects to turn others into ridicule, by an insolent affectation of the talent. The *thing* is generally found among fashionable young men, which (to use a very common, yet a very apposite expression) has more money than wit, plumes itself upon birth or connexion, and endeavours to make up by noise, turbulence, and privileged contradiction, what it wants in real knowledge and solid understanding. It is sometimes seen at a military mess, and about the purlieu of St. James's.

QUOIL, in gunnery, a rope laid round in a ring, one turn over another.

QUOINS, in architecture, denote the corners of brick or stone walls.

QUOIN, (*coin*, *Fr.*) a wedge used to lay under the breech of a gun, to raise or depress the metal.

QUOIT, the ancient discus—an olympic game, still practised in some parts of England. It consists in throwing a large iron ring, to a considerable distance, at an iron peg, driven into the ground.

QUOTIENT, in arithmetic, the number resulting from the division of a greater number by a smaller, and which shews how often the smaller, or the divisor, is contained in the greater or dividend.

R

**RABINET**, formerly a name given to a small sort of ordnance between a falconet and a base, about one inch and a half diameter in the bore, five feet six inches long, and 300 pounds in weight, loaded with six ounces of powder, and carrying a shot one inch and three-eighths in diameter.

**RACHAT du pain**, Fr. a certain pecuniary allowance which was made in the old French service, to the officers of each company for the surplus rations of ammunition bread that were left in the purveyor's hands. The same rule exists in our service, when troops are in camp or barracks.

**RACINE**, Fr. See Root.

**RACIOLIN**, Fr. a scraper. It is used in the artillery to cleanse out mortars.

**RACOLER**, Fr. to entice men to enlist.

**RACOLEUR**, Fr. a crimp, a bringer of recruits, one who entices others to enlist. Men of this description are to be found in all countries where military establishments prevail.

**RACORDEMENT**, Fr. this word is derived from *racorder*, which, in French architecture, signifies to join two pieces of building on one surface, or to unite an old building with a new one.

**RADE**, Fr. road for ships to ride in; road for anchoring.

**RADEAUX**, Fr. rafters. They are frequently used in sieges, for the purpose of crossing ditches, &c. Chevalier Polard enters largely into the nature of these rafters, particularly in his 4th volume, page 67. See RAFT.

**RADIOMETER**, (*radiomètre*, Fr.) This instrument is sometimes called Jacob's staff, *bâton de Jacob*. It is used by some to take the sun's altitude, and by others to ascertain elevations at sea.

**RADIUS**, the semi-diameter of a circle. In fortification, the radius is

distinguished into *exterior*, *interior*, *oblique*, and *right radius*. The three former are noticed each under its initial letter. The latter is a perpendicular line drawn from the center of a polygon to the exterior side.

**RAFFINAGE**, Fr. a term used by the French to express the operation through which saltpetre passes after it has been boiled once. The literal meaning is refinement; the act of cleansing any thing from recrementitious matter.

**RAFFINER**, Fr. to refine.

**RAFFINOIR**, Fr. a wooden cask, or copper vessel in which saltpetre is deposited after it has been boiled once. It usually remains thirty minutes, after which it is let out through a cock fixed for that purpose at the bottom of the vessel.

**RAFRAICHIR**, Fr. to cool; to sponge; as *rafraichir le canon*, to sponge a cannon.

**RAFRAICHIR une place**, Fr. to succour a place by sending in fresh troops and provisions.

**RAFRAICHIR des troupes**, Fr. to allow troops to repose; likewise to supply them with fresh provisions.

**RAFRAICHISSEMENTS**, Fr. This word literally signifies refreshments. It is used in a military sense among the French, for cantonments or quarters of repose, after troops have been much on service. It also means fresh stores and provisions for the army.

**RAFT**, or species of floating bridge, (*radeau*, Fr.) a machine which is readily constructed, and is used for the passage of troops over rivers or ground that may be overflowed. It consists of a certain number of planks that are fastened together, and form a sort of flat deck or barge, upon which men and light artillery may be embarked.

Rafts are also used by miners, when the fosses are full, that they may be

## R A F

able to carry on their works at the foot of the revetement belonging to the bastion, which they have directions to blow up.

M. Philipps made use of rafts with considerable advantage in 1743, when he enabled the Marquis du Châtelet to pass the river Isère, after he had been forced to evacuate Ingelfingen, at the head of 1400 men. When Hannibal resolved to cross the Rhone, (a large river in France, which rises in Mount Fourche, on the confines of Switzerland, and falls by several months into the Mediterranean,) and found it expedient to take his elephants with him, he constructed a quantity of double rafts, and effected his purpose.

*Rafts* are preferable to boats or barges, on account of the ease with which they may be put together. The Swedes, who call these rafts *prams*, make use of them on every occasion, and they unite the several pieces by means of a frame. Chevalier Folard does not hesitate to give a preference to the rafts, over bridges constructed on boats. Yet the French author, from whose work we have extracted this article, expresses his doubt by saying, that a bridge of boats seems to him to be better calculated to resist the current of a rapid river, than any raft can possibly be. "Nevertheless," continues the same author, "the opinion of such a man as Chevalier Folard is unquestionably great; and the example of Charles XII. of Sweden, who excelled in every sort of movement which was connected with the passage of rivers, &c. is still more powerful."

The modern French are so convinced of the necessity of these constructions, (call them rafts, or pontoons, or by any other name,) that they have established two regular battalions, for the purpose of being employed on that specific service. In the last printed *etat militaire de l'empire*, or imperial army list, we find the following distribution of a corps under the appellation of *bataillon de pontonniers*, or battalion of pontooners. These battalions are divided into first and second, and consist each of the following officers:

*Chef de bataillon*, commandant, or colonel commandant.

*Quartier-Maitre Trésorier*, or paymaster.

## R A I

*Adjutant-Major*, or major.

*Adjutant*, adjutant.

*Chirurgien Aide Major*, assistant surgeon major.

*Sous Aide Major*, deputy assistant surgeon major.

8 Captains of companies belonging to the first class.

8 Ditto ditto belonging to the second class.

8 Lieutenants of the first class.

8 Ditto of the second class.

**RAFTERS**, (*solvains, chevrons*, Fr.) are pieces of timber, which standing by pairs on the reason or raising-piece, meet in an angle at the top, and form the roof of a building.

It is a rule in building, that no rafters should stand farther than 12 inches from one another; and as to their sizes and scantlings, it is provided by act of parliament, that principal rafters, from 12 feet 6 inches to 14 feet 6 inches long, be 5 inches broad at the top, and 8 at the bottom, and 6 inches thick: those from 14 feet 6 inches to 18 feet 6 inches long, to be 9 inches broad at the foot, 7 inches at the top, and 7 inches thick: and those from 18 feet 6 inches, to 21 feet 6 inches, to be 10 inches broad at the foot, 8 at the top, and 8 thick.—Single rafters, 8 feet in length, must have 4½ inches, and 3½ in their square. Those of 9 feet long, must be 5, and 4 inches square.

**RAGE-PUTES**, Fr. Indian soldiers, who, during the days of the Emperor Tamerlane, were supposed to be invincible. According to P. Catrou, a French writer, the *Raspoutes* and *Rageputes* mean the same people.

**RAJAIL**, Ind. This word means king. The Rajals are generally tributary to the Mogul, but are suffered to follow their own modes of government.

**RAJAPOOTES**, Ind. a tribe of Hindoos, but of various denominations. They are soldiers by profession, and the most warlike of the Hindoos. They rank next to the Bramins. See Orme's History of the Carnatic, pages 6, and 40.

**RAIE**, Fr. properly means a seam, furrow, streak.

**RAINURE**, Fr. a groove.

**RAIS**, Fr. a spoke of a wheel.

**To RAISE Troops**. See **LEVY**.

**To RAISE a plan of a fortress**, is to measure

measure with cords and geometrical instruments, the length of the lines, and the capacity of the angles, that by knowing the length, breadth, and thickness of all the different parts of a fortification, it may be represented upon paper, so as to find out its advantages and disadvantages.

**RAISON, Fr.** This word is used by the French, in a mathematical sense, to express the relation which one number has to another, and, in general, that which exists between one quantity and another. The term is distinguished into *raison arithmétique*, or arithmetical reasoning; and *raison géométrique*, or geometrical reasoning. French carpenters likewise use the term, to shew that pieces of wood, &c. are properly laid, viz. *Des pièces de bois en leur raison*.

**RALLIEMENT, Fr.** rallying point. It is sometimes written *ralliment*.

*Mot de RALLIEMENT, Fr.* a word or countersign, which is given to out-posts, and to sentries that are stationed beyond the lines.

*Point de RALLIEMENT, Fr.* the rallying point; any spot particularly marked out, to which troops are directed to repair in cases of discomfiture or surprise.

**RALLUMER, Fr.** to light up again, to rekindle, to renew.

**RALLY, Fr.** one of the bugle horn soundings.

*To RALLY, (Rallier, Fr.)* to bring troops back to order that have been dispersed.

**RALLYING, Fr.** in war, re-establishing, or forming together again, troops broken and put to flight.

*To RAM, Fr.* to drive with violence, as with a battering ram.

*To RAM down, Fr.* to force any thing downwards, or to fill with any thing driven hard together, as in the charge of fire-arms.

**RAM down Cartridge, Fr.** a word of command which is used in the platoon exercise. See **MANUAL**.

**Battering RAM, Fr.** in antiquity, a military engine used to batter and beat down the walls of places besieged.

The battering ram was of two sorts, the one rude and plain, the other compound. The former seems to have been no more than a great beam, which the soldiers bore on their arms and shoul-

ders, and with one end of it, by main force, assailed the walls. The compound ram is thus described by Josephus: it is a vast beam, like the mast of a ship, strengthened at one end with a head of iron, something resembling that of a ram, whence it took its name. This was hung by the middle with ropes to another beam, which lay across two posts, and hanging thus equally balanced, it was by a great number of men drawn backwards and pushed forwards, striking the wall with its iron head.

Plutarch informs us, that Mark Anthony, in the Parthian war, made use of a ram 80 feet long: and Vitruvius tells us, that they were sometimes 106, and 120 feet long: to this perhaps the force and strength of the engine was in a great measure owing. The ram at one time was managed by a whole century of soldiers; and they, being exhausted, were seconded by another century; so that it played continually, and without any intermission.

The momentum of a battering ram 23 inches in diameter, 180 feet long, with a head of cast iron of one tun and a half, the whole ram, with its iron hoops, &c. weighing 41,112 pounds, and moving by the united strength of 1000 men, will be only equal to that of a ball of 36 pounds, when shot point blank from a cannon.

**RAMADAN, Fr.** a month so called among the Turks, during which period they observe fast days.

**RAMASSE, Fr.** a sort of sledge, in which travellers are conveyed from the tops of mountains that are covered with snow.

**RAMASSER, Fr.** to collect, to get together. *On a ramassé tout ce qu'on a pu trouver de soldats;* they got as many soldiers together as they could.

**RAMASSÉ, Fr.** gathered together, collected. This word is likewise used to distinguish men that are hastily raised and embodied, from soldiers who have been regularly disciplined, viz.—*Ce ne sont pas des troupes réglées, ce sont des gens ramassés;* they are not regular troops, but persons hastily got together.

**RAMASSÉ, Fr.** strong, vigorous. *Un homme ramassé;* a strong athletic man. *Ramassé,* in this sense, agrees with the English word tight-built, thick-set, &c.

## R A M

**RAMAZAN.** See **RAMADAN**.

**RAMBERGE, Fr.** an advice boat.

**RAMPE, Fr.** an oar. It is likewise called *Aviron*.

**Balle RAMÉE, Fr.** cross-bar shot.

**RAMEAUX de la mine, Fr.** branches belonging to a mine. See **GALLERY**.

**RAMMER**, an instrument used for driving down stones or piles into the ground in military works; or for beating the earth, in order to render it more solid for a foundation.

**RAMMER, or RAMROD of a gun**, the ramrod or gun-stick; a rod used in charging a gun, to drive home the powder and shot, as also the wad, which keeps the shot from rolling out. The rammer of a piece of artillery, is a cylinder of wood, whose diameter and length are each equal to the diameter of the shot, with a handle fixed to it, at the end of which is another cylinder, covered with lamb-skin, so as to fit the gun exactly, and called a sponge: it is used to clean the piece before and after it is fired. The ramrod of a musquet is one entire piece of iron. The ramrod was formerly called scowrer.

**RAMNENSIS**, one of the three mounted centuries or centuries which were formed by Romulus. They retained the appellation of the three first tribes, consisting of the Ramnusians, the Tatians, and the Luceres.

**RAMPART, (Rampert, rampier, Fr.)** an elevated piece of ground, or a great massy bank of earth raised about a place to resist the enemy's great shot, and cover the buildings. A parapet is raised upon this bank or elevation which looks towards the country. It is generally about three fathom high, and ten or twelve thick; but this depends upon the quantity of earth which may be taken out of the ditch, and cannot be otherwise disposed of. A rampert with half moons has advantages from being low, because the musquets of the besieged can better reach the bottom of the ditch; but care must be taken, that it is not commanded by the covert-way. A rampart ought to be sloped on both sides; that is, the mass of earth which composes the rampart, ought always to be larger at bottom than at top; more or less so, according to the nature of the earth: it should be broad enough to allow the passing of

## R A N

wagons and cannon, independent of the parapet which is raised on it. As the earth, of which the rampart is composed, is taken from the outside of it (because by so doing the rampert and the fossé are made at the same time), it follows, that their several proportions must depend upon one another; for since the rampert is made of a certain size, the fosse must be dug deep enough to supply earth for the rampart, the parapet, and the esplanade. Sentinels are regularly distributed round the ramparts, and pieces of heavy ordnance are planted, at given distances, for the protection of the place.

**RAMPE ou Pente extrêmement douce qu'ont fait le long des talus des ramparts, Fr.** a slope, or declivity, which is extremely gradual along the talus of ramparts. These slopes contain two toises in breadth, and are cut upon the interior talus. They are made, according to circumstances and the exigencies of the place, sometimes within the angle of the rampart, opposite to the entrance into the bastion, when the latter is full; sometimes along the flanks, or at the flanked angle when the bastion is empty. Pieces of ordnance, ammunition, &c. are conveyed up these slopes to the embrasures of the ramparts.

**RAMPS, (Rampes, Fr.)** in fortification, are sloping communications, or ways of very gentle ascent, leading from the inward area, or lower part of a work, to the rampart or higher part of it.

*Return* **RAMROD.** See *Platoon Exercise* under **MANUAL**.

**RAMS-HORNS**, in fortification, are a kind of low works made in the ditch, of a circular arc; they were invented by M. Belidor, and serve instead of tenailles.

**RANCHER, Fr.** a sort of ladder which is made of wooden pegs, and is used on various occasions.

**RANCON, Fr.** ransom. It was likewise the name of an old French weapon, consisting of a long stake with a sharp iron point at the end, and two blades or wings bent backwards, and extremely keen.

**RANCONNER, Fr.** to ransom.

**RANDOM Shot**, in artillery, when the piece is elevated at an angle of 45 degrees upon a level plane. See **RANGE**.

**RANG, Fr.** rank.

## R A N

**RANG** *d'un escadron ou d'un bataillon*, Fr. rank in a squadron of horse, or battalion of infantry. Any straight line which is formed by soldiers standing on the side of each other, is so called.

*Doubler les RANGS*, Fr. to form rank entire, or to throw two ranks into one, and thereby diminish the depth of any given number of men, by extending their front. Hence to *double up*, or extend the front of any leading line.

**RANG**, Fr. the relative rank which is observed in military corps with regard to precedence, tour of duty, &c. In some instances *rang et grade* mean the same thing.

*De RANG*, Fr. a-breast, side by side.

*Paroitre sur les RANGS*, Fr. to enter the list.

*Etre sur les RANGS*, Fr. to be numbered amongst any particular set of men.

*Mettre au RANG*, Fr. to class with, to associate.

*Vaisseau du premier RANG*, Fr. a first rate ship of war.

*Vaisseau du second, ou troisieme RANG*, Fr. a second or third rate.

*Placer par RANG de taille*, Fr. to size.

**RANGE**, in gunnery, the distance from the battery to the point where the shot or shell touches the ground.

**Point-blank RANGE**. When the piece lies in a horizontal direction, and upon a level plane, without any elevation or depression, the shot is said to take a point-blank range. See **POINT-BLANK**.

**RANGÉ, ÊE**, Fr. the participle of *Ranger*, drawn out or placed in regular order.

**RANGÉE**, Fr. a series of things placed upon the same line.

*Bataille RANGÉE*, Fr. a pitched or set battle, in which two armies are drawn up opposite to one another.

**RANGER**, Fr. to place in a certain line or order.

**RANGER**, Fr. to place under. The French say, *Ranger sous sa domination*, &c. to place a town or province under one's own government, or to make it subservient to one's own laws.

*RANGER en ordre de bataille*, Fr. to place in order of battle; to dispose troops for action.

*RANGER la côte*, Fr. to sail along the coast.

## R A N

**RANGEZ vous**, Fr. a term in general use among the French when any number of persons are ordered to clear the way, by drawing up on one side or the other of a street or road.

**RANGING**, in war, disposing the troops in proper order for an engagement, manœuvres, or march, &c.

**RANK**, range of subordination; degree of dignity; the relative situations which officers hold with respect to each other, or to military things in general. Hence *regimental rank*, *local rank*, *rank in the army*, &c.

By an order from the king, the officers belonging to the life guards are entitled to the rank of lieutenant colonel, when they obtain, or purchase a majority, provided they have been seven years. Their commissions in this case run major and lieutenant colonel. But if an officer should not have completed either of those periods, he obtains the rank of major only, until its completion. A lieutenant colonel receives the rank of full colonel if he has been seven years major, or twenty-one years in the British service. Cornets in the Life Guards rank as sub-lieutenants in their own corps, and as first lieutenants in the army. The English fusiliers enjoy the same privilege. Sub-lieutenants in the Welsh fusiliers rank only as second lieutenants in the army. Marines do the same.

With respect to rank in general, the following are the rules (as published by authority) by which the relative rank of the officers of His Majesty's regular forces, militia, fencibles, yeomanry cavalry, and volunteer corps, is to be determined.

Officers of the regular forces command the officers of equal degree, belonging to the other services; with the exception after-mentioned:

Officers of the militia, fencibles, yeomanry cavalry, and volunteer corps, rank together, according to the dates of their respective commissions.

Notwithstanding the regulation contained in the two preceding articles, such officers of fencibles as have commissions dated on or before the 25th of July, 1798, continue to rank with the officers of the regular forces of equal degree, according to the dates of their respective commissions: unless when acting

acting in conjunction also with officers of the militia; in which case, if the commission of the fencible officer be of a junior date to that of the militia officer, of the same degree, the regular officer of equal rank, although his commission be of a junior date to that of the fencible officer, commands both.—See *General Regulations and Orders*, page 4.

It will further be observed, that all commands in the regular forces fall to the eldest officers in the same circumstances, whether of cavalry or infantry, entire or in parties. In case two commissions of the same date interfere, a retrospect is to be had to former commissions. Should it happen, as it possibly may, that the original commissions interfere, the seniority of the corps, we presume, must determine the precedence of command; and if the officers belong to one corps, it must be decided by lot.

In page 49 of the Articles of War it is laid down, that the eldest officer is to command when any troops of the horse guards, and the regiment of horse guards, shall do duty together; or when any of the life guards, horse or foot guards, shall do duty with any other corps. The regiments of life guards, doing duty unmixed, are to be considered as one corps; and the officers are to take rank according to the dates of their commissions. The same holds good with respect to the foot guards. Regular officers with whom militia officers take rank as youngest, command officers of equal degree in the fencibles, yeomanry cavalry, and volunteer corps, who are to rank together according to the dates of commissions.

To *RANK with*, to hold the same relative position with regard to others.—Thus post captains of three years standing in the royal navy rank with colonels in the army; and lieutenants in the guards rank with captains in the line or regulars. Officers in the militia, rank generally with the regular forces as junior of their respective commissions. An ensign in the guards ranks no higher than an ensign in the regulars.

To *RANK with*, in a figurative sense, to be in equal estimation, to bear the same character for skill and valour, &c.

viz. Lord Nelson ranks with the bravest seaman that England, or any other country, has ever produced; Bonaparté with the greatest general in ancient or modern history, at least with respect to good fortune.

*Brevet RANK*, rank without pay, nominal distinction, which sometimes entitles the holder of it to command in mixed service. The brevet rank in the militia is confined to the colonels and adjutants of the several corps in that establishment. The former receive the brevet rank of colonels in the army whilst actually embodied for service, and command all lieutenant colonels in the line when they do duty together. Adjutants in the militia may have the brevet rank of captain, provided they have served five years as lieutenants in the militia, or in other forces on the British establishment. In the line, an adjutant, who has the rank of captain, may command as such when there is no superior officer on the parade, or for duty. This is not the case in the militia. No adjutant, let his brevet rank of captain be ever so ancient, can command the youngest captain of a company. The same difference prevails with respect to the captain-lieutenancy; which is literally brevet rank. In the regulars, a captain-lieutenant, the instant he is promoted to a company, takes rank according to the date of his first commission, and as we have observed, may be major by brevet; but no captain-lieutenant can ever avail himself of that seniority to the prejudice of a captain of a company in the militia; nor can an officer in the latter establishment take advantage of his standing, when he quits one regiment to serve in another, even in time of war, although he may have the requisite qualifications in both counties.

Brigade majors rank with captains, provided they have that rank in the army, independent of their staff appointment. But aids-de-camp do not possess any rank in that capacity with regard to the army. The latter constitute a part of the general's family, and are paid out of his allowance; they are in fact the mere carriers of his orders in the field, and his domestic inmates at home, &c. The former belong to the brigade, and are a necessary part of its effect-

effective force. It has been judiciously ordained, that both the one and the other should be regular officers.

There is likewise a sort of brevet rank which exists in the several regiments belonging to the British service, and is confined to the rank and file, or corporals and private soldiers. Thus a lance serjeant is a corporal who does the duty of serjeant without the pay or emoluments of the latter; and a lance corporal is a private soldier who does the duty of corporal. So that *lance*, which comes from *lansquenet*, and ought therefore to be written *lans-serjeant*, &c. is the abbreviation of that word, which signifies a private soldier, and is derived from the German; and when put before serjeant or corporal, points out, that a private soldier has the brevet rank of one of those situations. Captains of companies appoint or reduce lance-serjeants or corporals, according to their judgment.

*RANK and Precedence in the army and navy*, are as follow:

*Engineers RANK.* Chief, as colonel; director, as lieutenant-colonel; sub-director, as major; engineer in ordinary, as captain; engineer extraordinary, as captain lieutenant; sub-engineer, as lieutenant; practitioner-engineer, as ensign.

*Navy RANK.* Admiral, or commander in chief of his Majesty's fleet, has the rank of a field marshal; admirals, with their flags on the main-top-mast-head, rank with generals of horse and foot; vice-admirals, with lieutenant-generals; rear-admirals, as major-generals; commodores, with broad pendants, as brigadier-generals; captains of post ships, after three years from the date of their first commission, as colonels; other captains, as commanding post ships, as lieutenant colonels; captains not taking post, as majors; lieutenants, as captains.

*Court RANK*, the rank or precedence which the British Guards enjoy over the line of the marching army, is so called, by the author of an ingenious pamphlet, entitled, *Prevailing Abuses in the British Army*.

*RANK*, is a straight line made by the soldiers of a battalion, or squadron, drawn up side by side: this order was established for the marches, and for re-

gulating the different bodies of troops and officers which compose an army.

*Doubling of the RANKS*, is the placing two ranks in one, which is frequently done in the manoeuvres of a regiment.

*RANK and File*, men carrying the firelock, and standing in the ranks, are called rank and file. Thus corporals are included in the return which is made under that head.

*RANKS and Files*, are the horizontal and vertical lines of soldiers when drawn up for service, &c.

*RAPE*, *Fr.* a rasp, a file.

*RAPIDES*, *Fr.* Falls in a river are so called; as the falls in the river St. Laurence, &c.

*RAPIER*, (*Rapide*, *Fr.*) formerly signified a long, old-fashioned broadsword, such as those worn by the Scotch regiments; but now is understood only to mean a small sword, in contradistinction to a broad sword.

*RAPINE*, *Fr.* rapine, plunder.

*RAPPAREILLER*, *Fr.* to set sail again.

*RAPPELER*, *Fr.* to call back or to assemble. This is done by a particular beat of drum, when soldiers are directed to repair to their colours.

*RAPPORT*, *Fr.* report.

*RAPPORT*, *Fr.* in mathematics, a term frequently used among the French. It bears the same import as *raison*, and signifies the relation which two quantities have one with another. Thus the *rapport* or relation between twelve and six is the same as between six and three.

*RAPPORTEUR*, *Fr.* in geometry, an instrument made in the figure of a half circle, and divided into one hundred and eighty degrees. It is used for the purpose of ascertaining the openings in angles, and to take plans upon paper.

*RAREFACTION*, the extension of the parts of a body, by which it is made to take up more room than it did before. It is essentially connected with gunnery; for in proportion to the rapid combustion and consequent rarefaction of air, produced by the ignition of gunpowder confined in the chamber of a gun, so will be the force of expulsion with which the charge is propelled.

*RAS*, *Fr.* Every barge and vessel, &c. which is without any deck or up-

# R A T

ward covering, is called by the French *balteaux*, or *baliment ras*.

**RASANTE**, *Fr.* See *Ligne rasante*.

**RASANT**, } in fortification, *rasant*

**RAZANT**, } flank, or line, is that part of the curtain or flank whence the shot projected *raz* or glance along the surface of the opposite bastion.

**RASE**, *Fr.* pitch and tar mixed with tow for the purpose of calking a ship.

**RASE-campagne**, *Fr.* open field.

**RASER une place**, *Fr.* to demolish the fortifications of a town or place. This is often done by mutual compact between contending powers; but more frequently on the principles of retaliation, or by the effect of bombardment. Hence, *Raser les fortifications a coups de canon*, to batter or demolish the fortifications by cannon shot, or by the discharge of ordnance.

**RASLE**, *Fr.* This word is used in some parts of France to signify rather, and means the same as *chevron*.

**RASPOUTE**, *Fr.* Father Catrou, the Jesuit, in his history of the Mogul, confounds this word with *rage-puce*. They probably both mean the same as *Rajapoot*, which see.

**RASSEMBLER**, *Fr.* to collect together.

**RASSEMBLER des troupes**, *Fr.* to call troops or forces together.

**RASSEMBLER les debris d'une armée**, *Fr.* to collect together the broken parts, or scattered remnants of an army. It is likewise used with the personal pronoun, viz. *Tous les soldats dispersés se rassembleront autour du drapeau*, all the soldiers or troops that had been dispersed, gathered together round the standard or colours.

**RASSEMBLER les forces d'un cheval**, to put a horse well upon his haunches.

**RASSIÉGER**, *Fr.* to besiege again.

**RASSIS**, *Fr.* stale; as *pain rassis*, stale bread.

**RASSURER**, *Fr.* to restore confidence; to encourage; to invigorate.—*Quelques soldats commençoient à s'ébranler, quand l'exemple de leur capitaine les rassura*, some soldiers began to give way, when the example of their captain inspired them with fresh confidence.

**RAT**, *Fr.* literally means rat. It is used in a figurative sense, viz. *Une arme à feu a pris un rat*, a musket has missed fire.

# R A T

**RAT**, *Fr.* a sort of floating platform made of planks which are tied together upon two or three masts. It is used in calking ships, &c.

**RATAN**, a cane used by sergeants of companies, &c. in drilling the men, and with which, in other countries, the non-commissioned officers, and privates, are corrected for slight offences.

**RATELIER**, *Fr.* a rack used in armouries, &c. for the purpose of keeping fire arms arranged in proper order.

**RATER**, *Fr.* to snap, to flash in the pan, to miss fire. *Son pistolet a raté*, his pistol has missed fire.

**RATER** likewise means, figuratively, to be unsuccessful in an application.—*Il a raté sa charge*, he did not get the commission.

**RATES of Subsistence.** See **PAY**.

**RATIFICATION**, (*Ratification*, *Fr.*) the act of ratifying or confirming. Thus all treaties which are made between contracting parties, whether sovereigns or generals possessing full powers to execute, can never be valid until the ratification of each treaty has been reciprocally exchanged.

To **RATIFY**, (*Ratifier*, *Fr.*) to confirm; to render binding.

**RATION**, a certain allowance which is given in bread, &c. or forage, when troops are on service,—for an officer or soldier.

*Complete Ration of the small Species.*

Flour, or bread	-	-	1½ lbs.
Beef	-	-	1
Or pork	-	-	½
Peas	-	-	¼ pint.
Butter, or cheese	-	-	1 oz.
Rice	-	-	1 oz.

When the small species are not issued, 1½ lbs. of flour or bread, with 1½ lbs. of beef, or 10 oz. of pork, forms a complete ration: or 3 lbs. of beef; or 2 lbs. of cheese; or half a pound of rice, forms a complete ration.

The deductions to be taken for provisions from the pay of officers, non-commissioned officers, or men, are the same for all ranks, and in all corps, under the like circumstances of service, when serving out of Great Britain, on stations where provisions are supplied by the public: also, when embarked in transports or other vessels (except when serving as marines); also, when prisoners of war are maintained at the expense of

of Great Britain; also, when in general hospitals, whether at home or abroad, a deduction of *sixpence per day*.

A deduction of *three-pence halfpenny* from the pay of every non-commissioned officer and private in Jamaica, in New South Wales, or Gibraltar. Non-commissioned officers and soldiers serving as marines, shall not be liable to any deduction from their full pay on account of provisions.

Ration for a horse on home service in 1796:—11 lbs. of hay, 10 lbs. of oat, 4 lbs. of straw; for which a stoppage is made of sixpence.

The French use the same term, viz. *Ration de foin*, a ration of hay. *Double ration*, double ration. *Demi ration*, a half ration.

RATION *d'un fantassin*, Fr. the ration or allowance which is given to a foot soldier. During the French monarchy it consisted of 24 ounces of ammunition bread, one pint of wine or beer, Paris measure, one pound of beef, veal, or mutton.

RATION *pour les troupes de la maison du roi*, Fr. the ration for the household troops, during the French monarchy, consisted of two brown loaves of twenty-two ounces each, two pints of wine, or two pints of cyder or beer, Paris measure, and two pounds and a half of beef, veal, or mutton.

RATION *de cavalerie*, Fr. Each man belonging to the old French cavalry, received, daily, one ration, consisting of thirty-six French ounces of ammunition bread, one pint and a half of wine, cyder, or beer, Paris measure, and two pounds of beef, veal, or mutton.

RATION *de dragons*, Fr. the ration allowed to each dragon in the old French service, consisted of twenty-four French ounces of ammunition bread, one pound and a half of meat, one pint of wine, Paris measure, or one pot of cyder or beer, ditto.

RATION *de fourrage*, Fr. A ration of forage in the old French service, consisted of one pound of hay, and one bushel of oats, Paris measure.

RATIONS *des officiers du régiment des gardes Francoises*, Fr. Rations allowed in a regiment of French guards during the monarchy. These rations differed very considerably from those already stated. The particulars may be found

in the third volume of the Dictionnaire Militaire, page 253.

RATISSOIRS, Fr. graters used by the men employed in making saltpetre. To RAVAGE, (*Ravager*, Fr.) to do all the mischief one can in a country by force of arms, or other ways.

RAVAGES of War, the spoil, plunder, or waste, made by contending armies in the theatre of war.

RAVELIN, Fr. See FORTIFICATION.

RAVELINS, in fortification, are works raised on the counterscarp before the curtain of the place, and serve to cover the gates of a town, and the bridges. They consist of two faces, forming a salient angle, and are defended by the faces of the neighbouring bastions. They are the most in use of all out-works, and are by the soldiers most commonly called half moons, or demi-lunes. They should be lower than the works of the place, that they may be under the fire of the besieged. Their parapets, as those of all out-works, should be cannon proof; that is, about 18 feet thick.

RAVIN, Fr. a hollow road; a broken pass, &c.

RAVINE, in field fortification, a deep hollow, usually formed by a great flood, or long continued running of water; frequently turned to advantage in the field.

RAVITAILLER *une place*, Fr. to throw stones, ammunition, and provisions into a fortified place.

RAY, See ARRAY.

RAYE, Fr. rifled.

Canon RAYE, Fr. rifle barrel.

RAYON, Fr. in geometry, Radius.

RAW, in a military sense, unseasoned, unripe in skill, wanting knowledge in military tactics, &c.

Raw troops, unexperienced soldiers; men who have been little accustomed to the use of arms. This term is generally used in opposition to *veteran troops*. A cool and wise general will always know how to make the most of that part of his army which is composed of raw troops; and a rash, intemperate one will equally miss the proper application of the spirit and manhood, which ignorance of danger, and confidence of success, almost always give. Some of the most brilliant actions,

actions, and some of the greatest victories have been achieved and won by means of that daring impetuosity, which hurries *raw* troops into the thickest of an enemy. A thousand instances might be adduced from ancient and modern history, to prove the correctness of this remark. It may, perhaps, be sufficient for our purpose, to refer the curious reader to the bold and unexampled charge which was made against the French troops in Germany, by Elliot's new raised light horse. The laurels of Emsdorf are still the glory of the 15th regiment of dragoons, and every man who has the honour of belonging to this distinguished corps, looks back, with a spirit of exalted emulation, at the recorded valour of their raw and unexperienced predecessors.

**RAZED**, any works or fortifications when demolished, are said to be *razed*.

**READINESS**, (*promptitude*, Fr.) a state of alertness; a promptitude for action.

*To hold one's self in READINESS*, to be prepared, in consequence of some previous order, to march at a moment's notice.

**READY**, a word of command in platoon firing, being a contraction of *Make Ready*.—See **MANUAL**.

**READY**, (*préparé*, Fr.) prepared; prompt, or inclined to.

*To make READY*, to prepare. In the platoon exercise, as well as in all other firings by battalion or companies, &c. to take the first posture or position for firing.

**REAFAN**, (*étendart royal des Danois*, Fr.) the royal banner or flag of the Danes; so called from a raven embroidered upon it by King Ladbroke's daughter.

**RÉALE**, } Fr. the largest or  
*Galère RALE*, } principal galley used in Catholic countries, is so called. The first galley belonging to the pope is called *Réale*, because it takes precedence of all vessels, in the service of the different Roman Catholic powers.

**REAR**, in a general acceptation, any thing situated or placed behind another. The term is variously used in military matters, viz.

**REAR** of an army, signifies in general the hindermost part of an army, bat-

alion, regiment, squadron, or company, &c. Generally the third component part of a large body of forces, which consists of an advanced guard, a main body and a rear guard.

**REAR-guard**, a certain proportion of an army or regiment, which acts, in various capacities, according to circumstances, and the extent of military operations. The rear guard of an army is often the reserve, &c. The rear guard of a regiment is usually appointed for the purpose of picking up stragglers, &c. The old grand guards of the camp, always form the rear-guard of the army, and are to see that every thing comes safe to the new camp.—See **GUARD**.

**REAR-line**, of an army encamped, is always 1200 feet at least from the center line; both of which run parallel to the front line, as also to the reserve.

**REAR-rank**. When a regiment, troop, or company is drawn up two or three deep, the last line of men is called the rear rank.

**REAR-ranks**, all the ranks of a line, regiment, troop, or company, which are ranged in order behind the front rank. When troops are drawn up three deep, the second rank is called center rank.

**REAR-rank take open order**, a word of command which is given in the manual and other parade exercises. It is likewise used in marching by the general at a review, or on guard mounting, &c. See **OPEN Order**.

**REAR-half-files**, are the three hindermost ranks of the battalion, when it is drawn up six deep.

**REAR-front**. When a battalion, troop, or company, is faced about, and stands in that position, it is then said to be rear front. It sometimes happens, that through oversight, forgetfulness, or ignorance and confusion, troops are so clubbed, that, on the deployment of a column, the different troops and companies not only lose their stations in the line of original formation, but the rear-rank men stand where the front-rank men ought to be; in the latter case, they appear rear-front. This error might be easily remedied, by counter-marching the several troops or companies.

**REAR-rank lengthening out a line**. It is observed in Part the IVth, of the Rules

Rules and Regulations, that although a single battalion may, by opening its companies and files, *from 3 deep form 2 deep*, by introducing its rear rank into the other two, yet a considerable line posted, which is to be lengthened out to one or both flanks by its rear rank, must, to greater advantage, perform such operation, by each company wheeling the subdivisions of its rear rank backward, and facing to the head they are to march to; the last rank of each company closes up to its first; the subdivisions of each battalion move up to open distances from their respective head ones, and from each other; officers from the rear are appointed to command them; those of each, or of every two battalions, being considered as a battalion, they march on in column, and prolong the line. By this mode of lengthening out the line, the two front ranks remain undisturbed, and they protect the movement which is made unseen behind them.

**REARWARD**, the last troop or company.

**REBEFEAR**, *Ind.* Sunday.

**REBEL**, any one guilty of rebellion.

**REBELLION**, a traitorous taking up of arms against the king by his own natural subjects, or those formerly subdued.

**REBOUND**, the act of flying back in consequence of motion impressed and resisted by a greater power.

*Le REBUT*, *Fr.* the refuse, the scum, &c.

*Le REBUT du peuple*, *Fr.* the refuse, the dregs of the people.

**RECEIPT** (*Bon*, *Fr.*) a voucher, given or taken for any thing received or given. Soldiers who cannot write subscribe their marks; in which cases the pay-serjeants, or some trusty persons, witness the signature. Captains of troops and companies should be particularly minute on this head, as illiterate minds are naturally full of suspicion, and, in many instances, soldiers have been found unprincipled enough to deny their marks.

*To RECEIVE*, in a military sense, to wait the approach of a friend or foe.

*To RECEIVE an enemy*, to make the best disposition possible of your troops, for the purpose of meeting the attack

of an enemy that is advancing against you.

*To RECEIVE a general or reviewing officer*, to be drawn up according to regulations which are laid down, for the purpose of paying the compliments that are due to the rank of a superior, or commanding officer. For the method in which a general is to be received by all cavalry corps and infantry regiments on the British establishment, See Cavalry Regulations, pages 306 and 307, and Rules and Regulations for the British Infantry, pages 253 and 254.

**RÉCEPTION d'un officier dans un corps**, *Fr.* a ceremony which was performed in the old French service, when an officer first joined. This was done by beat of drum in front of the company. The officer, being dressed, accoutred, and armed, according to regulation, faced towards his men, and as soon as the drums had ceased, took off his hat to his commanding officer, who did the same to him, addressing the company in the following terms:—

*De par le roi. Soldats, vous reconnoîtrez M... pour votre capitaine, ou pour lieutenant, de la compagnie, et vous lui obéirez en tout ce qu'il vous ordonnera pour le service du roi, en cette qualité.*

From the king! or pursuant to the king's will.—Soldiers, you will acknowledge M... to be captain, or lieutenant, of the company, and you will obey whatever orders or commands he may issue, in that capacity, for the good of the king's service.

When a colonel or major was received at the head of a corps, the word *soldats*, *soldiers*, was altered into *messieurs*, *gentlemen*; the latter term including both officers and men. On this occasion, the corps of captains and subalterns formed a circle; round them stood the serjeants drawn up in the same manner, and beyond the serjeants, the drummers, &c. The different circles being concentrical to each other. The field officer, who was to be admitted or to take command, stood in the center of the whole, surrounded by the principal officers of the regiment.

**RECETTE**, *Fr.* a trough, which persons employed in preparing saltpetre, &c. place beneath tubs filled with broken rubbish, ashes, &c. for the purpose of

of receiving the liquid that is filtered through.

**RECHANGE**, *Fr.* reserved; kept for occasional need; in store; hence *des armes de Recchange*, arms kept in store.

**RECHARGE**, a renewal of the charge or attack.

**RECHARGE d'arme à feu**, *Fr.* a second charge or loading of a fire-arm immediately after the first has been fired. In proportion as these charges increase, the quantity of powder is lessened; and when the piece has been fired ten or twelve times successively, it must be cooled or refreshed.

**RÉCLAUD**, *Fr.* a chafing dish, or pan used for various purposes, particularly during a siege. They are filled with burning materials, and hung in different parts of the walls, so as to throw light into the ditches, and to prevent surprises.

**RECHERCHER**, *Fr.* to seek after; to court; hence *rechercher l'alliance d'un Prince, ou d'une nation par des voies honnêtes, et non par la corruption*; to seek or court the alliance of a prince, or of a nation, in a fair and open manner, without having recourse to the base tricks of corruption.

**RECHUTE**, *Fr.* literally means a second fall; but in fortification it signifies a greater elevation of the rampart in those spots where it is likely to be commanded.

**RÉCIP**, *Fr.* note or voucher given for a deposit.

**RECIPERE**, *ferum*, to receive the weapon or sword. This expression signified, among the ancient Romans, the

sentence of death which was pronounced, by the people, against a vanquished gladiator. The instant he fell under it, he voluntarily exposed his chest to have the dagger plunged into him.

**RÉCIPIANGLE**, *Fr.* recipient angle. A geometrical instrument, which is much used among the French, for taking the quantities of angles, especially in drawing plans of fortification. It consists of two moveable rules, made in the shape of a square rule. The center of one of its hands is marked by a semi-circle, which is divided into 180 degrees.

**RÉCIPIENDAIRE**, *Fr.* one who offers himself for any office or appointment.

**RECOGNISING**, an old term, used by some English military writers, signifying reconnoitring, which see.

**RECOIL**, (*recul*, *Fr.*) a falling back. The retrograde motion made by any piece of fire arms on being discharged, which is a consequence of the rarified air pressing on all sides, in order to expand itself with freedom. This term is generally applicable to fire-arms, especially to pieces of ordnance, which are always subject to a recoil, according to the sizes and the charge they contain, &c. Guns, whose vents are a little forward in the chase, recoil most. To lessen the recoil of a gun, the platforms are generally made sloping towards the embrasures of the battery.

To **RECOIL**, (*reculer*, *Fr.*) to fall back, to run back in consequence of resistance or repercussion.

The following particulars are extracted from the Little Bombardier, page 181.

*RECOIL of Field Guns on Travelling Carriages, on Elm Planks.*

Nature.	Charge.	1 Shot, at 1° 30' Elevation.	2 Shot, at 1° 30' Elevation.	Case Shot, at 3° 15' Elevation.
	lbs. oz.	Fect.	Fect.	Fect.
12 Pr. Med.	4 —	12	25	8½
6 Pr. Heavy	2 —	7	11	7½
6 Pr. Light	1, 8	12	21	10
3 Prs. Heavy	1 —	3	5	3½

*RECOIL of Land Service Iron Mortars,  
on Iron Beds,*

	Ft.	In.
13-Inch, with a charge of 6 lbs. —	4	2½
10-Inch, —————	3 lbs. —	2 10
8-Inch, —————	1 lb. 9 oz.	3 10

**RECOLLECTION**, a mode of thinking, whereby those ideas sought after by the mind, are brought again to view. A retentive memory, and a cool collected presence of mind, are necessary qualities in every good officer; and military men should often exercise the faculty of thinking, in order to become instantly familiar with what they have formerly studied, and occasionally practised. For memory, like every thing else, acquires strength, and is increased by cultivation. *Memoria, ut in ceteris rebus, colendo augetur.*

**Necessary RECOLLECTIONS** for the exercise of a battalion, as laid down in the Rules and Regulations, page 85.

It appears, that the front of any division or body is, in ordinary paces of 30 inches, nearly 3-11ths of the number of files of which it is composed.—That the circumference of the quarter circle which it describes, is in wheeling paces of 33 inches, the same as the number of files of which it is composed.—That the number of files being once ascertained in each division, the officer commanding it must, on all occasions, recollect the number of paces that are equal to his front; also the number of wheeling paces which the flank man must take to complete the quarter circle; also the spare time, which he has to regulate the *halt, march*, of his division after wheeling.

The field officers and adjutants must always recollect the number of paces the front of the battalion and its divisions occupy, in order to take up ground exactly in all formations.

**To RECOMMEND.** When a young gentleman wishes to enter into the British army, his first object should be to get well recommended for that purpose. It is a regulation, that none under the rank of field officer in the regulars, can recommend a person so circumstanced. He must state, that from his own personal knowledge, he believes the young candidate to be perfectly qualified to hold a commission in his Majesty's service. The person who recommends is responsible to the commander in chief

for the character and situation of the candidate.

**RECOMMENDATION**, in a military sense, a certificate, stating an individual to be properly qualified for a situation in the army. This certificate must be signed by a field officer in the regulars, addressed to the commanding officer of the regiment, by whom it is forwarded to the commander in chief, who lays the name of the person recommended before the king.

**Book of RECOMMENDATION**, a book of entry which is kept in public offices, and by army agents, for the insertion of the names of such officers, or candidates for commissions, as have been recommended to the commander in chief for his Majesty's approbation.

**RECOMPENSES militaires, Fr.** See **MILITARY Rewards.**

**RECONNOISSANCE, Fr.** the act of reconnoitring. See **RECONNOITRE.**

**RECONNOITRE, Fr.** to reconnoitre.

**RECONNOITRE une place, Fr.** to reconnoitre a fortified town or place.

**RECONNOITRE**, in military affairs, implies to view and examine the state of things, in order to make a report thereof.

Parties ordered to reconnoitre, are to observe the country and the enemy; to remark the routes, conveniences, and inconveniences of the first; the position, march, or forces of the second. In either case, they should have an expert geographer, capable of taking plans readily: he should be the best mounted of the whole, that in case the enemy happen to scatter the escorte, he may save his works and ideas.

All parties that go for reconnoitring only, should be but few in number. I would never choose more than twelve or twenty men. An officer, be his rank what it will, cannot decline going with so few under his command: the honour is amply made up by the importance of the expedition, frequently of the most interesting consequence, and the properest to recommend the prudence, bravery, and address, of any officer that has the fortune to succeed.

It is previously necessary that the officer ordered on this duty should be well acquainted with the country, the roads, and the distance of the enemy. His party

party must consist of men of approved fidelity, part of whom should be disguised. This detachment must march off in the night. The men must have strict orders neither to smoke tobacco, make a noise, nor speak. The officer must be furnished with two guides, who are to be strictly interrogated, but are to remain ignorant of the route you intend to take. A detachment of this kind should be furnished with subsistence for two or three days. The horses are to be fed every two or three leagues, for it is absolutely necessary that they should be always fresh and fit for duty. The officer will take care never to halt, but at a distance from any road, and also take every precaution to prevent his being surprised, whilst his horses are feeding &c.

**RECONNOITRING**, (*la reconnaissance*, Fr.) orders and instructions to be observed in. We have been favoured by a very ingenious and intelligent correspondent, with the following directions, which were dictated by the late Major-general Roy, F. R. S. and A. S. S. and issued as instructions to be followed by officers and engineers in examining, describing, representing and reporting, any country, district, or particular spot of ground.

First, As the encampments, marches, and every possible movement, proper for an army to make in the field, entirely depend on a just and thorough knowledge of the country, the greatest care and exactness should be observed in examining minutely the face of that country, and from time to time, to make proper memorandums of every variety of the ground; whether the face of the ground is flat and level, or interrupted with hollows and deep vales, always mentioning the nature of the soil in either, whether dry or wet, clay or sand, rocky, stoney, or smooth, in tillage or in grass; if enclosed, the nature of the fences, and largeness of the enclosures; where woody, the nature of the wood, whether thick and impassable, copse, or grown timber, and open; the extent of the wood; or if cut by few or many roads.

If there are any bogs or morasses, to be particularly exact in expressing the nature of either, both as to their size and extent, from north to south, and

from east to west; if deep and impassable, or capable of being traversed, with very little labour, by foot or horse. Where there are meadows, to observe the above directions in describing them.

In all places, where the country is cut by valleys or hollows, to be as explicit as possible in conveying a perfect idea of the bottom and banks of the said valley.

Second, Carefully to follow the line of the principal roads, in the several bendings and turnings, marking the breadth; and at every half mile's distance, minutely expressing every variation or change that happens in the road; if narrow or hollow, the depth of the hollow; if broken or impassable; leading through or near any road or cover, and how far it may continue through or close to that cover. If the ground on both or one side of the road, will admit of shunning the above inconvenience, by quitting the road, and making openings through the neighbouring fields. To be particularly attentive to mark every lane, cross-road, or communication, that either crosses the great road, or may lead from right or left of it; mentioning the distance where they run off in right or left, with what place or places they communicate, and how far they go. When you come to a farm-house, small village, or country town, to be particular and exact in describing the situation and extent of either, by mentioning the number of houses and barns, and how supplied with water.

Third, All rivers or waters, great or small, to be examined with the greatest attention and exactness; marking every where their breadth and depth, in floods and ordinary water, nature of their bottom, height of their banks, nature of the soil on both sides, and the access to the banks, if easy or difficult.

The above directions to be strictly observed in mentioning and inserting every ford across any river or rivulet; and all bridges to be particularly described, whether stone, brick, or timber, number of arches, with the width of each; thickness of the parapet; if the communications to the bridge are free, and on commanding ground, and the nature of the command.

Fourth,

Fourth, If the surface of the country is mountainous, or only broken by gentle heights; to describe and minutely express the nature of the mountains, as to their ascent and height, in what direction they run, and how fat; where broken, or cut by hollows and waters; where covered by woods or waters, or any other obstructions.

If the country is cut with rising grounds, to be very particular in observing the same mode of describing them.

Fifth, In reconnoitring, to never trust anything to memory, but constantly to sketch and mark memorandums with method, and regularly in travelling the road, and from time to time, at stated distances, to collect, digest, enlarge, and vary these memorandums and sketches before quitting the ground, so that every thing may be as correct, explicit, and expressive as possible. Great and many are the inconveniences that continually arise from not duly attending to this precaution, and trusting too much to one's own memory, which should therefore be avoided.

Sixth, At first setting out, if possible, to measure a long base, and intersect the most convenient objects, and as frequently as the nature of the ground will permit, to make proper measurements and cheques to the series of triangles in their proper position.

In an enclosed country, the only exact and useful method to lay down such, is to trace the roads with the greatest exactness and accuracy; always remembering, that in military maps, nothing should ever be represented at guess or random; and that the space of one quarter of a mile truly laid down, is far more useful, than an imperfect and loose representation of an entire country.

Seventh, When ordered to survey a ground for an encampment, the survey should at least contain three miles diameter; in which ought to be expressed, with the greatest minuteness, every particular above-mentioned, the advantages and disadvantages of water; if easy to be come at, if plenty and good, in rivers, rivulets, springs, and ponds of water; if clear and soft, or muddy or hard.

Eighth, To be particularly attentive to the produce of each part of a coun-

try, and how inhabited; if abounding in grass or hay, or only for pasture; if chiefly in corn, and what quantities of hay and straw are generally thought to be in the country; of all which particulars you may be easily informed, after some acquaintance with a judicious countryman.

Ninth, Every representation must be laid down to a particular fixed scale: when it is necessary to represent a spot of ground, proper for an encampment or any particular manœuvre for the troops, the best scale is one of 500 yards to an inch, which is sufficient to shew every part in its just proportion, and to express distinctly the nature of the surface.

General sketches of a country may be laid down to a scale of two inches to a mile; and when the sketch is finished, the miles must be constantly marked along the roads with red figures.

We cannot quit this important article without endeavouring to impress upon the mind and understanding of every officer in the British service, from the commander in chief of an army, to the head of a detached party, the necessity of taking the most minute information, respecting the state and condition of an enemy, before he is marched against or attacked. The act of reconnoitring requires not only great presence of mind, a knowledge of ground, and an accurate combination of circumstances, but also a daring and unshaken soul.—Previous to the assault of a place, it is, above all, indispensably necessary, that the different parts of its fortifications should be scrupulously examined. The depth of its ditches, and the height of its walls, must be ascertained; for although a breach may have been effected, it does not therefore follow that the assault is practicable. Had these particulars been attended to in India, we should not have had to lament the untimely fate of so many brave and gallant countrymen, who fell before Bhurtpore. It is not our province to enter at large into the operations of our generals, but it is certainly our duty to point out, to the best of our ability, the means which can be adopted to forward the business of war, at the least expence of human blood and industry.

**RECONQUERIR**, *Fr.* to reconquer; to regain; to retake by force of arms.

To **RECOVER** *arms*, a position of the firelock when the piece is held with the lock equal to the left shoulder, and the sling to the front. The steadiness of soldiers is frequently proved by bringing them to the *recover*, after the word *present*.

To *bring to the RECOVER*. See *Recover Arms*.

**RECOURSE**, *Fr.* rescue; help. The French make use of this expression when soldiers, contrary to law and the rules of war, have seized upon the cattle, grain, &c. and are carrying their booty away; in which case, an alarm is given, and the civil powers dispatch persons after the plunderers to rescue the property which has been thus taken by violence. The party sent on this business, is said to be gone *à la recousse*.—Hence *aller à la recousse*, to go out for the express purpose of rescuing stolen goods out of the hands of the marauders.

**Droit de Recousse**, *Fr.* a right which is vested in every individual, to rescue or get back what has been unjustly taken from him.

**RECRUITS**, (*recrues*, *Fr.*) men raised for military purposes on the first formation of corps, or to supply the places of such as are disabled, or have lost their lives in the service. For particulars respecting the enlistment of recruits, see Regulations and Orders, page 115.

**RECRUITING**, a term prefixed to certain corps and districts, which are specifically established for the recruiting service. Hence Recruiting Districts.

The recruiting corps, professedly so called, and having place in the army list, consist of *Ogle's*, *Loft's*, *Bradshaw's*, *Nugent's*, *Sir Vere Hunt's*, *Macdonald's*, and *Armstrong's*. There were several others during the course of the late war, viz. the *Hon. George Hanger's*, *Steele's*, &c.

The recruits made for the regular army of this country, are generally enlisted for life. In almost every other service in Europe, men are enlisted for a certain number of years. Experience has convinced the powers upon the Continent, that the system of binding a man during the whole course of his life to

military subjection, is contrary to every sound principle of economy, and effective service. We sincerely hope the period is fast approaching, when, in the general reformation of the British army, the wise method of enlisting for seven or ten years will be adopted.

**RECRUIT-horses**, are the horses brought up for completing the regiments of horse and dragoons, &c.

**RECRUITER**, *Fr.* to recruit.

**RECRUTEUR**, *Fr.* a person duly authorized to enlist men. This word is used in contradistinction to *racoleur*, a crimp, which see.

**RECTANGLE**, *Fr.* rectangle.

**RECTANGLE**, } See *ANGLR*.

**RECTANGULAR**, }

**RECTILIGNE**, *Fr.* rectilinear, or right-lined.

**RECTILINEAR**, } after the man-  
**RECTILINEOUS**, } ner, or consist-  
ing of right lines.

**RECUIT**, *Fr.* a term used in the French foundries of artillery, signifying the nealing or hardening of a cannon-mould.

**RECUI**, *du canon*, *Fr.* the recoil of a piece of ordnance. See *RECOIL*.

**RECUIADE**, *Fr.* the act of recoiling or falling back.

**RECUER**, *Fr.* to fall back. This expression is used by the French in a figurative sense, viz.

**RECUER pour mieux sauter**, *Fr.* to fall back or retreat, in order to return and advance with more energy.

**RECUER les bornes d'un pays**, *Fr.* a figurative phrase among the French, signifying to enlarge or extend the boundaries of a country.

**RECUER**, *Fr.* to give way; to yield. The French say of a brave man, who has often faced the enemy, and stood his ground, *il n'a jamais reculé*, he has never given way. *On ne l'a jamais vu reculer*, no one has ever seen him give way.

**A RECULONS**, *Fr.* backward.—Hence *travailler à reculons*, to work or get on by going backward as rope-makers do.

**REDANS**, in field fortification, are indented works, lines, or faces, forming sallying and re-entering angles, flanking one another; generally constructed on the sides of a river which runs through a garrison town. They were used be-  
fore

fore bastions were invented, and are by some thought preferable to them. They are likewise called *outrages à scie*, from their resemblance to a saw.

**RED COAT**, a familiar term for a British soldier.

**REDDITION** *d'une place*, Fr. the surrender of a besieged place.

**RED Hot Shot**, (*boulets rouges*, Fr.) shot made red hot, and in that state thrown out of cannon, against the vessels or magazines of an enemy.

**RÉDIGER**, Fr. to draw out.

**RÉDIGER des mémoires**, Fr. to draw out memorials.

**REDINTEGRATION**, the act of restoring any single substance, from a damaged mixed body, to its former nature and properties. Thus Col. Congreve, of the royal artillery, by the *redintegration* of nitre from damaged gunpowder, has effected a vast saving to government in that article.

**REDOUBT**, (*redoute*, Fr.) in fortification, a square work raised without the glacis of the place, about musket-shot from the town; having loop-holes for the small arms to fire through, and surrounded by a ditch. Sometimes they are of earth, having only a defence in front, surrounded by a parapet and ditch.—Both the one and the other serve for detached guards to interrupt the enemy's works; and are sometimes made on the angles of the trenches for covering the workmen against the sallies of the garrison. The length of their sides may be about 20 toises: their parapets must have two or three banquettes, and be about nine or ten feet thick. They are sometimes (in a siege) called places of arms.

**Redout**, is also the name of a small work made in a ravelin, of various forms. See **FORTIFICATION**.

**REDOUBT**, *castle or donjon*, a place more particularly intrenched, and separated from the rest by a ditch. There is generally in each of them a high tower, from whence the country round the place may be discovered.

**Detached REDOUBT**, is a work made at some distance from the covert-way, much in the same manner as a ravelin with flanks. See **ARROW**.

**Field REDOUBT**, a temporary defence or fortification, which is thrown up in a war of posts, or under sudden emergen-

cies. Field redoubts are highly useful. By them Peter the Great, of Russia, gained the battle of Pultowa, which was fought on the 8th of July, 1709.

**Redoubts en crémaillère**, differ from all the rest, because the inside line of the parapet is broken in such a manner as to resemble a pot-hook, or teeth of a saw; whereby this advantage is gained, that a greater fire can be brought to bear upon the defile, than if only a simple face was opposed to it, and consequently the passage is rendered more difficult.

**REDOUBTER**, Fr. to be alarmed at. *Redouter les armes d'un ennemi*, to be alarmed at the strength of an enemy.

**REDOUTES de terre**, Fr. redoubts that are hastily thrown up, and are made with earth, for the purpose of securing encroachments, circumvallations, passage of rivers, &c.

**Redoubts de maçonnerie**, Fr. redoubts made of mason-work. These are generally constructed in places where an enemy might derive advantage from establishing himself; they are likewise built upon the salient angles of the glacis.

**Redoubts casematés**, Fr. casemated redoubts. These are arched over and are bomb proof. Those constructed for the defence of Gibraltar, and for the security of Dover Castle are of this description.

**Redoubts à machicoulis**, Fr. redoubts made of brick or stone work, which are several stories high. The highest story juts out about one foot beyond the wall that surrounds, or fronts the redoubt.

**REDRESSER**, Fr. in a military sense, to recover. To make straight again, viz.

*Redressez vos armes*, Fr. recover arms.

*Redressez la ligne*, Fr. redress the line.

*Redresser les torts*, Fr. In the days of ancient chivalry, this expression signified to redress the wrongs of the oppressed. The knights, on these occasions, underwent the greatest hardships and faced the most imminent dangers.

**To REDRILL**, to drill again. To put a soldier through the first elements of military training. It is observed, page 2, of General Rules and Regulations,

tions, that every soldier on his return from long absence, must be *re-drilled* before he is permitted to act in the ranks of his company.

To **REDUCE** a place, is to oblige the governor to surrender it to the besiegers, by capitulation.

To **REDUCE** the Circle, to restore or bring back a battalion or company, which has been formed in circle, to its original position in line.

To **REDUCE** the square, to restore or bring back a battalion or battalions, which have been formed in a hollow or oblong square, to their natural situation in line or column. In Part the 4th of Infantry Regulations, S. 189, the following method is laid down, whereby the square is to be reduced. On the word, *Form close column*, the files that faced outwards, will come to their proper front, and the files that moved into intervals will face about. At the word *Back, March*, the grenadiers take one pace forward, and the two rear companies take one and two paces forward, and then face about; the files from the intervals take their proper places; officers, serjeants, &c. will quit the interior, move to their several stations, and the companies that composed the flank faces, will be completed; the companies will close inwards by sub-divisions one pace.

To be **REDUCED**, in a military sense, to be taken off the establishment, to cease to receive pay as soldiers.—When a regiment is reduced, the officers are generally put upon half-pay.—Sometimes the corps are reduced, and the officers remain upon full pay. This happens at the close of a war, when the standing army of the country is confined to a certain number of battalions.—Hence is derived the expression *in and out of the break*. In the break, is the liability of being reduced; *out of the break*, is the certainty of being kept upon the establishment.

To be **REDUCED** to the Ranks, to be taken from a superior appointment in a regiment, and to be ordered to the duty of a common soldier. This sometimes happens, by way of punishment, when a serjeant or corporal misbehaves himself. A serjeant, however, cannot at present be reduced, except by sentence of a regimental court-martial. Formerly this

necessary class of men was at the mercy of every flippant officer that happened to have the command of a company, without the knowledge or abilities to manage its interior economy. The army is indebted to the present Marquis of Townshend, for his manly exertions in favour of non-commissioned officers. According to the Regulations, printed officially, April 9th, 1800, if a serjeant be reduced to the ranks, his clothing is to be given in for the use of his successor; and he himself is to receive private's clothing, equally worn (or as nearly as may be) with the clothing he has given in.

**REDUCT.** See **REDOUIT**.

**RÉDUCTION** *des troupes*, Fr. a reduction of the armed force of a country.

**RÉDUIRE**, Fr. in drawing, to copy, to reduce a plan or picture. This operation differs from that of chalking out. The French use the expression in various senses, viz.

**RÉDUIRE en grand**, Fr. to copy an original drawing by giving it larger dimensions.

**RÉDUIRE en petit**, Fr. to copy an original drawing by giving it smaller dimensions, which is literally to reduce it.

**RÉDUIRE un plan au petit pied**, Fr. to make a copy of a drawing, in which every part is faithfully represented, though on a small scale.

**RÉDUIRE un bataillon**, Fr. to reduce a battalion, or to diminish its quota of men.

**RÉDUIRE en poudre**, Fr. to reduce to ashes. When a town is severely bombarded, and its different edifices, &c. are destroyed, it is said to be reduced to ashes, or to dust.

**RÉDUIT**, Fr. literally means a nook, or bye-place; in a military sense, it signifies a sort of citadel, which is extremely inconvenient to the inhabitants of the town, because it takes up more ground than those that are regularly built, and is, at the same time, uncomfortable to the troops, because they must be very much crowded. This word is explained by an English lexicographer, in the following manner:—*Reduct* or *Reduit*, an advantageous piece of ground, intrenched and separated from the rest of the place, camp, &c. for

for an army, garrison, &c. to retire to in case of surprise. *Reduits* are sometimes made for the purpose of securing different posts in a town independent of its citadel. These have been proposed by the celebrated Vauban.

*REDUIT*, in architecture, a recess.

*REED*, an arrow; also a musical instrument which has lately been introduced into this country, and is used in some military bands.

*REEDIFIER*, *Fr.* to rebuild.

*RE-ENTERING angle*, in fortification is that which turns its point towards the centre of the place. See *Fortification*.

*REFAIT*, *bois refait et remis à l'équerre*, *Fr.* an expression used among French carpenters, and by the artificers belonging to the train, to signify any piece of wood which has been planed, and made perfectly square and level.—The ingenious compiler of the *Dictionnaire Militaire*, has observed under this term, that although this, as well as many other words, which have been inserted, cannot strictly be called military, yet they are not to be deemed entirely superfluous, when it is considered, that wood is necessarily used in the artillery, &c. We must offer the same apology for having given place to many expressions and words which may not be thought rigorously technical in military matters.

*REFEND*; *Fr.* in architecture, a partition wall, viz. *Mur de Refend*.

*REFEREE*, (*refire*, *Fr.*) a person referred to. Every candidate for a vacant regimental paymaster-ship in the British service, must have four referees from whom the war-office obtains the necessary information respecting the responsibility of himself and his sureties.

*REFLUX*, *Fr.* the ebb tide.

*REFONDRE*, *Fr.* to put damaged pieces of ordnance in the foundry, for the purpose of melting it down; to new cast.

*REFONTE*, *Fr.* the melting down again or new casting.

To *REFORM*, (*réformer*, *Fr.*) generally speaking, (in military affairs) is to reduce a body of men, either by disbanding the whole, or only breaking a part and retaining the rest.

*REFORM*, (*réforme*, *Fr.*) reforming,

reformation; reduction; a disbanding some part of an army.

To *REFORM*, in a military sense, is after some manœuvre or evolution, to bring a line to its natural order, by aligning it on some given point. This frequently occurs in the passage of lines, &c. viz. When a line of several battalions hath passed another that remains posted, by retreating through by files, it may be reformed in the following manner:

To *REFORM by a flank battalion, on a central battalion, in an oblique position.*

When by a flank battalion, the line that has passed is fronted in column, and the several pivots are dressed correctly before wheeling up into line. To this effect, the commander of the head battalion will instantly place the pivots of his three first platoons in a true direction, and order the officers of his other platoons to line on them; himself remaining with the head platoon at the point d'appui, will see that this is correctly done. The first battalion thus steadied, will become a sufficient direction for the second, and every other one, to prolong it by their adjutants; and this operation, though successive from platoon to platoon, and from battalion to battalion, may be performed quickly and correctly; if the adjutants are timely detached, and if the head of the column is quickly arranged.

To *REFORM a first line on a central battalion.*

In order to give the adjuement from a central battalion, after halting and fronting, the platoon pivots of the given battalion are from its head to be accurately lined by its commander, in the true direction. This battalion being placed, from which distances and dressings are taken, the others will instantly proceed to line their pivot flanks upon it: those that are behind it, will readily do this; those that are before it will find more difficulty, as they must take their distances from the rear;—to facilitate this necessary object, their platoon officers will face to the directing battalion, and will then successively take their distances and covering from their then front; as soon as each has acquired his true position, he will face about and make his platoon join to and dress

dress to him. The line will then be ready to form, by wheeling up to the pivot flank.

To **RECOVER** a first line,—that has passed through a second which remains posted,—in an oblique position.

When it is found necessary that the passing battalions, which constitute the first line, should take a new position not parallel to the second, or to their own original formation, the commander with his two leading platoons, will first enter it (i. e. the new position) and direct the others to regulate their flanks by them; and if several battalions are passing the second line, the new alignment is thus made easier for them.

It frequently happens, that a height in the rear is to be crowned by a retreating line. In this case, each officer must not dress exactly to the platoon that precedes him, but in joining it he must halt, and arrange his own in such a manner, that the slope of the rising or descent can be entirely seen and commanded, which is here the great object, and would not be attained, if the troops were to adhere to a straight line.

To **REFORM**, (*reformer*, Fr.) is likewise to reduce a corps of men, by either disbanding the whole or only breaking a part, and retaining the rest; or sometimes by incorporating them with other regiments.

**REFORMADO**, from the Spanish, an officer who, having lost his men, is continued in whole or half-pay. It also signifies a volunteer in a man of war.

**REFORMÉ**, Fr. the reduction of an armed establishment, such as is generally made at the proclamation of peace.

**Officier REFORMÉ**, Fr. an officer put upon half-pay; or *seconded* according to the regulations of the old French service.

**REFORMED-Officer**, one whose troop or company being broke, is continued on whole or half-pay. He preserves the right of seniority, and continues in the way of preferment.

**REFOULER**, Fr. to ram down.

**REFOULOIR**, Fr. a cannon-rammer.

**REFUGEE**, (*refugié*, Fr.) See **EMIGRANT**.

To **REFUSE**, a military phrase, sig-

nifying to throw back, or to keep out of that regular alignment which is formed when troops are upon the point of engaging an enemy. This often occurs in order to occupy a particular position; to prevent the enemy's designs on any particular part of a line, or at least to make him take a greater detour to effect his purpose; or that he may be obliged to aligne his own on a height which is occupied, and from which he may be flanked. When a first line has passed through a second, and it is found necessary to refuse a wing, the several platoons of that line must pass according to the wing which is to be refused. If the left, for instance, is to be posted, and the right to be refused, the platoons may pass from their left; the column will thereby have its left in front, will be more readily directed on the point d'appui, and the preservation of distances will be facilitated, as they will then be taken from the front. If the right is to be posted, the platoons may pass from their right.

It may happen where the passing line is to post one flank and *refuse* the other, that the officers will have their distances to take from behind; the original remedy for this inconvenience has been shewn; (page 346, Part IV.) another also may be applied, which is to halt the whole, at any time after passing, and to countermarch each platoon, which will then cause the future formation to be taken from the front of the column.

A retreating line may also *refuse* a wing, by forming in line very soon after passing, and then taking up an oblique position to the rear, by the echelon march, or some other of the modes already prescribed. See Rules and Regulations, from page 357 to page 360, Part IV. See also pages 287 and 297 of Saldern's Elements of Tactics, translated by J. Landmann.

Frederic, surnamed the Great, king of Prussia, who had attentively studied the tactics of the ancients, first adopted the method of refusing a wing in the forming of an attack. This method has been since successfully followed by the best modern generals. It answers to a partial reserve of a force which is always ready at command; and in point of security, it is the reverse of what the French

French mean in *prêter une aile*, to expose a wing, or post it in a precarious manner. The French, during the whole of the action which was fought in Egypt, on the 21st of March, 1801, refused their right wing. Notwithstanding this precaution, they were defeated by the British.

As a correct formation of the line by the echelon march, whether it advance or retire in the presence of an enemy, is generally resorted to when it is found necessary to refuse any part of a line, it will not appear superfluous to submit the following mode which is practised by the French:

*Formation of the line by the echelon march of divisions, by the covering sergeants running out to mark the points in the new alignment, for their respective divisions.*

When the battalion changes position to the front on a fixed flank company, by throwing forward the rest of the battalion, the commander having determined the new line, and wheeled the right company into that line the named number of paces, (say 4) the remaining companies wheel two paces on their right forward into echelon. The covering serjeant of the second company instantly moves out, takes about 3-4th distance for his company, faces the point d'appui, and places himself in such a manner, that the outside of his right arm will pass in line with the breasts of the men of the company already in the line. He is corrected, if necessary, on the distant point of formation by a proper person placed on the right for that purpose. On the word *march* and *form line* being given by the commander, the covering serjeant of the third company runs briskly out, places himself so as to cover the second serjeant, faces the point d'appui, and takes the ordered 3-4th distance, corrected on the distant point by the person on the right. The officer commanding the second company, marches on till he sees himself clear of the left flank of the right company; he then gives the word *left shoulders forward*, (his right pivot marking time) and when he observes his company square with the new line, he gives the word *forward*, runs nimbly out and places himself in front of the third left file of the first formed company, and when the

men of his company have their feet in the air ready to finish the last pace to bring them into line, he gives the word *halt, dress*, and dresses his men close to the outside of the right arm of his covering serjeant; taking care that the outward flank of his company does not shut out the distant point of dressing; he then gives the word *eyes front*, places himself on the right of his division, covered by his serjeant, who quits his ground and briskly passes through the interval on the right of his division, as soon as he hears the word *eyes front* from his officer.

In this manner division after division arrives in the new line; and as the covering serjeants of each of the other divisions approach within 15 or 20 paces of the line, they run out to mark the points for their respective companies, face the point d'appui as already directed, and there remain till the word *eyes front* is given by their officers, ~~when~~ they quit their places and take post in the rear.

In forming line to the rear, by the echelon march, (suppose on a left company) the same operation takes place with regard to the covering serjeants running out, to mark the points of dressing for their respective divisions; but with this difference, that instead of their taking only about 3-4th distance, they are to take about one pace more or less, than the proper distance; face the point of appui, and are corrected on the distant point, as before, by a proper person on the left. The commanders of companies will, as soon as they see a proper front rank of their companies touch that part of the line already formed, give the word *halt, front, dress*. Each officer dresses the men of his platoon back till he brings them in line with the outside of the left arm of his covering serjeant; he then gives the word *eyes front*; taking post on the right of his company, covered by his serjeant, who quits his ground as before on the word *eyes front*.

It is to be observed, in order to preserve the proper interval, on the covering serjeant quitting his division to mark the point in the true line, the officer's place is to be immediately filled by a supernumerary or other man from the rear, where he is to remain till replaced

replaced by the officer, or covering serjeant.

It is likewise to be observed, that in forming line to the front on a right division, the dressing is close to, and on the outside of the right arm of the covering serjeant; and on forming the line forward on a left company or division, the dressing is close to and on the outside of the left arm. In forming line to the rear on a right division, the dressing is on the right arm; and in forming line to the rear on a left division, the dressing is on the left arm of the covering serjeant.

In forming line to the rear, the officers, or other persons appointed to correct the serjeants on the distant point of formation, move along in the rear, and correct the serjeants, as they successively arrive to mark the points for their respective divisions.

By the foregoing method of sending the covering serjeants to mark the point in the new line for their respective companies, that inaccuracy of dressing, which so often takes place when forming line to the front; and that very great confusion and incorrectness, which too frequently occur when forming to the rear, (particularly so, when the wheel into echelon is in any degree less than the one eighth of the circle or four paces,) are entirely obviated.

REFUSER, *Fr.* for its application in a military sense. See *To REFUSE*.

REFUSER, *Fr.* This word is used among the French as a sea phrase, viz. *le vaisseau a refusé*, the ship has missed the wind.

REGAIN, *Fr.* in carpentry and masonry, means the surplus of a piece of stone or wood when it proves too broad or too long for any particular use, and must of course be taken off. It likewise signifies after-grass or math.

RÉGALER, *Fr.* to level or make even.

REGATTA, (*regata*, *Fr.*) a rowing match; a procession by water. This word is taken from the Italian, signifying a species of water tournament, or exhibition which took place on the grand canal, at Venice. The conqueror, on these occasions, received a prize from the senate.

REGENCY, (*régence*, *Fr.*) the government or governors of a state or a

kingdom, during the minority or absence of a prince, by one or more subjects. Also a post of dignity with which one or more persons are invested under visitations of disease or incapacity in the lawful sovereign. A French writer says, on this subject, "That it is a dignity sometimes more envied than the crown itself. God knows," adds he, "it is already too much for any honest man to be condemned to wear the latter!"

*Regency* also means certain persons who are at the head of different states in Europe.

REGET, *Fr.* switch.

RÉGIE, *Fr.* government, administration.

REGIMENT, (*régiment*, *Fr.*) a term applied to any body of troops, which, if cavalry, consists of one or more squadrons, commanded by a colonel; and, if infantry, of one or more battalions, each commanded in the same manner. The squadrons in cavalry regiments are divided, sometimes into six, and sometimes into nine troops. The battalions of British infantry are generally divided into ten companies, two of which are called the flanks; one on the right consisting of grenadiers, and another on the left formed of light troops. There is not, however, any established rule on this head; as both cavalry and infantry regiments differ according to the exigencies of service in time of war, or the principles of economy in time of peace. We are humbly of opinion, that every regiment of foot should consist of 2400 men, making three battalions of 800 each. The German regiments frequently consist of 2000 men; and the regiment of Picardy in the old French service had 6000. The French made a distinction between the commanding officer of a regiment of cavalry, and the commanding officer of a regiment of infantry. The former was stiled *Mestre de Camp*, the latter *Colonel*, as with us.

According to the establishment of the present French army, the term of regiment is confined to the cavalry and artillery; and the name of half brigade is given to the infantry. So that *chef de brigade*, chief of brigade, corresponds with our colonel of a regiment of infantry. The denomination of colonel

lonel is still retained in the French cavalry.

With respect to the derivation of the word, it appears, that the best etymology is from the French word *régie*, management, which comes from the Latin *regere*, to govern. Hence a regiment is said to be governed by a colonel. M. Beneton, a celebrated French etymologist, differs from this explanation. He traces it from the French *régime*, which signifies system, regimen, administration, and which is again derived from the Latin *regimen*, bearing the same import. In a physical acceptation of the term, *regimen* (and *regimen*.) is used to express any body that is composed of several others. But this is mere conjecture on his part.

Regiments were first formed in France in the year 1558, and in England in the year 1660.

Although the several regiments in the British service have various facings, and in the cavalry as well as artillery, are totally different from one another with respect to colour, they are nevertheless distinguished by numbers only. Formerly, indeed, the militia, belonging to the city of London, was known by the facings of the different regiments. This circumstance puts us in mind of a laughable passage in Samuel Foote's humorous farce of the Mayor of Garratt. Major Sturgeon is there made to say, (in giving an account of the several promotions he had gone through,) that he had served under Jeffery Dunstable, knight, alderman of the City of London, and colonel of the *yellow*.

During the rebellion in 1745, (which ended in 1746, when the pretender was completely overthrown at the battle of Culloden,) the following proclamation was pasted up throughout the City of London:

"Notice is hereby given, that every officer and soldier in the six regiments of militia, without waiting for beat of drum, or any other notice, do immediately on hearing the said signals, repair with their arms, and the usual quantity of powder and ball, to their respective rendezvous; the *red* regiment upon Tower-hill: the *green* in Guildhall-yard; the *yellow* in St. Paul's Church-yard; the *white* at the Royal

Exchange; the *blue* in Old St. Street; and the *orange* regiment at West Smithfield."

We must, however, make one exception to the general rule observed in the service, with regard to numbers, which is the third regiment; that corps is generally called the *old buff*, from their facings being of buff colour.

*Dromedary REGIMENT.* Corps raised by the French during their stay in Egypt. The men were mounted upon dromedaries. To quote the words of M. Morier, in his account of a campaign with the Ottomans in 1820, the dromedaries composing this troop are made to go through a number of evolutions, and when attacked they are formed into a hollow square: they kneel, and by means of a cord which is thrown round one of the knees, they are prevented from getting up, and thus they afford a breast-work for the soldier.—The same author observes in a note, page 59, that the most convenient and only way of travelling in Egypt is upon dromedaries. The traveller need not encumber himself with food for his animal, as a very scanty allowance of beans suffices for many days' journey. Travellers ride upon convenient saddles; and the animal is so docile, that he is guided only by touching him with a small stick on the side that he is to turn. Some have a ring through each nostril, which serves as a bit to a bridle fastened to them. They walk very fast; and their trot is swift, but very inconvenient.

*Cape REGIMENT.* We have already mentioned under the article *Hottentots*, (which see) that a proposal had been delivered in to government to raise, train, and discipline a certain number of the original inhabitants of the Cape of Good Hope. This proposal, after considerable delay, and much deliberation, was finally accepted; and a few days previous to the sudden cessation of arms between Great Britain and the French Republic, Colonel King received his letter of service for that purpose.—The different officers were gazetted; but the prospects of the individual who conceived the plan, and the beneficial effects which must have accrued to both countries from the civilization of a harmless and industrious set

of people, soon yielded to the impetuous terms of diplomatic arrangement.

*Malays* REGIMENT, a corps which has been raised for the specific purpose of doing duty in the island of Ceylon.

REGIMENTAL, any thing belonging to a regiment.

REGIMENTAL-staff. See STAFF.

REGIMENTALS, the uniform clothing of the army; as a hat, coat, waistcoat, breeches, stocks, shoes, boots, spats, spatterdashes, &c.

REGIMENTAL courts-martial. See *Courts-Martial*.

REGIMENTAL band. See BAND.

REGIMENTAL book. See BOOK.

REGIMENTAL parade. See PARADE.

REGIMENTAL orders. See ORDERS.

REGIMENTAL necessaries. By the mutiny act, it is declared, that any person buying, detaining, or exchanging articles called regimental necessaries, or who shall cause the colour of the clothes to be changed, shall forfeit 5*l*. Soldiers selling or exchanging them, are liable to military punishment, &c.

REGIMENTAL receipts for forage on service. Vouchers which must be produced by the contractors of an army to authorize them to have their claims discharged by the commissary-general, or his deputies. It is sensibly observed in page 32 of the British Commissary, that in every case there should, if possible, be only one voucher for one issue. The mode of accomplishing this must be simple, and it is adopted by those who certainly have most experience; for every German corps, or German officer, who draws forage, or any other article, from the commissariat, sends a mere receipt. This prevents farther writing or trouble, because the receipt may be presented in the open field, and is in itself a complete voucher. All that is required, is for the regiment to order its forage party to bring back the receipt, if the quantity be not obtained; and the quarter-master, or foraging serjeant, to give a receipt for what he gets, if only part can be had.

RÉGIR, *Fr.* to govern; to manage; to take charge of, &c.

*Régir des soldats*, to take charge of soldiers.

REGIE, *Fr.* See RULE.

Vent REGIE, *Fr.* a trade wind.

REGLEMENT. See REGULATION.

REGRATTER, *Fr.* in architecture, to scrape the outside of a building.

Among engravers, this word signifies to re-touch a plate.

REGULAR, in geometry, a regular body is a solid, whose surface is composed of regular and equal figures, and whose solid angles are all equal.

REGULAR attacks, in a siege, are such as are made in form; that is, by regular approaches. See ATTACKS.

RÉGULAR, when applied to the army, signifies well disciplined, and fit for any service. Hence regular troops, or regulars.

REGULARS, (*troupes régulières*, *Fr.*) those troops whose conditions of enrolment are not limited to time or place, in contradistinction to fencible, militia, or volunteer corps; called also *The Line*.

To REGULATE, to adjust by rule or method.

REGULATING Battalion. See *Parallelism of a March*.

REGULATION, the act of regulating, or adjusting by rule or method.

RÉGULATION, a term generally used in the British army to signify the regulated price at which any commission, or saleable warrant is permitted to be disposed of. These prices have been fixed by the king. For particulars, see Military Finance.

To buy or sell at the REGULATION, to give or receive for a commission the exact sum that has been settled by the king's authority. When an officer is allowed to retire from a regiment with permission to sell, the one next for purchase is supposed to pay the regulation price of his commission; but it frequently happens, that parties agree among themselves with respect to terms; and it sometimes occurs, that young men of interest and fortune stop the regular promotions of officers by overbidding the market. We sincerely wish it were within the limits of this work to go thoroughly into all the mysteries of sale and purchase; and to lay open the secret traffic of military brokerage.

Cavalry REGULATIONS, a book published by authority, so called. It contains

tains specific instructions for the formations and movements of the British cavalry; which are, by his Majesty's commands, to be strictly observed and practised by the cavalry corps in general, in the British service, till further orders. The commander in chief has further directed, that every officer of cavalry shall be provided with a copy of these regulations, and the commanding officers of corps are to take care that this order be duly observed. Col. Le Marchant, lieutenant-governor of the Military College, has written some very judicious elucidations on this subject.

*Infantry REGULATIONS*, a book published by authority, so called. This ingenious system of tactics has been translated and compiled from the best foreign authorities, and has been adapted to the British service by General David Dundas, to whose indefatigable industry and perseverance not only the government of the country, but the army at large, stand considerably indebted. His Majesty has been pleased to direct, that these Rules and Regulations shall be strictly followed and adhered to, without any deviation whatsoever therefrom; and such orders before given, as may be found to interfere with, or counteract their effect and operation, are to be considered as cancelled and annulled. As sincere well-wishers to good order and discipline, we recommend the frequent perusal of this passage to every commanding officer in the service, particularly to the consideration of those gentlemen who may naturally feel a little reluctant to *unlearn*; and we avail ourselves of this opportunity to apologize for not having entered more fully into the cavalry regulations. It will, however, be remembered, (as General Dundas himself observes, page 281, *Cavalry Regulations*) that the general principles for the formations and movements of cavalry and infantry being invariably the same, their more particular explanation in several points, is to be found in the Regulations for the Infantry; from which we have made occasional extracts, as a general outline of what we hope hereafter more specifically to detail.

*General REGULATIONS and Orders*, a collection of certain general rules

which were published by authority on the 20th of August, 1799, and which are to be considered as the ground-work of those instructions that generals commanding districts, and officers in the command of brigades and regiments, forts and garrisons, may find it necessary to issue to the troops under their respective commands. To use the words of the adjutant-general, "This publication does by no means comprehend the whole detail which the various duties and services, and the interior æconomy and management of regiments may require." They are principally extracted from a book, intitled *The Rudiments of War*, which was published by N. Conant in 1777, and ought to be attentively perused by every British officer; since they are directed to be considered as the *standing orders* of the army at large. They cannot be altered, or in any sense be deviated from, without the king's or commander in chief's approbation.—It is, however, to be lamented, that a book, manifestly calculated for the interior management of the army, and consequently a necessary companion to the Rules and Regulations, should not have been more specific. Many circumstances, apparently insignificant in themselves, and, of course, unnoticed at head-quarters, grow into objects of serious discussion among the different regiments of the service, both at home and abroad.—It is an old maxim, that he who neglects small faults will soon fall into great offences.

**REIMBODY.** To re-imbody, is to embody again any regiment or corps that has been disbanded. Thus, the militia is disbanded, and partially reimbodied for 28 days in every year during peace.

**REIN,** (*réne*, Fr.) that part of a bridle which extends from the head of a horse to the hands of the rider, &c.

**REINFORCE**, in founding guns, that part of a gun next to the breech, which is made stronger than the rest of the piece, in order to resist the force of the powder. There are generally two in each piece, called the first and second reinforce: the second is something smaller than the first, upon the supposition, that when the powder is inflated, and occupies a greater space

its force is diminished; which is not the case.—See *CANNON*.

**REINFORCEMENT**, *Fr.* There are three in each gun, called the first, second, and third: they are flat mouldings, like flat iron hoops, placed at the breech end of the first and second reinforce, projecting from the rest of the metal by about  $\frac{1}{2}$  of an inch.

**REINFORCEMENT** to the *enemy*, is an addition of fresh troops to strengthen an army, in order to enable it to go on with an enterprise, &c.

**REJOINDER**. In military courts-martial the prisoner is entitled to a rejoinder; that is, when the prosecutor makes a reply to the defendant, the latter may answer again.

**To REINSTATE**, *Fr.* to place an officer or non-commissioned officer in the same rank and situation from which he had been removed.

**To REJOIN**, to meet again: to re-turp. He left his regiment when it broke up camp, but rejoined it again before the army marched into the enemy's country.

**RÉJOISSANCES publiques**, *Fr.* public rejoicings or thanksgivings. Chevalier Polard makes a curious and interesting comment relative to this subject, in one of his notes upon Polybius. He therein asserts, that the *Te Deum*, or thanksgiving to God, was as much practised among the heathens as it is among the moderns.

**REITRE**, *Fr.* a term derived from the German, signifying a cuirassier or mounted soldier; a dragoon. It is used among the French to express derision and contempt. They say, for instance, *de quoi s'avise ce vieux Reitree de devenir amoureux à soixante et quatorze ans?* what can induce this old dotard to fall in love at seventy-four?

**REITRES**, a body of horse, of which the elite of the German cavalry was formerly composed. This corps was of infinite use to France during the regency of Catharine of Medicis. The king of Navarre had upwards of 35,000 of these troops in support of the Calvinists.

**REITRES**, *Fr.* a body of armed horsemen, who came out of Germany, and entered into the French service during the reign of Henry III. They were incorporated with the carabineers.

**RELAYER**, *Fr.* to relieve; to lessen the labour of any particular set of men by occasionally sending fresh workmen.

**RELAIS**, *Fr.* a term used in fortification to signify a space, containing some feet in breadth, which is between the foot of the rampart and the scarpe of the fosse. It serves as a convenient receptacle for the earth that occasionally crumbles off.

**Cheval de RELAIS**, *Fr.* a hackney horse.

**RELATION** or **RECIT**, *Fr.* any account or description which is given of a war, or battle, or warlike feat, &c.

**RELAY-horses**, in the artillery, are spare horses that march with the artillery and baggage, ready to relieve others, or to assist in getting up a hill, or through bad roads, &c.

**RELEASE**. The commanding officer alone has the prerogative of releasing a prisoner from confinement, after he has once been duly given in charge to the guard, with his crime or crimes stated in writing; or of remitting after he has been adjudged to suffer military punishment; except in cases of a general court-martial, when the king alone can remit or mitigate.

**RELEVEE**, *Fr.* the afternoon.

**RELEVER**, *Fr.* to relieve. Hence, **RELEVER une sentinelle**, *Fr.* to relieve a sentry, by posting another soldier in his room.

**RELEVER la garde**, *Fr.* to relieve guard.

**RELEVER**, *Fr.* This word is also used by the French to hold, or to have a right to. Thus, *le roi ne relève que de Dieu seul*; the king holds of God alone.

**RELIEF**, *Fr.* an order, given by the minister at war, to authorize an officer to receive the arrears of pay which had accumulated during his absence from the regiment.

**RELIEF**, *Fr.* in architecture, means the same as the term does when used in English.

**RELIEU**, *Fr.* the broken grains of gunpowder which have not passed through the sieve.

**To RELIEVE the guard**, is to put fresh men upon guard, which is generally done every 24 hours.

\*To **RELIEVE** the trenches, is to relieve the guard of the trenches, by appointing those for that duty, who have not been there before, or whose turn is next.

To **RELIEVE** the sentries, is to put fresh men upon that duty from the guard, which is generally done every two hours, by a corporal who attends the relief, to see the proper orders are delivered to the soldier who relieves.

**RELIEVER**, an iron ring fixed to a handle by means of a socket, so as to be at right angles to it: it serves to disengage the searcher of a gun, when one of its points is retained in a hole, and cannot be got out otherwise. See **SEARCHER**.

**RELIGION**, (*la Religion*, Fr.) reverence, which is awful and affectionate towards God; connected with benevolence, which is thoughtful and active towards man. Religion, in observances, has differed in different communities, and in different individuals of the same community. All these are freely tolerated with us; and by provoking conversation to offend against any of them, is ungentlemanlike conduct, offending also against the articles of war.

Religion, like other accomplishments, must be most improved and best expressed by appropriate labours, and by well-counselled rites. Yet, apart from these, how finely has it been expressed and adorned by acts not ritual, and by collateral aids! Among a multitude of other splendid illustrations, by the glorious successes of Milton and Shakspeare, of Sir Isaac Newton and Mr. Boyle! by such deaths as Sir Philip Sidney and Bayard's! Though the expiring worship of the one was no more than a silent rapture over his uplifted sword, and a cup of cold water to a wounded comrade, the conclusive bounty of the other!

The religious sense may aspire and impress, under circumstances that seem untoward, and in actions the most slight; as, in the short convivial song of General Wolf, at supper, before the battle of Quebec; and in the favourite essay of Sir Richard Steele, so well hit off one day, when he was on the Tower-duty, an ensign, in the guards.

In General Wolf's song, what is thus good in the old and last stanza, derives

(but with the comparative weakness, too common in descendants of all sorts, from great lines) from Lucan and Dante; for Lucan has this fine thought:—

—*Animaque, capaces*

*Mortis!*

For the intrepidity inspired by religion, there is this admirable expression in the best dramatic poet of the French:—

*Je crains Dieu, Abner—Je n'ai point d'autre crainte!*

By the bye, the affecting thought of Wolf is the same with Dante's on his own grave:—

*Auctoremque suum petit.*

It may not be superfluous to add to this article (which has been transmitted to us by a grave and intelligent divine of the church of England), that it is contrary to the articles of war to upbraid any person on the score or ground of his religion, birth, or country.

A **REMAIN**, a term used among storekeepers belonging to the board of ordnance, &c. to express the actual quantity of stores which is found at an outpost, &c. when a new storekeeper is appointed.

**REMAINS** of stores are ordered to be taken at all places at home, once in seven years, as also at the expiration of a war. In foreign parts a *remain* is taken only on the appointment of a new storekeeper. See **OFFICE of Ordnance**, or **BOARD of Ordnance**.

To **REMAND**, to send back; as when a soldier who has been brought out of prison, or the guard-house, for the purpose of being examined or tried, is sent back without any thing final occurring relative to his case.

To **REMARK**, to take note of any thing.

**REMARKS**. Army returns, regimental statements, guard reports, &c. have a column allotted for remarks and observations relative to extraordinary occurrences.

**REMBARQUER**, Fr. to re-embark.

**REMBLAI**, Fr. earth collected together for the purpose of making a bank, way, &c.

**REMBLAYER**, Fr. to collect earth together.

**REMBROITER**, Fr. the same as *Lambolter*, to replace, to put together. The latter term is used by the French in artillery.

artillery and cavalry manœuvres. It is the correlative to *Déboiler*; to break off.

**REMETTRE**, *Fr.* to restore, to bring back again. It is frequently used in a military sense, viz. *Remettre un bataillon*, to restore or bring back a battalion to its original formation.

**REMETTREZ vous**. This term agrees with the British phrase—*As you were*. *Se Remettre*, to take a former position, to return to the original ground.

**REMIT**, to lessen; as to remit a part of a soldier's punishment.

**To REMONSTRATE**, to make a representation of a case or cases wherein one or more may consider themselves to be aggrieved. Military men may remonstrate through their superior officers; but where the duty of the service is concerned, that duty must be first performed with cheerfulness and alacrity.

**REMONTE**, *Fr.* See **REMOUET**.

**REMONTER**, *Fr.* to remount.

*Remonter une compagnie de cavalerie*, to remount a troop of horse.

*Remonter une rivière*, *Fr.* to sail up a river.

**REMORA**, *Fr.* This word is sometimes written *Rimora*, and signifies obstacle, hindrance. It comes from the Latin *Remora*, a small fish, which was supposed by the ancients to impede the progress of a ship.

**REMORAL**, *Fr.* an officer belonging to a galley who has charge of the oars.

**To REMOUE**, to change the situation of a person.

A **REMOUNT**, means a supply of good and serviceable horses for the whole or part of a cavalry regiment. The following instructions have been copied from a compilation of general and regimental orders, viz. the size of the horses for the heavy cavalry must run from 15 hands and 1 inch, to 15, 3; and the age be 4 or 5 off, if possible; the taking horses coming four must be avoided as much as can be. No horse must be taken for the king's service, unless he be very close and compact in his make, very broad across the loins, short and straight backed, close coupled, round barrelled, and well carcassed, wide between the rider's thighs,

deep at the girth and shoulders, and full, though not heavy chested, with short-jointed, clean, boney legs, and full furnished, with strong thighs; the shoulders must lay well back; the forehead rise so as to give the horse freedom; and the head must be so set on as to admit of his getting his nose in. To this must be added, action, and good sound full feet, with open heels. No horse must be taken with flat feet, or any lameness, or visible defect. No heavy, fleshy-legged, lumbering horse, must be taken on any account.

**To REMOUNT**. To remount the cavalry or dragons, is to furnish them with horses in the room of those which have been either killed, disabled, or cast.

*Se REMPARER*, *Fr.* to seize suddenly; also to make a prompt and vigorous defence against any sudden attack.

*Se REMPARER d'une place*, *Fr.* to get possession of a place which has been in the hands of the enemy.

**REMPART**, *Fr.* This word is used figuratively by the French. They say —*une ville très forte est le rempart de toute une Province*, a very strong town is a rampart to a whole province. *Une grande fleuve est le rempart réciproque de deux souverainetés*, a large river serves as a mutual rampart to two neighbouring powers. Malta is called by the French, *le rempart de la Chrétienté*, the rampart of Christianity; alluding to its situation with respect to Turkey. We also say, with the French, speaking of a beloved general, *les gardes lui firent un rempart de leurs corps*, the guards made a rampart round him with their bodies. For its military account, see **RAMPART**.

**REMPLISSAGE de muraille**, *Fr.* the inside of a wall which is filled up with rugged stone, or materials.

**REMPORTE**, *Fr.* to carry away; to bear away.

*Remporter le prix de la course*, *Fr.* to get the prize, or be first at a tournament or race. Hence *remporter la victoire*, to carry away the victory.—The French also say, *remporter un avantage sur l'ennemi*, to gain an advantage over the enemy. *Le général fut remporté tout percé de coups, tout criblé de balles*,

*balles*, the general was carried off the field pierced through with blows, and crippled with gun-shot wounds.

**RENCONTRE, Fr.** This word has been adopted amongst us, and signifies either a private quarrel, in which individuals accidentally meet and fight; or an unexpected and irregular combat between two bodies of armed men, who belong to armies that are in hostile opposition to each other. Thus, as in the former instance, it serves to distinguish the casual determination of a feud or difference from the pre-determined and settled plan of a duel; so in the latter it marks the difference between a skirmish, &c. and a regular battle.

**RENDER.** See **SURRENDER.**

**RENDEZVOUS**, the place appointed for troops to assemble at. It likewise means any particular spot that is fixed upon for two duellists to decide their quarrel.

**RENDEZVOUS**, } in a military sense,

**RENDEVOIS**, } the place appointed by the general, where all the troops that compose the army are to meet at the time appointed, in case of an alarm.— This place should be fixed upon, according to the situation of the ground, and the sort of troops quartered in the village. In an open country it is easy to fix upon a place of rendezvous, because the general has whatever ground he thinks necessary. In towns and villages the largest streets, or market-places, are very fit; but let the place be where it will, the troops must assemble with ease, and be ready for the prompt execution of orders.

**RENDU, Fr.** surrendered, given up.

**Soldat RENDU, Fr.** This term is used to express the difference between a soldier who deserts to the enemy; and one who lays down his arms. In the former instance he is called *Déserteur*; in the latter, *soldat rendu*. It is sometimes used as a substantive, viz. *un rendu*, a man who has surrendered.

**RENDRE, Fr.** to surrender a fortified place upon terms of capitulation.

**RENDRE l'épée, les armes, Fr.** to deliver up sword and arms, or to submit to the discretion and humanity of an opponent.

*Se RENDRE sans coup férir, Fr.* to give up or become prisoner of war without striking a blow.

*Se RENDRE à son poste, Fr.* to repair to one's station; to join.

**RENEGADE**, } a deserter; any one  
**RENIGADO**, } who goes over to the enemy.

**To RENEW**, (*renouveler, Fr.*) to repeat, to begin afresh. Hence to renew hostilities.

**RENEWAL**, the act of renewing, as the *renewal* of hostilities.

**RENFORCEMENT, Fr.** any hollow space. In fortification it more immediately signifies the opening or passage which has been made in the glacis of the covert-way, for the purpose of rendering the communication with the traverses more commodious to the troops.

**RENFORCEMENT, Fr.** a hollow place.

**RENFORCER, Fr.** to reinforce; to strengthen; to fortify.

**RENFORT, Fr.** reinforcement.

**RENFORT, Fr.** a certain part of a cannon so called. See **RENFORT.**

**RENOMMÉE, Fr.** renown; fame. Fame, which has been so beautifully described by Virgil, with her hundred mouths, not only publishes to the world at large, all great and good actions, but also (sooner or later) gives an ample detail of all the bad and mischievous deeds by which victories are ultimately disgraced; and of all the crimes and vices by which the heroes of the day are dishonoured. The testimony she bears in both instances is so far indisputable, that she is beyond the reach of flattery or corruption, and consequently discloses every thing she sees or hears. See **RENOUS.**

**RENOUS, or Reputation, (renom, ou réputation, Fr.)** the acquirement of a great name by means of great and good actions. An officer or soldier, (for as no rank and condition are exempt from disgrace, so likewise none are excluded from honour and fair fame,) may secure to himself a good name or reputation, by his zeal and punctuality, and a great or distinguished character by extraordinary feats in war. But it should always be remembered, that, although brilliant actions must give a lustre to the achiever of them, his reputation cannot be perfectly clear, unless his character be marked at the same time by traits of honour, and good conduct.

He

He will only realize what our celebrated didactic poet has so well expressed in verse:—

*A wit's a feather, and a chief's a rod;  
An honest man's the noblest work of God.*

RENVOI, *Fr.* sending back; any thing returned.

*Chevaux de Renvoi, Fr.* returned or cast horses.

REPAIR of Arms, (*Réparations d'armures, Fr.*) the keeping in constant good order the different fire-arms belonging to a troop or company; such as muskets, pistols, &c. A bi-yearly allowance is made to the captains of troops and companies for this purpose. There is also an additional sum of money (not to exceed 23. 9d. per annum per man) which is issued by the Board of Ordnance, under the head of emery, oil, and crocus, &c. An opinion has been hazarded by the author of the *Comprehensive View*, respecting this last allowance: and we are still persuaded, that the public and the different regiments would be benefited by a consolidation of the two issues. See *Comprehensive View*.

REPARATIONS *dans un Regiment, Fr.* repair of arms, necessaries, camp equipage, &c.

REPARATION d'Honneur, *Fr.* a reparation of honour. Under the word *Injure*, in the *Nouveau Dictionnaire Militaire*, by A. T. Gagne, we have found an elaborate article respecting the notice which ought to be taken when injuries have been received, and insults offered. This article concludes with the following observation, which combats the prevailing practice of duelling. "In my opinion, true grandeur of soul is more shewn (*par une réparation publique*) by an avowal of one's wrong, and an open apology to the party aggrieved, than by an appeal to the sword in private combat. This rule of conduct is conformable to all the principles of honour and honesty; whilst a deviation from it is contrary to all human and divine institutions: so much so, that the very persons who lose sight of them, run into dark and retired spots for the purpose of gratifying a spirit of revenge." This language is certainly correct; but how far it will be followed, even by those who feel the justness of it, daily experience must

determine. For our own ideas on the subject, see HONOUR.

RÉPARER une Injure, *Fr.* to apologise to another for an injury done or an insult offered.

RÉPARTIR, *Fr.* to divide; to separate; to detach.

RÉPARTITION des Troupes, *Fr.*—distribution of troops in different quarters.

To REPEAT, (*Répéter, Fr.*) to say or do the same thing over again.

To REPEAT Signals, (*Répéter les Signaux, Fr.*) to do over again any sign or token which is given for the execution or the communication of a thing. Hence the repeating signals in a fleet, &c. See SIGNAL.

To REPEAT Private Conversation.—See PRIVATE.

REPERTORY. See MAGAZINE.

REPLIER, *se replier, Fr.* to fall back; to retreat. In military movements, to take a rear direction towards any particular part of the line, viz. *Se replier sur la droite*, to fall back upon the right.

REPLY (*replique, Fr.*) answer; return to an answer. After the prisoner's defence before a court martial, the prosecutor or informant may *reply*, but without noticing any matter foreign to the crime or crimes expressed in the charge.

REPORT, sound; loud noise, as that made by the discharge of a musquet or cannon.

REPORT, specific statement of persons and things. Although this word may, in some sense, be considered the same as *Return*, yet it so far differs in military matters, that it is less comprehensive, and relates more immediately to persons and occurrences than to things.

General officers report to the commander in chief only.

The commander in chief's guard reports to himself by one of his aid-de-camps.

Reports of cavalry are given in to the senior generals of cavalry; and reports of infantry, to the senior general officers of infantry. On a march the field officer of the picket reports to the general of the day who leads the column; and in camp to the next superior officer to himself. A provost marshal gives

in his return of prisoners, and reports to the general of the day.

Deputy judge advocates, acting in districts or garrisons, &c. send in the minutes of courts-martial, and report to the judge advocate general, without going through any general officers. Regimental surgeons report to their commanding officers, and surgeons in districts, &c. to the medical board.

The life guards report, through the Gold Stick, to the King direct, from whom they receive the parole.

The foot guards report, through the field officer of the day, to the King direct.

All other troops belonging to the British service (the marines excepted, who report to the admiralty) report through their several commanding officers, &c. to the adjutant general and secretary at war, and to the commander in chief.

**Special Report.** A special report is said to be made when the name of an officer is transmitted by his commander to the general of a district, independent of the regular returns; and some specific instance of good or bad conduct is laid before him. It must be generally remembered, that every officer on his arrival from abroad with a regiment or detachment of troops, must report himself to the governor or commanding officer of the sea-port at which he arrives; and every officer who takes his passage for foreign service, must do the same previous to his departure.

The senior officer in each recruiting quarter reports weekly to the field officer of the district, the number and strength of the parties therein. The field officers commanding recruiting parties in districts, report to the inspector general, to whom all returns and reports are to be transmitted by them, and not direct from the recruiting officers. *General Regulations and Orders*, pages 104 and 105.

Reports are made daily, weekly, or monthly according to circumstances.

The various subordinate reports consist of

Report of a rear guard.

Report of a barrack guard.

Report of a quarter guard.

Report of the sick, commonly called sick-report.

Report of a main guard, and its dependencies, &c. &c.

In the column of remarks which must accompany each of these reports, it is necessary, for the person who signs, to specify all casualties and extraordinary occurrences according to the particular nature of each report. The different hours at which the grand rounds, visiting rounds, and patrols went, must likewise be put down.

**REPOS, Fr.** rest; ease. It is used by the French as a word of command, viz.

**REPOS, Fr.** a word of command which agrees with *Stand at Ease*.

**Quartiers de REPOS, Fr.** Those places are so called where troops remain for some days to refresh themselves.

**Soldat REPOSÉ sur l'arme, Fr.** a soldier standing at ease with ordered arms.

**In REPOSE, (en Repos, Fr.)** This term, which is manifestly taken from the French, applies to troops that are allowed to be stationary for any given period during an active campaign, either through sickness, or from some other cause. Thus the 5th regiment being in repose, it was judged expedient to order the 28th to advance by forced marches.

**REPOSER, laisser Reposer, Fr.** to permit the garrison of a place, which has been closely and vigorously besieged, to relax from the severity of their former discipline. The same is said of troops, who, after having executed all the plans, orders, and measures laid down for the conquest of any town, &c. are allowed to be in repose.

**REPOSEZ vous sur vos armes, Fr.**—order arms.

**REPOSITORY,** a place or repository, in which any thing is preserved. Thus the Royal Repository, at Woolwich, contains models of every sort of warlike stores, weapons, and fortification; whether invented by officers of the army or civilians, as well of other nations as of Great Britain and Ireland; receipts being given to preserve the title to the inventor. The Royal Repository is indebted to the ingenuity of the late General Congreve, for some of its most useful and important instruments of escalade, fortification and gunnery.

REPOUS, *Fr.* a sort of mortar, which is made of brick-dust, lime, &c.

REPOUSSER, *Fr.* to drive back; to repel.

REPOUSSOIRS, *Fr.* drivers, chisels.

REPOUSSOIR, *Fr.* a small stick which artificers and fireworkers use in making fire pots and other works.

REPRENDRE, *Fr.* to retake.

REPRENDRE courage, *haleine pour marcher de nouveau à l'ennemi*, *Fr.* to resume courage, or take breath in order to march afresh against the enemy.

REPRÉVALLER, *Fr.* in a military sense, to retaliate, or to subject the prisoners, who may fall into our hands, to the same treatment which is experienced by our own troops. When an enemy violates or breaks through the rights of nations, and the established rules of war, the vengeance which is taken by his opponent, is called by the *French* *repréaille*, or retaliation. Great Britain is, perhaps, the only country in the world, the minds of whose inhabitants are impressed with those natural principles of humanity, which make them rise superior to the dictates of private revenge. During the campaigns in Flanders, when His Royal Highness the Duke of York commanded the British army, there were several instances in which the clemency of the English character was eminently conspicuous. But on no occasion has it ever appeared in so bright and unquestionable a light, as when Robespierre, from a barbarous and mistaken policy, prevailed upon the members of the French Convention to issue a decree, that no quarter should be given to the British and Hanoverian prisoners. This decree, which was forwarded to the army under General Pichegru, was no sooner known at the British head quarters, than His Royal Highness the Commander in Chief immediately gave out the following general order, which must ever do him honour as a gentleman, a soldier, and a christian.

"H. Q. Tournay, 7 June, 1794.

"His Royal Highness the Duke of York thinks it incumbent on him to announce to the British and Hanoverian troops under his command, that the National Convention of France, pursuing that gradation of crimes and

horrors which has distinguished the periods of its government, as the most calamitous of any that has yet occurred in the history of the world, has passed a decree, that their soldiers shall give no quarter to the British and Hanoverian troops.

"His Royal Highness anticipates the indignation and horror which will naturally arise in the minds of the brave troops whom he addresses, upon receiving this information.

"His Royal Highness desires, however, to remind them, that mercy to the vanquished is the brightest gem in a soldier's character, and he exhorts them not to suffer their resentment to lead them to any precipitate act of cruelty on their part, which may sully the reputation they have acquired in the world.

"His Royal Highness believes, that it will be difficult for brave men to conceive, that any set of men, who are themselves exempt from sharing the dangers of war, should be so base and cowardly, as to seek to aggravate the calamities of it upon the unfortunate people who are subject to their orders; it was, indeed, reserved to the present time, to produce to the world the proof of the possibility of the existence of such atrocity and infamy; the pretence for issuing this decree, even if founded in truth, could justify it only to minds similar to those of the members of the National Convention, that is, in fact, too absurd to be noticed, and still less to be refuted: the French must themselves see through the flimsy artifice of a pretended assassination, by which Robespierre has succeeded in procuring that military guard which has at once established him the successor of the unfortunate Louis, by whatever name he may choose to dignify his future reign.

"In all the wars, which from the earliest times have existed between the English and French nations, they have been accustomed to consider each other in the light of generous, as well as brave enemies; while the Hanoverians, for a century the allies of the former, have shared in this reciprocal esteem, humanity and kindness, which have at all times taken place the instant that opposition had ceased; and the same cloak has frequently been seen covering the

the wounded enemies, while indiscriminately conveying to the hospitals of the conqueror.

"The British and Hanoverian armies will not believe that the French nation, even under their present infatuation, can so far forget their character as soldiers, as to pay any attention to a decree, as injurious to themselves as disgraceful to the persons who passed it.

"On this confidence his Royal Highness trusts, that the soldiers of both nations will confine their sentiments of resentment and abhorrence to the National Convention alone, persuaded that they will be joined in them by every Frenchman who possesses one spark of honour, or one principle of a soldier: and his Royal Highness is confident, that it will only be on finding, contrary to every expectation, that the French army has relinquished every title to the fair character of soldiers and of men, by submitting to, and obeying, so atrocious an order, that the brave troops under his command will think themselves justified, and indeed under the necessity, of themselves adopting a species of warfare, for which they will stand acquitted to their own consciences, to their country, and to the world. In such an event the French army alone will be answerable for the tenfold vengeance which will fall upon themselves, their wives, their children, and their unfortunate country, already groaning under every calamity which the accumulated crimes of unprincipled ambition and avarice can heap upon their devoted victims.

"His Royal Highness desires, that this order may be read and explained at their successive roll callings."

**REPRÉSAILLES**, *Fr.* reprisals.

*Droit de REPRÉSAILLES*, *Fr.* letters of mark, such as are given to privateers, &c.

**REPRIMAND**, (*réprimande*, *Fr.*) a slighter kind of punishment sometimes inflicted on officers and non-commissioned officers. It consists in reproving or reprimanding them at the head of their respective regiments, troop, or company, as the cases may be. A reprimand is sometimes inserted in the orderly books.

**REPRISE**, *Fr.* renewal; often repeated. *Les troupes le sont battues, à plusieurs reprises, avec acharnement,*

the troops engaged again at repeated intervals, with rancour or redoubled fury.

**REPRISES d'armes**, *Fr.* the taking up arms again for the purpose of going into action.

**REPRISES d'hostilités**, *Fr.* renewal of hostilities.

**REPUBLIC**, (*république*, *Fr.*) a government where democracy has the ascendancy.

**REPÛTATION**, (*réputation*, *Fr.*) See **REXOWN**.

**REQUISITION**, (*réquisition*, *Fr.*) a term peculiarly used by the French during the course of their revolution, and applicable to most nations in its general import. It signifies the act of exacting either men or things for the public service. Hence—*Denrées, marchandises mises en réquisition*; necessities of life, goods, &c. put in a state of requisition, or subject to be disposed of for the common good at a fixed price.

*Jeunes gens de la RÉQUISITION*, *Fr.* Young men required or called upon to serve in the army.

**RÉQUISITIONNAIRE**, *Fr.* a person liable to be put in a state of requisition.

**RESERVE**, (*corps de réserve*, *Fr.*) any select body of troops posted by a general out of the first line of action, to answer some specific or critical purpose, in the day of battle. The French likewise call that body a *corps de réserve*, which is composed of the staff of the army, and moves with the commander in chief, from whom it receives the parole or word; but in every other respect it is governed by its own general.

**RESIGNATION**, (*résignation, démission*, *Fr.*) in a military sense the act of giving up any thing, post, or situation, voluntarily. The French say, *donner sa démission*, to resign, or give in one's resignation. *Recevoir sa démission*, to be dismissed, or to be forced to resign. Although it is in the power of any officer to send or give in his resignation, (which must always be done through his commanding officer), he is not released from the service, or its incumbent duties, until his Majesty's approbation has been notified to him through the commander in chief. This holds good with the militia. See *Index Regimental Companion*.

RÉSINE, *Fr.* rosin.

To RESIST, (*résister*, *Fr.*) to withstand; not to yield or give up. Hence, to resist an illegal command, is to refuse to put an order into execution which is contrary to the known and established laws of the land. The articles of war expressly say—You shall obey all lawful commands. It follows, of course, that a person ought to resist all illegal ones.

RESISTANCE, (*résistance*, *Fr.*) the act of opposing, resisting, or withstanding.

RESOLUTION, in algebra, the solution of a problem.

RESOLUTION, (*résolution*, *Fr.*) an indispensable quality of the mind, which every general of an army should possess to its full extent. It is the advice of all wise men, leisurely to digest plans, and to deliberate calmly upon them; but when once it becomes necessary to put them into execution, the person entrusted with command, should be prompt and vigorous.

RESPECT, *Fr.* respect; regard; awe. The French say of a fortified place, *cette place de guerre tient l'ennemi en respect*, that town or fortified place keeps the enemy in awe, or checks his operations.

RESOOM, *Ind.* fees or dues.

A RESPITE, a term used in military accounts, signifying a certain sum of money which is directed to be withheld from the issue of pay, in order to make up the several stoppages in regimental distributions. For a more specific explanation, see *Regimental Companion*, vol. I. page 467.

To RESPITE, to suspend, to delay; from the French *Respiter*.

To be RESPITED on the muster roll, to be suspended from pay, &c. during which period all advantages of promotion, pay, &c. are stopped. It is originally derived from respite, which signifies delay, forbearance, &c. Thus in Clarendon's history of the civil wars we read, that an act passed for the satisfaction of the officers of the king's army, by which they were promised payment in November following; till which time they were to *respite* it, and be contented, that the common soldiers and inferior officers should be satisfied upon their being disbanded. At present to *respite*

means to deprive an individual of all the advantages attached to his situation; in which sense it signifies much the same as to suspend.

When an officer has exceeded his leave of absence, and has not sent a satisfactory account of himself to his commanding officer, the latter reports him, in an especial manner, to the general of the district, by whom he is returned absent without leave. It sometimes happens, that the colonel or commanding officer gives directions to have him noted on the muster-roll of the regiment; in which case he is said to be respited or deprived of pay. This is the first step towards suspension from rank and pay, which ultimately terminates in a total exclusion from the service, by the offending party being peremptorily superseded. The name of the person is laid before his Majesty, who directs the commander in chief to strike it off the list of the army.

The money which is respited upon the muster-roll is accounted for by the muster-master-general, and placed to the credit of the public by the paymaster-general.

RESPONSIBILITY, (*responsabilité*, *Fr.*) the state of being answerable. All public officers, civil or military, are in a state of responsibility with respect to national concerns.

RESPONSIBLE, answerable; accountable; liable to be called upon.—Colonels of regiments are responsible for the clothing, &c. of their men; and captains for the interior economy of their companies.

RESPONSION, *Fr.* a term used by the French, in military orders, signifying the same as *charge* or *redevance*, charge or service. Thus each commandery pays a certain sum called *Somme de Responsion*, to its order in proportion to its value.

RESSERRER, to hem in; to confine. *Une garnison fort resserrée*, a garrison narrowly watched by a besieging army, and kept within its walls.

RESSORT, *Fr.* spring; elasticity. This word is used in various senses by the French, viz.

*Dernier Ressort*, *Fr.* the last shift.

*N'agir que par Ressort*, *Fr.* to do nothing of one's own free will; to be influenced, to be acted upon by others.

*Manquer*

## R E T

*Munquer de RESSORT, Fr.* to want energy, vigour, &c.

*Un caractère qui a du RESSORT, Fr.* a firm determined character.

**RESSOURCE, Fr.** resource, shift, refuge.

*Un homme de RESSOURCES, Fr.* a man that has resources within himself.

*Un homme plein de RESSOURCES, Fr.* a man full of resources, full of expedients.

**REST**, the third motion of the firelock in presenting arms. The French present in two motions. Perhaps our method is the best, if we consider it as a mere motion of parade.

*To REST arms*, to bring the firelock to the same position as in present arms.

*To REST upon reversed arms.* At military funerals the arms are reversed. The soldiers belonging to the firing party rest upon the butt ends of their firelocks, while the funeral service is performed, leaning with their cheeks, so as to look towards the corpse.

*REST upon your firelocks reversed!* is the word of command now ordered to be used at military funerals.

**RESTANT, Fr.** the remainder; what is left.

**RESTE, Fr.** remainder, viz. *le reste des troupes*, the remainder of the troops.

*Être en RESTE, Fr.* to be in arrears.

**RESTER, Fr.** to remain behind.

**RETABLIR, Fr.** to restore or to bring back. Hence, *rétablir la discipline*, to restore to good order or discipline. It is wisely observed by a French writer, that the maintenance of good order, among troops, is far more easy than the restoration of it from a state of relaxation and indiscipline.

**RETAPER, Fr.** to cock up a hat.

**RENTÉR, Fr.** to resound; to re-echo; to repeat.

**RETENTISSEMENT, Fr.** the act of resounding, &c.

**REVENUE, Fr.** stoppage; any thing kept back.

**RETTAIRE, Fr.** See **RETIARIUS**.

**RETIARIUS**, a kind of gladiator who fought in the amphitheatre during the time of the Romans. He is thus described by Kennett, in his *Roman Antiquities*, page 274.

The Retiarius was dressed in a short coat, having a fuscina or trident in his

## R E T

left hand, and a net, from which he derives his name, in his right. With this he endeavoured to entangle his adversary, that he might then with his trident easily dispatch him: on his head he wore only a hat tied under his chin with a broad ribbon.

**RETIRADE, or coupure, Fr.** In fortification, a retrenchment, which is generally made with two faces, forming a reentrant angle, and is thrown up in the body of a work for the purpose of receiving troops, who may dispute the ground inch by inch. When the first means of resistance have been destroyed, others are substituted by cutting a ditch, and lining it with a parapet. The *retirade* sometimes consists of nothing more than rows of fascines filled with earth, stuffed gabions, barrels, or sand-bags, with or without a ditch, and either fenced with palisadoes, or left without them.

Whenever it becomes absolutely necessary to quit the head or side of a work, the whole of it must, on no account, be abandoned. On the contrary, whilst some determined troops keep the enemy in check, others must be actively employed in throwing up *retirades*, which may flank each other, and in cutting a ditch in front. It is particularly incumbent upon the engineer officer to assist in works of this sort, and every officer and soldier should zealously co-operate with him. A slight knowledge of field fortification will, on these occasions, give a decided advantage. The body of a *retirade* should be raised as high as possible, and several fougasses should be laid beneath it, for the purpose of blowing up the ground on which the enemy may have established himself.

*RETIRADES, as practised by the ancients.* These were walls hastily run up behind breaches that were made by the battering rams. The able commentator upon Polybius observes, that in no instance did the skill of the great men of antiquity appear in so conspicuous a light, as in the various chicanes to which they resorted for the preservation of a town. Their ingenuity and resolution increased in proportion as the danger approached. Instead of offering to capitulate, as the moderns generally do, when a practicable breach has been opened

opened by a besieging enemy, the ancients, in that emergency, collected all their vigour, had recourse to various stratagems, and waited behind their retirades or temporary retreats to give the enemy a warm and obstinate reception. Caesar, in his Commentaries, has given a minute description of the manner in which these retirades were constructed; and we find them mentioned by Josephus in his history of the war of the Jews against the Romans.

The intermediate periods, since the days of the Greeks and Romans, and before the modern era, furnished various examples on this head. In 1219, Genghis Khan set all his battering rams to work, for the purpose of effecting a breach in the walls of Ottrar; but, to his great surprize, he no sooner entered the town, than he found a fresh line of entrenchments that had been thrown up in the very heart of the city. He saw every street cut asunder with temporary ditches, and every house presented fresh obstacles: so much so, that he experienced more difficulty in subduing the inhabitants after he had forced the walls, than had occurred in practising the breach.

When the Emperor Charles V. laid siege to Mentz, in 1552, the Duke de Guise, who was governor of the town, instantly adopted the necessary precautions to defend it to the last. He built a new wall behind the one against which the principal attack was directed; and when the breach was made, the besiegers found themselves obstinately opposed afresh, within a short space of the ground they had carried. In consequence of this unexpected check, the enemy's troops grew disheartened; and their want of confidence soon convinced the emperor, that the place could not be taken. The siege was unexpectedly raised, and the preservation of the town was entirely owing to the wise precautions that had been adopted by the Duke de Guise.

In 1742, Marshal Broglie, being closely besieged in the city of Prague, threw up retrenchments within the walls, and prepared to make a most vigorous resistance. An occasion, however presented itself, of which he took advantage, that rendered any further precautions useless. He made a vigorous

sortie, and forced the enemy to raise the siege.

**RETIRED List**, a list on the marine establishment, upon which supernumerated officers are placed.

*Officers who RETIRE in the East India service.* The India Company have resolved, that an officer, (in his military capacity) after twenty years actual service in India, coming to Europe on leave, will be allowed to retire on the pay of his rank, provided he signifies his intention of so doing within twenty months after his arrival. Officers on leave who are desirous of returning, and who declare their intention to that effect, within twelve months from their arrival, will be permitted to retire on the pay of the rank they may be entitled to at that period. An officer having completed 22 years actual residence in India, will be allowed to retire on the full pay of his rank, directly on his leaving India.

**RETIRED, Fr.** to retire. Hence *retirer, du service*, to retire from the service.

**RETIRED sous une place, Fr.** to take up a position under some fortified place, for the purpose of being entrenched.

**RETOURS de la mine, Fr.** returns of a mine. See **GALLERY**.

**RETOURS de la tranchée, Fr.** returns of a trench. In fortification, the several windings and oblique deviations of a trench, which are drawn, in some measure, parallel to the sides of the place attacked, in order to avoid being enfiladed, or having the shot of the enemy scour along the length of the line. On account of these different returns, a considerable interval is opened between the head and the tail of the trench, which, (were the lines direct,) would not be at any great distance from each other.

**RETRAITE, Fr.** See **TO RETREAT**.

**RETRAITE dans les montagnes, Fr.** the act of falling back or retreating among the mountains.

**Faire RETRAITE, Fr.** to retire; to fall back.

**Battre la RETRAITE, Fr.** to beat the tap-too.

**Se battre en RETRAITE, Fr.** to maintain a running fight.

**RETRAITE, Fr.** certain appointments which were given during the French monarchy

narchy to infantry officers, when they retired from the active duties of their profession, to afford them means of support. The pensions which were settled upon cavalry officers were likewise distinguished by the same term.

RETRAITÉ, *Fr.* See RELAIS.

RETRANCHÉ, *Fr.* entrenched.

RETRANCHEMENS, *Fr.* See RETRENCHMENTS.

RETRANCHEMENS particuliers qu'on fait sur la tête des brèches d'une place assiégée, *Fr.* particular retrenchments, which are made in front of breaches that have been effected in the walls of a besieged town.

It is always necessary, that retrenchments of this description should have the figures of reentrant angles, in order, that they may not only flank the breaches, but be capable of defending themselves.

A besieging enemy, seldom or ever, attempts a breach at the flanked angle of a bastion, because it must be seen by the two flanks of the neighbouring bastions, and be perpetually exposed to the fire of the casemates of the town. Nevertheless, should the breach be actually effected, retrenchments might be thrown up, in the same manner that horn-works are constructed, for the purpose of flanking it.

If the breach should be made in the face of the bastion, (which usually happens, because that quarter can be seen by the garrison from one side only) retrenchments in the shape of reentrant angles must be constructed.

Breaches are seldom attempted at the angle of the epaulement, because that part of the bastion is the most solid and compact, and the most exposed to the fire from the curtain to that of the opposite flank, and to the reverse discharge, or fire from the rear. Add to this, that the storming party would be galled in flank and rear, not only from the simple bastion, but likewise from the casemates. If, however, a breach should be effected in that quarter, it would become necessary to throw up retrenchments of a salient and reentrant nature.

In constructing these different retrenchments it must be an invariable rule, to get as near as possible to the parapets of the bastions and to their ruins, in order to batter those in flank

and rear, who should attempt to scale, and at the same time to be out of the reach of the besieger's ordnance.

When the head of the breach is so much laid open, that the besieger's cannon can scour all above it, small mines must be prepared beneath, and a retrenchment be instantly thrown up in the body of the bastion.

RETRANCHER, *Fr.* to entrench.

RETRANCHER un camp, *Fr.* to throw up works before and round a camp, in order to strengthen it, and to keep the enemy in check.

To RETREAT, to make a retrograde movement. An army or body of men are said to retreat when they turn their backs upon the enemy or are retiring from the ground they occupied: hence, every march in withdrawing from the enemy is called a retreat.

That retreat which is done in sight of an active enemy, who pursues with a superior force, is the one we particularly allude to in this place; being, with reason, looked upon as the glory of the profession. It is a manœuvre the most delicate, and best fitted to display the prudence, genius, courage, and address, of an officer who commands. The records of all ages testify it, and historians have never been so lavish of eulogiums as on the subject of the brilliant retreats of their heroes. If it be important, it is no less difficult to regulate, on account of the variety of circumstances, each of which demands different principles, and almost endless detail. Hence a good retreat is esteemed, by experienced officers, the master-piece of a general. He should therefore be well acquainted with the situation of the country through which he intends to make it, and careful that nothing is omitted to make it safe and honourable. General Moreau's retreat in 1796, has rendered his name immortal. The three most celebrated retreats of modern times have been—the one already mentioned, that of Prague, and that of General Macdonald in Italy.

RETRÉAT, is also a beat of the drum, at the firing of the evening gun; at which the drum-major, with all the drums of the battalion, except such as are upon duty, beats from the camp colours on the right to those on the left, on the parade of encampment. the drums of

## R E T

of all the guards beat also, the trumpets at the same time sounding at the head of their respective troops. This is to warn the soldiers to forbear firing, and the sentinels to challenge till the break of day, when the reveillé is beat. The retreat is likewise called setting the watch.

*Chequered RETREAT*, (*retraite en échiquier*, Fr.) it is so called from the several component parts of a line or battalion, which alternately retreat and face in the presence of an enemy, exhibiting the figure of the chequered squares upon a chess board.

In part the fourth, page 353, of the General Rules and Regulations, it is judiciously observed, that all manœuvres of a corps retiring, are infinitely more difficult to be performed with order, than those in advancing. They must be more or less accomplished by chequered movements; one body by its numbers or position, facing and protecting the retreat of another; and if the enemy presses hard, the whole must probably front in time and await him: as the ground narrows or favours, different parts of the corps must double; mouths of defiles and advantageous posts must be possessed; by degrees the different bodies must diminish their fronts, and throw themselves into column of march when it can be done with safety.

The *chequered retreat* by the alternate battalions or half battalions of a line going to the rear, while the others remain halted, cover them, and in their turn retire in the same manner, is the quickest mode of refusing a part of a corps to the enemy, and at the same time protecting its movement, as long as it continues to be made nearly parallel to the first position.

In the *chequered retreat*, the following rules must be observed: The battalions of the division nearest to the enemy, will form flanks as soon as there is nothing in their front to cover them; but the other divisions will not have any flanks except to the outward battalion of each. The battalions always pass by their proper intervals, and it is a rule in retiring, that the left of each shall always pass the right of the neighbouring one. Whatever advantages the ground offers, those advantages must be seized without too critical an ob-

## R E T

servance of intervals, or minute adherence to the determined distance of each retreat. The division next the enemy must pass in front, through the intervals of the division immediately behind, and any battalion, that finds it necessary, must incline for that purpose. The retiring division must step out, and take up no more time than what is absolutely required to avoid confusion. The division nearest the enemy *fires* by platoons standing; the flanks of its battalions only fire when the enemy attempts to push through the intervals. When that division retires, it fires on, skirmishes by men detached from its light company, if present, or from platoons formed of rear rank men of one or two of the companies, and placed behind the flanks of the battalions. But should any of its battalions be obliged to halt and to fire, a shorter step must then be taken by the line; and should the enemy threaten to enter at any of its intervals, besides the fire of its flanks, such platoons of the line behind it, as can with safety, must give it support.—See from page 353 to page 357, *Rules and Regulations*.

**RETRENCHMENT**, in the art of war, is any work raised to cover a post, and fortify it against an enemy; such as fascines loaded with earth, gabions, barrels, &c. filled with earth, sand-bags, and generally all things that can cover the men, and stop the enemy; but it is more applicable to a ditch bordered with a parapet; and a post thus fortified, is called a *retrenched post*, or *strong post*. *Retrenchments* are either general or particular.

*General RETRENCHMENTS*, are a kind of new defence made in a place besieged, to cover the defendants, when the enemy becomes master of a lodgement on the fortification, that they may be in a condition of disputing the ground inch by inch, and of putting a stop to the enemy's progress, in expectation of relief. Thus if the besiegers attack a tennille of the place—which they judge the weakest, either by its being ill flanked, or commanded by some neighbouring ground—then the besieged make a great *retrenchment*, inclosing all that part which they judge in most danger. These should be fortified

tified with bastions and demi-bastions, surrounded by a good ditch countermined, and higher than the works of the place, that they may command the old works, and put the besiegers to infinite trouble in covering themselves.

*Particular RETRENCHMENTS, or Retrenchments within a bastion, (Retrenchemens dans un bastion, Fr.)* Retrenchments of this description must reach from one flank to another, or from one casemate to another. It is only in full bastions that retrenchments can be thrown up to advantage. In empty bastions you can only have recourse to retrades, or temporary barricades above the ramparts. The assailants may easily carry them by means of hand grenades, for these retrenchments never flank each other. It is necessary to raise a parapet about five or six feet thick before every retrenchment. It must be five feet high, and the ditches as broad and as deep as they can be made. There must also be small mines run out in various directions, for the purpose of blowing up the assailants, should they attempt to force the retrenchments.

**RETURNS**, in a military sense, are of various sorts, but all tending to explain the state of the army, regiment, troop, or company; namely, how many capable of doing duty, on duty, sick in quarters, barracks, infirmary, or hospital; prisoners, absent with or without leave; total effective; wanting to complete to the establishment, &c.

In Section V. of the Articles of War, page 14, it is expressed, that every officer who shall knowingly make a false return to the king, to the commander in chief of the forces, or to any superior officer authorised to call for such returns, shall, upon being convicted thereof before a general court-martial, be cashiered.

Whoever shall be convicted of having designedly, or through neglect, omitted sending such returns, shall be punished according to the nature of the offence by the judgment of a general-court-martial.

Returns are to be made in the same manner of the forces in Ireland to the chief governor or governors thereof; likewise of the forces in North Britain

to the officer there commanding in chief; which returns are from time to time to be transmitted to England as it shall appear best for the service.

Exact returns from Gibraltar, &c. and regiments stationed abroad, are by their respective governor or commanders there residing, by all convenient opportunities to be transmitted to the secretary at war, in order that the same may be laid before the king.

The life and foot guards do not make any returns to the commander in chief, or secretary at war, but to the king direct through their several field officers. This privilege is attached to them upon the principle of being household troops. Upon the same principle they have always, when brigaded, a general of their own attached to each brigade; on which account likewise, no other military honours than those done to their own brigade general are to be paid by them, except to a branch of the royal family, or to a commander in chief.

*RETURNS of a mine*, are the turnings and windings of the gallery leading to the mine. See **GALLERY**.

*RETURNS of a trench*, the various turnings and windings which form the lines of the trench, and are, as near as they can be, made parallel to the place attacked, to avoid being enfiladed.—These *returns*, when followed, make a long way from the end of the trench to the head, which going the straight way is very short: but then the men are exposed; yet, upon a sally, the courageous never consider the danger, but getting over the trench with such as will follow them, take the shortest way to repulse the enemy, and cut off their retreat, if possible.

**TO RETURN**, in a military sense, to insert the names of such officers, &c. as are present or absent on the stated periods for the identification of their being with their regiments, on detachment, or absent with or without leave.

*To be RETURNED*, to have one's name inserted in the regular monthly, fourteen days, or weekly state of a regiment, according to circumstances; as *to be returned absent without leave*; to be reported to the commander in chief, or to any superior officer, as being absent from the duty of the corps; either from

## R E T

having exceeded the leave given, or from having left quarters without the necessary permission. To be returned upon the surgeon's list as unfit for duty, &c. from illness, &c.

Every officer commanding a regiment or detachment, will, on his arrival from abroad, transmit to the adjutant-general's office, and to the war-office, a disembarkation return, a duplicate of which he will also deliver to the general, or other officer commanding at the port at which he disembarks.

Commanding officers of regiments in South Britain, are regularly to transmit to the adjutant-general's office the following returns:—

A monthly, on the 1st of each month.

A return of officers, on the 14th of each month.

A weekly state, to arrive on Mondays.

To the war office.

A monthly return, on the 1st of each month.

A return of absent officers, on the 14th of each month.

Every officer commanding a regiment, or detachment, on embarking for a foreign station, will transmit an embarkation return to the adjutant-general's office, and to the war office, a duplicate of which he will deliver to the general or officer commanding at the port from which he embarks.

On a regiment embarking, the commanding officer is to transmit to the adjutant-general's office, a return of the recruiting parties he purposes to leave in Great Britain, or Ireland, specifying their strength, their stations, and the officers by whom they are commanded; a duplicate of this return is to be transmitted to the inspector-general of the recruiting service in the Isle of Wight.

All officers belonging to regiments on foreign stations, not actually employed on the recruiting service, are to report their arrival from abroad, and the cause of their absence, at the adjutant-general's office, and are to leave their addresses with their respective agents, and in case of their changing their places of residence, are immediately to notice the same to their agent: any officer whose address is not with his agent, will be

## R E T

considered as absent without leave, and guilty of disobedience of orders.

Officers upon half pay are, in like manner, to leave their addresses at the war-office; particularly so if they should leave the united kingdoms; and officers belonging to the militia are to leave their names, &c. with the several adjutants of regiments.

Commanding officers of regiments are to transmit to the quarter-master-general an half yearly return of quarters, on the 1st of December, and the 1st of May, agreeable to the printed form; likewise a report of any march performed by the corps under their orders.

All returns, reports, and papers, purely of a military and public nature, which are to be sent to the adjutant-general, are to be addressed "To the Adjutant-General of the Forces, Horseguards, London," without adjoining his name.

All official letters from general or other officers in command, which are designed to be laid before his royal highness the commander in chief, are to be signed by the general or commanding officers themselves.

All official letters, intended for the deputy-adjutant-general, or other officers belonging to the department, are to be transmitted, under covers, addressed as above, to the adjutant-general.

To prevent an improper expence of postage, all official letters and returns sent to the quarter-master-general, or officers in his department, are to be sent, under covers, addressed "To the right honourable the Secretary at War, London;" and on the outside of the covers is to be written, in legible characters, "Quarter-master General's Department."

*RETURNED next for purchase.* When vacancies occur in regiments upon foreign or domestic stations, the names of such officers as intend to purchase must be inserted in the muster rolls: they are then said to be *returned next for purchase*. This serves as a government to the several agents, and prevents the introduction of persons into a corps with which they have not done duty, to the disparagement of those who have always followed the colours. The present commander in chief is particularly scrupulous on this head. Every officer that is returned

returned next for purchase, must take care to apprise his agent that the money will be lodged for that purpose.

**RETURN bayonet.** This term is sometimes used, but it is not technically correct, as the proper word of command is *unfix bayonet*.

**RETURN pistol.** See **PISTOL**.

**RETURN ramrod.** See **MANUAL**.

**RETURN swords.** See **SWORD**.

**RÉVEIL, ou Diane, Fr.** See *Reveille*.

**RÉVEIL-matin, double canon, brise-mur, Fr.** an ancient piece of ordnance which is no longer in use; it carried a ninety-six pound shot.

**REVEILLE**, is the beat of a drum, about break of day, to advertise the army that it is day-light, and that the sentinels forbear challenging.

**REVERIES** (*rêveries, Fr.*) loose musings; irregular thoughts; desultory reflexions. The celebrated Marshal Saxe has given this title to a collection of military ideas, which, in many instances, have proved the most correct principles in war.

The three following reflexions, but most especially the first and third, are maxims which have been corroborated by the experience of ages. With regard to his buckler we can only say, that although the Marshal is supported by so great a name as that of Montecuculli, his reveries have hitherto been neglected.

"New raised regiments I am altogether averse to; for unless they are grafted upon old ones, and commanded by good officers, eight or ten campaigns generally destroy them."

[The Marshal might have said less than half that number would do it.]

M. Saxe, speaking of his legions, says, "the men are likewise to be furnished with bucklers of leather prepared in vinegar, which will be attended with considerable advantage; for they are not only of use to cover the arms, but whenever the troops are to engage standing, they may form a kind of parapet with them in an instant, by passing them from hand to hand along the front; two of them, the one upon the other, being musket-proof. My opinion, in regard to this piece of armour, is supported by that of Montecuculli, who says, 'that it is absolutely necessary for the infantry.'"

"The Romans conquered the world by the force of their discipline, and in proportion as that declined, their power decreased."

**REVERS, Fr.** behind, in rear, at the back of any thing.

*Être vu de REVERS, Fr.* to be overlooked by a reverse commanding ground. When a work, for instance, is commanded by some adjacent eminence, or has been so badly disposed, that the enemy can see its terre-pleine, or rampart, that work may be said to be overlooked, *être vu de revers*. The same term is applicable to a trench, when the fire of the besieged can reach the troops that are stationed within it.

**REVERS de la tranchée, Fr.** literally means the back part of the trench. It is the ground which corresponds with that proportion of the border of the trench that lies directly opposite to the parapet. One or two banquettes are generally thrown up in this quarter, in order that the trench guard may make a stand, upon the reverse when it happens to be attacked by a sortie of the enemy.

**REVERS de l'Orillon, Fr.** that part of the orillon in a bastion which looks inwards, or towards the main body of a fortified place. Sally-ports are generally constructed in this quarter.

**REVERS, Fr.** this word also signifies a back stroke. Hence, *abattre la tête d'un revers*, to give a blow on the head with a back stroke.

**REVERS de fortune, Fr.** reverse of fortune; disappointments, &c.

**Prendre des REVERS, Fr.** to take up a position so as to be able to fire obliquely into the rear of an enemy.

**REVERSE**, a contrary; an opposite; as the reverse or outward wheeling flank; which is opposite to the one wheeled to or upon.—See **Pivot**.

**REVERSE** likewise signifies *on the back, or behind*: so we say, a reverse commanding ground, a reverse battery, &c.

**REVERSED**, upside down; as arms reversed.

**REVERSED arms.** Arms are said to be reversed when the butts of the pieces are slung or held upwards.

**REVETEMENTS passagers, Fr.** temporary revetements. These works seldom last more than three years.

**REVETEMENT**, (*revêtement*, Fr.) in fortification, a strong wall, built on the outside of the rampart and parapet, to support the earth, and prevent its rolling into the ditch.

**REVETEMENT du rampart**, Fr. revetement belonging to the rampart.

**Demi-REVETEMENT**, Fr. a revetement which is made from the outward slope of the fosse to the cordon or terrepleine of the rampart.

**REVETEMENT de saucissons**, Fr. a revetement which is hastily thrown up during a siege by means of saucissons, especially when breaches have been effected or practised in the outward works. Revetements of this sort are also formed of pointed fascines, &c.

**REVETIR**, Fr. to line, to cover, to fortify.

**REVETIR**, Fr. to throw up revetements. The French also apply this term in the same general sense that we use the word *invest*, as applicable to commission, power, authority. Hence, *revêtir d'une commission*; *d'un pouvoir*; *d'un ordre important*; to invest or entrust any person with a commission, with certain powers, or with any important charge or order.

**REVIEW**, (*revue*, Fr.) in the military acceptation of the term, an inspection of the appearance, and regular disposition of a body of troops, assembled for that purpose.

At all *reviews*, the officers should be properly armed, and ready in their exercise; they should salute well, in good time, and with a good air. The men should be clean and well dressed; their accoutrements well put on; very well sized in the ranks; the serjeants expert in their duty, drummers perfect in their beatings, and the fifers play correct. The manual exercise must be performed in good time, and with life; and the men must carry their arms well; march, wheel, and form with exactness. All manoeuvres must be performed with the utmost regularity, both in quick and slow time. The intention of a *review* is, to know the condition of the troops, to see that they are complete, and perform their exercise and evolutions well. —See *Movements*, likewise *Inspection*; and for a specific explanation of what is directed to be observed throughout the British army, with re-

gard to the formation of a battalion, see *Rules and Regulations*.

To **REVISE**, (*réviser*, Fr.) to review; to re-examine; to re-consider. This term is frequently used in military matters, most especially in those which relate to the proceedings of a general or regimental court-martial. It sometimes happens, that the members are directed to re-assemble for the purpose of *revising* part, or the whole mass of the evidence that has been brought before them, and of maturely weighing afresh the substance of the proofs upon which they have formed their opinion and judgment. Great delicacy and discretion are required in those who have authority to order a revision of this sort. A court-martial is perhaps the most independent court on earth. Interest, prejudice, or partiality, has no business within its precincts. An honest regard to truth, a sense of the necessity of good order and discipline, and a stubborn adherence to facts, constitute the code of military laws and statutes. Quirks, quibbles, and evasions, are as foreign to the genuine spirit of martial jurisdiction, as candour, manliness, and resolute perseverance in uttering what he knows to be the fact, are familiar to the real soldier. The king has the power of ordering the members of a general court-martial to revise their sentence; but he cannot oblige them to alter it. The same authority, subject to the same limitations, is vested in the commanding officer of regiments with respect to regimental courts-martial.

**REVOCABLE**, (*revocable*, Fr.)—that may be recalled. Thus, commissions in the line, granted during the reign of one king, and commissions in the militia, granted during the life of a lord lieutenant of a county, or deputy, are not revocable at the death of the grantor.

**REVOLT**, (*révolt*, Fr.) mutiny; insurrection.

**REVOLTER**, one who rises against lawful authority; a deserter, &c.

Se **REVOLTER**, Fr. to revolt; to rise in open rebellion. The French also say, *révolter*, to raise a rebellion.

**RÉVOLTÉS**, Fr. rebels.

**REVOLUTION**, (*révolution*, Fr.) a change in government, as the French Revolution. With us it denotes that particular

particular change which was produced by the admission of William and Mary.

The most memorable revolutions which have occurred within the last three hundred years are:—In England in 1668; Poland 1704, 1709, and 1795, when it was divided by Frederic the Great of Prussia, the Emperor of Germany, and the Emperor of all the Russias. Turkey in 1730; Persia in 1748 and 1755; Russia in 1668, 1710, and 1762; Sweden in 1772; America in 1775; and last, not least in the rotary wheel of fortune, France in 1788, 1789, 1792, 1793, 1795, 1802, and 1804; when Bonaparte absorbed them all in his own person and family.

*Jardin de Révolution*, *Fr.* revolution garden; a name which was given to the garden belonging to the cicerant Palais Royale; and which was called *Maison Egalité*, or equality-house, during the paroxysm of the French Revolution. This garden is situated in Paris, and formerly belonged to the Duke of Orleans.

*Place de Révolution*, *Fr.* revolution square or place; a name given to the spot of ground on which the Bastille stood.

*RÉVOLUTIONNAIRE*, *Fr.* a friend to the revolution.

*RÉVOLUTIONNAIRE*, *Fr.* an adjective of two genders; any thing belonging to the revolution. Hence—

*Armée RÉVOLUTIONNAIRE*, *Fr.* a revolutionary army; such as appeared in France during the bloody reign of Robespierre, when the troops were regularly accompanied by travelling guillotines—*des guillotines ambulantes*.

*RÉVOLUTIONNER*, *Fr.* to revolutionize; to propagate principles in a country which are subversive of its existing government.

*RÉUSSITE*, *Fr.* issue: it also signifies success. Under the first meaning (*viz.* issue), a French writer has the following remarks:—"A good general ought never to be disheartened, although the issue of his plan should, at first, prove unfavourable. He should always recollect, that great success, in warlike undertakings, is seldom confined to one person, or attached to one measure. Nothing, indeed, can be more capricious than dame Fortune on the same occasions: and if I may compare

great events with little ones, her conduct in war is often similar to that which she observes in games of chance, where the most skilful player is sometimes outdone by a feeble and unexperienced adversary."

*REVUE*, *Fr.* See *REVIEW*.

*REWARD*, (*récompense*, *Fr.*) a recompence given for good performed. Twenty shillings are allowed by the mutiny act, as a reward for apprehending deserters.

*Military REWARDS*, (*récompenses militaires*, *Fr.*) The original instances of military rewards are to be found in the Grecian and Roman histories. The ancients did not, however, at first recompence military merit in any other way than by erecting statues to the memory, or presenting them with triumphal crowns. The warriors of that age were more eager to deserve public applause by extraordinary feats of valour, by temperance and moral virtue, than to become rich at the expence of the state. They thirsted after glory; but it was after that species of glory which was not in the least tarnished by the alloy of modern considerations.

The services which individuals rendered were distinguished by the kind of statue that was erected, and its accompanying decorations; or by the materials and particular formation of the crowns that were presented.

In process of time, the state or civil government of a country, felt the propriety and justice of securing to its defenders something more substantial than mere show and unprofitable trophies.—It was considered, that men who had exposed their lives, and had been wounded, or were grown infirm through age, &c. ought to be above want; and not only to have those comforts which through their exertions millions were enjoying, but to be placed in an independent and honourable situation. The most celebrated of their warriors were consequently provided for at the public expence, and they had regular claims made over to them, which were answered at the treasury.

Triumphal honours were likewise reckoned among the military rewards which the ancients voted to their best generals. Fabius Maximus, Paul Emilius, Camillus, and the Scipios were satisfied

satisfied with this recompence for their services. With respect to old infirm soldiers, who were invalidated, they were provided for by receiving, each a lot of ground, which they cultivated and improved. Lands, thus appropriated, formed part of the republican or national domains, or were divided amongst them in the conquered countries.

The Roman officer was rewarded for his services, or for particular acts of bravery in three ways: 1st. By marks of honour or distinction, which consisted of two sorts, viz. Of that which was merely ornamental to their own persons, or limited to the investiture for life; and of that which may be called *rememorative*, such as statues, &c. The latter descended to their posterity, and gave their families a certain rank in the republic. 2dly. By pensions or allowances; and 3dly, by a grant of lands which exceeded the lots given to private soldiers.

The French, who got possession of the country which was formerly occupied by the Gauls, had, at first, no other method of recompensing their generals than by giving them a certain proportion of land. This grant did not exceed their natural lives, and sometimes it was limited to the time they remained in the service.

These usages insensibly changed, and by degrees it became customary for the children of such men as had received grants of national territory, to continue to enjoy them; upon condition, however, that the actual possessors of such lands should be liable to military service. Hence the origin of fiefs in France, and the consequent appellation of *Milice des fiefs*, or militia, composed of men who held their lands on condition of bearing arms when called upon. The French armies were, for many years, constituted in this manner: and the custom of rendering military service in consideration of land tenure, only ceased under Charles the VIIth.

In process of time, those lands which had been originally bestowed upon men of military merit, descended to their children, and were gradually lost in the aggregate lots of inheritable property. Other means were consequently to be resorted to by the state, in order to satisfy the just claims of deserving officers

and soldiers. The French, therefore, returned to the ancient custom of the Romans, and rewarded those, who distinguished themselves in war, by honorary marks of distinction.

Under the first race of French kings may be found several instances of men of low condition having, by their valour, obtained the rank and title of Count, and even those of Duke. These dignities, of themselves, entitled the bearers to places of high command in the armies. The title of Knight, most especially of *Knight Banneret*, gave very high rank during the reign of Phillip Augustus; and in the reigns of one or two of his predecessors, it was bestowed upon individuals who behaved in a distinguished manner in the field.

This species of reward did not cost the public any thing. It was bestowed upon the individual by the general of the army, and consisted in nothing more than a salute given by the latter on the field of battle, by which he became Knight Banneret, and was perfectly satisfied with the honour it conferred.

This mode of rewarding individuals for great actions or long services, continued until men enlisted themselves for money, and the army was regularly paid, according to the several ranks of those who composed it. At this period, however, it became expedient to have recourse to the second method which was adopted by the Romans to compensate individuals for services rendered to the state. The royal treasury was either subjected to the annual claims of individuals, or to the payment of a specific sum, for having distinguished themselves under arms. Notwithstanding this, honorary rewards continued to be given; and knighthood, conferred in the field by the kiss or salute of a general, which the French stile *accolade*, was practised until the 16th century.

It was usual, even during that century, to reward a soldier, who did a brave action, by some mark of distinction, that was given on the spot; by a crown made of grass or other verdure, which was placed upon his head by his comrades, or by a gold ring, which his commanding officer put upon his finger in the presence of the whole troop or company to which he belonged. It sometimes happened, as in the reign of Francis

Francis the First, that this mark of distinction was given by the general of the army.

Several brave men have been distinguished with titles of nobility and armorial bearings, which were conferred by princes, in consequence of some singular feat or exploit. There have been instances recorded in the French History of extraordinary actions having been rewarded upon the spot by kings who commanded in person. A soldier of merit was peculiarly honoured by Louis the XIth, for bravery and good conduct in the field. That monarch took the collar of a military order off his own neck, and placed it round the neck of Launay Morvillier, as a reward for great prowess and intrepidity.

Besides the grammeous crown and gold ring, which were thus given as marks of honour and distinction, the private soldiers were frequently rewarded by small sums of money, when they performed any particular feat or act of bravery. They were likewise promoted from the ranks, and made serjeants or corporals.

Honorary rewards and compensations for service were not confined to individual officers and soldiers. Whole corps were frequently distinguished in the same manner. When several corps acted together, and one amongst them gave signal proofs of gallantry and good conduct, that one frequently took precedence of the others in rank, or was selected by the sovereign to be his personal guard. Sometimes, indeed, the king placed himself at the head of such a corps on the day of battle; thereby testifying his approbation of their conduct, and giving a proof of his confidence in their bravery.

It is now usual, in most countries, to confer marks of distinction on those corps, that have formed part of any army that has signalized itself. Thus the kettle-drums, under the appellation of *Nacaires*, were given to some regiments, as proofs of their having behaved gallantly on trying occasions.

The military order of St. Louis, which was created by Louis the XIVth in 1693, and that of Maria Theresa, as well as many other orders in different countries, were only instituted for the purpose of rewarding military me-

rit. The establishment of hospitals for invalids, such as Chelsca, &c. owes its origin and continuance to the same just sense of what is due to deserving officers and soldiers. Hence, likewise, our invalid companies and retired lists.

No such instances, however, are to be found in ancient history. The Greeks and Romans satisfied themselves with honorary rewards, or occasional compensations. The moderns, particularly the French and English, have placed military claims upon a more solid footing. The gratitude of the public keeps pace with the sacrifices of individuals, and permanent provisions are made for those who are wounded or rendered infirm in the service.

The Athenians supported those who had been wounded in battle, and the Romans recompensed those that had served during a given period. The French kings reserved to themselves the privilege of providing for individuals who had been maimed in action, by giving them certain monastic allowances and lodging, &c. in the different convents of royal institution. Philip Augustus, king of France, first formed the design of building a college for soldiers who had been rendered infirm, or were grown old in the service. Louis, surnamed the Great, not only adopted the idea, but completed the plan in a grand and magnificent stile. Charles the second, on his restoration to the crown of Great Britain, established Chelsea, and James the second added considerable improvements to this royal institution. During the present reign, military merit has been rewarded with titles and pensions; but, what is still more creditable to the government, and reflects honour upon His Royal Highness the Duke of York (for his co-operation with those who originally suggested the idea) old and meritorious soldiers are taught to expect a secure retreat in the decline of life; and every rank is provided for according to the claims and services of individuals.

*REZ*, Fr. a preposition which signifies close to, adjoining, level with. It is never used except with *pied* or *terre*, as *rez-pied*, *rez-terre*. *Démolir les fortifications, rez-pied, rez-terre*. To level the fortifications with the ground.

*REZ-de-chaussée*, Fr. the ground-floor.

This

This term properly means the surface or floor of any building which is even with the ground on which it is raised. It would be incorrect to say *rez-de-chaussee d'une cave, ou du premier étage d'une maison*, the ground floor of a cellar, or of the first story of a house.

**RILAGOON**, *Ind.* the twelfth month which, in some respect, corresponds with February. It follows the month Magh, which agrees with January.

**RHINEGRAVE**, (*rhingrave*, *Fr.*) the Count Palatine of the Rhine. The judges and governors in the several towns situated on the banks of the Rhine were formerly so called.

**RHINELAND rod**, is a measure of twelve feet, used by all the Dutch engineers.

**RHOMBUS**, (*rhombe*, *Fr.*) in geometry, an oblique angled parallelogram, or a quadrilateral figure whose sides are equal and parallel, but the angles unequal; two of the opposite ones being obtuse and the other two acute.

**RIBAND**, (*rubande*, *ruban*, *Fr.*) this word is sometimes written *ribon*. A narrow web of silk which is worn for ornament.

**RIBAND Cockade**. The cockades which are worn by the British officers are made of black riband. The *riband cockade* which is given to recruits, is commonly called colours. No deduction is to be made from the bounty or subsistence of the recruit on this head.

**RIBAUD**, *E.* *Fr.* irregular, noisy, ill-mannered. This term is likewise used as a substantive, viz.

*Un Ribaud*, *Fr.* a noisy, ill-mannered fellow. It is an old French word, which at present is seldom spoken in the upper circles of life. In former times, as late indeed as during the reign of Philip Augustus, king of France, it was current, without carrying along with it any particular reproach, or mark of infamy. The foot-guards, who did duty at the palace were generally called *ribauds*, from the looseness of their morals; which by degrees grew so very corrupt, that the term (harmless perhaps at first) was insensibly applied to persons guilty of dishonourable acts. Hence pick-pockets, thieves, cheats, &c. were called *ribauds*. On which account the provost of the hotel or town-house in Paris, was popularly stiled *roi des ri-*

*bauds*, or the king of thieves. This phrase prevailed until the reign of Charles VI.

**RIBAUD**, *Fr. adj.* likewise means lewd, debauched, &c.

*Un homme RIBAUD*, } *Fr.* a licen-  
*Une femme RIBAUDE*, } tious man;  
a licentious woman.

**RIBAUDEQUIN**, *Fr.* a warlike machine or instrument, which the French anciently used. It was made in the form of a bow, containing twelve or fifteen feet in its curve, and was fixed upon the wall of a fortified town, for the purpose of casting out a prodigious javelin, which sometimes killed several men at once.

According to Monstrelet, a French writer, *ribaudequin* or *ribauderin*, signified a sort of garment which was worn by the soldiers when they took the field.

A fire-arm containing one pound of balls or shot, was also formerly so called. See *Nouvel Dictionnaire Militaire*.

**RIBAUDAILLE**, *Fr.* a term of reproach which was formerly attached to the character of a poltroon or cowardly soldier. When Philip of Valois went to war with Edward king of England, he took into pay twelve thousand Genoese archers, and placed them in the front. During their march, these men had neglected to secure their bows against the inclemency of the weather and when they came into action, they found them entirely useless, and were obliged to receive several British flights of arrows, without being able to return a single one against them; in so much, that they were forced to give way. Philip, imagining he was betrayed by these mercenary troops, exclaimed to the French, *et tôt, tuez cette ribaudaille qui nous empêche la voie!* kill, without loss of time, this dastardly gang, that only stop the way!

**RIBLER**, *Fr.* to ramble, &c. was formerly the verb, and *riblerie*, the act of rambling, &c. the substantive. Both terms are now obsolete, except among the lower orders.

**RIBLEURS**, *Fr.* vagabonds, debauched fellows that run about the streets, or spend their nights in disorderly houses. Soldiers who give themselves up to pillage, &c. in war time, are likewise called *rivoleurs*, by way of reproach.

**RICOCHER**, *Fr.* to ricochet, to batter or fire at a place with ricochet shots. The author of a very valuable work, entitled *Essai Général de Fortification, et d'Attaque et Défense des Places*, observes, in a note to page 89, vol. I. that in strict analogy, we should say *ricocheter*; but use, which is above all rules, has made *ricocher* a technical term, whenever we speak of the ricochets of cannon-shot.

*Une face RICOCHÉE*, *Fr.* the face of a fortification, which is fired at with ricochet shots.

**RICOCHET**, literally means a bound, a leap, such as a flat piece of stone or slate makes when it is thrown obliquely along the surface of a pool.

**RICOCHET**, (*ricochet*, *Fr.*) in gunnery, is when guns, howitzers, or mortars, are loaded with small charges, and elevated from five to twelve degrees, so that when fired over the parapet, the shot or shell rolls along the opposite rampart. It is called *ricochet-firing*, and the batteries are likewise called *ricochet-batteries*. The method of firing out of mortars, was first tried in 1723, at the military school of Strasburgh, and with success. At the battle of Rosbach, in 1757, the king of Prussia had several 6-inch mortars made with trunnions, and mounted on travelling carriages, which fired obliquely on the enemy's lines, and amongst their horse, loaded with eight ounces of powder, and at an elevation of one degree fifteen minutes, which did great execution; for the shells rolling along the lines, with burning fuzes, made the stoutest of the enemy not wait for their bursting.

**RICOCHET** firing is not confined to any particular charge or elevation; each must vary according to the distance and difference of level of the object to be fired at; and particularly of the spot on which it is intended the shot shall make the first bound. The smaller the angle, under which a shot is made to ricochet, the longer it will preserve its force and have effect, as it will sink so much the less in the ground on which it bounds; and whose tenacity will, of course, present so much less resistance to its progress. In the ricochet of a fortification of any kind, the angle of elevation should seldom be less than 10°, to throw the shot over a parapet, a

little higher than the level of the battery. If the works should be of an extraordinary height, the piece must be removed to such situation, and have such charge, that it can attain its object at this elevation, or at least under that of 13° or 14°, otherwise the shot will not ricochet, and the carriages will suffer very much. The first gun in a ricochet battery should be so placed as to sweep the whole length of the rampart of the enemy's work, at 3 or 4 feet from the parapet, and the rest should form as small an angle with the parapet as possible. For this purpose the guns should be pointed about 4 fathoms from the face of the work towards the interior. In the ricochet of ordnance in the field, the objects to be fired at being principally infantry and cavalry, the guns should seldom be elevated above 3 degrees; as with greater angles the ball would be apt to bound too high, and defeat the object intended. For ricochet practice, see the different pieces of ordnance, as gun, mortar, and howitzer. See also the Bombardier and Pocket Gunner, p. 185.

*Battre en RICOCHET*, *Fr.* to put a sufficient quantity of gunpowder in a piece of ordnance to carry the ball, with effect, into the works that are besieged. This sort of firing is generally practised along the whole extent of a face, or flank. The celebrated Marshal Vauban first invented the mode of firing *ricochet-shots*. He tried the experiment at the siege of Ath, in 1679.

*Battre un rempart à RICOCHET*, *Fr.* to batter a rampart with ricochet shots.

**RIDEAU** is a rising ground, or eminence, commanding a plain, sometimes almost parallel to the works of a place; it is a great disadvantage to have rideaus near a fortification, which terminate on the counterscarp, especially when the enemy fire from afar: they not only command the place, but facilitate the enemy's approaches.

**RIDER**, in artillery carriages, a piece of wood, which has more height than breadth; the length being equal to that of the body of the axle-tree, upon which the side-pieces rest in a four-wheel carriage, such as the ammunition-wagon, block-carriage, and sling-wagon.

*Rough Rider*. See *ROUGH*.

**RIDING**, in Yorkshire, the militia regiments

regiments, and those of the line, which bear the name of the several counties, are distinguished in Yorkshire by the word *riding*, which, according to Dr. Johnson, is a corruption of *withing*; but, according to others, is taken from *radings*, districts or governments. *Radt* in Celtic, signifies ruler, or provincial minister. A counsellor of state was of old called *Radt*; the council was styled *the Radts*. Thence whoever had the capital influence in council was said to ride the *radts*, or in the present pronunciation, to rule the *roast*. The latter interpretation differs, from Johnson, who says *roast* perhaps comes from *roist*, a tumult. The provincial corps, which are particularly known by the addition of *Riding*, consist of the 1st and 2d West Riding, the East Riding, and the North Riding regiments. These regiments are likewise distinguished from each other in the North by an allusion to their facings. Hence *green cuffs*, which are the 1st and 2d West Riding regiment; the *Beverley Buffs*, which are the East; and the *Black Cuffs*, which are the North Yorkshire Riding.

**RIDING-Master**, in the cavalry, an officer whose duty it is to instruct the officers and soldiers in the management of their horse.

**To RIFLE**, to plunder; to rob.

**RIFLE**, the thread, ray, or line, made in a rifled barrel.

**RIFLED gun**, } *arquebuse rayée*, Fr.  
**RIFLED piece**, } a fire-arm which

**RIFLED barrel**, has lines or exiguous canals within its barrel that run in a vermicular direction, and are more or less numerous, or more indented, according to the fancy of the artificer.—With respect to the word itself, it does not appear to admit any other analogy to our common conception of the verb, than what may be vulgarly applied to the common practices of riflemen. It is, on the contrary, immediately connected, in sense and signification, with an old obsolete word *to ray*; to streak; which comes from the French *rayon*.—The rifled barrel possesses many advantages over the common one; which advantages are attributed to the threads or rays with which it is indented. These threads are sometimes cut in such a manner, that the line which commences on

the right side of the breech, terminates on the left at the muzzle; by which means the ball acquires a rotary movement, revolving once and a half round its own axis before it quits the piece, and then whirling through the air with a spiral motion. It is well known, that cannon balls, and shot out of common barrels, are impelled in a different manner.

The rifled barrels in America, during the last war, contained from 10 to 16 rays or threads; some had as few as four. Some persons have imagined, that those of 16 rays were the best, from a supposition, that by the air collapsing in the several grooves, the ball obtained more velocity. Mr. Robins, however, seems to differ in opinion, particularly with respect to the depth of the grooves. He observes, page 339 and 340, in his *Treatise on Gunnery*, that whatever tends to diminish the friction of these pieces, tends at the same time to render them more complete; and consequently it is a deduction from hence, that the less the rifles are indented, the better they are; provided they are just sufficient to keep the bullet from turning round the piece. It likewise follows, that the bullet ought to be no larger than to be just pressed by the rifles, for the easier the bullet moves in the piece, supposing it not to shift its position, the more violent and accurate will its flight be. It is necessary, that the sweep of the rifles should be in each part exactly parallel to each other. See Robins on Gunnery, page 323.

Parades, a gunsmith, at Aix-le-Chapelle, who was reputed to be very ingenious in the construction of rifled barrels, used to compress his barrels in the center.

**RIFLEMEN**, experienced marksmen, armed with *rifles*. They formed the most formidable enemies during the last war in America, being posted along the American ranks, and behind hedges, &c. for the purpose of picking off the British officers; many of whom fell by the rifle in our contest with that country. They proved equally fatal in the hands of the French during the late war, and they have been wisely added to our establishment. Considerable improvements are daily made; and we shall hope to see not only additional corps of riflemen, but light infantry

fantry battalions, like the chasseurs of the French, form a considerable portion of the British army. This has been called a murderous practice, and some persons have questioned how far it ought to be admitted in civilized warfare.

*A Corps of RIFLEMEN*, a regiment in the British service, which was raised at the close of the late war. General Manningham's battalion, or 95th regiment, is of this description.

*Mounted RIFLEMEN*, a corps of riflemen in the British service, dressed like hussars, and mounted on horseback.

*RIGHT*, that which is ordered; that which justly belongs to one.

*To the RIGHT ABOUT*, (*demi tour à droite*, Fr.) make a half face to the right, slip the right foot back, so that the ball of the right toe is in contact with the heel of the left foot; slightly holding with the right hand the cantouch-box, and on the word *face*, come to the *right about*, that is, let your front be where your rear was.

*RIGHTS*, (*droits*, Fr.) Certain, unalienable claims and privileges, which every individual civil as well as military, possesses in regulated community. Although there is not any specific mention made of these rights in the Articles of War, (which constitute the military code of Great Britain) yet they are manifestly known to exist, from the circumstance of a mode being pointed out, whereby an officer or soldier who thinks himself wronged may find redress. See *WRONGS*. See also *BRITISH PAY*.

*RIGOL*. See *CIRCLE*.

*RING*, circle, an orbicular line.

*Ring of an Anchor*, that part of an anchor to which the cable is fastened.

*RINGS*, in artillery, are of various uses; such as the lashing-rings in travelling carriages, to lash the sponge, rammer, and ladle, as well as the tarpauling that covers the guns; the rings fastened to the breeching-bolts in ship-carriages; and the shaft-rings to fasten the harness of the shaft-horse by means of a pin.

*Rings of a Gun*, circles of metal, of which there are five, viz.

*Base-ring*, *reinforce-ring*, *trunnion-ring*, *cornice-ring*, and *muzzle-ring*. See Muller's Artillery, page 30, for a full explanation of the several rings.

*RINGLEADER*, the head of any

particular body of men acting in a riotous or mutinous manner.

*To RING*, to make a sharp reverberating noise.

*Rise Ramrod*, a word of command, which is sometimes used at private inspections, to try the bottom of the barrel of a musquet.

*RINGOLD*, Fr. a strong iron bar which is used in forges. It likewise means a thick pole with an iron ferrel.

*RINGRAVE*, Fr. putaloon-breeches.

*RIOT* and *Tumult*, sedition, civil insurrection, disturbance, &c. A breach of the peace committed by an assembled multitude. It frequently happens upon breaking out of riots or other disturbances, at a distance from the abode of any magistrate, that the officers commanding troops, have expressed doubts how far, and under what circumstances, they should be justified in proceeding to suppress such riots and disturbances, without the directions of a magistrate, or such other peace officers as are specified in the Riot Act.

In consequence of these doubts, an opinion has been taken upon the following case, which was laid before the Attorney General, on the 1st of April, 1801, by order of His Royal Highness the Commander in Chief.

*Case*.—Your opinion is requested whether in case of any sudden riot or disturbance, a constable or other peace officer, being under the degree of those described in the Riot Act, can call upon the military to suppress such riot or disturbance; or how far in the absence of any constable, or other peace officer at all, the military would be justified in proceeding to suppress any riot which might break out?

*Opinion*.—I understand the disturbances here meant to be such as to amount to the legal description of *riots*. The word *disturbance* has no legal and appropriate meaning, beyond a mere breach of the peace, which is not, however, the sense in which the word is used in this case; the case plainly importing a breach of the peace by an assembled multitude. In case of any such sudden riot and disturbance as above supposed, any of His Majesty's subjects, without the presence of a peace-officer of any description, may arm themselves, and of course may use ordinary means of force

to suppress such riot and disturbance. — This was laid down in my Lord Chief Justice Popham's Reports, 121, and Keyling 76, as having been resolved by all the judges in the 39th of Queen Elizabeth to be good law, and has certainly been recognized in Hawkins, and other writers on the crown law, and by various judges at different periods since. And what His Majesty's subjects may do, they also ought to do for the suppression of public tumult, when an exigency may require, that such means be resorted to; whatever any other class of His Majesty's subjects may allowably do in this particular, the military may unquestionably do also; by the common law, every description of peace officers may and ought to do, not only all that in him lies towards the suppressing riots, but may, and ought to command all other persons to assist therein.

However, it is by all means advisable to procure a justice of the peace to attend, and for the military to act under his immediate orders, when such attendance and the sanction of such orders can be obtained; as it not only prevents any disposition to unnecessary violence on the part of those who act in repelling the tumult, but it induces also, from the known authority of such magistrates, a more ready submission on the part of the rioters, to the measures used for that purpose; but *still* in cases of great and sudden emergency, the military, as well as all other individuals, may act *without* their presence, or *without* the presence of any other peace officer whatsoever.

(Signed) EDWARD LAW.  
(Now Lord Ellenborough, Lord Chief Justice of the Court of King's Bench.)

*Lincoln's Inn, 1st April, 1801.*

**RIOT-Act**, an act of parliament prohibiting riotous or tumultuous assemblies. This being read by a magistrate or police officer to the mob, if they do not in a given time disperse, or if they commit any act of violence on the property or persons of others, the soldiery may fire on them, and reduce them by force of arms to quiet and obedience to the laws.

**RIOTERS**. Disturbers of the public peace; persons acting in open violation of good order; raising or creating sedition, &c. Soldiers are not to fire on rioters until the riot act has been read by a magistrate, or peace-officer,

unless martial law is proclaimed; or in extraordinary cases. See **R10r**.

**RIPOSTE**, *Fr.* A parry and thrust. It likewise signifies in a figurative sense, a keen reply, a close retort.

**RIPOSTER**, or **RISPOSTER**, *Fr.* In fencing, to parry and thrust.

**RISBAN**, *Fr.* In fortification, a flat piece of ground upon which a fort is constructed for the defence and security of a port or harbour. It likewise means the fort itself. The famous *Rishan*, of Dnakkirk, was built entirely of brick and stone; having within its walls excellent barracks, a large cistern well supplied with water, magazines for stores, provisions, and ammunition. A ready communication was kept up with the town by means of the jettée, which corresponded with the wooden bridge that joined the entrance into the fort. The rampart was capable of receiving forty-six pieces of ordnance, which were disposed in three different alignements or tiers, owing to the triangular figure of the fort; so that a fire could be kept up on all sides.

**To RISE**. To break into commotions; to make insurrections.

**To Rise**. In a military sense, to make hostile attack; as the soldiers rose against their officers.

**To rise**. To obtain promotion.

**To rise from the ranks**. To obtain promotion by degrees, after having been in the ranks as a private soldier; a circumstance which has happened to some of the best generals in the world.

**RISE**. Increase of price; as the rise of commissions in the army upon the prospect of peace.

**RISE, debout**, *Fr.* A word of command among the French, when troops pay homage to the consecrated host. — See **Sacrament**.

**RUSSALA**, or **RUSSAULA**, *Ind.* An independent corps of cavalry.

**RISSALDAR**, *Ind.* The commander of an independent corps of cavalry.

**RIVAL**, one who is in quest of the same thing which another pursues. A competitor.

**RIVAL Powers**. Nations are so called when their relative situation and resources in men and money, &c. enable them to oppose each other; as Great Britain and France.

**RIVALISER**, *Fr.* To vie with another; to rival him. *Rivaliser de courage*

*courage, de célérité*, Fr. To vie in courage, in swiftness.

**RIVALITÉ**, Fr. See Emulation.

**RIVER**, (*Rivière*, Fr.) A land current of water bigger than a brook.—Vessels used upon navigable rivers may be impressed in cases of emergency by a warrant from any justice of the peace. See *Mutiny Act*, Sect. 46.

**Fordable RIVER**. A river which may be passed without the assistance of any floating machines. In order to sound the ford, and to ascertain the state of it, men on horseback are first ordered to cross. By that means you will be able to know, whether any obstacles have been thrown in the way by the enemy; for nothing is more easily effected. The passage of a ford may be rendered impracticable by throwing whole trees in, by tables or platforms covered with nails, and by stakes. The two latter impediments are the most dangerous.—But stakes are not easily fixed, and are consequently seldom used. When fords are embarrassed by them, it requires some time and trouble to clear the river; and it is equally difficult to get rid of the inconvenience that arises when wells have been sunk. Whenever there is reason to apprehend such obstacles, it is always best to reach the ford at dusk.

When the prince of Condé in 1567, resolved to cross the river Seine, the royalists, who were on the opposite side, endeavoured to prevent his passage by throwing quantities of madriers or thick planks that were nailed together, iron hoops and water-cats into the ford. The Huguenots or protestants, however, were not diverted from their purpose. Aubigné, a French writer, says, that on that occasion they placed 400 Arquebusiers upon the bank to protect the men that raked the ford.

This was certainly a singular method which was used to clear a ford, nor could it be done without much difficulty, and a considerable degree of danger. The chevalier Folard has proposed a much safer, and a much easier way, by means of grappling hooks, tied to long ropes, which might be thrown into the ford. Yet even in this case, observes the writer, the object could not be accomplished if the river were broad, unless the persons employed in the undertaking be under the cover of so heavy

a discharge of ordnance and musquetry, that the enemy would not be able to interrupt them, even from an entrenched position on the opposite bank.

With respect to caltrops, the removal of them, when properly distributed at the bottom of a ford, must be attended with great difficulty; for they must render the passage absolutely impracticable, unless they were to sink very deep into the mud and sand, and thus become useless. The men that first enter are in this case the only persons incommoded, but the rest may follow without much hazard.

It sometimes happens, that the bottom of a stream or rivulet is firm and gravelly; when this occurs, the greatest precautions must be taken to escape the effects of caltrops, which would be extremely hurtful to any persons that might attempt to cross. In order to obviate their mischievous consequences, and to render them in a manner useless, a good stock of hurdles must be provided. The soldiers will hand these to one another, force them into the water, and then cover them with stones.

When one or two fords in a river are so situated, that several battalions cannot cross them upon one front, it is then highly prudent to throw a bridge over, either above or below the ford; for a swell may intervene and render it otherwise impassable; add to which, you have the advantage of getting a greater number of troops over at once.

In order to effect a passage for his army over the river Segre, Cæsar gave directions that ditches, thirty feet broad, should be dug in such parts of the banks as might with ease receive the water out of the stream, and render it fordable. Having accomplished this object, he found no difficulty in reaching Petreus, who, being in the daily fear of wanting provisions and forage for his men, was on the eve of quitting his position and marching forwards.

The passage of the Granicus by Alexander the Great, is likewise mentioned in history, as an instance of bold enterprise. But however celebrated that act may be in ancient records, we shall not be thought partial to the moderns when we state, that the passage of the river Holowitz by Charles XII. of Sweden was equally bold and well managed.

The passage of the Teglimenti by Bonaparte,

Bonaparte, during his campaign in Italy, is the most celebrated of the present day.

**RIVERAINS, Fr.** Persons who inhabit the banks of rivers. By a regulation, which was in force during the French monarchy, all persons, so situated, were obliged to leave a space 18 feet broad at least, between their houses or huts, and the bank, for the convenience of navigation. A set of men, called *Balisours*, were paid to see this regulation strictly complied with.

**RIVET, a** fastening pin clenched at both ends, so as to hold an intermediate substance with more firmness.

**RIVETING-plates, in gun-carriages,** small square thin pieces of iron, through which the ends of the bolts pass, and are riveted upon them.

**RIZAMEDJAR, Ind.** an officer commanding a small body of horse.

**RO, Ind.** In Indian music means quick.

**ROAD, (Chemin, Fr.)** For the manner in which roads should be reconnoitred for military purposes, see RECONNOITRING, also page 231 of the *LITTLE BOMBARDIER*.

**Military Roads, (Chemins faits pour la marche des troupes, Fr.)** Roads which are made of a certain breadth, and through a country, susceptible of defence, for the convenience of troops upon the march.

**ROBE-courte, Fr.** literally means a short gown. Provost-marshal, under-bailiffs, vice-schenechals, their lieutenants, and various other persons, who are occasionally employed in camps and garrisons, to assist the military in maintaining internal good order and discipline, are called in France *Officers de Robe-courte*.

**ROC, Fr.** A rock.

**Roc de lance, Fr.** In tournaments the wooden part of a lance is so called.

**ROCIER, Fr.** A large rock; derived from *roc*, and generally bearing the same import.

**Roche à feu, Fr.** a solid composition, which gradually consumes when it has been lighted, but which emits a very broad and lively flame, and is not extinguished by water.

**ROCKET as used in India.** See *Fougette*.

**ROCKETS.** See *LABORATORY*.

**ROD.** See *MEASURING*.

**RODS, or rammers,** instruments either of iron or wood, to drive home the charges of muskets, carabines, and pistols.

**Rods.** Sticks fastened to sky-rockets, to make them rise in a straight line.

**RODOMONT, Fr.** A bully. An unmilitary character.

**Faire le Rodomont, Fr.** To bully, to talk loudly, without possessing the real spirit of a man, or soldier.

**RODOMONTADE, Fr.** Rodomontade. The act of bullying, vain boasting or arrogating to ourselves qualities which we do not possess. A French writer has very justly observed, that there cannot be a greater defect in the character of an officer than an overweening display of real or fictitious talents. The word is derived from one Rodomont, the hero or principal character in an old romance, who makes himself conspicuously ridiculous in this way.

**ROGUE'S March.** See *MARCH*.

**ROHILLAS, Ind.** A tribe of Afghans inhabiting the country north of the Ganges, as far as the Suba of Oude to the eastward.

**ROI, Fr.** King.

**ROI d'armes, Fr.** See *KING OF ARMS*.

**Le Roi s'avisera, Fr.** The king will consider. By these words written on a bill presented to the king by the parliament, is understood his absolute denial of that bill in civil terms, and it is thereby wholly made null and void.

**Le Roi le veut, Fr.** The king is willing. A term in which the royal assent is signified by the clerk of the parliament to the public bills; giving authority to those, which before were of no force or virtue.

**De Par le Roi, Fr.** A particular form which always preceded official papers or declarations, that were issued during the French monarchy. The expression was not confined to acts which came directly from the king, but was frequently used by persons subordinate to him; as *De Par son Altesse*. Bonaparte has revived the term, with the addition of *Empereur*; as, *de par l'Empereur et Roi*.

**ROKER, Ind.** Cash.

**ROLE, Fr.** A muster-roll, state, or return. The word *Rôle* is used among the French indiscriminately to signify, either the effective force of an army,

## R O L

army, or the actual quantity of stores and ammunition which the magazines contain.

*To roll in duty.* An old term which is seldom used at present, although extremely appropriate, and which corresponds with the French term *Rouler*. It signifies to take one's turn upon duty, and to be subject to a fixed roster according to rank and precedence. When officers of the same rank take their turns upon duty, pursuant to some established roster, as captains with captains, and subalterns with subalterns, and command according to the seniority of their commissions, they are said to roll in duty.

*To roll.* To continue one uniform beat of the drum, without variations, for a certain length of time. When a line is advancing in full front, or in echellons, for any considerable distance, the music of one regulating battalion may, at intervals, be permitted to play for a few seconds at a time, and the drums of the other battalions may be allowed occasionally to *roll*; drums likewise *roll* when troops are advancing to charge.

*Long-roll.* A beat of drum by which troops are assembled at any particular spot of rendezvous or parade.

*Master-roll,* is a return, given by paymasters, on which are written the names of both officers and soldiers of the regiment, troop, or company, with their country, age, and service.

*Squad-roll.* A list containing the names of each particular squad. Every non-commissioned officer and corporal, who is entrusted with the care and management of a squad, must have a roll of this kind.

*Size-roll.* A list containing the names of all the men belonging to a troop or company, with the height or stature of each specifically marked. Every serjeant keeps a regular size-roll, and every captain of a troop or company ought to have one likewise.

*Roll-call.* The calling over the names of the several men who compose any part of a military body. This necessary duty is done by serjeants of companies, morning and evening, in every well regulated corps. Hence *Morning Roll-call*, and *Evening Roll-call*. On critical occasions, and in services that require promptitude and exertion, frequent roll-calls should be made.

## R O M

*ROLLER.* A small wheel placed at the foot of the hammer of a gun, or pistol lock, in order to lessen the friction of it against the hammer or feather spring.

*ROLLER* likewise means a long piece of wood which is rounded and made taper to suit the regulated size of a military tail.

*ROLLER.* In surgery, a long and broad ligature, usually made of linen cloth, for binding, surrounding, and containing the parts of the human body, and keeping them in their proper situation, thereby disposing them to a state of health and reintegration.

*ROLLERS,* are round pieces of wood of about nine inches diameter, and four feet long, used in moving pieces of artillery from one place to another.

*ROMAINE, Fr.* A steelyard or balance for weighing things of various weights by one single weight, as from one single pound to 112 pounds.

*ROMANS.* Before the establishment of the *Guards* at the Horse Guards, which was formerly paid out of the king's privy purse, and is now charged in the extraordinaries of the army, the captain of the guard at St. James's, kept a table for the subalterns attached to that duty. In order to enable the captains to support these expences, a certain number of men were allowed to work in the metropolis, on condition that they left their pay in their officers' hands. These men were called *Romans*.

*ROMAN Catholics.* A name given to all such christians as acknowledge the Pope's supremacy. The English and Irish Roman Catholics were formerly subjected to very severe restrictions on account of their religious opinions. The penal code has, however, been gradually relaxed in their favour during the present reign; so much so, that persons of that persuasion may not only enter into the navy, and enlist in the army, without swearing, as heretofore, that they are protestants; but they may hold commissions in either establishment, be called to the bar, and participate with their fellow countrymen in all the rights and privileges of English or Irishmen, with the bare exception of representing others in parliament, or being represented themselves.

*ROMPRE, Fr.* To break.

*ROMPRE*

**ROMPRE un bataillon**, Fr. In military evolutions to break a battalion into a given number of parts for the purpose of *desiles*, &c.

**ROMPRE en Colonne**, Fr. To break into column.

**RONDAQUE**, Fr. A sort of shield which the French formerly used, and which is still carried by the Spaniards.

**RONDEL**, in *fortification*, a round tower, sometimes erected at the foot of a bastion.

**RONDES**, Fr. See **RECORDS**.

**RONDE Major**, Fr. Town-major's round. So called from the town-major visiting the different quarters of a garrison during the night. This round, in some degree, corresponds with our grand round.

**RONDES roulantes**, Fr. Rounds that are made by officers, sergeants, or corporals, over a certain part of the ramparts. These agree with our visiting rounds. The French say, *Qui va la?* Who goes there? technically with us, Who comes there?

**RONDE d'officier**, Fr. Officer's round.

**Chemin des RONDES**, Fr. A path marked out for the convenience of the rounds.

**RONDE de gouverneur**, Fr. The governor's round.

The French method of ascertaining the nature of the several rounds is by challenging in the same manner that we do, viz. *Qui va la?* Who goes there? This must be said sufficiently loud for the main guard to hear. He is instantly answered—*Ronde de gouverneur*, Governor's rounds; *Ronde Major*, Major's rounds, or grand round, and so on, according to the nature of the rounds. The sentry, who stands posted near the guard-house, after having cried out—*Demeure là*; stop there: or, as we say, stop round; cries out again, *Corporal hors de la garde*, Corporal of the guard. The corporal of the guard with his sword drawn, according to the French custom, repeats, *Qui va la?* Who comes there? He is answered *ronde*, round. He then says, *avance qui a l'ordre*; let him advance who has the parole or countersign; or, as we say, advance one, and give the countersign.

**RONDE des officiers de piquet**, Fr. Piquet rounds.

**RONDES des Turcs**, Fr. See **TURKISH ROUNDS**.

**RONDELLE**, Fr. A small round shield, which was formerly used by light armed infantry. It likewise means a part of the carriage of a gun.

**RONDELIERS**, Fr. Soldiers who were armed with rondelles, or small wooden shields, covered with leather, were anciently so called.

**ROOM**. Space; extent of space, great or small. Any part of a building for the accommodation of individuals; as barrack room, orderly room; viz. the orderly room at St. James's, mess room, guard room, officers' rooms, soldiers' rooms, and store-room, for the duty of the regiment.

**ROOMS**, in a military sense, are those parts of a building or barrack which by specific instructions, the different barrack masters must provide and furnish, for the accommodation of the king's troops in Great Britain or elsewhere. The schedule, as published by authority, describes the number of rooms allowed in barracks for the commissioned, warrant, and non-commissioned officers, and private men, to be as follows:—

**Cavalry rooms**. Field officers, each two rooms; captains, each one ditto; subalterns, staff, and quarter-masters, each one ditto: the sergeants of each troop of dragoons, and the corporals of each troop of horse, one ditto; eight rank and file, one ditto; officer's mess, two ditto.

**Infantry rooms**. Field officers, each two ditto; captains, each one ditto; two subalterns, one ditto; staff, each one ditto; twelve non-commissioned officers, and private men, one ditto; officer's mess, two ditto; sergeant-major, and quarter-master sergeant, one ditto. When there are a sufficient number of rooms in a barrack, one may be allowed to each subaltern of infantry.

**ROPE**. A cord; a string; a halter; a cable; a hauler.

**Rope of sand**. A phrase in familiar use to signify disunion, want of adhesion and continuity.—Thus the colonel and the captains of a regiment disagreeing may be called a *rope of sand*.

**ROPES**, are of various lengths and thickness, according to the uses they are made for; such as drags for the gin, for the sing-cart and wagon, &c.

**Drag-ropes**, in the *artillery*, by which

which the soldiers pull the guns backwards or forwards, both at practice and in an engagement, are of the following dimensions, viz.—For a 24-pounder, 54 feet long, with the loop-holes for the pegs included, and 5½ inches in circumference; for 18 and 12-pounders, 48 feet long, and four inches in circumference; for 6 and 3-pounders, 39 feet long, and 1-7 eight inches in circumference. For 13 and 10-inch howitzers, 45 feet long, and 6½ inches in circumference; for 8-inch howitzers, 48 feet long, and four inches in circumference; for all other howitzers, 35 feet long, and two inches in circumference.

*Picket-Ropes*, See *PICKET*.

**ROSETTE**, an ornamental bunch of black riband, or cut leather, which is worn both by officers and soldiers in the British service, on the upper part of their cues.

**ROSETTES**. Two small bunches of ribands that are attached to the loops by which the gorget of an officer is suspended upon his chest. The colour of the riband must correspond with the facing of the uniform. The French use the same word.

**ROSE-buds**. See *NAILS*.

**ROSIN**. See *RESIN*.

**ROSTER**, in *military affairs*, is a plan or table, by which the duty of officers, entire battalions, and squadrons, is regulated.

**ROSTRAL Crown**, (*Couronne Rostrale*, Fr.) A crown which was bestowed upon that Roman sailor who should first leap on board an enemy's ship.

**ROSTRUM**. A Latin word which literally means the beak or bill of a bird, and figuratively the prow of a vessel. There was in a public place in ancient Rome, a tribunal ornamented with various prows of ships, which the Romans had taken from the Antiati. The orators who harangued the people in public, mounted this *Rostrum*. Hence the Roman phrase. To speak from above the rostra or prows.

**ROUAGE**, Fr. The wheelwork of a carriage, &c.

**Bois de ROUAGE**, Fr. Timber to make wheels with.

**ROUASSE**, Fr. A concave iron instrument, which is used for the purpose of enlarging the hollow of a pump. It likewise signifies a mark. •

**ROUASSER**, Fr. To bore; also to mark casks.

**ROUÉ**, Fr. A licensed libertine; one whose principles of morality are considerably relaxed, but who is not sufficiently vitiated in his manners to be excluded from society. The French make a familiar use of the term, and do not affix any degree of stigma to it. They say, on the contrary, *C'est un aimable Roué*; he is an agreeable, gay fellow.

**Rour**, Fr. Wheel.

**Rour de Feu**, Fr. An artificial firework. See *Soleil Tourmant*.

**ROUET**, Fr. A small solid wheel, made of steel, which was formerly fixed to the pans of blunderbusses and pistols, for the purpose of firing them off.

*Arquebuses et Pistolets à ROUET*, Fr. Blunderbusses and pistols to which a small wheel was attached. These fire-arms are now very little known; some, however, are still to be found in arsenals; being kept there merely for curiosity.

**ROUGES**, *boulets Rouges*. Fr. Red-hot-balls.

**ROUGH Rider**. A person who is indispensably necessary in every cavalry regiment. He is a sort of non-commissioned officer, and should always associate with the sergeants in preference to the private men.

*Rough Riders* are the assistants of the riding master, and one should always be appointed to each troop. The necessary qualifications, for every *Rough Rider* (independently of a thorough knowledge of horsemanship) are activity, zeal and good conduct.

No *Rough Rider* ought to be an officer's servant, as his situation puts him above the level of common men.

*Rough Riders* are generally paid five guineas a year as a compensation for their trouble; they likewise receive 10s. 6d. from every officer who learns to ride, and from every officer who has a horse broke at the riding school. This money is divided equally amongst them.

Every *Rough Rider* must provide himself with a proper jacket for the riding school business, according to the pattern fixed upon in the regiment.

When it is found absolutely necessary to employ non-commissioned officers as

*Rough Riders*, they must do as much troop duty as they can.

*To Rough Horses*, a word in familiar use among the dragoons to signify the act of breaking in horses, so as to adapt them to military purposes.

*To Rough it*, a cant word used among military men, signifying to face every sort of hardship.

**ROULEAU**, *Fr.* A cylindrical piece of wood with iron ferrels at both ends, and with mortises fitted to the end of the lever.

**ROULEAU de Cartouche**, *Fr.* A cylindrical solid piece of wood, which is used in making cartridges.

**ROULEAUX**, *Fr.* Round bundles of fascines which are tied together. They serve to cover men, when the works are pushed close to a besieged town, or to mask the head of a work.

**ROULEMENS**, *Fr.* The several rolls or ruffles which are beat upon a drum, as preparations for exercise, &c.

**ROULER**, *Fr.* To be subject to a fixed roster according to rank and precedence.

**ROULER**, *Fr.* To be in motion; to be stirring. The French say figuratively—*L'argent roule*, money is stirring, or in plentiful circulation. They also say, speaking of any particular point—*tout roule là-dessus*, that is the main point.

**ROULIER**, *Fr.* A wagoner.

**ROUND**. From the French *rond*. In *military matters*, a visitation; a personal attendance through a certain circuit of ground, to see that all is well. A round consists, in the ordinary way, of a detachment from the main-guard, of an officer or a non-commissioned officer and 6 men, who go round the rampart of a garrison, to listen if any thing be stirring without the place, and to see that the sentinels be diligent upon their duty, and all in order. In strict garrisons the rounds go every half hour. The sentinels are to challenge at a distance, and to port their arms as the round passes. All guards turn out, challenge, exchange the parole, and present arms, &c.

**ROUNDS**, are ordinary and extraordinary. The ordinary rounds are three: the *town-major's round*, the *grand round*, and the *visiting round*.

*Manner of going the ROUNDS*. When the town-major goes his *round*, he comes to the main-guard, and demands a serjeant and four or six men to escort him to the next guard; and when it is dark, one of the men is to carry a light.

As soon as the sentry at the guard perceives the *round* coming, he shall give notice to the guard, that they may be ready to turn out when ordered; and when the round is advanced within about 20 or 30 paces of the guard, he is to challenge briskly: and when he is answered by the serjeant who attends the round, *Town-major's round*, he is to say, *Stand, round!* and port his arms: after which he is to call out immediately, *Serjeant, turn out the guard!* *town-major's round*. Upon the sentry calling the serjeant to turn out the guard, the latter immediately draws up the men in good order with shouldered arms, and the officer places himself at the head of it, with his sword drawn. He then orders the serjeant and four or six men to advance towards the *round*, and challenge; the serjeant of the *round* is to answer, *Town-major's round*; upon which the serjeant of the guard replies, *Advance, serjeant, with the parole*; at the same time ordering his men to rest their arms. The serjeant of the *round* advances alone, and gives the serjeant of the guard the parole in his ear, that none else may hear it; during which period, the serjeant of the guard holds the spear of his halbert or pike at the other's breast. The serjeant of the *round* then returns to his post, whilst the serjeant of the guard, leaving his men to keep the *round* from advancing, gives the parole to his officer. This being found right, the officer orders his serjeant to return to his men; says, *Advance, town-major's round*; and orders the guard to port their arms; upon which the serjeant of the guard orders his men to wheel back from the centre, and form a lane, through which the town-major is to pass (the escort remaining where it was) and go up to the officer and give him the parole, laying his mouth to his ear. The officer holds the point of his sword at the town-major's breast while he gives him the parole.

*Grand ROUNDS*. The rounds which are gone by general officers, governors, commandants

commandants, or field officers. When there are no officers of the day on picket, the officer of the main guard in garrison may go to the grand rounds.

**Visiting Rounds.** Rounds gone by captains, subalterns, and the town-majors of garrisons.

The grand rounds generally go at midnight; the visiting rounds at intermediate periods, between sunset and the revêillé. The grand rounds receive the parole, and all other rounds give it to the guard.

There are also a species of bastard rounds, (if we may be permitted the expression,) which are gone by a corporal and a file of men; and which are in reality nothing more than a patrol. When challenged they answer, *Pat. Rounds*, i. e. *Patrol Rounds*.

N. B. The governor of a garrison can order the rounds to go as often as he may judge expedient. Extraordinary rounds are resorted to when any particular event or occurrence is expected, and in cases of tumult, &c.

The going the rounds, though generally considered among the inferior duties of military discipline, ought to be most scrupulously attended to; and we are sorry to have the opinion of many good officers with us when we assert, that a specific regulation is wanted upon this head. It will be observed, that we call the duty when done by the town-major, &c. *round*, not *rounds*, as is erroneously practised.

**Turkish Rounds.** The Turks are in the habit of going the rounds like other nations, for the purpose of ascertaining whether sentries are alert and vigilant on their posts. They call the rounds *rol*. They start from the guard-house, and the person who goes with them has no other weapon of defence than a stick in his hand. He is accompanied by a corporal who carries a lantern. He observes whether at his approach the sentry instantly cries out, *Jedger Allah*, which signifies *Good God*. If any sentry should be found asleep, or be backward in crying out *Jedger Allah*, he is put into prison, and there severely bastinadoed. The Turks never give a parole or countersign, in camp or in garrison.

The design of *rounds* is not only to visit the guards, and keep the sentinels

alert, but likewise to discover what passes in the outworks, and beyond them.

**Round-Major**, (*rond-major*, Fr.) the round which the town-major goes in a fortified place. The officers of the guard receive him with two musqueteers, and give him the word once, when he goes that round.

When the governor of a town goes his *round*, the officers turn out the guard without arms, and send four musqueteers to receive him at ten paces distance, and give him the word as often as he chuses to demand it. All other rounds, without exception, are obliged to give the word to the corporal of the guard.

**Round-Parades.** See **PARADES**.

**Round-Robin.** A compact of honour which officers enter into, (when they have cause of complaint against their superior officer) to state their grievances, and to endeavour to obtain redress, without subjecting one more than another to the odium of being a leader or chief mover. The term is a corruption of *Ruban rond*, which signifies a round ribbon. It was usual among French officers, when they signed a remonstrance, to write their names in a circular form, so that it was impossible to ascertain who signed first. Hence to sign a *Round Robin* against any person, is for any specific number of men to sign, one and all, a remonstrance against him. Colonels of regiments have been sometimes treated in this manner. Great judgment, operating upon motives grounded in strong facts, should always influence on these nice occasions.

**Rounds** in firing ordnance or musquetry. A general discharge of cannon or fire-arms is so called. The French use the word *salve* on this occasion; *rade* being confined to the act of visiting posts, &c.

**ROUPIE**, *Fr.* rupee. An Indian coin, equal to two shillings and three pence British.

**ROURA**, *Ind.* A term used to express Lord, Sir, Master, Worship.

**ROUSE.** One of the bugle-horn soundings for duty. It is derived from the German word which signifies *To turn out*.

**ROUT**, (*déroute*, Fr.) confusion of

## ROU

an army or body of men defeated or dispersed.

To *ROUT*, to put to the rout. To defeat, to throw into confusion, &c.

*ROUTE*, (*route*, Fr.) a term used in military matters to express the destination of one or more bodies of armed men. The destination of the troops originates in the Cabinet; their specific movements are planned by the quarter-master-general, who makes minutes thereof for the secretary at war, the latter giving the stamp of office, and sending them into circulation: to him falls the task of accounting to parliament for the expences of military movements in Great Britain. The route, or order for a regiment to march, is expressed in the following manner:

It is his Majesty's pleasure, that—

Wherein the Civil Magistrates, and all others concerned, are to be assisting in providing quarters, impressing carriages, and otherwise as there shall be occasion.

Given at the War Office, this ——— day of ——— 13

By his Majesty's command,  
————— Secretary at War.

In like manner the war department has the superintendence of the military in the colonies; and here it may be of use to say, that letters in the first instance, (unless the particular address be well known,) for the Windward Islands, (Demerary and the conquered Dutch colonies excepted), must be sent to Barbadoes; for the Leeward to Jamaica; for the Mediterranean to Gibraltar; America, Halifax; and for the East Indies, to the chief places of the respective presidencies.

*Marche ROUTE*, Fr. route of march. The French use this term in contradistinction to *marche manœuvré*, march in manœuvring.

*Pas de ROUTE*, Fr. stepping at ease, or marching with the least possible restraint.

*ROUTIER*, Fr. a ruttier. The French say figuratively, *c'est un routier*, he is an old stager.

*ROUTIERS*,

*BRABANCONS*, } Fr. *Routier* signifies, literally, a  
*COTEREAUX*, } ruttier, or a man constantly plying upon the road. *Routiers*, according to the author of the *Nouveau Dictionnaire Militaire*, were

## ROY

formerly a gang of adventurers or banditti in Brabant; who, by degrees, formed themselves into armed troops and companies, and were hired by those who paid them best. These *Brabanters* were called *Cotereaux* and *Routiers*, because they were constantly lurking about the skirts and heights, &c. of places, and in the highways.

*ROUTINE*, Fr. This word has been adopted by us in the same sense that it is familiarly used by the French. It signifies capacity, or the faculty of arranging; a certain method in business, civil or military, which is rather acquired by habit and practice than by regular study and rule. We say familiarly the routine of business.

*ROUAFERIN*, Fr. battle iron, such as easily breaks when it is committed to the force.

*ROWANNA* or *Rovinda*, Ind. a passport or certificate from the collector of the customs.

*ROWEL*, (*mulette*, Fr.) the pointed part of a horseman's spur, which is made in a circular form.

*Rowel*, in surgery, (*sélon*, Fr.) a sort of issue which is made in man or horse, by drawing a skein of silk or thread through the nape of the neck.

*ROXANA*, Ind. an Indian term, expressive of great magnificence, splendence.

*ROY*, Ind. a Hindoo prince.

*ROYAL*, (*Royal*, Fr.) belonging to a king; kingly.

*Royal assent*, the assent of the king to an act which has passed both houses of Parliament.

The term *Royal* is likewise applied, by way of distinction, to corps and establishments, viz.

*Royal Train* of Artillery, *Royal Wagon Train*.

*Royal Army*, an army marching with heavy cannon, capable of besieging a strong fortification, &c.

*Royal Standard*. See *STANDARD*.

*Royal parapet*, in fortification, a bank about three toises broad, and six feet high, placed upon the brink of the rampart, towards the enemy: its use is to cover those who defend the rampart.

*Royal Academy*. See *ACADEMY*.

*Royal Military School at Paris*. See *SCHOOL*.

*ROYAL Poverty*. According to Bailey,

ley, a modern nickname for geneva or genevire, vulgarly called gin. The epithet royal is affixed to it, because, when beggars are drunk, they think themselves as great as kings. There is no doubt but they are much happier, when under the influence of that intoxicating liquor.

ROYALS, in artillery, are a kind of small mortars, which carry a shell whose diameter is 5.5 inches. They are mounted on beds the same as other mortars.

THE ROYALS. This term is applied to the First Regiment of Foot, which is likewise sometimes called *Royal Scotch* and *Roy's*. It is supposed to be the oldest regular corps in Europe. The men originally went out of Scotland and entered into the French service. They afterwards returned to England in 1633, during the reign of Charles the First, and were styled, The First, or Royal Regiment of Foot. A curious anecdote is related respecting the precedence claimed by this corps over the Regiment de Picardie, in point of standing. Having had frequent arguments on the subject, a wag belonging to the Royal Scotch, (who called themselves Pontius Pilot's Guards on account of their boasted antiquity) observed, that his own corps must be mistaken, for had the Royals done duty at the sepulchre, the holy body never could have left the spot; implying, that the British sentinels would not have slept upon their posts; whereas those of the Regiment de Picardie did.

ROYALISÉ, *or*, Fr. brought over to the royal cause; attached to the kingly dignity.

ROYALISER, *Fr.* an expression which has been made use of since the commencement of the French revolution; it signifies to wear the mind from revolutionary principles, &c. Thus Bonaparte is said to have royalized jacobinism, i. e. to have given to the existing government of France that unity of action, which constitutes the superiority of monarchy; and, at the same time, to have preserved all the means of a revolutionary system, by flattering the ambition and the thirst of gain by which foreign jacobinism is actuated.

ROYALISME, *Fr.* an attachment to the royal cause. The French used to say, figuratively, *ils sentent le royal-*

*isme*, they are attached to the royal cause.

A ROYALIST, (*Royaliste*, Fr.) one who is of the king's or queen's party, and who maintains his or her interest. Hence, the French royalists in La Vendée.

ROZEENDAR, *Ind.* a person holding a yearly pension.

ROZENADAR, *Ind.* one who receives an allowance daily.

ROZENAMA, *Ind.* a day-book.

RUBBY, *Ind.* a division of the year, containing the months of *chait* or 3d month, from the 11th of March to the 10th of April. *Bysar* or 4th month, from the 11th of April to the 11th of May. *Ict* or 5th month; *Assam* or 6th month, from the 12 of June to the 13th of July. *Sohan* or 7th month, in some manner, agrees with July and August. *Bardoon*, or the same as *Ict*, from the 11th of May to the 12th of June. The other half ~~of the year~~ is called *Kerak*.

RUDIMENTS, the first principles, the elements of any particular science. Hence—

RUDIMENTS of war, the first principles or elements of war; as the drill, manual, and platoon exercises, manoeuvres, &c. &c.

RUE, *Fr.* street.

RUER, *Fr.* to fling; to jirk.

RUER de grands coups, *Fr.* to strike hard, or with violence.

RUFFLE, (*Roulement*, Fr.) a term used among the drummers of a British regiment, to signify a sort of vibrating sound, which is made upon a drum, and is less loud than the roll.

To beat a RUFFLE, to make a low vibrating noise upon the drum. It is generally practised in paying a military compliment to a general officer, and at military funerals.

A lieutenant-general is entitled to three ruffles.

A major-general to two ruffles.

A brigadier-general to one ruffle.

RUG, (*couverture velue*, Fr.) a coarse nappy coverlet used for mean beds. Each set of bedding which is provided for regimental hospitals has one rug.

RUILLER, *Fr.* to establish marks for the purpose of rendering surfaces and places correct.

RUINE,

**RUINE**, *Fr.* literally signifies ruin. It is used by the French in a warlike sense.

*Battre en RUINE*, *Fr.* to defeat an enemy in such a manner as to destroy all his means of taking the field again.

*RUINER un pays*, *Fr.* to lay waste a country.

*RUINER la réputation d'un officier*, *Fr.* to defame, or undermine the character of an officer.

**RUINES**, *Fr.* ruins.

**RULE**, in a general sense, government, sway, empire.—In a more confined one, canon, precept, direction.—Hence, Rules and Regulations for the Government of the Army.

*To RULE over*, to govern; to command.

**RULE**, } an instrument by which  
**RULER**, } lines are drawn.

**RULES and articles**. Under this term may be considered the military code of the British army. They comprehend 21 sections, divided into separate articles, and contain the substance of the mutiny act, which passes annually for the government of all the king's forces.

For rules relating to courts-martial, in cases where the life-guards and horse-guards, likewise where the foot-guards are concerned, see *Articles of War*, page 53; and for the rest of the army, see page 71, &c. &c.

**RULES and Regulations**. Two books so entitled, which have been industriously and ably compiled by General David Dundas, from Saldern, &c. and which are published by authority, for the discipline of the British army. One book specifically relates to the formations, field exercises and movements of the infantry; the other to those of the cavalry; and both are ordered to be strictly observed and practised, without any deviation therefrom.

*RUMB de vent*, *Fr.* point of the compass.

*RUMB or rum*, *Fr.* the hold of a ship.

**RUMOUR**, a desultory, loose report of what may, or may not be.

*To spread false RUMOURS*, to circulate things without the foundation of reality. Reports, &c. are sometimes circulated by means of spies, deserters, &c. for the purpose of covering some

particular design, or intended operation. Rumours of this kind should be cautiously listened to by the commanding officer of the army through which they are spread. It sometimes happens that individuals, through wantonness, or from some other motive, create alarms among their own people by anticipating some looked for or dreaded event. This offence is not only punishable by the civil law, but, being contrary to good order and discipline, is rigidly so in every army. A singular circumstance of this kind occurred at Colchester in 1797. During the alarm which universally prevailed at that time, especially along the coast of Essex, a sergeant belonging to a militia regiment, unwittingly, (for we know he did not do it wilfully) said in the hearing of some soldiers, that the *French would dine at Ipswich on the Sunday following!* This expression soon spread among the inhabitants of the place, and a formal complaint was made to the general of the district. The offender having originally belonged to the line, and bearing the best of characters, was so far considered, as not to be tried by a general court-martial; but, for the sake of example, he was ordered to be escorted to the church nearest to the coast, and on a Sunday to appear in the porch, and there ask pardon of the inhabitants for the alarm he had created. The orderly books of the different regiments that were then quartered at Colchester, bear testimony to the accuracy of this article; and we insert it as a caution to others.

*To RUN the gantlope*, to undergo a punishment which has been allotted for considerable offences in some foreign countries. When a soldier is sentenced to run the gantlope, the regiment is drawn out in two ranks facing each other: each soldier, having a switch in each hand, lashes the criminal as he runs along, naked from the waist upwards. While he runs, the drums beat at each end of the ranks. Sometimes he runs 3, 5, or 7 times, according to the nature of the offence. The major is on horseback, and takes care that each soldier does his duty. This punishment is not known in the British service.

**RUNNING-fire**.—See **FIRE**.

**RUPÉE**, a silver coin, which varies in

in its value according to the part of India in which it is current. *Rupécs* struck by the English are generally worth two shillings and three pence.

**RUPTURE**, a disease which disqualifies a man from being admitted as a soldier; but as some men are capable of producing and reducing a rupture with great ease, they should not be discharged in slight cases, as by the use of a truss they may be enabled to do duty for a long time.

**RUPTURE**. This word signifies the commencement of hostilities between any two or more powers.

**RUSE**, *Fr.* cunning, trick, ingenuity. It is applied to military matters, and signifies stratagem.

**RUSER**, *Fr.* to make use of stratagems. *Il est permis de ruser à la guerre*, it is lawful to make use of stratagems in war.

**RUSES de guerre**, *Fr.* stratagems of war. See **STRATAGEMS**.

**RUSSOOT**, *Ind.* a tribe of Hindoos, whose particular duty is the care of horses.

**RUSSUMDAR**, *Ind.* a person deriving a particular perquisite.

**RUSTRE**, *Fr.* according to the author of the *Nouveau Dictionnaire Militaire*, a lance, which the ancients used in prize-fighting, was so called. We have carefully examined our Latin authorities for its derivation, but the only word that seems to approach its meaning is,

**RUTHRUM**; which Adam Littleton thus interprets: an instrument where-with sand or such like is digged out. A mattock, a spade, a shovel, a pickaxe, a hoe; also an instrument where-with sand is mingled and beaten with lime, to make mortar with. Also a strickle.

**RUTIER**, a direction of the road or course at sea.

**RYAL**, a Spanish coin, worth sixpence three farthings English money.

**RYET**, or *Ryot*, *Ind.* a general name given in India to the lower order of people, particularly the cultivators of the ground.

**RYET**, or *Ryot Lands*, *Ind.* lands farmed out and cultivated by the tenant.

## S.

**SABBATH**, the seventh day; set apart from works of labour to be employed in piety. See *Divine Service*.

**SABLE**, *Fr.* sand.

**SABLIÈRE**, *Fr.* This word signifies a pit from which sand is taken. It sometimes means a large joist with holes in it, to admit smaller beams in ceilings, &c.

**SABLONIERE**, *Fr.* a sand-pit.

**SABORD**, *Fr.* a port-hole.

**SABRE**, (*sabre*, *Fr.*) a kind of sword, or scimeter, with a very broad and heavy blade, thick at the back, and a little falcated, or crooked, towards the point. It is generally worn by the heavy cavalry and dragoons. The grenadiers, belonging to the whole of the French infantry, are likewise armed with sabres.

The blade is not so long as that of a small sword, but it is nearly twice as broad. French hussars wear the curved ones somewhat longer than those of the grenadiers. The same will, perhaps, arrive when it may be thought advantageous to the service to arm the British grenadiers with this useful and formidable weapon.

**SABRE** (*coup de plat de.*) During the French monarchy, it was usual to punish dragoons for small offences, by giving them a certain number of blows with the flat side of a sword. A *coup de sabre* likewise signifies any stroke or blow, which is made with a sword or sabre.

**SABRE-Tasche**, from the German *sabel*, sabre, and *tasche*, pocket. An appointment

ment or part of accoutrement which has been adopted amongst us for the use and convenience of dragon officers. It consists of a pocket which is suspended from the sword-belt on the left side, by three slings, to correspond with the belt. It is usually of an oblong shape, scalloped at the bottom, with a device in the center, and a broad lace round the edge. The colour of it always corresponds with that of the uniform. The *sabre tasche* which is worn in the 10th regiment of light dragoons, commanded by his Royal Highness the Prince of Wales, is of a royal blue cloth, with an imperial crown and feathers, the motto *Ich Dien*, I serve; and the badge G. R. reversed. It is edged with white silver lace; the pocket under the flap of red leather, with red slings stitched with silver, waistbelt of the same, with silver buckles.

**SABRER**, *Fr.* to cut to pieces.

**SAC d'une ville**, *Fr.* the storming of a town.

**Mettre une ville à Sac**, *Fr.* to give a town up to the plunder of the soldiers.

**Sac**, *Fr.* a bag.

**Sac à poudre**, *Fr.* a bag of gunpowder. These bags are frequently used in war, for the purpose of intimidating an enemy, and of setting fire to places. They are of different sizes and dimensions: some to be thrown by the hand, and others out of a mortar. A French work, intitled *Le Bombardier Francois*, gives a full account of both.

**Sac à terre**, *Fr.* a sand-bag, or a bag filled with earth.

**Sac à morce**, *Fr.* a small leathern bag which is used for the purpose of carrying gunpowder to the different batteries to prime the pieces.

**Sac à laine**, *Fr.* a bag made of, or stuffed with wool and other soft materials. It is larger than a sand-bag.—Every army should be provided with a certain quantity of these bags, in order to supply the want of soil on critical occasions.

**Un havre Sac**, *Fr.* a knapsack. See **HAVRESACK**.

**Cul de Sac**, *Fr.* a street or passage that has no outlet.

**SACCADE**, *Fr.* in the manège, a violent check or jerk, which the horseman gives his horse by drawing both the

reins very suddenly. This is practised when the horse bears too heavy on the hand; but it ought to be done with great caution, as the frequency of it must eventually spoil the horse's mouth.

**SACNET**, *Fr.* a pouch. It likewise signifies a bag in the diminutive sense. A satchel.

**SACHES de mitrailles**, *Fr.* small bags filled with grape-shot, which are afterwards fired from cannon, or thrown out of mortars.

**SACHETS de balles de plomb**, *Fr.* bags of bullets.

**SACKS**. See **BAGS**.

**SACKERS**, they who sack a town.

**SACRAMENTUM**, the oath which was taken by the Roman soldiers, when they were enrolled. This oath was pronounced at the head of the legion, in an audible voice, by a soldier who was chosen by the tribune for that purpose. He thereby pledged himself before the gods, to expose his life for the good and safety of the republic, to obey his superior officers, and never to absent himself without leave. The aggregate of the legion assented to the oath, without going through the formal declaration of it. Another oath was then tendered, which related to the tribune only, and which was taken indiscriminately by every person that had access to the camp. Every individual bound himself by oath, not to take away any thing, and to carry to the tribune every article that might fall into his hands during the campaign.

**SACRE ou Sacret**, *Fr.* a name formerly given to pieces of ordnance that carried balls of 4 to 5lb. weight. Each piece weighed from two thousand five hundred to two thousand eight hundred pounds. The same as **Saker**.

**Saint SACREMENT**, *Fr.* holy sacrament, or consecrated host. According to Bailey, a sign of an holy thing, containing a divine mystery, with some promise annexed to it; an outward visible sign of an inward spiritual grace. In the acceptation of the French term, and in conformity to the tenets of the Roman Catholic religion, the holy sacrament, or consecrated host, is the symbol containing the real body and blood of Christ, and taken in remembrance of his crucifixion.

As a sense of religion, (to use the words

words of the translator of the Tactics and Discipline of the French army,) is the very best foundation of discipline in any country, we shall, in this place, transcribe the article which describes the military honours that are paid to the holy sacrament, or consecrated host, in France; leaving to casuists the solution of those points which have occasioned the difference between the Protestant Lord's Supper, and the Roman Catholic's belief in the doctrine of transubstantiation.

In page 414, Vol. II. we find the following particulars:

"If a body of men is halted in line, at any time when the consecrated host approaches towards them, the commanding officer will order arms to be presented. He will then order kneel, (*genou à terre,*) on which the drums will beat *aux champs*, to the field.

"If the corps is marching, the commanding officer will halt and wheel it into line, so as to make front to the consecrated host. He will then order arms to be presented, and the corps to kneel; on receiving the word kneel, (*genou à terre*) the three ranks are to assume the position directed to be taken by the front rank when firing.

"Should the body of men consist of a regiment or battalion, all the officers, not only captains of companies, but the officers also in the supernumerary rank, must salute with their swords; the bearers of the colours must salute with the colours, at the same time that the troops present arms; and they are to kneel also along with the general body.

"All non-commissioned officers, whether covering serjeants, or belonging to the supernumerary ranks, and likewise those attached to the guard of the colours, are to present arms, and kneel at the same time that the general body kneels.

"The colonel will take post at the distance of six paces in front of the centre of his regiment, and each lieutenant-colonel at the distance of six paces in front of the centre of his battalion; they will face towards the consecrated host, after giving the word kneel, (*genou à terre,*) they must salute with their swords, and kneel afterwards, if they are on foot.

"The adjutant-major and adjutants

stationed in the rear of the wings they respectively belong to, are to salute and kneel, at the same time that the battalion kneels to which they are attached.

"When the consecrated host is passing, the officers, non-commissioned officers, and soldiers, are to bow their heads.

"The consecrated host having passed, the commander of the troops will direct the drums to cease beating, and he will order attention, (*garde à vous,*) the officers, non-commissioned officers, and soldiers, will raise their heads.—The commandant of the troops will immediately order rise, (*debout,*) upon this word of command, the officers, non-commissioned officers, and soldiers, are to rise up. The non-commissioned officers and soldiers are to resume the position of presented arms. The officers and bearers of the colours will keep, the former, the points of their swords, and the latter, the point of the spear of the colours, lowered, or in the saluting position, until the commandant gives the word shoulder arms, (*portez-les armes.*) When the corps has risen from the kneeling attitude, the commandant will order arms to be shouldered."

**SACRILEGE**, *ou profanation*, Fr. sacrilege or profanation. In the old French service this crime was reckoned capital. By an order which was issued on the 1st of July, 1717, it was decreed, that every soldier who should be found guilty of having robbed a church in time of peace; or who, in war time, should be proved to have taken away church property, such as chalices, &c. from any consecrated place within the kingdom, or belonging to the enemy's country, was to be hung or strangled to death; and if the theft was accompanied by an act of profanation, such as drinking out of the chalices, and using irreverend expressions, &c. the culprit or culprits were condemned to be *burned alive*.

**SADDLE**, the seat which is put upon a horse for the accommodation of the rider. The saddles in the British service are reckoned better, both in quality and for service, than those of any other nation. The Austrian saddle has been lately adopted in some dragoon regiments.

**SADDLE** recommended by Marshal Saxe for the use of cavalry regiments. "The bow is to be made of iron, strong and well tempered, and fixed upon a pair of cloth or leathern pannels, stuffed with either wool or hair; to the end of which must be fastened the crupper; over these must be placed a black sheep-skin, or one of any other animal, which will serve at once for housing, and as a covering for the pannels: this skin is to be brought across the horse's chest, and will have a graceful effect; underneath it also must go a surcingle, which, in that position, can never gill either the horse or his rider, who, at the same time, will have a very close and easy seat. The stirrups are to be the same as those used in the riding school, fastened at the bow of the saddle, and capable of being shortened or lengthened at pleasure.

**SADDLE-cloth**, (*housses*, Fr.) See **FURNITURE**.

**SADDLE horses let to hire**, may be impressed by warrant of a justice in cases of emergency. See **MILITARY ACT**, section 46.

**SADDLERY**. See *Regimental Companion*, page 134, Vol. II.

**SAFE Conduct**, a security which is given by the king, under the broad seal, or by some other person in authority, to any individual, for his quiet coming into, or passing out of, the realm. It is also given by governors of fortified places, commanding officers, &c.

**SAFE-guard**. A protection granted by a prince or general, for some of the enemy's lands, houses, persons, &c. to preserve them from being insulted or plundered. See **GUARD**.

**SAFYNAMA**, *Ind.* a certificate or writing, specifying any matter of dispute, which it is found necessary to have settled or cleared up.

**SAGITTAL**, belonging to an arrow.

**SAGITTARIUS**, or **SAGITTARY**. See **ARCHER**, **BOWMAN**.

**SAGO**, *Ind.* a tree of the palm species. A flour is made from this tree, which, formed into bread and fresh baked, eats like hot rolls; when it grows stale it becomes hard, and requires to be soaked in water before it can be used. Three of the trees are found sufficient to give sustenance for one man during a whole year; and an acre pro-

perly planted, will supply food for one hundred for that period.

**SAGUM**, a woollen garment, which was formerly worn by the Roman soldiers when they took the field. It is said that the Gauls adopted the use of it.

**SAII**, *Ind.* a banker.

**SAHEB**, *Ind.* master, Sir.

**SAHOOKER**, *Ind.* a merchant.

**SAICK**, (*Saïque*, Fr.) A sort of merchant-ship, used chiefly in the Mediterranean; as also among the Turks.

**SAIGNÉE du fossé**, Fr. the act of drawing off the water which is in the ditch or fosse of a town or fortified place. When this has been executed, clays or hurdles covered with earth, or bridges made with reeds, must be thrown upon the mud, to establish a firm footing.

**SAIGNÉE du saucisson**, Fr. the act of cutting off a part of a linen saucisson, which is filled with gunpowder, for the purpose of introducing the mine or cylindrical tube, in order to set fire to a mine.

**SAIGNER une pièce**, Fr. an expression used in artillery, when a piece of ordnance, that is mounted on a carriage, has its breech carried away by the violence of the explosion. This sometimes happens when the discharge is made directly downwards, or from top to bottom.

**SAIGNER une rivière**, Fr. to turn the current of a river, by partially drawing off some of its water. We also use the word *Saigner* as an English word in military matters; hence *Saigner a mole*, to empty or take water out of it by conveyances under ground, that it may be passed over, after having laid hurdles, &c. over the mud,

**SAIGNER du nez**, Fr. literally, to bleed at the nose. This is said by the French of a piece of ordnance which is fixed in such a manner, as to carry away its breech. This happens when the cylinder becomes crooked or bent, from the piece having been fired repeatedly, without being cooled or refreshed.

**SAILLANT**, Fr. salient. See *Saliant Angle*. This word, as well as *Saillie*, signifies generally any part of a building that does not run up perpendicularly from its base, but projects or slopes out.

'**St. GEORGE'S**

**St. GEORGE's Guard**, a guard of the broad sword or sabre, used in warding off blows directed against the head. See **BROADSWORD**.

**SAISIE des appointemens des officiers**, Fr. the sequestration of officers' pay and emoluments. If, in consequence of any part of their pay being retained by the captain of a troop or company, the soldiers belonging to the old French service, indemnified themselves by raising contributions, and the fact was made known to the war-office, the pay, &c. of such captain or captains was directed to be stopped in the hands of the treasurer-general belonging to that department; and the commissaries of war were ordered to make good the several exactions, and to report the names of all such officers to the king, that they might be instantly cashiered. This regulation was issued on the 7th of February, 1661.

**SAISIR**, Fr. to take sudden possession of any thing. To seize.

**SAKER**, an old word for cannon.—It carried a shot of five pounds and a quarter weight: the diameter of the bore was three inches and 9-16ths; the length eight or nine feet. See **CANNON**.

**SALADE**, Fr. this word literally means salad. It likewise signifies a head piece. The French use it frequently in a figurative sense, viz.

*Donner une SALADE à quelqu'un*, Fr. to give any one a good dressing.

*Régiment de SALADE*, Fr. a term of ridicule which the French frequently applied to small new-raised corps; such as our independent companies which were levied for rank only.

The men belonging to these corps were also vulgarly called *mangeurs de salade*, salad-eaters.

**SALAMANDRE et serpens**, Fr. In the *Nouveau Dictionnaire Militaire*, published at Paris, in 1801, by A.T. Gaigne, this article is thus described: Brittle vessels, made of earthen composition, are filled with these venomous animals, care having been previously taken to let in the air by small apertures. When a storming party is on the point of ascending the breach, these vessels are suddenly thrown down, and being broken, the enraged and hungry inmates are scattered among the soldiers, to their no small surprize and discom-

figure. In order to render them innocuous, the assailing party should have salt in their havresacks, by the application of which upon the serpent's back, he is immediately benumbed, and is ultimately destroyed.

**SALE**, state of being venal; price.

**SALE of Commissions**. The sale and purchase of commissions, though not unknown in other services, is of general usage in the British; the navy, the marines, and the royal artillery excepted, Commissions in the British army are sold for various purposes; sometimes to indemnify individuals for their original purchase; sometimes as rewards for gallant and meritorious actions; sometimes as provisions for the widows or children of deceased officers; and sometimes for the relief of an indigent gentleman or lady. Such multiplied channels for the disposing of an article, which is always called for in a country abounding in young men of fortune and expectations, must naturally produce all the speculative commerce of bargain and sale; and as London is the grand emporium of every species of traffic, official or otherwise, it is not wonderful that a most lucrative system of brokerage should branch out of, or rather be spuriously connected with, the regular agency of regiments: Nor can it be prevented, so long as the partial agency of corps is suffered to continue. In Vol. I. 6th edit. of the *Regimental Companion*, a necessary caution is thrown out for the benefit of young purchasers. We wish it were within the limits of this undertaking to enter at large into the subject.

We have already had opportunities of expressing our full sense of the impropriety of sale and purchase, and our decided opinion, that not only the whole system ought to be abolished, but, that a general agency board should be established, communicating with the different paymasters of corps, and being accountable to the pay-office for the regular distribution of public monies.—Even in the event of the sale and purchase of commissions being continued, (which God forbid they should) we do not scruple to say, that not only the service, but the several individuals who embrace a military life, would be considerably benefited. We humbly pre-

sume, that whenever such a board shall be established, it will have directions to receive vouchers from the commanding officers of the corps to which the candidates for vacant companies, &c. belong, stating, through the commander in chief, or secretary at war, for his Majesty's satisfaction, their abilities to do justice to the service. And to this end, we shall hope to see a school of theory established in each British regiment, to communicate with the Royal Military College.

**SALIAN Priests**, twelve persons, among the Romans, whose particular duty was to take care of the ancilium, or sacred shield, which was believed to have been sent by the gods to Numa Pompilius. These priests were attended by a certain number of maids, who were called the Salian virgins. It is further said, in tradition, that when the shield fell from Heaven, a voice was heard to say, "Rome shall be mistress of the world, as long as she remains possessed of this shield." At the commencement of the month of March, in every succeeding year, three festival days were instituted, during which period, no business could be transacted of any sort, nor any functions of a civil nature be performed. The author of the *Nouveau Dictionnaire Militaire*, (from which we have chiefly extracted this article) observes, that many writers have mentioned ancilium as a javelin. "But I have satisfied myself," continues the same author, "by a reference to many old established authorities, that the ancilium was a shield which was worn by a particular sort of militia called Ancilistæ, that threw javelins.

**SALIENT Angle**, in fortification, that whose points turn from the center of the place. See FORTIFICATION.

**SALLE d'Armes**, Fr. A fencing school.

**SALLE d'armes dans un magasin ou arsenal**, Fr. an armory. A particular place (as in the Tower or at Woolwich), where arms of all descriptions, for offensive or defensive purposes, are kept in store.

**SALLESEE**, Ind. arbitration.

**SALLIS**, Ind. an arbitrator.

**SALLY**. See STEGE.

**SALLY-ports**, or *postern-gates*, as they are sometimes called, are those under-

ground passages, which lead from the inner to the outward works; such as from the higher flank to the lower, to the tenailles, or the communication from the middle of the curtain to the ravelin. When they are constructed for the passage of men only, they are made with steps at the entrance, and outlet. They are about six feet wide, and eight feet and a half high. There is also a gutter or shore made under the sally-ports, that are in the middle of the curtains, in order that the water, which runs down the streets, may pass into the ditch; but this can only be done when they are wet ditches.—When sally ports serve to carry guns through them for the outworks, instead of making them with steps, they must have a gradual slope, and be eight feet wide.

**SALMANAZER**, Ind. the salutation of victory.

**SALOOTER**, Ind. a farrier.

**SALOOTEREF**, Ind. the business of a farrier.

**SALTPETRE**, a salt, out of which, by means of a chymical preparation, a fixed alkali and a volatile acid may be extracted. These constitute the principal ingredients or properties that distinguish saltpetre from other salts.—This salt is collected from the surfaces of the earth, out of cellars, vaults, stables and other places, above and under ground, which are covered in, and are impregnated with animal and vegetable particles, and to which the air has access. Saltpetre is used in the composition of gunpowder after its third concoction or boiling.

**SALTING Boxes**, in artillery, are boxes of about four inches high, and two inches and a half in diameter, for holding mealed powder, to sprinkle the fuzes of shells, that they may take fire from the blast of the powder in the chamber; but it has been found, that the fuze takes fire without this operation, so that these boxes are now laid aside.

**SALPETRE**, Fr. See SALTPETRE.

**SALPETRIÈRE**, Fr. a particular spot in an arsenal where there are pits, &c. for the purpose of making saltpetre.

**SALPETRIERS**, Fr. men employed in making saltpetre.

**SALVE**,

**SALVE**, *Fr.* a volley. It generally means a discharge of heavy ordnance and other fire-arms in concert.

**SALUER** *de la mousquetrie*, *Fr.* to fire a volley, or a discharge of musquetry only.

**SALUER** *du canon*, *Fr.* to salute by a discharge of ordnance.

**SALUER** *de la voix*, *Fr.* to huzza; to cry out, as *Vive le Roi!* God save the King! *Vive la République*, Long live the Republic! This manner of saluting generally appertains to the mob of a country, which lavishes its applause upon every man that happens to succeed. It has, however, been customary, both in England, France, and other countries, for whole battalions of soldiers to salute à *vice voix*, or by exclamation, in which case they generally take off their hats, and give three huzzas.

**SALUER** *du pavillon*, *Fr.* to salute with the colours.

**SALUER** *à boulet*, *Fr.* to salute with ball.

**SALUT**, *Fr.* the salute.

**SALUT** *du sponton*, *Fr.* the spontoon salute.

**SALUT** *de l'épée*, *Fr.* the sword salute.

**SALUT** *de mer*, *Fr.* the deference and respect which are shown at sea by ships of inferior force to those of superior rate. This is done by lowering the flag. The British flag stands paramount to all others, and is always saluted by foreign ships at sea.

**SALUTATOIRES**, courtiers, saluters or persons who pay homage or obedience to others. The following article is from a publication (*viz.* *Dictionnaire Militaire*) which made its appearance in 1801, and has been extant in France during all the stages of her unprecedented revolution.

"It has been customary (says its author), from time immemorial, to cast a ridicule upon every species of attendance on persons in superior stations, without any reflexion being made, that such an intercourse must eventually be productive of considerable advantages to all parties. The custom itself has existed from the earliest times; and I am confident, that the very persons who, but a little while back, condemned the practice, are at this very moment sedulous in their attentions to some

man in power; and they are so, not through accidental circumstances, but from their own reflexions, and from mental acquiescence. The Roman soldiers did not scruple to follow the example of courtiers. When they were encamped, they went every morning in a body to pay their respects to their centurion. The centurion waited upon the tribune: and after that, the tribune, together with other courtiers, went to the general's tent. The only objection (observes our author) which I can make to this ceremony, is in the visit of the soldiers to their centurions. Yet these haughty citizens of Rome, (who looked upon kings as their inferiors) carried the system of paying homage to a much greater extent. They spent a certain portion of the forenoon, in waiting upon those of their fellow citizens, whose votes or good will could contribute to their attainment of any place, or situation, in the Republic.—Some, out of respect and deference, remained in humble attendance in the anti-chamber; others stood in the vestibule; and when their patrons came forth (in order to go through the same ceremony themselves elsewhere), these saluters or courtiers very submissively crowded round their litters, and accompanied them to the spot, where they alighted, paying fresh reverence as the concluding homage of the morning.—This attendance became, at last, a heavy tax upon the several classes of dependent citizens; for they felt severely the consequences of the slightest neglect to their superiors. The mere empty parade of a court must be contemptible in the eyes of all thinking men; but there is certainly a middle tract which may always be adopted. Whereas the Romans (with all their pride and apparent independence) went into two opposite extremes. They affected to despise kings, and yet almost every one amongst them condescended to play the part of a menial, and dependent servant.

**SALUTE**, a discharge of artillery, or small arms, or of both, in honour of some person; also the ceremony of presenting arms. The colours salute royal persons, and generals commanding in chief; which is done by lowering the point within one inch of the ground. In the field, when a regiment is to be reviewed

ed by the king, or his general, the drums beat a march as he passes along the line, and the officers salute together, pointing their swords downwards. The ensigns do so likewise, by lowering their colours, when his Majesty, or any of the royal family, are present. When the word of command, *shoulder arms*, is given, the officers recover their swords, and the ensigns raise the colours together.

**Royal SALUTE.** This consists in the discharge of twenty-one pieces of ordnance, and is given on the approach of his Majesty at review days; and on solemn occasions, wherein their Majesties appear.

The other salutes are—19 pieces to the commander in chief; 17 to a general; 15 to a lieutenant-general; 13 to a major-general; 11 to a brigadier-general.

These salutes are answered by one gun less from the body saluted; where troops, &c. approach one another.

**SAMATA.** See CURASS.

**SAMBUCUS** (*Sambucus*, Fr.), an ancient musical instrument of the wind kind, resembling a flute. It probably derives its name from Sambucus, the Elder tree; being made of that wood.

**SAMBUCUS** was also the name of an ancient engine of war used by Marcellus in besieging Syracuse. Plutarch relates that two ships were required to carry it. A minute description of this engine may be seen in Polybius.

**SAMPIT**, an instrument or weapon which is used by the inhabitants of the island of Borneo. They sometimes convert it into a sort of cross-bow, from which they shoot poisoned arrows; at others, into a javelin; and frequently into a bayonet, which they fix at the end of a firelock.

**SAMPODAR**, *Ind.* a treasurer or cashkeeper.

**SAND**, fine gravel. The best sand for good mortar, is that whose grain is not too small, and which is clear of the earthy particles. Sand found in rivers is esteemed the best, as having a coarse grain, and being free from earth and mud. See MORTAR.

**SAND Bags.** See BAGS.

**SANG**, *Fr.* blood. This word is used among the French in many senses. They say, figuratively, *Se battre au pre-*

*mur sang*, to fight (as duellists do) until blood is drawn on one side or the other: *Mettre un pays à feu et à sang*, to commit every species of enormity in a country by destroying the human race, and burning their habitations: *Se faire la guerre à feu et à sang*, to carry on the war with fire and sword; or without the least regard to humanity.

**SANG froid**, *Fr.* a certain state of the mind, in which it is not ruffled or agitated. It also signifies cold blood. Hence, *Il l'a tué de sang froid*, he killed him in cold blood, or without emotion.

**SANGIAC**, a Turkish dignity, which entitles the person, who is invested with it, to have a horse's tail carried before him. The Sangiac is governor of a province, and next in authority to the Beglebergs, who are viceroys in that country, and give the name of *Beglerbut* or *Begherbey* to a mulatta which they support at their own expence. Sangiac also means a standard which is used by the Turks.

**SANGLANT**, *Fr.* bloody. *Combat sanglant*, a bloody contest. The French also say, *Injure, offense sanglante*, an outrageous injury or offence.

**SANGLE**, *Fr.* a girth.

**SANGLER**, *Fr.* to gird.

**SANGUINARY**, (*Sanguinaire*, Fr.) one who loves blood, and delights in deeds of sanguinary devastation and spoil. A sanguinary chief may have his name mentioned in history, and be marked for extraordinary feats in war, but the tradition will only serve to hand him down to posterity as an object of horror and detestation.

**SANS Culotte**, *Fr.* a revolutionary term, which was first given by the French to the most indigent class of the people, and which Robespierre, and other furious demagogues, endeavoured to convert into an honourable title.—It means, literally, a man without breeches.

**SANS-culotterie**, *Fr.* the class consisting of what are called *Sans Culottes*.

**SANS-culottides**, *Fr.* a name given, for some time, to the five complementary days which were added to the twelve months that form the revolutionary year of the French Republic.

**SAP**, (*sape*, Fr.) in sieges, is a trench, or an approach made under cover, ten or twelve feet broad, when the besiegers

ers come near the place, and the fire from the garrison grows so dangerous, that they are not able to approach uncovered.

There are several sorts of *saps*: the single, which has only a single parapet: the double, having one on each side; and the flying, made with gabions, &c. In all *saps*, traverses are left to cover the men.

**Double SAP, (Sape double, Fr.)** Is that which has two sides, and where the men work between two parapets. The double sap is undertaken in cases of imminent danger. By way of precaution, a picket or stake, which rises from 18 to 20 inches above the top, must be fixed in each gabion, for the purpose of keeping it firm and upright, when the gabion is filled. A beam or small path, about seven inches wide, must also be left at the foot of the gabion. When the gabions have been filled up with earth, a fascine must be laid on the borders or edges of it, and another above through which the picket or stake is forced, so as to stand some inches higher than the gabion. After this the whole is to be covered with earth in order to form a parapet, which is sloped towards the point of attack. A trench, properly so called, is always from 3 French, or 4 feet English deep, and 10 to 12 French, or 11 to 13 feet English broad. Every species of work, which leads by way of communication upon these dimensions, to a fortified place, is called a trench: that which fronts the place, is called the parallel or place of arms belonging to the trench, and is used for the lodgment or distribution of troops. The articles which are indispensably necessary to form or work a sap, consist of gabions, sand-bags, iron pitch-forks, poles with iron hooks, stakes, pick-axes, spades, mallets, mantlets. The chief of a brigade in a sapping party or detachment, or the leading sapper, should be particularly careful to prevent every appearance of intoxication among the workmen. For the manner in which *saps* are conducted, see *SAP*, 2nd edit. **BOMBARDIER.**

**SAP-flying, (Sape volante, Fr.)** When a flying sap is undertaken, it is not necessary to fill up the gabions; these are merely conducted upon the plan or

scale which the sap embraces. Flying saps are resorted to according to circumstances, during the night, and when the danger of being attacked is not immediate.

**Half SAP, (Demi-Sape, Fr.)** A trench which is sunk by degrees near some fortified place, and during the execution of which, the workmen are covered by gabions, sand bags, and mantlets. The difference between working at a demi or half sap, and at a trench, consists in the one being done in open day and to a considerable extent, whereas the other is accomplished under circumstances of peculiar caution, and on a very confined scale. There are six sorts of saps, viz.

**Single SAP, (Sape simple, Fr.)** That which has a single parapet, on account of the work being on one side only.

**Covered SAP, (Sape couverte, Fr.)** The covered sap consists of a gallery that is sunk into the earth, by means of which soldiers may secretly approach the work they have orders to surprise.

**SAP, Fr.** The French say:—*être commandé pour la sape*, to be in orders for the sap; *être de jour, aller à la sape*, to be officer of the day, to be on duty for the sap; *pousser, continuer la sape*, to forward, to get on with, or continue, the sap; *commander la sape*, to give orders for the opening or commencement of a sap.

**SAPER, Fr.** To sap or undermine.

**SAPPER, Fr.** A sapper. See *SAP*, in the 2nd edit. of the **BOMBARDIER**, or **POCKET GUNNER**.

**SAPPERS, (Sapeurs, Fr.)** are soldiers belonging to the artificers or engineers, whose business it is to work at the saps, and for which they have an extraordinary pay.—A brigade of *sappers* generally consists of eight men, divided equally into two parties. Whilst one of these parties is advancing the sap, the other is furnishing the gabions, fascines, and other necessary implements; they relieve each other alternately.

**SARAT.** The breaking up or ending of the rains, is so called in India.

**SARDER, Ind.** A chief, a leader.

**SARISSA.** A weapon of offence, which was first used by the Macedonians, and afterwards by the Grecians. It was longer than the modern pike, measuring

measuring from twelve to fourteen feet in length. The soldiers that carried this weapon were in complete armour, and when they went into action, they wore a shield on their left arms, and fought with the sarissa; to the end of which was attached a sharp cutting blade made of iron. The president Fauchet states, that the inhabitants of Flanders used this offensive weapon, which they called *godenhoc*. He further adds, that by means of this long pike, the Counts of Artois and Saint Pol, were completely routed and overturned in a deep ditch or ravine, close to Courtray, in 1311.

**SARK.** A small island on the coast of Normandy in France, subject to Great Britain. The mutiny act extends to that island in various instances. See *MURIN* Act, sect. 78.

**SARRAU, Fr.** A frock made of coarse linen or Russia duck, such as is generally worn by peasants, wagoners and carmen, &c. It more particularly signifies a loose coat, with a collar and cape of a different colour. Of this description are the coats and frocks of our artillery drivers, and other camp followers.

**SARRASINE, Fr.** See *HERSE*.

**SASCE, Ind.** The moon.

**SASH.** A mark of distinction, which in the British service, is generally made of crimson silk for the officers, and of crimson mixed with white cotton for the serjeants. It is worn round the waist in most regiments; in some few, particularly in the Highland corps, it is thrown across the shoulder. Sashes were originally invented for the convenience and ease of wounded officers, &c. By means of which, (in case any of them were so badly wounded, as to render them incapable of remaining at their posts,) they might be carried off with the assistance of two men. They are now reduced to a very small size, and of course unfit for the original purpose.—Both the sash and gorget, indeed, must be considered as mere marks of distinction, to point out officers on duty. In some instances they are worn together: in others, the gorget is laid aside, and the sash only worn. The British cavalry tie the sash on the right, the infantry on the left, side. The sashes for the Imperial army, are made

of crimson and gold; for the Prussian army, black silk and silver; the Hanoverians, yellow silk; the Portuguese, crimson silk, with blue tassels. The modern French have their sashes made of three colours, viz. white, pink, and light blue, to correspond with the national flag. For order respecting sashes, see *SASH*, in Index to the *REGIMENTAL COMPANION*.

**SATELLITE, (Satellite, Fr.)** A person who attends on another, either for his safety, or to be ready to execute his pleasure.

**SATELLITES, Fr.** Certain armed men, of whom mention is made in the history of Philip Augustus, king of France. The word *satellite* itself, which we frequently find in ancient historians, signifies a guard or attendant about the person of a prince. It is derived from the Latin word *satelles*, which comes from the Syriac term for a companion. The satellites of Philip Augustus were men selected from the militia of the country, who fought on foot and horseback. The servants or baunens who attended the military knights, when they went into action, were likewise called *satellites*, and fought in their defence, mounted or on foot.

**SATISFACTION.** When an officer or other person goes out to fight with one whom he has offended, or by whom he has been offended, he is said to give or take satisfaction.—Hence to demand satisfaction is tantamount to challenge, to call to account, &c.

**SATRAPA, (Satrape, Fr.)** The chief governor of a province in Persia, and in other parts of India. These men are commonly very rich, extremely haughty, much addicted to pleasure, and generally inhuman. The French frequently apply the term *satrape*, by way of irony, to the understrappers of a government.

**SATRAPY.** The jurisdiction or government of a *Satrapa*.

**SAUCISSE, } in mining, is a long**  
**SAUCISSON, } pipe or bag, made of**  
cloth well pitched, or sometimes of leather, of about 1½ inch diameter, filled with powder, going from the chamber of the mine to the entrance of the gallery. It is generally placed in a wooden pipe, called an *auget*, to prevent its growing damp.

damp. It serves to give fire to mines, caissons, bomb chests, &c.

**SAUCISSON**, is likewise a kind of fascine, longer than the common ones: it serves to raise batteries, and to repair breaches. Saucissons are also used in making epaulements, in stopping passages, and in making traverses over a wet ditch, &c.

**SAUCISSON de brulot**, Fr. A machine made use of to set fire to the different compartments in a fire-ship.

**SAUCISSON d'artifice**, Fr. Saucissons used in artificial fire-works.

**SAUCISSONS volans**, Fr. Flying saucissons: a species of sky-rocket.

**SAUVE-conduite**, Fr. A pass. This word among the French signifies not only *safe-conduct*, but also a letter of licence; such as creditors frequently give to individuals who have failed in business, &c.

**SAUT**, *Ind.* An hour.

**SAUT**, Fr. This word is used in hydraulics to signify a considerable fall of water, such as the fall of Niagara, &c.

**SAUT**, Fr. This word is often used among the French, to signify that a soldier has suddenly risen from the ranks to the situation of lieutenant or captain. We also say, in the same sense, to leap over; hence to leap over the heads of older officers.

**SAUTER**, Fr. To leap.

**SAUTER à l'abordage**, Fr. To leap upon the deck, or on any part of an enemy's ship, for the purpose of boarding her.

**SAUTER**, Fr. The French also say, *Faire sauter un bastion*, to blow up a bastion, or cause it to blow up; *faire sauter la cervelle à quelqu'un*, to blow a person's brains out, or to fire a pistol at his head.

**SAUTER à la Gorge**, Fr. A figurative expression among the French, which signifies to rush upon an enemy with rage and fury.

**SAUTER un fossé**, Fr. To leap a ditch or fossé.

**SAUTER en selle**, Fr. To get on horseback. To jump upon your saddle.

**SAUVE-garde**, Fr. Safe-guard. Protection.

**Accorder des Sauve-gardes**, Fr. To grant protections.

*Envoyer une garde en SAUVE-garde*,

Fr. To send out a party for the purpose of escorting persons, or of protecting any particular quarter.

**SAUVE qui peut**! Fr. Let those escape that can! This expression is familiar to the French in moments of defeat, and great disorder.

**SAUVER**, Fr. To save. Hence *sauver la vie à quelqu'un*, to save a person's life; *sauver une ville*, &c. *d'entre les mains des ennemis*, to rescue a town out of the enemy's hands.

**SAW**, a dentated steel instrument with which wood or metal is cut by attrition. Each pioneer is provided with one.

**SAYON**, Fr. A kind of course habit in which soldiers were formerly clothed among the French.

**SAWN**, *Ind.* The name of an Indian month, which corresponds with July.

**SCABBARD**, (*Fourreau*, Fr.) A case commonly made of black leather, with a ferrel at the end, in which a sword, sabre, &c. may be sheathed.

**Bayonet SCABBARD**. A leathern sheath made in a triangular form to correspond with the shape of the bayonet.

**To SCABBARD**. To punish with the scabbard of a bayonet. Infantry soldiers are sometimes scabbarded under the sanction of the captains of companies, for slight offences committed among themselves. A court-martial is held in the serjeant's room or tent, to ascertain the culprit's guilt; it having been previously left to him to abide by the judgment of his comrades, in this manner, or to be tried by a regimental court-martial.

**SCABBARD-button**. A brass button or hook by which the scabbard is attached to the frog of the belt.

The word *scabbard* has been sometimes used, in a figurative sense, to distinguish those persons who have obtained rank and promotion in the army, without seeing much hard service, from those who have fought their way through all the obstacles of superior interest, &c. Hence the favourite expression of a deceased English general—*Some rise by the scabbard, and some by the sword!* Which means more than we are at liberty to illustrate, but which may be easily applied to cases in point.

**SCALADE**, from the French *Escalade*, a furious attack upon a wall or rampart, contrary to form, and with no regularity. This is frequently done by means of ladders, to insult the wall by open force.

**SCALE**, a right line divided into equal parts, representing miles, fathoms, paces, feet, inches, &c. used in making plans upon paper; giving each line its true length, &c. See also *Balance*, *Escalade*, &c.

**SCALENE**, *Fr.* A term used in geometry to express a triangle whose three sides and three angles are unequal to one another.

**SCALING-ladders.** See **LADDERS**.

**SCALLOP**, any segment of a circle.

**To SCALP.** To deprive the skull of its integuments. A barbarous custom, in practice amongst the Indian warriors, of taking off the tops of the scalps of the enemies skulls with their hair on. They preserve them as trophies of their victories, and are rewarded by their chiefs, according to the number they bring in. In America it is vulgarly called *scalping*.

**To SCAMPER**, (*Escamper*, *Fr.*) To run away precipitately.

**SCARF.** See **SASH**.

**SCARLET**, the prevailing national colour for the dress of the British. The artillery, and cavalry, are clothed chiefly in blue; rifle corps in green; and the cavalry for foreign service in light blue.

**SCARPE.** See *Escarpe*.

**SCENOGRAPHY**, (*Scenographie*, *Fr.*) The representation of a building, town, &c. as it appears in prospective or from without, with all its dimensions and shadows.

**SCHEDULE.** An inventory, a list; also something referred to by numbers or letters; as the oaths of the recruit and magistrate, marked A and B at the end of the mutiny act.

**SCHOOL**, (*école*, *Fr.*) A house of discipline and instruction; a place of literary education; an University. It is a more general and comprehensive term than college or academy. The French have made a great distinction on this head with respect to their military institutions. Thus the great receptacle for military genius was called *L'école Militaire de Paris*; the military school

of Paris; whereas the subordinate places of instruction and the preparatory houses, were termed colleges, viz. *Collèges de Soreze, Brienne, Tivon, Rebus, Beaumont, Pont-le-voys, Vendôme, Effiat, Pont-a-Mousson, Tournon*.

**ROYAL MILITARY SCHOOL.** See **COLLEGE**.

*The Royal Military School of Paris*, (*Ecole Royale Militaire de Paris*, *Fr.*) This celebrated establishment, which so many years supplied France with superior talents and abilities, and to which Bonaparte is indebted for the solid ground work of that military knowledge that has astonished and confounded Europe, owes its origin to Henry IV. who first erected a public building in Anjou, for the free education of the children of poor noblemen; it was called the college of *La Flèche*, where in one hundred young boys of the above description were supported, &c. at the king's expence. They were there taught Latin and the liberal arts by the Jesuits; whose learning, and aptitude at teaching others to learn, have been so deservedly admired in every quarter of the globe. This order, however, having been banished out of France in 1770, by Louis XV. under the flimsy pretext, that the members interfered with the government of the country, (whilst all their crimes consisted in being too virtuous to countenance the debaucheries of that weak monarch; and in being too independent in worldly circumstances and religious principles, to submit to acts of degradation;) the direction of the college was entrusted to the secular priests, and the number of students was increased to 350. On this occasion it was distinguished by a particular mark of royal favour, and was called *The Royal College*.

In addition to this provincial establishment, Louis XV. instituted the Royal Military School in the neighbourhood of Paris, where 250 young lads received a regular education under the most able masters; particularly in those branches which contributed to military knowledge. During their vacations, and at periods of intermission from classical pursuits, they were attended and instructed by experienced officers. They generally remained until the age

of 18, and were, after that, distributed among the different regiments with appropriate commissions. They were then distinguished by being permitted to wear a cross, which was tied to a crimson piece of ribbon, and hung from a button-hole in their coat. The cross, on one side, represented the figure of the Virgin Mary; and on the other, there was a trophy adorned with three fleurs de lis. They had likewise an annual pension of 200 livres, (about 8l. sterling) which was paid them without deduction, until they obtained the rank of captain; provided they had a certificate of good behaviour from the staff or *état major* of their corps. They received moreover, when they quitted the school, a small kitt of linen, a hat, sword, and an uniform coat. They were replaced in the military school by an equal number of youths who came from the college of La Flèche, for that purpose, at the age of 13 or 14.

Both these establishments underwent a considerable alteration during the administration of the Count de St. Germain, in April 1776. This minister persuaded Louis XVI. that great public benefit might be derived from increasing the number of these colleges, and admitting youths from every class of his subjects. When these alterations took place in the Royal Military School, all the young men that were 18 years old were incorporated with the regiments of gentlemen cadets. These enjoyed all the advantages which their predecessors had possessed; with this exception, that they did not wear the uniform of their corps, nor the cross. Those lads that had not reached the period in question, were placed in different corps, and several remained in the military school who were afterwards provided for on another footing. The number of young men was gradually increased, not only by fresh arrivals from La Flèche, but by the admission of several others, for whom a yearly pension was paid by their parents. The latter were not, however, entitled to any advantage or indulgence beyond what was generally allowed.

On the 28th of March, 1776, the king gave directions, that ten colleges should be established, over the gates of each of which was written—*Collège*

*Royal Militaire*; Royal Military College. These Colleges were under the immediate care and instruction of the Benedictine Monks, and other religious persons.

The secretary of state held the same jurisdiction, over these colleges, that he possessed over La Flèche, and the military school of Paris.

There were always 50 at least, and never more than 60 young men placed for education in each of these colleges, at the expence of the king; amounting annually per head to 700 livres, about 30l. sterling. For this sum each student was supplied with a blue coat with red cuffs, and white buttons, a blue surtout or great coat, two white waistcoats, two pairs of black breeches, twelve shirts, twelve handkerchiefs, six cravats, six night caps, two dressing gowns, two hats, two pairs of shoes, combs, and powder-bag. These articles were, in the first instance, to be provided by the young man's parents or friends, and when he quitted, he was furnished with the same articles at the expence of the college. Travelling expences, postage of letters, &c. were defrayed by the parents or friends of the different students. The secretary of state's letter, conveying the king's approbation, was the voucher for admission; but no child could be received unless he had previously learned to write and read. Candidates for admission underwent a close examination on the very day they arrived, and if they were found deficient in any of the necessary qualifications, they were sent back to their friends, with directions not to return until the year following, provided they got properly instructed during that period. No person could be admitted who was lame, or otherwise deformed; and certain proofs of nobility were to be established and given in, as well as proofs of property; vouched for by two gentlemen who lived in the neighbourhood of the applicant, and confirmed by the intendant of the province, or by the governor. And in order to afford the parents ample time to collect the necessary vouchers, the preliminary consent of the king was forwarded to them six months before July; announcing that their children might be pre-

sented to the college on the 7th of September next following.

The king's students, or those young lads for whom 700 livres were annually paid out of his privy purse, were taught in the subordinate colleges, as in the military school at Paris, every thing that could be useful to a military character, besides music and other accomplishments. They were, moreover, regularly supplied with foils for fencing, and with mathematical and musical instruments. In order to excite emulation, prizes and rewards were distributed according to merit; and an allowance for pocket money was made in the following manner:—20 sols, or 10d. English per month, to each boy under twelve; and 40 sols, or 20d. to all above that age. The royal pensions and allowances were paid every quarter, commencing on the 1st of April, 1776. These payments were regulated by specific returns, which were regularly forwarded on the 5th of each month preceding the expiration of the quarter, to the secretary at war, and were signed by the heads or superiors of each college, accompanied by an exact muster-roll of all the students. By direction of the secretary at war, every species of necessary furniture and utensil that was found for La Flèche, and the military school of Paris, was distributed, in equal proportions, among the subordinate colleges; a preference, however, was uniformly given to the calls and necessities of those two establishments. The colleges that were appointed to pass the final examination of students received a double quantity of each article.

Every student who was admitted into any of the subordinate colleges at eight or nine years old, was obliged to remain there six years before he could appear at the final examinations; that period being thought necessary to complete his education. With respect to those who were entering into the tenth or eleventh year, and even those who were orphans, they were not forced to fill the term of six years instruction, provided they had already acquired sufficient knowledge to entitle them to a favourable report from their superiors.

The king directed that the pensions for 50 students upon the establishment,

should be paid three months in advance to the several colleges, for the purpose of enabling them to complete the necessary buildings, &c. Each of those students was allowed a small separate apartment, with a key to the door. They were distributed in a particular quarter of the building, that they might be more easily attended to; having no other communication with the honorary pensioners, or those who had an allowance from their parents, than what was absolutely necessary to carry on the public instruction and discipline of the place.

The college of Bricenne, a small town in Champagne, was fixed upon for the admission of the young lads whose pensions were paid by their parents. The latter likewise defrayed the expences of the journey; but they were entitled to the same indemnification that was afterwards granted to the king's students.—The same rules and method of instruction were pursued by the different colleges, in order that all the candidates might be brought together at the same time for examination. This examination was made in the presence of the principal, and under inspector of the schools, and of other literary men, who were appointed by the secretary of state for that purpose, and received 1200 livres, or 50l. sterling, as a gratification for their attendance, besides board and lodging at the king's expence. The *concoirs*, or meeting for examination, took place every year, and lasted from the 1st to the 15th of September; the original one commencing in September, 1778. The young men that passed the examination to the full satisfaction of these gentlemen, were placed in different regiments, and received commissions accordingly.

The four best informed and most able of the young candidates, received pensions or temporary allowances in the following manner:—The two first got 150 livres, between 6l. and 7l. sterling; and the two next 100 livres, equal to 4l. odd per annum, until they were promoted to companies. They were further entitled to wear the ancient cross of the military school. If any of them quitted the service before they had obtained the above rank of captain, the pension ceased.—They likewise received, (in common with

with all the other students that left the establishment) 200 livres, between 8l. and 9l. on their becoming lieutenants in the army.

The young men that were not found sufficiently instructed to join a regular corps, as gentlemen cadets, remained at the *Collège de Concours*, or college of examination, until the following year, when they were again questioned as to every particular which regarded a military education. But, (let their success on this occasion be what it might,) they ceased to be entitled to those marks of distinction and temporary allowances which were given to the first successful candidates. Those boys, who were brought by their parents, and for whom a pension was to be paid, lost all pretensions to the notice of government if they failed to give satisfaction at this final hearing. Proper representations of their incapacity were made by the inspector of military schools to the secretary of state, which representations were formally attested and corroborated by the opinion and judgment of the superior of the college of Brienne, in order that an accurate account might be given to his Majesty, and that the parents might be officially directed to send or come for their children.

The superior, or head of each subordinate college was directed, from the 1st of July 1778, to send, under cover to the secretary at war, an effective return of those students that had finished their course of education, and were prepared for examination. An order was then issued from the war-office for their attendance at the college of Brienne.

The heads of colleges were enjoined to transmit, annually, to the secretary of the war department, an analysis of the various elementary tracts which they had perused, accompanied by comments and observations thereon, together with original suggestions of their own. 6000 livres, or 250l. sterling, were allowed out of the annual revenue of the military school of Paris, for the specific purpose of rewarding those writers who should publish the best treatises relative to the military education of youth; and when this intent was fulfilled, the surplus or the sum entire was appropriated to the pur-

chase of books, that were equally distributed among the different colleges; each of which had a separate library for the convenience and improvement of the students.

The king left it to the discretion of the different religious orders, to select such persons, as were best calculated to undertake the direction of the colleges, and to chuse the different masters and professors. He reserved, however, to himself, the power of displacing any of them, if, upon mature and correct representation they were found inadequate to the trust.

The four professors, belonging to the colleges in which the four successful candidates at the general examination had been educated, received four golden medals, each worth 150 livres, about 6l. as a testimony of his Majesty's approbation. The king's likeness was on one side of the medal, and on the other was engraved, *Pris de bon Instruteur*; the able teacher's prize. With the laudable view of collecting the best and most able masters, various rewards were imagined, and occasionally distributed among the different persons employed in the instruction of young beginners.

The different vacancies, which occurred in consequence of the public examination that took place once a year, were regularly filled up at that period.

The secretary of state transmitted to the heads of colleges a list, containing the names of the young men that were to succeed.

Louis XVI. exclusively of the 600 students who were placed in the different colleges pursuant to the new regulations, restored the ancient foundation of La Flèche, which had originally been established by Henry IV. for the benefit of 100 poor boys, who were of noble blood, and whose parents had rendered some service to the state in the civil, military, or ecclesiastical line. They were educated according to the bent of their talents and disposition, and fitted to any of those professions; provisions and regulations having been made in the college of La Flèche for these purposes, that differed from the general system pursued in the other military colleges.

Those boys, who at 13 or 14 years old,

old, discovered a partiality to civil or ecclesiastical functions, left the subordinate colleges, and repaired to La Flèche. Their number was limited to five, who might annually be admitted in consequence of an order for that purpose from the secretary at war; which order was obtained by their parents, on a representation being made to him of their talents and disposition, confirmed and vouched for by the inspector-general, and by the heads and superiors of each college.

An extraordinary allowance was made by the king to enable these students to acquire a knowledge of law, and to become acquainted with every species of theological learning.

These students were never permitted to leave college under a pretext of seeing their friends or parents; however near the residence of the latter might be.

The heads or superiors of each college transmitted every quarter to the secretary of state for the war department, and to the inspector-general of schools, a minute account of the actual state of the college, and of the progress which each student had made in the several branches of education. If any extraordinary occurrence happened, these communications were to be made forthwith, and at broken periods, without waiting for the regular expiration of three months. They were likewise instructed to communicate with the parents of such children, as were paid for by them; giving an account of their progress in education, and stating what they had written on that subject to the secretary of state.

The inspector and under inspector-general went every year to the different colleges, to examine personally into every thing that concerned the management of each institution, and to report accordingly to his Majesty.

The secretary of state for the war department was directed by the king to be present at the annual distribution of prizes, which were given in each college, in order to give every aid and consequence to these public marks of royal attention. In case of the secretary's death or sickness, the inspector-general of the schools attended for the same well judged purpose.

On the 21st of January 1779, the following regulation appeared for the better management and advantage of the students belonging to the royal military school:—

It was ordained, that the privilege of being received as members of the military orders of Notre Dame, of Mont-Carmel, and St. Lazarus of Jerusalem, which had been hitherto given, without distinction, to all the students of the different colleges, should, in future, be considered as the reward of peculiar merit, and be rendered the means of exciting emulation among the gentlemen cadets of the royal military school only.

To this end the secretary of the war department was instructed to give in a list of six students who should have passed an examination before the inspector-general, with a minute account of their progress in the different arts and sciences, as well as of their general good conduct, natural disposition, &c. From this number, three were selected by the grand master, and were made knights of the order, with permission to wear the cross according to prescribed rules and regulations. All the students that were so distinguished received from the revenue, or funds of the order, an annual allowance of 100 livres, equal to about 1*l.* 3*s.* 2*d.* English; which sum was paid them, exclusively of the 200 livres, or 8*l.* 6*s.* 4*d.* which they got from the royal military school. They continued to receive the annual pension as long as they remained in the service; and if they were under the necessity of retiring through sickness, or wounds, it was continued to them during their natural lives.

Whenever a student, who had been placed in a regiment, and was entitled to wear the cross of the royal military school, distinguished himself on service by some brilliant action, or gave an extraordinary proof of military knowledge, he was recommended to the grand master, and on the attestation of the general commanding the army, countersigned by the secretary at war, he was instantly invested with the order of St. Lazarus.—Thus the re-union of these two crosses, (which could only happen in cases of singular merit, and under the circumstances already stated) would always bear

bear undeniable testimony of the service rendered by the individual. The pension, in fact, would neither incur the suspicion of partiality, by having been a mere sinecure, nor the honorary mark, the imputation of undue influence, and ill-applied patronage.

In consequence of the king's approbation, the following specific regulation, relative to the orders of Mont-Carmel, and St. Lazarus of Jerusalem, was issued on the 21st of January 1779, by Louis Stanislaus Xavier de Franks, brother to his Majesty, and grand master of those orders.

It was therein stated, that, in future, the order of Notre Dame du Mont-Carmel should be reserved for such students belonging to the royal military school, as had been approved of in every respect, conformably to the prescribed instructions on that head, for the purpose of being admitted knights of the order. The mark by which they were distinguished consisted of a small cross similar to the one already described, which was formerly worn by the students. The candidates were obliged to prove four degrees of nobility on the father's side, and to produce the certificates required by the different colleges. Three out of the six received the cross, and became entitled, from the day of their admission, to an annual allowance of 100 livres, or 1*l.* 3*s.* 2*d.* English; which they continued to enjoy, as long as they remained in the service, and after they quitted it, provided they retired from the causes already stated. If a knight of the order of Notre Dame du Mont St. Carmel did any singular act of bravery, or discovered talents of superior military knowledge, on a proper attestation being produced of the same, signed by the general under whom he served, and countersigned by the minister of war, he became knight of the order of St. Lazarus, and by thus uniting the two orders, preserved an incontestible proof of the service he had rendered.

This regulation, however, did not interfere with the ancient forms and rules of the royal military school, as far as they concerned those students who had already been received into two orders. It only went to restrict the number of such as might lay claim to the particu-

lar marks of distinction, &c. which were thereby granted to the newly admitted.

The French had likewise a marine school, (*école de marine*), which was kept at the expence of government, and was regularly attended to, in one of the departments. There was also a ship, distinguished by the name of school, (*école*) which was regularly manned and equipped for the instruction of young marines.

There were several schools of artillery, *écoles d'artillerie*, distributed in different parts of the kingdom, and supported at the public expence. The five principal ones were at *La Fère*, *Metz*, *Grenoble*, *Strasbourg*, and *Perpignan*.

They were under the direction of an inspector-general, who had the rank of a lieutenant-general in the army. Each school was superintended by three commandants, and was composed of ordinary and extraordinary commissaries belonging to the artillery, of officers who had the immediate direction of the levelling and pointing pieces of ordnance, and of volunteer cadets.

These schools were open throughout the year; advantage being taken of occasional fine weather during the winter months to practise and exercise the cadets. They were divided into schools of theory, *écoles de théorie*, and into schools of practice, *écoles de pratique*.

The theoretical establishments were for the immediate instruction of all officers belonging to the engineer and the artillery departments.

The practical schools were open indiscriminately to all officers and soldiers. There was also a particular school for the information of those persons who directed their attention to mining and sapping; this school was called *l'école des Sapeurs*. The miners' school. There was likewise a school established at *La Fère*, to which none but artillery officers could be admitted. The students consisted of one company, whose number never exceeded 50. They had the rank of sub-lieutenants, and received a monthly subsistence, amounting to forty French livres, a little more than 1*l.* 1*s.* English.

The school at Mézières, which was established before the additional one at

La Fère, for the exclusive use and advantage of the artillery, was calculated to receive 30 officers; and those who went from La Fère had the rank of second lieutenants, with 60 livres, something more than 2l. sterling, as monthly subsistence.

On the 26th of July 1783, an order appeared, by which the king directed, that the young gentlemen who, by a former regulation could only be admitted into the royal colleges between the ages of eight and eleven, should be received from the age of seven to that of ten. Orphans alone could be admitted as late as the full completion of twelve years. The parents of such children as had been approved of by his Majesty, were, without delay, to send in proofs and certificates of their nobility; in failure whereof, one year after their nomination, they were deprived of the situation which had been destined for them.

No family could solicit a letter of admission for more than one child at a time; and when it was granted, no application could be made in favour of another child until the first had completed his education, and was provided for in a regiment, or elsewhere.

The wisdom of this regulation is manifest. It was calculated to prevent every species of partiality and undue influence, and it kept the door open for many a meritorious youth, that might otherwise be deprived of the advantages of this useful institution. Like every other system, however, of that ill-fated monarchy, the principles were gradually perverted; and what was intended as a general good, became subservient to the intrigues of Versailles, the secret views of inspectors and commissaries, and the venal pliancy of individuals that acted under them. This evil was not confined to France. It has existed, and does still exist, in other nations: let us hope that the judicious arrangements of the military school in England, may save that infant establishment from an early visitation of its baneful and insidious spirit. So strict, indeed, was the regulation in France to prevent any monopoly of interest or patronage, that particular instructions were issued to commissaries to repair into the different provinces in which the several colleges

stood, and to see that no students were sent to the general examination at Brienne, who had any brother or brothers under the same establishment.

It will naturally strike every observer, from these several establishments, which were all supported by government, and warmly patronized by the different reigning monarchs in France, that military science constituted one of the chief objects of French policy; and it is only bare justice to say, that their encouragement was not fruitlessly bestowed. The only public military establishments in this country, (which may be said to have sound theory and practice for their groundworks,) are the Royal Academy at Woolwich, and the infant institution of High Wycombe. The Turks have a military school, called the School for the Agemolans, or young men attached to the corps of Janizaries. This institution was created by Amurat, for the purpose of enuring a certain number of persons to every possible hardship of military service.

*Fencing School, (école d'armes, Fr.)* Every French regiment, when in barracks or otherwise conveniently quartered, has a room allotted for the exercise of the small sword, the spadron, &c. Some active clever serjeant or soldier is authorised to teach his comrades, and to derive what benefit he can from giving lessons abroad. We need scarcely add, that some internal regulation of the kind would be highly advantageous to British officers.

*SCIAGE, (Bois de Sciage, Fr.)* sawing. Wood that is proper to be sawed in planks, or to be made fit for any use in carpentry.

*SCIAGRAPHY, (Sciographie, Fr.)* the profile or section of a building to shew the inside thereof.

*SCIE, Fr.* a saw.

*SCIENCE*, any art or species of knowledge; as military science, &c.

*SCIENCE of war, (Science de la Guerre, Fr.)* According to the author of the *Nouveau Dictionnaire Militaire*, the science of war, or the knowledge of military tactics upon an extensive scale, is, perhaps, the most compendious operation of the human mind, and demands the full exercise of all its powers. To be equal to the multifarious branches of this unbounded art, the strictest

strictest attention must be given to military discipline. The best authors, both ancient and modern, must be resorted to for information; and when the mind has been well stocked with the sound principles of theory, practice and experience must follow, in order to confirm what has been carefully selected from the first authorities, and maturely digested. Courage, zeal, prudence, and discretion, must likewise be the constant companions of those persons who would distinguish themselves in war; and it ought never to be forgotten, that a scrupulous adherence to morality, a rigid observance of every social duty, and a manly subjugation of the many passions by which different men are differently agitated, must constitute the character of a real warrior. These are the qualifications by which the science of war is distinguished from every other pursuit in life; and without these qualifications, a conqueror can neither be called a hero nor an able general, but only a lucky soldier. We have, indeed, our military colleges and institutions, and so had the Grecians and the Persians, not only for the instruction of the privates, but also for the education and formation of those individuals who were destined to be officers. These colleges and institutions were under the superintendence of persons who had established their reputation by a knowledge, not only of the theoretical, but also of the practical branches of their profession. Nobody could be admitted in the capacity of master or professor, unless he had previously undergone several examinations respecting the science of war, both as to offensive and defensive operations. These professors were called *tacticians*.

**SCIMITAR**, (*Cimeterre*, Fr.) A short sword, with a convex edge, more or less incurvated.

**SCIRITES** *et squirites*, a body of cavalry which formerly made part of the Macedonian army. The men, who chiefly composed it, came from a small town in the neighbourhood of Lacedæmon, which was called *Sciros*.

**SCITIE**, or **SETIE**, Fr. a small decked barge with Levant sails.

**SCOPETIN**, Fr. a person armed with a *scopette*, which see.

**SCOPETTE**, Fr. a fire-arm, resem-

bling, in shape and make, a small blunderbuss, which was formerly used by the *gens d'armes* under Henry the IVth and Lewis the XIIIth of France. It carried from four to five hundred paces.

**SCORPION**, (*Scorpion*, Fr.) a sort of long thick javelin or arrow, which was used among the ancients. For a specific description, see Vegetius and Justus Lipsius. The Cretans are supposed to have invented the scorpion.

**SCOTLAND**, once a kingdom of Europe, comprehending the north part of the island of Great Britain, and hence called North Britain. It was united to England in the reign of Queen Anne, so that both countries, with the principality of Wales, form one nation. Ireland has been added to them, during the present reign.

Scotland has the sea on all sides, except the south, on which it is separated from England. It is about 380 miles long, and 100 broad. Exclusive of the main land, there are about 300 islands in its vicinity.

There are some laws respecting military matters which are peculiar to Scotland. Officers and soldiers, for instance, can only be quartered there, as they might have been quartered by the laws in force in Scotland at the time of the union. No officer or soldier, however, is obliged to pay for his lodging, when he is regularly billeted, except in the suburbs of Edinburgh.

Carriages are to be furnished there in like manner as by the laws in force at the union.

When any troops, or parties upon command, have occasion in their march to pass regular ferries in Scotland, it is lawful for the commanding officer either to pass over with his party as passengers, or to hire the ferry boat entirely for himself and his party, debarring others for that time, in his option. When he takes passage for himself and party as passengers, he is only to pay for himself, and for each person, officer, or soldier, under his command, half of the ordinary rate payable by single persons at any such ferry; and when he hires the ferry-boat for himself and party, he is to pay half of the ordinary rate for such boat or boats; and in such places where there are no regular ferries, but that all passengers hire boats

at the rates they can agree for, officers, with or without parties, must agree for boats at the rate as other persons do in like cases.

**To SCOUR**, (*Battre à toute volée*, Fr.) This term is frequently used to express the act of firing a quick and heavy discharge of ordnance or musquetry, for the purpose of dislodging an enemy. Hence, to scour the rampart, or the covert way. It likewise signifies to clear, to drive away, viz. to scour the seas, *ecumer les mers*, Fr. to scour the streets, *ecumer les rues*; also to run about in a loose desultory manner, as to scour the country.

**To SCOUR a line**, is to flank it so as to see directly along it, that a musquet-ball, entering at one end, may fly to the other, leaving no place of security.

**SCOURER**, the ramrod was so called in old times. It formerly made a part in the exercise of the firelock, as, *Draw forth your scourer; Return your scourer.*

**SCOUTS**, are generally horsemen sent out before, and on the wings of an army, at the distance of a mile or two, to discover the enemy, and give the general an account of what they see.

**SCRAMASAXES**. According to the author of the *Nouveau Dictionnaire Militaire*, the Scramasaxes was an offensive weapon, made in the shape of a sword, but not so long. Grégoire de Tours observes, in the 21st chapter of the fourth book of his history, that *Frédigonde* caused *Sigisbert*, king of Austrasia, to be assassinated by two drunken valets, who were armed with this weapon.

**SCREW**, (*Escrou*, Fr.) one of the mechanical powers, which is defined a right cylinder cut into a furrowed spiral. Wilkins calls it a kind of wedge, that is multiplied or continued by a helical revolution about a cylinder, receiving its motion, not from any stroke, but from a vertic at one end of it.

Screws, in gunnery, are fastened to the cascable of light guns and howitzers, by means of an iron bolt, which goes through a socket fixed upon the center trunnion, to elevate or depress the piece with, instead of wedges.

**Screw of direction**, (*Vis de Pointage*, Fr.) The screw of direction, used

in the artillery, is formed of a brass horizontal roller, placed between the two cheeks of the carriage. The trunnions of the roller move upon two vertical iron pivots, which are fixed against the interior side of the cheeks. By means of this screw, the direction of pieces is either raised, or lowered, with a regular movement, and in the smallest space.

The screw of direction, or *Vis de Pointage*, is equally used for howitzers as well as for heavy pieces of ordnance. It has been invented by the French, and serves in lieu of the *Coins à Crémallière*, or indented coins.

**Lock SCREWS**, small screws which are attached to the lock of a musquet.

**SCULL**, (*petit bateau*, Fr.) A small boat.

**SCULLCAP**.—See **HELMET**.

**SCULLER**, (*Bateau à un rameur*, Fr.) A small boat with one man or a boy to row it.

**SCURVY**, (*Scorbut*, Fr.) a disease to which soldiers and seamen are peculiarly exposed, from eating salted meat and drinking bad water, &c. &c.

**SCUTE or Canot**, Fr. any small boat which is used in navigation for the accommodation of a ship.

**SCUTUM**, the Latin word for a buckler or a shield, with which the Roman soldiers were formerly armed.—It also signified a target. The scutum differed from the clypeus, in as much that the former was oval and the latter round. That which was used among the Grecians, was sometimes round, at others square, and not unfrequently oval. The scutum, or buckler, which the Lacedæmonians used, was so large, that the dead and wounded were carried on it.

**SEA-BOAT**, commonly called *Life-boat*, a floating vessel of a particular construction, made for the preservation of persons.

The new-invented life-boat was built by Mr. Towill, of Teignmouth, in Devonshire. It is considered by those who have tried experiments with it, to be well calculated to answer the purpose it is intended for. She is buoyed up by eight cases, four on each side, water tight, and independent of each other. When men are saved from a wreck and landed, the boat may return, and some tons of goods may be put in the

the cases, if the sea will admit of their being taken out of the wrecked vessel. In a storm the boat is dismantled, and rowed by 14 men, who are all fastened to their seats. As the sea breaks into the boat, it immediately runs out at her stern ports. It is impossible to sink her. She has fourteen life-lines, the ends of which float with cork, by which men that are washed off the wreck may hold, before they can be taken into the boat. She brings before the wind, or nearly so, upwards of one hundred men at a time from the wreck. She is as manageable with sails as any other boat of her size. The rudder is on a new principle. She has fourteen grapplings for a wreck, a room ten feet wide, water tight, with copper ventrillators.—The whole of her construction is entirely new.

**SEARCHER**, an instrument used by the founders to discover any flaws in the bore of cannon, &c. See **PROOF**.

**To SEASON.** (*Acclimater*, Fr.) In a military sense, to accustom, to enure. Soldiers are frequently sent to Gibraltar in order to be seasoned for a hot climate.

**SEASONED Troops**, troops that have been accustomed to climate, and are not so liable to become the victims of any endemical disorder, as raw men must unavoidably be. The French use the word *acclimater*, to get accustomed to a change of climate. Hence *troupes acclimatées*, troops that have been seasoned.

**SEAT of War**, the country in which war is carrying on.

**SECANT**, (*sécante*, Fr.) a line which cuts another, or divides it into two parts.

**SECANT of an arch**, in trigonometry, is a right line drawn from the center of the circle to the extremity of the tangent.

**SECANT of an angle.** Supposing an angle to be terminated by a base that is perpendicular to one of the sides, and that the smallest side of the angle be taken for the radius or whole sinus, the greatest of the two sides of that angle will be its secant.

**SECOND**, (*second*, Fr.) the next in order to the first. The ordinal of two. The next in dignity, place, or station. The French use the word *second*, in mi-

litary matters, somewhat different from the English, viz.

*Compagnie en SECOND*, Fr. this literally means second company, but according to the old French regulations it signifies a company which consists of half the number of men, that other companies are composed of. This was however, applied to the cavalry only.

*Capitaine en SECOND ou reformé, en pied*, or *Lieutenant en SECOND*, ditto, Fr. are officers whose companies have been reduced, but who do duty in others, and are destined to fill up the first vacancies. We have borrowed the expression, and say, *To be seconded*.

When an officer is *seconded*, he remains upon full pay, his rank goes on, and he may purchase the next vacant step, without being obliged to memorial in the manner that a half-pay officer must. Should the latter have taken a difference, he will find much difficulty in getting upon full pay, and he can only avail himself of his standing in the army when the last object is accomplished. So that a *seconded* officer stands in a more favourable light. He is besides likely to be appointed to the vacant commission of the regiment in which he is seconded.

*Prendre pour son SECOND*, Fr. to take for a second.

*Les SECONDS de côté et d'autre se sont tués*, Fr. both the seconds were killed, or the seconds on each side killed one another. It was very usual among the French for the seconds to make common cause with their principals, and to fight upon the decease of the former.—The practice is out of date.

*To SECOND*, (*second*, Fr.) to aid or assist, to support.

**SECOND covert-way**, that beyond the second ditch. See **FORTIFICATION**.

**SECOND ditch**, that made on the outside of the glacis, when the ground is low, and there is plenty of water. See **FORTIFICATION**.

**SECOND Flanc**, Fr. See *Flank oblique* in **FORTIFICATION**.

*Le SECOND*, Fr. the second beat of the drum, when troops are to move.—See *la Générale*.

**SECONDE**, Fr. A thrust in fencing, which is delivered at the outside of the body beneath the arm, with the nails downward.

**SECOURABLE**, *Fr.* that may be relieved, or have succours thrown in. The French say of a fortified place, which is invested at all points; or so blockaded, that there is neither egress nor ingress, *qu'elle n'est pas secourable*, that it cannot be relieved, or have succours thrown in.

**SECOURIR une place**, *Fr.* to throw succours into a besieged town or place. It sometimes signifies to force an investing or attacking army to raise the siege.

**SECOURS**, *A.* See **Succour**.

**SECRECY**, a quality of the mind, by which men are enabled to keep to themselves anything reposed in trust, or designs intended for execution. In the second volume of Polybius, page 134, the following sensible observations occur on this head:

"Among the many precautions to which a commander should attend, the first is that of observing *secrecy*. That neither the joy which springs from an unexpected prospect of success, nor yet the dread of a miscarriage, that neither friendship nor affection may prevail upon him, to communicate his design to any persons, except to those alone without whose assistance it cannot be carried into execution: and not even to these, till the time in which their services are severally required, obliges him to disclose it. Nor is it necessary only, that the tongue be silent, but much more, that the mind also make not any discovery. For it has often happened, that men who have carefully restrained themselves from speaking, have sometimes, by their countenance alone, and sometimes by their actions, very clearly manifested their designs."

In military economy, this quality is peculiarly requisite. It signifies fidelity to a secret; taciturnity inviolate; close silence. Officers, in particular, should be well aware of the importance of it, as the divulging of what has been confidentially entrusted to them, especially on expeditions, might render the whole project abortive. The slightest deviation from it is very justly considered as a breach of honour, as scandalous conduct, unbecoming an officer and a gentleman. In official matters, the person, so offending, is liable to the severest punishment and penalty.

The following authentic anecdote cannot be uninteresting to a military reader:

A lieutenant in the Prussian service having ingratiated himself into the confidence of the late king of Prussia, (when he was crowned prince of Prussia,) Frederick the Great sent for him, and accosted him in the following manner:

"Sir, I am very happy that my nephew has made so discreet a choice, as that of selecting you for his friend; but there is a matter in which you may oblige me essentially; and that is, to make me acquainted with the particulars of his conduct. This will gratify me much, and I will take care of your promotion."

The lieutenant bowed very respectfully, and nobly replied, "I am sensible to your majesty's mark of approbation; but it would be dishonourable, and, of course, it is impossible, for me to betray the prince's secrets." He was then retiring, when old Frederick, in an altered tone of voice, exclaimed,

"Mr. Lieutenant! as you do not know how to oblige me, I will now teach you to obey me. To Spandau!"

The young officer was immediately secured, and confined in a prison of that name, which is in the neighbourhood of Berlin.

We lament, that so great a man should have tarnished the splendour of his character, by descending into the low temper of a prying courtier.

**SECRET**, (*Secret*, *Fr.*) Under this word may be considered the caution and circumspection which every good general should observe during a campaign; the feints he may think proper to make for the purpose of covering a projected attack; and the various stratagems to which he may resort to keep his own intentions concealed, and to get at those of others.

**SECRET**, kept hidden, not revealed.—Hence secret expedition, secret enterprise, &c. Secret articles of a treaty, being the correlative words to patent articles.

**SECRET**, *Fr.* The French use this word in the same sense that we do, which signifies, figuratively, a certain skill or aptitude in one general, to discover and penetrate into the latent designs of another, who may be opposed to him. This also holds good in politics.

tics. Hence, *le plus grand secret de l'art militaire et de la politique, est de savoir bien étudier, et bien pénétrer, les actions et les desseins de son adversaire*; the greatest secret in war, as well as in politics, consists in being able to study, with correctness, and to penetrate, with certainty, not only the actions, but also the designs, of an adversary.

**SECRET**, *Fr.* the spot chosen by the captain of a fire-ship to apply the saucisson of communication.

**SECRET Expedition**. Those are often called such, which in fact are known to the enemy before they are put into execution; they should never be communicated to any other than the commander of the troops, and the first naval officer, until they are in absolute readiness to act, and but a few hours before the enterprize is put in execution: no officer being allowed to open his instructions until he is either at his destination, or at sea. See **EXPEDITION**.

**SECRÉTAIRE**, *Fr.* the clerk belonging to the Swiss regiments in the old French service so called. He acted likewise as quarter-master serjeant and was styled *musterscriber*.

**SECRÉTAIRE général d'artillerie**, *Fr.* a place of trust, which, during the French monarchy, was in the nomination of the grand master.

**SECRETARY at War**, (*secrétaire de guerre*, *Fr.*) the first civil officer next to the minister of the war department. All military matters that are of a pecuniary nature, rest with the secretary at war.

*'Secretaries at War.*

March 24th, 1761, Right Hon. Lord Barrington, Right Hon. Charles Townshend.

February 27th, 1763, Right Hon. Welbore Ellis, (late Lord Mendip).

July 20th, 1765, Lord Barrington.

June, 1778, Charles Jenkinson, now Earl of Liverpool.

May 30th, 1782, Right Hon. T. Townshend, late Lord Sydney.

July 10th, 1782, Sir G. Yonge, Bart. K. B.

April 9th, 1783, Right Hon. R. Fitzpatrick.

Jan. 6th, 1784, Right Hon. Sir G. Yonge, Bart. K. B.

July 11th, 1794, Right Hon. William Windham.

Feb. 20th, 1801, Right Hon. Charles Yorke.

June, 1802, Mr. Bragge.

In 1803, Right Hon. William Dundas.

**Military SECRETARY**, at the horse guards, a confidential person, who is attached to the commander in chief of the British forces, and who does the official business of the army, as far as respects the rank and precedence of officers, &c. It is his duty to receive communications, memorials, and other documents appertaining to the executive branches of the service, and to lay them before the commander in chief, without favour or affection. He has also fixed days and hours for the reception of military men; whose cases he listens to with candour, and to whom he behaves with the becoming firmness of a soldier, without deviating from the conciliating manners of a gentleman.—A military secretary should be well versed in every sort of military reading, thoroughly conversant with every species of military duty, and capable of the most ready combination of theory and practice. All memorials, &c. to be addressed for the commander in chief, are to be sent under cover to his public or official secretary, at the commander in chief's office, Horse Guards.

**SECRETARY and aid-de-camp**, the confidential aid-de-camp of a commander in chief, or general officer, is usually so called.

**SECRETARY of State**, (*secrétaire d'état*, *Fr.*) This officer, independent of his civil capacity, has so far an intimate connexion with the administration of the army, that many of its essential branches must necessarily pass through him. It is his duty, in particular, to lay before the king the names of all persons recommended to hold commissions in the militia. He must likewise cause copies of the several qualifications, which have been transmitted to him by the clerks of the peace, or their deputies, to be annually laid before both houses of parliament. This clause, we believe, has lately been dispensed with, as well as a foregoing one, which enacts, that the clerk of the peace of every county, riding, and place, shall enter the qualifications transmitted to him upon a roll, and shall cause to be in-

serted in the London Gazette, the dates of the commissions, and names and rank of the officers, together with the names of the officers in whose room they are appointed; in like manner as commissions in the army are published from the war-office. The expense of such insertion, in the Gazette, for each commission, is likewise directed to be charged to the treasurer of the county, riding, or place. For particulars, see the last edition of Regimental Companion.

To **SECRETE**, to hide; to keep private; to harbour; to conceal, &c.—By the Articles of War it is provided, that if any person shall harbour, conceal, or assist any deserter from his Majesty's service, knowing him to be such, the person, so offending, shall forfeit, for every such offence, the sum of five pounds.

**SECTION**, (*section*, Fr.) from the Latin word *sectio*, which is derived from *seco*, to cut, a part of a thing divided, or the division itself. Such particularly are the subdivisions of a chapter, called also paragraphs and articles. Sometimes we find the term section divided into articles; as in the Articles of War. The Rules and Regulations for the discipline of the British army, are divided into parts, and each part subdivided into heads or sections of explanation. So that when an officer reads the higher tactics under Battalion and Line, and wants any specific explanation, he must refer to the section. The Drill, or instruction of the recruit, is explained in forty sections, which constitute the 1st part. The instruction and various operations of the Company are explained in 265 sections, which form the 2d part.

The several operations, &c. which belong to a battalion when it acts singly, or in line with others, are explained in 108 sections, which form the 3d part. And the principal circumstances relative to the movements of a considerable line, are explained in 32 sections, which constitute the 4th part, or the line. All of which have been compiled and arranged with much skill and accuracy by General Sir David Dundas.

**SECTION**, (*section*, Fr.) a certain proportion of a battalion or company, when it is told off for military move-

ments and evolutions. It is stated in the Rules and Regulations, that a section should never be less than five files. This rule, however, is not absolute, as we find in another part of the Regulations, that a section may consist of four files. This relates to the infantry; the cavalry is not told off into sections, but into ranks by three's. The French use the word section for the same purpose; but their sections are stronger than ours. We generally divide a company into two sub-divisions, and each sub-division into two sections; and for the convenience of marching through narrow ground, these sections are frequently reduced to three or even two files in front. The French form their companies into platoons, and divide their platoons into two sections, so that their sections are equal to our subdivisions.

**SECTOR**, (*secteur*, Fr.) a mathematical instrument of great use in finding the proportion between quantities of the same kind, as between lines and lines, surfaces and surfaces, &c. for which reason the French call it the compass of proportion.

The great advantage of the sector, above common scales, &c. is, that it is adapted to all radii, and all scales. The sector is founded on the fourth proposition of the sixth book of Euclid. The sector consists of two equal legs, or rules of brass, &c. riveted together, but so as to move easily on the rivet; on the faces of the instrument are placed several lines; the principal of which are, the line of equal parts, line of chords, line of sines, line of tangents, line of secants, and line of polygons.

To **SECURE**, in a military sense, to preserve, to keep, to make certain; as to secure a place, to secure a conquest. In the management of the firelock, it signifies to bring it to a certain position, by which the locks are secured against rain. Hence.

**SECURE arms!** a word of command which is given to troops who are under arms in wet weather. To bring your firelock to the secure; 1st. throw your right hand briskly up, and place it under the cock, keeping the piece steady in the same position.

2d. Quit the butt with the left hand, and seize the firelock with it at the swell, bringing

bringing the elbow close down upon the lock; the right hand kept fast in this motion, and the piece still upright.

3d. Quit the right hand, and bring it down your right side, throwing the firelock nimbly down to the secure; the left hand in a line with the waist-belt. In order to *shoulder* from the secure, you must 1st, bring the firelock up to a perpendicular line, seizing it with the right hand under the cock.

2d. Quit the left hand, and place it strong upon the butt.

3d. Quit the right hand, and bring it smartly down the right side,

*SECURE arms*, now forms a part of the new manual.

*SECUTORES*, or *Sequutores*, a certain class of gladiators, among the ancient Romans, who, being armed with a helmet, a shield, and a sword, or a leaden mace, encountered the *retiarii*. The latter stood always upon the defensive, and only watched an opportunity to throw a net over their antagonist, in order to destroy him with a pitch-fork; which was the only weapon the *Retiarii* used.

*Sédentaire*, Fr. Stationary.

*Troupes Sédentaires*, Fr. Stationary troops. Thus the national guards in France, who do duty in the several garrison towns, are called *gardes nationales sédentaires*, in contradiction to *colonnes mobiles*, or moveable columns. The latter are sometimes called, *troupes en activité*, troops on service.

*SEDITION*, (*Sédition, revolte, émeute*, Fr.) Mutiny, strife, popular tumult, uproar.

Solon, the celebrated lawgiver among the ancients, made a rule which rendered all persons infamous who stood neuter in a sedition. This good and wise man thought, indeed, that no individual ought to be insensible with regard to his country, nor value himself on providing for his own security, by refusing to share the distresses of the public; but in the defence of a just cause, he judged that a good citizen should bravely run all hazards, rather than remain an inactive spectator.

*SEER*, *Ind.* A weight nearly equal to a pound.

*SEESAR*, *Ind.* The dewy season.

*SEEARISH*, *Ind.* A recommendation.

*SEEPPEYA*, *Ind.* A triangle to which culprits are tied to be flogged.

*SEFFY*, *Ind.* A dynasty of Persia.

*SEGBANS*. Horsemen among the Turks, who have care of the baggage belonging to cavalry regiments.

*SEGMENT*, a figure contained between a chord and an arch of the circle, or so much of the circle as is cut off by that chord.

*SEJA*, *Ind.* A fenced terrace.

*SEILLURE*, (*Sillage, eau, houeage ou oniache*, Fr.) Terms used among the French to express the way a ship makes; it corresponds with our naval word *Wake*, which is also called *Eaur*.

*SÉJOUR*, Fr. A halting day; such as is usually marked out by the secretary at war, when troops are on their march in the interior of a country; or by the general of an army, when they are in the field. In a naval sense, it signifies the time that a ship remains in port.

*SEIN*, Fr. In the midst. The French say figuratively, *porter la guerre dans le sein d'un royaume*; to carry a war into the heart of a kingdom. *Au sein de ses soldats*; in the midst of his soldiers.

*SEING Manuel*, Fr. Sign manual.

*SEL*, Fr. Salt. Before the revolution of 1789, the French troops were allowed a specific quantity of salt, which was regularly accounted for at the back of the muster-rolls.

*SEL*, Fr. The salt used in the artillery is lixivial, and of a fixed quality. It is extracted from saltpetre, and must be thoroughly washed, as no saltpetre can be good which has the least saline or greasy particle about it.

*SELF*, (*Soi-même*, Fr.) One's own person.

*SELF-confident*. See *VANITY*.

*SELF-sufficient*. See *VANITY*.

*SELFISHNESS*. A narrow, mean, and unmanly regard for one's own interest only; a quality incompatible with the fine feelings and the high notions of an officer.

*SELICHTAR*. A Turkish sabre.

*SELION*, (*Sillon*, Fr.) A ridge of land which lies between two furrows.

*To-SELL*. To dispose of for a price.

*To SELL out*, a term generally used when an officer is permitted to retire from the service; selling or disposing of

of his commission or commissions. It is the word correlative to *buy in*. Officers who have purchased or bought, are usually allowed to sell. But much depends upon the interest or good luck of the individual, with respect to the advantages which are derived from this traffick. It sometimes happens, that an officer, who has only perhaps bought one commission, and has risen to the top of the regiment, is permitted to get the aggregate value of all the steps; and he is fortunate indeed, if the step he purchased was the first, and consequently the cheapest. During the administration of his Royal Highness the Duke of York, a great check has been put to the enormous abuses which were practised at the beginning of the late war. But it will require more than Herculean labour to keep this military Augean stable clean, so long as the system of bargain and sale prevails.

*To sell, at the Regulation.* To receive the regulated price of a commission.—A commission is sometimes allowed to be sold at the Regulation for the benefit of an individual, whose children have fallen in the service; and it sometimes happens, that individuals are obliged to quit the army without being able to take advantage of the market. Thus some officers at the commencement of the present war, were ordered by his Majesty to retire from the service, taking the regulated prices of their several commissions, on account of their political opinions.

*SELLA imperatoria vel castrensis.* A chair of state, made of carved ivory, which the Roman generals used in the field, and which was afterwards converted into the Imperial throne.

*SELLE, Fr.* A saddle.—See *Boute-selle*.

*SELLE rasc, Fr.* A saddle without a bow.

*SELLE à arçon, Fr.* A bow-saddle.

*SEMBLABLES, Fr.* In geometry, similar, alike, equal. This term is applied to any two figures, the sides of one of which correspond with the sides of the other, and are always in the same ratio. So that semblable or alike, only means in this sense *equal*. Two circles, though unequal in their sizes, may still be alike, that is, their several parts may agree according to a certain ratio.

*Les SEMELLES, Fr.* The axletrees belonging to the carriage of a gun.

*SEMESTRE, Fr.* This word literally signifies a term of six months; but it is generally understood to express any term of leave of absence which is granted to officers or soldiers. With respect to the latter, it means furlough.

*SEMESTRIER, Fr.* This term comes from the word *Semestre*, and signifies the person who has leave of absence, or who goes on furlough.

*SEMICIRCLE*, part of a circle divided by the diameter.

*SEMI-DIAMETER*, half of the line which divides a circle into two equal parts.

*SEMIORDINATE*, a line drawn at right angles to be bisected by the axis, and extending from one side of the section to the other.

*SENAU, Fr.* A small skiff, or tender, calculated for quick sailing.

*SÉNÉCHAL, Fr.* This is the most ancient of all the titles or dignities which were attached to those individuals that undertook the command of armies, when the Kings of France, belonging to the second race, ceased to go in person. The *Sénéchal* was selected by the sovereign from among those vassals and subjects, who were highest in nobility, and were most distinguished for their rank, wealth and talents. The title of grand *Sénéchal* of France was first created by Lotharius, in 928, and conferred upon Geoffrey, count of Anjou, surnamed *Grisegonnelle*. This rank or situation, continued to be attached to the title of Count of Anjou, until the reign of Philip Augustus, in whom it was extinguished when he ascended the throne of France, in 1121. The grand *sénéchal* likewise exercised the functions of Lord Steward of the King's household; having under him several subordinate seneschals, who also held places of considerable trust. These were called *Sénéchaux de France*, or *Seneschals of France*.

*SÉNECHALE, Fr.* The seneschal's wife or lady.

*SENS-dessus-dessous, Fr.* Topsy-turvy.

*SENS-*

*SENS-devant-derrrière*, Fr. Wrong way.

**SENIORITY**, in military matters, is the difference of time betwixt the raising of two regiments, whereby the one is said to be so much senior to the other. All regiments take place according to seniority. The difference of time betwixt the dates of two commissions, makes the one senior to the other; and all officers of the same rank, roll by the seniority of their commissions.

The seniority of a regiment or battalion supersedes the standing of an individual in the army, being wholly distinct from each other with respect to rank. A regiment, for instance, may have three battalions, and be thus commanded:—1st battalion by a major-general, 2d battalion by a lieutenant-general, and the third again by a full general; or to make the case as it really existed during the late war, the first and second battalions shall be commanded by a major-general and a lieutenant-general, the latter having the youngest battalion. Should the second battalion be reduced, the senior officer with respect to rank in the army, goes to the right about, and the junior remains full colonel of the standing battalion. It must likewise be observed, that in the line of battle, officers are posted according to the seniority of their regiments. So that, in the case aduced, the lieutenant-general would be commanded by the major-general.

**SENTENCE**. Decision; determination, final judgment. There is an appeal allowed from the sentence of a regimental court-martial to the opinion of a general one.

*To sentence a thousand lashes*. To pass judgment upon a man, by which he is liable to receive that specific number of lashes. When the sentence proceeds from a general court-martial, the king only can remit the punishment; in regimental cases the total remission, or mitigation, rests with the commanding officer.

**SENTINEL**, } From the Latin *sen-*  
**SENTRY**, } *tio*, or, more properly  
from the Italian *sentinella*, is a private soldier, placed in some post, to watch the approach of the enemy, to prevent surprises, to stop such as would pass

without order, or being discovered who they are. Sentries are placed before the arms of all guards, at the tents and doors of general officers, colonels of regiments, &c.

All sentries are to be vigilant on their posts; they are not, on any account to sing, smoke tobacco, nor suffer any noise to be made near them. They are to have a watchful eye over the things committed to their charge. They are not to suffer any light to remain, or any fire to be made near their posts in the night-time; neither is any sentry to be relieved, or removed from his post, but by the corporal of the guard. They are not to suffer any one to touch or handle their arms, or in the night time to come within ten yards of their post.

No person is to strike or abuse a sentry on his post; but when he has committed a crime, he is to be relieved, and then punished according to the rules and articles of war.

A sentinel, on his post in the night, is not to know any body, but by the countersign; when he challenges, and is answered, *relief*, he calls out *stand, relief! advance, corporal!* upon which the corporal halts his men, and advances alone within a yard of the sentry's fire-lock (first ordering his party to port arms, on which the sentry does the same) and gives him the same countersign, taking care that no one hears it.

**See ROUNDS.**  
**SENTINELLE**, Fr. Sentinel; sentry. This word is likewise used to express the duty done by a sentinel. *Faire sentinelle*. To stand sentry.

**SENTINELLE perdue**, Fr. A sentry posted in a very advanced situation, so as to be in continual danger of surprize from the enemy.

**SEPTANGULAR**. Having seven angles.

**SEPTENTRION**, Fr. The north.

**SEPADAR**, Ind. An officer of the rank of brigadier-general.

**SEPAHE**, Ind. A feudatory chief, or military tenant.

**SEPHARRY**, Ind. Afternoon.

**SEPOYS**, Ind. Derived from *Sepahay*. Natives who have enlisted themselves into the service of the East India Company, and are attached to the infantry. These troops have both native

and European officers; but the Europeans at all times command. The Scipios make excellent soldiers, are remarkably clean, and feel a natural predilection for arms.

**SEPTEMBRISADE, Fr.** A term used to express the general massacre which took place in Paris on the 2d and 3d of September, 1792.

**SEPTEMBRISER, Fr.** To Septemberise. To massacre.

**SEPTEMBRISEUR, Fr.** A name given to those who were concerned in the massacres of September, and to those who were suspected of having aided and abetted the perpetrators of those horrid acts. The latter were also called *Sentenbristes*.

**SEPTIDI, Fr.** The seventh day in the French Republican decade.

**SEPTILATERAL.** Having seven sides.

**SEPTUPLIE.** Seven-fold.

**SERAKHUR, Ind.** } Native oil-  
**SERANG,** } cers who are  
employed in the artillery, and on board ships of war.

**SERASKIER, (Seraskier, Fr.)** Among the Turks, the next in rank to the Vizier, in whose absence he commands, but to whose orders he is constantly subservient.

**SERASKUR, Ind.** This word is sometimes written Seraskier, and signifies the commander in chief of a Turkish army.

**SERDANS.** Colonels in the Turkish service are so called.

**SERE, SERVE, Fr.** A bondman, bondwoman. Formerly, those only were called bondmen and bondwomen whose persons and property belonged, unconditionally, to some lord of a manor, to whom the property devolved in default of lineal inheritance. A bondman or serf was, in fact, a slave. All the peasants in Poland are of this class, as well as those in Russia.

**SERGENS D'ARMES, Fr.** A distinguished class of military men, that constituted the body guard of Philippe Auguste of France. Under Philippe-le-Bel, they only did duty every quarter, at the palace. Their weapons consisted of the *mace d'armes*, or mace, and the *arc* or bow. The company of *sergens d'armes* was, at first, composed of two hundred men; afterwards it was re-

duced to one hundred and fifty, and then again to one hundred. During the absence of his father John, who was a prisoner in England, Charles the Fifth, regent of France, reduced them to six individuals. And since the reign of Charles the Seventh, the *sergens d'armes* have not been spoken of.

**SERGEANT, Fr.** See SERJEANT.

**SERGEANT noble, Fr.** A post of honour which existed during the first periods of the French monarchy. The French compiler, from whose work we have occasionally translated much matter relative to the military history, &c. of France, has the following passage concerning the term itself. We shall give his words literally:—"This term does not come from *serviens*, as I have imagined in common with many other Etymologists. Monsieur Beneton, in his *Histoire de la Guerre*, says, that the serjeant who seemed to think he could trace the origin of his title in the Latin word *serviens*, was a gentleman by birth, who during the prevalence of military fiefs, was liable to do military service, in consequence of the feudal tenure, called *Chief de Sergenterie*, by which he held his land. His superior officer was called *Suzerain*, the functions of whose situation corresponded with those of a modern adjutant. It was the business of the *Sergeant Noble*, or gentleman serjeant, to assemble all the vassals of the *Suzerain*, for the purpose of incorporating them under one standard, and of rendering them fit for war.

**SERGEANT de bande, Fr.** Serjeant in the common acceptation of the term.—The etymology of this word is different from that of *Sergeant Noble*. It evidently comes from the French *Serre-gens*, or men that close or lock up, the same as *serre-files*; shewing that this non-commissioned officer was placed to take charge of the rear files, whilst the commissioned one was in the front. It was his business to see, that the rear conformed itself to the orders which were given in the front; to make the files lock up and dress, &c.

**SERGEANT de bataille, Fr.** Field serjeant. This was an appointment of considerable trust in the old French armies. The *Sergens de bataille* held commands,

commands, and did the duty of inspectors. They ranked next to a field marshal, or *maréchal de bataille*. The *sergens de bataille*, or field serjeants, existed under Francis the First. But these field serjeants were only at that time *sergens de bandes*, or train serjeants. There were likewise, under the same king, *sergens généraux de bataille*, general field serjeants. These were officers of rank, and did the duty of a modern major-general.

There were also officers of the same description in the reign of Henry IV. This appointment appears to have been dropped after the peace of the *Pyrénées*. The author of the *Histoire de la Milice Francoise*, observes, that the appointment and duty of the different officers, called marshals, or field serjeants, varied according to the will and pleasure of the French kings, and their war ministers. He agrees with us, that the situation of field serjeant was originally of great consequence, but that it gradually declined, and was eventually made subservient to a superior officer, who was called *Maréchal de bataille*, whose duties corresponded with those of adjutant-general in the present times.

There have been officers of the same denomination both in Spain and Germany, who did the duty of *Maréchaux de Camp*; another term, we presume, for major-general. But the general field serjeants in those countries were divided into two classes; one class was confined, in its functions, to the infantry, and the other to the cavalry; and both acted independently of one another; whereas in France they acted together.

According to the present establishment of the French army, there is a serjeant-major belonging to each company. The *sergens majors d'un régiment, ou d'une place*, of the old French service, were what are now simply called *majors*, majors of regiments, or town-majors.

**SERGEANT, Fr.** A word frequently used by the French, in a figurative sense, signifying to press, to importune. *On n'aime point à être sergenté*; One does not like to be pressed; or as we familiarly say, to be dragooned into a thing.

**SERUUD, Ind.** A boundary, or frontier.

**SERGEANT, } In war, is a non-**  
**SERGEANT, } commissioned or**  
**SERGEANT, Fr. } inferior officer in**  
a company or troop, armed with a pike, and appointed to see discipline observed; to teach the private men their exercise; and to order, straiten, and form ranks, files, &c. He receives the orders from the serjeant-major, which he communicates to his officers. Each company has generally three serjeants, in the British service.

**SERGEANT-Major.** The serjeant-major is the first non-commissioned officer in the regiment after the quartermaster. He is, in fact, an assistant to the adjutant.

It is his peculiar duty to be perfect master of every thing which relates to drills; and it is always expected, that he should set an example to the rest of the non-commissioned officers, by his manly, soldier-like, and zealous activity.

He must be thoroughly acquainted with all the details which regard the interior management, and the discipline of a regiment. For this purpose he must be a good penman, and must keep regular lists of the serjeants and corporals, with the dates of their appointments, as well as the roster for their duties, and rosters of privates orderly duty and commands, as far as relates to the number which each troop or company is to furnish. He is in every respect responsible for the accuracy of these details. He must look well to the appearance of the men, and order such to drill as he sees awkward, slovenly, or in any way irregular. If it be meant as a punishment, he specifies the time for which they are sent to drill; if only for awkwardness, they remain there until their faults are removed.

When he has occasion to put a non-commissioned officer in arrest, he must report him to the adjutant.

In most regiments the serjeant-major, under the direction of the adjutant, is directed to drill every young officer who comes into the regiment in the manual and platoon exercises; he is likewise to instruct him in the slow and quick marches, in wheeling, &c. He is paid for his trouble by each officer whom he instructs. In some regiments, especially

pecially the cavalry, one guinea and a half, and in others one guinea is given.

He reports regularly to the adjutant the exact state of the awkward drill, &c.

It is scarcely necessary to observe in this place, that the good or bad appearance of a regiment, with or without arms, depends greatly upon the skill and activity of a serjeant-major; and that he has every inducement to look forward to promotion.

**Covering-SERGEANT.** A non-commissioned officer, who during the exercise of a battalion, regularly stands or moves behind each officer, commanding or acting with a platoon or company. When the ranks take open order, and the officers move in front, the covering serjeants replace their leaders; and when the ranks are closed, they fall back in their rear.

**Drill-SERGEANT.** An expert and active non-commissioned officer, who, under the immediate direction of the serjeant-major, instructs the raw recruits of a regiment in the first principles of military exercise. When awkward, or ill-behaved, men are sent to drill, they are usually placed under the care of the drill-serjeant. This non-commissioned officer will do well to bear constantly in mind the following observations from page 155, vol. I. of the *Règlement pour l'Infanterie Prussienne*.

In teaching young recruits their first duties, the greatest caution must be observed not to give them a disgust to the service, by harsh treatment, angry and impatient words, and much less by blows. The utmost mildness must, on the contrary, be shewn, in order to endear the service to them; and the several parts of exercise must be taught them by degrees; so that they become insensibly acquainted with the whole of the discipline, without having been disgusted in the acquirement. Rustics and strangers must be used with extreme lenity.

**Pay-SERGEANT.** An honest, steady, non-commissioned officer, (who is a good accountant, and writes well) that is selected by the captain of a company in the infantry, to pay the men twice a week, and to account weekly to him, or to his subaltern, (as the case may

be) for all disbursements. He likewise keeps a regular state of the necessities of the men, and assists in making up the monthly abstract for pay, allowances, &c.

**Quarter-master SERJEANT.** A non-commissioned officer who acts under the quarter-master of a regiment; he ought to be a steady man, a good accountant, and to be well acquainted with the resources of a country town or village.

**Lance-SERGEANT.** A corporal who acts as serjeant in a company, but only receives the pay of a corporal.

**White-SERGEANT.** A term of just ridicule, in the British service, which is applied to those ladies, who, taking advantage of the uxoriousness of their husbands, neglect their household concerns, to interfere in military matters.

**SERGEANT-at-Arms.** An officer appointed to attend the person of a king, arrest traitors, and persons of quality offending, and to attend the lord steward when he sits in judgment on any traitor.

**SERMENT, Fr.** Oath.

**Peter SERMENT, Fr.** To take an oath.

**SERMENT DE SOLDAT, Fr.** The soldier's oath, or oath of fidelity and passive obedience, as far as lawful commands extend. For the oath which was taken among the Romans, see SACRAMENTUM.

**SERIF, Fr.** A bill hook.

**SERPE d'armes, Fr.** An offensive weapon; so called from its resemblance to a hedging bill.

**SERPENS, Fr.** See *Salamandre*.

**SERPENTEAU, Fr.** A round iron circle, with small spikes, and squibs attached to them. It is frequently used in the attack and defence of a breach. It likewise means a fusée, which is filled with gunpowder, and is bent in such a manner, that when it takes fire, it obtains a circular rapid motion, and throws out sparks of light in various directions.

**SERPENTEaux et serpenteaux brochetés, Fr.** A species of fusée, which is garnished or loaded upon a stick or spit that is a third of the length of the cartridge.

**SERPENTIN, Fr.** The cock of a musquet or firelock.

SERPENTIN,

## S E R

**SERPENTIN, Fr.** An old piece of ordnance, which resembled a cannon, but is no longer in use.

**SERRE-File, Fr.** The last rank of a battalion, by which its depth is ascertained, and which always forms its rear. When ranks are doubled, the battalion resumes its natural formation by means of the *serre-files*. *Serre-file* literally signifies a closer up. Perhaps the term *serre-file* would be more appropriate than *supernumerary*, as both officer and serjeant are posted in the rear to keep the rear-ranks up.

**SERRE-demi File, Fr.** That rank in a battalion which determines the half of its depth, and which marches before the *deni-file*. Thus a battalion standing six deep, has its *serre-demi file* in the third rank, which determines its depth.

**Capitaine de SERRE-Files, Fr.** The officer who commands a rear-guard when a regiment is on its march.

**SERRER, Fr.** To close up. *Serrez vos rangs.* Take close order.

**SERRER la bride, Fr.** To pull in the bridle.

**SERRER la botte, Fr.** A term used in cavalry movements, when dragoons are ordered to close in, knee to knee.

**SERRER l'épéron, Fr.** To push the spur home, when the horse is required to go full gallop.

**SERREZ la masse, Fr.** A word of command in the French service, signifying—Form close column.

**SERREZ vos rangs, Fr.** Take close order.

**SERRURE, Fr.** A lock.

**SERRURIER, Fr.** A locksmith.

**SERVANS d'armes, or Chevaliers Servans, Fr.** Persons belonging to the third class of the Order of Malta are so called. They are not noblemen, although they wear the sword and the cross.

**SERVANTS.** In a military sense are soldiers taken from the ranks, for the purpose of waiting upon officers, and of accompanying them when they are with their respective corps. Among the Standing Orders for Prince William's regiment, of Gloucester, namely, the 115th, which were printed during the last war, we find the following particulars respecting this class of men.

The officers' servants to be taken from the rear and center ranks.

## S E R

No soldier to be permitted to act as an officer's servant, that is not perfect in his exercise, and whose conduct is not good.

Recruits, on no account whatever, to be suffered to attend officers as servants.

No soldier to be taken as a servant, without the consent of the commanding officer of his company; and if he is of a different company than that to which the officer belongs, he is to have the consent of both captains or commanding officers. When a soldier is to be employed as a servant, by an officer who does not belong to the same company, his commanding officer will chuse out of the company to which such servant is transferred, another man in exchange, from the same rank, as that in which the servant has been accustomed to serve.

It is recommended, that every soldier who shall attend an officer in the capacity of a servant, may be allowed no more wages than one shilling British per week.

Servants to constitute, invariably, part of the detail with their masters on duty.

They are to be punctual in their attendance, at the time the non-commissioned officers and men are ordered for inspection.

No officer is, on any pretence whatever, to neglect reporting to the commanding officer instantly, when he discovers any act of dishonesty, either in his own servant, or in the servant of any other officer of the regiment. Any soldier, employed by an officer in the character of a servant, who either himself robs, or knowingly suffers others to do so, from his master, or from any body else, let the articles be ever so trifling, shall be brought to a court-martial, and if found guilty, be punished for a breach of the Standing Orders of the regiment. We humbly presume to suggest, that under so serious a charge as that of theft, the delinquent should be tried for a breach of the specific article of war, before a general court-martial.

Whenever an officer dismisses a soldier from acting as his servant, such soldier is to return to his company complete in regimentals, necessaries and

nts, without any expence  
; and if he is discharged  
of dishonesty, or irregn-  
any kind, such servant is  
not afterwards to be employed by any  
other officer of the regiment.

In addition to these orders, we take the liberty to observe, (since the article of war, which says expressly, that no soldier shall wear a livery, is through neglect and by custom, become a dead letter,) that if officers' servants were to be plainly dressed, with a cuff and cape to correspond with the facings of the several regiments, much ridiculous parade and shew would be avoided.

**TO SERVE, (Servir, Fr.)** In a military sense, to do duty as an officer or soldier.

**TO SERVE *à piece*, (servir *une pièce*, Fr.)** in the artillery; to load and fire with promptitude and correctness. The French use the term in the same sense, viz. *L'artillerie fut bien servie à ce siège*; the artillery was well-served at this siege.

**SERVICE, (Service, Fr.)** In a general sense of the word, as far as it relates to war, every species of military duty which is done by an inferior under the influence and command of a superior. It likewise means exploit, achievement. It also points out the particular profession to which a man belongs, as land service, sea service, and the degree of knowledge which he may have acquired by practice, viz. He has seen a great deal of service.

**SERVICE** likewise means the period during which a man has done duty, or followed the military profession in an active manner.

**To see SERVICE.** To be in actual contact with an enemy.

**To be on SERVICE.** To be doing actual duty with a corps, or detachment.

**To enter into the SERVICE.** To purchase, or receive without purchase, a commission in the army. In either case the individual must be recommended to the commander in chief, or to the secretary at war, (as the case may be) stating him to be fully qualified to hold that situation. This is done for his Majesty's approbation.—See RECOMMEND.

**To retire from the SERVICE.** To

quit the army, or resign with or without the advantage of being benefited by the sale of one, or more commissions.

No officer can resign his commission, or retire from the service, without having previously obtained his Majesty's permission through the commander in chief, or the secretary at war, as the case may be.

**To retire from the SERVICE, keeping one's rank.** It has sometimes happened, that an officer has obtained permission to quit the army, keeping his rank: by which means he has been enabled to return into the service, and to take advantage of his original standing. A very meritorious officer, of high rank at present, was permitted to retire in this manner. There have been instances of officers retiring, not only with their rank, but with a certain allowance from the regiment. None, however, of any description have occurred since the management of the army fell to the present commander in chief, who is decidedly averse to every thing of the kind.

**Infantry SERVICE.** Service done by foot soldiers.

**Cavalry SERVICE.** Service done by soldiers on horseback. In the different exchanges and promotions which take place, the strictest regard should be paid to the particular branch of service, in which the individual has been trained. For it would be ridiculous to bring an officer from Gibraltar, after ten years residence, to take the command of a troop of life-guards, or light-dragoons in Hyde-Park; and it would be equally absurd to see an old cavalry officer suddenly undertake the management of an infantry regiment. But the absurdity is more glaring in the first instance, than in the latter; and we are happy to learn, that among other salutary regulations which have taken place, in consequence of his Royal Highness the commander in chief's attention to the real interests of the British army, there is a specific instruction given to all colonels of cavalry regiments, to be scrupulously minute on this head.

**General SERVICE.** This term is applied to troops that are liable to be sent to any quarter of the habitable globe. Hence men raised for general service.

service. Regiments composed of volunteers from the militia are not of this description; nor have the officers who came from that establishment, progressive rank in the army. Stars are affixed to their names in the army list.

*A letter of SERVICE, see LETTER.*

*Home SERVICE.* In a military sense, and with us, the duty which is done within the limits of the three united kingdoms, and the adjacent islands. This term is frequently used to distinguish such troops as are not liable to serve beyond specified limits, from those that have been raised for general service.

*Foreign SERVICE,* military duty, or service done abroad.

*Secret SERVICE,* any service performed by an individual, in a clandestine secret manner. It likewise means intelligence, or information given by spies when countries are engaged in war, for which they receive pecuniary compensation.

*Secret SERVICE money,* the reward or compensation which is given for secret intelligence.

*Hard SERVICE.* This term is used, among the British, to signify the exercise of military duties in the presence of an enemy: we say, he has *seen much hard service*; which the French express thus: *Il a beaucoup servi.*

*SERVICE,* pecuniary disbursements, or payments which are made for military purposes.

*Etre de SERVICE, Fr.* to be on duty.

*Etre de SERVICE chez le roi, Fr.* to do duty at the palace.

*Service* likewise means tour of duty, or routine of service.

*SERVICE de l'infanterie en marche, Fr.* the regular duties or routine of service which an infantry regiment goes through when it receives orders to march. These are the general, *la générale ou le premier*; the assembly, *l'assemblée ou le second*; the troop, *le drapeau, ou le dernier.*

*SERVICE des places, Fr.* the regular duty, or routine of service, which is performed in fortified towns or places. Of this description are garrison duties. See *l'Essai sur la science de la guerre*, par Mons. le Baron D'Espagnac, tom. ii. p. 355, and *les Elémens Militaires*,

tom. ii. p. 116, where specific regulations on this head may be seen. We likewise recommend to the perusal of every engineer and artillery officer, a late valuable publication, entitled *Essai Générale de Fortification et d'Attaque et Défense des places.*

*SERVICE de Campagne, Fr.* field duties. This subject has been ably treated by several French writers, and among others by the author of *Les Elémens Militaires*, tom. ii. p. 1, &c. and in tom. iv. p. 68, &c. We likewise recommend to British officers in general, a small treatise which has lately been published at the Military Library, relative to the duties of an officer in the field, and principally of light troops, whether cavalry or infantry; as containing much useful information, and preparatory knowledge.

*Avoir du SERVICE, Fr.* a vulgar term used among the French to signify, that a man has been in various situations without much credit to himself, or benefit to others. It is particularly applied to a soldier who has been in different services, or who has deserted and got into two or three different regiments.

*SERVICE de Grand n'est pas héritage, Fr.* an expression used among the French, which signifies, that attendance on the great seldom produces any permanent advantage. Every individual, who has talents, should, of course, depend upon his own exertions.

*Faire son SERVICE, Fr.* to go through the functions or duties of a place or situation.

*SERVICEABLE,* capable of performing all necessary military duty.

*SERVIR le canon, Fr.* to serve the cannon, or bring it into action.

*SERVIR l'artillerie, Fr.* to serve the artillery, or bring it into action.

*SERVITEUR, Fr.* The French use this word in the same way that we do *servant*; Hence, *bon serviteur du Prince, de l'état, de la Patrie*, a good servant of his prince or sovereign; a good servant of the state, of the country. By which is meant a rule of conduct marked by zeal and assiduity, together with unshaken fidelity; all of which are essential ingredients in the military character.

To **SET** a *scntry*, (*poser une sentinelle*, Fr.) to place a soldier at any particular spot for its security.

To **SLT** on, (*attaquer*, Fr.) to attack.

To **SET** at *defiance*, (*défier*, Fr.) to defy; to dare to combat, &c.

To **SET** up, (*dresser*, Fr.) to make a man fit for military movements and parade. It is observed in the Rules and Regulations, that too many methods cannot be used to supply the recruit, and banish the air of a rustic; but that excess of setting up, which stiffens the person, and tends to throw the body backward instead of forward, is contrary to every true principle of movement, and must therefore be most carefully avoided.

**SETENDY**, *Ind.* the militia.

**SETTEL**, in gunnery, a round stick to drive fuzes, or any other compositions, into cases made of paper.

**SHAFT-rings**. See **RINGS**.

**SEUIL**, *Fr.* a threshold.

**SEUIL d'écluse**, *Fr.* a thick piece of wood which is laid cross-ways between two stakes at the bottom of the water, for the purpose of supporting the flood-gate.

**SEUIL de pont leviss**, *Fr.* a thick piece of wood with a groove, which is fixed on the edge of the counterscarp of a fosse or ditch, in order to bear the weight or pressure of the draw-bridge, when it is lowered. It is likewise called *sommier*, a *summer*, or principal beam.

**SEVIR**, one of the chief knights of ancient Rome, being six in all, and one to each ten; also a captain of a regiment of horse.

**SEWER**, (*égout*, *Fr.*) a drain, conduit, or conveyance, for carrying off water, soilage, &c. It is necessary, that every building have conveniences for discharging its refuse water, and other useless and offensive matters.—These are obtained by digging and laying sewers and drains at proper depths, and with the necessary outlets. The great care is, that they be large enough; that they be placed sufficiently deep, and have a proper descent; that they be well arched over, and have so free a passage, that there be no danger of their choaking up; the cleaning them being a work of trouble and expence.

Instead of making the bottom of the

sewer a flat floor, it should be in the form of an inverted arch, answering in part to the sweep of the arch above. Every one knows that the freest passage is through circular channels; and these might easily be constructed so as to wear that form; they would resemble so many water-pipes of a circular base, and there would be no danger of their filling up. The perpendicular walls would not retain any thing, because there are no angles in their joining; and the bottom being round and free, all would run off.

**SEX-angled**, having six angles.

**SEXTANT**, (*Sextant*, *Fr.*) in mathematics, an instrument which serves to measure angles. It is the segment of a circle, or an arch of 60 degrees, which makes the sixth part of a circle.

**SEYMAR-Bassy**, or first lieutenant-general of the Janizaries, an officer among the Turks who not only commands the Janizaries that are called *Seymenis*, but when the Aga, (which signifies chief guardian, and Aga-si, chief or guardian of) takes the field, who further assumes the title of Kaymekan, or his lieutenant at Constantinople. He is authorized to put his own seal upon the different dispatches which he sends, and takes rank of all the sardans or colonels in his jurisdiction. He is likewise entrusted with the entire direction and management of all that concerns, or relates to, the interior government of the Janizaries.

**SEXTIDI**, *Fr.* the sixth day in the French republican decade.

**SEXTILE**, *Fr.* In the French republican almanack, a year is said to be *sertile*, when it contains 366 days; in which case there is a sixth complementary day.

**SILAKÉE**, *Ind.* a small coin of the value of about three-pence.

**SIAKER**, *Ind.* city.

**SHAIT**, *Ind.* bridge, embankment.

**SHAFT**, an arrow; a missive weapon.

**SHART**, in mining; a narrow, deep perpendicular pit.

**SHAFIS** of a carriage, are two poles joined together with cross bars, by which the hind horse guides the carriage, and supports the fore part of the shafts; the hind part turning round an iron bolt.

**SHART-bars**, are two pieces of wood to fasten the hind ends of the shafts together,

together, into which they are pinned with wooden pins.

**SHALLIE**, *Ind.* the same as batty, which signifies rice in the husk.

**SHAMROCK**, the Irish word for three-leaved grass. It is worn by the Irish in their hats on St. Patrick's day; as the leek is by the Welch on St. David's, and the thistle by the Scotch on St. Andrew's.

**SHANK**, the long part of any instrument.

**SHAROCK**, *Ind.* a silver coin, equal in value to about one shilling.

**SHAUMIARIS**, *Ind.* a canopy of cotton cloth.

**SHAW**, *Ind.* a king.

**SHAWZADA**, *Ind.* the king's son.

**SHEED**, *Ind.* a witness.

**SHIEICK**, a chief of a tribe among the Arabs. Mr. Morier, in his account of a campaign with the Ottoman army, relates, that in 1800, a fanatic sheick, who pretended to be inspired, headed the Fellahs, (the lowest class of inhabitants are so called among the Arabs) of the district of Demenhör, and caused a detachment of 80 Frenchmen to be put to death in the night; this was effected by first securing the sentinel.

**SHELL of a sword**, (*plaque d'épée*, Fr.) a particular part of a sword, which serves as a shield to the hand when it grasps the hilt. The regulation sword, which is directed to be worn in a cross belt, has its shell so constructed that one side can fall down, by which means the hilt hangs more conveniently.

**A Spring-SHELL of a Sword**, (*plaque d'épée à ressort*, Fr.) a shell, which, by means of a spring, can lie flat against the hip, when the sword is worn in a cross-belt.

**SHELL**, a short jacket without arms, which was worn by light dragoons, and in some instances by the infantry, before the new regulations took place, respecting the clothing of the British army. At the commencement of the late war, some militia colonels derived no inconsiderable emolument from this mode of dress.

**SHELLS**, in gunnery, are hollow iron balls to throw out of mortars or howitzers, with a fuze-hole of about an inch diameter, to load them with powder, and to receive the fuze: the bottom, or

part opposite the fuze, is made heavier than the rest, that the fuze may fall uppermost; but in small elevations this is not always the case, nor is it necessary; for, let it fall as it will, the fuze sets fire to the powder within, which bursts the shell, and causes great devastation. The shells had much better be made of an equal thickness, for then they burst into more pieces.

**Message-SHELLS**, are nothing more than howitzer shells, in the inside of which a letter, or other papers, are put; the fuze-hole is stopp'd up with wood or cork, and the shells are fired out of a royal or howitzer, either into a garrison or camp. It is supposed that the person to whom the letter is sent, knows the time, and accordingly appoints a guard to look out for its arrival.

**To find the weight of a SHELL. Rule.** Double the difference of diameters of the shell and hollow sphere, and 7 times the result gives the weight in pounds, cutting off the two right hand figures of whole numbers.

**Example.** Let the diameter of the shell be 13 inches, and that of the hollow sphere 9.5. Then the cube of 13 is 2197, and that of 9.5, is 857.357; the difference is 1339.625, its double is 2679.25, which multiplied by 7, gives 18754.625; and cutting off two places in whole numbers, the result is 187lb. or 1 cwt. 2 qrs. 21 lb. the weight of the shell.

**SHERISCHER WAR**, *Ind.* A word which corresponds with Saturday.

**SHERISTA**, *Ind.* An officer; a registry.

**To SHIFT**, in a military sense, to change place or station. Hence, to shift quarters. In the exercise, &c. of a battalion, officers commanding divisions are, upon particular occasions, such as marching past, &c. to shift from the right to the left, to conduct the heads of files, or the pivot flanks, in column or echelon. Whenever officers shift, they must pass briskly by the rear, and never along the front of the division. The covering sergeants always move with them.

**The SHILLINGS**, a phrase in familiar use among army brokers, to express a certain profit or per centage which they gain in the sale, purchase, and exchange of commissions. The regulated price of a company in any re-

gument of foot being 1500*l.* only, that sum can be lodged at an agent's, or a banker's; but if the company be (what is called) in the market, the broker who transacts the business, receives one shilling in the pound, and in order to produce this premium, the purchaser gives 1500 guineas, out of which the shillings, amounting to 75*l.* are paid to the broker, leaving the nett regulation untouched.

*Head-quarter SHIP*, the ship on which the commander in chief of an expedition is embarked, and from which signals are made for the commanding officers, adjutants, &c. of corps, to attend.

*Hospital SHIP*, the ship in which the sick and wounded soldiers, &c. are taken care of on expeditions, and during sea voyages.

*Prison SHIP*, a ship appropriated for the reception of prisoners of war, &c.

*SHOCCA, Ind.* any letter written by the king.

*SHOOKREW AR, Ind.* a word which corresponds with Friday.

*SHOOTING.* See *GUNNERY and Projectile.*

*SHORTEN your bridle*, a word of command used in cavalry, viz.

1st. Seize the upper end of the reins of the bridle, which is to lie on the right side of the horse, with the right hand.

2d. Bring it up as high as your chin, keeping your right elbow on a level with the shoulder.

3d. Slip your left hand along the reins of the bridle, and take hold of the loop or button, which is near the upper end of the reins.

4th. Slip the loop down with the left hand as low as the pommel of the saddle.

5th. Bring the right hand down with life on the right holster-cap, quitting the reins of the bridle with both hands.

*SHORT-roll.* See *SEGNARS.*

*SHOT*, a denomination given to all kinds of balls used for artillery and fire-arms; those for cannon being of iron, and those for guns and pistols, &c. of lead.

*Grape* }  
*Chain* } *SHOT.* See *LABORATORY.*  
*Case* }

*To find the weight of an iron SHOT*

whose diameter is given; and the contrary. *Rule.* Double the cube of the diameter in inches, and multiply it by 7; so will the product (rejecting the 2 last or right-hand figures) be the weight in pounds.

*Example.* What is the weight of an iron shot of 7 inches diameter. The cube of 7 is 343, which doubled is 686, and this multiplied by 7 produces 4802, which, with the right hand figures rejected, gives 48 pounds, the weight required.

N. B. This rule is sufficiently exact for practical uses.

*To find the diameter of the SHOT*, when the weight is given. *Rule.* Multiply the cube root of the weight in pounds by 1.923, and the product is the diameter in inches.

*Example.* What is the diameter of an iron shot of 52 pounds? The cube root of 52 is 3.732, which, multiplied by 1.923 gives 7.177 inches, the diameter required.

*Rule by logarithms.*

To 1-3d of the log. of 52 0.572001

Add the constant log. 0.283979

And the sum is the log. } 0.855980  
of the diameter 7.177 }

*To find the diameter of a SHOT*, from the impression or cavity it makes by striking a brass gun, or other object.

*Rule.* Divide the square of the radius of the cavity by the depth of it, and add the quotient to the depth; so will the sum be the diameter of the shot required.

*Example.* A shot having struck upon a brass gun, made a cavity of 1.49 inches deep, and 4.94 inches diameter; what was the size of the shot? The radius of the cavity is 2.47, and its square is 6.1009, which divided by the depth 1.49, the quotient is 4.1, to which, adding 1.49, the sum 5.59 inches is the diameter required, answering to a 21-pounder.

*Tangrel SHOT*, a sort of shot which runs loose, with a shackle or joint in the middle.

*Spherical Case-SHOT.* Case-shot is so termed from the whole charge of the gun being contained in a tin case. The tin case is cylindric, in diameter a little less than the calibre of the gun or howitzer. It is filled with iron balls, so as to make up the weight of the shot.

These

These balls are seldom less than  $1\frac{1}{2}$  oz. in weight. But little effect is to be expected from firing case shot beyond 300 yards, from the very great divergency of the balls.

**SHOULDER**, the upper part of the blade of a sword is so called. The shoulders of regimental sword-blades, for the infantry, are directed to be one inch broad at least.

**SHOULDER** of a *bastion*, in fortification. See **EXPLAN.**

**SHOULDER-belt**, so called because it hangs over the shoulder, to carry the bayonet or sword: it is made of strong bull leather.

**To SHOULDER**, in a military sense, to lay on the shoulder, or to rest any thing against it. Hence, to shoulder a musquet.

**SHOULDER arms**, a word of command which is used in the British service. See **MANUAL.**

*Right SHOULDERs forward,* } Two  
*Left SHOULDERs forward,* } terms of command in the British service, when a column of march (in order to follow the windings of its route) changes its direction in general, less than the quarter of the circle. See Sections 22 and 39 of the Rules and Regulations.

**SHROFF**, *Ind.* a banker, a money-changer, or one who keeps a shop for the accommodation of the public in pecuniary matters, and who derives considerable advantage from the circulating medium of other people's property.

**SHROFFING**, *Ind.* the act of examining and sorting money.

**SHUMSERTREEPUT**, *Ind.* avowal, acknowledgment, confession.

**To SHUT**, to close, to make not open.

**SHUT pans**, a word of command used in the inspection of arms. Place the inside of your fingers against the back part of the hammer, and bring it briskly to in one motion. In opening pans, you place the thumb against the inside of the hammer.

**SHUTERNAUL**, *Ind.* a sort of arquebuss, which is fixed upon the back of a camel.

**SICK and Hurt**, a board so called, to which the agents, commissaries, &c. belonging to the several military hospitals in Great Britain, are responsible,

**SIDE-pieces**, of gun-carriages. See **CARRIAGES.**

**SIDE-straps**, in a field carriage, are flat iron bands which go round the side-pieces, in those places where the wood is cut across the grain, to strengthen them near the center and the trail.

**SIEGE**, (*siege*, Fr.) the position which an army takes, or its encampment before a fortified town, or place, for the purpose of reducing it. The term comes from *siege*, which signifies seat, chair, &c. Hence, to sit down before a place, signifies, in a military sense, to choose a position from which you may commence the necessary operations to attack and get possession of it. The French use the word generally as we do.

*To undertake the SIEGE of a town,* (*entreprendre le siège d'une ville*, Fr.) to invest it, to form lines of circumvallation, to open trenches, &c.

*To lay SIEGE to a town,* (*faire le siège d'une ville*, Fr.) to draw your forces round a town, for the purpose of attacking it.

*To carry on a SIEGE,* (*continuer un siège*, Fr.) to persevere by regular approaches, &c. in gaining ground upon the garrison.

*To lay close SIEGE,* (*presser le siège*, Fr.) to approach close to the walls for the purpose of making a breach and storming, or of starving out the garrison. For a full and scientific explanation of the different methods, which are adopted in modern times, for the attack and defence of places, particularly of sieges, see *Essai Général de Fortification, d'attaque et défense de places*, tom. 1. page 61, &c. &c.

**SIEGE brusque**, Fr. an expression used among the French to signify the prompt and immediate movement of a besieging army, against a fortified town or place, without waiting for the regular formation of lines, &c. In this case the troops make a vigorous attack upon all the out-works, and endeavour to make a lodgement upon the counterscarp. When they have succeeded, they instantly throw up temporary lines, &c. behind them, in order to secure a retreat, should the garrison force them to quit their ground.

**SIEGE**, in the art of war, is the act of surrounding a fortified place with

an army, and approaching it by passages made in the ground, so as to be covered against the fire of the place.

The first operation of a *siege* is investing. The body of troops investing a town should, at least, be as strong again as the garrison; so as to be able to divide itself into several parties, in order to take possession of all the avenues leading to the place. By day they should keep themselves out of cannon-shot; but as soon as it is dusk they must approach much nearer, the better to be able to support each other, and to storm the town.

*General phrases and terms used at a SIEGE are, viz.*

*To besiege a place.* See *SIEGE*.

*To accelerate the SIEGE, (accélérer le siège, Fr.)* is when an army can approach so near the place as the covert-way, without breaking ground, under favour of some hollow roads, rising grounds, or cavities, and there begin their work.

*An attack,* is when the besieging army can approach the town so near as to take it, without making any considerable works.

*To form the SIEGE, or lay siege to a place, (mettre le siège à une place, Fr.)* there must be an army sufficient to furnish five or six reliefs for the trenches, pioneers, guards, convoys, escorts, &c. and artillery, with all the apparatus thereto belonging; magazines furnished with a sufficient quantity of all kinds of warlike stores; and a general hospital, with physicians, surgeons, medicines, &c.

*To raise the SIEGE, (lever le siège, Fr.)* is to give over the attack of a place, quit the works thrown up against it, and the posts formed about it. If there be no reason to fear a sally from the place, the *siege* may be raised in the day-time. The artillery and ammunition must have a strong rear guard, lest the besieged should attempt to charge the rear: if there be any fear of an enemy in front, this order must be altered discretionally, as safety and the nature of the country will admit.

*To turn the SIEGE into a blockade, (convertir le siège en blocus, Fr.)* is to give over the attack and endeavour to take it by famine; for which purpose all the avenues, gates, and streams,

leading into the place, are so well guarded, that no succour can get in to its relief.

*To insult a work,* to attack it in a sudden and unexpected manner, with small arms, or sword in hand.

*Surprise,* is the taking a place by stratagem or treason.

*To escalate a place,* is to approach it secretly, then to place ladders against the wall, or rampart, for the troops to mount, and get into it that way.

*To petard a place,* is privately to approach the gate, and fix a petard to it, so as to break it open for the troops to enter.

*Line of circumvallation,* is a kind of fortification, consisting of a parapet, or breast-work, and a ditch before it, to cover the besiegers against any attempt of the enemy in the field.

*Line of countervallation,* is a breast-work, with a ditch before it, to cover the besiegers against any sally from the garrison, in the same manner that the line of circumvallation serves to protect them in the field.

*Lines,* are works made to cover an army, so as to command a part of the country, with a breast-work and a ditch before it.

*Retrenchment,* a work made round the camp of an army, to cover it against any surprise.

*Line of counter-approach,* a trench which the besieged make from the covert-way to the right and left of the besiegers attacks, in order to scour their works. This line must be perfectly enfiladed from the covert-way and the half-moon, &c. that it may be of no service to the enemy, in case he gets possession of it.

*Batteries at a siege,* cannot be erected till the trench is advanced within reach of the cannon of the place; that is, within what is generally understood to be a point-blank range, which is reckoned about 300 toises, or 1800 feet.

*Cannon* is made use of at a *siege* for two different purposes; the first to drive away the enemy from their defences; and the second, to dismount their guns. To produce these two effects, the batteries should not be above the mean reach of cannon-shot from the place: therefore there is no possibility of constructing them, till the first parallel is formed;

formed; and as the distance of the first parallel from the second is generally 300 toises, the batteries must be on this line, or beyond it, nearer the town.

The construction of batteries belongs to the officers of the royal artillery, who generally consult with the engineer that has the direction of the siege, as well about their situation as about the number of their guns and mortars. They must be parallel to the works of the town which they are to batter. It is customary to place the mortar-batteries and gun-batteries side by side, and in the same line, to the end that they may batter the same parts. The use of both is to demolish the enemy's works, to dismount their guns, to penetrate into their powder magazines, and to drive the besieged from their works and defences; as also to ruin and destroy the principal buildings, by setting fire to the town; and to fatigue and distress the inhabitants in such a manner, that they shall press the garrison to surrender.

*To sally at a siege*, is to go privately out of a besieged town, fall suddenly upon the besiegers, and destroy part of their works, spike their cannon, and do every other possible damage.

*A sally*, a secret movement which is made out of a besieged town or place, by a chosen body of troops, for the purpose of destroying an enemy's out-works, &c. Sallies are seldom made when the garrison is weak; for although they molest the enemy, and keep him on the alert, yet the chance of losing men renders it prudent to keep within the works.

*Saps in a siege*, are trenches made under cover from the fire of the place, behind a mantlet or stuffed gabion: they are generally ten or twelve feet broad. This work differs from the trenches, in as much as the latter are made uncovered. The sap has also less breadth; but when it is as wide as the trench, it bears the same name. There are various sorts of saps, viz.

*Single sap*, is that which is made on one side only, or, which is the same thing, has only one parapet.

*Double sap*, has a parapet on each side, and is carried on wherever its two sides are seen from the place.

*Flying sap*, is that in which the be-

siegers do not give themselves the trouble of filling the gabions with earth: it is made where the workmen are not much exposed, and in order to accelerate the approaches.

*Sap-faggots*, are a kind of fascines, only three feet long, and about six inches in diameter.

*Saucissons*, are another species of fascines, from 12 to 19 feet long, and from 8 to 10 inches in diameter, and are used in making batteries, and repairing the breaches.

*Sortie*. See SALLY.

*Tail, or rear of the trench*, (*Queue de la tranchée*, Fr.) is the first work the besiegers make when they open the trenches.

*Tambour*, is a kind of traverse, at the upper end of the trench, or opening made in the glacis to communicate with the arrows. This work hinders the besiegers from being masters of the arrow, or discovering the inside of the place of arms belonging to the covert-way.

*Traverse*, in a siege, a kind of retrenchment which is made in the dry ditch, to defend the passage over it.

*Trenches*, are passages or turnings dug in the earth, in order to approach a place without being seen from its defences.

*Wool-packs*, used in a siege, differ from sand-bags, in this only, that they are much larger, and, instead of earth, they are filled with wool. They are used in making lodgments in places where there is but little earth, and for other similar purposes. They are about five feet high, and 15 inches in diameter.

*Rear of an attack*, is the place where the attack begins.

*Front, or head of an attack*, that part next to the place.

*Mantlets*, are wooden fences, rolling upon wheels, of two feet diameter; the body of the axle-tree is about four or five inches square, and four or five feet long; to which is fixed a pole of eight or ten feet long, by two spars; upon the axle-tree is fixed a wooden parapet, three feet high, made of 3-inch planks, and four feet long, joined with dowelpins, and two cross-bars: this parapet leans somewhat towards the pole, and is supported by a brace, one end of which is fixed to the pole, and the other to the upper part of the parapet.

Mantlets

Mantlets are used to cover the sappers in front against musket-shot.

**Maxims in SIEGES.** 1st. The approaches should be made without being seen from the town, either directly, obliquely, or in flank.

2. No more works should be made than are necessary for approaching the place without being seen; i. e. the besiegers should carry on their approaches the shortest way possible, consistent with being covered against the enemy's fire.

3. All the parts of the trenches should mutually support each other; and those which are farthest advanced, should be distant from those that defend them about 120 or 130 toises, that is, within musket-shot.

4. The parallels, or places of arms the most distant from the town, should have a greater extent than those which are the nearest, that the besiegers may be able to take the enemy in flank, should he resolve to attack the nearest parallels.

5. The trench should be opened or begun as near as possible to the place, without exposing the troops too much, in order to accelerate and diminish the operations of the siege.

6. Care should be taken to join the attacks; that is, they should have communications, to the end that they may be able to support each other.

7. Never to advance a work, unless it be well supported; and for this reason, in the interval between the 2d and 3d place of arms, the besiegers should make, on both sides of the trenches, smaller places of arms, extending 40 or 50 toises in length, parallel to the others, and constructed in the same manner, which will serve to lodge the soldiers in, who are to protect the works designed to reach the third place of arms.

8. Take care to place the batteries of cannon in the continuation of the faces of the parts attacked, in order to silence their fire; and to the end that the approaches, being protected, may advance with greater safety and expedition.

9. For this reason the besiegers shall always embrace the whole front attacked, in order to have as much space as is requisite to place the batteries on the produced faces of the works attacked.

10. Do not begin the attack with

works that lie close to one another, or with reentrant angles, which would expose the attack to the cross fire of the enemy.

**Stores required for a month's SIEGE, are nearly as follow:—**

Powder, as the garrison is more or less strong	3 or 900,000 lb.
Shot } for battering pieces	- 6000
} of a lesser sort	- 20,000
Battering cannon	- 80
Cannons of a lesser sort	- 40
Small field-pieces for defending the lines	- 20
Mortars for throwing	{ shells 24
	{ stones 12
Shells for mortars	- 15 or 16,000
Hand-grenades	- 40,000
Lead-en bullets	- 180,000
Matches in braces	- 10,000
Flints for muskets, best sort	100,000
Platforms complete for guns	100
Platforms for mortars	- 60
Spare { carriage for guns	- 60
{ mortar-beds	- 60
{ sponges, rammers, and ladles, in sets	- 20
Tools to work in trenches	- 40,000

Several hand-jacks, gins, sling-carts, travelling forges, and other engines proper to raise and carry heavy burdens; spare timber, and all sorts of miner's tools, mantlets, stuffed gabions, fascines, pickets, and gabions.

**SIENS, Fr.** the plural of *sien*, *his*, *her's*, or *one's* own. This word is used among the French, to signify the same as *gins*, men, people, soldiers; viz. *ce general fut abandonné par les siens*, Fr. that general was abandoned by his own soldiers.

**SIEVE, an instrument**, which by means of hair, lawn, or wire, is capable of separating the fine from the coarse parts of any powder.—See *GILFLOWDER*, *LABORATORY*, &c.

**SIES or SHIAS, Ind.** a tribe of people in the N. West of India.

**SIFFLEMENT, Fr.** literally means the noise of a whistle. It is used to express the sound which a ball or bullet makes when it cuts the air; as *sifflement des armes à feu*, the whistling or whizzing noise of fire-arms.

**SIFFLET, Fr.** a whistle. The French make use of the whistle on board their ships in the same manner as we do. It answers the same purposes at sea, that

that the drum and trumpet do on shore. The boatswain's whistle pipes all hands up, as occasion requires in a ship: and the drum and trumpet collect troops together in camp, garrison, or elsewhere.

SIG, an old Saxon word, importing victory.

SIGHT, (*La Mire*, Fr.) a small piece of brass or iron which is fixed near to the muzzle of a musquet or pistol, to serve as a point of direction, and to assist the eye in levelling.

SIGN, a sensible mark or character, denoting something absent or invisible. As the trace of a foot, the hand-writing or mark of a man; also the subscription of one's name.

SIGN Manual, the king's signature is so called. All commissions in the regular army of Great Britain, army warrants, &c. bear the sign manual. The appointments of officers in the volunteers have been so distinguished during the present war. Adjutants only in the militia have their commissions signed by the king; those of the field officers, captains, and subalterns, &c. are signed by the lords lieutenants of counties, or by their deputies for the time being, sanctioned by a previous intimation from the secretary of state, that the king does not disapprove of the names which have been laid before him.

SIGNAL, (*Signal*, Fr.) Any sign made by sea or land, for sailing, marching, fighting, &c. Signals are likewise given by the short and long rolls of the drum, during the exercise of a battalion.

SIGNAL, in the *art of war*, a certain sign agreed upon for the conveying intelligence, where the voice cannot reach. Signals are frequently given for the beginning of a battle, or an attack, usually with drums and trumpets, and sometimes with sky-rockets, &c.

SIGNAL of attack or assault, (*Signal d'une attaque, ou d'un assaut*, Fr.)—This signal may be given in various ways. By the discharge of a lighted shell, by sky-rockets, by colours displayed from a conspicuous spot, &c.—In 1747, Marshal Lowendal made use of lighted shells or bombs, when he laid siege to the town of Bergen-op-zoom.—During the consternation of the inhabi-

tants, which was excited by a continual discharge of these signal shells, the grenadiers entered a practicable breach, and took the town by storm.

SIGNAL-flag, in *ancient military history*, was a gilded shield hung out of the admiral's galleys: it was sometimes a red garment or banner. During the elevation of this the fight continued, and by its depression or inclination towards the right or left, the rest of the ships were directed how to attack their enemies, or retreat from them.

SIGNALS made by the colours of an army, (*Signaux des Enseignes*, Fr.) The ancients had recourse to all the various methods which could be used by signals, to express the particular situation of affairs, and to indicate measures that should be adopted. If, during an engagement, victory seemed inclined more to one side than another, the colours belonging to the victorious party were instantly bent towards its yielding antagonist. This signal was conspicuous to the men, and excited them to fresh efforts. They imbibed the most lively hopes of success, and eagerly pressed forward to reap the advantages of bravery and good conduct.

When an army was hard pressed by its enemy, the colours of the former were raised high in air, and were kept in a perpetual flutter and agitation, for the purpose of conveying to the soldiers, that the issue of the battle was still doubtful, and that nothing but courage and perseverance could determine the victory. If, in the heat of action, any particular regiment seemed to waver and give way, so as to cause an apprehension that it might finally be broken, its colours were instantly snatched out of the bearer's hands by the general or commanding officer, and thrown into the thickest of the enemy. It frequently happened, that the men, who were upon the point of yielding ground and flying, received a fresh impulse from this act, rallied, and by a desperate effort of courage recovered the colours, and restored the day. This method of re-animating their legions was generally resorted to by the Romans. We have had instances in modern times, where the fortune of the day has been wholly decided by some sudden and unexpected

expected act of an individual. In the reign of Louis XIV. a private soldier threw his hat into the midst of the enemy, during a hard fought and doubtful battle, expressing thereby that fresh succours were arrived to strengthen the French army. This circumstance, so apparently trifling, produced the desired effect. It threw the enemy into confusion, gave the French fresh spirits, and finally determined the victory in their favour. We read of various instances in which signals have been used to express the personal danger of a king or general, who was fighting at the head of a select body of men. The knowledge of the critical position in which their leader stood, excited fresh courage in the rest of the troops, and drove them to acts of the greatest intrepidity. In the course of the present war some examples of the same sort might be adduced, both on the side of Austria, and oh that of France. The bridge of Lodi, the passage of the Teiglementi, &c. would illustrate any observations we could make upon the subject.

Nor are the advantages, which arise from the use of signals, confined to these particular cases. Various circumstances grow out of the desultory nature of military operations, to render flags of communication indispensably necessary. The vast scope which is given to modern tactics, makes it impossible, that the human eye or voice should take in all the critical manœuvres or evolutions that occur, when an extended line is actually engaged. The right wing may be giving way, while the left is gaining ground, and the center might be in danger, while the two flanks were rapidly advancing with apparent security against the enemy. Under these circumstances, a general, by means of communicating signals, would be enabled to provide for every contingency, without losing time by sending his orders verbally. Although signal flags, in modern engagements, have been generally laid aside, their use has been acknowledged in the adoption of warlike instruments, which by the variety of their sounds convey the necessary directions to an engaging army.

The ancients had signals which they

called *Mute Signals*, (*Signaux muets*;)—These consisted in certain actions or signs that were made by a general; such as waving the hand, brandishing a stick or sword, or by exhibiting to view any part of his dress, accoutrements, &c. Instances of the same kind have occurred among the moderns. Under this denomination may likewise be classed the different signals which are made for the movement, marching, and manœuvring of troops, in and out of quarters.

When troops are scattered or separated from one another, it is usual to communicate by means of fires lighted upon eminences, during the night, and by smoke, during the day.

In former times, large pieces of wood were hung above the towers of cities or castles, which, by being drawn up or lowered, gave intelligence of what passed. This method has been succeeded by the invention of telegraphs, which answer every purpose of communication, when they can be established through any extent of country. Besides those signals, there are others which may be called *vocal* and *demi-vocal*. The vocal signals are those of the human voice, which consist in the necessary precautions that are adopted to prevent a guard or post from being surprised, to pronounce words of command in action, &c. Of the first description are paroles and countersigns, which are exchanged between those to whom they are intrusted, and which are frequently altered, during the day and night, to prevent the enemy from receiving any information by means of spies. The demi-vocal signals are conveyed by military instruments; the different soundings of which indicate, instantaneously, whether an army is to halt or to advance, whether troops are to continue in the pursuit of an enemy, or to retreat.

The demi-vocal signals, directed to be observed in the British service, as far as regards the manœuvring of corps, &c. consist of signals for the government of light infantry, and of cavalry regiments, squadrons, or troops: the latter are properly called soundings. Light infantry signals are to give notice, —to advance; to retreat; to halt; to cease firing; to assemble; or call in all parties

parties. In the regulations, printed by authority, it is observed, that these signals are to be always considered as fixed and determined ones, and are never to be changed. The bugle horn of each company is to make himself perfect master of them. All signals are to be repeated; and all those signals which are made from the hue or colour, are to convey the intention of the commanding officer of the line to the officer commanding the light infantry, who will communicate them to the several companies or detachments either by word or signal.

**SIGNAL Staff.** In matters of military parade it is usual to fix a red flag, somewhat larger than a camp colour, to point out the spot where the general, or officer commanding, takes his station in front of a line. This is called the signal staff.

**SIGNALEMENT, Fr.** The description of a man's person, his appearance, &c. Having omitted to mention the English term under its appropriate letter D, we shall give it under the French word *Signalement*, which signifies not only the description of a man's figure, but an exact and specific detail of such marks and prominent features, that by comparing the copy taken on paper with the original, the latter may be instantly recognized. It is the custom in all well regulated armies for every regiment to have an exact description of each man that belongs to it, specifically drawn out in the adjutant's book. So that when a soldier deserts, a copy is instantly taken, and forwarded to those places to which he is most likely to resort.

**SIGNUM.** A standard, an ensign, a streamer, a flag. In the early days of Rome, the military ensign or standard consisted of a wisp or handful of straw, which was fixed at the end of a pike. It was then called *Manipulus feni*, a bottle of hay. By degrees, the Romans adopted more respectable marks to move by. The wisp of straw, or bottle of hay, was changed into a piece of wood which lay crossways at the end of a pike, and underneath the traverse hung different small figures and representations of the gods. In latter periods, the likenesses of the different emperors were suspended in the

same manner. The staff, in these cases, was made of solid silver, so that it required uncommon strength of body to be able to carry the *Signum*. When the armies were encamped, each legion had its *signum* erected in front of the pretorium; which was always close to the general's tent.

**SIGNUM Militare.** The watch-word which was given among the Romans, to the troops that were on guard. The *signum militare* was changed every morning. The watch-word of the patrol was also called *tessera*, which signifies a signal in war, any private sign or token.

**SIGNUM Profectonis.** The signal for marching, which was given among the ancient Romans, was so called. It corresponds with our beat, the general.

**SIGNUM Pugne.** The signal for battle which was used among the ancient Romans. When this happened, a red coat of arms was displayed above the general's tent, after which, all the different warlike instruments sounded together, and proclaimed the signal of attack.

**SIGURGHAI, Ind.** A feudal tenure.

**SIGUETTE, Fr.** The same as cavesson, a sort of noseband, sometimes made of iron, and sometimes of leather or wood; sometimes flat, and sometimes hollow or twisted; which is put upon the nose of a horse, to forward the suppling and breaking of him.

**SILENCE, (Silence, Fr.)** This word is used by the French as a caution to soldiers to prepare for any part of the military duty or exercise.—The French have likewise another term which corresponds with our word attention—See *Garde à vous*.—We use *Attention* in both instances.

**SILHATARIS, Fr.** See SPANIS.

**SILADARS, Ind.** Armour-bearers belonging to the Malhatta princes, who are obliged to furnish a certain number of men, composing the second class of their cavalry.

**SILLAGE, Fr.** The wake of a ship; the trace which a vessel leaves astern when she moves forward.

**SILLON, in fortification,** is a work raised in the middle of a ditch, to defend it when it is too wide. It has no par-

particular form, and is sometimes made with little bastions, half-moons, and redans, which are lower than the works of the place, but higher than the covert-way. It is more frequently called *envelope*, which see.

**SIMILAR polygons**, are such as have their angles severally equal, and the sides about those angles proportional.

**Simple SOLDAT**, *Fr.* A private soldier.

**SIMPLIFICATION**, (*Simplification*, *Fr.*) The act of rendering plain, clear, and simple. The state of any thing that is made plain and simple. This substantive, like the verb, is evidently borrowed from the French; who say familiarly, *Traictier à la simplification d'une affaire*; to endeavour to make a matter plain and conspicuous. The simplification of army accounts is perhaps one of the most desirable objects in finance, especially during a war, when so many branches of service render them unavoidably complicated. It is, however curious to remark, that since the simplification of army accounts is said to have taken place, by the abolition of arrears, &c. every regimental rank of commissioned officers (Infantry) has reason to rejoice in the opportunity that is given for the exercise of arithmetical powers; nor has the contrivance of it less cause to be proud of the ingenuity displayed in proportionably dividing the lowest silver coin, so as to leave some broken figure, to be calculated and adapted to a square sum. It is not less curious to observe, that of the four different ranks under that of a commissioned officer, three receive pay, the daily rate of which is a fractional part of a halfpenny. The following two instances will prove our assertion, viz.

Lieut. Colonel	15s.	11d. per diem.
Major	14s.	1d. ditto.
Captain	9s.	5d. ditto.
Lieutenant	5s.	8d. ditto.
Ensign	4s.	8d. ditto.
Serjeant	1s.	6½d. ditto.
Corporal	1s.	2½d. ditto.
Drummer	1s.	1¼d. ditto.

**To SIMPLIFY**. This word has been adopted amongst men of business and arrangement, from the French *simplifier*, which means to relate the bare

matter of fact. This signification likewise reaches every species of analysis, &c.

In order to place the advantages of simplification in the clearest point of view, we submit the following enumeration of the words of command which were given in 1689, and may be read in an old book entitled the *Perfection of Military Discipline after the newest method, as practised in England and Ireland, &c. or the industrious Soldier's Golden Treasury of Knowledge in the Art of Making War, viz.*—

- 1 Musketeers, have a care of the exercise, and carry your arms well.
- 2 Lay your right hands on your muskets.
- 3 Poise your muskets.
- 4 Rest your muskets.
- 5 Cock your muskets.
- 6 Guard your muskets.
- 7 Present.
- 8 Fire.
- 9 Recover your arms.
- 10 Half bend your muskets.
- 11 Clean your pans.
- 12 Handle your primers.
- 13 Prime.
- 11 Shut your pans.
- 15 Blow off your loose corns.
- 16 Cast about to charge.
- 17 Handle your chargers.
- 18 Open them with your teeth.
- 19 Charge with powder.
- 20 Draw forth your scowrers.
- 21 Shorten them to an inch.
- 22 Charge with bullet.
- 23 Ram down powder and ball.
- 24 Withdraw your scowrers.
- 25 Shorten them to a handful.
- 26 Return your scowrers.
- 27 Poise your muskets.
- 28 Shoulder your muskets.
- 29 Order your muskets.

**SINE**. In geometry, a right *sine*, is a right line drawn from one end of an arch perpendicularly upon the diameter drawn from the other end of the arch.

**SINGE**, *Fr.* An instrument so called. See **PANORAPH**.

**SINECURE**. Dr. Johnson calls a sinecure an office which has revenue without any employment. Of this description, in a military sense, are those appointments which admit of deputies upon deputies; so that the original holder receives the public money without doing

doing any public service; an abuse that has been very justly reprobated by the select committee of the house of commons.

**SINEW.** See the article ARGENT.

**SINGLE combat**, a contest in which not more than two are engaged.

**SINUS, Fr.** See LINE for its geometrical acceptation.

**SINUS**, in English, signifies a bay of the sea, an opening of the land; any fold or opening.

**SINUSOIDE, Fr.** A geometrical curve, which has been imagined by Monsiur Bêlidor, for the purpose of balancing or preserving the equipose of a draw-bridge. See *Science des Ingenieurs*, liv. iv. See likewise the specific construction of this curve as explained by the Marquis de l'Hôpital, in a book entitled, *Acta Eruditorum*, published at Leipsick, in 1695; and demonstrated by M. Bernoulli, who discovered, that this curve was nothing more than the epicycloid, which see.

**SIPHON**, (*Siphon*, likewise *Siphon*, Fr.) In hydraulics, a crooked tube, one leg or branch whereof is longer than the other. It is used in the raising of fluids, emptying of vessels, and in various hydrostatical experiments.

**SIRKAR, Ind.** The government.

**SIROC.** From SIRIUS, the dog-star. The wind, which we call south-east, is so called in Italy.

**SISTRUM.** A musical instrument which was used by the Egyptians in their armies. It also signifies, generally, an instrument used in battle instead of a trumpet. Likewise a brazen or iron tinsel, much like to the kettle-drum.

**To SIT, (asseoir, Fr.)** In a military sense, to take a stationary position; as, *To sit before a fortified place*; to be encamped for the purpose of besieging it. The French use the word *asseoir* as an active verb, with respect to military matters, viz. *asseoir un camp*, to pitch a camp. *At assit son camp hors de la portée du canon de la ville*; he pitched his camp out of the range of the town's cannon.

**SITUÉ, Fr.** Situated; placed; pitched. The French say, *un camp bien situé*, a camp well situated, or pitched.

**SIXAIN.** Sixth, Sexagena, in war, an ancient order of battle, wherein six

battalions being ranged in one line, the second and fifth were made to advance, to form the *two guard*; the first and sixth to retire to form the rear guard; the third and fourth remaining to form the main corps. The word is derived from the French, which signifies the same thing. The *sixain* order of battle may be formed with all the battalions whose number is produced by the number six. Twelve battalions, for instance, may be ranged in order of battle, by forming two *Sixains*; and eighteen battalions, by forming three *sixains*, and so on *progre sine*.

**To SIZE.** In a military sense to take the height of men for the purpose of placing them in military array, and of rendering their relative stature more effective. In all regiments the sizing begins from flanks to centre, the tallest men being placed upon the right and left of the several companies in the front rank, and the shortest in the center and rear ranks. The flank troops of a squadron must be sized in the following manner:—That of the right flank, from right to left; that of the left flank, from left to right; the center one from center to flanks: the tallest man must, of course, be always in the part where the sizing begins, excepting the corporals, one of whom must be on each flank of the front rank of the troop, covered by a clever soldier in the rear rank. If there be only two troops in a squadron, they size the right from the left, the left from the right flank. A question has arisen among military men, especially among those who has seen service, respecting the propriety of placing the shortest infantry men in the centre and rear ranks.

**SKATE, Skate, or Scute; Skidor,** Swedish; *Skul*, Icelandic; *Scabbu*, Saxon; *Sker*, Norwegian; *Patin*, Fr. A sort of shoe or sandal made of wood, and armed with iron for sliding on ice.

Skates are used by the inhabitants of all Northern nations, either for expedition in travelling or amusement. They are made of wood and iron, fastened to the feet by straps of leather or by screws. The Dutch were probably the original inventors; but the English have greatly improved upon them, for by comparing them together, the prefer-

ence must be given to the latter. Skates are so well known, that it is needless to describe them. It will be necessary however, to remark, that the Dutch skates are very long in the iron, of a flat broad surface, to enable them to run over rough ice with ease and expedition, while those that are used by the English are short and circular, so that not above two inches of it touch the ice, and all that is required, is for the skater to keep his body in a proper equilibrium. It has another advantage over the Dutch, the friction on the ice is considerably diminished. In Holland, it is not so much a diversion as an employment. Women as well as men, practice it for the purpose of going from one place to another, and carrying provisions to market. But it is in England that skating has been brought to the highest perfection. An artillery officer, about 30 or 40 years ago, published a very ingenious treatise on it, which work is now seldom to be met with. In it he lays down rules for the art, which is still capable of great improvement.

In Norway, a kind of skate is used for travelling upon land. These are formed of planks of wood as broad as the hand, and nearly of the thickness of the little finger, the middle underneath being hollowed to prevent vacillation, and to facilitate the advancing in a direct line. The plank fastened under the left foot is ten feet in length; that intended for the right is only six, or thereabouts; both of them are bent upwards at the extremities, but higher before than behind. They are fastened to the feet with leather straps attached to the middle of them, and for this purpose they are formed a little higher and stronger in that part.

The plank of the right foot is generally lined below with the rein deer's skin, or at least with skin of the sea-wolf, so that in drawing the feet successively, in right or parallel lines, with skates thus lined with skin, and very slippery in the direction of the hair, the skidder or skater finds them, nevertheless, capable of resistance, by affording a kind of spring when he would support himself, with one foot, in a contrary direction, as by much movement he raises up the hair or bristly

part of the skin. With skais on this plan, it is astonishing, (however loose or compact the snow may be,) to what a distance a Norwegian will travel in a day. In Canada, the Indians and other inhabitants, make use of what are called *snow-shoes*, for a similar purpose: these are shaped something like a pear with a stalk. They are made of a hoop of wood bent to that form, and fastened at the narrow end by the sinews of deer or small thongs of the skin of the same animal. Two cross pieces of wood are placed, one about three inches from the broadest end of the snow-shoe, and the other the length of a man's foot from it. These pieces are fixed into the outer frame. Between them a kind of net work is made from small thongs of deer skin, something like a racket. On this net work the feet are placed and fastened by a pliable strap of smoked deer skin in a very simple manner: so that the feet may be extricated without untying the strap, which is sometimes necessary, particularly when the traveller accidentally falls in deep snow, or strikes his feet against the stump of a tree. During the American war, the king's troops were practised in the use of these shoes, and could walk or run with them, as well as the natives. All the scouting parties sent out from the frontier posts, during the winter, were equipped with snow shoes, to enable them to travel through the woods, where the snow is frequently of astonishing depth.

In Norway, there is a regiment of two battalions of skaters; one stationed in the North and the other in the South. The corps consists of 960 men. The uniform is a short jacket or waist-coat, a grey surtout, and grey pantaloons. The arms are a carbine, which is hung in a leather belt, passing over the shoulders, a large couteau de chasse, a staff of three yards and an half long, an inch and a quarter in diameter, to the end of which is affixed a piece of iron, which serves principally to moderate his speed in going down a hill; the skater then puts it between his feet, and contrives to draw it in that manner, or he drags it by his side, or uses it to help himself forwards when he has occasion to ascend a hill; in short,

short, he makes use of it according to the occasion and to the circumstances in which he may be placed; this staff, besides, affords a rest to the firelock when the skater wishes to discharge its contents. In the ordinary winter exercise, the skaters draw up in three ranks, at the distance of three paces between each file, and eight paces between each rank; a distance which they keep in all their movements, (whenever they do not disperse,) in order that they may not be incommoded in the use of their skates. When there is occasion to fire, the second and third ranks advance towards the first. The baggage of the corps (kettles, bottles, axes, &c.) is conveyed upon sledges, or carriages fixed upon skates, and easily drawn by men, by the help of a leather strap passing from the right shoulder to the left side, like that of a carabineer. In Canada, when the Indians travel in the winter, they make use of a similar conveyance, which is generally drawn by the synaws, by means of a broad strap across the forehead that passes the shoulders. The Norwegian skaters are of great use in winter campaigns, as from their velocity, and form of their skates, they are enabled to move, in every direction over light or deep snow, rivers or creeks covered with thin ice, and where cavalry or other infantry cannot act. Their use in harassing an enemy, in reconnoitring, or performing the office of comiers, must be obvious to every one. It may be conceived, that they find great difficulty in turning, on account of the length of their skates: this, however, is not the case; they make a retrograde motion with the right foot, to which the shortest plank is attached, and put it vertically against the left.—They then raise the left foot and place it parallel to the right, by which movement they have made a *half* face; if they would face about, they repeat the motion.

We have given these particulars, as furnished to us by an officer who has served in Canada, because we humbly conceive, that the knowledge of the art might be of use to our troops in America.

**SKATERS,** (*Patineurs*, Fr.)

**SKEAN.** This word is sometimes

written skeene, skeyne or skaine. It signifies a weapon, in the shape of a small sword or knife, which was anciently used by the Irish.

**SKELETON.** This word is frequently applied to regiments that are extremely reduced in their number of men.—Thus a regiment that went out to Sr. Domingo 1000 strong, and returned to England with 20 or 30 men only, was called a skeleton regiment.

**SKELETON plan.** See **OUTLINE**.

**SKETCH.** See **ditto**.

**SKETCH-book,** (*Livre d'esquisse ébauche*, Fr.) In page 201 of the *Little Bombardier*, we find the following particulars relative to the use which may be made of a sketch-book, in military reconnoitring.

“Before an officer gets out to reconnoitre a country, he should trace out, from the best map he can procure, its principal features, which will serve him as a guide, in his progress through the principal parts that are to be the subject of his observations, and will enable him to connect the whole into one grand plan. His observations should be expressed by written remarks, and by sketches. For this purpose, he must be provided with a *sketch-book*, on the right hand page of which he may express the appearance of the country by sketches; and on the left, the remarks made on particular parts, with the names of the towns, their distances asunder, &c. with proper references to the sketches. The scale best adapted to this purpose, is two inches to a mile; if therefore the sketch-book be made six inches wide, and the leaves divided by lines into three equal parts, each division will be one mile, which will be a sufficient scale for the purpose.”

**SKILL,** knowledge in any particular art.—As,

**Military SKILL.** (*Habileté militaire*, Fr.) M. Belleisle, the French general, after the example of Xenophon, the Greek, undertook in the month of December 1742, to withdraw the French army from Prague, where it was at that time shut up, and to march over the enemy's country through a road of 38 leagues, upwards of 124 English miles, covered with ice, and over mountains whose precipices were concealed under the snow, having, besides, an army

my of between eighteen and twenty thousand men, under the command of Prince Lobkowitz, to fight with. For the particulars of this famous retreat, in which was evinced so much military skill, and which, in Count Turpi's words, deserves to be written by Xenophon himself, see page 2, Vol. 1. of his Art of War.

**SKINS.** Sheep-skins are made use of to cover the mortars or howitzers between firing, to prevent any wet or dampness getting into them.

**SKIRMISH**, in war, a loose desultory kind of combat, or encounter, in presence of two armies, between small parties who advance from the main body for that purpose, and invite to a general fight.

**SKIRMISHERS**, detached parties of light horse sent out in front of a battalion, &c.

**SKIRT**, in a general acceptation, edge, border, extreme part. As the skirt of a country, the skirts of a wood. It also signifies the loose or hanging part of a coat or garment. The whole of the British army formerly wore skirts to their coats. The non-commissioned officers and soldiers now generally wear jackets.

**SKITALE**, *Fr.* according to the *Nouveau Dictionnaire Militaire*, a staff, or stick of distinction, which was used by the Lacedæmonian generals.

**SKY-ROCKET.** See **ROCKET**.

**SLASH**, a cut; a wound; also a cut in cloth. It is used to express the pieces of tape or worsted lace which are upon the arms of non-commissioned officers and corporals, to distinguish them from the privates.

**SLASHED**, cut in stripes or lines. Hence *slashed* sleeves and pockets, which are peculiar to the British cavalry, when the officers or men wear long coats.

**SLASHERS**, a nickname which was given, during the American war, to the 28th regiment of foot, and which took its origin from the following circumstance:—One Walker, a magistrate, in Canada, having, during a severe winter, with great inhumanity refused to give comfortable billets to the women belonging to the 28th, and some of them having perished in consequence of the inclemency of the season, so great was the resentment of the corps, that some

officers dressed themselves like savages, entered his house whilst he was sitting with his family, danced round the table, and suddenly pulling him back upon his chair, cut off both his ears. They instantly disappeared; nor was the deed discovered until after their departure. From this circumstance, and in consequence of various intrepid actions which the 28th performed during the course of the war, the men obtained the name of *Slashers*.

**SLATE**, in military architecture, a kind of bluish fossil stone, very soft when dug out of the quarry, and therefore easily slit, or sawed into thin long squares, to serve instead of tiles for the covering of all kinds of military buildings, &c.

**SLAUGHTER**, destruction by the sword, bayonet, and fire-arms.

**SLEDGE**, or *Sledge Hammer*, (*gross marteau*, *Fr.*) a smith's large iron-headed hammer, to be used with both hands in beating out iron upon the anvil.

**SLEIGH**, (*traineau*, *Fr.*) a sort of carriage without wheels, upon which a plough, or other weighty things, may be laid. It also signifies a machine, on which traitors are usually drawn to the place of execution. It means likewise a gentle carriage without wheels, which is used by the nobility and gentry in cold climates, to divert themselves in winter upon the snow. Likewise a machine which is lined by travellers in the North of Europe.

**SLEEPERS**, the undermost timbers of a gun or mortar-battery. Small joists, or beams of wood, which are laid over a foundation, for boards, &c. to be placed upon them. See **PLATFORM**.

**SLEETS**, are the parts of a mortar going from the chamber to the trunnions, to strengthen that part.

**SLIDING**, (*coulant*, *Fr.*) passing without difficulty or obstruction, easily removed.

**SLIDING of Courage**, an obsolete term, signifying easily daunted.

**SLIDING Knot**, (*naut coulant*, *Fr.*) a running knot which is made in a rope, for the purpose of being stopped when required.

**SLIDING Rule**, } Mathematical instruments to be used without compasses in gauging.

**SLIDING**

**SLIDING-Keel.** This is an improvement in ship-building, for which we are indebted to the skill and ingenuity of Captain John Shark of the Royal Navy; an officer who, during the American and late war, gave proofs of his consummate talents, for invention and resource, on many occasions. Vessels of this kind have each three keels, made moveable in a trunk or well, so as to be drawn up or let down in shoal water. By means of these keels they sail faster, steer easier, and tack and wear quicker, and in less room: they ride more easy at anchor; take the ground better; and in case of shipwreck, springing a leak, or of a fire, they are more safe and more likely to be saved. For fire-ships, floating-batteries, gun-boats, and flat-bottomed boats for landing troops, they are particularly well adapted. Three vessels with these keels have been built for his Majesty's service, viz. the *Trial cutter*, *Cynthia* sloop of war, and the *Lady Nelson* of 60 tons burthen; which latter vessel was fitted out for a voyage of discovery in 1800, under the command of Lieutenant James Grant, of the Royal Navy, who in it arrived safe at New South Wales the following year. An account of this very interesting voyage, with the origin of sliding keels, and various official documents of their utility, was lately published, to which we refer our readers. It may not be improper to observe, that Lieutenant Grant is the officer, who, in May, 1804, was taken by the French, in attempting to cut out a vessel in the Weser, in a boat, with only 11 men, belonging to his Majesty's cutter the *Hawke*, which he commanded, and in the attempt he was wounded in five places, and several of his gallant followers killed or wounded.

**SLING**, a leather strap which is attached to a musquet, and serves to support it across the soldier's back as occasion may require.

**Gun-SLING, or Belt.** Although this useful article owes its invention to the ingenuity of an individual for the convenience of sportsmen, it may, nevertheless, be adapted, with so much facility to military purposes, that a description of it cannot be thought superfluous.

The gun-sling or belt, contrived by

Thomas Smith, sadler, No 159, New Bond Street, is made in the following manner.—

The sling consists of three straps of leather, viz. one of four feet six inches long, with the breadth agreeable to order. It is pointed and punched at one end, and has a buckle and loop at the other, which serves to shorten or lengthen it as the size of the person may require; another about twelve inches long, and three quarters of an inch wide, with a hook fixed at one end, the first being sewed ten inches from the pointed end of the belt. The strap being hooked up to either of the hooks in the main sling, forms a loop or bearing strap for the barrel of the musquet; and a third three quarters of an inch wide, and about six inches long, with an inch ring at one end, through which the belt is passed. This ring runs conveniently up and down the belt, and fully answers every purpose for which it was designed. A hook is sewed at the other end of this strap. The strap is now lapped round the small part of the stock of the musquet, and the hook fastened to the ring, they together form a loop, or bearing strap for the butt. By these means, in addition to the strap round the barrel, as already mentioned, the musquet or rifle can be conveniently carried, on foot or horseback, without the assistance of either hand. The musquet being released from these restraints, and the hook fixed to the strap, (with the ring being hooked to a small eye that is fixed just before the guard,) the whole is carried with very little assistance from either hand, and is instantly brought to a firing position. The next position is by hooking the same hook to an eye that is fixed to the stock, about seven inches behind the guard; the barrel being at the same time supported by the strap, which is hooked to the main belt. The musquet is thus carried without the assistance of either hand; and if there be occasion to fire at a moment's notice, you have only to draw out the top hook.

**SLING**, a missive weapon made by a strap and two strings; the stone is lodged in the strap, and thrown by loosing one of the strings.

**SLING** likewise means a kind of hanging

ing bandage, in which a wounded limb is sustained.

**Breeches SLING**, an article of regimental necessaries which is used to keep up the breeches, and which must be paid for by the men.

**To SLING**, to hang loosely by means of the strap belonging to a firelock.

**SLING your firelocks**, a word of command formerly used in the exercise of British grenadiers.

1st. Bring the sling with the left hand opposite to the right shoulder, and the firelock with the right hand opposite the left shoulder, ~~say~~ crossing both hands at the same time, bringing the left hand within the right, keeping the muzzle upright, the barrel to the left, and the right hand just under the left elbow.

2d. Bend the firelock back, and bring the sling over your head, placing it just above your right shoulder.

3d. Draw the sling with your left hand, and let go the firelock with the right at the same time, that it may hang by the sling on the right shoulder, the muzzle upwards, dropping both hands down by your sides at the same time.

**Handle your SLINGS**. 1st. Seize the sling with both hands at the same time, taking hold of it with the right hand about the middle, and as low as you can reach, without bending your body.

2d. With the left hand bring the butt forwards, slipping your left elbow under the firelock, by bringing it between the firelock and the sling; taking hold of the firelock at the same time with the left hand, letting the stock lie between the thumb and fore-finger, the butt end pointing a little to the left with the barrel upwards.

3d. Bring the firelock to lie on the left shoulder, and the sling on the right, the barrel upwards, and the butt end pointing directly to the front, keeping the firelock to a true level.

**SLOPE Arms**, a word of command, by which the musquet rests upon the shoulder with the butt advanced. In long marches soldiers are sometimes permitted to slope arms. In all other instances it is strictly forbidden.

**SLOPING Swords**, a position of the sword among cavalry, when the back of the blade rests on the hollow of the right shoulder, the hilt advanced.

**SLOPS**. See **NECESSARIES**.

**SLORS** also signifies a sailor's trowsers. The French say, *culottes de matelots*.

**SLOW Time**. See **ORDINARY TIME**.

**SLUGS**, (*Boulets coupés*, Fr.) Cylindric, or conical pieces of metal, shot from a gun.

**SLUICE-gate**, a water-gate, by which a country may be inundated, or the water excluded at pleasure.

**SLUICES**, in military architecture, are made for various purposes; such as to make rivers navigable; to join one river to another, which is higher or lower, by means of a canal; to form inundations upon particular occasions, or to drain spots of ground that are overflowed by high tides; they are also made in fortresses, to keep up the water in one part of the ditches, whilst the other is dry; and to raise an inundation about the place when there is any apprehension of being attacked.

**SLUICES** are made different ways, according to the uses for which they are intended: when they serve for navigation, they are shut with two gates presenting an angle towards the stream; when they are made near the sea, two pair of gates are made, the one pair to keep the water out, and the other in, as occasion may require: in this case, the gates towards the sea present an angle that way, and the others the contrary way. The space enclosed by these gates is called *chamber*.

When sluices are made in the ditches of a fortress to keep up the water in some parts, instead of gates, shutters are made, so as to slide up and down in grooves; and when they are made to raise an inundation, they are then shut by means of square timbers let down into *cullises*, so as to lie close and firm.—Particular care must be taken in the building of a sluice, to lay the foundation in the securest manner; that is, to lay the timber, gates, and floors, in such a form, that the weather cannot penetrate through any part, otherwise it will undermine the work, and blow it up, as it has sometimes happened: lastly, to make the gates of a proper strength, in order to support the pressure of the water, and yet to use no more timber than what is necessary.—Those who wish to be thoroughly acquainted with this kind of work, may meet

meet with satisfaction in *L'Architecture Hydraulique, par M. Belidor*; or in Mr. Millar's *Practical Fortification*.

**SMALL arms**, muskets, fusils, carabines, pistols, &c.

**SMARTS**. The different *sums* which are received by recruiting parties under the head of *Smart money*, are frequently so called. It is a standing order in most regiments, that an account of all *smarts* should be kept, and regularly accounted for, by the officer or non-commissioned officer commanding the parties, to the officer commanding the regiment in the different abstracts, that he may give orders for the distribution thereof when the parties join the regiment.—See **MONEY**.

**SNAFFLE**, a bridle without a curb bit.

**SNAPHANCE**. A firelock, a gun that fires without a match, *Bailey*.—**SNAPANCE**, according to Nugent's French and English Dictionary, signifies in French, *Rouet d'arquebuse*.

**SNAPSACK**, from the Swedish *Snappsack*, a soldier's bag; more usually *knapsack*.

**SNICK and SNEE**, a combat with knives, such as the Dutch carry.

**SOBRIETY**, (*sobriété, tempérance*, Fr.) general temperance. In a military consideration, abstinence from an immoderate use of strong liquors. However frequent the deviations from this great and uncommon virtue may be found among soldiers, nothing can excuse or exculpate an officer who should so far forget himself, especially upon service, as to give the least countenance to such excesses, even by an occasional, much less by an habitual, dereliction of this estimable quality. Sobriety keeps the head cool, strengthens the nerves, and renders moderate abilities equal to great exertions. Drunkenness, on the contrary, unfits the man for the common functions of life, and makes an officer not only contemptible to his soldiers, and dangerous to the cause he has engaged to fight for, but an indirect spur to the enterprize of an enemy; who will soon know how to take advantage of his vice and weakness.

**SOC**, Fr. a machine made of leather, which is fixed near the stirrup, to receive the end of the standard staff in cavalry regiments. It is likewise called

*braïer*, and is used by the persons who carry the colours either in infantry or cavalry regiments. In the former instance it is fixed to a leathern belt that comes over the shoulder, or that is fixed to the waist.

**SOCI**, allies; a term by which the Romans generally distinguished those kings and nations with whom they were in alliance, or, more properly speaking, whom they condescended to honour with their friendship. The Romans, observes *Pistius*, became so intoxicated with the power they possessed, that they obliged ~~the~~ neighbouring nations to purchase their friendship at the rate of the most abject subordination. Their uninterrupted succession of victories made them behave, towards the most powerful of their allies, with brutal superiority; thus converting the name of *friend* and *ally* into a tame and unqualified acknowledgment of the most unbounded tyranny. They were not aware, that the greatest conqueror becomes little and debased, when he can treat those with contempt and ill usage, from whose downfall and defeat he derives all the laurels he possesses. The Romans, however, (if we may be permitted to add our humble opinion to these observations), were not singular in this perversion of true grandeur. The modern French (whose success upon the continent has given them and their leaders all the notions of ancient Rome), by different names and by different means, have insidiously brought half Europe under the yoke of treacherous affiliation.

**SOCKET**, (*bobèche*, Fr.) Generally means any hollow pipe that receives something inserted.

**SOCKET of a bayonet**, the round hollow part near the bent or heel of a bayonet, into which the muzzle of a fire-arm is received when the bayonet is fixed.

**SODS**, pieces of turf with which works are faced.

**SOHAN**, *Ind.* the seventh month. It, in some degree, corresponds with July and August.

**SOI**, Fr. one's self; it-self; one.

**Sou-disant**, Fr. pretended; would-be. Hence, *Sou-disant soldat*, a pretended or would-be soldier; *Sou-disant roi*, pretending to be king, but not acknowledged

ledge as such. This was said, by the British, of James the III, when he lived at S. German in France; and is now asserted by the French of Louis the XVIII, whom they refuse to acknowledge. The term is used, by the French, by way of railery or contempt, as in the first instance, and by way of legal distinction as in the second. They also say, *Sou-dout héritier*, a person who pretends to be heir to any individual or property.

**SOL**, *Fr.* soil; ground.

**SOLAKS**, bowmen or archers belonging to the personal guard of the grand signor. They are always selected from the most expert bowmen that are among the Janizaries. Their only arms are the sabre, bow, and arrows.

**SOLBATU**, *Fr.* in farmery, sublated.

**SOLD**. See **PAY**, **SUBSISTENCE**, &c.

**SOLDAN**. This word is pronounced *Snadan*. It was formerly given to a general who commanded the calif's army. Saladin, a general under Nairdin, king of Damas, having killed the calif Caym, usurped the throne, and assumed the title in 1116; so that he became the first Soldan of Egypt.

**SOLDAT**, *Fr.* a soldier. Although we have offered our own observations respecting the etymology of this word, under soldier; we shall nevertheless extract, from our French authority, what is said upon the same subject. In the *Nouveau Dictionnaire Militaire* we find, that *Soldat*, which comes from *Solde*, signifies any man who serves the state for a stipulated sum of money. This distinction did not obtain ground, nor was it acknowledged in France, until after the reign of Francis I. Under the reigns of Charles the VIIIth and Louis the XIIIth, persons who took up the profession of arms, were simply styled *aventuriers* or *adventurers*; and before we conclude this article, it will not be thought superfluous to remark, that although many writers have given various interpretations to the word *aventurier*, the term may be brought under a plain and historical explanation. These *aventuriers* or *adventurers*, were nothing more than a certain description of soldiers or armed men, who were hired by a number of Lords, that had the command of little jurisdictions beyond the Pyrenées and the Alps.

Charles the VIIIth, Louis the XIIIth, Francis the Ist, and Henry the III, made use of these adventurers during their campaigns in Italy. To return to our first article, it is nevertheless certain, that, in France, bodies of armed men were already taken into pay under the reign of Philippe Auguste; and it is equally certain, that foreigners or mercenaries were first employed, for money, by Philippe-le-Bel. Among the Romans, soldiers were distinguished under a multiplicity of appellations, which grew out of the dress or uniform of each particular arm or corps; which was again marked by some particular service, and peculiar weapon of offence. When strangers were taken into their pay, they were called *auxilarii*.

*Simple SOLDAT*, *Fr.* a private, or a soldier in the ranks.

*Simple CAVALIER*, *Fr.* a private dragoon.

*SOLDAT écroué*, *Fr.* See **ÉCROUE**.

*SOLDAT d'ordonnance à l'armée*, *Fr.* an orderly man.

**SOLDATS étrangers ou mercénaires**, *Fr.* foreign or mercenary troops.

**SOLDATS de marine**, *Fr.* marines, or soldiers who do duty on board ships of war.

**SOLDATS gardiens**, *Fr.* a description of invalid soldiers, so called during the French monarchy. They were stationed at the sea-ports. There were 300 at Toulon, ditto at Rochefort and Brest, and 50 at Havre-de-Grace. There were besides 300 in each of the first three ports, who received half-pay.

*Four SOLDATS*, *Fr.* See **FAGOT**; **PASSI-volant**.

**SOLDATESQUE**, *Fr.* a substantive of the collective feminine gender, which signifies private soldiers, viz.

*La Bourgeoisie étoit exposée aux insultes de la soldatesque*; the citizens were exposed to the insults of the soldiery.—*La soldatesque s'est révoltée contre les officiers*, the soldiers revolted, or mutinied, against the officers.

**SOLDATESQUE** is likewise used as an adjective, viz. *des mœurs soldatesque*, the ways or manners of a private soldier. *Une dispute soldatesque*, a military broil, or a dispute among private soldiers. We have an adjective, which is derived from the same source, and which is frequently used, as *soldier-like conduct*,

conduct, soldier-like behaviour; unsoldier-like being the opposite.

**SOLDE**, *Fr.* the pay and subsistence, &c. which are issued to officers and soldiers are so called.

*Demie-Soldr.*, *Fr.* half-pay. The French likewise say, *demie-paye*, half-pay.

*Compagnies SOLDÉES*, *Fr.* troops or companies receiving stated pay.

**SOLDIER**, a piece of money; the pay of a soldier. Dr. Johnson derives the word from *solidarius*, low Latin of *solidus*. We conceive it to be immediately taken from the French *soldat*, which comes from the Latin *solidatus*. *Veget.* A soldier in pay—a *solido quem mercetur*. Some again trace both the English and French word to the Italian *soldato*, and others to the German *soldat*; *sold* in German signifying pay. So *that* originally soldier meant only one who listed himself to serve a prince or state, in consideration of certain daily pay.

**SOLDIER**, (*Soldat*, *Fr.*) Under this head so much might be written, that it would become rather a dissertation than an article in a Dictionary. Who is the best Soldier? All the people in Europe have claimed this honour in their turn; even the Tartar and the Arab are not without well-founded pretensions. Perhaps some nations may have greater aptitude for war than others; but then that very aptitude is formed, strengthened, and even created, by particular habits, education, and a certain state of society. The laurel on the warrior's brow is not perennial, but is liable to wither and decay. Almost every country in Europe has had its share of military renown, at some particular period. Greece, Italy, France, Germany, Sweden, Spain, Russia, England, have all to boast of the bravery of their soldiers, and the skill of their generals. This reflexion ought to diminish the pride of those nations who consider themselves, at this moment, as the most military; and, at the same time, administer consolation to the inferiority of weaker powers, who may yet hope to have their day, and to be illuminated by the sun of warlike glory. Of all the puerile vanities into which national presumption and national prejudice have caused men to fall, surely none is less consonant to reason, or more re-

prehensible, than the idle, we might say blasphemous opinion, that God has created one nation braver than another. Courage, perhaps, depends upon human institutions more than any other quality of the mind; and upon those strong impelling circumstances, which induce every individual to become a party in the common cause, and to fight the battles of the public, as if they were his own. The King of Prussia, (sometimes a great authority, but at others a disingenuous and miserable sophist), has declared his opinion, that soldiers ought to be machines, beings with sense — a motion, but without feeling and understanding; born for confinement, chains, hunger, and discipline. This principle may do on the parade, for *there* a soldier may be an automaton, to be moved by the stick of the corporal; but his Prussian Majesty found out the folly of this position, or rather of this assertion, (for he was too great a man to believe in it himself,) when he lost twenty-five thousand men by desertion, in the campaign of 1778, against the Austrians. History and military experience sufficiently vindicate human nature from this stain. Perhaps soldiers are so far from being automatons, that the greatest successes in war have derived their origin from the influence of the human passions. What did the Arabs, operated upon by an intolerant zeal and religious enthusiasm? The raw levies of the French, at the commencement of the late war, resisted and repulsed the veteran troops of Europe; animated by a mistaken love of what they called liberty, and by an unconquerable determination not to suffer foreign powers to interfere in their domestic concerns. At other times, hope and confidence have enabled soldiers to perform the most illustrious achievements; hope, inspired by former success, and confidence, built upon the knowledge of the talents and military views of a fortunate general. It is certainly true, that a mistake, which would ruin a general of inferior reputation, has sometimes added to the fame of a superior one. Caesar and Alexander often tempted fortune, and risked more than was prudent or perhaps justifiable. The confidence, with which they had inspired their soldiers, led them out of

every difficulty. Under such leaders they thought themselves invincible, and they actually became so. We have dwelt particularly on this part of the subject, because we are convinced, that the most erroneous and dangerous opinions have been adopted upon it. We repeat it again, and we would never cease to re-echo it, till the solemn sound vibrated upon the ear of every British officer, that a soldier is not an automaton, but a man, in whose humble breast the pulse of glory often beats high, and who rushes, with indifference, into the heat and danger of battle without the hope of fame, or the prospect of sharing in the reward of victory. Where is the philosophy—where is the reason of him who asserts, that in order to draw forth the best exertions of a man, and to make him a hero in the cause of his country, it is necessary first to degrade him from the rank of a human being, and to level him to the standard of a brute? No; on the contrary, arm the human passions in your favour; teach the soldier to believe, that he has an interest in your cause; pity his weakness, cherish his good and noble qualities, instil into his breast principles of honour and rectitude; you will then be invincible, and place around you a wall stronger than brass, which the efforts of no earthly power shall ever be able to penetrate. The human passions, properly regulated, are the handmaids of truth; of pure, genuine, uncorrupted nature; the staff of virtue; the harbinger of victory: the prop, the buttress, the main pillar of government. Dissertation upon dissertation has been written about the puerilities of the body, but not a word has yet been said upon the moral discipline of the mind; which certainly must be the essential part, so long as man is a creature composed of body and soul. Should you be induced to assert, that a soldier is a machine, make an appeal to your own heart; if you are not contradicted, retire from the profession of arms, for you are a man without passions, and consequently without talents.

Although in a former part of this work (vide *Panæ militares*) we have attempted to shew, that corporal punishment is necessary, nevertheless we are not ashamed to confess ourselves

the feeble advocates of a mild system of military discipline. We would endeavour to elevate, and not to depress, the soldier's mind; we would treat him as an humble friend, and not as a slave: we would abolish that disgrace to our service, the punishment of flogging. We are asked what we would substitute in its room? we answer again, abolish it; we dare not trust our indignation to reason upon it, but shall satisfy ourselves in the words of a great authority, *J'attends la voix de la nature qui s'élève contre moi.* Montesquieu.

Certainly this doctrine of the moral education of the soldier, ought not only to be inculcated, but should be acknowledged and adopted. When you reflect, that all the European powers have now nearly the same arms, the same constitution, practise the same movements, and follow the rules of the same tactic; to look upon them on a parade, or in a field of exercise, the shades of distinction between the troops of different countries, are only just perceptible; so that the superiority which the army of one power may have over that of another, cannot arise from practices which are similar in all, but from causes arising out of the moral and intellectual qualities of man. To give strength and perfection to those qualities is the great desideratum, and ought to be the object of our most zealous pursuits, and not the idle imitations of idle nothings, taken from other services; as if it were the cut of the coat, and not the strength of the arm, impelled by the magnanimity of the heart, which led to victory. Better, far better is it for us to continue good Englishmen, than to endeavour to become bad Germans. Our military institutions are not perhaps the best possible, but we will adopt the idea of a great Legislator (*Solon*), and say, they are ours, and consequently the best for us, as far as national habit and constitution go. Among the ancients the army of one nation might have had a great and real advantage over that of another, from the comparative excellence of their tactic, and the superiority of their arms; but in our times the European nations, with the exception of the Turks, have all of them adopted a tactic nearly similar, if not the same. We do not mean

mean to say, that there are not great shades of difference, and a marked line of separation, which clearly distinguish the soldier of one country from that of another. War is a science, which, like physic, is divided into a multiplicity of different branches; because a man is great in the practice of one, it does not therefore follow, that he should be excellent in another. So it is with the troops of different nations; they have, each, their peculiar qualities and comparative merits. The cool and steady courage, the phlegm, the obedience of a German, make him excellent in a retreat; the natural sagacity, the activity, the promptitude of a Frenchman, make him admirable in a war of posts, and in a country of mountains. In a plain, and in a day of general action, the British infantry are inferior to none in Europe; there is a decision in their mind, a boldness in their character, and perhaps even an impatience, in danger, which ever prompts them to close their enemy, and to bring the contest, at once, to a glorious issue. Every officer, who looks to great command, ought to study the nature, the habits, the constitution, of the different European armies. This knowledge is absolutely necessary, in order to become thoroughly acquainted with the strength and the weakness of the troops of his own country, of its allies, and of those which are opposed to him. There is, perhaps, no part of the profession which requires more serious meditation; to the neglect of it may be attributed many of the misfortunes of the last war. The French first brought into practice a system of operations peculiarly consonant to the tone and temper of the mind, the disposition and state of the troops which composed their armies. The Austrian generals had the weakness, or rather the imbecility, to follow them, and to imitate a mode of warfare, which their soldiers, by nature and habit, were eminently disqualified to adopt. They committed the greatest of all possible errors, that of suffering themselves to be dictated to by their enemies, and to wait upon their movements. Had they sufficiently studied the constitution of their own troops, and that of the enemy whom they opposed, they would have avoided those multiplied affairs of posts which

led to their defeat and ruin; on the contrary, had they concentrated their troops, and engaged in nothing but general actions, the ultimate issue of the war would, probably, have been very different from what it unfortunately was. We cannot conclude this important subject without conjuring British officers to consider war as a science, the common property of all; to place themselves above narrow, little, dangerous prejudices; to cease to over-rate themselves, and to under-rate their enemies. Flattery to an individual is meanness, to a nation wickedness; for it is the parent of presumption, the polar star of ignorant ministers and of thoughtless generals, who scorn to calculate, and appear to imagine, that fortune is enchained to the triumphal car of Britain, and consequently that they may attempt any thing with the most inadequate force. We have heard it said, by a very intelligent and scientific officer, that formerly at Rome, it was inscribed, in letters of gold, over the gate of the Temple of Bellona, "Warrior! if you despise your enemy, your adoration is not worship but blasphemy?" The ancient Romans obeyed the precept of the goddess, and never failed to adopt the arms and military constitution of the nations whom they conquered, when they found them more useful and advantageous than their own. It is not permitted to despise your enemy, and least of all, an illustrious people, who, in modern times, have produced more great generals, than any other; who were victorious for sixty years in the former century, and who, in the latter, over-run half Europe. It is in vain to deny, that the French are a military nation; history and our own experience demonstrate that the French troops have been and are excellent.

The three great and necessary qualities of an army are, marching, abstaining, and fighting; in the latter virtue we yield to none in the world: but surely candour must allow, that the French are better marchers, and require a much less quantity of food to subsist on than an English army of the same force. To have contended with such a nation, so superior to us in population, extent of territory, and natural resources for five hundred years; to have generally been victorious over her, has been the fortune,

tune, and is now the glory and boast of the British name. These triumphs may swell the pride of youthful and thoughtless patriotism; but they afford matter for serious contemplation to the cool, dispassionate, reflecting military mind; to him, who judging of events, with impartiality, belongs to no party, and to no country. He who thus meditates on the fate of nations, will make a great and a just distinction between a general who dictates to fortune, and is successful by his own arrangements; and him who owes his glory to the failure and rashness of his enemy. To gain a victory by your own conduct, and to acquire it by the misconduct of another, are things very distinct in their own nature, though they are constantly confounded. Edward and Henry were bad generals, for they acted contrary to all the rules of war; fortunately for them John and Charles of France were worse. The latter preferred the celar of battle, (where they were defeated), to the enjoyment of the fruits of victory, which they held in their hands. It is not a little extraordinary, that at Crecy, Pontiers, Agincourt, and even in Egypt, the French committed the same errors, and engaged in general actions where they should have avoided them. In Egypt their conduct was more pardonable than on the three former occasions. They made, however, it would appear, a miserable disposition of their army on the 21st of March. Had they attacked the left, in the plain, with their cavalry, instead of the right, placed in unfavourable ground, and among ruins, the event would have been more doubtful, and possibly different. Military men are particularly bound to investigate the circumstances which have attended, and the dispositions which have been made in all actions, where the troops of their own country have been principally engaged. It may be a mortification to their national vanity, but it cannot fail to be an instruction to their reason, to find that the enemy often placed themselves in such a situation, and acted in such a manner, that it was impossible that they should not have been defeated. Trade events to their proper causes, and then you may be enabled to draw a just conclusion; but we cannot see how it can give you any additional powers to be unacquainted with the real

strength of your enemy. As well might it be said, that ignorance is wisdom; or that because you chose to be unacquainted with your danger, therefore it did not exist.

It is no vain for sophistry to endeavour to argue; practice and experience teach almost every thing in war. Veterans will always be more formidable than an army of recruits; officers of much experience will ever have a great advantage over those who have little. It seldom happens, that old soldiers will not fight, and make a resistance more or less vigorous. Young soldiers cannot be relied on; they may be heroes in the day of battle; but they may take it into their heads to conduct themselves in quite a different manner, and to bring danger upon themselves, which otherwise would not really have existed. It is experience in war that teaches an old soldier the danger of running away; for there is generally more security in doing your duty with the greatest courage and perseverance, than in endeavouring to avoid it. In many battles the troops which have fought hard, and gained a victory, have suffered less than those who have abandoned their ground, and betaken themselves to a shameful flight. At the battle of Leipsic the Saxons did not stand at all, while the Swedes won the battle; and it is well known, that the latter did not lose half so many men as the former.

A thousand such instances might be given; cowardice increases danger, courage diminishes it: it is therefore the opinion of the best military writers, that in time of war you should not add above one fourth to the strength of an army. In the first year of the late war, we raised upwards of 120,000 men; that is, four fifths of our soldiers were recruits.

We should imagine, that this country will at last find it necessary to have an effective army. Other powers, after the conclusion of a war, endeavour to augment their troops, and to place them on the best possible footing. What is our practice?—At a peace we reduce the army to the lowest establishment; we pay no attention to the recruiting: on the contrary, we neglect it in all its different branches. The period of hostilities advances; the commencement of a war arrives. We have every thing to begin

begin again, and a new army to create. In the exigency of our case we are obliged to have recourse to ale-houses and to crimps of the worst description, from whom we purchase defenders by a ruinous system of enormous bounty. At the expiration of six months, we find, however, these very men thus procured, (many of whom are feeble in their frames, and vitiated in their minds,) transformed into soldiers, nay into heroes, by the magic touch of the drill-corporal, and the stroke of the elastic drum. We sing the hymn of victory before the day of battle; we buoy up our minds with visions of imaginary glory; we declare that we possess an army the terror of our enemies, the admiration of Europe! the strength and security of England, the last hope and refuge of established governments! What we have related is no exaggeration; the wisest men have adopted this language; political orators have descanted upon it; the press has teemed with such effusions; whilst the unlettered military reasoner is struck dumb and confounded, but he is not convinced; he bows his head to such great authorities, and begs leave with the utmost humility, to burn the few books he may have perused; to turn a deaf ear to the suggestions of experience, for he has been misled by them;—to set at naught in future the practice and authority of the greatest generals, for they have been mistaken; and to acknowledge that a great military principle, though true, and found so in every other country, must be false when applied to Englishmen.

In this article, we are sensible that we have exceeded the bounds of a dictionary; we may have shocked prejudices, and combated general opinions; we make no apology. It is the duty of a writer to instruct and not to flatter; he ought to know how to place himself above censure and above praise. We feel, we know that what we have said is true.—*Magna est vis veritatis et prece-*  
*lebit*; We hope so, for the honour of the king, the reputation of the British arms, and the glory of our common country. We cannot conclude, without seriously recommending to review our military institutions; and we do so with the greater confidence, because we are borne out, not only by the best written authorities, but also confirmed and strengthened in

our opinion by the most experienced and most successful officers amongst us. Whatever may be right, let us retain; whatever may be wrong, let us correct. We must particularly keep in our recollection, that the events of the last few revolving years have materially altered the position and relative situation of our natural enemy. For us, in future, there will be no security, but in an army composed of real soldiers, and not of individuals dressed in red coats, armed with a firelock and a bayonet, and called by the names of regulars, militia, and volunteers, or whatever appellation your fancy may be pleased to bestow upon them. Nevertheless, let not Englishmen be disheartened by this representation of our military state; let them, on the contrary, remember, that every day brings an accession of strength to their internal defence, by the amelioration of systems, which (though not productive of the discipline of regular armies) are sufficiently digested to render the native courage of the inhabitants of these islands subservient to the best plans of military distribution:—

For Britons plac'd on dissolution's brink,  
Will dare to do what some scoundrel dare  
to think!

**SOLDIER** now generally signifies any fighting man.

*Private SOLDIER*, a man in the ranks; one under the degree of a corporal; as distinct from the commanders.

*A real SOLDIER*, a term among military men, to mark out one who knows and does his duty.

*No SOLDIER*, an expression of familiar currency in the British service. It is sometimes used as a term of reproach, and sometimes of harmless irony; as, you're a duty fellow and no soldier.

*Citizen SOLDIER*, (*Soldat citoyen*, Fr.) In a general acceptance of the term, a citizen-soldier signifies any man who is armed for the support and vindication of his rights.

*A Brother SOLDIER*, a term of affection which is commonly used in the British service by one who serves under the same banners, and fights for the same cause, with another. In a more extensive signification, it means any military man with respect to another.

*SOLDIER of Fortune*, (*Soldat de Fortune*,

*tune*, Fr.) During the frequent wars which occurred in Italy, before the military profession became so generally prevalent in Europe, it was usual for men of enterprise and reputation to offer their services to the different states that were engaged. They were originally called *condottieri*, or leaders of reputation. They afterwards extended their services, and under the title of *soldiers of fortune*, sought for employment in every country, or state, that would pay them.

*Soldier's Friend*, a term in the British service, which is generally applied to such officers as pay the strictest attention to their men; granting them seasonable indulgences without injuring the service; seeing their wants relieved; and, above all things, having them punctually paid, and regularly settled with. There is much confidence in the multitude when they are justly dealt by, and every soldier fights well under the guidance of a soldier's friend!

*Soldier-Officer*, a term, generally used among naval men, to signify any officer belonging to the land service.

**SOLDIERSHIP**, (*l'etat de soldat*, Fr.) the profession, character, and qualities of a military man.

**SOLDIERY**, body of military men; soldiers collectively. Soldiers are properly the land forces of a kingdom, or state; but in England it is against the ancient law to keep an army of soldiers, in time of peace, beyond a certain establishment. It is, however, in the power of the legislature to augment this establishment, according to the exigency of the times. Where any soldier that is lawfully retained shall depart from his colours without leave, he is declared to be guilty of felony by 18 Henry VI. c. 9, and every soldier, who either causes a mutiny, or deserts the service, shall be punished with death, or otherwise, as a court-martial shall think fit. All persons, suspected of desertion, are to be apprehended by constables, who shall be allowed a reward of twenty shillings for every such deserter.

By 4 Geo. I. c. 4, it is ordained, that no soldier shall be taken out of the service by any process in law, unless it be for some criminal matter, or where the debt he owes amounts to twenty pounds at the least; of which affidavit it is to be

made, &c. Soldiers must be quartered in inns and ale-houses only, and not in private houses, without the consent of the owners, under certain penalties; and where victuallers refuse soldiers quartered on them, or constables receive any reward for excusing their neglect, they forfeit a sum not exceeding fifty pounds, nor under thirty shillings, by 3 Geo. II. c. 2. A person, enlisted for a soldier, within four days after, is to be carried before the next justice or chief magistrate of a town, and is to declare his assent, that he listed voluntarily, &c. but if he then dissents therefrom, on his returning the money received, and paying twenty shillings smart money, he may be discharged. In case any subject of Great Britain, or Ireland, shall list or enter himself, or procure any one to be enlisted a soldier to go beyond the seas, without leave obtained from his Majesty, such person shall be punished as a felon by 8 and 9 Geo. II. There are acts annually made for punishing mutiny, &c. of soldiers, and false musters, and for the better payment of the army and their quarters. During the late war, a specific act passed both houses of parliament, whereby all persons who shall be discovered to have used any art or persuasion to induce a soldier to quit the service, or who shall otherwise tamper with him, to the detriment of good order and discipline, are declared to be guilty of high treason.

**SOLDURIERS**, *Fr.* a term anciently used among the French, to signify those persons who attached themselves to some particular general or military knight, whose fortunes they followed, in consequence of being paid and supported by him.

**SOLDURIERS**. According to the author of the *Nouveau Dictionnaire*, these were intrepid men among the Gauls, who were so closely attached to some particular chief, that if he fell in action they fell also, by continuing to fight, or destroy themselves. It is said, in *Cæsar's Commentaries*, that no man of this class was ever known to forfeit his engagement. The word comes from *soldurius*, a man sworn and devoted to his friend, to partake of his good and ill fortunes; a retainer to a great person, or one of his clan. With certain modi-

modifications, the clans of Scotland come under this description.

*Barque à SOLE*, Fr. a flat-bottomed vessel.

*SOLEIL*, Fr. sun.

*SOLEIL fixe*, Fr. an artificial fire-work, so disposed, that when it takes fire, it emits a brilliant light from a fixed center, and resembles the sun at mid day.

*SOLEIL tournant et courant sur une corde*, Fr. an artificial fire-work made in the shape of the sun, which is so contrived, that it moves in full illumination, either backward or forward, along a rope.

*SOLEIL montant*, Fr. an artificial fire-work, so called from its ascending in full illumination, and scattering fire in various directions by a desultory movement. It is likewise called *tourbillon de feu*; a whirlwind of fire.

*SOLEIL tournant et grandole*, Fr. an artificial fire-work, which, when set fire to, resembles a sun moving round its axis, and exhibiting the figure of a grandole; which see.

*SOLID*, (*solid*, Fr.) that body which has all the geometrical dimensions.

*SOLID Bastion*. See *FORTIFICATION*.

*SOLIDAIRE*, Fr. consolidated. An old French legal term, but now generally used to signify a concentration of good qualities, &c. Thus the French Convention declared—*Que les armées étoient solidaires de gloire*; that the armies had consolidated their glory; meaning thereby, that the victories of one part of the army had been added to the account of the rest.

*SOLDATUS*, the Latin word for soldier, or for any person who carried arms for pay. Hence *soldat*, Fr. *a soldo quem meretur*. Dr. Johnson, as we have stated under *soldier*, derives the latter word from *soldarius*. *Soldatus* seems more appropriate.

*SOLIDIFY*, (*solidifié*, Fr.) firmness; density; compactness.

*SOLITAURIE*, (*solitaires*, Fr.) sacrifices of three things of sundry kinds, as a bull, a ram, a boar, which were made by the Romans in honour of Mars the god of war.

*SOLIVE*, Fr. a joist.

*SOLIV* likewise signifies a measure in carpentry. It is supposed to be equal to three cubic feet. So that the solive in France is to the measure of wood-

work, what the cubic toise is to the measure of earth or brick-work. The solive is divided into six French feet which are called *pièces de solive*. The foot into 12 inches, called *pouces de solive*; and the inch into 12 lines, which are called *lignes de solive*. In order to form a correct idea of the solive, with regard to all parts or proportions, it must be considered as a parallelepiped, whose base is a rectangle containing 12 inches in breadth, to six in height, and a toise in length, the solive being equal to 3 cubic feet.

*SOLIVEAU*, Fr. a small joist; a rafter.

*SOLSTICE*, (*solstice*, Fr.) the point beyond which the sun does not go; the tropical point; the point at which the day is longest in summer, or shortest in winter. It is taken, of itself, commonly for the summer solstice.

*The Summer Solstice*, (*le solstice d'été*, Fr.) is when the sun is in the tropic of cancer, and gives us the longest day.

*The Winter Solstice*, (*le solstice d'hiver*, Fr.) is when the sun is in the tropic of capricorn, and gives us the shortest day. There is not any solstice under the equator; there being, in that quarter, without variation, equal day and equal night.

*SOLUTION*, (*solution*, Fr.) resolution of a doubt; removal of any intellectual difficulty.

*SOMACHE*, Fr. brackish, salt. The mixture of sea and river water is so called, as *eau somache*.

*SOME-WAR*, *Ind.* Monday.

*SOMMERS*, in an ammunition wagon, are the upper sides, supported by the staves entered into them with one of their ends, and the other into the side pieces.

*SOMMIER d'un pont levé*, Fr. *Séo* *Scaut de pont levé*.

*SONAILLER*, Fr. a term used among the drivers of mules, to signify the leading animal that has a bell tied to his neck, which they call *sonaille*.

*SONDE*, Fr. sounding lead; also a probe, or any instrument used to ascertain the nature of soil, &c.

*SONDER*, Fr. to sound, to throw out the lead.

*SONNANT*, Fr. a participle which is frequently used by the French, to ex-

press a specific period of time, or the nature of any thing.

*A 5 heures SONNANTES, Fr.* at five o'clock precisely, or as the clock strikes five.

*Argent SONNANT, Fr.* hard cash. This coin was in familiar use at the commencement of the French revolution, when it was found expedient to pay a select body of troops, called the *généralmes*, in ready money, whilst the aggregate of the nation took paper currency, or assignats.

*SONNER, Fr.* to sound. *Sonner de la trompette*, to sound the trumpet.

*SONNETTE, Fr.* a machine which is used in driving piles of wood into the earth; a sort of rammer.

*SOODER, Ind.* the fourth, or lowest of the original tribes of Hindoos, as they come from the feet of Branna, which signifies subjection. They are obliged to labour, and to serve when called upon.

*SOOFERBAR, Ind.* Friday.

*SOORETHAUL, Ind.* statement of

*SOQUEVILLE, Fr.* See *SARRAV*.

*SORDIT*,  $\frac{1}{2}$  the small pipe or mouth

*SORDINE*,  $\frac{1}{2}$  piece of a trumpet.

*SORN*, a servile tenure in Scotland, by which, formerly, a chieftain might, with his followers, live upon his tenants at five quarters.

*SORT, Fr.* fate; lot; destiny. The French say, *sort de la guerre*, the fate of war.

*Tirer au SORT, Fr.* to draw lots.—*Etre condamné par le SORT*, to be condemned in consequence of lots being drawn.

*SORTIE, Entière, Fr.* a sortie or sally which is made out of a besieged place, or invested camp, when the besieging army is at some distance from the works, and which is consequently full of uncertainty and danger. Hence *sortie de cinq cents hommes*, a sortie or sally of five hundred men.—*Grande sortie*, a sortie or sally made by a large proportion of the troops in camp or garrison. *Vigoureuse sortie*, a vigorous sortie or sally.

*SORTIE, intérieure, Fr.* a sortie or sally which is made when the enemy gets close to the covert-war. This sort of sally is less dangerous than the former, because the retreat is more cer-

tain. The Turks are remarkable for their prowess on these occasions; they generally commence their sorties at break of day, and at the very beginning of a siege. The ancients, on the contrary, always sallied out, in considerable force, at midnight.

*SORTIES*, in a siege, parties that sally out of a town secretly to annoy the besiegers, and retard their operations.

*SORTINGUES, Fr.* the Scilly Islands.

*SORTIR, Fr.* to go out. The French say, *sortir sur l'ennemi*, to rush upon the enemy; *sortir l'épée à la main*, to rush out sword in hand.

*SORTIR du camp, du port, Fr.* to leave camp; to sail out of port.

*SORTIR d'un péril, Fr.* to get out of a scrape.

*SORTIR des bornes de la discipline militaire, Fr.* to trespass upon military discipline, or to go out of military rules and regulations.

*SOUBREVESTE, Fr.* a part of the old dress of a musqueteer, which was somewhat similar to a close jacket without sleeves, and was hooked on each side like a cuirass.

*SOLDAN, Fr.* See *SOLDAN*.

*SOLDARD ON Soudart, Fr.* an old French term, signifying *soldat*, or soldier. It is often used in familiar discourse, when the subject relates to a person who has served for any length of time. Hence *un vieux soudard*, an old soldier.

*SOUDOYÉS, Fr.* from *soudoyer*, to keep in pay. This name was originally given to a body of men who enlisted themselves under Philip Augustus of France, on condition that they should receive a certain daily pay in the way of subsistence. Frois-art calls all soldiers, who are paid for doing duty, or for going to war, *soudoyés*.

*SOURILLE, Fr.* a term of reproach, signifying a dishonest soldier; a vagabond, or thief.

*SOVEREIGN*, supreme in power; having no superior. In Great Britain the sovereign is so far limited with respect to this explanation, that he has no power beyond the legislative delegation of their authority by the two Houses of Parliament. He has, however, no superior with regard to the army and navy.

**SOVEREIGN contempt.** This expression is used to signify contempt that is shewn in the highest degree.

**SOUFFLE, Fr.** the wind of a cannon.

**SOUTFLER les canons, Fr.** to scale pieces of ordnance. This is done, by means of a moderate charge of gunpowder, for the purpose of cleaning them.

**SOUTFLER, Fr.** This word is used figuratively, among the French, and signifies to do any thing underhand, or by stealth. Hence *souffler la division, le feu de la discorde*, to sow the seeds of, or secretly to blow up the embers of discord.

**SOUFFLER un avancement, Fr.** to obtain promotion, without having any claim from personal service or merit. To rise by underhand or low means.—See SCARBARD.

**SOUTFLER le froid et le chaud, Fr.** to blow hot and cold. This sort of character, sometimes disgraces military life; especially within the purviews of a court.

**SOUTFLER au poil, Fr.** a term used in farriery, to signify that the pus or matter oozes out of the crown of a horse's hoof, through the hair that grows round it.

**SOUTFLER un exploit, Fr.** to boast of some exploit which has never taken place. The French also use the word *souffler* in an absolute sense, to signify any fruitless attempt or wild scheme to become rich, by looking after the philosopher's stone, and trying to make gold and silver by chemical operations. Hence *il a dépense tout son bien à souffler*, he has spent or wasted all his property in visionary pursuits.

**SOUFFLEURS, Fr.** a mean degraded set of men, who get military promotions at the expence of neglected merit, and succeed in life by being subservient to the vices and caprices of imaginary greatness.

**SOUFFRIR, Fr.** to bear; to support; to meet. Hence *souffrir une tempête*, to meet a storm.

**SOUFRIR une siège, Fr.** to stand a siege.

**SOUFRIR une attaque, Fr.** to stand an attack.

**SOUFLURE, Fr.** a cavity or hole which is frequently occasioned when

pieces of metal have been forged in too intense a fire. Cannon balls lose their required weight by flaws of this sort.

**SOUFRE, Fr.** See SULPHUR.

**SOUGARDE, Fr.** guard, throat-band of a gun. A semi-circular piece of brass which is fixed beneath the trigger of a musquet, to prevent it from going off by accident.

**SOUGARDES.** See DISCHARGERS.

**SOUGORGE, Fr.** throat-band of a bridle.

**SOUKARS, Ind.** a general name for bankers.

**SOULE, Fr.** to sully; to stain; to defile.

**SOUTER ses mains de sang, Fr.** to sully or stain one's hands with blood. The author of the French work, from which we occasionally extract matter, observes on this head, that soldiers, who only follow the dictates of their duty, and obey the orders of their superiors, grounded in state necessity, cannot be said to stain or defile themselves with blood, although in the heat of an action, they are obliged to be the blind instruments of the most sanguinary measures. They only, let their sex be what it may, can be said to stain their hands, and to be imbrued in blood, who cause the death of innocent persons.

**SOULEVEMENT, Fr.** Insurrection, revolt.

**SOUTEVER, Fr.** To stir up, to excite to insurrection.

**Se SOUTEVER, Fr.** To rise, to revolt, to mutiny; *l'armée s'est soulevée contre son général*; the army rose, or mutinied against its general.

**SOUMETTRE, Fr.** (As an active verb,) to subdue, to overcome, to reduce to subjection.

**Se SOUMETTRE, Fr.** To submit oneself; to yield.

**SOUSSION, Fr.** Submission.

**SOUAIS, is, Fr.** In fortification, to lie under, to be commanded. Thus, one work is said to be commanded, or *être souais*, when it is lower than another. The same signification holds good with respect to heights or elevations.

**SOUND.** Any thing audible, noise; that which is perceived by the ear.—The experiments are numerous by which it has been found, that sound

perhaps more so; because his peevish and morose temper, if not checked in infancy, is seldom mended in manhood.

**SOUS, Fr.** A preposition which is used to denote the state or condition of one thing with respect to another which is above it, viz.

*Sous-tangente, Fr.* Sub-tangent.

*Sous, Fr.* Under; close to. The French say, as we do, *camper sous une ville*, to encamp under a town; *être sous le feu d'un bataillon*, to be under the fire, or exposed to the ure of a battalion; *les soldats sont sous les armes*, the soldiers are under arms; *sous les drapeaux*, under the colours; *sous les auspices*, under the auspices; *être en son ordre*, to be under orders.

*Sous-brigadier, Fr.* Sub-brigadier.

*Sous-faute, Fr.* Under roof timber.

*Sous-garde, Fr.* Throat-band of a gun.

*Sous-gorge, Fr.* Throat-band of a bridle.

*Sous-gueule, Fr.* A bridle.

*Sous-lieutenant, Fr.* Under lieutenant's place or appointment.

*Sous-lieutenant, Fr.* Sub-lieutenant.

*Sous-secrétaire, Fr.* Under secretary.

*Sous-ventrière, Fr.* Under girth.

**SOUSIGNER, Fr.** To undersign.

**SOUSIGNE, Fr.** The undersigned.

**SOUSTRARE, Fr.** To withdraw; to take away. The French say, *soustraire des soldats de ou à l'obéissance de leur commandant*, to seduce soldiers from their duty to their commanding officer. They also say, *se soustraire de la tyrannie*, to get rid of, or to shake off the yoke of tyranny.

*La SOUTE, Fr.* The powder or bread-room.

**SOUTENEUR, Fr.** in a bad sense, a bully; a bravo; one who attempts to carry things, by noise and menaces, in opposition to truth and reason.

**SOUTIEN, Fr.** a supporter; an abettor.

**SOUTENIR, Fr.** To maintain; as *soutenir le combat*; to maintain the fight.

*SOUTENIR le feu de l'ennemi, Fr.* To stand the enemy's fire.

*SOUTENIR le siège, Fr.* To hold out in a besieged place.

**SOUTENIR, This word is also used**

in the French drill, and signifies to support or balance the body on the right or left foot, according to the given direction. The point upon which the heel turns, is called the pivot, (*le Pivot.*)

**SOUTERRAINS, Fr.** Subterraneous passages, lodgments, &c. that are bomb-proof.

There are several lodgments of this description in the different fortified places upon the Continent. The most remarkable are those at Landau, an ancient and strong town of Lower Alsace, in France; New Bisach, a town of Alsace, in France, not far from Bisach, the ancient capital of Brisgaw, in Germany, and Figueras. The latter belongs to Spain, and is so skilfully and so solidly constructed, that the horses of several regiments may be quartered in them.

**SOUTHWARK, a dependency of the city of London.** All musters of soldiers taken or made in the borough of Southwark, must be in the presence of two justices. See MUTINY ACT, Sect. 21.

**SOUTHEN, Fr.** a prop; a support. It also signifies any work in fortification, which props or supports another of larger dimensions, and without which aid, it might fall or give way.

**SOLVERVIN, Fr.** sovereign. The person in whom sovereignty is vested.

**SOUVERAINETÉ, sovereignty; supremacy; highest place; supreme power.**

**SOW, in ancient military history, a kind of covered shed, fixed on wheels, under which the besiegers filled up and passed the ditch, sapped or mined the wall, and sometimes worked a kind of ran. It had its name from its being used for rooting up the earth like a swine, or because the soldiers therein were like pigs under a sow.**

**SOWAR, Ind.** a horse-man.

**SOWGUND, Ind.** an oath.

**SPADASSIN, Fr.** in familiar language, a bully. It also signifies a cut-throat; a fellow who is regardless of his own life, and attempts that of another, for the slightest offence or contradiction.

**SPADE, (bêche, Fr.** an instrument for digging. See *Entrenching Tools, Mining, &c.*

**SPADROON,**

**SPADROON**, a sword much lighter than a broad sword, and made both to cut and thrust.

**SPADROON Guard**, a guard sometimes used with the cut and thrust sword, and also with the broadsword. It consists in dropping the point towards the right from the outside guard, till it comes under your adversary's blade, the edge being upwards, and your wrist at the same time raised.

**SPAH**, an upper garment made of blue cloth, which is worn by the Janizaries, in the same manner that we wear a loose great coat or surcoat.

**SPAHILAR-AGASI**, *Fr.* colonel-general of the Spahis. He has the same command or authority over them which is vested in the *Aga*, who is head of the Janizaries.

**SPAHIS**, a corps of Turkish cavalry, which is kept in pay by the grand signor. The Spahis do not possess any lands as the *Zannis* and *Timariots* are allowed to do. This corps is composed of twelve or fifteen thousand men, and consists of the *Saltanars*, whose standard or cornet is yellow, and of the *Spahis-Gilans*, who have a red one. When these troops were first formed, the latter acted as servants or batmen to the former: they became a separate class or troop in consequence of their superior conduct on service, and are distinguished in this manner: they are armed with a sabre and a lance, which they call *misach*. They likewise make use of a long dart or javelin, called a *geric*, with an iron ferrul at one end, which they throw at an enemy with surprising skill; and if they should happen to miss their aim, they can instantly bend from their saddles, and catch it up, whilst the horse is on full gallop.—Others again are armed with bows and arrows, and some have pistols and carbines. When the grand signor takes the field in person, he generally makes a present of five thousand aspres to each *Spahi*. This bounty is called *sadach-ackehias*, or gift to enable each man to purchase bows and arrows.

When the *Spahis* take the field, they march in rear of their standard; but they do not observe any particular order of route. They divide themselves, on the contrary, into small bodies, and advance in the most desultory manner.

Besides these two troops of *Spahis*, there are four others in the Turkish service, which are only called upon under circumstances of extreme pressure and emergency. The first is called *sag-zucagi*; the standard is red and white. The second is named *sol-zucagi*; the standard is white and yellow. The third is styled *sag-gurcba*; the standard green: and the fourth, *sol-gurcba*; the standard is white. All these *Spahis* receive a daily pay of twelve to twenty aspres; and they are subject to every species of duty. There are *Spahis* called *Timars*, or *Timariots*. See **TIMARIOTS**.

**SPAHISGHANIS**, *Fr.* See **SPAHIS**.

**SPANISH**, a vulgar phrase, used principally among sea-faring men, to signify money.

**SPANNER**, the lock of a fusil or carbine.

**SPARUM**, a kind of dart, which was used by the ancients in war, and was shot out of a cross-bow. The wound it occasioned was extremely dangerous, as its point was triangular. Several of these darts were discharged in a volley.

**SPATHAIRES**. See **PROTOPATHAIRES**.

**SPATTERDASHES**, a kind of covering for the legs of soldiers, made of cloth, or coarse linen waxed over, and buttoned tight; by which the wet is kept off: now called long gutters.

**SPATTS**, a small sort of spatterdashes, that reach only a little above the ankle, called also half gutters.

**SPEAKING Trumpet**, a trumpet by which the voice may be carried to a great distance. It was formerly used in large armies; and even so late as the siege of Gibraltar, when General Eliott, (afterwards Lord Heathfield) caused the brigade words of command to be given by means of this instrument.

**SPEAR**, a lance, or long weapon with a sharp point, formerly used as a manual, or missile weapon. See **LANCE**.

Major Cartwright, in a late ingenious publication, has given some curious particulars respecting this weapon. See **EGGS**, published by that gentleman.

**SPECULATOR**. This word had three different meanings among the ancient Romans. It signified a spy in war,

war, or a sentinel and a scout; it also expressed a soldier who did duty at the imperial palace; and sometimes it was used to mark out the person who did the function of a public executioner.

**SPECULATOIRES**, *Fr.* According to Suetonius, there was a body of men among the ancient Romans, which was called *caliga speculatoria*, (the word *caliga* signifying a sort of military spatter-dash) whose duty was to observe the motions of the enemy, and to be constantly hovering about him. The speculatores were better paid than other soldiers, on account of the dangers to which they were exposed, but they were not so well clothed, being looked upon as a forlorn hope.

**To SPEND**. This term is used at sea of a mast of a ship; when it is broken down by foul weather, it is said to be spent. It is sometimes used in military matters to express the consumption of any thing; as to spend all your ammunition.

**SPENT ball**, (*boulet mort*, *balle morte*, *Fr.*) a cannon or musquet ball, &c. is said to be spent, when it reaches an object without sufficient force to pass through it, or otherwise wound, than by a confusion. Spent balls, however, are frequently fatal in their effects, especially when they hit any of the noble parts. It is on occasions of this sort, that the activity and skill of a field or ambulating surgeon are indispensably necessary; for which reason a sufficient number of these useful attendants upon an army ought always to accompany the different battalions that go into action. The French pay the strictest attention to this branch of the service.— Their flying hospitals are not only well supplied with all the requisites for so important an establishment, but every dependent part is equally well provided.

**SPHERES**, or *Sphære*. See **CIRCLE**.

**SPHERE**, } a round body of  
**SPHERICAL**, } which the center is  
at the same distance from every point  
of the circumference; as is the case  
with *Shot*, *shells*, &c.

**SPHERES d'artifice**, *Fr.* iron hoops with matches steeped in combustible matter, fixed round them. When there is only one hoop it is called *cercle d'artifice*; when there are two or three,

one within the other, the assemblage of them is called *sphère d'artifice*, from its resemblance to that figure.

**SPHERICAL**, *Fr.* und.

**SPHEROID**, an oblong body, approaching the form of a sphere.

**SPIES**, { in war, are persons em-  
**SPLAIS**, } ployed to give intelligence  
of what the enemy is doing. They should be well paid: who pays them ill, is never well served. They should never be known to any body, nor should they know one another. When they propose any thing very material, their persons, or their wives and children, should be secured and kept as hostages for their fidelity. If they are apprehended, they immediately suffer death.

**SPIES** are found in the cabinets of princes, in the closets of ministers, amongst the officers of the army, and in the councils of generals; in towns belonging to the enemy, and in monasteries. The greatest generals strongly recommend them, whatever expence they may occasion; and indeed a commander had better be in want of many particulars, however necessary, than be destitute of spies. Nothing should be spared to procure them; and even the promises made to them should be observed with the most inviolable integrity. By making a proper use of these necessary creatures, the most secret designs of an enemy may be discovered, the positions his armies are to take, the stations of his fleets, and even the manner in which the former is to be secured by masked batteries, or the latter be kept firm with chain moorings, as was the case off Boulogne in 1600.

**To SPIKE a gun**. This term is chiefly used at sea, and signifies to fasten a quon with spikes to the deck, close to the breach of the carriages of the great guns, so that they may keep firm and close to the sides of the ship, and not break loose when the ship rolls. It is likewise used in military matters to signify the choaking up the touch-hole of a piece of ordnance, so as to render it useless. See **To Nail**.

**SPIKES**, in gunnery. See **HAND-SPIKES**.

**SPIN**, or *to spin hay*, is to twist it up in ropes, very hard, for an expedition; by which means it is less bulky, and less troublesome for the cavalry to carry behind

hind them. An expert horseman can spin five days forage into a very narrow compass.

**SPIRAL**, (*spirale*, Fr.) in architecture, a curve that ascends winding about a cone or spire, so that all the points thereof continually approach the axis.

**SPIRAL Line**, (*ligne spirale*, Fr.) a curve line, which makes a circular movement like a screw, perpetually diverging or going off from its center.

**SPIRAL**, } a line drawn progressively  
**SPIRE**, } round the same axis, with  
a distance between each circle; as the thread of a screw. See **SCREW**.

**SPIROLE**, Fr. a small culverin, which was so called from the spiral or crooked direction that was taken, and the hissing noise which was made by the ball shot from it. Hence it was also called *serpentine* and *basilisk*.

**SPOKES**, the bars of a wheel that pass from the nave to the felly.

**SPOILS**, from *Spolium*, among the ancient Romans, spoils; booty taken from an enemy.

**SPOILIA Opima**, among the ancient Romans, those spoils which a subaltern officer took from any officer of distinction belonging to the enemy.

**SPONTON**, Fr. See **SPONTON**.

**SPONTON**, is a weapon much like a halberd, formerly used instead of a halberd, by the officers of foot. When the spontoon was planted, the regiment halted; when pointed forwards, the regiment marched; and when pointed backwards the regiment retreated.

To **SPRAWL**, to widen out in an irregular and unsoldier-like manner.—This term is chiefly applicable to the cavalry.

**SPRAWLING**, loose, unconnected, wide of each other.

A **SPRAWLING charge**, a loose and irregular movement of cavalry, instead of a close, compact, forward attack.

To **SPRING**, to give vent to any combustible matter upon which gunpowder principally acts by the power of explosion. Hence to spring globes of compression, &c. The latter are frequently used for the same purposes that sky-rockets, &c. are, viz. to serve as signals when any sudden attack is to be made.

When the impression, which finally

led to the surrender of Valenciennes to his Royal Highness the Duke of York, was made, the springing of three globes of compression was the signal for the attack. The late General Sir Ralph Abercrombie commanded the column that rushed into the sap on this memorable occasion; and we need scarcely add, that every thing which British valour and intrepidity could do was instantly effected. The result is a sufficient illustration.

**SPRING**, in a general acceptation, an elastic body; a body which when bent, or distorted, has the power of restoring itself to its former state. It is in general a piece of tempered metal, which by means of its elastic force, is useful in several machines to give them motion. In a gun-lock the springs are distinguished by various appellations according to their several uses, viz.

**Car and Carr Spring**. The car is a piece of hardened iron or steel in a gun lock, which moves on a pivot, and the point of which is received in a notch cut in the tumbler, and the other end is acted upon by the trigger.

The car spring is a small spring, which throws the car into the notch cut in the tumbler of a gun cock, when the piece is at half cock, or full cock.

**Feather Spring**, the spring of a gun lock beneath the foot of the hammer; called likewise hammer-spring.

**Main Spring**. The spring of a gun lock which operates on the tumbler, and gives force to the cock.

To **SPRING**, in a military sense, to step forward with a certain degree of elasticity.

**Spring up**. A word of command, which has been occasionally used when sections double up. It signifies, indeed, the same as double up, and is sometimes used singly, as *Spring!* particularly to light infantry men.

To **SPRING the firelock**. To bring it briskly up to any ordered position; to the recover, for instance.

**SPUNGE**, (*écouvillon*, *griffon*, Fr.) A long staff with a roll at one end, covered with a sheep's skin, of the bigness of the bore of a gun, to scour it after firing; and to prevent any sparks from remaining. It is sometimes called *Merkin*, from its artificial texture of hair at the end of the staff.

**Pyrotechnical SPUNGES.** Spunges which constitute the black match or tinder that is brought from Germany, for striking fire with a flint and steel. These spunges are made of the large mushrooms or fungous excrescences which grow upon old oaks, ash trees, firs, &c. These are dried, boiled in water and beaten, and then put in a strong lye made of saltpetre, and afterwards dried in an oven.

**To SPUNGE the gun,** (*couvillonner le canon*, Fr.) To cool and cleanse the bore of a piece of ordnance by means of a wet sponge which is fixed to the end of a long pole.

**Jingling SPUR.** A curious spur which was worn in the seventeenth century. The Reverend Walter Harte, in his ingenious translation of the Life of Gustavus Adolphus, King of Sweden, has furnished the following particulars respecting it. His words are—

I have seen one of these jingling spurs which was found in the *Star Park*, on the famous *White Mountains* near Prague, where the battle was fought between the Imperialists and troops of the Union; by the event of which the Elector Palatine lost the crown of Bohemia. The spur was large and strong; it was made of brass, and had a short curved neck. The box (from whose center the rowels came) was as broad as an half crown piece; hollow, and something more than a quarter of an inch. It was of bell metal gilt, and contained three or four metal balls about the size of a small field pea. The rowels, which were generally four or six, passed through the sides of the box, and measured near three inches, from opposite point to point. In the text it is observed, see *Essay*, Vol. I, Page 43, that it is thought, these spurs were made to jingle, in order to animate the horses, and keep them up to their duty, without goring their flanks unmercifully.

**SPURS, in old fortifications,** are walls that cross a part of the rampart, and join to the town wall.

**SPURS.** Instruments fixed to the heels of horsemen, with which they can, at pleasur, goad the horse to action.

**SQUAD.** A diminutive of squadron. It is used in military matters to express any small number of men,

horse or foot, that are collected together for the purposes of drill, &c.

**To SQUAD.** To divide a troop or company into certain parts, in order to drill the men separately, or in small bodies, or to put them under the direction and care of some steady corporal, or lance corporal. In every well regulated troop or company, the men are squared in such a manner, that the most minute concern with respect to the interior economy can be instantly accounted for.

The following distinct instructions have appeared in print.—

We quote them the more readily because they not only coincide with our own ideas on the subject, but seem perfectly calculated to preserve good order and discipline. They relate chiefly to the cavalry, but are equally applicable to infantry corps.

Each troop, it is observed, ought to be divided into two squads when under forty. Into three or four when above, according to the number, with an equal proportion of non-commissioned officers in each; and when the eldest is on duty, the charge of the squad falls on the next in the squad, and so on. First the stables must be divided, as equally as possible, into these divisions, and the men must belong to the same squad that their horses do: so that the foot and horse billets, and those for the married men's rooms of a squad, go together. The squads must be as distinct and separate as possible; in short as much so as two troops are; never crossing each other. The stables must likewise be, squadded entire; that is, no one stable must be allotted to two separate squads; for which reason, the proportion of numbers in each squad cannot always be exactly equal. The squad is entirely in charge of its own sergeant, or, in his absence, of the corporal who commands it, with relation to every quarter and stable duty, parades on foot and horseback. The quarter-master, in the cavalry, has, of course, the general inspection of the whole.

When a corporal has charge of a squad, he must not look after his own horse at such times as interfere with his squad duty: he can generally manage to do it at the morning stable, and in the evening he can get him done before

fore the regular hour. On a march, or after a field day, he cannot do it so conveniently, and of course orders another man to do it.—When a detachment of an absent troop is in a quarter, it must be attached to a particular troop, which ever may be judged most convenient. It must be considered as a separate and distinct squad, quartered by itself, (at far as it can be, consistent with the proper quartering of its recruits,) and under the command of its own non-commissioned officer, unless the troop to which it belongs cannot spare a non-commissioned officer with it; in which case it must be given in charge to a non-commissioned officer of the troop to which it is attached.

The same rules for squadding hold good on a march, and in all situations whatever; and the list of quarters must be made out accordingly.

The non-commissioned officers must always be kept to the same squad, as nearly as they can be. The policy of this instruction is obvious, as they will thereby be made acquainted with the character of every man in the squad.

Recruits should always be quartered and squadded with old soldiers who are known to be steady and well behaved; and those men that are at all irregular in their conduct, must be separated and distributed in squads which are composed of good old soldiers.

**Aukward SQUAD.** The aukward squad consists not only of recruits at drill, but of formed soldiers that are ordered to exercise with them, in consequence of some irregularity under arms. This term has been likewise used, partly in ridicule, and partly in reproach, to mark out those officers who are negligent of their duty. A well known industrious tactician in the British army, frequently uses the expression, in the latter sense.

**SQUADRON, (Escadron, Fr.)** A body of cavalry, composed of two troops. The number is not fixed, but is generally from 80 to 120 men. The oldest troop always takes the right of the squadron, the second the left.

The most scientific and the most experienced officers, have always held the cavalry in high estimation. The services which have been rendered by this body of men, their innumerable suc-

cesses, of which so many records are preserved both in ancient and modern history, together with the unanimous approbation of those authors, who are considered as masters in the art of war; all these circumstances sufficiently evince, that cavalry is not only useful, but indispensably necessary in war. Marshal Turenne was known to say—*Avec une bonne cavalerie, on travaille l'ennemi par detail*, with a body of good cavalry, one works or harrasses the army of one's enemy by detail; meaning, thereby, that the desultory and rapid movements of dragoons, if properly managed, are of a nature to destroy the best concerted plans of an adversary, by hanging upon his flanks, driving in his outposts, intercepting his convoys, and by taking advantage of every opening during the heat of an engagement. The Austrians had a memorable instance of the latter, when the French general Désaix, at the head of a body of horse, decided the fate of the battle of Marengo. In pursuits, the superiority of the cavalry is unquestionable.

**SQUARE, (Carré, Fr.)** A figure with right angles, and equal sides.

**The SQUARE.** A particular formation into which troops are thrown on critical occasions; particularly to resist the charge of cavalry.

**Solid SQUARE,** is a body of foot, where both ranks and files are equal.—It was formerly held in great esteem; but when the prince of Nassau introduced the hollow square, this was soon neglected.

**Hollow SQUARE,** is a body of foot drawn up, with an empty space in the center, for the colours, drums, and baggage, facing every way to resist the charge of the horse.

**Oblong SQUARE.** A square which is not at right angles, but represents the figure of an oblong, whose sides are unequal. Thus as eight companies of equal numbers would form a perfect square, ten make an oblong.

**Perfect SQUARE.** A square whose sides are equal and at right angles.

The perfect square, in the formation of troops, seems best calculated for military movements and arrangements.—Battalions, for instance, which are composed of eight companies, with one hun-

dred rank and file in each, are equal to every species of disposition. It is upon this principle, we presume, that the French have distributed their infantry. British regiments, on the contrary, consist of ten companies, and are so composed that no square of this kind can be formed. This is manifestly a defect in our system. It is indeed remedied by the grenadier and light infantry companies being occasionally detached, or cast into separate battalions; so that the remaining companies, by being told off, are brought to eight equal parts.—Tacticians will perhaps agree with us, that it would be better to have seven companies flanked by a subdivided one of grenadiers, the whole being so equalized as to produce eight equal parts. In this case, the light companies should be formed into separate bodies of chasseurs or riflemen, after the manner of the French.

Shakspeare uses the word square to signify squadron; but it is now obsolete.

**SQUARE Root.** In geometry, the square root of any number is that which multiplied by itself, produces the square; thus 4 is the square root of 16.

**Square Number.** In arithmetic, is when another number, called its root, can be found, which multiplied by itself, produces the square; thus 16 is the square number of 4, and 9 the square of 3.

**SQUELETTE, Fr.** Literally means a skeleton. It is used by the French, as by us, to signify the remnant, or incomplete state of a regiment, viz. *La squelette d'un regiment*, the skeleton of a regiment.

**SQUELETTE, Fr.** Likewise means the skeleton state of a ship, or a ship upon the stocks, which has only her ribs and first timbers laid in. So that *squelette*, among the French, will apply either to the first organization or arrangement of the parts belonging to a work or establishment, before it is completed, or to the remnant of such a work or establishment, after it has been completed. In the first sense the word *cadre*, frame, outline, &c. bears the construction of *squelette*, among the French, as *cadre d'un corps*. When the expedition into Brittany was planned, there were several cadres of this description. They consisted of French noblemen and

gentlemen who were to organize the Chouans, and to receive appointments according to their several ranks, &c. &c.

**SQUIRE.** An attendant on a warrior was formerly so called. See *Armiger*.

**STABLE horse, Ind.** That part of Tippoo Sultan's cavalry, which was best armed, accoutred, and most regularly disciplined.

**STADIUM, (Stadium, Fr.)** An ancient Greek long measure, containing 125 geometrical paces, or 625 Roman feet, corresponding to our furlong.—This word is formed from the Greek term, which signifies station. It is said that Hercules after running that distance at one breath, stood still. The Greeks measured all their distances by stadia. The Romans had, likewise, their stadia, derived from the Greek, by which they measured distances. The stadium at Rome contained 620 geometrical paces. Eight stadia make one Italian mile.

**The STADION**, among the Greeks signified also a space of enclosed or open ground, (containing that measure,) where the public races were run.

**STAFF**, in military affairs, consists of a quarter-master general, adjutant-general, majors of brigade, aids-de-camp, &c. The staff properly exists only in time of war.—See **QUARTER-MASTER GENERAL**, &c.

**Regimental STAFF**, are the adjutant, quarter-master, chaplain, and surgeon, &c.

**The STAFF**, on home service, consists in general of

One general commanding a district.

One lieutenant-general.

One major-general.

One adjutant-general.

One quarter-master general.

One deputy-adjutant, and quarter-master general.

One engineer.

One assistant-adjutant, and quarter-master general.

The regulated number of aids-de-camp and brigade-majors.

One commissary general.

Deputy commissaries general, assistant commissaries general, according to circumstances.

One inspector general of hospitals.

One

One physician, surgeon and apothecary, mates.

The staff in India consists of a general staff, station staff, cantonment and garrison staff; and an hospital staff.

The staff in great Britain is comprehended under general staff, garrison staff, district staff, and staff belonging to the cavalry depot at Maidstone, and the general infantry one in the Isle of Wight. There is likewise an hospital staff. For an account of staffs in general, see PREFACE.

STAFF belonging to the Army Depot, in the ISLE of WIGHT.

One inspector-general.

One deputy do. do.

One assistant do. do.

One fort-major and quarter-master.

Four staff-captains.

One chief paymaster.

One deputy do.

One chaplain.

One principal medical officer.

One surgeon

One assistant do.

One adjutant.

One assistant do.

One assistant quarter-master.

Fourteen inspecting field officers in England.

Four. do. do. in Scotland.

Eight do. do. in Ireland.

STAFF of the ARMY of DEFENCE.

One inspector-general.

One deputy do.

One assistant do. do.

One agent general.

One Deputy inspector general in Scotland.

One deputy inspector general in Ireland.

Foreign Depot at LYMRINGTON.

One commandant and inspecting field officer.

Cavalry Depot at MAIDSTONE.

One commandant and inspecting field officer.

STAFF of Command. See BATTOON.

HAMMER STAIL. A piece of leather, which is made to cover the upper part of the lock belonging to a musquet. It is useful in wet weather.

STAMP Duties. Imposts laid upon paper that is used for legal or commercial purposes. Proceedings of courts-martial, whether copies or originals, are not chargeable with stamp-duties; nor are the receipts given by officers for their respective pay or allowances.

STAND. The act of opposing; thus, troops that do not yield or give way are said to make a stand.

To STAND the enemy's fire: to remain, with steady firmness, in orderly array, without being discomposed by the shot, &c. of an opposing enemy. British troops are remarkable for their coolness on these occasions.

To STAND. To have an erect position. Every recruit should be taught to hold his body in such a manner, that he feels himself firm and steady upon whatever ground he may be placed for the purposes of exercise or parade. See POSITION WITHOUT ARMS.

To STAND well under arms. To be so perfectly master of the firelock as not to be embarrassed, or to be rendered unsteady by its weight, but to be able to preserve a correct relative position of the body through all the changes of the manual and platoon, &c. and during the prescribed movements in parade and field exercises. See POSITION WITH ARMS.

To STAND at ease. To be allowed a certain indulgence with regard to bodily position, with or without arms. See EASE.—It is likewise a word of command, as *Stand at—Ease*.

STAND fast. This term is frequently used as a caution to some particular part of a line, or column. In the first of the nineteen manoeuvres, for instance, the grenadiers are directed to *stand fast*, while the remaining companies march from their alignment to form close column behind them. When a battalion, drawn up in line, is to move forward in front of its original position from the right, left, or centre, the named division, subdivision, or section, *stands fast*, and the remaining ones, which have been wheeled backward into column, march towards the inward flank of the standing division, subdivision, or section. On the first of the moving bodies arriving at the inward pivot of the standing one, the latter receives the word march, and the former wheels into the ground. The rest successively do the same. By this method the leading division is spared the trouble of wheeling back and returning again to its original ground.

STANDARD

**STANDARD**, that which is the test or criterion of other things.

**STANDARD**. A measure by which men enlisted into his Majesty's service have the regulated height ascertained.

According to the Regulations and Orders published by authority, the standard for men, raised for the heavy cavalry, shall be five feet seven inches, and for the light cavalry and infantry five feet five inches; but no recruits are to be taken, even of those sizes, who exceed thirty-five years of age, or who are not stout and well made. Lads between 16 and 18 years of age, who are well limbed, and likely to grow, may be taken as low as five feet six inches for the heavy cavalry, and as low as five feet four inches for the light cavalry and infantry. In those regiments which are specially authorised to enlist boys, healthy lads, under 16 years of age, who are likely to grow, may be taken as low as five feet one inch. It will be recollected, that this standard is for men enlisted during a war; when recruits are put upon a peace establishment, a higher standard is resorted to.

Thus by a letter, dated 28th January, 1802, it is directed, that the standard for the infantry of the line shall be five feet seven inches; that no man shall be enlisted who is above 25 years of age; but growing lads from 17 to 19 years of age, shall be taken as low as five feet five inches.

**STANDARD**, in war, a sort of banner or flag, borne as a signal for the joining together of the several troops belonging to the same body.

The standard is usually a piece of silk  $1\frac{1}{2}$  feet square, on which are embroidered the arms, device, or cypher, of the prince or colonel. It is fixed on a lance, eight or nine feet long, and carried in the center of the first rank of a squadron of horse, by the cornet.

**STANDARDS belonging to the cavalry**. Standards are posted in the following manner:—

The King's, with the right squadron.

The second with the left; and the third with the center.

In advancing to the front on foot, the advanced standards and their sergeants must not slacken their pace, or deviate from right to left, as the lieutenant-co-

lonel or leading officer may happen to do; but if he be in their way, they must call to him, because they alone regulate the march.

The standards must always be brought to the parade by a troop, viz. by that which has its private parade nearest to head-quarters. They must be accompanied by as many trumpeters as can conveniently assemble with that troop.—Swords must be drawn, and the march sounded. The cornets parade, of course, with that troop to receive the standards. The standards are received by the regiment or squadron at open ranks, with swords drawn, officers saluting, and the march sounding by the remaining trumpeters. They must march off from head-quarters, and be lodged with the same form.

**Royal-STANDARD**. (*Oriflamme*, Fr.) A standard, carried when sovereigns accompanied their armies to battle.

**STANDARD-Bearer**, he who carries the standard; a cornet, ensign, &c.

**STANDARD-Hill**, a hill in England, so called because William the Conqueror set up his standard on it, before he joined battle with Harold.

**STANDING**. Settled, established, not temporary.

**STANDING-Army**, (*Armée sur pied*, Fr.) An army which is quartered upon a country, and is liable to every species of duty, without any limitation being fixed to its service. The life and foot guards form a part of the standing army of Great Britain.—The militia, but not the volunteers, may be partially considered as such; the adjutant, non-commissioned officers and drummers, being in constant pay, and a third of the quota of men, together with all the officers, being called out once a year, to be exercised for 23 days.

**STANDING**. Rank; condition. It likewise signifies length of time. As, such an officer is of very old standing in the army.

Before a subaltern can apply for a troop or company, he must have been two full years in the former capacity; and to be a field officer it is necessary, that the individual should have six years standing in the army; unless he has been two years captain of a troop or company, in which case, four years standing

standing in the army will be sufficient.

**STAPLES**, are loops of iron, or bars pointed at both ends to be driven in at both ends.

**STAR-Chamber.** A chamber in Westminster, so called from its roof being painted with gilt stars. It has been rendered proverbially odious to the English nation, on account of the encroachments which were made upon the constitution of the country during the reign of Charles the First.

**STAR-fort, in fortification.** See FORT and FORTIFICATION.

**STAROSTIES**, *Fr.* Certain tenures or fiefs, which the kings of Poland formerly granted to the nobility and gentry of the country, for the purpose of enabling them to support the expenses of military expeditions. The person who received, out of the royal domains, a fief of this sort, (for the public were not taxed on that account) was called a *Staroste*. *Staroste* also signified a Polish nobleman, and *Starostise* his wife.

**STATARIUS**, hence stationary, that keepeth in his standing, and doth not move from one place to another.

**STATARIUM Prandium.** That the soldiers eat standing. This was frequently done among the ancient Romans, not only to save time, but to enure themselves to every species of military discipline.

**STATARIi excubitores.** A standing watch, or sentinels who were upon the alert, and did not sit or lie down, but stood steady at their posts.

**STATE.** Condition of any thing; as a weekly state of a regiment, &c.

**STATE** of a detachment. The difference between the state of a corps or detachment, and a mere return of the same, consists in this, that the former comprehends the specific casualties, &c. that have occurred; whereas the latter gives an abstract account of the officers and men, in a more general and comprehensive manner. The word *state* is likewise used to express the condition of every thing belonging to the equipment of a regiment; as, state of arms, accoutrements, &c.

**STATHOLDER**, *Stathouder*, *Fr.* (from the Teutonic *Stadthalter*.) According to Basley, this word signifies

a governor of a province, chiefly that of Holland. The author of the *Dictionnaire Militaire*, says, on this subject, that Statholder was sometime back, (alluding to the period before the French invasion,) the name of the head of the Dutch Republic. This title or dignity had rank with that of sovereign prince, although the person invested with it, was subordinate to the United States, in the same manner as the Doge of Venice acted under the Senate. The French writer further adds; the orthography of this word is not right, although I have followed the *Dictionnaire de l'Academie Francaise*. It must both be written and pronounced Statholder—*Stadthouder*.

**STATHOUDERAT**, *Fr.* The dignity of the Stadtholder; when such was acknowledged in Holland.

**STATICS**, (*Statique*, *Fr.*) A branch of mathematics which considers weight or gravity, and the motion of bodies arising therefrom. Those who define mechanics to be the science of motion make statics a member thereof, viz. That part which considers the motions of bodies arising from gravity. Others again say, that statics should be the doctrine or theory of motion, and mechanics the application thereof to machines.

**STATION**, in geometry, a place pitched upon to make an observation, take an angle, or the like.

**STATION.** See POST.

**STATIONARIUS.** A sentinel; a garrison-soldier.

**STATARIi Milites.** Stationary soldiers, or soldiers in garrison.

**STATISTICS.** According to the author of a late work, statistics are that comprehensive part of municipal philosophy, which states and defines the situation, strength, and resources of a nation. They constitute a kind of political abstract, by which the statesman may be enabled to calculate his finances, as well as guide the economy of his government; and they are equally useful in ascertaining the military resources of a country.

**STATIVA Castra.** Standing camps. The ancient Romans accustomed their troops to remain, occasionally under canvas, both in winter and summer; but these encampments were of short duration.

duration. At first they were only for a single night, and they were then named lodgments: but if they lasted several nights, they were called *Stativa*.

The winter camps were always better supplied with provisions, and warlike stores, than the summer ones. Whilst Rome was governed by Emperors, their armies were constantly in the field, or encamped upon the frontiers of the empire, both in peace and war. They were certainly less considerable in the first than in the latter instance, and they always remained in camp during the winter, as well as the summer months. Particular care was taken to have these camps well fortified, and abundantly provided with stores and provisions. This precaution was the more necessary, because, in those days, there were not strong places enough along the frontiers of the Roman empire, to prevent the incursions of the barbarians into the different provinces. By degrees, fortified camps grew into fortified castles and strong forts, and even into fortified towns; many of which took their names from the several legions that had been encamped upon the ground. *Stativa* likewise signifies, generally, quarters.

**STATOR.** One of the standing watch. It also signified, among the ancient Romans, a serjeant, a messenger, or any person who was always attending about an officer, to be ready at command. The term, in some degree, corresponds with our orderly.

**STATORES** *Prætorum*. A certain description of soldiers among the ancient Romans, belonging to the Imperial guard, who always did duty at the entrance of the Pretorium, or general's pavilion.

**STAVES**, used in ammunition and other wagons of carts, are round and flat sticks between the summers and side-pieces, also in column and scaling ladders.

**STAYS**, in *truck carriages*, are the irons which are fixed one end under the fore axle-tree, and the other to the side-pieces, in the form of an S.

**STECCADO**, the lists, a place raised in for beholding a combat or duel. The term is Spanish.

**STRECCO**, in fortification, a sort of pale or fence which is raised before the trenches.

**STEED**, a horse either for state or war.

**STEEL**, particularly applied, it means *weapon* or *armour*.

**STEELYARD**, (*Peson*, Fr.) A balance for weighing.

**STEGANOGRAPHY**, (*Stéganographie*, Fr.) the art of secret writing, or of writing in cyphers, known only to persons corresponding. It is much used in war.

**STENOGRAPHY**, (*Sténographie*, Fr.) See **SILBEOGRAPHY**.

**STFP**, (*Pas*, Fr.) progression by one removal of the foot. It likewise signifies pace.

*To STEP*, to move forward or backward, by a single change of the place of the foot.

*To STEP out*, to lengthen your pace.

*To STEP short*, according to the *Regulations*, is to diminish or slacken your pace. On the word, *step short*, the foot advancing will finish its pace, and afterwards, each man will step as far as the ball of his toe, and no farther, until the word, *ordinary step*, or *ordinary*, be given, when the usual pace of 30 inches is to be taken. This step is useful when a momentary retardment of either a battalions in line, or of a division in column, shall be required. See *Rules and Regulations*, part I. pages 11 and 12. Ditto, page 31, Sect. 40.

*To STEP out*, according to the *Regulations*, is to lengthen the step to 33 inches, by leaning forward a little, but without altering the cadence. This step is necessary when a temporary exertion in line and to the front, is required; and is applied both to ordinary and quick time.

These phrases are frequently used in military movements, when it is found necessary to gain ground in front, or to give the rear of a column, &c. time to acquire its proper distance. The officer, who leads a head division, should be particularly attentive, when he is ordered to step out, or step short, especially in the different wheelings, not to lose the precise moment when either may be thought expedient; and in marching in open column, every successive officer should watch the seasonable moment, after a wheel, of preserving his relative distance.

*To STEP off*, in a military sense, to take

take a prescribed pace from a halted position, in ordinary or quick time, in conformity to some given word of command or signal.

**Balancing STEP,** (*Pas d'école*, Fr.) a step so called from the body being balanced upon one leg, in order to render it firm and steady in military movements, &c. Men at the drill should be frequently exercised in this step. The manner in which it is executed is as follows:—

At the word *march* the left foot is advanced firmly, but without a jerk, the body is kept perfectly erect, the knee straight, the toe pointed out, the shoulders square to the front, and the whole weight of the body bearing on the right foot. Great care must be taken, that the foot is thrown straight forwards, and that the shoulders do not go with it. When the men have remained, in this position, just long enough to make them perfectly steady, the word *Right* must be given. Upon which the left foot is planted firm, the body quite steady, and the whole weight rests *à plomb* or perpendicularly upon the left foot; the right foot is, of course, advanced as the left foot was before, and so on; the feet being thrown forward, alternately, at the words *Right, Left*. The drill serjeant or corporal must see, that the toe of each man comes rather first to the ground, that he rests on the flat of the foot that is planted, and by no means on the heel, that both knees are straight, and that his arms are kept close to his side without constraint.

When a recruit has been rendered tolerably steady in this step, he must be made to stand on one leg, and move the other to front and rear gently; he must then bring that leg to the ground, and do the same with the other. He must be frequently practised in this until he becomes quite steady on his legs, and has acquired a free motion, *from his hips*, without working his body.

**Deploy STEP; Lock STEP,** (*Pas de manœuvre*, Fr.) See **LOCK**.

**The side or closing STEP,** (*Pas de côté, ou Pas saut*, Fr.) a step which is taken in order to gain ground to the right or left, without altering the front of the battalion, or of closing it to its center, whenever a chasm occurs in

the line after it has wheeled from column, &c. According to the Regulations, this step is performed from the halt, in ordinary time, by the following words of command:—

*Close to the Right—March, (Appuyez à la droite, Fr.)*

*Close to the Left—March, (Appuyez à la gauche, Fr.)*

**Back STEP,** (*Pas en arrière*, Fr.)—a step taken to the rear from any position without any change of aspect. According to the Regulations, the back step is performed in the ordinary time and length of pace, from the halt, on a given word of command. It will be generally recollected, that a few paces only of the back step can be necessary at a time.

**STEP Back, March,** (*En arrière, Marche*, Fr.) a word of command which is given when one or more men are ordered to take the back step according to regulation.

**Quick STEP,** (*Pas accéléré*, Fr.) a military step, consisting of 30 inches, (of which 103 are to be taken in a minute, making 270 feet in a minute) which constitutes what is technically called *quick time* in marching. According to the Regulations, the command *quick—march* being given with a pause between them, the word *quick* is to be considered as a caution, and the whole are to remain perfectly still and steady; on the word *march*, they step off with the left feet, keeping the body in the same posture, and the shoulders square to the front; the foot to be lifted off the ground, that it may clear any stones, or other impediments in the way, and to be thrown forward, and placed firm; the whole of the sole to touch the ground, and not the heel alone: the knees are not to be bent, neither are they to be stiffened, so as to occasion fatigue or constraint.—These instructions can only be complied with by means of a sedulous attention not only in the instructor at the drill, but by a constant application of that solid principle, which directs, that all movements of the legs should come from the haunches. The knees, indeed, must bend, and the fore parts of the feet must unavoidably be lifted, but both these natural actions may be done in so correct and quick a manner, that

they will scarcely be perceptible. The elasticity of the instep, if properly managed, will always give a firmness to the tread. The arms are to hang with ease down the outside of the thigh, and by no means to swing backwards and forwards, like so many pendulums. A very small motion may indeed be occasionally permitted, to prevent constraint. The head is to be kept to the front, the body to be well up, and the utmost steadiness to be preserved. The quick step is the pace to be used in all filings of divisions from line into column, or from column into line; and by battalion columns of manoeuvre, when they change position, independently of each other. It may occasionally be used in the column of march of small bodies, when the route is smooth, or the ground unencumbered, and no obstacles occur; but in the march in line of a considerable body, it is not to be required, and very seldom in a column of manoeuvre; otherwise fatigue must arise to the soldier, and more time will be lost by hurry, and inaccuracy (the natural consequence of hurry) than is attempted to be gained by quickness.—See *General Rules and Regulations*, part I.

**Quickest Step**, (*Pas précipité*, Fr.) a step measuring 30 inches, and of which 120, making 300 feet, may be taken in a minute.

This step is applied chiefly to the purpose of wheeling, and is the rate at which all bodies accomplish their wheels; the outward file stepping 33 inches, whether the wheel is from line into column, during the march in column, or from column into line. In this time also, and by this step, should divisions double, and move up, when they pass obstacles in line; or when in the column of march, the front of divisions is increased, or diminished.

**To Step between.** To interfere.

**To Step forth or forward.** To take an active part in any thing. Thus, when the circle was formed, the grenadiers stepped forward to beg off their comrade, &c. The officers stepped forward, and remonstrated against their colonel.

**STEP** is likewise figuratively used to signify promotion. As the next step from a lieutenancy is a troop or company, and from that to a majority; ex-

cept in the guards, who have the exclusive privilege of going over this intermediate rank, and stepping into a lieutenant-colonelcy at once.

**To Step over**, to rise above another. This term is generally used in a bad sense. As, young men of interest and connection frequently step over old soldiers.

**STEP** (*Echelon*, Fr.) according to the Translator of Rules and Regulations for the field exercise and manoeuvres of the French Infantry, *echelon* means, in a figurative sense, what we understand by a step in military promotion. See *Grades Militaires* in the *Nouveau Dictionnaire Militaire*, by A. T. Gaigne. We avail ourselves of this opportunity to recommend to the perusal of our military readers the above translation, which has been ably executed by John Macdonald, Esq. F. R. S. F. A. S.

**STEPPING off to music.** In stepping off to music, or to the tap of the drum, it will be recollected, that the word of command is the signal to lift up the left foot, and that it comes down, or is planted, the instant the tap is given, or the music completes its first note, so that the time must be invariably marked by the left foot, and not by the right; as has been practised by the guards and the artillery, until a recent regulation.

**STÈRE**, Fr. a measure for firewood, which has been adopted by the French, since the revolution. The stère is equal to the cubic meter. It is used instead of the *voie*, and is about half of that measure. The *Corde*, in decimals, answers to 3.335 steres.

**STEREOGRAPHY**, (*Stéréographie*, Fr.) the art of drawing the forms of solids upon a plane.

**STEREOMETRY**, (*Stéréométrie*, Fr.) the art of measuring, or that which teaches how to measure all sorts of solid bodies.

**STEWARD**, one who manages the affairs of others. In all well conducted messes belonging to military corps, certain officers are named to act as stewards, for some specific period. These act, conjointly, with the treasurer and pay-master for the good of the whole.

**STICK**, the same as *Baton*, an instrument of dignity, which is occasionally carried by persons and officers in high

high situations, particularly by such as are in waiting near the royal person.

**GOLD STICK**, an officer of superior rank in the life guards so called, who is in immediate attendance upon the king's person. When his Majesty gives either of his regiments of life-guards to an officer, he presents him with the gold stick. The colonels of the two regiments wait alternately month and month. The one on duty is then called gold stick in waiting, and all orders relating to the life-guards are transmitted through him. During that month he commands the brigade, receives all reports, and communicates them to the king. This temporary command of the brigade does not, however, interfere with the promotions that may be going forward, as each colonel lays those of his own particular corps before his Majesty. Formerly the gold stick commanded all guards about his Majesty's person. On levees and drawing room days, he goes into the king's closet for the parole.

**SILVER STICK**. The field-officer of the life-guards, when on duty, is so called. The silver-stick is in waiting for a week, during which period all reports are made through him to the gold-stick, and orders from the gold-stick pass through him to the brigade. In the absence of the gold-stick on levees and drawing room days, he goes into the king's closet for the parole.

**STICKLER**, a sidesman to fencers: or second to a duellist.

**STILET**, *Fr.* See **STILETTO**.

**STILETTO**, a small dagger, with a round blade and sharp point.

**STINKPOT**, a firework made of offensive combustibles, which is used at sieges, &c. See **LABORATORY**.

**STIPEND**, (*Salair*, *Fr.*) salary, hire, wages, pay.

**STIPENDIARY**, (*Stipendiaire*, *Fr.*) that serves a foreign power for pay. Hence, stipendiary troops.

**STIPENDIUM**, wages, or pay for soldiers. This term was applied, among the ancient Romans, to the money which was paid, by way of subsistence, for military service, and which only took place in the year 947 of the Roman æra. Until that period the Roman soldiers, or rather citizens, served voluntarily, and without pay; clothing and subsisting themselves until the

close of the war, in which the Republic might be engaged. It was so, likewise, in the early days of Greece; among the Lacedæmonians, the Athenians, and the Spartans, who never paid their soldiers except when the campaign was at a great distance from home. The pay of the foot soldiery, among the Greeks and Romans, resembled, in some degree, the subsistence which is given to modern soldiers; being equally subject to deductions for arms, accoutrements, necessaries, &c. But the cavalry of the ancients was more amply supplied than that of the moderns in every respect, and better paid.

**STIPENDIUM**. This word has also been used, among the ancient Romans, to signify a soldier that had served 40 years.

**STRATOCRACY**, (*Stratocratic*, *Fr.*) a government in which military power has the ascendancy.

**STIRRUPS**, iron loops, suspended by straps, to each side of the saddle, in which the horseman sets his feet in mounting or riding.

**STOCCADO**, a push or thrust with a rapier.

**STOLE**. See **ORDER of the Stole**.

**STOCK**, the wooden part of a musquet or pistol.

**Stock**, (*Col*, *Fr.*) a part of an officer's dress, which consists generally of black silk or velvet, and is worn round the neck instead of a neckcloth. The soldier's stock is of black ribbed leather, and is part of his small mounting. Red stocks were formerly worn in the guards; they are still so in some Prussian regiments.

**Stock Purse**, (*Masse*, *Fr.*) a certain saving which is made in a corps, and which is applied to regimental purposes. In some corps this fund is so honestly managed, that, without encroaching upon the public, the most beneficial effects are produced: in others again, it is so mysteriously handled between commanding officers and paymasters, that it becomes a perpetual source of discontent and jealousy.

**Stocks for building Ships**, (*Chantier*, *Fr.*) Certain places, on the sides of rivers or up creeks, which are appropriated to the construction of vessels, &c.

**STOMPER**, *Fr.* to sketch out a design, or to draw with colours that have

been pounded into dust. Instead of the pencil or crayon, a roll of paper which is dipped into the coloured dust, serves to put on the different colours.

**STONES**, in military architecture, may be distinguished into two sorts; that is, into hard and soft: hard stone is that which is exposed to the open air, such as rock; and which lies loose upon the surface of the earth: the soft stone is that which is found in quarries, and underground. It is undoubtedly true that the hardest stones make the most durable works; but as there is seldom a sufficient quantity to build the whole fortification, the best service in the facings of the building, in the foundations, and where the works are exposed to the violence of the waves.

The stones of some quarries are very soft, and easily worked, when first cut out; but when exposed for some time to the open air, become very hard and durable.

As there is undoubtedly a kind of sap in stones, as well as in timber, by which the same sort of stone, taken out of the same quarry, at one season, will moulder away in a few winters, but, when dug out in another season, will resist the weather for many ages; stones should always be dug in the spring, that they may have time to dry before the cold weather comes in; for the heat of the sun will extract the greatest part of the moisture, which otherwise expands in frosty weather, and causes the stone to splinter, although it be otherwise hard and good.

As stones lie in the quarries in horizontal beds or strata, (that is, they cleave in that direction) and have likewise a breaking vein, which is perpendicular to the former; both these directions must be observed in cleaving, as well as in raising them out of their beds. Stones that will not easily cleave must be blown up by gunpowder.

**Marble**, is of various sorts and colours; the most beautiful of which is exported from abroad. The marble found in England is mostly blackish, and so very hard and difficult to polish, that very little use is made of it, except to burn and make lime.

**Fire-Stones** come from Reigate, and serve chiefly for chimneys, hearths, ovens, furnaces, and stoves; being a

dry, porous, gritty stone, which bears the heat without breaking: on account of this quality, it is called *fire-stone*.

**Purbeck-Stone**, is a hard, greyish stone, and serves chiefly for paving, coping off walls, and for all such other uses where strength is required, it being the most hard and durable stone, except the Plymouth marble. It is found on Purbeck island.

**Rag-Stone**, is of a bluish colour, and commonly used in paving: but there is a stone called *Kentish rag*, that is very useful in building: it splits very easily, and yet is very hard.

**Free-Stone**, more generally called *Portland-stone*: it is a fine whitish stone, without any veins. This stone is very soft when it comes out of the quarry, is easy to be worked, and becomes very hard in time. Hence, it is very fit for military works.

**Alabaster**, is a clear whitish stone, not unlike coarse marble. It is plentiful in some parts of Italy: but there is none to be found in England. It is to be had in great abundance in Scotland, and makes the very best lime.

**Whin**, or *Aberdeen whin*, is of a greyish colour, intermixed with veins, not unlike coarse marble. This stone is the fittest of any for military works: because it withstands the weather, and the violence of the waves, better than any stone found in England.

**Russian Stone**, commonly called *Asbestos*. Cloth, which is proof against fire, may be fabricated out of this stone, when decomposed. It is indigenous to Russia.

**STOPPAGES**, in a military sense, deductions from a soldier's pay, the better to provide him with necessaries, &c. A soldier should never be put under a greater weekly stoppage from his pay, than what will afterwards leave him a sufficiency for messing. Since the abolition of arrears a regulation has taken place, by which soldiers are directed to be stopped one shilling and sixpence per week in the infantry, and to be accounted with on the 24th of every month. See *Military Finance*, pages 72 and 73.

**STOPPAGE**, for the subsistence of the Sick. In the Regulations for the better management of the sick in regimental hospitals, it is particularly laid down, under

under the head subsistence, page 16, that sufficient funds should be established for the support of the sick without any additional charge to government; and, at the same time, that the sick soldier should be provided with every reasonable comfort and indulgence that can be afforded. The sum of four shillings per week from the pay of each soldier will, under proper regulations, and with strict economy, be sufficient for this purpose; which sum is to be retained by the paymaster of the regiment.

The sick are to be furnished with bread made of the finest wheat flour, and fresh meat, perfectly good and wholesome.

That the greatest economy may be used in laying out the money for the sick, every article ought to be purchased by the surgeon, who is required to keep a book, in which he is to enter the amount of the weekly consumption of each man according to the diet table; and this book, with the diet table, is to be laid before the commanding officer and paymaster every week, to be examined and signed by each; and it is of the utmost importance to the welfare of his Majesty's service, that every commanding officer, and every regimental paymaster, should superintend the expenditure.

**STOPPER**, a piece of wood or cork, made to fit the bore of a musquet barrel, which soldiers use in wet weather; and, on other occasions, when the piece is not loaded, to prevent moisture and dust from getting into the barrel.

**STORE-keeper**, in war-time, must take care of the stores in the magazines, such as the provisions, forage, &c. receive the same from contractors, and deliver them out to the troops. He has several clerks under him, appointed to the different departments, of provisions, hay, straw, oats, &c. In time of peace he has charge of all the king's stores, belonging both to land and sea-service.

**STOREHOUSE.** See **MAGAZINE**.

**Military STORES**, are provisions, forage, arms, clothing, ammunition, &c. Officers, storekeepers, or commissaries, who are convicted of embezzling or misapplying any military stores, are to make good the damage, forfeit 100*l*.

and be cashiered.—See *Muting Act*, Sect. 65.

**Medical STORES on board Transports.** Certain articles of diet which are put on board each transport, are so called.—These are to be considered as intended solely for the use of the sick, or convalescents; they are to remain in the charge of the master of the transport, and only to be issued upon demand in writing, made by the surgeon from time to time as he shall judge proper; or, when there is no surgeon, upon demand of the commanding officer. And the surgeon or commanding officer is to give the master, at the end of the voyage, a certificate that his demands for the said medical stores have been made only upon proper occasions, and have not been expended for any other use, than that of the sick, or convalescent.

**To STORM**, (*Donner l'assaut*, Fr.) in military matters, to make a violent assault on any fortified place, or works.

**STORMING Party**, a select body of men, consisting generally of the grenadiers, who first enter the breach, &c.

**STRAGGLERS**, men who wander from the line of march. It is the business of the rear guard to pick up all stragglers, &c.

**STRAP**, a narrow long slip of cloth or leather. It is directed, that every recruit shall, on his final approval, be provided with straps for his coat, the amount of which, namely 2*s*. 4*d*. is to be stopped out of his bounty.

**STRAPONIN**, Fr. a sort of hammock which is used in hot countries, &c. See **HAMMOCK**.

**STRATAGEM**, in war, any scheme or plan for the deceiving and surprising an army, or any body of men. See **STRATAGEM**.

**STRATAGEMS in war**, (*Stratagèmes de guerre*, Fr.) certain feints which are resorted to by able generals, &c. to cover their real designs during the operations of a campaign. It is impossible to lay down any specific rules on this head, as every general, according to the capacity and activity of his mind, makes use of the various means and expedients which grow out of times, circumstances, and occasions. It has been asserted by some writers, that all sorts of stratagems, (even those which

are

are connected with treachery,) may be adopted for the accomplishment of any design. This maxim is, however, strongly combated against by those who have written upon the law of nations. Probity, in fact, and elevation of mind, (which are superior to the pitiful measures of treacherous affiliation or intercourse), should always bear the ascendancy in human actions. There are stratagems which may be practised and carried on, without the least deviation from honour and good faith.—Many distinguished generals have had recourse to these; but none ever succeeded so well as Hannibal. Wishing to cross the river Rhone, and being in want of almost every article, that was necessary, to effect the passage in the presence of an enemy who was diligently watching his motions, he caused him to imagine that it was his intention to keep the ground he occupied. He ordered large fires to be lighted up in different quarters of his camp, and directed some of his troops to shout and make loud noises, as if they were perfectly stationary. During this apparent state of inactivity, he broke up his camp, marched along the river side, and crossed it at a place where it was least expected he would make the attempt.

Among other good qualities, which are indispensably necessary in an able general, that of knowing how to conceal a projected march, and to anticipate the motion of an enemy, is not the least important.

The army under the command of the Duke of Saxe-Weimar, having laid siege to Brissack in 1630, the Imperialists went to the relief of that place. The Duke, on receiving intelligence of their approach, instantly marched against them, with a body of forces, composed of Swedes and French allies. The Imperialists, who had advanced by rapid marches, had gained possession of an eminence, by means of which they would have enjoyed all the advantages of local superiority, had not the Count de Guébriant, who was then a lieutenant-general in the Swedish service, suggested a stratagem to dislodge the enemy. The plan was adopted, and it succeeded to the full extent of his design.

The drums and trumpets of the different corps were collected together,

and stationed in a neighbouring wood, so as to draw the enemy's force and attention from the quarter proposed to be carried. The Imperialists being naturally led to believe, from the noise and concurrence of so many military instruments, that they were going to be attacked from that quarter, beat to arms, and left their position in complete order of battle. They had scarcely quitted the eminence, before the Duke of Saxe-Weimar appeared in their rear, took possession of the ground which they had so imprudently abandoned, and became master of all the advantages which his enemy would otherwise have enjoyed.—An interesting account of this ingenious manœuvre may be found in the History of Le Maréchal de Guébriant.

Stratagems of this description have been frequently used by the French during the late war, particularly in Italy. Stratagems, in fact, constitute one of the principal branches in the art of war. They have been practised in all ages by the most able generals, and have contributed, in a great degree, to their military reputation. Virgil, in his *Æneid*, Book II. says:—

*Dolus an virtus, quis in hoste requirat.*

The history of France abounds with instances, in which stratagems of every kind have been successfully practised. It seems the peculiar talent of the inhabitants of that country to derive advantages from well concerted feints, &c. in war, and to secure their victories more by science than by downright hardihood. Nevertheless, far be it from us to detract from the latter. Modern Frenchmen seem to have acquired, or to have had awakened in them, on shore, the courage and perseverance which are so remarkably conspicuous amongst us at sea. Perhaps it is out of the natural course of things, that they should ever reach the naval excellence by which this country is so singularly distinguished; and perhaps it is equally ordained, that we should never be the first in military knowledge. France and England unquestionably hold between them the destiny of Europe, and of the three other quarters of the globe: France, by the natural advantages of her continental position, added to a predilection for arms, which is manifest throughout her population; and England by its insular situation,

situation, rendered, as it were, impregnable, by an innate courage, and unvalued aptitude at sea. Time alone, and the experience of facts, must hereafter determine how far either nation will be benighted by a deviation from the primary advantages which nature furnishes to each, for the adoption of artificial means. For it must be acknowledged, that the true element, in which a Frenchman seems calculated to act, is on shore, or within the guardian range of his artillery and fire-arms; and that an Englishman, though far from being wholly out of his element on land service, is thoroughly himself at sea. From the increase of our foreign possessions, but most especially from the extent of our territories in India, and the armed state of Europe, it has been found expedient to enlarge the scale of our military establishments, in proportion to the exigencies of a very desultory service abroad, and a possible necessity at home for military operations. Without, therefore, entering into the policy of either country, we shall content ourselves with observing, that as we have an army, it behoves every efficient character belonging to that army, to obtain a thorough knowledge of his profession, and to study the nice shades of an art which, of all others, has principles that are fixed and immutable, under circumstances of the greatest apparent casualty. It has been wisely observed by a French writer, under the article of *Stratagèmes de guerre*, that a chief, who is defeated in a general action, will sometimes attribute his failure to fortune, although it be universally acknowledged, that chance or fortune has a very trifling share in pitched battles, while art and science regulate the different movements, and finally determine their issue. Whoever, therefore, suffers himself to be surprised by his enemy, cannot be said to stand wholly exculpated from ignorance or neglect, since it must have been in his power to have avoided the snares laid for him, by means of vigilant spies, and unremitting attention. This remark appears to us, not only to be generally correct, but it seems more immediately applicable to all generals that have secret service-money at command. The influence of that commodity, (upon which no embargo can

be laid) will be felt in every garrison town, or sea-port; and those who have the management of the public purse, must be dull indeed, if they do not feel their way into the secret preparations of an enemy, before they hazard an attack against him.

Besides the different stratagems, which may be used by an able general, to bring about the overthrow of the whole or part of an army, by leading it into an ambuscade, there are various ones which may be practised against a fortified place. To direct the latter purpose, you may contrive to get soldiers, in disguise, through the gates at unguarded hours; to introduce them through subterraneous passages, or by any other means that may offer. Before any attempt of this sort is made, every part of the fortifications should be narrowly reconnoitred, and as much knowledge be obtained of the interior situation of the place as can be procured by means of good spies, or from deserters. You must, above all things, be well assured, that the garrison is relaxed in duty; that the different guards are negligently attended to; that the soldiers who compose them are in the habits of drinking or gaming; that their officers miss their rounds, or go them without system or regularity; that the gates are ill guarded, and the avenues to them ill watched; and that there are certain places, or entrances, which are not watched at all; for it is almost impossible to surmise any place, that has been regularly fortified, while the garrison does its duty.

If it should appear practicable to surprise a town, by taking advantage of the negligence of the sentries, &c. at some particular gate, previous means must be adopted to introduce some soldiers dressed like market women, or in the garb of some religious order. You may then contrive to get a wagon or cart, (seemingly loaded with hay or straw, but with soldiers concealed beneath it,) so placed in the entrance of the gate that it will serve as an obstacle when it may be found necessary to shut it. In order to do this effectually, let a pin be taken out, so that the wheel comes off, or the axle-tree gets broken. The instant this is done, the soldiers, who had entered the town in disguise, must join the drivers,

drivers, the men that have been concealed in the wagon will then leap out, and the whole must rush upon the port-guard. While this happens, the troops that have been placed in ambush round the fortifications, will advance with promptitude and firmness, and endeavour to get possession of the town before a sufficient force can be collected to repel the attack. In the year 1780 a rabble from Courtray took advantage of the carelessness of the Imperial troops; who were in garrison at Gand, in Flanders, and by seizing upon the gate and port-guard, brought about a temporary rebellion in the country. This, indeed, was done without stratagem; but the circumstance proves, that when the sentries of a fortified place are negligent in their duty, a surprise is always practicable. We are precluded, by the limits of our undertaking, from going more fully into this important branch of military science. Several treatises have been written on the subject. Among others one appeared in 1756, intitled, *Stratagèmes de guerre*, illustrating, from history, the various stratagems which had been practised by some of the ablest generals, during a long period of time, down to the peace of Aix-la-Chapelle. It was published by M. Carlet de la Rosière; an officer in the French service, and acting engineer in the Isles of France and Bourbon. It contains much curious matter.

**STRATAGEM and force united.** Count Turpin, page 43, Vol. I. in his Essay on the Art of War, judiciously remarks, that when an enemy, superior in force, is in possession of a pass, from which he cannot be dislodged but by art, stratagem and force should be blended together as often as possible. Onozander, the Greek general, set fire to a wood which was at the foot of a mountain in the enemy's possession, and which he wanted to go over; the flames and smoke forced the enemy to abandon it, and leave the passage free for him.

**STRATARTHIMOMETRY.** In war, the art of drawing up an army, or any part of it, in any given geometrical figure; and of expressing the number of men contained in such a figure, as they stand in order of battle, either at hand, or at any distance assigned.

**STRATEGY,** (*Strategie*, Fr.) from the Greek *Strategos*, the art or science of military command. In a most excellent publication, entitled *Idées Raisonnées sur un Système Général &c. pour étudier la Science de la Guerre*, &c. by Nockhorn de Schorn, we find the following explanation of this term; and as it does not exist in any of our English lexicographers, we presume the extract must be particularly gratifying to the intelligent officer. In page 193, *Troisième Partie, Sixième Chapitre, Sixième table Méthodique*, our author thus continues:—

“We are at length got to the sixth integral part of military knowledge, which is termed *Strategie*, or the art of knowing how to command, and how to conduct the different operations of war: the word is derived from the Greek *Strategos*, which signifies chief or general of the army. The term *general* or *chef* conveys the same meaning, indeed, that constitutes the word universal, and points out an officer of superior rank, whose mind is well stored with military theory, and who can practically lead into active service, all the different arms or component bodies belonging to war; such as cavalry, infantry, and artillery. This definition clearly points out the impropriety of confining the terms *general*, *lieutenant-general*, and *major-general*, to any particular body of armed men: for what is a general, whose skill consists in being able to manage a body of cavalry or of infantry only, without knowing how to conduct others? A general, whether he be commander in chief, or be acting in a subordinate capacity to him, ought to know cavalry, infantry, and artillery movements, and possess all the branches of military science.

Nor are these observations confined to the generals and superior officers of armies: subaltern-officers should be, more or less, versed in the science of knowing how to conduct men into action, and to combine the different operations of war; particularly so, if their natural ambition should lead them to aspire to the highest posts of military preferment.

Strategy, or the knowledge of commanding armies, may be divided into two parts; one comprehending the higher

higher, and the other embracing the lower branches of the art. The first comprehends all that a commander in chief, and all that his subordinate generals should be acquainted with; and the second, (which may also be called *la petite guerre*, being the diminutive of the first,) appertains to the staff, and to a certain proportion of subaltern officers.

To be adequate to a chief command, it is necessary that the person, so selected, should possess extraordinary talents, and not only be master of all the theory of war, but likewise know, from practice and experience, every species of military operation. He should in fact, to refer to one of our own articles, (vide *MIND*) be gifted with a military mind.

In order to obtain all that can be obtained by study, (for natural genius must supply a very large proportion,) the intelligent officer will first fix upon a distinct and clear idea of the part he means to investigate. From one idea he will gradually proceed to another; and when the whole system has thus been progressively touched upon, he will take an analytical view of the several component parts; examine them together; weigh their relative points, and then look into the different authors that have written upon this vast and complicated subject. He will peruse what relates to the first branch or *la grande Strategie*, in the following works:—

1. Les Mémoires de Montecuculi.
2. L'Esprit de Folard.
3. Art de la Guerre, par le Maréchal de Puisegur.
4. Les Réveries du Maréchal de Saxe.
5. L'Essai sur l'État de la Guerre, par Turpin.
6. Les Instructions du Roi de Prusse.
7. Le Cours et le Traité de Tactique, par Joly de Mezeroy.
8. Théorie de la Guerre par le même.
9. Pensées sur la Tactique et la Strategie, par M. de Sylva.
10. L'Essai général de Tactique, par M. Guibert.

The best writings on what is called *La Petite Strategie*; or the inferior branches of the art of war, are

1. Le Premier livre du 1 tome,

et le cinquième livre du 2 tome, de L'Art de la Guerre, par M. Turpin.

This work has been translated by Captain Otway.

2. Le Traité sur la Petite Guerre, par Grand Maison.

3. Le Partisan, par Jenney.

4. Principes sur la petite Guerre: Ouvrage ajouté aux instructions du Roi de Prusse.

5. La Petite Guerre, par M. le Capt. Knock.

6. Sentimens d'un Officier Hessois sur l'art de conduire les détachemens à la guerre.

7. Le Chasseur à la guerre, ou du service des troupes légères.

8. Observations sur le Service de Cavalerie à la Guerre, par le Chevalier de Shônacken.

Although these celebrated writers ought to be considered by every young officer as the oracles of his profession, he must, nevertheless, guard his mind against that fatal persuasion, which might lull it into a belief, that nothing more is required than to peruse and to digest their rules and regulations. When he has made himself completely master of their thoughts, he must endeavour to identify himself, as it were, with the authors and the generals themselves. By this method he will probably hit upon some of those hidden truths in military science, from which many secondary ones are drawn; and in contemplating the commentaries, &c. of great generals, he will discover, that they knew well how to calculate dangers, to appreciate probabilities, and by occasionally deviating from ordinary rules and prescribed principles, how to move in untrodden paths, and to obtain signal advantages, where, to superficial minds, nothing but desperate hazard and destruction appeared.

*STRATOGRAPHY*, (*Stratographie*, Fr.) The description and detail of all that belongs to an army; of the dress, arms, &c. of the soldiers, and of the manner of encamping, &c. Vegetius has given the *Stratography* of the Romans.

*STRATOR*. Among the ancient Romans, *Strator* signified an officer, belonging to the army, whose duty was to take care of the military roads; to see that all obstacles to the ready move-

ment of troops, were taken away; to level heights, throw bridges over rivers, cut down woods, and to execute all the orders which tended towards facilitating the march of an army.

**STRAW.** According to the regulations, published by authority in 1799, relative to the forage, &c. which troops are to receive in the home encampments, it is directed, that straw is to be allowed at the rate of one truss of 36 pounds to each *paillasse* for two men, being a *full bedding*; at the expiration of sixteen days to be refreshed with half a truss to each *paillasse*; and at the expiration of 32 days to be removed, and a fresh bedding of one truss is to be given, and so on every succeeding period of sixteen and thirty-two days..

For the sick in the hospital, the straw is to be changed as often as it may be deemed necessary.

Two trusses per troop or company are to be allowed for batmen, or servants, not soldiers; and three trusses per troop or company for the washerwomen, to be changed every sixteen days, not having *paillasses*.

Thirty trusses of straw per troop, or company, are allowed on first taking the field for thatching the women's huts.

Regiments, *not having paillasses*, are allowed straw at the following rates:—

On taking the field, two trusses of 36 pounds each to every five men, at the end of eight days to be refreshed by one truss, and at the end of eight days more to be refreshed again by the same quantity. At the end of twenty-four days the whole to be removed, and an entire new bedding to be given, and refreshed as before, viz. two trusses for every five men.

Four pounds of straw are to be added to the ration forage for the cavalry and artillery horses only.

Six pounds of straw are to be allowed to the general officers and staff, in addition to the prescribed ration of forage.

The straw which is allowed to cavalry regiments for the bedding of their horses, is called *long forage*.

For **STRAW**, a word of command to dismiss dragoons when they have grounded their arms, so that they may

be ready on the first signal given. The French say—*à la Paille*. See *Paille*.

**STREAKS**, are the iron bands on the outside of the wheel to bind the fellics strongly together.

**STREAK nails**, are those driven through the streaks into the fellics.

**STREET.** See **ENCAMPMENT**.

**STREET-firing.** See **FIRING**.

**STRELITZ**, a Russian word, whose plural number is *Strelitzzy*, derived from *Strelai*, an arrow, in the same language. An ancient militia, which was formerly kept in pay among the Muscovites, both in time of peace and in time of war, was so called. The men who composed it always served on foot, and were originally armed, as their name indicates, with bows and arrows. They afterwards received musquets or firelocks, and laid aside the bow and arrow. The rest of the Russian army, which was only called together in cases of emergency, retained the bows, arrows, and lances; with which each soldier armed himself according to his own particular whim or notion.

In the remote periods of the Russian empire, the *Strelitzzy* were the only regular body of troops that formed any part of the standing army of that country. It consisted of twenty to twenty-four thousand men, who enjoyed a multiplicity of privileges and immunities, and were quartered in one of the suburbs of Moscow, which is still called *Strelitzkaia Slaboda*. From the latitude allowed them, and the peculiar indulgences which these soldiers enjoyed, they might well be compared to the *Prætorian bands* under the first Roman emperors, and, in some degree, to the *Janizaries* of Constantinople. They frequently mutinied, like the latter, and interfered in the management of public affairs. Their last revolt, however, was fatal to them. It happened in 1698, during the absence of the Czar Peter the First; who on his return into Russia, broke the whole corps, erased its name from the list of military establishments, and put his troops upon the same footing that those of the rest of Europe were.

The established pay of a *Strelitz* was seven rubles, and twelve comb and bushels of corn, every year.

Corn, even in these days, is given as a necessary

a necessary ration to a Russian soldier, which he bakes or roasts upon thin plates of iron, and then reduces to meal, making therewith a sort of dough, called *Toloqueno*. Every man always carries a good portion of this subsistence about him, to which he adds a small cruet of vinegar. By soaking this meal in water mixed with a little vinegar, he contrives to make a sort of soup or broth, which the Russians, who are fond of acids, find extremely palatable; and by giving it the consistency of dough, it serves for bread and meat. When the Russian soldier can procure a few greens, such as cabbage, &c. to mix with his *toloqueno*, he makes a complete meal, which he calls *Chety*. A *tcharotcheka*, or small glass of brandy, makes up the measure of a full repast. It must be acknowledged, that where soldiers can be brought to satisfy the cravings of nature in this economical manner, great advantages must be derived, especially in long marches through an uncultivated, or desert country. We cannot, however, recommend its adoption, except in cases of urgent necessity, and on services where there might be a possibility of absolute want, from the destruction, or poverty, of a country into which an army marches. The fare itself is not calculated to add vigour and activity to the body, or to keep alive that promptitude and fire which are required in military operations.

**STRENGTH.** This word may be variously understood in military matters, viz. .

**STRENGTH.** Fortification; fortress; strong hold. It likewise signifies armament; power; force. In all returns which are made of corps, *strength* implies the number of men that are borne upon the establishment, in contradistinction to *effective force*, which means the number fit for service. Hence the strength of a battalion, troop, or company, &c.—The allowance for the repair of arms, &c. is issued according to the return which is made, not of the *effective force*, but of the established strength of a troop or company. This, however, must be considered as a trespass against public economy, and ought to be remedied on the solid principle, that they who neglect small errors, will soon fall into great faults.

**STRICT**, exact, severe, rigorous; the contrary to mild, indulgent. Hence a strict officer. It is sometimes used in a bad sense, to signify a petulant, troublesome commander.

**To STRIKE.** This word is variously used in military phraseology, viz.

**To STRIKE at.** To attack; to endeavour to destroy, directly or indirectly.

**To STRIKE off.** To erase; to blot out; as to strike off the list of the army. This can be done only by the king's order.

**To STRIKE a tent.** In castrametation, to loosen the cords of a tent which has been regularly pitched, and to have it ready, in a few minutes, to throw upon a bat-horse, or baggage wagon.

**To STRIKE terror into an enemy.** To cause alarm and apprehension in him; to make him dread the effects of superior skill and valour.

**To STRIKE a blow.** To make some decisive effort.

**To STRIKE the colours.** This is properly a naval term, but it may be applied to military matters on some occasions. Thus at the battle of Fontenoy, when the British had driven the French out of the field, Louis XV. who was upon an eminence in the neighbourhood with his guards, &c. ordered the royal standard to be *struck*, from a full persuasion that the day was lost.

**STRIPE.** Dr. Johnson calls a stripe a linear variation of colour. Regimental sword knots are directed to be made of crimson and gold in stripes.

**STRUCTURE.** (*Structure*, Fr.)—The manner in which any thing is built. *Une édifice de belle structure.* An edifice which is built in a handsome manner.

**To STRUGGLE with or against;** to make extraordinary exertions in direct contest with an enemy, or against superior forces.

**STUC,** Fr. Stucco. Plaster of Paris.

**STUCATORS,** Fr. The men employed at Stucco work.

**STUCCO,** a sort of fine white mortar or composition, which is made of lime mixed with pounded marble. It is used for the outward covering of all sorts of works, and when it is perfectly

dry, it has the appearance of the finest polished stone.

**SUB.** A familiar abbreviation which is used in the British army to signify *subaltern*.

**SUB-Brigadier**, an officer in the horse-guards, who ranks as cornet.

**SUB-Lieutenant**, an officer in the royal regiment of artillery and fuzileers, where they have no ensigns; and is the same as second lieutenant.

**SUBA, Ind.** A province.

**SUBADAR, Ind.** the governor of a province. It likewise signifies a black officer, who ranks as captain in the company's troops; but ceases to have any command when an European officer is present.

**SUBADARY, Ind.** the appointment or office of a subadar.

**SUBALTERNUS, (Officers subalternes, Fr.)** subaltern officers. This word is used among the French, as with us, to signify all officers of a certain inferior degree, viz. *les subalternes*, the subalterns.

All officers under the rank of major, technically considered, are subalterns; captains of troops and companies, in an effective battalion, under arms, are in a subaltern station, and subject to the word of command given by one person; hence subaltern,—in the same manner, that lieutenants, cornets and ensigns, are under the controul of captains of troops or companies.

**SUBARMALF, Fr.** A thick garment or clothing; which was formerly used to secure the body from the hard and cold contact of armour.

**SUBDIVISION**, the parts distinguished by a second division. Thus a company divided forms two subdivisions. Whereas two companies added together make a grand division; except the flank companies, which constitute grand divisions of themselves.

**SURDUR, Ind.** Chief.

**SUBJECT, (Sujet, Fr.)** One who lives under the dominion of another. It is only used in the first instance, as no one can be the subject of a secondary power, although he is bound to obey his orders. Thus soldiers are obliged to submit to the orders of a general, but they are not his subjects. The French make the same distinction.

**SUBORDINATION.** A perfect sub-

mission to the orders of superiors; a dependence which is regulated by the rights and duties of every military man, from the soldier to the general. Subordination should shew the spirit of the chief in all the members; and this single idea, which is manifest to the dullest apprehension, suffices to shew its importance.—Without *subordination* it is impossible that a corps can support itself; that its motions can be directed, order established, or the service carried on. In effect, it is *subordination* that gives soul and harmony to the service: it adds strength to authority, and merit to obedience; and while it secures the efficacy of command, reflects honour upon its execution. It is *subordination* which prevents every disorder; and procures every advantage to an army.

**SUBSIDY, Fr.** See **SUBSIDY**.

**SUBSIDIA.** Among the ancient Romans, the *subsida* consisted of troops, that formed a body of reserve, and remained in the rear, in order to support any part of the line that might give way. This corps was always composed of allies, or subsidiary soldiers. Their post was in the rear of the triarii; and until they were called into action, they sat upon the ground.

**SUBSIDIARY Troops.** Troops of one nation assisting those of another, for a given sum or subsidy.

**SUBSIDY**, a stipulated sum of money which one prince pays to another, with whom he has formed an alliance, for offensive or defensive purposes.

**To SUBSIST**, In a military sense, to give pay or allowance, &c. to soldiers; as a captain of the light company will subsist 20 men belonging to other companies, for so many days during the march. The French do not use the term in the same sense.

**SUBSISTANCE des pièces, Fr.** This term is used among the French to signify the pay or allowance which is given to the officer, bombardier, and men belonging to the train of artillery who serve the batteries.

**SUBSISTENCE, (Substance, Fr.)** In a military sense this word may be divided into two sorts, viz. that species of subsistence which is found in the adjacent country: such as forage, and frequently corn that is distributed in parcels; and that which is provided at a distance

a distance, and regularly supplied by means of a well conducted commissariat. The latter consists chiefly of meat, bread, beer, &c. To these may be added wood or coals, and straw; which are always wanted in an army. Every general will take proper precautions to have his men well supplied with these first necessaries in life. A very sensible treatise has lately made its appearance in this country, respecting the system of a British commissariat staff in England: it is entitled the British Commissary.

Baron d'Alpaigne has written more at large upon this important object. — See *Elémens Militaires*, tom. i. page 162; and that writer's *Suite de l'Essai sur la Science de la Guerre*, tom. i. page 246.

**SUBSISTENCE** likewise means pay or allowance.

**SUBSTITUTE** in the Militia. A person who voluntarily offers to serve in the room of another that has been chosen by ballot. But if afterwards he should himself be chosen by ballot, he is not exempted from serving again, as principals are, within certain restrictions. Substitutes may be provided for quakers. Every substitute is liable to a penalty for not appearing to be sworn upon due notice being given; and every regularly enlisted soldier who shall offer to serve as a substitute in the militia, is liable to forfeit 10l. or to be imprisoned. Substitutes who desert are to serve the remainder of their term when taken.

**SUBSTITUTION**, *Fr.* an algebraical term used by the French, signifying to substitute in an equation any quantity in the room of another, which is equal to it, but which is differently expressed.

**SUBTANGENT**, in any curve, is the line which determines the intersection of the tangent in the axis prolonged.

**SUBTENSE**, (*Soutendante*, *Fr.*) a geometrical term signifying the base of an angle, that is to say, a strait line opposite to an angle, which is supposed to be drawn from the two extremes of the section that measures it. Likewise the chord of an arch; that which is extended under any thing.

**SUBVERSION**, (*Subversion*, *Fr.*) a

state of total disorder and indiscipline; generally produced by a neglect of small faults at the beginning, and a gradual introduction of every sort of military insubordination.

**SUBURBS**, (*Faubourgs*, *Fr.*) buildings without the walls of a city; from the Latin *Sub* and *Urbis*.

**SUCCESSION** of rank, relative gradation according to the dates of commissions.

**SUCCESSION** of Colonels, a particular part of the official army list is so called. The dates of the several appointments are therein specified, together with the numbers and facings of the different regiments.

**A Commission in Succession**. A commission in which an individual has an inherent property from having purchased it, or raised men; or which, through interest, he is at liberty to sell to the best advantage, provided it does not go in the regiment; in which case no more than the king's regulation can be taken.

**SUCCOUR**, in war. Assistance in men, stores, or ammunition.

**SUD**, *Fr.* This word is variously used by the French. It signifies, in sea language, the south wind, and the southern regions; and in an absolute sense, it means one of the four cardinal winds which blows from the south. — Hence *le sud*, the south wind; *sud est*, south east; *sud ouest*, south west.

**SUFFISANTE**, *Fr.* See *Passemur*.

**SUFFRAGES**, *Fr.* Votes.

**SUISSSES**, *Fr.* The Swiss soldiers who were in the pay of France previous to the 10th of August 1792, were generally so called. It was also a general term to signify stipendiary troops. Hence *point d'argent*, *point de Suisses*! which agrees with our cant phrase — No pay, no soldier.

**SUITE**, or **SERIES**, *Fr.* This term signifies generally any regular collection and successive distribution of things.

This word was also used among the French to signify, that although an officer might be reduced or put upon half pay, he was, nevertheless, obliged to follow (*être à la suite*) of some given regiment, or remain stationed in some fortified place. Perhaps a regulation of this kind might be resorted to with benefit

benefit to the service, as far as regards the British half-pay.

*Officiers à la suite, Fr.* supernumerary officers attached to a regiment, &c. during the monarchy of France, who were not required to do duty with it.

*SUIVRE, Fr.* to follow. The French say, *suivre la profession, le métier des armes*, to follow the profession or trade of arms; to embrace a military life.

*SUIVRE le chemin de la gloire, Fr.* to follow the path of glory.

*SULPHUR, or brimstone*, a mineral very useful in making gunpowder and artificial fireworks.

*SULTAN or SULTAUN, Ind.* king. The title which was assumed by Tippoo Saib, chief of the Mysore country. Hence called Tippoo Sultaun. This term generally signifies the emperor of the Turks; but in that case it is proper to prefix the word grand or great; as most Mahometan princes, especially those of Tartary, assume the title of Sultan.

*SULTAN Shirki, Ind.* king of the East.

*SULTAUNUT, Ind.* the decorations or appendages annexed to royalty.

*SUMMARY Arithmetic*, the art of finding the flowing from the fluxion.

*SUMMER-TREE*, in architecture, a beam full of mortises for the joists to lie in.

*To SUMMON, (Sommer, Fr.)* to demand the surrender of a place. This is done either in writing, by beat of drum, or sound of trumpet: it also signifies to excite; to encourage; to call up. Thus our immortal poet exclaims:—

When the blast of war blows in our ears,

Stiffen the sinews, *summon up* the blood!

*SUMMONS, (Sommatton militaire, Fr.)* a call of authority; a citation to surrender any fortified place or body of men. In this case the governor is informed, that unless he yield before the assault is made, the inhabitants will be put to the sword, and their property given up to the plunder of the soldiers.

*SUMNUTCHEER, Ind.* a word, among others, which signifies Saturday.

*SUMOODER, Ind.* the sea or main ocean.

*SUMPTER HORSE, (Sommier;*

*cheval de Somme, Fr.)* a horse that carries necessities on a journey, the same as *Bât-horse*.

*SUN, Ind.* the year.

*SUNAT, Ind.* old rupees, on which a discount is allowed. Hence *Sunat Rupres*.

*SUNEEBAR, Ind.* another word for Saturday.

*SUNECHUR, Ind.* a word likewise meaning Saturday.

*SUNNUD, Ind.* a charter, grant, or patent, from any man in authority.—When it is given by the king, it obtains the appellation of *Firman*.

*SUNNO Dewanny, Ind.* a grant or instrument in writing, which entitles a person to hold land in India.

*SUNSET. See RETREAT Beating.*

*SUNSET*, the time at which the evening gun fires, and the retreat is beat in camp, or quarters, &c. When troops are embarked on board transports, or any of his Majesty's ships, the men are ordered to parade at half an hour before sunset, quite clean as to their persons. See *Regulations and Orders*, page 178.

*To SUP up*, a term used in the British cavalry, to signify the last duty which is performed under the inspection of the quarter-masters of troops, when the horses are allowed to rest for the night.

*SUPERANNUATED, (Suranné-é, Fr.)* in a military sense, rendered unfit for service through old age. To be placed upon the superannuated list, is to be recommended to the board at Chelsea, for the purpose of being provided for on that establishment.

*SUPERFICIES, (Superficie, Fr.)* outline; exterior surface, extent without depth. The curved superficies are divided into two sorts, viz. convex and concave.

*SUPERINTENDANT, (Surintendant, Fr.)* a person appointed to take charge of any particular district or department.—Hence Military Superintendent.

*SUPERIOR, (Supérieur, Fr.)* that is above others in authority, dignity, power, strength, and knowledge. This term always implies some rank, title, or situation, by which one person is placed above another. In military life, as well as in every other branch of society,

ciety, the individual who holds an inferior post or place, is bound to pay due obedience and respect (as far as regards the exercise of his duties or functions), to his superior in rank. At all times, indeed, the latter is entitled to a certain degree of deference and attention.

**SUPERIOR OFFICER, (*Officier supérieur*, Fr.)** any officer of higher rank than another, or who has priority in the same rank, by the date of his commission, &c.

**SUPERIORITY, (*Supériorité*, Fr.)** pre-eminence, excellence above others. Although men, in general, viewing them abstractedly, and with regard to legal rights, may be called, and indeed are, equal; human nature is, nevertheless, so constituted, that, for the sake of good order in civil, and good discipline in military life, certain persons must be selected out of the mass of community, for the guidance and government of others. Hence, the origin of intelligent leaders. The subsequent perversion of the principle into weak and ignorant chiefs, who have filled the posts of honour that ought to be occupied by merit only, on no other ground than that of hereditary claim, or prostituted patronage, has frequently produced the melancholy consequences of abrupt usurpation, or revolutionary dominion, in the midst of anarchy and blood. We wish the limits, or the nature of this publication, would permit us to select what has appeared on this chapter. We shall, however, remain satisfied with recommending, to the perusal of those in power, the following passage out of the *Life of Gustavus Adolphus* (vide page 7, *Essay on the Military State*, &c. Vol. I.) After stating the laudable methods which were pursued by that able king, in the formation of his troops, his ingenious translator thus continues:—Hence it happened, that the loss of the commanding officers, in some sharp engagements, rarely discomposed a Swedish regiment (a thing frequent enough in other armies); for half the corps was just as capable to take the command as those who had given them laws. There were but two means of advancement, *seniority* (which was sometimes superseded) and merit. Birth, quality, and court

friends, availed nothing; so that the world can hardly expect to see such another army but very seldom; an army formed by a monarch equally brave, moral, and religious; and nursed by him for twenty years, with all the care that a parent educates a single child. The same plan was observed, more or less, by his generals, till the conclusion of the peace of Westphalia; and this body of troops, from the year 1612 to 1628, had hardly ever tasted a single month's repose. The regulations, order, and discipline, of Julius Caesar, can bear no comparison with the correct emendations, harmonious adjustment, and religious decency, of Gustavus." It is not difficult to conclude, that the ground-work of this excellent military superstructure, was *superiority* in talents, and not mere *seniority*, or rank in life.

**SUPERNUMERARY, (*Supplémentaire*, Fr.)** beyond a fixed or stated number. In a strict military sense it means the officers and non-commissioned officers that are attached to a regiment or battalion, for the purpose of supplying the places of such as fall in action, and for the better management of the rear ranks when the front is advancing, or engaged.

Supernumerary officers and non-commissioned officers must always divide their ground equally in the rear of the division they belong to, and pay the strictest attention to the orders which are issued for its exercise, or movement.

If an officer is killed or wounded in action, the supernumerary officer of the division takes the command, and so on to the quarter-master and serjeants, &c.

**To SUPERSEDE, (*Remplacer*, Fr.)** See **To RESPITE**.

**To be SUPERSEDED, (*Etre remplacé*, Fr.)** Both these terms are used, by the French, in the same military sense that we adopt them, *viz.* to be deprived of rank and pay for some offence, and to have another put in one's stead.

**SUPPLÉANT, Fr.** a substitute; any person named to do the functions of another.

**SUPPLEMENT, addition; augmentation, in case of deficiency.**

**SUPPLÈMENT, Fr.** additional allowance, or gratification money, given by a Sovereign.

a Sovereign to his officers, over and above their regular subsistence.

**SUPPLEMENT of an arch.** In geometry or trigonometry, the number of degrees which it wants of being an entire semicircle; as complement signifies what an arch wants of being a quadrant.

**SUPPLÉMENT d'un angle, Fr.** supplement of an angle. The number of degrees which are wanting in an angle to constitute or make up two angles.

**SUPPLÉMENT, Fr.** a certain pecuniary allowance, over and above the ordinary pay or subsistence, which was given by the king to officers belonging to the old French service.

**SUPPLEMENTAL, } (Supplémentaire, Fr.)**  
**SUPPLEMENTARY, }** additional; such as fills up what is wanting.

**SUPPLEMENTARY Militia.** See MILITIA.

**SUPPLY, relief of want;** making up of deficiencies. A fresh supply of troops, ammunition, &c.

**To SUPPLY,** to make up deficiencies; to aid; to assist; to relieve with something wanted. To fill any room made vacant. Thus covering sergeants supply the places of officers when they step out of the ranks, or are killed in action.

**To SUPPORT,** to aid; to assist; it likewise signifies to preserve untarnished, viz. to support the ancient character of the corps.

**SUPPORT, Fr.** support. This term is used to mark any particular work by which another, that is on a larger scale, is defended and secured.

**Well SUPPORTED,** well aided; well assisted. It likewise signifies well kept up, as a *well supported fire from the batteries*; a well supported fire of musquetry.

**SUR,** upon, against. It is often used in the latter sense by the French, as *Marcher sur une place*, to march against a place.

**SURAPAN, Ind.** an honorary dress, which is given to an inferior by a superior.

**SURARBITRE, Fr.** an umpire.

**SURPLOMBER, Fr.** to slope.

**SURAT Haul, Ind.** a state or representation of the case.

**SURBATE, } (Surbature, Fr.) a**

**SURBATING, }** bruise under a

horse's foot, which is often occasioned by the loss of a shoe, and by his travelling too long in that state.

**SURCINGLE, (Surfair, Fr.)** a girth, with which the saddle, or any other burden, is bound upon a horse.

**SURETY, bondsman;** one that gives security for another; one that is bound for another. Every paymaster in the British service is obliged to find two sureties, who bind themselves in given sums, for the security of monies entrusted to him by government.

**SURFACE,** in fortification, is that part of the side which is terminated by the flank prolonged, and the angle of the nearest bastion: the double of this line with the curtain is equal to the exterior side.

**SURGEON, (Chirurgien, Fr.)** a staff officer, who is chief of the medical department in each regiment, or hospital, &c.

**Surgeon-General,** the first or senior surgeon of the army.

Particular instructions to the regimental surgeons of the line:—

Each regimental surgeon of the line, when provided with a chest of medicines, is required half yearly to make a return to the inspector of regimental hospitals, (under cover to the secretary at war), of the medicines used by him during the preceding six months, and what remain; and this return must be accompanied by an affidavit taken before a magistrate, that none of the medicines have, to his knowledge, been converted to private purposes, or applied to any use but that of the regiment, or some other military service; for which he must produce the special orders of the commanding officer, or of the inspector of regimental hospitals.

Should a regiment of the line be placed in an unhealthy situation; or, from any prevailing disease, should the surgeon's stock of a particular medicine be exhausted before the next yearly supply becomes due, he is to apply to the inspector of regimental hospitals, (under cover to the secretary at war) for a fresh supply; the existence of such cause for the extraordinary consumption of the medicines to be certified by the commanding officer.

If a medical officer of the line desires to use a medicine not in the dispensatory,

tory, he must procure it at his own expence.

Whenever wine is necessary for the sick of a regiment of the line, a return of the consumption thereof is to be made weekly to the inspector of regimental hospitals.

The medical and hospital expences of régiments of the line, and of their respective detachments, are to be inserted in the public accounts of the respective corps.

Every regimental surgeon is to make a report to the inspector of regimental hospitals, of the situation, size, rent, &c. of the hospital he proposes to hire; and, unless on very pressing emergencies, no engagement is to be entered into without the permission of that officer, to whom is to be transmitted half-yearly, viz. June 21th, and Dec. 21th, an abstract of the regimental hospital contingent expences, approved by the commanding officer of the regiment, accompanied with regular vouchers signed and certified by the paymaster.

When a soldier is punished, it is the duty of the regimental surgeon to attend at the execution of the sentence, and to see that the life of the culprit is not endangered by excessive rigour. He is, in fact, paramount to the commanding officer on this occasion, and ought to interfere whenever his judgment dictates. If any commanding officer should be hardy enough to continue the chastisement, in spite of the surgeon's interposition, the responsibility will then rest with him.

**Assistant SURGEON**, the person who acts immediately under the regimental surgeon. In the Regulations for improving the situation of regimental surgeons and mates, which took place in 1796; it is expressed, that surgeons' mates in future are to be stiled Assistant Surgeons, and to be appointed by commission from his Majesty, or by generals authorized by him. For farther particulars respecting surgeons and assistant surgeons, see Military Finance.

**Veterinary SURGEON**. See VETERINARY.

**SURINTENDANT des Fortifications**, Fr. a place of great trust and considerable importance during the old French government. It was his duty to submit plans of places that were to be fortified,

or of others that wanted repairing; to give estimates of the expences that would attend the works; and to state to the directors the degrees of skill and activity, which he had discovered in the different engineers who acted under him. He likewise communicated with the king on every weighty branch of ordnance. His allowance was fifty thousand livres per annum, out of which he gave six thousand livres, or 250*l.* to a first clerk, who received the like sum from the king for under clerks and stationary.

**SURINTENDANT général des poudres et salpêtres de France**, Fr. superintendant-general of the powder and saltpetre magazines of France. An appointment in the old French artillery, which was created in 1631, and paid the Paulette.

**SURMENER**, Fr. to founder; a term in the French manège, signifying to over-ride or over-work a horse. Hence, *un cheval surmené*, a jaded horse, or one spoiled by too much work.

**Les SURPENTES**, Fr. the slings or straps used in the artillery.

**SURPRENDRE la garnison d'une Place**, Fr. to surprize the garrison of a fortified place.

**To SURPRIZE**, (*Surprendre*, Fr.) in war, to fall on an enemy unexpectedly, in marching through narrow and difficult passes, when one part has passed, so as not easily to come to the succour of the other; as in the passage of rivers, woods, enclosures, &c. A place is surprized by chains, casemates, or the issues of rivers or canals; by encumbering the bridge or gate, by wagons meeting and stopping each other; sending soldiers into the place, under pretence of being deserters, who, on entering, surprize the guard; being sustained by troops in ambush near the place, to whom they give entrance, and thereby seize it. Soldiers, dressed like peasants, merchants, jews, priests, or women, are sometimes employed for this purpose. The enemy sometimes sends in his soldiers, as if they were yours coming from the hospitals, &c. they also dress their soldiers in your regimentals, who, presenting themselves at your gate as such, are immediately admitted, seize the guard, and become

masters of the place. Secretaries' houses are set on fire, and whilst the garrison comes out to extinguish it, troops who lay in ambush march in, and surprise the place. Officers, commander guards at the principal gates, are laid out under various pretences; officers being so contrived, that a party may seize the gate in coming in with them. Sometimes an alarm is given at one side of the garrison, whilst you enter secretly at the other, which at that time is too often neglected.

**SURPRISES**, (*Surprises*, Fr.) in a military sense, may apply either to those measures which are adopted by one army in the field to surprise another, or to those which are followed in the attack of fortified places.—The French make a distinction between *Surprises de Campagne*, and *Surprises des Places*; or the surprises which are practised against an army in the field, and those which are executed against fortified towns or places. What has been said under the article *Stratagems of War*, will equally apply to the latter system.

When it is found expedient to attempt a surprise in the field, a sufficient number of men must be collected, for the purpose, not only of advancing with confidence against the enemy, but of being able to make good a retreat, should he prove stronger than was suspected. The troops that are selected for this duty, should be remarkable for their fidelity, and be able to undergo the greatest fatigue. Intelligence and faithful guides must be distributed among the different troops and companies, in order to keep up the continuity of the march, and to put those of the rear in the right path, should they have deviated from the direct route, or line of march.

If the detachment or corps, that is entrusted with the secret expedition or surprise, be marched out of an entrenched camp, proper precautions must be taken, to prevent any intercourse between the enemy and persons employed, to send, or give, intelligence. To do this effectually, the instant the rear guard has left the camp, the gates must be shut, and the strictest orders be issued to prevent spies, or deserters, from stealing out. Small parties of dragoons and riflemen must likewise be sent for-

ward to scour the roads, and to pick up stragglers. Care is taken to have it understood by the people of the country, that these parties are detached, for no other purpose than to escort some wagons, which are expected for the use of the army, to parley, or, apparently, to execute some business that can neither create jealousy, nor give uneasiness.

About an hour after, it must be proclaimed, in and about the camp, and adjacent country, that no officer, soldier, sailor, or inhabitant of the villages, &c. shall, on any account, go more than one quarter of a league from the army. Small scouting parties, with the Provost Marshal's field patrols, must be distributed beyond these limits, in order to pick up stragglers, and to search their persons lest they should be the bearers of letters, &c. A great number of small ambuscades, must be laid along the leading avenues between the enemy's camp and your own. If, notwithstanding all these precautions, you should learn, that the enemy has gained some information respecting your movement, a report must be instantly spread to make him imagine, that you have some other design in contemplation.

If, during the night, or in the course of the day, small reconnoitring parties, belonging to the enemy, should be discovered upon the road, or about it, one half of your patrol or scouting detachment, must be posted in ambush along one side of the road, in order to take them in the rear, whilst the other half attacks them in front, and by thus surrounding them, prevents any intelligence from being carried to the enemy.

When such parties consist of a regular advanced detachment from the enemy's forces, that challenges you on your approach, your out-scouts must instantly give the name of the prince or general against whose troops you are marching, or make them imagine, that you are returning from some secret expedition which had been undertaken in his favour, or that you came out of a neighbouring state which is in alliance with him. As you draw near, proper measures must be adopted to get upon its flanks; so as ultimately to surround the whole guard, and to prevent any infor-

information from being forwarded to the main body of the enemy. This operation cannot fail of success, if you act with promptitude; and most especially, if you can get possession of the enemy's watchword, or counter-sign.

• Such are the leading precautions to be observed at the first outset of an army, whose design is to surprize its enemy.—But these are not all. • A perfect knowledge of his position must have been likewise acquired; correct descriptions of all the posts and stations, local as well as military advantages, must likewise have been given in, with a specific account of fortresses, bridges, fords, &c. the state of the provisions, and of the general's headquarters.

If it be your design to surprize any strong hold, or particular position, suddenly upon some detached enemy's command, or to carry the main body's themselves, you must be made thoroughly acquainted with all the intricacies of ground about them, with the number of men which may be opposed against you; and, when you have gained this necessary information respecting the matters, particularly the latter, you must assemble a body of active and zealous troops, whose number shall be one-third at least greater than that of the enemy, to execute your plan.

When your project has been completed, you must call your men together. For in all expeditions of this sort, desultory operations are unavoidably necessary, and the troops employed upon them, must be dispersed. Should any be found absent at the roll-calling of the different companies or detachments, it may reasonably be presumed, that they are engaged in pillaging the place they entered. In which case, you must set fire to the houses, if you cannot withdraw the free-booters by any other method.—Strict orders should be given out, that no soldier, or follower of the army shall move before the detachment returns to the main body, after having effected the surprize, or remain behind when it marches off. It frequently happens, that a few irregular soldiers, &c. will avail themselves of the confusion of the moment, to con-

ceal the property that may have fallen into the hands of the detachment, and thereby to avoid sharing it with their comrades. Patrols must be sent out of the camp, and be posted along the road or roads, that lead to the place which has been surprized, and strict injunctions to stop all stragglers; and the quarter and rear guards of the camp itself must see, that none enter before the detachment is regularly marched in. When any are found guilty of this un-military practice, they must not only be stripped of their booty, but they must also be severely punished; for the sake of example. If there should not be a sufficient number of wagon to transport the wounded, the cavalry must dismount, and the wounded be put upon their horses. But if it be found expedient to make use of the horse, you must then convey the disabled in the best manner you can, by taking all the horses, &c. which may have been found in the place you have surprized.

After a *surprize* has been accomplished, the troops employed upon that service, must, if possible, be marched back to headquarters, by a different road to the one they took in advancing against the enemy. For it would be extremely improper to expose them, even though their number were a third greater than that of the enemy, to a second action; under the manifest disadvantages of being fatigued with the march, and the attack they had just made, and of being encumbered with the booty, &c. of the place they had surprized. Their retreat must be effected through the shortest way back. But if there should be the least ground to apprehend, that any attempt might be made by the enemy to cut them off, the first movement must be upon the same road they came; and when night approaches, the troops must be suddenly counter-marched, in order to take a different road, and to avoid any ambush that might be laid by the enemy.

Under these circumstances, every measure must be embraced to deceive the enemy. Some prisoners may be suffered to escape, before the troops have been counter-marched, in order to give false information; some mules or horses may be left on the road, and small parties of drummers, &c. be detached

tached forward to keep beating along the first road, as if the whole body were marching that way.—Fires may also be lighted by patrols sent forward for the purpose. Among other means, which may be resorted to, to induce the enemy to believe that the original line of march has been continued, that of sending horses and men forward to mislead them by their footsteps is not the worst imagined.

It is more than probable, that if the retreat be made during the night, and through an enclosed or intersected country, the enemy will scarcely run the risk of pursuing, lest ambuscades should be formed to surprize him on his march.

If, notwithstanding all your precautions, the enemy should get intelligence of what has happened, and in consequence thereof he should have time to collect his forces together in order to attack you in your retreat; under these circumstances, a position must be taken that is best suited to the kind of troops you have with you, and to their effective number.

If there be a ford, a bridge, or a defile, near to the ground you have taken up, which the enemy must unavoidably pass, the greatest expedition must be made to get beyond the obstacle, so as to have it securely in your rear. Should the obstacle be upon either of your flanks, a detachment must be posted there to keep the enemy in check, while your main body continues on its march. If you cannot conveniently send forward your booty, for fear of weakening your forces, it must be placed in such a manner, as not to be in the way when you find it necessary to engage the enemy.

As soon as the enemy approaches, the whole body must be halted, and the proper dispositions be made for battle. The guard that is entrusted with the care of the prisoners, must instantly strip them of their swords, bayonets, and of every offensive weapon, (supposing them to have had permission to wear them,) and must order them to sit down, threatening to shoot, or cut down the first man that should presume to stir. On this account, the men who compose the guard, should always be ready to do their duty upon

the least symptom of irregularity. A small cavalry detachment is usually employed upon this service, as it would not be in the power of the infantry to act with so much promptitude and activity. Before the troops are ranged in order of battle, directions must be given for every soldier to take off his knapsack, or haversack; for if the men were allowed to retain this load of baggage and booty, it would not be in their power to act.

History furnishes us with various instances, in which fortified places, strong holds, and gates, have been surprized. There are others again in which *surprizes* have been practised with success by means of spies, and of secret intercourse with one or more of the party against whom you are engaged. In 1707, several Miquelets disguised themselves as peasants, entered Balvaastro, and remained concealed in the houses of some of the inhabitants, who supplied them with arms to enable them to attack the gate of Monsons, in order to co-operate with a detachment which was advancing towards that quarter for the purpose of surprizing the place. But they did not succeed; for two regiments, which lay in the town, to guard the hospitals and magazines belonging to the army, instantly flew to arms, marched against the detachment, and forced them to retreat. Had the latter been superior in force, it is more than probable, that the stratagem, used by the Miquelets, and seconded by the treachery of the inhabitants, would have amply succeeded.—In 1580 Count Egmont surprized Courtray, by ordering a number of determined good soldiers to get into the town *à la débânde*, and to remain concealed in the houses of the Roman Catholics.—See *Stratagèmes de guerre*, Page 164, &c. &c.

For various interesting particulars which regard the article we have been cursorily discussing, we refer our reader to *La Suite de l'Essai sur la science de la guerre*, tom. iii. page 259; and tom. iv. page 87. Likewise *Les Œuvres Militaires*, tom. ii. p. 69; and to the *Stratagèmes de guerre*, page 173.

To prevent a SURPRISE. Turpin in his Art of War observes, that it is not sufficient for the security of the quarters, that they are well distributed, that the guards

guards of horse are posted on the outside, and guards of foot on the inside, and that patrols also are added to them; detachments must likewise be sent out in advance of the guards, in order to make discoveries.

A quarter should never be imagined to be totally secure, whilst there are only guards before it: it would not be difficult for the enemy to come close up to them, particularly if the country is enclosed, either during the day or night; and if it is an open country, in the night time only.

Detachments, in advance of the quarters, are absolutely necessary, even when there are guards; they should be increased, according to the number of the troops, and in proportion to the extent of country to be guarded.

These detachments should march separately in the front, and they should occupy as much country as possible upon the flanks; they must march upon the roads leading to the enemy. In the day time, they must scour the hedges, thickets, and woods, the villages, the hollows, and every sort of place that may serve for an ambuscade: in the night time, they must draw near the quarter, and remain at the distance of at least four hundred paces, and even further, if the country is open.

In the night, detachments must march very leisurely, not advancing, but crossing each other; and beside the word given out in orders, they will have another particular one to recognize each other. Every now and then, they must stop and listen, in order to discover, whether they can hear any thing. The officers commanding the detachments, should avoid fighting till the last extremity; they should constantly bear in mind, that the sole purpose of their being ordered to advance, is to preserve the quarters from a surprise.

These detachments should not continue out above six or eight hours, and consequently should never dismount. If there are any huzzars in the quarters, they should be employed in these detachments, preferably to any other troops, as they are better calculated to scour a country than cavalry, or even dragoons: their horses being more in wind, and less liable to be fatigued. It is, besides, the sort of war which is natural to Hussars.

As soon as these detachments are returned, others should be sent out for the same purpose; as the quarters should never be uncovered in front. If these detachments hear any thing in the night, the commanding officer should send to discover what it is, and must afterwards convince himself of the truth of it; if it should be occasioned by troops, he will directly send an hussar to the commanding officer of one of the guards, if there are any in the front of the quarters; but if not, then to the commandant of the first quarter, who will apprise the general. He must conceal himself in some place, from whence, without being discovered, he will with greater ease be able to form a judgment of what is marching towards him; and when he shall be more confirmed that they are enemies, he will send a second hussar to give notice to the first post, who will inform the general; and will always continue to observe their motions by marching either on their flank, or before them. See page 36, &c. of Turpin's ART OF WAR, vol. II.

For some very sensible observations respecting surprises, see Hints to Non-Commissioned Officers on Actual Service, compiled and translated by Colonel Sontag, page 68.

To SURRENDER, (*Rendre*, Fr.) to give up a town, post, or other fortification, agreeably to articles, &c.

To SURRENDER, (*Se Rendre*, Fr.) to lay down your arms, and give yourself up as prisoner of war.

SURRENDER, (*Reddition*, Fr.) the act of giving up; as the surrender of a town or garrison.

To SURROUND, in fortification, to invest. In tactics, to outflank and cut off the means of retreating.

SURROUNDED, inclosed; invested. A town is said to be surrounded when its principal outlets are blocked up; and an army, when its flanks are turned, and its retreat cut off.

SURSOLID, the fourth multiplication, or power, of any number whatever taken as the root.

SURTOUT, Fr. This term is used by the French, to express the elevation of the parapet, and of the rampart, which is made at all the angles of a fortified town or place, in order to protect the garrison from enfilades and ricochet firings.

SUR-

**SURVEILLANCE**, *Fr.* inspection; superintendence; the act of watching. The substantive is new among the French, and comes from *Surveiller*, to watch.

**SURVEY**. A survey is an examination of any place or stores, &c. to ascertain their fitness for the purposes of war, &c.

**SURVEYING**, in military mathematics, the art or act of measuring lands; that is, of taking the dimensions of any tract of ground, laying down the same in a map or drawing, and finding the content or area thereof.

*Surveying*, called also *geodæsia*, is a very ancient art; it is even held to have been the first, or primitive, part of geometry, and that which gave occasion to, and laid the foundation of, all the rest.

Surveying consists of three parts: the first is the taking of the necessary measures, and making the most necessary observations, on the ground itself; the second is, the laying down of these measures and observations on paper; and the third, the finding the area, or quantity, of ground there laid down. The first is what we properly call *surveying*; the second we call *plotting*, *protracting*, or *mapping*; and the third *casting* &c.

The first, again, consists of two parts, *viz.* the making of observations for the angles, and the taking of measures for the distances. The former of these is performed by some one or other of the following instruments, *viz.* the theodolite, circumferenter, semi-circle, plain table, or compass. The latter is performed by means either of the chain, or perambulator.

The second branch of surveying is performed by means of the protractor, and plotting scale. The third, by reducing the several divisions, inclosures, &c. into triangles, squares, trapeziums, parallelograms, &c. but especially triangles; and finding the areas or contents of these several figures. See *Love's Geodæsia*; and *Wylde's Practical Surveyor*.

**SURVEYOR of the Ordnance**. See **ORDNANCE**.

**SUSBANDE**, *Fr.* the iron band or plate which covers the trunnion belonging to a piece or ordnance, or to a

mortar, when either is fixed upon its carriage.

**SUSCITER**, *Fr.* to excite; to encourage persons to rise. This frequently happens between neighbouring princes.

**SUSPECT**, *Fr.* A term adopted by the modern French, to signify any person suspected of being an enemy, or indifferent to the cause of the Revolution.—Hence, *Classe des Suspects*, *Fr.* The list of the suspected.—*Réputé suspect*, *Fr.* Looked upon as a suspected person.

*To SUSPEND*, (*Suspendre*, *Fr.*) In a military sense to delay, to protract.—Hence to suspend hostilities. It is likewise used to express the act of depriving an officer of rank and pay, in consequence of some offence. This sometimes happens by the sentence of a general court-martial, or by the summary order of his Majesty through the commander in chief.—In both cases, it is used for the commanding officer of the regiment to report him to the general of the district, by whom he is again reported to the commander in chief, through the adjutant-general. He is then directed, by letter to the commanding officer of the regiment, to be suspended agreeably to the nature of the transgression. In a trifling case, he is only suspended from pay, and is respected accordingly upon the next muster roll for the government of the regimental agent. But when the offence is aggravated by palpable neglect, or obstinacy in not sending a satisfactory reason for his absence, (which can only be done by vouchers from the Medical Board, &c.) he is suspended from both rank and pay. So that to be suspended is either partially or generally to be deprived of the advantages of a military appointment.

*To SUSPEND hostilities*, to cease attacking one another.

**SUSPENSION of Arms**, a short truce which contending parties agree on, in order to bury their dead, without danger, or molestation; to wait for succours; or to receive instructions from a superior authority.

**SUSPENSION**, as a military punishment, was probably intended to operate as pecuniary fining does in that of the common law; but (to use Mr. Sullivan's

livan's words, in his Treatise on Martial Law) it can neither be considered as deprivation, or degradation. It does not divest an officer of his military character, though it puts him under a temporary incapacity to exercise the duties of his station: he still possesses his rank, though he does not reap any immediate advantage from it. It, in fact, may be looked upon, and considered, as borrowed from the ecclesiastical system of jurisdiction, which admitted suspension as a minor excommunication.

One stubborn difficulty, however, seems to present itself from suspension, and that is the article of pay and allowance. For if an officer shall have been suspended from the exercise of the authority annexed to his rank, and to have the pay of his allowance also suspended, he certainly seems warranted to plead such suspension in bar to the proceedings of a court-martial; there being always an implied contract, between a soldier and his employer, that in consideration of certain pay and advantages granted by the one, the other shall submit to military discipline; and the obligation being mutual, when one fails in the performance of his part, he frees the other from the observance of his; therefore, when the pay, and other advantages, are suspended by the employer, the subjection to military discipline would seem also suspended. But this difficulty is easily removed, from the circumstances of the officer so suspended, still holding his commission; and from his submitting himself to the punishment which hath been inflicted on his transgression. The latitude of this principle hath even been seen to go farther, and under the sanction of such authority, that (since his Majesty hath been graciously pleased to direct, in cases of doubt, members of a court-martial shall be guided by their consciences, the best of their understandings, and the custom of war in the like cases) it may be said to establish a precedent, which may with safety be appealed to. We here allude to the trial of Lord George Sackville, who, at the time he was put upon the judgment of a general court-martial, had (so dear are the honour and reputation of a soldier) *neither military employ nor commission* under his Majesty; and yet he was deemed entitled to an awful and

solemn investigation of his conduct; application, indeed, having been previously made in his name, and he having declared himself willing to abide by the decision of the court. In a word, then, it may, without risking too much, be asserted, that an officer under suspension, may be considered *strictly amenable* to martial law for any trespass, or transgression, he shall commit. The same writer observes, in a preceding page, that suspension is a specific punishment for a specific crime; but it is a punishment which does not free a man from his military obligations. On the contrary, he is still considered as in the service; he holds his commission, and at the expiration of the term of suspension, becomes a perfect man again. If therefore, during the continuance of this chastisement, he should attempt to go over to the enemy, to desert, or hold treasonable correspondence, he certainly is, in such cases, to be dealt with according to martial law.—Pages 86, 87, and 88, Thoughts on Martial Law.

The late Mr. Tytler, deputy judge advocate of North Britain, who has published an Essay on Military Law, quotes the case of Lord George Sackville, when he treats of officers under suspension, and agrees in every point with the author just referred to. Suspension, he observes, though it has the effect of depriving an officer, for the time, of his rank and pay, and putting a stop to the ordinary discharge of his military duties, does not void his commission, annihilate the military character, or dissolve that connection which exists between him and the sovereign, of whom he is a servant. He retains his commission, and is, at all times, liable to a call to duty, which would take off the suspension. See Essay on Military Law, pages 131, 132.

*Suspension of parliamentary privilege.* This can only be considered, in a military point of view, as affecting such officers, who, being members of parliament, are entrusted with any specific appointment in the army, and thereby make themselves liable to the Mutiny Act, or Articles of War. We have had an instance, during the late war, of a militia colonel, (who was a member of the house of commons) having been put in arrest, tried before a general court-martial, cashiered in consequence

consequence of gross offences and misdemeanours, and afterwards expelled the house, in consequence of military delinquency. We do not hesitate to say, from the character of the culprit, that if the privilege of parliament could have been taken advantage of, it would have been by *him*.—Mr. Tytler, however, does not speak so positively as we could wish on this important question; for important it certainly is, when we reflect, that there is scarcely a general of a district, or colonel of a militia corps, but might avail himself of this privilege; since the majority of them are members of parliament. It is, indeed, within the personal knowledge and recollection of the compiler of this dictionary, that all the field officers and one captain of a company, in a militia regiment, belonged to the Lords or Commons.

Mr. Tytler, page 129 and 130, writes in the following manner; “It has been questioned, whether the privilege of parliament prevents any officer, who is a member of either house of parliament, from being put under arrest by his general, or tried by a court-martial. This is a subject of difficult discussion. If the privileges of parliament were to be considered only in the light of immunities, or benefits, personal to the individual who claims them, it might, with some reason, be argued, that a member of parliament, by the acceptance of a military commission, subjects himself, in all respects, to the operation of the military law, and renounces his privilege of freedom from personal arrest; as every person is competent to renounce a benefit granted in favour of himself. But the privileges of parliament belong to the parliament as a body, and their dignity and independence, being interested in maintaining them inviolate, it would thence seem to follow, that no individual member has a right to renounce any of those privileges, without consent of the whole body of which he is a part. General utility, however, demands, that the ordinary course of justice should not be impeded in the prosecution of crimes; and therefore it is an understood point of law, that the privilege of parliament does not protect from arrests in cases of treason, felony, or breach of the peace. With respect to military crimes, the same political ex-

pediency demands, that the course of justice should not be obstructed: but as the law has not expressly warranted the suspension of parliamentary privilege, in such cases, the safest course seems to be, that previously to the arrest of any member, in order to try him for a military crime, notice should be given to the house of which he is a member, with a request, that, for the sake of public justice, they should consent to renounce the privilege in that instance, in so far as the body of parliament is concerned; as the individual member is understood to have renounced it for himself, by the acceptance of a military commission.”

The method which is here proposed, though perfectly consonant to the usual proceedings in civil cases, and full of deference to the legislative body of the country, would be attended with innumerable inconveniences in military matters. The service would be exposed to perpetual interruptions, most especially as it would be necessary to make a motion in parliament, every time it should be found expedient to put a privileged officer in arrest. The learned advocate besides, did not probably recollect, that the most active period of military service in England, except in cases of actual invasion, or insurrection, occurs at a time when parliament is not sitting; so that the very object, for which he contends, would be lost by the course of justice being considerably impeded. It must be manifest to every thinking man, that military service is of such a prompt imperious nature, as not to bear the most trifling suspension, or interruption, in the exercise of its duties. Though, in one sense, the military be subject to the civil power, according to the principles of the constitution, in every other it ought to be paramount to extraneous authority; and one simple question would shew the impolicy not to say the absurdity of such an interruption. A member of parliament, who claims his privilege whilst he is an officer, is, in fact, like the man who would, but cannot, serve two masters at once.

**To SUSTAIN.** To sustain is to aid, succour, or support, any body of men in action, or defence.

**SUTLER and Victualer** may be considered as synonymous terms as far as they

they relate to military matters; most especially when an army lies encamped, or rather takes the field. A sutler may be considered as one who follows the camp, and sells all sorts of provisions to the soldiers. There are also sutlers in garrison towns, who serve the soldiery, and are subject to military regulations.

Among the French, according to the present establishment of their army, a sutler is a soldier or inferior officer, who is authorized to follow head-quarters, and to be constantly with the corps to which he is attached. He is permitted to sell the necessaries of life to the soldiers, and, under certain restrictions, to deal in wines and spirituous liquors.

The sutlers are usually chosen from the regiments to which they belong, and are subordinate to the quarter-masters, after they have been appointed by the regimental committee, or council of administration. They receive a licence enabling them to sell and buy, which licence must be approved of by the chief of the bat major or staff of the division, in which the corps is stationed, or under which it acts.

The sutlers, attending head-quarters, are licensed by the quarter-master general. In order to distinguish them from adventitious travellers or pedlars, &c. it is wisely recommended by Paul Thiabault, (author of a treatise upon the duties of an bat major, or general staff), that they should have a particular number, which is to be engraved upon a tin plate, and constantly worn by them, as a mark of their being licensed by the quarter-master general.

When an army moves, the sutlers accompany the baggage. As many irregularities must naturally grow out of this necessary evil, the conduct of sutlers ought, at all times, to be narrowly watched, and severe penalties to be announced, in general orders, for every instance of unlawful depredation among the inhabitants, or of disorder in their booths. It is the duty of the piquet, at night, to be particularly watchful on this ground.

**SUTUR.** A manner of sewing or stitching, particularly of stitching wounds.

**SWALLOW'S-tail.** In fortification, an out-work, differing from a single

tenaille, as its sides are not parallel, like those of a tenaille; but if prolonged, would meet and form an angle on the middle of the curtain; and its head, or front, composed of faces, forming a re-entering angle. This work is extraordinarily well flanked, and defended by the works of the place, which discover all the length of its long sides, &c.

**SWAMMIES, Ind.** Pagan gods or idols.

**SWAMP.** See MARSH.

• **SWAY,** the swing or sweep of a weapon. Takewise power, as military sway.

**SWEEP-bar,** of a wagon, is that which is fixed on the hind part of the fore guide, and passes under the hind pole, which slides upon it.

**SWEEPING.** A word which is peculiarly attached to one of the sections, or clauses, in the Articles of War, namely, the 21th. Hence *Sweeping Clause*.

**SWEEPING Clause or Section.** This comprehensive clause states, that all crimes, not capital, and all disorders and neglects, which officers and soldiers may be guilty of, to the prejudice of good order and military discipline, though not specified in any of the foregoing rules and articles, are to be taken cognizance of by a general, or regimental, court-martial, according to the nature and degree of the offence, and to be punished at their discretion.

This wisely imagined clause serves as a check to the petty tricks and outrages, which are sometimes resorted to by men who are not thoroughly soldiers. It frequently happens, even among officers, that the service is hurt and embarrassed by the meanness of evasive characters, who think they are safe, provided they do not glancingly transgress specific rules and regulations. Another advantage is likewise derived from this clause: It enables officers, at a court-martial, in cases where the offence is manifestly felt but cannot be brought under any specific article, to do justice to the service, by punishing the delinquent under an indisputable clause.

**SWIMMING.** In addition to what we have offered under the article *Natu-*

tion, the following authenticated facts cannot be deemed superfluous.

In 1757, (when General Keith retreated out of Bohemia, among the Austrian irregulars, or tri-corps, which incommoded the movements of our troops in their march, there was a party of Croats, who (with more courage than prudence, putting their arms in three small boats, threw themselves into the Elbe, near Ister, and swam across that river, in order to intercept a small body of Prussians who were escorting the baggage. *The Life of Gustavus Adolphus*, Vol. II. page 204.

*Flavius Vegetius*, lib. I. cap. 10. *De Re Militari*, speaks in the following terms respecting the necessity of having soldiers regularly taught to swim.—

*Natandisum, et ita sensibus, omnis aquatilis debet tunc condiscere; non enim pontibus semper flumina transcurrunt, sed et sedes et insequens, nature cogitur frequenter periculis. Sape respondentibus, et arduis, solent exundare torrentes, et ignorantia non solum ab hoste, sed etiam ab ipso aquis, discrimen incurrit: adeoque Romanos, viros, quos tot bella et continuata pericula, ad invicem et in hostis erudierunt, autem, Caopica Martiana, et cum Pyber delibent: in quo juvenis, post exercitum amicum, sudores, palcerumque didicerit, ac lassitudinem cursum, natandi laboris deponet. Non solum autem pedes sed et equites, ipsosque equos, ad natandum ericere percompulsi est, ne quid imperitis, cum necessitas invenit, crevat.* Page 10, Editio Lugdun Batavorum.

“Every young man ought to be practised in the art of swimming, during the summer months: for there are not always bridges ready to cross rivers upon; but an army, whether stationary or moving, is often under the necessity of swimming. Sudden inundations frequently happen, through a heavy fall of rain or snow; and a want of knowledge in swimming, not only exposes the ignorant man to imminent danger from the enemy, but also from the waters themselves. On this account, the old Romans (who, from the experience of so many wars, and such continued dangers, had become perfect masters of the military art) had their field of Mars near the banks of the

river Tiber; where the youth of the Capital, after having been practised with arms, might wash off the sweat and dust, and get relieved from their fatigue by the exercise of swimming. It is not only proper and advantageous that foot soldiers, but also that the cavalry, and the horses themselves, should be taught to swim, lest, in cases of necessity, something hazardous should happen to the inexperienced.”

In addition to this established authority, we think it right to give the following particulars out of a small tract lately published, and attributed to the celebrated Dr. Franklin.

“1. That though the legs, arms, and head, of a human body, being solid parts, are specifically something heavier than fresh water, yet the trunk, particularly the upper part, from its hollow-ness, is so much lighter than water, as that the whole of the body, taken together, is too light to sink wholly under water, but some part will remain above until the lungs become filled with water; which happens from drawing water into them instead of air, when a person, in the fight, attempts breathing while the mouth and nostrils are under water.

“2. That the legs and arms are specifically lighter than salt-water, and will be supported by it, so that a human body would not sink in salt-water, though the lung, were filled as above, but from the greater specific gravity of the head.

“3. That therefore a person throwing himself on his back in salt-water, and extending his arms, may easily be so as to keep his mouth and nostrils free for breathing; and, by a small motion of his hands, may prevent turning, if he should perceive any tendency to it.

“4. That in fresh water, if a man throws himself on his back, near the surface, he cannot long continue in that situation, but by proper action of his hands, on the water. If he uses no such action, the legs and lower part of the body will gradually sink till he comes into an upright position, in which he will continue suspended, the hollow of the breast keeping the head uppermost.

“5. But if in this erect position, the head is kept upright above the shoulders,

ders, as when we stand on the ground, the immersion will, by the weight of that part of the head that is out of water, reach above the mouth and nostrils, perhaps a little above the eyes, so that a man cannot long remain suspended in water with his head in that position.

"6. The body continuing suspended as before, and upright, if the head be leaned quite back, so that the face looks upwards, all the back part of the head being then under water, and its weight consequently in a great measure supported by it, the face will remain above water quite free for breathing, will rise an inch higher every inspiration, and sink a much every expiration, but never so low as that the water may come over the mouth.

"7. If therefore a person, unacquainted with swimming, and falling accidentally into the water, could have presence of mind sufficient to avoid struggling and plunging, and to let the body take this natural position, he might continue long safe from drowning, till perhaps help would come. For as to the cloaths, their additional weight while immersed is very inconsiderable, the water supporting it; though when he comes out of the water, he would find them very heavy indeed.

"But, as I said before, I would not advise you, or any one, to depend on having this presence of mind on such an occasion, but learn fairly to swim; as I wish all men were taught to do in their youth; they would, on many occurrences, be the safer for having that skill, and, on many more, the happier, as freer from painful apprehensions of danger; to say nothing of the enjoyment in so delightful and wholesome an exercise. Soldiers particularly should, methinks, all be taught to swim; it might be of frequent use either in surprising an enemy, or saving themselves. And if I had now boys to educate, I should prefer those schools (other things being equal) where an opportunity was afforded, for acquiring so advantageous an art, which, once learnt, is never forgotten.

To SWINDLE, (*escroquer*, Fr.) a cant word, signifying to cheat; to impose upon the credulity of mankind,

and thereby defraud the unwary, by false pretences, fictitious assumptions, &c. This criminal and unmanly practice often times proves successful under the gab of a military dress and character, and sometimes under that of holy orders.—The records of Bow-street are filled with pseudo-majors, captains, parsons, &c.

SWINDLER, (*Escroc*, Fr.) a sharper; a cheat. This word is evidently taken from the German *Schwindler*, which, we presume, comes from *Schwindel*, giddiness of thought; giddy pate. See J. J. Eschschburg's *English and German Dictionary*, part II. page 197. With us, however, it signifies a person who is more than thoughtless or giddy. We apply to the term the character of premeditated imposition; so that a swindler comes under the criminal code, and may be prosecuted accordingly. Swindlers almost always assume a military name. Perhaps the army might, in some degree, be rescued from these *pretenders*, were it ordered, that no officer shall appear with any military badge unless he be regimentally dressed; and that when so dressed, he shall have the number of his regiment marked upon the button of his hat, &c.

SWING-tree of a wagon. The bar placed across the foreguide, to which the traces are fastened.

SWIPE, (*Bascule*, Fr.) an engine which is used to draw up water; also that part of a drawbridge on which it is swung; it likewise serves to throw grenades.

SWIVEL, (*Pivrier*, Fr.) a small piece of ordnance which turns on a pivot or swivel.

SWIVELS, (*Tourniquets de fer*, Fr.) commonly called *Loop and Swivel*, and *Guard and Swivel*; two iron rings attached to a musquet, through which the slug passes.

SWORD, a weapon used either in cutting, or thrusting. The usual weapon of fights hand to hand. It also signifies, figuratively, destruction by war; as by fire and sword; *à feu et à sang*, Fr.

Broad Sworn, an original weapon of Scotland: it is sometimes called a *Buck Sword*, as having but one edge: it is basket-handled, and three feet two inches long.

**Regulation Sword,** (*Epee d'ordonnance*, Fr.) a sword which is ordered to be worn by officers throughout the British service. The price of such a sword, with a spring steel and embossed blade, amounts to three guineas.

The sword, which is worn by British officers, may be properly called a long cut and thrust.—It is a manifest imitation of the Austrian sword, and has been introduced this war. It is not, however, so conveniently used by us as it is by the Austrians.—The latter have it girt round their waists, so that it hangs, without any embarrassment to the wearer, close to the left hip or thigh; whereas with us, it is suspended in an awkward diagonal manner from a cross belt over the loins, and is scarcely visible in front, except occasionally, when it is drawn, or gets between the officer's legs, and sometimes trips him up, when on duty. We could exemplify our ideas upon this subject by various known occurrences, such as the sword being suspended so much out of the grasp of the wearer, that his right hand has appeared to run after the hilt, which has as constantly evaded its reach by the left side bearing it off, in proportion as the right turned towards it: by officers being reduced to the necessity of applying to their sergeants, &c. to draw their swords; but it is not our wish to turn any regulation into ridicule.—It is, however, our duty, and the duty of all men who write for the public, to point out practical inconveniences, &c. Perhaps it may not be thought superfluous on this occasion to remark, that the sword ought not to be considered as a mere weapon of offence or defence in an officer's hand; for unless that officer should be singly engaged, which scarcely ever happens upon service, the very notion of personal safety will take his mind off the superior duty of attending to his men. Officers, in fact, should always bear in mind, that they are cardinal points which direct others. Their whole attention should consequently be paid to their men, and not the slightest idea must interfere with respect to themselves. We are therefore convinced, with due deference to the superior judgment of others, that the swords of infantry officers, and of the staff in ge-

neral, should be of the small sword kind, sufficiently long to dress the leaden heels, &c. and extremely portable. Setting aside this suggestion, we shall not be contradicted when we say, that every officer ought to know the use of his sword. Perhaps it may not be thought extravagant to propose a limited imitation of what was so generally practised in France. We mean the appointment of a fencing-master, or drill-swordsmen, for every company of grenadiers in the service, who should be armed with sabres, or gold cut and thrusts. With respect to the officers of the British army, common sense dictates the propriety of their being skilled in the art of fencing.

**Position of the sword at open Order.** When an officer stands or marches (slow time) in front of his company, &c. the position of the sword is diagonal across the chest. At close order, or when the officer is on the flank of his company, &c. (and marches quick time) the hilt is close to the right thigh, and the blade in the hollow of the right shoulder. When mounted, he carries it diagonally across the saddle band.

When troops or squadrons of cavalry advance.—In the walk, the sword is carried with the blade resting on the right arm, in the trot and gallop, the right hand must be steadied on the right thigh, the point of the sword rather inclining forward; and in the charge, the hand is lifted, and the sword is carried rather forward, and crossways in front of the head, with the edge outwards.

**Sword-bearer,** (*Porte epee*, Fr.) one who wears a sword. It also signifies a public officer.

**Sword-belt,** (*Boudrier*, Fr.) a belt made of leather, that hangs over the right shoulder of an officer, by which his sword is suspended on the left side. When the sword is suspended from a belt round the waist, the French use the word *Cinturon*.

**Sword-cutter,** (*Fourbisseur*, Fr.) one who makes swords.

**Sworded,** girt with a sword.

**Sword-knot,** (*Nœud d'epee*, Fr.) a ribbon tied to the hilt of a sword.

**Sword-knot,** according to the regulation; This knot is made of crimson and gold, and is now sold for ten shillings

hugs and sixpence. The sash and sword-knot together amount to 2*l.* 10*s.* 6*d.*

**Swords-Law,** (*Tu Loi du plus Fort*, Fr.) When a duel is enforced, without a due regard being paid to established rules and regulations, it is said to be carried by *Swords-Law*, or by the will of the strongest.

**SWORDSMAN,** (*Homme d'Épée*, Fr.) This word was formerly used to signify a soldier, a fighting man. But at present it nearly means a person versed in the art of fencing. Hence, a good swordsman. The French use the terms *Bretteur* and *Fleur-de-lance*. The former is more immediately applicable to a man who wields a sword and poses himself upon the exercise of it; the latter means a person who frequents fencing schools, and often excels himself in that art.

**Sword-plugget**, a gladiator; one who fences publicly.

**SYCOPIANT**, a dirty, mean, grovelling creature, that sometimes finds its way into the army, and gets to the ear of a superior officer, for the purpose of undermining the good opinion, which honest valour and open manhood may have obtained.

**SYEF**, *Ind.* a long sword.

**SYEUL**, *Mulk*, *Ind.* the sword of the kingdom.

**SYMBOL**, in a military sense, *Ind.* &c. Every regiment in the British service has its badge.

**SYMBOLE**, *Fr.* The French make use of this word in the same sense that they apply *Écusson*. *Symbole* means with them, in a military sense, what badge does with us.

**SYMMETRY**, (*Symétrie*, *Fr.*) a word derived from the Greek. True symmetry consists in a due proportion, or in the relation of equality in the height, length, and breadth of the parts, which are required to make a beautiful whole, or in an uniformity of the part with respect to the whole.

**SYMPATHETIC** *Ind.* (*Encre Sympathique*, *Fr.*) a sort of ink which is

used by diplomatic persons, &c. for the purpose of carrying on a secret correspondence.

**SYRRES**, or *sables mouvans*, *Fr.*—quick-sands.

**SYSTEM**, (*Système*, *Fr.*) a scheme which reduces many things to regular dependence, or co-operation. This word is frequently applied to some particular mode of drilling and exercising men to fit them for manoeuvres and evolutions. Hence the Prussian system, the Austrian system, &c. The Rules and Regulations, which have been compiled and published by authority during the present war, and consist almost wholly of extracts from Saldern, who wrote upon Prussian tactics, constitute the military system of Great Britain, with respect to order and discipline. Although we seem, in this instance, to stand indebted to a foreign power for an entire change of manoeuvres and evolutions, common justice to the British character demands, that we should mention a circumstance which is not exactly recollected, but which we have from too good authority to leave unnoticed. We have heard it confidently asserted, that the system which Frederic the Great of Prussia brought into universal notice, was that which was practised by the British troops under the Duke of Marlborough; and that the Germans, with whom we were in alliance, adopted most of their manoeuvres from us. We give the fact as stated to us from the best authority.

**Military System**, specific rules and regulations for the government of an army in the field, or in quarters, &c.

**SYSTEMS**, (*Systèmes*, *Fr.*) in fortification, a particular arrangement or disposition of the different parts which compose the circumference of a town or fortified place, according to the original idea or invention of an engineer. The systems best known under this head, and most followed, are those of Vauban, Cohorn, De Ville, Pagan, &c. See **FORTIFICATION**.

## T.

**T**, a subterraneous arrangement in mining; so called from its resemblance to that letter. See *Ti, Fr.*

**TABAC**, *Fr.* tobacco. During the monarchy of France there was a specific allowance made of tobacco to the cavalry and infantry, when they were in camp, quarters, or garrison. They were likewise supplied by the captains of troops or companies, with a certain quantity of this valuable leaf, whilst on the march from one province, or quarter, to another. We wish the same practice prevailed in this country, especially when soldiers are encamped at the close of the year, lie thick in barracks, or do prison duty.

**TABARD**, *l'ecotte d'armes, Fr.* a

**TABERD**, *S*herald's coat; also a short jacket without sleeves.

**TABER**, a small drum. See *Tabor*.

**TABLE**. In military affairs, a kind of register to set down the dimensions of carriages for guns, mortars, &c. also for the practice of artillery, charges of mines, &c.

**TABLE**, in literature, an index, a repository, at the beginning, or end, of a book, to direct the reader to any passage in it.

**Crowned TABLE**, in architecture, one which is covered with a cornice, and in which is cut a basso relievo; or a piece of black marble incrustated for an inscription.

**Raised TABLE**, in architecture, an embossment in a frontispiece for the putting an inscription, or other ornament in sculpture.

**Rusticated TABLE**, in architecture, one which is picked, whose surface appears rough, as in grottoes.

**The Round TABLE**, a table to distinguish military merit, which was first invented by King Arthur, who succeeded his father, Uther Pendragon, King of the Britons, who was brother to Aurelius Ambrosius, and third son of Constantine. Arthur was the 11th King

of England, from the departure of the Romans, and was crowned about the year 516.

Having expelled the Saxons out of England, conquered Norway, Scotland, and the greatest part of France, (where at Paris he was crowned) this monarch returned to his native country, and lived in so great renown, that many Princes and Knights came from all parts to his court, to give proof of their valour in the exercise of arms. Upon this he erected a fraternity of knights, which consisted of twenty-four, of whom he was the chief; and for the avoiding controversies about precedence, he caused a round table to be made, from whence they were denominated *Knights of the Round Table*. This table, according to tradition, hangs up in the castle at Winchester, where they used to meet. The time of their meeting was at Whitsuntide.

**TABLE des officiers généraux et principaux, Fr.** mess or table as directed to be kept for the general and other superior officers of the old French army. During the monarchy of France, the principal officers in the king's service were so handsomely provided for, that they were enabled to keep a respectable table, not only for themselves, but likewise for the accommodation of several officers, to whose finances it proved extremely beneficial. It is here proper to remark, that certain allowances were made to general officers for this express purpose; and in other instances it was always understood, that a proportion of the officers, under their command, should invariably have access to their table. This practice, indeed, prevails in the British service, but not universally; neither is it incumbent upon the generals of districts, &c. to provide a table. No allowance is made to them on that head; but it is usually expected, and with the exception of a very few instances, the custom is general. The old French regulation expressed,

pressed, that all general officers, to whom allowances were made for that specific purpose, should keep *table ouverte*, or open table, for the convenience of such officers as stood in need of accommodation, and who might repair to it without waiting for a daily invitation, or being exposed to the galling caprice of ostentatious folly.

It has been observed by a French writer, that the custom of keeping an open table was peculiarly congenial to the character of the nation; and so little was there a necessity of enjoining it, that a regulation came out, limiting the expences of the general officers, and strictly forbidding them to use sumptuous utensils, or to give rich repasts. It was specifically stated, by order of his Majesty, that no officer, whilst with the army, should have any other vessels or utensils in silver, besides spoons, forks, and goblets; and that all general officers, or such as kept open table, should confine themselves to soup, plain boiled and roasted meat, with vegetables, and one or two side dishes of ragout, &c. But they were not, on any account, to have high seasoned messes, &c. Their desert was to consist of cheese, stewed pears or fruit in season, without confectionary, sugared biscuits, &c. The whole to be served up in common plates and dishes. Porcelain, china, and crystal vessels, &c. were strictly forbidden. These restrictions grew out of two very rational principles, viz. to prevent unnecessary expence, and consequent embarrassment, and to give those, who kept open tables, a facility and convenience in asking guests to them. If any general, or other superior officer, &c. presumed to act contrary to this regulation, and the transgression reached the king's ear, he was ordered to quit the army, and to remain in a garrison town during the campaign. The only military table which is regulated in Great Britain, is at the Horse Guards; and that is charged in the extraordinaries of the army. We have already suggested the idea of extending the principle of messing, at the public expence, beyond the limits of the palace. Good order and discipline are intimately connected with a system of messing. This truth holds good with respect to the soldier, and a regulation is

the consequence of its propriety. With regard to the officers, it is well known, that in corps where they do not mess, perpetual bickerings among themselves, and occasional obstacles to the service, occur. We refer our readers to the 6th edition of the Regimental Companion for a full discussion of this important subject.

The French regulation took place on the 1st of April 1705, and was again renewed, with additional clauses, on the 20th of January, 1711, on the 1st of December, 1716, on the 17th of February 1753, and on the 9th of March 1757. The curious are referred to a French publication, intitled, *Elémens Militaire*, &c.

Before the abolition of the French monarchy, it was usual for officers belonging to the line in that service, to mess together according to their several ranks; the colonel excepted, who had a private table to which he occasionally invited the officers of the corps. A regular roster was kept for this purpose. The lieutenant-colonel and major uniformly messed with the captains; and the different tables were generally composed of eight or ten officers, of the same rank. The lieutenants dined together; so did the sub-lieutenants; each paying towards the mess in proportion to the receipt of daily subsistence. When an officer, of independent income or private fortune, wished to fare better than those of his own immediate rank, he was at liberty to join the upper table, or mess. This method of messing was certainly preferable to the mode adopted amongst us. But a method still more preferable than either might be devised.

*TABLE de capitaine de vaisseau*, Fr. a mess, or table which was regularly provided at the king's expence, for the superior officers who served on board.

*TABLE d'hôte*, Fr. an ordinary.

*Tenir TABLE ouverte*, Fr. to keep open house.

*TABLE en saillie*, Fr. in architecture, a table which juts out of the facing of a wall, or of a pedestal.

*TABLE fouillée*, Fr. that which instead of being saliant is indented: it is commonly adorned with a border.

*TABLE d'attente*, Fr. See RUSTICATED Table.

*TABLE de marbre*, Fr. a marble table.

## T A B

ble. During the monarchy of France, there were two courts, or jurisdictions, which were called *Tables de Marbrer*, or marble tables; one was that of the *conseil*, and the *Marchaus-ée*, or police, of France; and the other that which gave directions for the general cleaning of the forests, and the purifying of stagnant waters. They are so called from the meeting being held round a *large marble table*.

**TABLE de réunion**, *Fr.* an ordinary, or table, to which persons of different nations and situations in life are admitted. Thus a table, or mess, where the officers of different corps dine together, may be called a *Table de réunion*. Under this description may also be placed the table which is kept, at the expence of the public, for the mounted, and dismounted, officers of his Majesty's life, and foot, guards.

**TABLEAU**, *Fr.* A description, a catalogue. It likewise signifies a chimney-piece.

**TABLETTE**, *Fr.* a flat thin stone, which is used to cover the outside of a wall belonging to a terrace, or the border of a basin, &c.

**TABLER**, *Fr.* Apron. It likewise signifies an outside cover made for ornament, or to prevent any thing from being damaged by the weather. In the old French army the kettle-drums had two of these aprons or covers; one made of damask or satin, on which were embroidered the arms of the king, or of the general to whom they belonged, and the other of black leather. It is also called *Tablier de Tambours*.

**TABLIER de pont levé**, *Fr.* that part of a draw-bridge, which is raised for the purpose of shutting a gate, and to prevent access to it, and upon which persons pass when the bridge is let down.

**TABLOIRINS**, *Fr.* A word used in the artillery. The thick boards or planks that constitute the platform upon which cannon is mounted in battery.

**TABOUR**,  
**TABOURET**,  
**TABOURINE**,  
**TABRET**, } A small drum, beat with one stick to accompany a pipe. It was anciently used in war.

## T A C

**TABULE**, *Triumphales*, public records among the ancient Romans, which were deposited in the capitol at Rome, by the several generals, &c. who had made triumphant entries. These records were written in a sort of prose and verse, having neither measure nor cadence. The following one was exhibited by Arias Glabrio—*Eundit; fugat, prostrant maximas legiones*: he pours or rushes upon; he puts to flight, he overthrows the greatest legions.

**TACTIE**, *Fr.* properly means job, or a regular rate for labour. Workmen are thus hired and paid by the day, or by the lump.

**TACTIR** also means province, or business, in a general acceptation of the term—as, *Ce n'est pas la tâche d'un officier de terre de donner un Dictionnaire des termes de la marine*. It is not the province, or business, of a land-officer, to publish a dictionary, or vocabulary, of sea terms.—See *Discours préliminaire* of the new French Military Dictionary.

**TACKLE**, the weapon, or arrow, shot from a bow, was so called by the ancient Welsh.

**TACKLES** are more particularly used for small ropes running in pulleys, the better to manage all kinds of ordnance. See *GUN*.

**TACTICS**, a word derived from the Greek, signifying order. Tactics consist of a knowledge of order, disposition, and formation, according to the exigency of circumstances, in warlike operations. These dispositions are severally made, or one disposition follows another, by means of manœuvres and evolutions. Hence the necessity of paying the greatest attention to the first principles of military art; and hence the absurdity and ignorance of some men, who would pass for great and able tacticians, without having grounded themselves in the elements of their profession. As well might a person assume the character of a complete arithmetician, under a total ignorance of the first rules.

General tactics are a combination, or union, of first orders, out of which others grow, of a more extensive and complicated nature, to suit the particular kind of contest, or battle, which

is to be given, or supported. Let it not, however, be inferred from this, that evolutions and tactics are one and the same. They are closely connected, but there is still a discernible difference between them.

Tactics (or as the French say, *La Tactique*, tactical art) may be comprehended under order and disposition; evolution is the movement which is made, and eventually leads to order. The higher branches of tactics, or *la grande tactique*, should be thoroughly understood by all general officers; but it is sufficient for inferior officers and soldiers to be acquainted with evolutions. Not that the latter are beneath the notice of general officers, but that having already acquired a knowledge of them, they ought to direct their attention more immediately to the former, carefully retaining, at the same time, a clear apprehension of every species of military detail, and thereby obviating the many inconveniences and embarrassments, which occur from orders being awkwardly expressed by the general, and of course ill understood by the inferior officer. It may be laid down, as a certain rule, that unless a general officer make himself acquainted with particular movements and dispositions, and preserve the necessary recollections, it is morally impossible for him to be clear and correct in his general arrangements. Of all mechanical operations, founded upon given principles, the art of war is certainly the most compendious, the most enlarged, and the most capable of improvement. Almost every other science and art are comprehended in it; and it should be the subject matter, the chief study, and the ultimate object of a general's reflections. He must not be satisfied with a limited conception of its various branches; he should go deeply into all its parts, be aware of its manifold changes, and know how to adapt movements and positions to circumstances and places.

It will be of little use to a general to have formed vast projects, if, when they are to be executed, there should be a deficiency of ground; if the general movements of the army should be embarrassed by the irregularity of some particular corps, by their overlapping

each other, &c. and if through the tardiness of a manoeuvre, an enemy should have time to render his plan abortive by a more prompt evolution. A good general must be aware of all these contingencies, by making himself thoroughly master of tactics.

The Prussian tactics, under Frederic the Great, had for their principal object to concentrate forces, and to attack the chief points of an enemy, not at one and the same time, but one after another; whereas the tactics which have been uniformly pursued by the French, since the commencement of their revolution, have been founded upon this principle:—To attack all points with divided forces, at one and the same time. We thus see, that the principles of extension have been as much followed by the latter, as those of compression were studiously adhered to by the former.

*Tactics of Europe.* The following observations respecting the Tactics of Europe, which we extract from a book entitled the *Elementary Principles of Tactics*, page 127, may not be uninteresting to our military readers.

In the time of the Romans, the Gauls, and other nations on the continent, fought in the phalanx order; it is this order which still prevails through all Europe, except that it is deficient in the advantages and utility which Polybius ascribes to it, and is injured and disgraced, by defects unknown in the ancient phalanx.

In Turcomen's days, troops were arranged 8 deep, both in France and Germany. Thirty years after, in the time of Puy-cuq, the ranks were reduced to 5; in the last Flanders war to 4; and immediately after to 3.

This part of the progression from 8 to 3 being known, we easily conceive how the files of the phalanx had been diminished from 16 to 8 in the ages preceding Turcomen. It is to be presumed, that this depth was considered as superfluous, and it was judged necessary to curtail it, in order to extend the front. However, the motion is of very little consequence, since we are now reduced to three ranks; let us therefore endeavour to find out what qualities of the phalanx have been pre-

served, and what might have been added thereto.

To shew that we have preserved the defects of the phalanx in Europe, I suppose two bodies of troops, one of eight thousand men, ranged as a phalanx, sixteen deep; the other a regiment of three battalions, consisting only of fifteen hundred men, drawn up in three lines, after the same manner. Those two bodies shall be perfectly equal and alike in extent of front, and shall differ in nothing but in the depth of their files; the inconveniencies and defects, therefore, occasioned by the length of the fronts are equal in both troops, though their numbers are very different; hence it follows, that, in Europe, the essential defects of the phalanx are preserved and its advantages lost.

Let the files of this body of eight thousand, be afterwards divided, and let it be reduced to three in depth, its front will then be found five times more extensive, and its depth five times less; we may, therefore, conclude, that the defects of the phalanx are evidently multiplied in the discipline of Europe, at the expence of its advantages, which consisted in the depth of its files.

The progress which has taken place in the artillery, has contributed greatly to this revolution. As cannon multiplied, it was necessary to avoid its effects; and the only method of avoiding, or at least of lessening them, was doubtless to diminish the depth of the files.

The musquet, likewise, has a great share in the alteration; the half-pike was entirely laid aside for the bayonet: and in order to have no fire unemployed, it was thought necessary to put it in the power of every soldier to make use of his fire-arms.

Those are, I think, the two principal causes of the little solidity, or depth given to our battalions.

We have now seen, that the defects of the phalanx were multiplied in the European discipline, and its advantages and perfections infinitely diminished. Our regulations are, therefore, much inferior to the phalanx, and have nothing but the single effect of fire-arms to counter-balance all its advantages. The effect, however, of fire-arms is an

artificial power, and does not originally belong to the manner of disciplining troops, the sole aim of which, should be to employ man's natural action. It is man, therefore, and not this fire, which is to be considered as the principal agent; and from hence we may, I think, infer that this method is very much inferior to the phalanx, and still more to the Roman arrangement, which so far surpassed that of Greece.

The light troops of both these people were much heavier than our battalions, and had more power and solidity for a shock, or conflict. However, the Roman discipline, notwithstanding its superiority, is not calculated for our times; because, as we are obliged to engage at a distance, ours, by its cannon, would destroy the Grecian order of battle in a very short time, and would be exposed to a loss much less considerable itself, supposing even the artillery was equal on both sides; we should then, in order to perfect our arrangements, endeavour to procure them all the advantageous qualities of the legionary regulations, as the only means of giving them the superiority.

Many people are of opinion, that we imitate the Romans, and that we give battle according to their system, because our troops are drawn up in lines some of which are full, and others vacant. But I have proved, that three battalions have the same front, and the same inconveniencies that eight thousand men ranged in the phalanx order. Our lines are formed by brigades, regiments or battalions, and the distance of one corps to the other is equal to the front of one of those corps; so that those lines, both full and vacant, are composed of detachments equal in front and in defects; each has a phalanx of six, eight, or twelve thousand men. Our orders of battle consequently can be no more, at most, than a kind of medium between those of Greece and Rome.

*Maritime TACTICS*, or *manœuvres*, &c. at sea, like those practised on land may be considered under two heads. The first contains what the French term *historique* or detail, in which are included the orders and signals directed to be observed by fleets going into action;

tion; together with a specific account of the different manœuvres which have been executed in the principal engagements. The second comprehends a knowledge of the rates of ships, and of the method of constructing them.

The vessels of the ancients made their way by means of sails and oars. The rows of oars were proportioned to the different sizes, from what was called *unus-ramus*, which was the smallest, and had only one row: to the *quinquerami*, which had five rows.

The particular method in which these ships were constructed, as well as of the arrangements that were made within, in order that a sufficient number of rowers might be commodiously placed to work them, is not perfectly known to the moderns; nor have the ancients left us documents sufficiently clear and accurate on that head.

With respect to naval tactics, or the art of fighting at sea, it is confessedly less ancient than tactics on shore, or what is generally called land-service. Mankind were accustomed to contend for the possession of territory long before they determined on, or even dreamed of, making the sea a theatre of war and bloodshed.

Setting aside the many fabulous accounts which are extant concerning naval tactics, we shall remain satisfied with what has been transmitted to us by the Roman writers of the fifth and sixth century of that republic. We shall there find specific details of the different manœuvres which were practised at sea during the Punic war. In those times, naval armaments began to be regularly fitted out; ships of different forms and sizes were constructed, and certain offensive and defensive machines, that served as a species of artillery, were placed upon them. They had already been drawn out according to system: (being divided into certain proportions which were then called divisions, but are now named squadrons;) and the persons who commanded them, exerted all their skill and genius to gain advantages over their enemies, by opportunely getting to windward, by seizing the favourable occurrence of the tide, or by mooring in advantageous situations.

At the battle of Actium, Augustus

finding himself inferior to Mark Anthony in the number of his ships, had the sagacity to draw up his line of battle along the entrance of the gulph of Ambracia, and thereby to make up for his deficiency. This naval manœuvre, as well as that of getting to windward of the enemy, in order to bear down upon him with more certainty and effect, exists to the present day.

We act precisely upon the same principles in both cases, by which the ancients were governed, with the additional advantage, in fighting to windward, of covering the enemy's line with smoke from the discharge of ordnance and firearms. The French call this being in possession of the closest line—*Occuper la ligne de plus près*.

In those times, ships were boarded much sooner than they are at present. Most engagements at sea are now determined by cannon shot. Among the ancients, when two ships endeavoured to board each other, the rowers drew in their oars, to prevent them from being broken in the shock.

The manœuvre which was practised on this occasion, was for the ship that got to windward of its adversary, to run upon its side, with the prow, which being armed with a long sharp piece of iron, made so deep an impression in it, that the ship thus attacked, generally sunk. The voyages which were afterwards made on the ocean, rendered it necessary to construct ships that carried more sail, and were double decked; and since the invention of gunpowder, tiers of guns have been substituted in the room of rows of oars.

On the decline and fall of the Roman empire, the Saracens got the ascendancy in naval tactics. They took advantage of this superiority, and extended their conquests on all sides. The whole extent of coast, belonging to the Mediterranean, together with the ancient islands, fell under their dominion. Mankind are indebted to them for considerable improvements in naval tactics.

It was only under Charlemagne, that the Europeans can be said to have paid any great attention to their navy. That monarch kept up a regular intercourse with the Caliphs of the East; and having just grounds to apprehend an invasion

sion from the Normans, he constructed vessels for the defence of his coasts.

During the reign of the first French kings, belonging to the third race, naval tactics were little attended to, on account of the small extent of maritime coast which France possessed at that period. It was only in the days of Louis the Younger, and of Louis surnamed the Saint, that we discover any traces of a considerable fleet; especially during the crusades.

Under Charles the Vth, and his successor Charles the Vith, the French got possession of several sea-ports, and had the command of a long line of coast. Yet neither they nor the English, with whom they were frequently at war, had, at that period, any thing like the fleets which are fitted out now.

The discovery of America by Columbus, and the more lucrative possession of the East Indies, induced the principal states of Europe to encrease their naval establishments, for the purpose of settling colonies, and of bringing home, without the danger of molestation, or piracy, the wealth and produce of the Eastern and Western Worlds.

The French marine was far from being contemptible under Francis the first; but it grew into considerable reputation during the administration of Cardinal Richelieu in the reign of Louis the XIII; and continued so until the battle of La Hogue, which was so gloriously won by the English, under William III. From that epoch it began to decline; while the English on the other hand, not only kept up the reputation they had acquired under Cromwell and his predecessors, but rendered themselves so thoroughly skilled in naval tactics, that they have remained masters of the sea to this day. In corroboration of what we have advanced, we refer our readers to a very interesting work, lately published, entitled the History of Maritime Events, by Captain Schomburg, of the Royal Navy.

**TACTIQUE, Fr.** Tactics, art of marshalling an army.

**TACTIQUE Maritime, Fr.** Naval tactics, or sea manœuvres, &c. See NAVAL TACTICS.

**TACTIQUES, Fr.** Tacticians. A name which was formerly given, in Persia

and Greece, to those persons who taught the military art. See SCIENCE OF WAR.

**TAGEERE, Ind.** Dismission.

**TAIGAU, Ind.** A sabre.

**TAIL of the trenches,** the post where the besiegers begin to break ground, and cover themselves from the fire of the place, in advancing the lines of approach.

**TAILLE du soldat, Fr.** The size, height, and stature most proper for a soldier.

**TAILLER, Fr.** To cut.—*Tailler en pièces*; to cut to pieces.

**TAILLOIR, Fr.** Trencher. It likewise signifies in architecture a square piece of stone, or wood, which is placed above the capital.

**TAIRE, Fr.** To silence; *se taire*, to hold one's tongue. The French say, *Faire taire le canon des ennemis*, to silence the enemy's cannon.

**To TAKE.** This verb, as Dr. Johnson observes, like *prendre* in French, is used with endless multiplicity of relations. Its uses are so numerous, that they cannot easily be exemplified; and its inferences, to the words governed by it, so general and lax, that they can hardly be explained by any succedaneous terms. But commonly that is hardest to explain which least wants explication. We shall content ourselves with giving a few general terms, in which the verb *take* is used with respect to military matters.

**To TAKE.** To make prisoner.

**To TAKE advantage of.** To avail oneself of any peculiar event, or opening, whereby an enemy may be overcome, viz.—He took advantage of the debaucheries which were daily committed in the enemy's camp, to surprize the army.

**To TAKE ground to the right or left.** To extend a line towards either of those directions.

**To TAKE up quarters.** To occupy locally; to go into cantonments, barracks, &c. To become stationary for more or less time.

**To TAKE up the gauntlet.** The correlative to throw down the gauntlet.—To accept a challenge.

**To TAKE up arms.** To embody and troop together for offensive, or defensive purposes. We likewise say, to take arms.

**To TAKE down.** To minute; to commit to paper what is spoken or given orally. Hence to take down his words.

**To TAKE the field.** To encamp. It likewise means generally to move with troops in military order.

**To TAKE in.** A low phrase, signifying to cheat, to gull. Officers, especially the junior classes, are frequently taken in by usurers and money-lenders, and sometimes by what are called *Old Soldiers*.

**To TAKE oath.** To swear.

**To TAKE up.** To seize; to catch; to arrest; as to take up a deserter.

**To TAKE on.** An expression in familiar use among soldiers that have enlisted for a limited period, to signify an extension of service by taking a fresh *Bounty*.

**To TAKE.** To adopt any particular formation:

*Rear ranks take open order* } Words of  
*Rear ranks take close order* } command  
which are used in the British service. For the manner in which they are executed, see *ORDER*.

**To TAKE cognizance.** To investigate with judicial authority.

**TALC**, (*Talc*, Fr.) Isinglass. In natural history, a shining, squamous, fissile species of stone, easily separable into thin laminae, or scales.

There are two kinds of talc, viz. the white talc of Venice, and the red talc of Moscow.

**TALE.** Information; disclosure of any thing secret.

**TALR, Ind.** An Indian coin equal to six shillings and eight pence.

**TALEBEARER**, one who officiously gives ill-judged, or malignant, intelligence. With respect to the interior economy of military life, a talebearer is the most dangerous creature that could insinuate itself among honourable men; and however acceptable domestic information may sometimes seem to narrow minds, it will be found, even by those who countenance the thing, that such means of getting at the private sentiments of others, not only defeat their own ends, but ultimately destroy every species of regimental harmony. The only way to secure a corps from this insidious evil, is for commanding officers to treat those with contempt, who

would endeavour to obtain their countenance by such base and unofficer-like conduct; for it is a known axiom, that if there were no listeners, there would be no reporters.

**TALENT.** Quality; disposition; natural endowment; an aptitude to things.

Count Turpin, in his *Essay on the Art of War*, makes the following distinction between genius and talent:—Talent remains hidden for want of occasions to shew itself; genius breaks through all obstacles; genius alone is the contriver, talent only the workman.

**TALENT of persuasion**, the faculty of influencing; the act of gaining, or attempting the passions.

We find a remarkable instance of this faculty in the conduct of Julius Cæsar, when he not only quelled the mutiny of one of his best legions, but also made the deepest impression on their minds.

When the mutineers appeared in his presence, they were so struck with the awe and respect which his victories inspired, that even the boldest among them could not utter a single word. Then Cæsar, mounting his tribunal, exhorted them to speak, and lay their complaints before him. Hereupon they took courage, and begged him to discharge them, alledging their age, their wounds, and their long service. As Cæsar was entering on a new war, they expected he would have counted them, and, with large presents, enticed them to follow him. They were therefore thunder-struck, when he answered, without shewing the least surprize or concern, "*Your demand is just; I do discharge you, and you may be gone.*" Cæsar, perceiving the consternation and surprize these words occasioned among them, after having kept silence for some time, added—"*I do not, however, design to rob you of your rewards; these I will give you, when I shall have triumphed over the rest of my enemies.*" At these words, they crowded round his tribunal, begging, that since he intended to reward them, he would suffer them to deserve the promised recompence with further services. But Cæsar, without seeming to take notice of their demand

demand—*Go, fellow citizens*, said he, *return to your houses and families*. The word, *fellow citizens*, instead of *fellow soldiers*, was like a clap of thunder in their ears. They all cried out that they were soldiers; that they had not accepted of their discharge; and that they would follow him into Africa. But Cæsar, pretending to despise both their offers and their submissions, turned his back upon them, and came down from his tribunal: then the legionaries, throwing themselves at his feet, conjured him rather to inflict such punishments upon them as their insolence deserved, than to dishonour them in so shameful a manner. He continued, however, inflexible for a considerable time; but at length, pretending to be overcome by the importunities of his friends, he ascended the tribunal once more, and, addressing himself to them, told them, That the revolt surprized him the more, because it came from a legion, which he had always distinguished above the rest; that, nevertheless, he could not prevail upon himself to punish those, whom he had once so tenderly loved; that, on his return from Africa, he would give them the rewards he had promised, and launch too for their subsistence; but that he would not by any means suffer them to attend him in the expedition he was now undertaking, in order to convince them, that he could conquer without them. This speech made so deep an impression on their minds, that, with tears in their eyes, they begged he would rather decimate them, than debar them from sharing with him the glory of his victories. *We will follow you as volunteers*, they all cried out with one voice, *if you refuse to admit us in the number of your legions*. These words, which were manifestly spoken from a true sense of their crime, and a sincere repentance, touched Cæsar: he could no longer dissemble; but, stiling them again, *fellow soldiers*, he, not only freely forgave them, but declared, that they should share with him both the glory and advantages of all his victories. See Appian, Hist. Liv. Dio.

**TALENT, Fr.** This word is used by the French in the same figurative sense, that it is generally received in England.

We say a man of talents, *un homme à talens*; men of talents, *gens à talens*.

**Un TALENT manqué, demi TALENT, Fr.** A man of mistaken talents, a half genius.

**Enterrer les TALENS, Fr.** to bury one's talents, to misapply natural endowments, or suffer them to remain inactive through indolence.

**To TALK**, to make use of the powers of speech. Officers and soldiers are strictly forbidden to talk under arms.

**TALLOW**, a well known name for the fat of animals. It is used as a combustible in the composition of fireworks. See LABORATORY.

**TALON, Fr.** in architecture, an ornamental moulding, which is concave below, and convex above.

**TALON renversé, Fr.** an ornamental moulding which is concave above. This word is likewise applied to many other things, as the upper part of a scythe, &c. the end of a pike, &c.

**TALON d'un Cheval, Fr.** a horse's heel, or the hind part of his hoof. Talon literally means heel.

**TALOOKDAR, Ind.** the head of any department under a superior.

**TALPATCHES, Fr.** a nickname which is given to the foot soldiers in Hungary. It is derived from TALP, which in the Hungarian language signifies sole of a shoe, and plainly proves, from the ridicule attached to it, that the Hungarians would rather serve on horseback than on foot. All persons are strictly forbidden to call them by this name.

**TALUS, Fr.** This word is sometimes written *Talut*. For its signification see FORTIFICATION.

**TALUTER, Fr.** to give a slope, to any thing in fortification.

**TAMBOUR**, in fortification, is a kind of work formed of palisades, or pieces of wood, 10 feet long, and 6 inches thick, planted close together, and driven 2 or 3 feet into the ground; so that when finished, it may have the appearance of a square redoubt cut in two. Loopholes are made 6 feet from the ground, and 3 feet asunder, about 8 inches long, 2 inches wide within, and 6 without. Behind is a scaffold 2 feet high, for the soldiers to stand upon. They are frequently made in the place  
of

## T A M

of arms of the covert-way, at the salient angles, in the gorges, half-moons, and ravelins, &c.

TAMBOURS, in fortification, are also solid pieces of earth which are made in that part of the covert-way that is joined to the parapet, and lies close to the traverses, being only 3 feet distant from them. They serve to prevent the covert-way from being enfiladed, and obstruct the enemy's view towards the traverses. When tambours are made in the covert-way, they answer the same purposes that works *en crémaillère* would.

Tambour likewise means, in fortification, a single or isolated traverse, which serves to close up that part of the covert-way where a communication might have been made in the glacis for the purpose of going to some detached work.

TAMBOUR also signifies, both in French and English, a little box of timber-work covered with a cicling, within side the porch of certain churches, both to prevent the view of persons passing by, and to keep off the wind, &c. by means of folding doors. In many instances it is the same as porch.

TAMBOUR, *Fr.* See DRUM.

*Marcher TAMBOURS battans et drapeaux flottans*, to march with drums beating and colours flying.

TAMBOUR, *Fr.* See DRUMMER. We frequently use the word drum in the same sense that the French do, viz. to signify drummer. We likewise say *five for five*; as, one drum and five to each company.

TAMBOUR *Major*, *Fr.* drum-major.

*Batteries de TAMBOUR, Fr.* the different beats of the drum. The principal beats among the French are—*La générale*, the general; *L'assemblée*, the assembly; *Le dernier*, the last beat; *Le drapeau*, the troop; *Aux champs*, to the field; *La marche*, the march; *La diane*, the réveillé; *L'alarme*, to arms, or the alarm; *La chamade*, the parley; *L'appel*, the roll or call; *La fascine ou brélogue*, the workman's call. *Le ban et la retraite*.

*Aux champs, ou le premier*, is beat when any particular corps of infantry is ordered to march; but if the order should extend to a whole army, it is

## T O M

then called *La générale*, the general. We do not make this distinction in our service, but we omit the *Premier*, or first beat, when one regiment, detachment, or company, marches out of a camp or garrison where there are other troops.

*Le second, ou l'assemblée*, is to give notice that the colours are to be sent for.

*La marche* is beat when troops march off their parade.

*Battre la charge, ou battre la guerre*, to beat the charge, or the point of war. This occurs when troops advance against an enemy. *Battre la retraite* is to beat the retreat, to cease firing, or to withdraw after the battle. It is likewise used in garrisons to warn soldiers to retire to their quarters.

*Battre la fricassée*, to beat the long roll.—A beat which is practised to call soldiers suddenly together.

*Battre la Diane*, to beat the réveillé. This is done in a camp or garrison at break of day. When an army besieges a town, the réveillé is confined to those troops belonging to the infantry that have mounted guard, particularly in the trenches; and it is then followed by the discharge of those pieces of ordnance which had ceased firing on account of the darkness of the night, that prevented their being properly pointed against the enemy's works.

TAMBOUR *de basque, Fr.* a tabour.

TAMBOUR *battant, Fr.* drums beating.

*Sortir TAMBOUR battant, enseignes déployées, Fr.* to go out drums beating and colours flying.

TAMBOUR, in architecture, a term applied to the Corinthian and composite capitals, as bearing some resemblance to a drum, which the French call *Tambour*.

TAMBOUR likewise denotes a round course of stone, several whereof form the shaft of a column not so high as a diameter.

*Un TAMBOURIN, Fr.* a timbrel.

TAMBOURINE, a drum, somewhat resembling the tabour, but played in our military bands without either stick or pipe.

TAMIS, *Fr.* a sieve.

TAMPIONS, or TOMPIONS, are wooden cylinders to put into the

## T A P

the mouth of the guns, howitzers, and mortars, in travelling, to prevent the dust or wet from getting in. They are fastened round the muzzle of the guns, &c. by leather collars.

They are sometimes used to put into the chambers of mortars, over the powder, when the chamber is not full.

**TAMPIONS**, in sea-service artillery, are the iron bottoms to which the grape-shot are fixed; the dimensions of which are as follow, viz.

	<i>Diameter.</i>
42-pounders	6 6-10ths inches
32 ditto	6
24 ditto	5 4-10ths "
18 ditto	4 9-10ths
12 ditto	4 3-10ths
9 ditto	3 9-10ths
6 ditto	6 3-4ths
4 ditto	2 9-10ths
1½ ditto	2 1-10th
¾ ditto	1 4-10ths

**TAMPON**, *Fr.* a wooden peg or instrument which is used to plug up cartridges, petards, &c. a stopper.

**TAMPONS**, *Fr.* in mason-work, are wooden pegs by which beams and boards for floors are fastened together.

**TAMPONS**, *Fr.* flat pieces of iron, copper, or wood, which are used by the French on board their men of war, to stop up holes that are made by cannon-balls during a naval engagement.

**TAMPONS de Canon**, *Fr.* the apron made of cork or lead, which is put over the vent of any piece of ordnance.

**TANGENT**, (*Tangente*, *Fr.*) in trigonometry, is a right line raised perpendicularly on the extreme of the diameter, and continued to a point, where it is cut by a secant, that is, by a line drawn from the center, through the extremity of the arch, whereof it is the tangent.

**TANK**, *Ind.* a pond or pool of water; a reservoir to preserve the water that falls in the rainy season.

**TANNADAR**, *Ind.* a commander of a small fort.

**TAP**, a gentle blow, as a tap of the drum.

**TAPABORD**, *Fr.* a sort of cap or slouched hat made in the English fashion which the French sailors wear. Its sides hang over the shoulders, and shield them from rain in wet weather.

## T A R

It likewise signifies a riding-cap, a montero.

**La TAPE**, *le TAPON*, ou **TAMPON**, *Fr.* the tampion.

**TAPER** ou **TAMPONNER** un *Canon*, *Fr.* to put in the tampion; *detaper un Canon*, *Fr.* to take out the tampion.

**TAPE-cul**, *Fr.* that part of a swipe or swinging gate, which serves to raise and let down a draw-bridge.

**TAPE-cu**, *Fr.* a falling gate.

*En TAPINOIS*, *Fr.* slyly, secretly.

*Se TAPIR*, *Fr.* to lie squat.

**TAPIS**, *Fr.* This word literally means carpet, and is used by the French in a figurative sense, viz.

*Amuser le TAPIS*, *Fr.* to trifle.

*Mettre une affaire sur le TAPIS*, *Fr.* to open any particular transaction, to move a business.

**TAPPEE**, *Ind.* an express.

**TAPROBANE**, *Ind.* the ancient name for the island of Ceylon. It is derived from *tapoo*, an island; and *bany*, a ferry.

**TAP-TOO**, } See **DRUM**.

**TAT-TOO**, }

**TAR**, a kind of liquid pitch used in the composition of some sorts of fire-works.

**TARANTHE**, *Fr.* a thick iron peg which is used to turn the screw in a press.

**TARAU**, *Fr.* an instrument which is used in making the nut of a screw. It is a round piece of steel with a spiral shape.

**TARAUDEUR**, *Fr.* to make a hole like that which is effected by the operation of the *Tarau*.

**TARD-venus**, ou *Malandrins*, *Fr.* late-comers, or banditti: a body of men who formerly collected together in France, without any order, or authority, from the king, or government, and who were commanded by a chief of their own selection. These troops or companies first made their appearance in 1360. They were professed plunderers, that did a great deal of mischief in France, until they made inroads into Italy. The author of the *Nouveau Dictionnaire Militaire* humorously concludes this article by observing, that the term *trop-tôt-venus*, or persons coming too soon, would have been more suitable

suitable to the occupation of these freebooters.

TARE, *Fr.* a word adopted by the French from the English term tar.

TAREAU, *Fr.* a screw-tap.

TARGE, *Fr.* It is generally pronounced *Targue*, from whence is derived the figurative expression *se targuer*, to plume one's-self, or to be self-sufficient. *Le poltron se targue du courage de son père*, the coward plumes himself upon the courage of his father. — See TARGET.

TARGE, *Fr.* a weapon of defence. See PAVOIS.

TARGET, a sort of shield, being originally made of leather, wrought out of the back of an ox's hide. They were much used by the Scotch.

TARGET, is also a mark for the artillery, &c. to fire at in their practice.

TARGET, a mark set up at certain distances, to be fired at with musquet and ball. The mark is sometimes made in the form of a man, and of the same size; and sometimes in a circular form, on which are concentric circles, to determine the distance from the centre; the point aimed at. The distance of the target, from the firing station, is generally about a hundred yards, and, for security, it is placed at the bottom of a hill, or a large mound of earth is raised, or faggots are piled up to such a length or height, as is deemed sufficient to stop all the stray balls. In flat countries the latter securities are absolutely necessary: but in many places nature points out its glens and recesses, where the target may be placed without any aid from art, and on the sea side no security is wanting. In many places, an old chalk pit answers the same purpose. According to the skill of those who fire in a flat country, the mound behind the target may be made of different dimensions; and instead of a large mound, which it is often inconvenient to raise behind the target, a few small mounds, or piles of faggots, may be raised between the firing station and a small target mound, which shall answer the same purpose. Thus, suppose the distance between the target mound and the firing station to be a hundred yards, and the target mound to be twenty feet wide, and twelve feet high, two po-

sitions may be taken, one ten yards, the other thirty yards, from the firing station; and at each two mounds should be raised, between which, if the ball passes low enough, it will be stopped by the target mound; and if the piece was raised too high, the ball will be stopped by a cross bar of earth, or faggots, over the mounds, at one or other of the two positions. The width of the aperture, at the second position, or the position distant thirty yards from the firing station, may be thus taken by the eye. The target is supposed to be fixed in the middle of the target mound; the person standing directly opposite at the firing station, fixes two rods, or straight lines, meeting in a point at the height of his eye, and making such an angle, that, looking along each line, he just sees the extremity of the target-mound. In these lines, at the distance of thirty yards, two upright poles are fixed, and the space between these poles is the opening, through which, if the ball goes, it will be stopped by the target-mound. A line being drawn between the two upright poles, and extended on each side, to the distance of six or eight feet from each, an upright pole is fixed; and if a ball were fired through the space, between either of the first fixed, and the adjacent poles, it would not hit the mound, but go wide of it. This space is, therefore, to be filled up with earth or faggots, to intercept the stray balls; and over them is to be thrown a bar, to intercept the balls that would otherwise go over the mound. The height of this bar from the ground, is found by pointing a gun to the top of the target-mound, whilst a cross pole is raised or lowered, till it meets the eye; and over the bar at this height, is to be raised, a mound of earth, or faggots, three, or four, feet in height. A ball now directed for the target, might either pass through this aperture, or be caught by the mounds and cross bar, or go wide of the one, and over the other. At the distance of ten yards, from the firing station, two poles are erected, in a straight line from the eye to the outward extremity of each mound, at the second position; and there two mounds are raised like the former, and cross them a bar is thrown, whose height is

found by pointing a gun to the top of the earth, over the cross bar at the second position; and upon this bar at the first position, is raised earth or faggots, to the height of three, or four, feet. It is manifest, that a ball directed to the target will, if not taken with an aim that must be corrected by a stander by, in a raw recruit, either pass through the aperture, or be stopped by its mounds. If it pass through this aperture, it must pass through the aperture at the second position, or be stopped by its mounds: and if it passes through this latter aperture, it must either be stopped by the ground, or by the target-mound. To prevent any ill accident from the ball bounding from the ground, dung may be raised to the height of a foot in two places, which will effectually prevent mischief. The respective heights of the target, and the other mounds, as also their widths, and the widths of the apertures, and of the bars over them, and the distances of the target and the other mounds, may be ascertained accurately by trigonometry. At several places on the continent, it is customary for the inhabitants to meet, on the Sunday afternoon, to practise firing at a target; and the practice gives a steadiness which would be found very useful in the regular army. By an easy contrivance, the target is made moveable, either advancing from the target-mound, or passing by it, that the eye may be accustomed to a moving object. This is done by a rope, fixed to each side of the target, and which goes round two pulleys, and is drawn by a person behind the target-mound; and when it is made to advance, or retreat, the target is put on wheels, and the ropes going round two pulleys on posts, between the second position, and the target-mound, are drawn by the man behind the target-mound, to make it advance; and for the retreat, two other ropes are fixed behind it, by which it is drawn back by the person behind the target-mound. When it is an object to save the lead, a sheet of lead is suspended behind the target, which the balls perforate; and their motion being retarded by the vibrating lead, is deadened by a brick wall instead of earth behind, and the balls fall to the ground. We are indebted for this article, to the ingenious author of a Treatise

on the Principles of Algebra, and of several other useful publications.

**TARIERE**, *Fr.* Auger, wimble, gimlet. The French make a distinction with respect to the gender of this word. When they express a large sized auger or wimble, they say, *Un gros Tarière*, making it masculine, and when they mean a small sized one, they say, *Une petite tarière*, making it feminine.

**TARIERE**, *Fr.* likewise signifies a miner's tool with which he bores into the earth. It is used to force a lighted match into the chamber of a counter-mine, and to make it explode.

**TARPAULINGS**, are made of strong canvass, thoroughly tarred, and cut into different sizes, according to their several uses in the field; such as to cover the powder-wagons and tumbrils (carrying ammunition) from rain: each field-piece has likewise one to secure the ammunition-boxes.

**To be TARRED**. A cant word used among the guards to signify the punishment which privates undergo among themselves, when they have been tried and sentenced by their own comrades. It is the same as being scabbarded or booted; with this exception, that the guards chastise with their cross-belts, whereas the cavalry and infantry of the line use their boots and scabbards.

**TARTARES**, *Fr.* a word used in the French army, to distinguish officers' servants and bat-men from the soldiers that serve in the ranks. *Tartare* likewise means a groom.

**TARTARS**, (*Tartars*, *Fr.*) Asiatics, whose principal arms are the bow and arrow, and sabre or pike. Some few have firelocks and pistols.

*Calmyc* **TARTARS**, a free people inhabiting the borders of the Caspian Sea, and the banks of the river Wolga. They are under the immediate protection of Russia, and in consideration of the security they enjoy, they are obliged to serve, when called upon. They consist of wandering hordes, live in tents, and are armed with bows and arrows. Some have rifleguns, with one or two pistols. But they are extremely cruel, and worse disciplined than the Cossacks.

**TARTES**, *Fr.* Bogs.

**TAS**, *Fr.* A heap. When the works of a fortification are lined with turf and fascines, &c. small beds of earth are previously

previously prepared and laid one over another, till the necessary thickness is obtained; when completed it is called *Tas de gazon* ou *de placage*; a heap of turf or a placage, which see.—*Tas* is likewise used in a sense of contempt to signify a croud.—*Un tas de jainéans*; a heap, or croud of parasites.

*Un Tas de mensonges*. A heap of lies.

*Tas de charge*, Fr. An arsh made in a particular manner. It is generally found in gothic buildings.

*TASA*, Ind. A kind of drum, formed from a semisphere of copper, hollowed out and covered with goat-skin. It is hung before from the shoulders, and beat with two rattans.

*TASSEAU*, Fr. A small auvil. It likewise signifies a bracket.

• *TASSES*. Armour for the thighs, so called.

*TASSETTE*, Fr. All those parts of an iron armour which are under the cuirass, and serve to cover the thighs of an armed man.

*TATTA*, Ind. A bamboo frame, which encloses an herb called jawassen. Frames of this sort are made to put to the different openings of a room; by throwing water against them, the hottest wind, in passing through, becomes cool.

*Taugour*, Fr. A small lever which is used for various purposes.

*TAUPINS*, *Francs Taupins*, Fr. A name which was formerly given to a body of free archers, or Francs archers, in France. This body, consisting chiefly of countrymen and rustics, were probably so called from *taupe*, a mole; of which there are great quantities in the fields. *Taupin* likewise signifies swarthy.

*TAX*. A tribute, or duty rated on land, &c.

*Tax upon property or income Tax*. A tribute required from all persons, civil as well as military, of the tenth part of their incomes, if they exceed 60l. per annum.

This tax is peculiarly burthensome to British officers, as may be seen by the following extract out of the regimental companion.

The lowest tradesman in Great Britain has raised the prices of all the commodities he sells, in proportion to

the influx of money, and the increased value of the several necessities of life. By so doing, he is enabled to meet the exigencies of government, without materially breaking into the capital upon which he began trade. But this is not the case of a British officer. The subaltern alone excepted, (and on him the tax does not press so heavily) every commissioned officer in the army receives the same pay which was given in the reign of Queen Anne; when all the articles of life could be bought for two-thirds less than they cost now. So

that an individual, who laid out in those days any given sum for a company, could live upon his pay with considerable ease; whereas, in these days, he can scarcely procure the necessities of life. We therefore, humbly conceive, that before the legislature, or government, interposed with the army on this head, some steps should have been taken, to put military men upon the same ground, that their fellow subjects stand. Their pay ought to have been increased in proportion to the rise of the several commodities of life; and if the exigencies of the state be such, that persons of all descriptions must contribute, let those at least, who make the greatest sacrifices, be entitled to common justice. For we still maintain—without running the hazard of being contradicted—that to tax one class of the community, without considering its relative situation as to others, is a hardship, if not unjust, bordering upon injustice. Even generally considered, it is peculiarly partial; for it operates upon British officers in two uncommon ways. They pay, as we have already observed, not only as much as their fellow subjects, out of a property which is two-thirds less in value, (on account of the increased prices of the articles of life, and from the stationary condition of their own resources,) than it was in the reign of Queen Anne; but they are also taxed again in the additional charge which is made by every tradesman to bear him, in some degree, harmless of the impost. See also *BRITISH PAY*.

*Tax on the use of hair powder, or powder Tax*. A contribution which is exacted from the public, and to which all officers in the army, subalterns excepted, are liable. The volunteer corps

are exempted, from the private to the colonel inclusive.

**TECHAROTCHIEKA.** A small measure of brandy, which the Russian soldier takes with his toloqueno on service.

**TÊ, Fr.** a term used among miners to express a figure which greatly resembles the letter T, and which consists of a certain arrangement and disposition of the furnaces, chambers, or lodgments that are made under any particular part of a fortification, in order to blow it up. The Tê has four lodgments; the double Tê has eight; and the triple Tê has twelve.

**TEBET,** a sort of hatchet which the Turks use in war. It hangs suspended on one side of the saddle.

**TECHNICAL,** (*Technique, Fr.*) All terms, or words which have been invented for the purpose of expressing particular arts, are called *technical*.

**Mots TECHNIQUES, Fr.** Technical words.

**TE DEUM,** as far as it concerns military matters, is a holy hymn sung in thanksgiving for any victory obtained.

**TEEP, Ind.** a contract or note of hand.

**TEFTERDA Effendi.** The commissary general is so called among the Turks.

**TEINT, (Teinte, Fr.)** In painting, an artificial or compound colour, or the several colours which are used in a picture, considered as more or less, high or bright, or deep or thin, or weakened, &c. to give the proper relieve, or softness, or distance, &c. of several objects.

**TEINT, which is used to draw a plan,** *Teint dont on se sert pour lever un plan, Fr.* Teint, in general acceptation of the word, means any shade that is given to an object which is raised from the canvas, paper, &c. and placed in perspective.

**TELAMONES,** a term used in ancient architecture, to express the figures of men supporting entablatures, and other projectures.

**TELEGRAPH,** a machine by which any combination of letters, or words, may be made known in fine weather, to a person within sight of it, by means of a telescope. It is made in England

with three upright beams, and three cross parallel beams, which divide the space between the four outside beams, into six compartments, to each of which is a shutter, opened, or shut, by means of a string and pulley. Under this machine is a room provided with telescopes, in which the observer, sitting at a table, can, by drawing the strings, open, or shut, any shutter at pleasure. The letters of the alphabet are expressed according to agreement, each by a certain position of the shutters, and the other positions serve for any signal which has been previously determined upon. At proper distances, machines of this kind are erected, and in each, the observer is to keep a watchful eye on the two, between which he is, and upon the signal given by either, to take notice. Suppose it to be made by shutting all the shutters, he draws all the strings, by which his shutters are all closed, and waits till the observer at the next telegraph has done the same. He now observes, with the telescope, the new position of the shutters at the first telegraph, which he repeats, and writes it down in a book, waiting also till the second telegraph has done the same. In the same manner, every new position, made by the first, is repeated by the middle and the last telegraph, and so on by as many telegraphs as there may be between the first and last station. The time required to convey intelligence, in this manner, may easily be calculated if it is done by letters; each letter is made by moving one, or more ropes, and according to the number of letters and words, for there is a mark for the end of each word, the larger will be the time of making the signals; but this is so short a time, that in five minutes, intelligence may be conveyed from Deal to London, a distance of upwards of seventy miles. Numbers may be made with great ease; thus a position is given, denoting, that the following positions represent numbers, and then there are nine positions determined on for the nine figures, and one for the cypher; and any number may now be represented in the same manner, as with the figures in writing. The first position stands for a figure in the place of units, the second for a

figure in the place of tens, the third for a figure in the place of hundreds, and so on. Thus supposing it had been agreed upon, that the first, third, fourth and sixth shutters being open, should mean the enemy has landed, and the three first open represent Romney. Then it would require eleven positions to say: *The enemy has landed forty thousand men at Romney*, which would be known at London in ten minutes; and every movement of the enemy's troops would be known in London, within five minutes after it was made, till the enemy had taken possession of the nearest telegraph. Telegraphs may be made portable for the use of armies, and instead of frames, posts with balls will answer the same objects. Also a sash window with six panes of glass, may serve the same purpose, a piece of pasteboard being adapted to each pane; and such is the facility of corresponding by signals, that in case of invasion, by means only of steeple and houses, with a few flags and pasteboard, every movement of an enemy may be known over the whole kingdom, within six hours after it has been made.

**MARINE TELEGRAPH**, an invention of Capt. Sir Home Popham, of the royal navy, has been used with great benefit by him at different times, and by many others. When Admiral Dickson commanded the North Sea fleet, during the late war, and was lying off Ebsineur, Sir Home Popham was stationed off Copenhagen with the Romney man of war. To facilitate the conveyance of intelligence, the latter invented a set of flags to be used as a sea telegraph; and although the distance between these places is at least six miles, yet it was conveyed in five minutes. He afterwards practised it while commanding in the Red Sea, and brought it to great perfection. On his return from thence to Calcutta, he printed at the Company's press there, a small volume, entitled "A Marine Vocabulary; or, Telegraphic signals." In April 1803, he returned to England, and submitted his plan to several of the first naval characters, who approved highly of it, and deemed that it might be of the most essential service in the royal navy. This induced him to reprint his work

with great additions and improvements.

It is divided into three parts, the second and third not being in the original work. The two first parts consist of a thousand words alphabetically arranged, and the third of as many sentences, also arranged alphabetically from a leading word. The first number of the first part begins with 26; the preceding 25 comprise the letters of the alphabet, from A to Z, and numbers from 1 to 25. Flags are made to represent these.

The words, in the first part, are those mostly made use of in conversation and writing. The second part begins with 1026, and consists of words next useful to those in the first, or which have been forgot. The third part begins with 2026, and is made up of short sentences, applicable to military, or general conversation. These are intended to save the use of many signals; as by one flag a whole message may be conveyed.

It has been already mentioned, that flags represent the alphabet and figures.

There are also the following flags made use of:—A cypher flag, a substitute flag, a preparative flag, and flags to distinguish a message finished, understood, not understood, or message to be answered, and a numerical pennant. A flag hoisted alone, or under another, represents units; when two flags are hoisted, the upper represents tens; when three are hoisted, the uppermost is to represent hundreds, the next tens, and the lowest units. The thousands are denoted by balls of pennants, as may appear most likely to be seen, inferior or superior; superior 1000, inferior 2000; as for example:—

No. 1026—Aback.

No. 2026—Shall I leave off action?

When the substitute flag is hoisted under other flags, it is to represent the same figure as the flag immediately above it.—For example: to represent the number 33, the substitute flag must be placed under that representing 3. When the cypher is put under other flags, it represents the cypher; as under 3, it stands for 30.

Words, not in the vocabulary, may be spelt by the numerical alphabet from 1 to 25. When it is necessary to express

express numbers in a message, the numerical pennant must be hoisted with the signal. When it is inconvenient to hoist three flags, and a pennant at the same place, the two upper may be at one place, and the two others at another; taking places progressively, as follows: first, main; second, fore; third, mizen; fourth, gaff; fifth, ensign-staff.

In cases of doubt, a ship is to repeat the signal instead of the answering pennant; or when any particular number in a message is not understood, it is expressed by hoisting the numerical pennant, with the word, or sentence, beginning from the first word. For example: if it was the fourth word, when the message was finished, the numerical pennant (4) must be hoisted by the ship not understanding. The ship making signal is then to repeat that word; and if not then comprehended, to change it for one nearest and synonymous. When the cypher flag is hoisted singly, it is to annul the signal made, or making.

Sir Home Popham's marine telegraph does not in any degree interfere with the signals established by the Lords of the Admiralty, for the use of his Majesty's navy.

The marine telegraph is used by the ships of the honourable East India Company.

**TELESCOPE**, (*Télescope*, Fr.) An optical instrument, composed of lenses, by means of which remote objects appear as if nigh at hand. The telescope was invented by Galileo.

**TELINGY**, *Ind.* A word used upon the Coromandel coast to signify Sepoy.

**To TELL off**. A term used in military formations, to designate the relative proportions of any given body of men. Thus a battalion may be told off into wings, grand divisions, divisions or companies, subdivisions or sections. It is the peculiar duty of every adjutant and serjeant-major to be particularly expert at telling off. Squadrons of horse are told off by half squadrons, 4 divisions, 8 sub-divisions, ranks by threes, and files right and left. ●

**TÉMÉRAIRE**, *Fr.* Rash; heedless of danger. *Un homme téméraire*, a rash man. A French author ob-

serves under this word, (after having said the French were naturally rash,) that courage is not always an inmate, or even a companion, of rashness, since the latter too often exceeds the bounds of sober discipline. There are, however, occasions and moments, in which a soldier may be rash; particularly in a storming party, and when he mounts a breach.

**TEMQIN**, *Fr.* a witness. It likewise signifies the second in a duel.

A piece of tinder (is also so called) which corresponds in size and preparation, with that which a miner lays upon the saucisson. By means of this duplicate, he can ascertain the moment of explosion.

**TEMQINS**, *Fr.* In civil and military architecture, arc pieces of earth left standing as marks or witnesses in the fosses or places which the workmen are emptying, that they may know exactly how many cubical fathoms of earth have been carried.

**TEMPER**. A state of steel or other metal, that best fits it for the use to which it is to be applied.—Thus, the blade of a sword should be so tempered as to admit of considerable flexure without breaking, yet so elastic as to return to its shape, on the pressure being removed.

**To TEMPER**. In a military sense, to form metals to a proper degree of hardness.

**TEMPEST**, (*Tempête*, Fr.) According to Dr. Johnson, the utmost violence of the wind: the names by which the wind is called according to the gradual increase of its force seem to be, a breeze; a gale; a gust; a storm; a tempest.

**TEMPLAR**, (*Templier*, Fr.) See MILITARY ORDERS.

**TENABLE**, (*Tenable*, Fr.) such as may be maintained against opposition; such as may be held against attacks.

**TENAILLE**, *Fr.* (This word literally means *shears*.) A military evolution which was performed in the times of the ancients. In page 206 of Observations on the Military Art, we have the following account of it:—

A phalanx, attacked by a lozenge or triangular wedge, bent its right and left forward by a half-quarter conversion, each wing on their common center; and when

when they found themselves opposite the sides of the enemy's arrangement, they each marched on their own side, right before them; by which means they both inclosed and attacked the enemy together, at the same time, while the head was engaged and at blows with the center of the phalanx that had kept its ground. Such is the description authors have left us of the design and effects of this manœuvre.

The *tenaille* had considerable advantage over the triangular wedge; but, according to the Chevalier Folard, it was not equally efficacious against the column. The latter could alter the direction of its march, and fall upon one of the wings, whether in motion or not, or detach the section of the tail, or rear, to take its wings in flank, while it was occupied in making the quarter conversion. The column and *tenaille* were formed for acting against each other, and could only be victorious over one another by the superior abilities of their commander. I fancy, however, the column was always exposed to less danger than the *tenaille*, for the latter could not pursue the column without changing its order; whereas the column must destroy, and, in a manner, annihilate the *tenaille*, in case it could once break it.

The *tenaille* is unquestionably an excellent manœuvre, and strictly conformable to a very wise maxim, which directs us to multiply our strength and efforts as much as possible against one point. We sometimes, indeed, make use of it in war without being sensible of its advantages. This, however, does not hinder the manœuvre from being well performed; for the nature of the ground not being level like a sheet of paper, the commander in ranging his troops, according to the advantages of the situation, does not form a perfect *tenaille*, such as may be drawn or sketched out, but one of an irregular kind, which produces the same effects; and this is what should be sought on all occasions.

TENAILLES, in fortification, are low works made in the ditch before the curtains. There are three sorts: viz. the first are the faces of the bastions produced till they meet, but much lower; the second have faces, flanks, and a curtain; and the third have only faces and flanks.

*Single TENAILLE*, (*Tenaille simple*, Fr.) is a work whose front is advanced towards the country, having two faces, forming a re-entering angle: its two long sides terminate on the counterscarp, opposite to the angle of the shoulder.

*Double TENAILLE*, (*Tenaille double*, ou *flanquée*, Fr.) is a work whose front, having 4 faces, forms 2 re-entering, and 3 salient angles: its long sides are likewise parallel, and terminate on the counterscarp, opposite to the angle of the shoulder. Both the single and double *tenailles* have this fault, viz. that they are not flanked or defended at the re-entering angle, because the height of the parapet hinders the soldiers from discovering before that angle. Therefore *tenailles* should only be made when there is not room enough to make horn-works. The ramparts, parapets, ditches, covert-way, and glacis of *tenailles*, are the same with other out-works.

TENAILLE of a place, is what is comprehended between the points of two neighbouring bastions; as the faces, flank, and curtains. Hence it is said, the enemy attacked the whole *tenaille* of a place, when they made two attacks on the faces of the two bastions.

TENAILLES, Fr. pincers, nippers, *tenails*.

TENAILLER, Fr. to tear off the flesh with red hot pincers. This punishment existed in civilized Europe, until a year or two before the French revolution.

TENAILLON, Fr. This is sometimes called, among the French, *grande lunette*. It is a work composed of two parts, each of which covers the faces of the half-moon; in whose front the *tenailon* is constructed.

Un *TENAILLON*, Fr. a little *tenaille*. See FORTIFICATION.

TENDELET, Fr. an awning; such as is used on board of ship, and over carriages, in hot countries.

TENDRE, Fr. to stretch; to spread. This word has various significations in the French language. In military matters, it is common to say,

TENDRE un piège à quelqu'un, Fr. to lay a snare for any body,

TENDRE une marquise, une tente, Fr. to pitch a marquise, a tent.

TENIR, Fr. to hold, to keep, &c.

TENIR

**TENIR tête à quelqu'un**, Fr. to cope with any body.

**TENIR la Campagne**, Fr. to keep the field.

**TENIR**, Fr. to hold out, as in a siege.

**TENIR**, Fr. to cover, as *Le Camp tient tant de terrain*, the camp covers so much ground.

**TENIR une Armée en respect**, Fr. to keep an army in a constant state of alertness.

**TENIR tête à l'ennemi**, Fr. to face the enemy; to hold up against all his attacks.

**Se TENIR**, Fr. to remain; to stay; to hold fast.

**Se TENIR bien à cheval**, Fr. to sit well on horseback, to have a good seat.

**TENON**, (*Tenon*, Fr.) any thing that holds or keeps fast.

**TENON d'arquebuse**, Fr. loop of a gun.

**TENT**, (*Tente*, Fr.) (This word is originally derived from the Latin *tendo*, I stretch; whence *tendre*, to stretch.) A soldier's moveable lodging place, commonly made of canvas, and extended upon poles.

The sizes of the officers' tents are not fixed; some regiments have them of one size, and some another. A captain's tent and marquee is generally 10½ feet broad, 14 deep, and 8 high: those of the subalterns are a foot less: the major's and lieutenant-colonel's, a foot larger; and the colonel's 2 feet larger.

The subalterns of foot lie two in a tent, those of horse but one.

The tents of private men are 6½ feet square, 5 feet high, and hold 5 soldiers each.

The tents for the horse are 7 feet broad, and 9 feet deep: they hold likewise 5 men and their horse accoutrements.

In a common infantry tent, the length of the ridge pole is 7 feet; length of standards 6 feet.—Weight complete 27 pounds.

**Bell TENTS**, so called from their resemblance to a bell. They serve to shelter the fire-arms from rain.

**Round TENT**, a circular tent which contains 12 men; the weight complete, with poles, 43 lbs.—Length of pole, 9 feet.

**Hospital TENT**, a large commodious

tent, which is appropriated for the sick. It sometimes happens, that when a contagious disorder breaks out in a camp, or in barracks, the persons infected are removed from the hospital and lodged in a tent, which is pitched for that purpose, in the neighbourhood. It is usual for the commanding officer of the regiment to order one or more sentries to be furnished to the regimental hospital, and the same to the hospital tent, which sentries are directed to permit no person to enter but those concerned in the hospital, or belonging to the staff; and officers of the regiment. They are to be particularly careful in preventing liquor, or any thing improper from being carried into the hospital; nor are they to permit any patient to go out (to the necessary excepted) without a ticket of leave from the attending surgeon. See pages 28 and 21 of *Regulations for the better Management of the Sick*.

**Laboratory TENT**, in artillery, a large tent which is sometimes carried to the field for the convenience of fire-workers and bombardiers. The weight complete, with poles, pins, &c. 3 cwt. 24 lbs. length of ridge pole 18 feet, length of poles 14½ feet.

**TENT bedstead**, a small portable bedstead, so contrived as to correspond with the shape of an officer's tent.

**TENT-pins**, pieces of wood, which are indented at the top, and made sharp at the bottom, to keep the cords of a tent or marquee firm to the earth. There are four large ones which serve for the weather cords.

**TENT-poles**, the poles upon which a tent or marquee is supported.

**TENT-walls**. See **WALL**.

**TENT** likewise means lint to put in a wound.

**TENTED**, having tents pitched on it. Hence the tented field.

**TENTORIA**, the tents or pavilions under which the ancient Roman soldiers, and, indeed, the shepherds of Italy were accustomed to lie. The first tents were made out of the branches of trees; these were improved into covers made of the skins of wild beasts, and kept together by means of cords. When the Romans wished to express a distinction between a soldier's and a shepherd's tents, they said of the former *sub pellibus esse*, to be under skins; in the

the same manner that we say, to be under canvas. During the winter months, the Roman tents were made of wood.

**TERGIDUCTEUR**, *Fr.* from the Latin *tergiductor*, the bringer up of a rear file of soldiers, or *Serre-file*.

**Military TERMS**, (*Termes de guerre*, *Fr.*) certain technical expressions, which, either directly or indirectly, ought to be used by every military man, when he writes upon his profession, or when he relates the events of war.

**TERNIR**, *Fr.* to tarnish; to soil.

**TERNIR sa reputation**, *Fr.* to tarnish one's reputation.

**TERPAN**, *Fr.* a scythe with a handle to it, which the Turks use in war.

**TERRAIN**, *Fr.* This word is sometimes written *terrein*, and signifies, generally, any space or extent of ground.

**Gagner du TERRAIN peu-à-peu**, *Fr.* to gain ground little by little.

**Perdre du TERRAIN**, *Fr.* to lose ground.

**Ménager son TERRAIN**, *Fr.* to make the most of your ground. It is likewise used in a figurative sense, viz. *Un homme est fort quand il est sur son terrain*, *Fr.* A man always speaks with great confidence when he is thoroughly master of the subject.

**TERRAIN du camp**, *Fr.* the ground within the lines of encampment.

**Lever le TERRAIN**, *Fr.* to reconnoitre, to take a survey of ground.

**Chicaner le TERRAIN**, *Fr.* to dispute the ground; to fight it inch by inch.

**Tenir un grand TERRAIN**, *Fr.* to take up much ground.

**TERRASS**. See **MORTAR**.

**TERRASS**, (*Terrasse*, *Fr.*) a plat-  
**TERRASSE**, } form; a bank of  
**TERRACE**, } earth; an open raised

walk in a garden, &c. Among the ancients a bank of this sort answered the purpose of an epaulement in modern fortification. This bank was raised behind in such a manner, that it surrounded the fosse, and served as a cover for the archers, who poured in showers of darts, while the exterior defences of a fortified town or place, were insulted at all points. The terrasses also answered the same end, in those days, that trenches and contravallations do in these times. A terrass likewise signified, in former times, a

sort of cavalier, which was carried to a great height, in order to overlook and command the walls of a town. These terrasses were constructed by means of mantelets, which stood very high, for the purpose of covering the working parties from the arrows, &c. of the besieged: Alexander the Great had frequent recourse to these terrasses when he attacked a town.

**Contre-TERRASSE**, *Fr.* a terrace, or platform, that is raised above another.

**TERRASSER**, *Fr.* to throw down; to rout completely.

**TERRASSIER**, *Fr.* This word is used among the French not only to signify the person who undertakes to see heaps of earth removed, &c. for any specific purpose, but likewise the man who actually carries it.

**TERRRE**, *Fr.* earth, ground.

**La TERRE**, *Fr.* the earth; the ground.

**Ouvrages de TERRE**, *Fr.* works which are thrown up with earth. This does not, however, imply, that nothing but earth is used; since palisades, traverses, chevaux de frizes, &c. may also form part of the defence.

**A TERRE**, *Fr.* on the earth or ground.

**Etre genou à TERRE**, *Fr.* to kneel.

**Genou à TERRE**, *Fr.* kneel; a word of command used in the French service.

**TERRE-PLEIN**, *Fr.* See **FORTIFICATION**.

**TERRER**, (*se Terrer*, *Fr.*) to hide under ground. The French say, *des gens de guerre se sont bien terrés*; meaning thereby, that they had thrown up entrenchments with earth, so as to be covered from the enemy's fire. *Terrer une artifice*, to cover the head of any fire-work with earth.

**TERRES-Amendées**, *Fr.* earths that have been used in the cleansing of saltpetre. Saltpetre-men call these earths *Terres réunies*.

**TERREUR**, *Fr.* fear; apprehension.

**Repandre la TERREUR**, *Fr.* to spread terror; to cause dismay. *Jeter la terreur parmi les ennemis*, to throw terror amongst the enemies. A French author has made a very just distinction between causing fear and apprehension to exist in an adversary's army, and occasioning terror and dismay, among the inhabitants of a country, through which

troops are obliged to march. Marshal Saxe was particularly cautious on this head; so much so, that he was always well received by the inhabitants of every place, where he had made war. This cannot be said of all conquerors or generals.

*TERREUR panique*, Fr. See PANIC.

*TERTIATE*, in gunnery, is to examine the thickness of the metal of a piece of artillery, in order to judge of its strength. This is usually done with a pair of calliper compasses.

*TERTIATING a piece of ordnance*, is to find whether it has its due thickness at the vent, trunnions, and neck; if the trunnions and neck are in their due order, and the chase straight, &c.

*TERTRE*, Fr. a small rising ground that stands unconnected with any other.

*TESSERA*. See *SIGNUM Militare*.

*TESSERÆ Militares*, military watchwords or countersigns. Among the ancient Romans the military watchword, or countersign, was passed in the following manner:—

One soldier was selected throughout ten legions, and was called *tesserarius*, the bringer, or the giver, of a watchword. It was the duty of this man to wait, at sunset, upon the tribune of the guard, from whom he received, written upon a small wooden tablet, certain orders which had been issued by the general. This tablet, besides the watchword, contained also some specific order from head quarters. As soon as the *Tesserarius* had received the orders from the tribune, he immediately repaired to his legion, and delivered the tablet to the commanding officer, in the presence of witnesses. This officer transmitted it to the next in command, after having inserted the particulars in his own orderly books; and as each centurion (when he sent to the tribune for orders) was obliged to transmit the tablet, containing the watchword, after sunset, the latter, by referring to the minutes, (which he kept of every part of the army), easily ascertained every omission or neglect of orders; and if the person, so offending, affected to deny his having seen the tablet, the witnesses were examined, as to the delivering of it by the *Tesserarius*.

*TESSONS*, Fr. potsherds,

*TESTAMENT*, Fr. will, testament.

*TESTAMENT Militaire*, Fr. among the French, a will which is made in the presence of two witnesses only, by word of mouth, and is not committed to paper.

*TESTIMONY*, verbal declaration, given upon oath or honour, before any court martial. The testimony of a witness should neither be influenced nor interrupted, and the precise words used by him should be written down in the proceedings without any alteration.

*TESTUDO*, in the military art of the ancients, was a kind of cover or screen, which the soldiers of each company made themselves of their bucklers, by holding them up over their heads, and standing close to each other. This expedient served to shelter them from darts, stones, &c. thrown upon them, especially those from above, when they went to the assault.

*TESTUDO*, was also a kind of large wooden tower, which moved on several wheels, and was covered with bullocks' hides: it served to shelter the soldiers when they approached the walls to mine them, or to batter them with rams.

*TETE*, Fr. head.

*TETE du Camp*, Fr. the head of the camp, or the front ground which looks towards the country; also that part of a camp which lies contiguous to the enemy, and where the troops bivouac.

*TETE de la Sappe*, Fr. head of the sap.

*TETE de Chevalement*, Fr. a cross beam which lies upon two stays, and supports any part of a wall, &c. whilst it is in repair.

*Faire (ou tenir) TETE à quelqu'un*, Fr. to oppose a person; to keep him at bay.

*Avoir quelqu'un en TETE*, Fr. to have any person opposed to one, viz. *Turenne avoit en tête Montecuculli*; *Turenne* was opposed by *Montecuculli*.

*TETE baissée*, Fr. headlong. *Se précipiter sur son ennemi tête baissée*; to plunge headlong into the thickest of the enemy; to run into danger without the least fear or apprehension.

*A la TETE*, Fr. at the head of.

*A la TETE des troupes*, Fr. at the head of a body of armed men.

*TETE d'une armée*, Fr. the head of an army. This consists of the troops which

which are furthest advanced towards the enemy, or on any given point of direction.

*Montrer une TETE, Fr.* This phrase is used among the French to signify any particular direction that an army takes.

*TETE de tranchée, Fr.* that part of a trench which is closest to a fortified town or place.

*TETE de Moure, Fr.* a sort of grenade which is thrown out of a piece of ordnance.

*TETE d'un ouvrage à corne, à couronne, Fr.* that part of a horn, or crown-work, which looks towards the country.

*TETE d'un ouvrage, d'une armée, qui assiège une ville, Fr.* that part of a fortified work, or proportion of an army, which looks towards the country, and is connected with the line of contravallation.

*Avoir la TETE de tout, Fr.* to be the most advanced.

*TETE de pont, Fr.* that part of a bridge which is on the enemy's side.—When the bridge is fortified on both sides, the French say, *les deux têtes de pont.*

*TETE de Porc, Fr.* This word means literally a hog's head. It is used to denote a military arrangement of the triangular kind. Those mentioned under the term wedge, were composed of ranks, greater one than another, in a regular progression from the incisive angle to the base. The *tête de porc* was formed of small bodies ranged in lines in the same sense, and in the same progression as the ranks in the preceding wedges; that is to say, a small body (probably square) was placed at the head, another of the same size was posted behind it, having two others, one on its right, the other on its left, both extending the full length of their front beyond the wings of the first. Behind those three, five others were ranged in the same order, and so on successively until all were placed.

This arrangement is equal to the former (viz. that of the wedge) with regard to defects, as to advantages, it has but one only, which will never be of weight enough to gain it any degree of reputation; it is this, that being composed of small bodies, each having its leader or

commander, all the different parts are more or less capable of defence, should they be attacked at the time they are forming or dividing; and if the enemy attempted to form the *Tenaille*, they might detach some of those small bodies to interrupt their motions, or to attack them in flank.—See *Observations on the Military Art*, page 205.

*TETES, Fr.* in the plural number, are the same as men or lives, viz. *La prise d'une place a coûté bien des têtes*, the reduction or taking of a place has cost many lives or men.

*TETHILL, (Entrée, Fr.)* a string by which horses are held from pasturing too wide. We say figuratively, to go the length of one's tether; to speak or act with as much freedom as circumstances will admit. An officer, who has any certain powers vested in him, should be particularly cautious how he makes use of them.

*TETRAEDRON, (Tétraèdre, Fr.)* in geometry, one of the five regular bodies. It is a pyramid which is terminated by four equilateral triangles, that are equal to each other; in the same manner that the tetragon is a rectilineal figure of four equal sides, which has four right angles.

*TETRAGONAL, square, having equal sides and angles.*

*TETRARCH, a Roman governor of the fourth part of a province.*

*TEUTONIC, (Teutonique, Fr.)* See ORDERS.

*TEVEEL, Ind.* The treasury.

*TEVEELDAR, Ind.* The treasurer.

*THANE.* An ancient military title of honour, now obsolete.

*To THANK.* In military matters, to make honourable mention of a person or persons, for having behaved gallantly in an action, or otherwise rendered a public service.

*To be THANKED.* To receive a public testimony of good conduct. Officers, &c. are generally thanked in public orders.

*THANKS.* Public acknowledgements for gallant actions.

*Vote of THANKS.* It has been customary, in all civilized countries, for the legislature to pay a public tribute of applause to those warriors, who have fought their country's battles with suc-

cess, and have otherwise distinguished themselves by particular feats of gallantry and good conduct. The French, during the progress of their revolution, have had frequent recourse to this mode of adding new zeal and fresh courage to their armies, and of expressing national gratitude. It has been the good fortune of this country, to have experienced occasions of testifying a higher sense of its obligations to the navy, than can be found in the history of any people. From the commencement of the war in 1793, until the cessation of hostilities, every session of parliament has had its records marked by the brightest maritime operations; and although the exertions of our land forces have not been equally brilliant in all instances, yet there are none in which the innate bravery of the men has lost one spark of its wonted fire and impetuosity. We may say, (without the hazard of contradiction, and in direct defiance of those slippant characters who feel gratified in every apparent degradation of our national character) that whenever the British forces have acted as one army, without the alloy of foreign auxiliaries, their native spirit has, like sterling ore, stood the most searching ordeal. Without looking for proofs of this assertion in the different pages of history, that are so copiously marked by them, we shall content ourselves with the following extract from the vote of thanks which has unanimously passed both houses of parliament, in testimony of the gallant behaviour of the British troops in Egypt:—

*"Copy of the Vote of Thanks from the House of Lords, to Major-General, now Lord HUTCHINSON, &c.*

*Resolved, Nemine Dissentiente,*

That the thanks of this house be given to the honourable Major-General John Hely Hutchinson, second in command, Major-Generals Eyre Coote, John Francis Craddock, the honourable George James Ludlow, John Moore, Richard, Earl of Cavan, the honourable Edward Finch, Brigadier-Generals John Stuart, the honourable John Hope, John Doyle, Hildebrande Onkes and Robert Lawson, and to the several officers who served in the army under the command of the late Sir Ralph Abercromby, knight of the most ho-

nourable order of the Bath, for their splendid and heroic exertions in effecting a landing on the coast of Egypt, in spite of local difficulties, and in the face of a powerful and well prepared enemy, and in all their subsequent operations, particularly in resisting with signal success the desperate attack made upon them on the 21st of March, 1801, and achieving the brilliant and important victory obtained on that memorable day.

*Resolved, Nemine Dissentiente,*

That this house doth highly approve of, and acknowledge the distinguished regularity, discipline, coolness, and valour displayed by the non-commissioned officers and private soldiers of the army, serving under the command of the late Lieutenant-General Sir Ralph Abercromby, knight of the most honourable order of the Bath, in the memorable and brilliant operations in Egypt, and that the same be signified to them by the commanders of the several corps, who are desired to thank them for their distinguished and exemplary conduct."

The surrender of Alexandria, and the consequent evacuation of Egypt by the French forces, (who in spite of their veteran knowledge and persevering resistance, were obliged to yield to troops, certainly less experienced and less injured to war,) sufficiently prove the accuracy of our remark, and the justness of the tribute, which both houses have paid to national spirit and good discipline.

**THIANLACHES, Fr.** Weapons which were used among the Gauls or ancient French, of an offensive and defensive nature. The former were made in the shape of halberts or pikes, and the latter were a sort of small round shields.

**THEATRE of War.** Any extent of country in which war is carried on may be so called. The French say *Théâtre de la Guerre*. It signifies the same with us as Seat of War. According to Turpin, page 21, in his Essay on the Art of War, there are but three sorts of countries which may become the theatre of war; an open country divided by rivers, a woody, or a mountainous one. The dispositions for a march must of course

course be varied as the situations of places differ.

**THEOCRACY**, (*Théocratie*, Fr.) Government by God himself; such as the Jewish form of government was before they had an earthly king. It also signifies the government of the Lama, which was vested in the *lincas*, and which still exists among the tribes of Tartary.

**THEODOLITE**, a mathematical instrument useful to engineers and artillerymen, in taking heights and distances.

**THEOREM**, (*Théorème*, Fr.) In mathematics, a proposition which is purely speculative, and tends to the discovery of some hidden truth.

*An universal THEOREM*, in mathematics, is one that extends universally to any quantity without restriction; as that the rectangle of the sum, and difference of any two quantities, is equal to the difference of their squares.

*A particular THEOREM* is when it extends only to a particular quantity.

*A negative THEOREM* is one that demonstrates the impossibilities of an assertion, as, that the sum of two biquadrate numbers cannot make a square.

*A local THEOREM*, that which relates to surface; as the triangles of the same base and altitude are equal.

**THEORETICAL**, (*Théorique*, Fr.) What appertains to theory.

**THEORY**, (*Théorie*, Fr.) The speculative part of any particular science, in which truths are demonstrated without being practically followed.

*School of THEORY*. In order to secure to the army intelligent and well informed officers, it has been wisely suggested, that there should be a school of Military Theory in each regiment. The persons selected for this purpose are to pass an examination before the professors at the Military College, whenever the vicinity of the regimental quarters will allow them to attend.

**Order of MARIA THERESA**. A military order of knighthood, which was founded and established by the House of Austria, on the 18th of June, 1757, and was distinguished by the name of the reigning queen and empress, being called the Imperial Military Order of Maria Theresa. It was instituted with

the view of manifesting the sovereign's approbation of the merits of the army, and of consigning to the latest posterity, a memorial of its good conduct. The 15th regiment of light dragoons having by its singular prowess and good conduct on the 24th of April, 1794, been found worthy of Imperial notice and consideration, we should be deficient in our duty to a corps of gallant officers, did we omit an opportunity of inserting the principal heads of an order with which they have been honoured.

The office of grand master is permanently attached to the reigning prince of the arch-house of Austria.

It is an inviolable principle, that no person whatsoever shall, on account of his high birth, long services, wounds received from the enemy, or former merits, much less from mere favour, or the recommendation of others, be received into the Order, but that those only who shall have signalized themselves by some particular act of valour, or have aided the Imperial service by able and beneficial councils, and contributed to their execution by distinguished bravery, shall be admitted.

The order may be conferred upon all officers of cavalry, infantry, hussars, artillery, miners, and engineers, from the highest to the lowest inclusive.

The number is not limited, and may always consist of as many grand crosses and knights, as may render themselves deserving of them.

The numbers of the order are divided into two classes, namely, grand crosses and knights. All those officers who may distinguish themselves above others, by some singular exploit are received as knights: but the grand crosses are designed only for those, who have united valour with such prudence of conduct, as may have had a beneficial influence on the fortunate issue of any particular military enterprise.

The grand crosses wear pendant from a scarlet hand-breadth ribbon (having a white stripe in the middle, and being thrown scarf-wise across from right to left,) a golden, white enamelled octangular cross.

On one side of the escutcheon, in the center, is represented the name of the Emperor and that of the Empress, in cypher within a wreath of laurel; and on

on the other side, the arms of the Arch-Duchy of Austria, with the motto *Fortitudini*. The knights wear, on the breast, in a button-hole of the coat or waistcoat, a similar but smaller cross, pendant from a ribbon, of two finger's breadth, and of the same colours.

This order is not purely honorary. A certain allowance is given to every individual belonging to it as an augmentation to his pay. Twenty grand crosses are entitled to an annual pension of fifteen hundred florins each; one hundred knights to an annual pension of six hundred florins each; and another hundred knights to an annual pension of four hundred florins: which several allowances are to be enjoyed from the day of their reception into the order. The remaining members of the order are provided for as the vacancies occur, and succeed in rotation.

The privileges and honours, which are attached to this order, are very considerable. The persons admitted are not only knights by the fact of their admission, but they may, upon application for the same, obtain the rank of baron.

In the statutes of the Imperial Order, it is particularly expressed, that, in imitation of the rule observed with respect to the Order of the Golden Fleece, (namely, that the ensigns of no other order can be worn therewith,) the ensign of the Imperial military order of Maria Theresa, may be worn at the same time, and together with the Golden Fleece, with this exception, that no order of knighthood of a foreign power can, or shall be worn with the military order of Maria Theresa.

The following letter was transmitted from Vienna, on the 7th of November, 1800, respecting the very flattering manner with which this order had been conferred by the Emperor of Germany, upon those officers of the 15th Light Dragoons, who had distinguished themselves in the action of Villers en Couché, near Cambray, on the 24th of April, 1794.

SIR,

I have received from his Excellency Baron Thugut, eight crosses of the Order of Maria Theresa, which the Emperor has been pleased to confer on your-

self and seven other officers undernamed, of the 15th regiment of Light Dragoons, who distinguished themselves in a most gallant action, near Villers en Couché, on the 24th of April, 1794.

His Imperial Majesty had already testified the high sense he entertained of the brilliant and important service, which the regiment performed on that occasion, by presenting the officers engaged with a medal, struck for the purpose of commemorating that distinguished action, and affording to those who achieved it, a lasting testimony of his approbation and gratitude. It was deemed, at that time, worthy of the cross of Maria Theresa; but at that period, a doubt was entertained, whether this order could be conferred on foreigners: that difficulty being now removed, his Imperial Majesty avails himself, with pleasure, of the occasion to evince his high esteem for the regiment, as well as his regard for the individuals, by investing with this distinguished order of merit, gentlemen who have proved themselves so worthy to wear it.

In transmitting to you, Sir, these crosses, to be distributed to the officers for whom they are destined; I cannot omit the opportunity of expressing the satisfaction I have experienced, from the share which my situation here has afforded me, in a transaction, which, while it does honour to the liberality of his Imperial Majesty, and throws so much lustre on the corps, and on those who are immediately concerned, reflects, at the same time, credit on the country to which they belong.

(Signed)

MINTO.

His Majesty's Envoy Extraordinary and Plenipotentiary at the Court of Vienna.

Lt. Col. William Aylett,  
15th Light Dragoons.

The several officers entitled to the order received the crosses, &c. free of all expence from the Court of Vienna: and they have since been regularly notified in the British Gazette, after having paid the following fees:

A. B. late of the 15th Regiment of Light  
1801 Dragoons.

May 29.

l. s. d.

To fees due to the register of  
the college of arms for record-

ing

L<sup>s</sup>. d.

ing his Majesty's royal licence and permission that A. B. of the 15th regiment of light dragoons, may accept the Imperial military order of Maria Theresa, and bear the insignia of knight of the said military order, conferred upon him by his Imperial Majesty Francis II. Emperor of Germany, for his share of the signal services rendered by a detachment of the 15th regiment of light dragoons, near Villars en Couché, on the 24th April 1794, - - - - - 6 6 0

Ditto for recording the documents of his Imperial Majesty conferring the said military order of Maria Theresa, upon

**THERMES, Fr.** Small barges or boats in which persons formerly bathed.

**THERMOMETER, (Thermomètre, Fr.)** An instrument for measuring the heat of the air, or of any matter.

**THERMOSCOPE, (Thermoscope, Fr.)** An instrument by which the degrees of heat are discovered; a thermometer.

**THIEF**, any person that robs another. The character of a thief is of so foul a cast in a military life, that the least imputation of dishonesty incapacitates either officer or soldier from remaining in the service.

**Soldier's THIGH.** A well-known part of the human frame which takes its peculiar military application from the notorious poverty of army men in general. Hence Soldier's Thigh figuratively means an empty purse, or, speaking familiarly, a pair of breeches that sit close and look smooth, because the pockets have nothing in them.

**THILL.** The shafts of a wagon;

hence the horse which goes between the shafts is called the thill-horse, or thiller.

**To THIN, (Eclaircir, Fr.)** To make less numerous. As to thin the ranks by a heavy discharge of ordnance and fire-arms.

**THIRTEENER.** A shilling is so called in Ireland; thirteen pence of that country's currency being only equal to twelve pence English.

**THREE DEEP.** Soldiers drawn up in three ranks, consisting of front, center, and rear, are said to be *three deep*. It is the fundamental order of the infantry, in which they should always form and act at close order, and for which all their operations and movements are calculated.

**THREES.** A term used in the tellings off in squadron.

**Ranks by THREES.** Each half squadron told off by threes. See *Cavalry Regulations*, page 2.

**To THROW.** To force any thing from one place to another; thus artilleryists say to *throw* a shot or shell, or so many shot or shells were thrown.

**THRUST, (Botte, Fr.)** Hostile attack with any pointed weapon, as in fencing. When one party makes a push with his sword to wound his adversary with the point, it is called a thrust.

**To THRUST-home, (Tirer à fond, Fr.)** A term used in fencing. This thrust is used after any parade of tierce, or of half-circle, when the adversary does not throw in a reposte, or is late in doing it.

**To THRUST carte, (Tirer carte, Fr.)** The thrust in carte is made after a close disengage, or disengagement.

**To THRUST tierce, (Tirer tierce, Fr.)** This thrust differs from the thrust in carte over the arm, only by the position of the hand, which must be reversed; and it is never used in attacks.

**To THRUST seconde, (Tirer seconde, Fr.)** The thrust in seconde is commonly done on the following occasion: having parried in tierce, if you perceive that your adversary keeps his sword heavy against yours, disengage dexterously under the hilt, reversing the nails downwards, and make your *thrust* on the flank; taking care that your

arm

arm be in a perfect opposition, and that your head is inside the thrust.

**THUMBSTAIL**, (*Couvre-platine*, Fr.)

A piece of leather which every careful soldier carries with him to secure the lock of his musquet from moisture.

**THUNDERING-legion**. This legion is said to have saved the whole army, then ready to perish from thirst, by procuring, by their prayers, a very plentiful shower thereon, and at the same time, a furious storm of hail, mixed with lightning and thunderbolts, on the enemy.

This is the account commonly given by ecclesiastical historians, and the whole history is engraved in bass-reliefs on the Antonine column. See *Fulminante*.

**TIDEGATE**. See *Shuice-gate*.

**TIERCE**, a thrust in fencing, delivered at the outside of the body over the arm.

**TILE**, } (*Tuile*, Fr.) in military build-

**TYLE**, } ing, a sort of thin, facitious, luminated brick, used on the roofs of houses; or more properly a kind of clayey earth, kneaded and moulded of a just thickness, dried and burnt in a kiln, like a brick, and used in the covering and paving of different kinds of military and other buildings. The best brick earth should only be made into tiles.

The tiles for all sorts of uses may now be comprised under 7 heads, viz. 1. The *plain tile*, for covering of houses, which is flat and thin. 2. The *plain tile*, for paving, which is also flat, but thicker; and its size 9, 10, or 12 inches. 3. The *pan-tile*, which is also used for covering of buildings, and is hollow, and crooked, or bent, somewhat in the manner of an S. 4. The *Dutch glazed pan-tile*. 5. The *English glazed pan-tile*. 6. The *gutter-tile*, which is made with a kind of wings. And 7. The *hip or cornertile*.

**Plain Tiles**, are best when they are firmest, soundest, and strongest. Some are duskier, and others ruddier, in colour. The dusky-coloured are generally the strongest. These tiles are not laid in mortar, but pointed only in the inside.

**Paving Tiles**, are made of a more sandy earth than the common or *plain-tiles*: the materials for these last must be absolute clay, but for the others a kind of loam is used. These are made

thicker and larger than the common *roof-tiles*; and, when care has been taken in the choice of the earth, and the management of the fire, they are very regular and beautiful.

**Pan Tiles**, when of the best kind, are made of an earth not much unlike that of the *paving-tiles*, and often of the same; but the best sort of all is a pale-coloured loam that is less sandy; they have about the same degree of fire given them in the baking, and they come out nearly of the same colour. These tiles are laid in mortar, because the roof being very flat, and many of them warped in the burning, will not cover the building so well as that no water can pass between them.

**Dutch glazed Pan-Tiles**, get the addition of glazing in the fire. Many kinds of earthy matter running into a glassy substance in great heat, is a great advantage to them, preserving them much longer than the common *pan-tiles*, so that they are very well worth the additional charge that attends the using them.

**English glazed Pan-Tiles**, are, in general, not so good as the Dutch ones under that denomination; but the process is nearly the same.

**Dutch Tiles**, for chimnies, are of a kind very different from all the rest. They are made of a whitish earth, glazed and painted with various figures, such as birds, flowers, or landscapes, in blue or purple colour; and sometimes quite white: they are about 6.5 inches each way, and three quarters of an inch thick. They are seldom used at present.

**Gutter-Tiles**, are made of the same earth as the common *pan-tiles*, and only differ from them in shape; but it is advisable that particular care be taken in tempering and working the earth for these, for none are more liable to accidents. The edges of these tiles are turned up at the larger ends for about 4 inches. They are seldom used where lead is to be had.

**Hip or Corner-Tiles**, are at first made flat like *pan-tiles* of a quadrangular figure, whose two sides are right lines, and the ends arches of circles; the upper end concave, and the lower convex; the latter being about 7 times as broad as the other: they are about 10.5 inches

10.5 inches long; but before they are burnt are laid upon a mould in the form of a *ridge tile*, having a hole at the narrow end, to nail them on the hip corner of the roof.

*Ridge-TILES* are used to cover the ridges of houses, and are made in the form of a semi-cylindrical surface, about 13 inches in length, and of the same thickness as *plain-tiles*; their breadth at the outside measures about 16 inches.

*TILLAC*, *Fr.* the same as *pont*, which signifies the deck of a ship.

*Franc-TILLAC*, *Fr.* the lower deck.

*TILT*, a thrust, or fight with rapiers; also an old military game. See *TOURNAMENT*.

*TILTER*, one who fights or contests in a tournament.

*TIMARIOT*, a Turkish soldier who has a certain allowance made him, for which he is not only obliged to arm, clothe, and accoutre himself, but he must likewise provide a certain number of militia-men. The allowance is called *Timar*.

The *Timariots* are under the immediate command of the *Sangiack* or *Bey*, according to their particular distribution. When the *Timariots* belonging to *Natolia*, do not join the standard, they forfeit a whole year's allowance, which is deposited in a chest or stock-purse called *mankafut*. But the *Timariots* in Europe or Turkey, are not liable to this fine. When they refuse to serve, they are suspended for two years. The income of a *Timariot* amounts to five thousand aspres, and the *Timariots* of Hungary have six thousand. When an Hungarian *Timariot* dies, the *Bashaw* of Buda has the power of dividing his property into two parts, which is placed to the account of the Ottoman government, and enables it to pay two soldiers.

There are different classes among the *Timariots*. Some are called *Ikmalers*, some *Isels*, and others *Bernobets*.

The *Ikmalers* are in possession of that species of *timar* which cannot be divided for the benefit of government, after the decease of the individual.

The *Isels* are subject to a division of property among two or three persons, at the will of the Porté.

The *Bernobets* are in possession of that kind of *timar*, which may become

the property of three or four individuals who serve together, or relieve each other alternately, on condition that the one who takes the field enjoys the whole benefit of the *timar* during his stay with the army. There are many of this kind in *Natolia*. Every thing which appertains to the Turkish cavalry, known by the name of *Topachly*, and which is regularly clothed, armed, accoutred, and paid by certain officers belonging to the Ottoman empire, out of revenues called *maly-mukata*, may be ascertained and known under the several appellations of *Timariots*, *Zaims*, *Begliers*, and *Beglier-beys*.

*TIMARS*, certain revenues, in Turkey, growing out of lands which originally belonged to Christian clergy and nobility, and which the sultans seized, when they conquered the countries they inhabited.

By means of these *Timars* and *Ziamets*, the Grand Signor is enabled to support the greatest part of his cavalry.

The *Timars* differ in value. The richest, however, do not exceed twenty thousand aspres annually, which may be considered as equal to about sixty or seventy pounds sterling; and the *Ziamets* receive full as much. Those who are entitled to *Timars*, are called *Timariots*, and those who have *Ziamets* are named *Zaims*.

*TIMBALE*, *Fr.* A brass kettle-drum, such as is used in the cavalry. French soldiers say figuratively, *Faire bouillir la timbale*; to make the pot boil.

*TIMBALIER*, *Fr.* Kettle drummer.

*TIMBER*, in military architecture, includes all kinds of felled and seasoned wood used in the several parts of building, &c.

*Oak*, of all the different kinds of timber known in Europe for building, is the best in every respect; because, when well seasoned and dry, it is very tough and hard: it does not split so easy as other timber, and bears a much greater weight. When it is used under cover, it never perishes, no more than in water; on the contrary, the older it grows the harder it becomes; and when it is exposed to the weather, it exceeds all other timbers for durability. English oak is the best, American the next, then Norway, and lastly German.

*Elm*, if felled between November and February, is all spine, or heart, and no sap, and is of singular use in places where it is always wet or dry. It is very tough and pliable; it is easily worked, and does not readily split; it bears driving of bolts and nails into it better than any other wood; for which reason it is almost the only kind of wood used in artillery.

*Beech* is likewise a very useful wood; it is very tough and white when young, and of great strength, but liable to warp very much when exposed to the weather, and to be worn-eaten when used within doors. It is frequently used for axle-trees, scellies, and all kinds of wheelwright work; but where it is kept constantly wet, and free from air, it will outlast oak.

*Ash*. Its use is almost universal, but it is rather scarce in most parts of Europe. It serves in buildings, or for any other uses where it is screened from the weather: hand-spikes and oars are chiefly made of it; and indeed it is the only wood that is fit for this, or any other purpose, which requires toughness and pliability.

*Fir*, commonly known by the name of *deal*, is of late much used in building, especially within doors. It wants but little seasoning, and is much stronger while the resinous particles are not exhausted, than when it is very dry: it will last long under water.

*Chesnut-tree*, especially wild chesnut, is by many esteemed to be as good as oak, but is exceedingly rare.

There are many other kinds of wood, but not generally used in military works, consequently not mentioned here.

*Preserving of TIMBER*. When boards, &c. are dried, seasoned, and fixed in their places, care is to be taken to defend and preserve them; to which the smearing them with linseed oil, tar, or the like oleaginous matter, contributes much.

The Dutch preserve their gates, portcullises, draw-bridges, sluices, &c. by coating them over with a mixture of pitch and tar, whereon they strew small pieces of cockle, and other shells, beaten almost to powder, and mixed with sea-sand, which incrusts and arms

them wonderfully against wind and weather.

*Seasoning of TIMBER*. As soon as felled, it should be laid in some dry airy place, but out of reach of too much wind or sun, which, in excess, will subject it to crack and fly. It is not to be set upright, but laid along, one tree upon another, only with some short blocks between, to give it the better airing, and prevent it becoming mouldy, which will rot the surface and produce mushrooms on it. Some persons daub the trees all over with cow dung, which occasions their drying equally, and prevents their cracking, as they are otherwise very apt to do.

Some recommend the burying timber in the earth, as the best method of seasoning it; and others have found it a fine preservative to bury their timber under the wheat in their granaries; but this cannot be made a general practice. In Norway they season their deal planks, by laying them in salt water for three or four days, when new sawed, and drying them in the sun: this is found a great advantage to them; but neither this, nor any thing else, can prevent their shrinking.

Timber should always be seasoned, when it is intended for piles and other pieces that are to stand under the earth or water. The Venetians first found out this method; and the way they do it is this: they put the piece to be seasoned in a strong and violent flame, turning it continually round by means of an engine, taking it out when it is every where covered with a black coaly crust; by this means the internal part of the wood is so hardened, that neither earth nor water can damage it for a long time after.

*TIMBRE*, *Fr.* This word is sometimes used to signify a helmet.

*TIMBRE*, *Fr.* stamped. The French say figuratively—*Avoir l'esprit mal timbré*, to want sense.

*TIME*, the measure of duration, by which soldiers regulate the cadence of a march; as *ordinary*, *quick*, and *quickest* time or step, *which see*.

*TIME*, in manœuvring. That necessary interval betwixt each motion in the manual exercise, as well as in every movement of the army, or of any body of men.

*TIME*,

**TIME**, in fencing. There are three kinds of time; that of the sword, that of the foot, and that of the whole body. All the times that are perceived out of their measure, are only to be considered as appels or feints to deceive and amuse the enemy.

**TIME thrust**, in fencing. A thrust given upon any opening which may occur by an inaccurate or wide motion of your adversary, when changing his guard, &c.

**TIMING**, is the accurate and critical throwing in of a cut or thrust upon any opening that may occur, as your adversary changes his position.

**TIMON**, *Fr.* shafts of a cart, coach-pole.

**TIMONIER**, *Fr.* This word is frequently used as a sea term by the French, and signifies helmsman, or steersman, from *Timon*, which is applied to the part of the helm he holds.

**TIN tubes**. See **TUBES** and **LABORATORY**.

**TINDALS**, *Ind.* native officers employed in the artillery, and in ships.

**TIR**, *Fr.* in artillery, a term used to express the explosion or discharge of any fire-arm in any given direction. *Un bon, un mauvais tir*, a good, a bad shot; or a shot well or ill directed.

*La théorie de Tir*, *Fr.* the theory or art of firing.

**TIR perpendiculaire**, *Fr.* a shot made in a perpendicular direction.

**TIR oblique**, *Fr.* an oblique shot.

**TIR à ricochet**, *Fr.* a ricochet shot.

**TIR rasant**, *Fr.* a grazing shot; or shot made *rasant*. See **FORTIFICATION**.

**TIR plongeant**, *Fr.* a downward or plunging shot.

**TIR fichant**, *Fr.* a shot made *fichant*. See **FORTIFICATION**.

*La justesse du Tir*, *Fr.* the true direction of a shot. The French say, *ce fusil n'a pas le tir juste*, this musquet has not a true direction, or its shot diverges from the point levelled at.

**TIRAILLER**, *Fr.* to pester; to annoy: hence the word *Tirailleur*.

**TIRAILLEUR**. This word originally meant a bad shot. It now signifies a soldier who fires as he pleases.

**TIBAILLEURS** are likewise skirmishers or marksmen, advanced in front to annoy the enemy, and draw off his at-

tention; or they are left behind to amuse and stop his progress in the pursuit.

**TIRE**, are great guns, shot, shells, &c. placed in a regular form. See **PILES**.

**TIRE-balle**, *Fr.* an instrument used by surgeons to extract musquet-balls. This word is also used, by the French, to express a strong worm, with which bullets and balls are drawn out, after having been well rammed down.

**TIRE-bourre**, *Fr.* in artillery, a wad-hook. It likewise signifies a worm to draw the charge out of a musquet.

**TIREfond**, *Fr.* an instrument which is used among the French to fix a petard. It likewise means a surgeon's tenebra or piercer.

**TIRE ligne**, *Fr.* an instrument used in drawing lines.

**TIRE-ployer**, *Fr.* to discharge; to unload.

**TIRER**, *Fr.* to shoot; to fire.

**TIRER à boulets rouges**, *Fr.* to fire with red hot shot.

**TIRER des armes à feu**, *Fr.* to fire any species of fire-arm. There is a curious and well written passage on this subject in the *Supplément aux rêveries de M. le Maréchal de Saxe*, page 76.

**TIRER le canon**, *Fr.* to fire or discharge pieces of ordnance.

**TIRER** likewise means to move towards any place, viz. *Après la bataille gagnée, l'armée tira vers un tel lieu*, after the battle had been won, the army moved towards such a quarter.

**TIRER dix ou douze pieds d'eau**, *Fr.* to draw ten or twelve feet water.

**TIRER à la mer**, *Fr.* to put off to sea.

**TIRER l'épée**, *Fr.* to draw swords; to fight.

**TIRER l'épée contre son Prince**, *Fr.* to rise in open rebellion against your king.

**TIRER un homme de prison**, *Fr.* to take a man out of prison.

**TIRER le plan d'une forteresse**, *Fr.* to draw or take a plan of a fortress.

**TIREUR**, *Fr.* a game-keeper; a shooter.

**TIREUR d'arc**, *Fr.* a Bowman; an archer.

**TIREUR d'armes**, *Fr.* a fencing-master.

**TIROILIANS**, a body of sharp shoot-

ers in the Austrian service. They take their name from the Tirol, a country in Germany, about 150 miles long, and 120 broad. It is rather mountainous, and is part of the hereditary dominions of the House of Austria.

**TIRONES.** Among the ancient Romans the *Tirones* were supernumerary soldiers, who were not enrolled or enlisted, but were regularly sworn when they replaced the superannuated, or dead, belonging to a legion.

**TOCSEING ou, Tocsin, Fr.** an old French word which signified a bell, and which was formerly rung for the purpose of assembling the people. The *Tocseing* was also used in the army in those days, to sound the charge, or to give notice of the approach of an enemy.

**TOGA Militaris,** the dress which was anciently worn, tucked up, by the Roman soldiers, when they were quartered in a town. The *Sagum* was worn in camp.

**TOILE, Ind.** a canoe.

**TOILE, Fr.** canvas. The French say as we do, *l'armée est sous la Toile*, the army is under canvas, or is encamped.

**TOISE,** in military mensuration, is a French measure, containing 6 feet, or a fathom: a square toise is 36 square feet, and a cubical toise is 216 feet.

These two measures correspond in the division of the feet; but these divisions being unequal, it is necessary to observe, that the proportion of the yard, as fixed by the Royal Society at London, to the half toise as fixed by the Royal Academy at Paris, is as 36 to 33.355.

**TOISE carrée, Fr.** any square extent, having six feet in every sense.

**TOISE cube, Fr.** any substance having 6 feet in length, 6 ditto in breadth, and 6 in depth.

**Le Toise, Fr.** This word is used in the masculine gender, and signifies, in mathematics, the science or art of measuring surfaces and solids, and of reducing the measure by accurate calculation.

**Une affaire Toisée,** a familiar phrase, signifying, the thing is done, all over.

**TOISER, Fr.** to measure by the toise.

**TOISER, Fr.** in a military sense, to take the height of a man, as, *toiser un*

*soldat*, to take the height of a soldier. The French likewise say in a figurative sense, *toiser son homme* to examine one's man with great attention, in order to find out his merits, or good qualities.

**TOISEUR, Fr.** a person employed, among the French, in the constructing and repairing of fortifications.

**TOISEUR, Fr.** a measurer.

**TOISON d'or, Fr.** the golden fleece.

**La Toison, Fr.** the order of the Golden Fleece is so called.

**TOKERY, Ind.** a basket made with cane.

**TOLE, Fr.** plates.

**TOLOQUENO,** a sort of dough which the Russian soldier bakes on thin plates of heated iron, and carries with him for subsistence in time of war.

**TOLPACHES.** See *TALPATCHE*.

**TOMAN, Ind.** ten thousand men.

**TOMAND, Ind.** equal to something more than three guineas.

**TOMBET, Fr.** to fall. *Le vent tombe*, the wind falls; *tomber entre les mains des ennemis*, to fall into the hands of enemies.

**TOMBIE, Ind.** a wind instrument made in the shape of a globe.

**TOMPION.** See *TAMPION*.

**TAMSOOK Hazin Zaminee, Ind.** a security for personal appearance.

**TAMTOM, Ind.** a drum made in the shape of a tambourine.

**TONDIN, Fr.** a term in architecture which is seldom used. It is the same as the astragal or fillet, which goes round the base of pillars.

**TONG.** See *TENAILLE*.

**TONGS of a wagon,** a piece of wood fixed between the middle of the hind ends of the shafts, mortised into the fore cross-bar, and let into the hind cross-bar.

**TONGUE of a sword,** that part of the blade on which the gripe, shell and pommel are fixed.

**A triangular TONGUE,** the bayonet figuratively so called from its shape. Its wonderful effect, in peremptorily putting an end to the senseless jargon of contending factions, has sometimes been acknowledged. Cromwell, who was a man of few words, and since him Bonaparte (equally remarkable for his taciturnity)

taciturnity) found the application of it wonderfully eloquent.

**Devil's Tower**, a battery so called in Gibraltar. See Colonel Drinkwater's account of the memorable defence of that honorary, but unprofitable spot, to Great Britain.

**TONNAGE**, *Fr.* a word adopted from our term tonnage.

**TONNAGE**, a custom or impost due for merchandize, brought or carried in tons, from or to other nations, after a certain rate in every ton.

**TONNAGE**. The usual method of finding the tonnage of any ship is by the following rule:—Multiply the length of the keel by the breadth of the beam, and that product by half the breadth of the beam; and divide the last product by 94, and the quotient will be the tonnage.

Ship's keel 72 feet: breadth of beam 24 feet.

$$\frac{72 \times 24 \times 12}{94} = 2206 \text{ tonnage.}$$

The tonnage of goods and stores is taken sometimes by weight and sometimes by measurement; and that method is allowed to the vessel which yields the most tonnage.—In tonnage by weight, 20 cwt. make 1 ton.—In tonnage by measurement, 40 cubic feet equal 1 ton.—All carriages, or other stores, to be measured for tonnage, are taken to pieces, and packed in the manner which will occupy the least room on board ship.—All ordnance, whether brass or iron, is taken in tonnage by its actual weight.—Musquet cartridges, in barrels or boxes, all ammunition in boxes, and other articles of great weight, are taken in tonnage according to their actual weight.

The following is the tonnage allowed to the military officers of the ordnance embarked for foreign service, for their camp equipage and baggage:—

For a field officer - 5 tons:

For a captain - 3 do.

For a subaltern - 1½ do.

**TONNE**, *Fr.* a tun: it likewise signifies a large cask or vessel which is used for stores and ammunition.

**TONNEAUX Mentrriers**, *Fr.* casks which are bound together with ropes, or circled round by iron hoops, and are filled with gunpowder, pebbles, &c. The particular method in which these

casks are prepared may be seen in *Tom. II. page 218, Des Euvres Militaires.*

**TONNELLON**, *Fr.* a drawbridge, which was used, by the ancients, in order to get suddenly over the fosse upon the walls of a besieged place.

**TONNERRE**, *Fr.* that part of a piece of ordnance, or fire-arm, wherein the charge is deposited.

**TOOKSOWARS**, *Ind.* the vizir's body of cavalry.

**TOOLS**, used in war, are of many denominations and uses, as laboratory tools, mining tools, artificers tools, &c. which see.

**TOOP**, *Ind.* a small wood or grove.

**TOOP-e Walla**, *Ind.* a person who wears a hat.

**TOQP Conna**, *Ind.* the place where the guns are kept.

**TOPARCH**, (*Toparque*, *Fr.*) the principal man in a place.

**TOPARCHY**, (*Toparchie*, *Fr.*) superintendence; command in a district.

**TOPASS**, *Ind.* This name was originally given by the natives of India to a native Portuguese soldier, on account of his wearing a hat. It is now generally used to distinguish all Europeans.

**TOPEYS**, *Fr.* the cannoniers belonging to a Turkish army are so called.

**TOPGI-Bachi**. Grand master of the Turkish artillery. This appointment is one of the most important situations in the gift of the Porte. It is generally bestowed upon a relation to the Grand Signor, or upon a favourite to the Grand Visier.

The name is derived from *Top*, which, in the Turkish language, signifies cannon, and from *Bach*, which means lord, chief or commandant.

The person next in command to the Topgi-Bachi is called *Dukigi-Bachi*, or Master of the Topgis, who are both cannoners and founders. The latter are paid every month by a commissary of their own, whom they call *Kiatib*.

**TOPGIS**, sometimes written *Topchis*. A name generally used among the Turks to signify all persons employed in the casting of cannon, and who are afterwards appointed to the guns. It is here necessary to observe, that on account of the vast extent of the Ottoman empire, the Turks do not attach much heavy ordnance to their armies, especially when they carry on their operations

rations from one frontier to another. This is owing to the scarcity of draught horses, and to the natural obstacles of the country. So that they seldom carry into the field above eight or twelve-pounders.

But when it is their design to form any considerable siege, they load camels with all the materials requisite for casting cannon. A certain number of Topgis accompany them, and the instant the army takes up its quarters near to the spot where the attack is to be made, they set to work and make pieces of ordnance of every species of calibre or bore.

The Turkish cannon is extremely beautiful and well cast. The ornamental parts consist of plants, fruits, &c. for it is expressly forbidden in the Alcoran to give the representation of any human figure upon fire-arms, particularly upon pieces of ordnance; the Turks being taught to believe that God would order the workman to give it life, or would condemn him to eternal punishment.

The Turks are very awkward in constructing platforms for their batteries, and are almost ignorant of the art of pointing their pieces. From a consciousness of their deficiency on this head, they encourage Christian artillerymen and engineers to come amongst them; but until the present war they seldom viewed them but with a jealous eye, and always gave the preference to renegadoes. General Koehler, with a few British officers belonging to the train, joined their army last year for the purpose of acting against Egypt.

**TOPOGRAPHER.** A person skilled in ground and locality, &c.

**TOPOGRAPHY.** In *military history*, a description or draught of some particular place, or small tract of land, as that of a fortification, city, manor or tenement, garden, house, castle, fort, or the like; such as engineers set out in their drawings, for the information of their prince or general. Hence a Topographical Chart — *Carte Topographique*. Topography constitutes, very deservedly, a principal branch of study at the Royal Military College or School.

**TOPSYTURVY.** Upside down, or, as our old authors more properly wrote it, (to use Mr. Tooke's words in his *Diversions of Purley*, 2d edit. page 329)

Up so down; bottom upward. It corresponds with the French term, *sans dessus dessous*; without top or bottom; i. e. a situation of confusion, in which you cannot discern the top from the bottom, or say which is the top and which the bottom. When a battalion is so awkwardly managed, either through the ignorance of the chief who gives the several words of command, or through the dullness of the officers and soldiers who are to execute them, that the grenadiers get where the light infantry should stand, and the rest of the companies out of their proper fronts and positions, such a battalion may be said to be topsyturvy. There is a sea-phrase in familiar use among the military, which means the same thing, viz. *To Capsize, Renverser. Chavirer quelque chose, comme une embarcation, &c.* To turn upside down, as to capsize a piece of ordnance. Hence, figuratively, to capsize a battalion, which means the same as to club a battalion. See *TO CLUB*.

**TOQUE, Fr.** A velvet cap with the sides turned up, and flat at the top. The *Cent Suisses*, or the King's Swiss body guard, wore the *toque* during the French monarchy.

**TOR,** a tower, or turret.

**TORCHES, (Torches, Fr.)** In military matters, are lights used at sieges, &c. They are generally made of thick ropes, &c.

**TORCHES inextinguibles, Fr.** Particular lights or torches, which are made for the use and convenience of workmen at a siege, and which are not extinguished by wind or rain.

**TORCHIS, Fr.** Mud-clay, with which cottagers' huts, &c. are made in most countries.

**TORE, Fr.** See *Torus*.

**TORUS.** In architecture, a large round moulding used in the bases of columns.

**TORLAQUI.** A sort of priest in Turkey.

**TORMENTUM.** An instrument of torture, which was used by the ancient Romans, when they had reason to suspect the fidelity or honesty of a slave. The delinquent was tied to a wheel, by his neck; having his legs and arms fastened on it in the form of St. Andrew's cross. The wheel was then put

## T O U

in rapid motion, and continued so, until some confession was extorted from him. This punishment was confined to slaves.

*La Question*, among the French, was an imitation of this barbarous practice; with this difference, that it was extended to all ranks and degrees, to answer the views of despotism and tyranny.

**TORNADO.** A Portuguese word, which is used, on the southern coasts of Africa, to express furious whirlwinds that are often fatal to mariners and seamen. Dr. Johnson calls it generally, a hurricane, or a whirlwind.

**TORSE, Fr.** This word means literally, twisted. In architecture it signifies a pillar, the body of which, or the part between the base and the capital, is surrounded with concave and convex circular lines.

**\* TORTOISE.** See *TESTUDO*.

**TORTS, Fr.** See *WRONGS*.

**TORTUE, Fr.** Literally means tortoise. It likewise signifies the testudo, a warlike machine which was used among the ancients.

**TORRE d'hommes, Fr.** A particular formation which was formerly adopted by the besieged when they made a sortie.

**TORTUE de Mer, Fr.** A sort of vessel which has its deck raised in such a manner, that it resembles the roof of a house, beneath which soldiers and passengers may conveniently stand or sit with their baggage in bad weather.

**TOSHA Couna, Ind.** Store-room, wardrobe.

**TOSTE, Fr.** A rowing bench in a boat. It is likewise called *Toste de Chaloupe*.

**TOUCHER, Fr.** to touch. The French say—*Toucher ses appointements*, to touch, or receive one's pay or allowances.

**TOUCH-HOLE.** The vent through which the fire is conveyed to the powder in the chamber of a gun. See page 42, vol 1, of Macdonald's *Tactics* from the French.

**TOUR.** Turn. That which is done by succession.

**Tour of duty.** The tour of duty, throughout the British army, is always from the eldest downwards. The following are the different heads of duty, and the ranks in which they respectively stand.

1. The king's guard.

## T O U

2. The guards of the royal family.
3. The commander in chief's guard.
4. Detachments of the army and outposts.

5. General officer's guard.

6. The ordinary guards in camp and garrison.

7. Pickets.

8. Courts-martial.

9. Fatigues, or duties which are done without arms.

**Tour bastionnée, Fr.** A small bastion, with subterraneous passages under it, which are bomb proof, where cannon is placed to defend the pass of a fortified place.

**Tour à feu, Fr.** A light-house.

**Tour de bâton, Fr.** By-profits. See *Baton*.

**TOURS Mobiles, Fr.** Moveable towers. These were in use of in remote ages; and although the invention of them has been attributed by some to the Greeks, and by others to the Romans, it does not belong to either; for we read of moveable towers in Ezekiel. The curious may derive much information on this head from the Chevalier Polard, in his translation of Polybius, page 536, tom. ii. See *Moveable Towers*.

**Tours isolées, Fr.** Detached towers; such as are made in forts, or stand upon the coast to serve for light-houses.

**Tours terrières, Fr.** Large Pieces of wood which are used in mechanical operations to convey or remove heavy burthens.

**La TOURBE menue, Fr.** The common people, the rabble.

**TOURBILLON, Fr.** Whirlwind, vortex. The French likewise call a water-spout by this name.

**TOURBILLON de feu, Fr.** See *Soleil Montant*.

**TOURELLE, Fr.** A turret.

**TOURILLON, Fr.** A sort of pivot upon which several machines, such as draw-bridges, &c. are made to turn.

**TOURILLONS.** See *Trunnions*.

**TOURMENTE, Fr.** A violent storm.

**TOURNAMENT, from the old French word *tournoi*, which is derived from *turner*, to turn. An exercise of honour formerly practised, wherein princes and gentlemen afforded specimens of their dexterity and courage in public**

public places, by entering the lists and encountering all opposers. They were well mounted on horseback, clad in armour, and accoutred with lance and sword; first tilted at one another, and then drew their swords and fought hand to hand.

These exercises being designed to make the persons, who practised them, expert in the art of war, and also to entertain the court, the arms were, in a great measure, rendered so far innocuous, that they could not kill the combatants. For this purpose, the points of the lances and swords were broken off; but notwithstanding this precaution, frequent mischief occurred; in consequence of which, the Pope prohibited all sorts of tournaments, under pain of excommunication.

Tournaments had their origin from the ancient gladiatory combats, and not from the usage of the northern people, as is commonly believed. In Cicero's time they were called, by the Greek name, Anabatis; because their helmet, in a great measure, obstructed their seeing.

**TOURNÉE**, *Fr.* a circuitous journey made for the purpose of inspection, &c.

*Le Général fit une TOURNÉE pour examiner les avant postes*, *Fr.* the general went round to examine the outposts.

**TOURNE à gauche**, *Fr.* a tool used by carpenters, masons, and other artisans, in turning screws, saws, &c.

**TOURNER**, *Fr.* to turn. In military matters it signifies to get upon the flank, or in the rear, of any object you propose to attack.

**TOURNER un ouvrage**, *Fr.* in fortification, to turn a work. This is effected by cutting off its communication with the main body of the place, and taking possession of the gorge. *Tourner le flanc*, to turn the flank; *tourner l'aile droite ou l'aile gauche*, to turn the right or left wing; *tourner un poste, une montagne*, to get into the rear of a post, mountain, &c.

**TOURNIQUET**, *Fr.* a turnstile: it likewise signifies a swivel or iron ring.

**TOURNIQUET**, *Fr.* among artificers, a species of firework composed of two fuses, which, when set fire to, produces the same effect as the *soleil tour-  
nant*.

**TOURNIQUET**, (*Tourniquet*, *Fr.*) in

surgery, an instrument made of rollers, compasses, screws, &c. for compressing any wounded part, so as to stop hæmorrhages.

The common Tourniquet is very simple, consisting only of a roller, which, with the help of a small stick, serves to stop the effusion of blood from large arteries, in amputation, by forcibly tying up the limb. The things required in this operation are, a roller of a thumb's breadth, and of an ell in length; a small cylindrical stick, a conglomerated bandage, two fingers thick and four long; some compresses of a good length, and about three or four fingers breadth, to surround the legs and arms, and a square piece of strong paper or leather, about four fingers wide. By the regulations published in 1799, for the better management of the sick in regimental hospitals, every surgeon, and assistant-surgeon, is directed to have, among other surgical instruments, a certain number of tourniquets; and sergeants, &c. are to be taught the method of using it.

In May, 1798, two tourniquets were directed to be sent to each regiment, the rest are to be made by the men of the regiment; and besides one to each person, who will be taught the use of it, it is necessary to have four for every hundred men.

The non-commissioned officers, band, and drummers, of every regiment, are to be taught the manner of applying it, according to instructions sent down from the surgeon-general's department.

**TOURNOIS**, *Fr.* tournament.

**TOURTEAU Goudronné**, *Fr.* old rope which is untwisted, steeped in pitch or tar, and afterwards left to dry. It is used in fosses and other places during a siege. The French make the *Tourteau Goudronné* in the following manner.—Take 12 pounds of tar or pitch, 6 ditto of tallow or grease, which put to 3 pints of linseed oil, and boil the whole together. You then take old matches, or twisted pieces of rope of any length you want, and let them soak in the boiling liquor. If you wish to prevent them from burning too fast, add six pounds of resin and two of turpentine.

**TOUT le monde haut**, *Fr.* a French word of command at sea, which corresponds with our sea-phrase, *Pipe! all hands up*.

**TOUR**

*Tout le monde bas*, Fr. a French word of command at sea, which corresponds with, *Pipe!* all hands down.

*Toute volée*, Fr. point-blank.

*Tirer à Toute volée*, Fr. to fire point-blank.

**TOWER**, (*Tour*, Fr.) 'any' high building raised above another, consisting of several stories, usually of a round form, though sometimes square or polygonal; a fortress, a citadel. Towers are built for fortresses, prisons, &c. as the tower of the Bastille, which was destroyed by the inhabitants of Paris in 1789.

*The Tower of London*, commonly called *The Tower*, a building with five small turrets, at different angles, above it, situated on the banks of the river Thames. The Guards usually do duty in it. It is at present garrisoned by the invalids.

The Tower of London is not only a citadel to defend and command the city, river, &c. but it is also a royal palace, where the kings of England, with their courts, have sometimes lodged; a royal arsenal, wherein are stored arm, and ammunition for 60,000 soldiers; a treasury for the jewels and ornaments of the crown; a mint for coining money; the archive, wherein are preserved all the ancient records of the courts of Westminster, &c. and the chief prison for state delinquents. The officers belonging to the Tower of London consist of

	<i>per ann.</i>		
1 constable and chief governor at	1000	0	0
1 lieutenant-governor, at	700	0	0
1 deputy-lieutenant, at	365	0	0
1 major, at	182	10	0
1 chaplain, at	121	13	4
1 gentleman porter, at	84	6	8
1 gentleman gaoler, at	70	0	0
1 physician, at	182	10	0
1 surgeon, at	45	12	6
1 apothecary, 1 yeoman porter.			

**TOWER-bastions**, in fortification, are small towers made in the form of bastions, by M. Vauban, in his second and third method; with rooms or cellars underneath to place men and guns in them.

**Mortello Tower**, as adopted for the defence of the Island of Jersey. This tower is quite round, of a conical form,

being something broader at the base than the top, and about 40 feet high. It is built of the hard grit stone of the country, (which in general are very large), closely cemented together, and the surfaces rendered quite smooth by the hammer; the mason work is admirable. The only entrance is by a door  $7\frac{1}{2}$  feet from the ground; you ascend to this by a ladder, which is pulled up into the tower every night. The door is arched, and is  $5\frac{1}{2}$  feet high, and wide in proportion; the wall in this part is  $5\frac{1}{2}$  feet thick. Having quitted the ladder, you mount a step two feet high, and then you are on the first floor of the tower. This room is round, and 13 feet diameter in the clear. Underneath it is the magazine, to which there is no way of getting, except through a trap door that is in the middle of the floor. Round this room are eleven loop holes, for the men to fire through, and benches to stand on during this operation. On these benches their beds are placed at night; this is, in fact, their guard-room, for here is the fire-place, &c. &c.

To the next floor you ascend by a ladder also, through a trap-door, the ladder then may be pulled up, the trap closed, and all communication between the two stories completely cut off. In this room are four small windows; there are the same number of loop-holes, benches, &c. for the same purposes as the room below, but no fire-place. The loop-holes are not placed exactly over each other, but in quin-cunx order. This room is covered with a strong arch, in the center of which is a round hole 30 inches diameter. When you get through this hole, which you do by means of a ladder, you are then on the top of the tower.

At the sides of this hole are firmly fixed three very strong iron hoops or bars, which form an arch over it, on the top of which is a massy iron pin. On this pin, or pivot, rests the center of a large beam of wood, on one end of which is placed an iron 18 pound carronade, on a sort of frame, constructed like those used on board ships, where the gun slides back in the recoil. This end of the beam is supported by two pieces of timber, each resting on a small block wheel; the other end of the beam is supported by a lesser beam,

resting on a large block wheel. All these wheels run in a wooden groove, that goes round the inside of the parapet. The whole is so well contrived and balanced, that the beam is easily turned round, so that the gun may be fired over any part of the parapet.

The parapet is built of brick, and is  $4\frac{1}{2}$  feet high, with a slope of 4 feet, forming an angle of about  $22\frac{1}{2}$  degrees, with the top of the parapet. When the men proceed to load, they stand on a bench, and when loaded, step down, and are sheltered from the enemy's shot by the parapet: there are places also, on the top, for three wheel-pieces. The ordinary guard consists of a sergeant or corporal, and from 6 to 12 men. Some of the Towers are guarded by the veteran battalion, and others by the Militia of the island, who mount in their common working clothes.

The towers were built about 20 years ago, and were thought, until the middle of last year, to be perfectly complete for what they were designed, as well as the square towers in the forts; when machicoulis were added to all, and a carronade mounted, *en barbette*, on the top of each. Shot fired from so high an elevation is, in the opinion of engineers, of little use. The men inside the towers are quite safe from musketry, but those who are to load and fire the carronade, must be exposed as on a *barbette* battery. In case of attack, the guns on all these towers are manned by the Militia of the island; they are exercised at them every Sunday morning, but never fire powder. For the derivation of the word Martello, see MORTELLA.

**Movable Towers;** in ancient military history, were three stories high, built with large beams, each tower was placed on 4 wheels, or trucks, and towards the town covered with boiled leather, to guard it from fire, and to resist the darts; on each story 100 archers were posted. They were pushed with the force of men to the city wall. From these the soldiers, placed in the different stages, made such vigorous discharges, that none of the garrison dared to shew themselves on the rampart.

**TOWN,** any walled collection of houses.

**Town-Adjutant,** an assistant to the town-major. See ADJUTANT.

**Town-Major,** (*Major de Place*, Fr.) an officer constantly employed about the governor or officer commanding a garrison, &c. He issues the orders to the troops, and reads the common orders to fresh troops when they arrive. He commands according to the rank he had in the army; but if he never had any other commission than that of town or fort-major, he is to command as youngest captain. See MAJOR.

**TRABAND,** a trusty brave soldier in the Swiss infantry, whose particular duty was to guard the colours and the captain who led them. He was armed with a sword and a halbert, the blade of which was shaped like a pertuisan. He generally wore the colonel's livery, and was excused all the duties of a sentry. His pay was eight deniers more than the daily subsistence of the company.

**TRABEA,** (*Trabé*, Fr.) a white gown bordered with purple, and adorned with clavi or trabææ of scarlet. See Kennett R. A. page 313.

**TRABOU,** a species of fire-arm resembling a blunderbuss, with a very wide muzzle, carrying ten or twelve small pistol balls; used by the Austrians in 1760. Warnery speaks of this fire-arm, but observes, at the same time, that the Prussians never perceived any effect produced by it.

**TRACÉ,** Fr. This word is used, by the French, in fortification, as a substantive; thus, *le tracé d'un ouvrage*, the plan or drawing of a work.

**TRACER,** Fr. to trace.

**TRACES,** the harness by which beasts of draught are enabled to move bodies to which they are yoked.

**TRADE,** according to Johnson, occupation; particular employment, whether manual or mercantile, distinguished from the liberal arts, or learned professions. Among the French, the word *métier*, which corresponds literally with trade, is applied to arts and learned professions, as *métier de la guerre*, the science or art of war. With us, as the learned *lexicographer* very justly states, trade is not expressive of any liberal art, science, or profession. It has been used, by some of

our best writers in a familiar and ir-  
 chanical sense. Thus Dryden writes :

The rude Esquicole,  
 Hunting their sport, and plund'ring was  
 their trade.

Fight under him, there's plunder to be  
 had.

A captain is a very gainful trade.  
 The whole division that to Mars per-  
 tains,

All trades of death, that deal in steel  
 for gains.

TRADE is also used to express ge-  
 nerally, instruments of occupation :

The shepherd bears  
 His house and household goods, his  
 trade of war;

His bow and quiver, and his trusty  
 cur.

DRYDEN.  
 TRAGULA. A javelin, with a  
 barbed head. It was used among the  
 ancients, and the wound, occasioned  
 by it, was extremely dangerous. It is  
 supposed to be the same as *Jaculum*  
*amentum*, or a javelin fastened with  
 something (such as a strap or string,) so  
 that it might be drawn back by the  
 thrower.

TRAGULARII. Soldiers among  
 the Romans, who shot arrows out of  
 cross-bows, or threw barbed javelins.

TRAINE, *Fr.* A term known  
 among French sailors and soldiers at  
 sea, to signify a thin rope, or rather  
 packthread, to which they tie their  
 linen; leaving it to float or be dragged  
 through the waves until it is clean.

TRAINE, *Fr.* This word is used  
 variously by the French, in conjunction  
 with other words, viz.

TRAINE-*Malheur*, *Fr.* A miserable  
 wretch.

TRAINE-*potence*, *Fr.* A villain;  
 a gallows-looking fellow.

TRAINE-*rapicre*, *Fr.* A bully; a  
 hectoring fellow.

TRAINEAUX, *Fr.* Several pieces  
 of wood made in the form of a large  
 sledge, upon which pieces of ordnance  
 and stores, &c. are conveyed to the ram-  
 part, and brought from one place to  
 another.

TRAINÉE, *Fr.* A train. A cer-  
 tain length, or space, which is filled  
 with gunpowder, for the purpose of  
 setting fire to some particular spot or  
 place.

TRAINEURS. *Fr.* Men who on a

march lag behind, and thereby occa-  
 sion a loose and unconnected appear-  
 ance in the line of march. It is the  
 duty of the rear guard to pick up all  
 stragglers, and to report them to head-  
 quarters.

TRAINEUR *d'épée*. A parasite; a man  
 who has never done a day's duty, but  
 wears a sword and looks big.

TRAITE, *Fr.* A treaty.

TRAITE *Public*, *Fr.* An act, or  
 treaty which is made for the public, or  
 nation at large.

TRAHISON, *Fr.* Treason.

Haute, TRAHISON, *Fr.* High trea-  
 son.

Tuer en TRAHISON, *Fr.* To kill in  
 a treacherous manner.

TRAIL, in gunnery. The end of a  
 travelling carriage, opposite to the  
 wheels, and upon which the carriage  
 slides when uninhibited upon the bat-  
 tery. See CARRIAGES.

To TRAIL, literally means to draw  
 along the ground. In military matters  
 it signifies, to carry the firelock in an  
 oblique forward position, with the butt  
 just above the ground. Hence *Train*  
*Arms*, a word of command for that  
 purpose.

TRAIN, (*Train*, *Fr.*) In a military  
 sense, all the necessary apparatus, in-  
 plements of war, such as cannon, &c.  
 that are required at a siege or in the  
 field.

TRAIN of Artillery, (*Train d'artil-  
 lerie*, *Fr.*) in a general sense, means  
 the regiment of artillery; it also in-  
 cludes the great guns, and other pieces  
 of ordnance belonging to an army in the  
 field. See ARTILLERY.

TRAIN, (*Trainée*, *Fr.*) In mining. A  
 line of gunpowder laid to give fire to a  
 quantity thereof, which has been lodged  
 for the purpose of blowing up earth,  
 works, building, &c.

TRAIN, is also used to denote the at-  
 tendants of a prince or general, upon  
 many occasions.

TRAIN-bands, or trained-bands, a  
 name formerly given to the militia of  
 England.

TRAITEMENT, *Fr.* Allowance  
 or pay. As, *Traitement d'ving shil-  
 lings par jour*, an allowance of five  
 shillings per diem.

TRAITOR, (*Traître*, *Fr.*) A be-  
 trayor

trayer of his king and country; one who is guilty of high treason. Tacitus says, it was usual among the ancient Germans, to tie traitors and deserters to trees, and to let them die suspended from them.

**TRAITS, Fr.** Drag-ropes, &c. used in the artillery.

This word is generally used by the French to signify all sorts of arrows, darts, javelins, &c. that are cast out of bows, or thrown from the hand.

**TRAJET, See FERRY.**

**TRAME, Fr.** A plot.

**TRAME de la vie, Fr.** The thread of life.

**TRAMER, Fr.** To plot; to enter into a conspiracy.

**TRAMONTANE, Fr.** The north wind in the mediterranean is so termed by the French. It is so called, because it blows beyond the hills that are near Rome and Florence. The French say figuratively, *Perdre la tramontane*, to be at a loss.

**Une épée à deux TRANCHANS, Fr.** A two-edged sword.

**TRANCHANT, Fr.** Cutting.

**Couleurs TRANCHANTES, Fr.** Glaring colours.

**TRANCHÉE, Fr.** See TRENCH.

**TRANCHÉE double, Fr.** A double trench, one side of which serves as a traverse to the other; by which means they are mutually covered from a reverse or entilade firing.

**TRANCHÉE à crochet, Fr.** A bending trench, or one in the shape of a hook. This species of trench is found where the line turns, at the extremities of the places of arms, and at the ends of the cavaliers.

**TRANCHÉE directe, Fr.** A trench which is carried, or run out in a strait forward direction, and which serves to shut up any spot from whence you might be entiladed.

**TRANCHÉE tournante, Fr.** A trench which is carried round a work, that is or may be attacked. Of this description is the glacis, or the head of the trench.

**TRANCHÉE, (Retours de la, Fr.)** See *Retours*.

**TRANSFERS.** Soldiers taken out of one troop or company, and placed in another are so called.

When a man is transferred from one

troop to another, his own horse is to go with him (unless it be of a different colour from those of which the troop into which he goes is composed,) but not his arms, nor any of his accoutrements, excepting his belts; and if the troop receiving such man, finds out that he has not been transferred with his own horse, the commanding officer of it must immediately make his complaint to the officer commanding the regiment. The transfers are to be entered in the general, and troop, or company registers, as soon as they take place, so that no mistake may arise from delay.

Whenever a troop receives a man as a non-commissioned officer, or for any other reason, the troop that transfers, if it does not receive a non-commissioned officer in return, must receive a man from the troop, on which, in the course of the transfer, it fails to give a man to the said troop; and a troop so giving a man, must set apart its non-commissioned officers, officers' servants, and four men, including its lance corporals, if it has any; out of the remainder, the other captain chuses.

It ought to be generally observed, that the most convenient period at which transfers should be made, is the 24th day of each month.

**TRANSFIXED.** An ancient term used to express the state of being desperately wounded by some pointed instrument, as being run through by a spear, javelin, or bayonet, &c.

**TRANSFUGE, Fr.** From the Latin *Transfuga*, a turn-coat, a deserter, a runaway, one who abandons his party, in time of war, and goes over to the enemy. It also signifies, generally, any person that is guilty of tergiversation in private or public life. A French author has made the following distinction between *un transfuge et un déserteur*, which terms have been considered as synonymous. A man may be looked upon as a *transfuge*, or turn-coat, although he should not go over to the enemy of the party which he abandons. When the well-known Count de Saint-Germain, left France, and sought military employment under the king of Denmark, he was most unquestionably a transfuge, or deserter from his country; and when he again suddenly returned to France, on the commencement of hostilities

hostilities with Denmark, and became minister of the war department, he was equally looked upon in the same light. For it is a known truth, that to quit, abruptly, the service of any state or king, by which an individual has been paid, for the direct purpose of fighting under the banners of his adversary, not only implies desertion, but justifies the imputation of treachery; and it must be allowed, that that is a man's country, where he has been well received, and to which he has pledged his life and talents. There are certainly shades of difference in the manner, and in the motive of quitting one party for another.

The celebrated Eugene of Savoy, for instance, may be considered as a transfuge, but certainly with less reproach or disgrace than must be attached to Saint Germain; since the latter quitted France from peevishness, and unjustifiable disgust; whereas, Prince Eugene, (who had never received any commission in the French army, but was, on the contrary, rejected, with disdain, by Louis the XIVth. when he applied for service,) was graciously received by the Emperor of Germany, and remained attached to Austria, which became his country, during the remainder of his life. There were instances of both kinds, during our contest with the alienated colonies of America, which might be brought in illustration of this article. The French say proverbially, *On hait les transfuges plus que les ennemis mêmes*, one hates a transfuge, or a turn-coat more than the enemies themselves.

**TRANSOMS.** In artillery. Pieces of wood which join the cheeks of gun-carriages; there is but one in a truck-carriage, placed under the trunnion-holes; and four in a wheel-carriage, the trail, the centre, the bed, and the breast transoms.

**TRANSOM-plates**, with hooks. There is one on each side of the side-pieces, against each end of the transom, the bed-transom excepted, fastened by two transom-bolts.

**TRANSOM-bolt**, with bars. They serve to tie the side-pieces to the transom.

**TRANSPARATION**, *Fr.* This word is used by the French in hydraulics, to

signify the oozing of water through the pores of the earth. It often happens, in digging a canal through sandy ground, that the transpirations or oozings, are so plentiful as not to leave water enough for the intended purposes of navigation. This occurred at New-Brisack, when a canal was dug in order to convey materials for its fortifications. The waters having been let in, the whole body was absorbed in the space of twenty-four hours. This evil or inconvenience cau, however, be remedied; as may be seen in the fourth volume of Belidor's *Architecture Hydraulique*.

**TRANSPORT**, (*Vaisseau de transport*, *Fr.*) A vessel in which soldiers are conveyed on the sea.

**TRANSPORT-Board**. An office established in 1794, which has the entire arrangement of the transport service, and of prisoners of war, in conjunction with the sick and hurt board. It consists of five commissioners, who are captains in the navy, and a secretary.

**TRANSPORTEUR**, *Fr.* to transport; to remove, to change the situation of any thing.

**TRANSPORTER** *les files et les rangs d'un bataillon dans les évolutions*, *Fr.* To change files or ranks in military evolutions. To countermarch any given number of men so as to place the right where the left stood, and make the front rank take the ground that was occupied by the rear, with a different aspect. See **COUNTERMARCH**.

When the countermarch is effected on the centre, or by a central conversion, the French use the phrase—*Faire le moulinet*, from the similarity of movement round a central point; *moulinet* signifying *capstan*, *turnstile*, &c.

**TRANSPOSER** *les files d'un bataillon dans les évolutions*, *Fr.* To change the relative position of files in a battalion, that is, to countermarch the whole so as to make the natural front stand where the rear did, and to place those on the left that originally stood on the right.

**TRAP**. See **AMBUSH**, **STRATAGEM**, &c.

**TRAPE**, *Fr.* A falling door.

**TRAPEZE**, *Fr.* See **TRAPEZIUM**.

**TRAPEZOID**, (*Trapezoïde*, *Fr.*) A figure in geometry, which is formed by the

the circumvolution of a trapezium, in the same manner that a cylinder is by that of a parallelogram.

**TRAPEZIUM.** A quadrilateral or square figure whose four sides and angles are unequal, and no sides are parallel.

**TRAPPINGS.** See **Housings.**

**TRATTES, Fr.** The several beams and long pieces of wood which support the body of a windmill.

**TRAVADE, Fr.** A whirlwind; a violent squall accompanied by thunder and lightning.

**TRAVAILLER, Fr.** To work. In mechanics; to warp, to open, &c. The French say, *Ce bois travaille*, this wood warps—*Ce mur travaille*, this wall gives way, &c.

**TRAVAILLER, à la journée, Fr.** To work by the day—*à la pièce*, by the piece:—*à la tâche*, by the great:—*en bloc et en tâche*, by the great, by the lump.

**TRAVAILLER à toise, Fr.** To work by the toise. Works in fortification are generally done by this measure.

**TRAVAILLER par épaulées, Fr.** To execute a work with intervals of labour.

**TRAVAILLER** also signifies in a familiar sense, to work upon the feelings, or understanding of a person, so as to impose upon him.

**TRAVAILLER les esprits des soldats.** To work upon the minds of the soldiery. To excite them to insurrection.

**TRAVAILLER un pays, Fr.** To feel the pulse of a country by working upon the minds of the inhabitants; to excite them to support any particular cause.

**TRAVAILLEURS, Fr.** Literally workmen. In military matters, pioneers and soldiers employed in fatigue duties.

**TRAVAILLEURS, à la tranchée, Fr.** A detachment, consisting of a given number of men from each battalion, which is employed in the trenches. The soldiers who are sent upon this duty have only spades and pick-axes, and the officers who command them wear their swords.

**TRAVAISSON, Fr.** Entablature.

**TRAVAUX Militaires, Fr.** See **Military Works.**

**TRAVAUX avancés, Fr.** Advanced

works or outworks. The same as *pièces détachées*, or *dehors*. See **Dehors.**

**TRAVÉE, Fr.** A bay of joists.—A scaffold.

**TRAVELLING forge.** See **Forge.**

**TRAVERS, Fr.** A rope which is used to fasten cannon on their carriages, &c. and which serves for various other purposes.

**TRAVERSE.** In fortification, is a parapet made across the covert-way, opposite to the salient angles of the works, near the place of arms, to prevent being enfiladed. Traverses are 18 feet thick, and as high as the ridge of the glacis. There are also traverses made by caponiers; but then they are called *tambours*.

*To TRAVERSE* a gun, or mortar, is to bring her about to right or left with hand-spikes, till she is pointed exact to the object.

**TRAVERSE contre un commandement, Fr.** An elevation, made of earth, in a bastion, either on a curtain, or on any other work of a fortified place, for the purpose of protecting it against the enfilading fire of an enemy, from some commanding spot.

**TRAVERSE d'attaque.** See **Places d'armes.**

**TRAVERS de tranchée, Fr.** See **Traverse tournante.**

When an engineer, either through oversight, or even through necessity, has exposed himself to the enfilade of an enemy's cannon, he leaves a certain proportion of the field-terrepleine, in the bayau of the trench, in order to conceal from the besieged, the operations in that quarter.

**TRAVERSEE, Fr.** Passage; short trip by sea.

**TRAVERSIER, Fr.** A passage boat, &c. It likewise means a wind that blows into port: also a pontoon.

**TRAVERSINES, Fr.** Pieces of wood which are laid cross-ways in a dyke.

**TRAVERSING-plates**, in gun-carriages, are two thin iron plates, nailed on the hind part of a truck carriage of guns, where the hand-spike is used to traverse the gun.

**TRAVERSING**, in fencing, is the change of ground made by moving to right or left round the circle of defence.

**TRAVONS,**

**TRAVONS, Fr.** The large main beams in a wooden bridge, which support the joists, &c. They are likewise called *sommiers*.

**TRAVESTISEMENT, Fr.** Disguise. In the old French service, it was ordained, that no dragoon, or foot soldier, should change his uniform or regimentals whilst in garrison, nor within the boundaries of it. Every infraction of this order was punished with three months imprisonment.

**TRAUMATICK.** Vulnerary; useful to wounds; as *Traumatick* decoction.

**TREACHERY.** Perfidy; breach of faith.

**TREASON.** Disloyalty; treachery; perfidious dealing.

**High TREASON.** An offence against the security of the commonwealth, or of the king's majesty, whether by imagination, word or deed. It is a capital crime, and subjects the offender not only to loss of life, but also to forfeiture of all he may possess.

**TRECHETOR,** } One who betrays

**TRECHEUR,** } a place, or body of men. An obsolete word.

**TREFLE, Fr.** Trefoil. A term used in mining, from the similarity of the figure to trefoil. The simple trefle has only two lodgments; the double trefle four; and the triple one six.

**TREILLAGE, Fr.** Any assemblage of wood which is laid cross-ways. Of which description are the palisadoes, &c. in gardens.

**TREILLIS, Fr.** A general term for iron grating, &c. Such as is used for prisons.

**TRELLIS, Fr.** The method that is used in copying plans, &c. It consists of a certain arrangement of strait lines, which being measured at equal distances from one another, and crossed from right to left, represents a quantity of small equal squares. This arrangement, or disposition of lines is used by painters, engravers, and engineers, in taking accurate copies of plans, &c. and is called by the French *Trellis*.

**TREILLISER, Fr.** To trellis. To furnish with a trellis.

**TREMEAU, Fr.** An ancient term in fortification. See **MORTAR**.

**TRENCHANT, Fr.** Sharp or cutting.

**TRENCHES,** in a siege, are ditches

made by the besiegers, that they may approach more securely to the place attacked; on which account they are also called lines of approach. The tail of the trench is the place where it was begun, and its head is the place where it ends.

Trenches are also made to guard an encampment.

The trenches are usually opened or begun in the night-time, sometimes within musquet-shot, and sometimes within half or whole cannon-shot of the place; generally about 800 toises. They are carried on in winding lines, nearly parallel to the works, so as not to be in view of the enemy, nor exposed to the enemy's shot.

The workmen employed in the trenches, are always supported by a number of troops to defend them against the sallies of the besieged. The pioneers, and other workmen, sometimes work on their knees, and are usually covered with mantlets or saucissons; and the troops who support them lie flat on their faces, in order to avoid the enemy's shot. On the angles, or sides of the trench, there are lodgments, or epaulements, in form of traverses, the better to hinder the sallies of the garrison, and to favour the advancement of the trenches, and to sustain the workmen.

The platforms for the batteries are made behind the trenches; the first at a good distance, to be used only against the sallies of the garrison. As the approaches advance, the batteries are brought nearer, to ruin the defences of the place, and dismount the artillery of the besieged. The breach-batteries are made when the trenches are advanced near the covert-way.

If there are two attacks, it will be necessary to have lines of communication, or boyaus, between the two, with places of arms at convenient distances. The trenches are 6 or 7 feet high with the parapet, which is 5 feet thick, with banquettes for the soldiers to mount upon.

The approaches at a siege are generally carried on upon the capitals of the works attacked; because the capitals produced are, of all other situations in the front of a work, the least exposed to the fire of either the cannon or musquetry:

quetry; and are the least in the line of fire between the besieged and besieger's batteries. But if, from particular circumstances, these or other advantages do not attend the approaches upon the capitals, they are by no means to be preferred to other positions.

The trenches of communication, or zig-zags, are 3 feet deep, 10 feet wide at bottom, and 13 feet at top, having a berm of one foot, beyond which the earth is thrown to form a parapet.

The parallels, or places of arms of the trenches are 3 feet deep, 12 feet wide at bottom, and 17 or 13 feet wide at top, having a banquette of about 3 feet wide, with a slope of nearly as much.

The first night of opening the trenches, the greatest exertions are made to take advantage of the enemy's ignorance as to the side of attack; and they are generally carried on as far in advance as the first parallel, and even sometimes to the completion of that work. The workmen set out on this duty, each with a fascine of 6 feet, a pick-axe and a shovel; and the fascines being laid so as to lap one foot over each other, leave 5 feet of trench for each man to dig.

The usual method of directing the trenches or zig-zags, is by observing during the day, some near object in a line with the salient parts of the work, and which may serve as a direction in the night; or if the night be not very dark, the angles of the works may be seen above the horizon; but as both these methods are subject to uncertainty, the following is proposed to answer every case:—Having laid down the plan of attack, the exact positions of the flanked angles of the works of the front attacked, and particularly of those most extended to the right and left; mark on the plan the point of commencement for the first portions of zig-zag, the point where it crosses the capital, and the point to which it extends on the other side of the capital: this last point will be the commencement of the second branch: then mark off the point where this branch crosses the capital, and its extent on the other side; and this will give the commencement of the third branch; and so on for the others. Thus provided with a plan ready

marked off, it will be very easy, even in the darkest night, to lay down the points where the zig-zags are to cross the capital, and the points to which they are to be produced beyond them.—The first parallel is generally run about 600 yards from the place, and of such extent as to embrace the prolongation of the faces of all the works which fire upon the trenches; and each end has a return of about 30 or 40 yards.

The second parallel is constructed upon the same principles, and of the same extent as the first, at the distance of about 300 yards from the salient angles of the covert-way.—This parallel is usually formed of gabions; each workman carrying a gabion, a fascine, a shovel, and a pick-axe.—After this the trenches are usually carried on by sap.

The half parallels are about 140 or 150 yards from the covert-way, and extend sufficiently on each side to embrace the prolongation of the branches of the covert-way.

The third parallel must not be nearer than the foot of the glacis, or it will mask the ricochet batteries. It is generally made rather wider than the other parallels.

Cavaliers of the trenches must not be nearer than 23 yards from the covert-way, or they will be liable to be annoyed by hand grenades.

*Returns of a TRENCH*, are the elbows and turnings, which form the lines of approach, and are made, as near as can be parallel to the place, to prevent their being enfiladed.

*To mount the TRENCHES*, is to mount guard in the trenches, which is generally done in the night.

*To relieve the TRENCHES*, is to relieve the guard of the trenches.

*To scour the TRENCHES*, is to make a vigorous sally upon the guard of the trenches, force them to give way, and quit their ground, drive away the workmen, break down the parapet, fill up the trench, and nail their cannon.

*Counter-TRENCHES*, are trenches made against the besiegers; which consequently have their parapet turned against the enemy's approaches, and are enfiladed from several parts of the place, on purpose to render them useless to the enemy, if they should chance to

to become masters of them; but they should not be enfiladed, or commanded by any height in the enemy's possession.

To *open the TRENCHES*, is to break ground for the purpose of carrying on approaches towards a besieged place.

*TRENCH-Master*. A term formerly used in the British army to signify engineer. See *ENGINEER*.

*TRENTE-six mois*, Fr. Thirty-six months. A sea phrase. By this term was understood among the French before the revolution, *Un Engagé*, A person who hired himself for that period to another, on condition that the latter defrayed his passage to the East Indies; after the expiration of which term, the former was at liberty to settle in that country.

*TREPAN*, Fr. An instrument which is used to find out the quality of any ground into which beams or stakes are to be driven. Also an instrument used in surgery.

This instrument likewise serves to give air in the gallery of a mine, and its necessity is discovered by means of a lighted candle, when it ceases to blaze.

*TREPANER une mine*, Fr. To let fresh air into a mine.

*TREPIGNER*. To clatter. In horsemanship it is used to describe the action of a horse who beats the dust with his fore-feet in manning, without embracing the volt; who makes his motions and time short and near the ground, without being put upon his haunches. This defect is usually occasioned by a weakness in the shoulders.

*TRESOR*, Fr. The military chest.

*TRESORIER*, Fr. Paymaster. There were formerly on the French military establishment two classes of paymasters, viz. *Tresoriers de l'ordinaire*, et *tresoriers de l'extraordinaire*, Paymasters or treasurers for the ordinary expences of the service, and ditto for the extraordinary. The latter were accountable to government for a just distribution of stores and provisions, and gave in their estimates and vouchers to the comptroller general's office in Paris. These were formerly called *Clercs du Tresor* ou *Payeurs*, Clerks attached to the military chest or paymasters. They were partly the same as our paymasters and commissioners-general on service.

During the monarchy in France there

were several treasurers or paymasters general in ordinary belonging to the army, who had their several departments, viz.

*TRESORIER de la Gendarmerie et des Troupes de la Maison du Roi*, Fr. Treasurers or paymasters attached to the Gens d'arms and the king's household.

*TRESORIER de l'extraordinaire des guerres*, Fr. Treasurers or paymasters of the extraordinaries of the army.

*TRESORIER des Maréchaussées de France*, Fr. Treasurers or paymasters of the Marshalsey or armed police of France.

*TRESORIER payeur des troupes*, Fr. Treasurers or paymasters general of the forces.

*TRESORIER des gratifications*, Fr. Treasurers or paymasters of compensations, gratuities, &c.

*TRESORIER de la Prévôté de l'Hotel*, Fr. Treasurers or paymasters of the prévost-marshal's department at the hotel or town-hall in Paris.

*Le TRESORIER Général de l'Artillerie*, Fr. The treasurer or paymaster general of the artillery.

*Le TRESORIER Général des Fortifications*, Fr. The treasurer or paymaster-general of fortifications.

All these treasurers or paymasters were subject to their several comptrollers of accounts, and their issues, &c. were audited accordingly. There were likewise provincial or subordinate paymasters of the extraordinaries of the army. They were appointed by the treasurers or paymasters-general, and resided in the different departments and general districts of the kingdom. These appointments fell, of course, at the revolution, and they have since been replaced by a more simple and economical consolidation. The artillery has still its separate treasurer or paymaster. The district paymasters, who have been established in Great Britain, &c. during the present war, seem manifestly to have taken their origin from the old French arrangement.

*TREVE*, Fr. See *TRUCE*.

*TREVE du Seigneur*, Fr. A Particular law or injunction that was passed under Henry the Second, king of France, in the year 1041, by which all duels and private combats were forbidden from Wednesday night until

the morning of the Monday following. President *Hénaut* remarks, that this was all which could, in those days, be effected by royal authority and interference, to prevent men from killing one another.

**TREVET.** Any thing that stands upon three legs. An iron instrument to set a pot or saucepan on over the fire. It is likewise used in field-ovens.

**TREUIL, Fr.** A roll, an axle-tree, &c.

**TRIAIRES. Fr.** See **TRIARI.**

**TRIAL** Test, examination, experiment. It is in the power of his Majesty to dismiss an officer from the regular, militia, or volunteer service, without any species of investigation or trial. See **COURTS MARTIAL**, &c.

**TRIAL by Jury.** An investigation of matters of fact, before a certain number of men, impanelled upon cases of a criminal or civil nature. The trial by jury is the pride of English justice, and the bulwark of English liberty.

**TRIANGLE, (Triangle, Fr.)** The triangle may be considered as the most simple of all figures. It is composed of three lines and three angles, and is either plain or spherical.

A plain **TRIANGLE** is one that is contained under three right lines.

A Spherical **TRIANGLE** is a triangle that is contained under three arches of a great circle or sphere.

A right-angled **TRIANGLE** is one which has one right angle.

An acute-angled **TRIANGLE** is one that has all its angles acute.

An obtuse-angled **TRIANGLE** is that which has one obtuse angle.

An oblique-angled **TRIANGLE** is a triangle that is not right angled.

An equilateral **TRIANGLE** is one whose sides are all equal.

An isosceles **TRIANGLE**, ? A triangle

An equilegged **TRIANGLE** that has only two legs or sides equal.

A scalenus **TRIANGLE**. One that has not two sides equal.

Similar **TRIANGLES** are such as have all their three angles respectively equal to one another.

**TRIANGLES.** A small triangular piece of metal, which is used in military bands, emitting a sharp reverberating sound in concord with the rest of the music.

**TRIANGLES** likewise mean a wooden instrument, consisting of three poles

which are fastened at top in such a manner, that they may spread at bottom in a triangular form, and by means of spikes affixed to each pole, remain firm in the earth. An iron bar, breast high, goes across one side of the triangle. The triangles are used in some regiments for the purpose of inflicting military punishments.

**TRIANON, Fr.** A generical French term signifying any pavilion that stands in a park, and is unconnected with the castle or main building. Of this description was the French Queen's Petit Trianon in the neighbourhood of Versailles.

**TRIARI.** Soldiers so called among the Romans. According to Kennet, the Triarii were commonly veterans, or hardy old soldiers, of long experience and approved valour. They had their name from their position, being marshalled in the third place, as the main strength and hopes of their party. They were armed with a pike, a shield, a helmet, and a cuirass. They are sometimes called *Pilarii*, from their weapon the *Pila*. See KENNET'S ROMAN ANT. p. 190. They were likewise stiled *Tertiarii*. A certain number of these veterans was always distributed in each cohort.

Polybius, in his 6th book, classes the Roman troops under four different heads: the first he calls *Pilati* or *Velites*, light-armed men, selected from the lower order of the people, and generally composed of the youngest men in the army. The second class consisting of pikemen, *Hastati*, were more advanced in age, and had more experience. The third class, called *Principes*, were still older, and more warlike than the second.

The fourth class consisted of the oldest, most experienced, and bravest soldiers. These were always posted in the third rank, as reserve, to support the others in case they gave way. Hence their appellation of *triarii* or *tertiarii*; and hence the Roman proverb, *Ad triarium ventum est*, signifying thereby, that the last efforts were being made. The *triarii* were likewise named *post signani*, from being posted in the rear of the *princeps* who carried the standard in a legion.

**TRIBUNAL CASTRENSIS.** Among the ancient Romans the Tribunal *Castrensis*,

## T R I

trensis, or Camp-tribunal, was made of turf. The curulean chair was placed upon this elevation, and the Roman general not only dispensed justice, but also harangued the soldiers occasionally from it.

**TRIBUNATE**, (*Tribunat*, Fr.) The office of tribune.

**TRIBUNE**, (*Tribun*, Fr.) A title which was originally given to certain Roman magistrates, who were established for the specific purpose of maintaining the rights of the tribes or mass of the people, in opposition to the possible encroachments of the consuls and the senate; on which account they were stiled the tribunes of the people, *les tribuns du peuple*. The number, at first, was limited to two; but they were subsequently augmented to ten. There were likewise military tribunes, *tribuni militares*. These held commands of considerable extent in the Roman armies. According to the present constitution of France, there are civil tribunes who are presumed to have the same powers of control over the acts of the consuls and the conservatory senate for the benefit of the people, that constituted the character of the Roman tribunes.

**TRIBUNI Aëarii**. Paymasters-general belonging to the military establishment of ancient Rome. These persons were selected on account of their great wealth and known probity.

**TRIBUNI Militares**. See **TRIBUNES**.

**TRIBUNUS Celerum**. The chief or commandant of a body of men which Romulus, the founder of Rome, selected for his own body-guard. The individuals, who composed it, were called *celeres*, swift-footed. According to the *Dictionnaire des Dieux*, they were very wealthy, of high birth, and distinguished for their bodily and mental qualifications.

**TRICKER**. See **TRIGGER**.

**TRICOISSES**. Fr. Pincers used by farriers.

**TRICOT**, Fr. A cudgel.

**TRICOLOR**, Fr. Three-coloured. Hence the tricolor-cockade, which was adopted by the French at the commencement of their revolution. It consists of sky blue, pink, and white, and was emblematical of the three estates of the kingdom, viz. nobility, clergy, and peasantry. The armies still wear the

## T R I

tricolor, although the first order, or what is generally called the nobility, has been abolished since the 10th of August 1792.

**TRIER**, Fr. To pick and chuse. Hence, *trier les plus beaux soldats*, to pick out the finest soldiers. *Triage* is used as the substantive, signifying the act of picking and chusing.

**TRIGGER**, (*détente*, Fr.) an iron hook which is used to trig or stay a wheel; also a catch, which being pulled, disengages the cock of a gun-lock, that it may strike fire.

*Hair-TRIGGER*, (*détente à cheveux*, Fr.) The hair trigger is generally used for rifles, when there is a great nicety required in shooting. The difference between a hair trigger and a common trigger is this:—the hair trigger, when set, lets off the cock by the slightest touch; whereas the common trigger requires a considerable degree of force, and consequently is longer in its operation.

**TRIGON**, a triangle: hence,

**TRIGONOMETRY**, (*Trigonometrie*, Fr.) the art of measuring triangles, or of calculating the sides of any triangle sought. This is either plain or spherical.

**TRILATERAL**, having three sides.

**TRIMESTRE**, Fr. a period of three months.

**TRINGLE**, in architecture, a name common to several little square members or ornaments, as reglets, listels, and platbands. It is more particularly used for a little member fixed exactly over every triglyph, under the platband of the architrave; from whence hang down the guttae or pendent drops.

**TRINGLE**, Fr. a wooden rule.

**TRINGLER**, Fr. to draw a strait line upon wood by means of a stretched piece of packthread, or cord, which is chalked.

**TRINOME**, Fr. a word used among the French, in algebra, to express any quantity which is produced by the addition of three numbers or quantities that are incommensurable.

**TRINOMIAL**, or **TRINOMIAL root**, in mathematics, is a root consisting of three parts, connected together by the signs + or —, as  $x + y + z$ , or  $x - y - z$ .

**TRINQUET**, Fr. a word used in

the Levant to signify the mizen or foremast of a ship.

**TRINQUETTE**, *Fr.* a sail used on board the ships in the Levant, which is of a triangular shape.

**TRIOMPHÉ**, *Fr.* See **TRIUMPH**.

*Arche de TRIOMPHÉ*, *Fr.* a triumphal arch.

**TRIPASTE**, *Fr.* a machine which consists of three pulleys, and is used in raising heavy weights.

**TRIQUE**, *Fr.* a large cudgel.

**TRIQUE-BALLE**, *Fr.* a sling cart or machine which is used to convey pieces of ordnance from one quarter to another.

**TRIREME**, *Fr.* a galley with three benches for rowers.

**TRISECTION**, (*Trisection*, *Fr.*) the division of a thing into three. The term is chiefly used in geometry for the partition of an angle into three equal parts.

The trisection of an angle geometrically, is one of the great problems whose solution has been so much sought by mathematicians; being in this respect on a footing with the quadrature of the circle, and the duplicature of the cube angle.

**TRIUMPH**, a solemnity practised by the ancient Romans, to do honour to a victorious general.

There were two sorts of triumphs, the greater and the lesser, particularly called ovation; of these the triumph was by much the more splendid procession. None were capable of this honour but the dictator, consul, and pretors; though there are examples to the contrary, as particularly in Pompey the Great, who had a triumph decreed him when he was only a Roman knight, and had not yet reached the senatorial age.

The triumph was the most pompous show among the ancients: authors usually attribute its invention to Bacchus, and tell us, that he first triumphed upon the conquest of the Indies; and yet this ceremony was only in use among the Romans. The Grecians had a custom which resembled the Roman triumph; for the conquerors used to make a procession through the middle of their city, crowned with garlands, repeating hymns and songs, and brandishing their spears; their captives were also led by them, and all their spoils exposed to public view. The order of a Roman triumph was

chiefly thus: the senate having decreed the general a triumph, and appointed a day, they went out of the city gate and marched in order with him through the city. The cavalcade was led up by the musicians, who had crowns on their heads; and after them came several chariots with plans and maps of the cities and countries subdued, done in *relievo*: they were followed by the spoils taken from the enemy; their horses, arms, gold, silver, machines, tents, &c. After these came the kings, princes, or generals subdued, loaded with chains, and followed by mimics or buffoons, who exulted over their misfortunes. Next came the officers of the conquering troops, with crowns on their heads. Then appeared the triumphal chariot, in which was the conqueror, richly clad in a purple robe, embroidered with gold, setting forth his glorious achievements. His buskins were beset with pearl, and he wore a crown, which at first was only laurel, but afterwards gold; one hand held a laurel-branch, the other a truncheon. His children were sometimes at his feet, and sometimes on the chariot-horses. As the triumphal chariot passed along, the people strewed flowers before it. The music played in praise of the conqueror, amidst the loud acclamations of the people, crying, *To triumph*. The chariot was followed by the senate clad in white robes; and the senate by such citizens as had been set at liberty or ransomed. The procession was closed by the sacrifices, and their officers and utensils, with a white ox led along for the chief victim. In the mean time all the temples were open, and the altars were loaded with offerings and incense; games and combats were celebrated in the public places, and rejoicings appeared every where.

**TRIVIRI**, or **TRESVIRI CAPITALES**, men employed, among the ancient Romans, to preserve the public peace, &c. For particulars, see *Kenet's Roman Antiquities*, page 121. They likewise signify the three persons, Cæsar, Crassus, and Pompey, who seized on the government of the republic, and divided it among them.—Hence,

**TRIVIRATE** (*Trivirate*, *Fr.*) An absolute government administered by three persons with equal authority.

There

There are two triumvirates particularly recorded in history: Pompey, Caesar, and Crassus, who had all served the republic as generals of marked reputation in the first instance; and Augustus, Mark Anthony, and Lepidus, in the second.

**TROCHLEA.** One of the mechanical powers usually called a pulley.

**TROCHOID,** in mathematics. The same as cycloid.

**TROCHOLIQUE, Fr.** a name used among the French for that branch of mathematics which treats of circular movements.

**TROMBE, Fr.** a water-spout. It is likewise called *Siphon* or *Syphon*.

**TROMPE, Fr.** in architecture, an arch which grows wider towards the top.

**TROMPES, Fr.** in artificial fireworks; a collection of *pots à feu*, or fire-pots so arranged, that upon the first being inflamed, a ready communication takes place with the rest, and the explosion is successively effected.

**TROMPETTE, Fr.** This word, which signifies trumpet, is applied by the French, not only to the instrument, but to the man who blows it; in the same manner that we say files and drums, for files and drummers; but we do not say trumpet for trumpeter, although we say *Bugle*, for the man who blows the bugle-horn; *Trompette* when used in this sense, is of the masculine gender.

**TROMPETTE sonnante, Fr.** with sound of trumpet, or trumpet sounding.

**TROMPETTE parlante, Fr.** a speaking-trumpet. This instrument is generally used at sea; and owes its invention to an Englishman.

**Déloger sans TROMPETTE, Fr.** to steal away, to take French leave.

**TROMPILLON, Fr.** the diminutive of trompe, a term used in architecture, which owes its origin to the resemblance that exists between the wide part of a trumpet, and the arch or vault so called.

**TROOP,** any body of soldiers.

**TROOP,** in cavalry, a certain number of men on horseback who form a component part of a squadron. It is the same, with respect to formation, as company in the infantry. When a troop dismounts and acts on foot, it is still called a troop.

**TROOP,** a certain beat of the drum. See *Drum*.

*To Troop the colours.* See *Colours*.

**TROOPS,** the same as *copie* in Latin, and *troupes* in French, any collective body of soldiers.

**Heavy Troops, (Troupes d'ordonnance, Fr.)** Soldiers armed and accoutred for the purpose of acting together in line, &c.

**Light Troops, (Troupes légères, Fr.)** hussars, light horse, mounted riflemen; light infantry are so called, in opposition to cavalry or heavy horse. Skirmishing is solely the business of light horse, who, according to count Turpin, should be constantly exposed as the forlorn hope of the army; or as troops whose duty it is to be continually watchful for its repose and security.

When the light horse compose an advanced camp, the men should keep their horses constantly saddled; it being only an indulgence to allow those off duty to have their horses unsaddled. It is very true, that a camp of cavalry cannot be managed after the same manner; but then cavalry is seldom so situated as to be attacked, or to attack every day, which is the real business of light horse. They should serve as vedets to the whole army, in order to prevent the enemy from approaching it; whereas cavalry should never be employed, but in the greatest operations; and on occasions which are to decide the fate of a campaign.

Light troops, according to the same writer, are employed to gain intelligence concerning the enemy, to learn whether he hath decamped, whether he hath built any bridges, and other things of the same nature, of which the general must necessarily be informed, and should have a day fixed for this return. There are other detachments, which should be sent out under intelligent officers, and which should never lose sight of the enemy, in order to send in daily intelligence, to attack small convoys and baggage, to pick up marauders, and harass the advanced guards. There should not be any time fixed for the return of these detachments, neither should they be confined to particular places; they should, however, return to the camp at the expiration of eight or ten days at farthest. The inconvenience, arising from confining these detachments to a particular

particular time, would perhaps be, that the very day appointed for their return, would be that on which they might have the fairest opportunity of learning intelligence of the enemy: consequently their being forced to return would defeat the objects for which they were sent out.— See page 122, vol. II. of *Count Turpin's Art of War*. In addition to this valuable work, we recommend the perusal of the following pamphlets which have appeared during the late war, and treat, more or less, of light troops: *Baron Gross's Duty of Officers in the Field: Duty of Officers commanding Detachments*, by Lieutenant Colonel John Ormsby Vandeleur; and a small Treatise on the *Duty of Hussars*, translated by Mr. Rose, junior. Likewise a very well written treatise entitled, *Instruction concernant le Service de l'Infanterie légère en Campagne*. This production comes out of the Royal Military College at High Wycombe, and has been published in French and English.

**Light Troops** are sometimes called irregulars, as they almost constantly act detached and loose bodies. The tirailleurs, Tyroliens, Yagers, sharp-shooters, and the *Chasseurs à cheval et à pied*, to which the French owe so much during the whole course of their stupendous revolution, are of this description. General Money observes in page 8, of a small pamphlet addressed to the late Secretary at War, "that what was called in this country, advancing *en masse*, by the French, was nothing more than very large bodies of irregulars (or light troops), which covered the country, in the front of their armies, like an inundation. To their irregulars, and to their light artillery, are the French indebted for most of the victories they have gained. He adds, that the troops stiled in France *chasseurs*, are, more or less, to be met with in every service in Europe, except the British. The Austrians have many regiments of them; the Prussians have them attached, in a certain proportion, to each corps; but the French, seeing the good effect of these irregulars, have brought them more into the field than all the combined powers together." These troops are peculiarly useful in enclosed countries, and must, of course, be peculiarly so in Great Britain. General Money observes, page 35, that with respect to England, we

are infinitely more strongly inclosed than Flanders, where the combined armies met all their disasters; and we have above 40,000 cavalry in this country, and not a single troop of them trained, or properly armed to dismount.

In page 18 and 19 of the same pamphlet, we find the following passage:—"Let us for a moment look at the country that has been the theatre of the late war, to shew the use that was there made of irregulars. Our operations were then carried, in the spring of 1794, into an open country near Cambray: the enemy then felt the superiority of our cavalry; and saw that their irregulars, with which their army abounded, were useless, and would continue so, unless they could force us to make war in an inclosed country; and this they effected by obliging us to return into Flanders, to protect our magazines, and cover our communication with them. Here that country is much inclosed; and here all their irregulars could act. From that hour we were constantly losing ground, holding only those points we thought proper to cover with works; and in the short space of a few weeks, it may be said in a few days, those armies which had been acting offensively, were actually obliged to act defensively. Was that army diminished by slaughter or sickness? No: but the enemy's armies, it is said were increased: True; and with what? Irregulars: requisition-men or volunteers; without discipline, yet not without ardour to fight: and from the moment we commenced our sad retreat from Tournay, till we arrived near Breda, nothing was to be seen but the enemy's irregular troops. This was owing to our having only small bodies of irregulars to meet large ones, and the countries being inclosed; which favoured their operations."

**Revenue Troops.** A body of invalid troops in the service of the Honourable the East India Company. Their establishment in 1787 consisted of eight battalions, each battalion containing five companies, and each company containing 150 men: so that the total of the battalions (each being 650 strong,) amounted to 5232. The strength of each company was 1 captain commandant, who was an European, 1 Subadar, 1

Jemidar,

Jemidar, 5 Havaldars, 3 Naigues, 16 Sepoys, 104 Sepoys who were natives. The strength of a battalion was 1 European captain commandant, 3 European serjeants, 5 Subadars, 5 Jemidars, 25 Havaldars, 150 Naigues, 80 Sepoys, 520 effective Sepoys.

In the event of a war, these troops were drawn into the garrisons of the district to which they belonged; on which occasion they were placed upon the same footing and pay, in every respect as the regular battalions. One vakeel was allowed to every company, who received monthly 1 pagoda 38 sauams. The revenue troops did not receive any bounty, nor were any stoppages made out of their pay. The following cloathing and half-mounting were issued to them annually, viz. one coat, one sash, two white jackets; also two pair of short drawers, and three turbans, every two years. The commanding officers of these corps drew per annum 400 pagodas off-reckonings. Considerable alterations having taken place in the organization of the different corps in India, we have given the above article according to what existed in 1787.

There is no such establishment in Europe, at least in Great Britain. The revenue officers are assisted by the military, as occasions may require, in time of war; and it is the peculiar duty of light dragoons to secure smugglers, &c. in time of peace. We do not, however, hesitate to say, that a corps might be formed out of the invalids, &c. not only to answer every revenue purpose, but to protect the capital from the shameful assaults and depredations which are committed in the broad face of day. They would serve in the latter capacity as troops attached to the police. The *marechaussés* of France do credit to the legislature of that country.

**TROOPER**, (*Cavalier*, Fr.) a horse soldier. According to Dr. Johnson, a trooper fights only on horseback; a dragoon marches on horseback, but fights either as a horseman or footman. There is no such thing as a trooper in the British service. The Blues were the last corps that deserved that appellation; but they now act, like the rest of the cavalry, on foot.

**TROPHEE**, Fr. See **TROPHY**.

*Faire TROPHÉE*, Fr. to glory in,

**TROPHY**, something taken from an enemy, and shewn or treasured up in proof of victory. Among the ancients, it consisted of a pile or heap of arms of a vanquished enemy, raised by the conqueror in the most eminent part of the field of battle.

The trophies were usually dedicated to some of the gods, especially to Jupiter. The name of the deity to whom they were inscribed, was generally mentioned, as was that also of the conqueror. The spoils were first hung upon the trunk of a tree; but instead of trees, succeeding ages erected pillars of stone or brass, to perpetuate the memory of their victories. To demolish a trophy was looked upon as a sacrilege, because they were all consecrated to some deity.

**TROPHY-money**, certain money annually raised in the several counties of the kingdom, towards providing harness, and maintaining the militia.

**TROPIQUE**, Fr. tropic: it is likewise used as an adjective, and signifies tropical.

*Baptême du TROPIQUE*, Fr. the ceremony which is performed when a person crosses the line for the first time.

**TROSSERS**, } a kind of breeches  
**TROUSE**, } reaching down to the  
**TROUSERS**, } ankles, worn by some regiments of infantry and light-cavalry. See **PANTALON**.

**TROSSULI**, a select body of cavalry among the old Romans, to every individual of which was given the title of Roman Knight, from their having taken Tossulum, an inland town in Tuscany, (still called Trosso) without the assistance of the infantry. According to Pliny, they were first called, *Celeres*, and then *Flerumines*.

**TROTTOIR**, Fr. Footway, It more properly means a raised pavement on the sides of a street or bridge, for the convenience of foot passengers.

**TROU**, Fr. A hole.

*Trou de mineur*, Fr. A lodgement which is made for the safety and convenience of a miner, when he first begins his operation.

**TROUBLESOME**, from the verb to trouble. Importunate, teasing, full of molestation. This word is frequently misapplied in military matters. Many officers, who have the service of their king

## T R U

king and country at heart, are improperly called *troublesome*, because they will not add, by negligence or connivance, to the too frequent abuses which exist in the interior economy of corps.

**TROUÉE, Fr.** An opening; a gap. This word is applied to any passage, which is made through an abatis, wood or hedge; also to the impression of cavalry, when it breaks the line, &c.

**TROUGIL.** A hollow wooden vessel to knead bread in. It is used among the utensils of field bakery.

**TROUPES, Fr.** Troops, forces.

**TROUPES légères, Fr.** Light troops.

**TROUS-DE-LOUP,** in field fortification, are round holes, about 8 feet deep, and pointed at the bottom, with a stake placed in the middle. They are frequently dug round a redoubt, to obstruct the enemy's approach. They are circular at the top, of about  $1\frac{1}{2}$  feet diameter.

**TROUSSE, Fr.** A quiver. It also signifies any bundle of things tied together, viz. *Une troussé de foin*, a bundle of hay.

**Monter en Trousse, Fr.** To ride behind.

**Etre au TROUSSES, Fr.** To be upon one's heels.

**TROUSSEAU, Fr.** A long piece of wood in the shape of a cane, which has one end smaller than the other, and is used in foundries to make cannon-moulds.

**TROUSEPAS, Fr.** A sort of iron spade which is used in cutting turf.

**TRUCE, (Trêve, Fr.)** A suspension of arms, or a cessation of hostilities, between two armies, in order to settle articles of peace, bury the dead, &c.

**TRUCHEMAN, or TRUCHEMENT, Fr.** An interpreter, or one who conveys the sentiments of another to a person unacquainted with his language.

**TRUCK.** Wooden wheels for the carriage of cannon, &c.

**TRUCKS** of a ship carriage are wheels made of one piece of wood, from 12 to 19 inches diameter; and their thickness is always equal to the calibre of the gun.

The trucks of garrison-carriages are made of cast iron.

A truck-carriage goes upon four trucks of 24 inches diameter: has two flat side pieces of ten inches broad, and

## T R U

serves to carry guns, ammunition boxes, or any other weights, from the store-houses to the water-side, or to any small distance.

**To TRUCKLE.** This word is adopted from trucklebed, which is a low mean bed, that can be pushed under another. Hence.

**To TRUCKLE TO.** To submit to, to allow the superiority of another.

**TRUEBORN.** According to Dr. Johnson, having a right by birth to any title.

**TRUELLE, Fr.** A trowel.

**TRULL.** A low, vagrant strumpet; a hedge-whore, or one that has promiscuous dealings upon the road, or elsewhere, with men of all descriptions. Hence a soldier's trull.—In every well regulated camp and garrison the utmost precaution should be taken, to prevent these wretches from having the least intercourse with the soldiery. Notwithstanding the presumed, or reputed immorality of the French nation, the strictest regard was paid to the character and health of their armies. During the monarchy, prostitutes were publicly exposed upon a wooden horse.—See *Chéval de Bois*.

**TRUMEAU, Fr.** In architecture, the space in a wall which is between two windows. It also signifies a pier-glass.

**TRUMPET, or Trump.** A wind instrument made of brass or silver, with a mouth piece to take out and put in at pleasure. Each troop of cavalry has one.

**TRUMPETER.** The soldier who sounds the trumpet.

**TRUMPET SOUNDINGS.** See SOUNDINGS.

**TRUNCHEON.** A club; a cudgel, also a staff of command. See FA-TOOKS.

**To TRUNCHEON.** To beat with a truncheon. Dr. Johnson has quoted a passage out of Shakespeare, which is extremely apposite to those blustering imposing characters that sometimes annoy public places, and commit swindling acts of depredation under the assumed title of captain. *Captain! thou abominable cheater! if captains were of my mind, they would truncheon you out of taking their names upon you before you earned them!*

**TRUN-**

## T U C

**TRUNCHEONEER.** One armed with a truncheon.

**TRUNNIONS,** in guns. Two cylindrical pieces of metal in a gun, mortar, or howitzer, which project pieces of ordnance, and by which they are supported upon their carriages. See **CANNON**.

**TRUNNION-plates,** are two plates in travelling carriages, mortars, and howitzers, which cover the upper parts of the side-pieces, and go under the trunnions.

**TRUSQUINS, Fr.** Tools made use of by carpenters and joiners. They are called *trusquins d'assemblage*, and *trusquins à longue pointe*.

**TRUSS.** A bundle, as a bundle of hay or straw. Any thing thrust close together. Trusses of this description have been sometimes used in military affairs; the men carrying them in front for the purpose of deadening shot.

**Truss of forage,** is, as much as a trooper can carry on his horse's crupper. See **SPUR HAY**.

**To TRUST.** To give credit to, on promise of payment. In article 63, of the 39 and 40 of the king, cap. 27, it is enacted, that no soldier shall be liable to be arrested for a sum under 20l. and then an oath of the debt must be made before a judge.

**TRUSTY.** Honest, faithful, true, fit to be trusted. This word is used in the preamble of military commissions, &c. viz.—*To our trusty and well beloved, &c.*

**TUBA.** A trumpet, or military instrument, which was used among the ancients. There were three kinds among the Romans, viz.—The straight, or long trumpet, with which they sounded the charge; the crooked ones, or buccinæ, with which the signal for battle was given, in the presence of the general, or for any military punishment; and the horn, by which orders were communicated from the general to the standard-bearer.

**TUBE, Fr.** A pipe, a siphon. It is particularly applicable to optical instruments.

**TUCDUMMA. Ind.** An account which is closed, after it has been examined.

**TUCK.** A long narrow sword.

## T U G

**TUDESQUE, Fr.** Teutonic; Germanic.

**TUERIE, Fr.** Slaughter; massacre.

**TUF, TUEAU, Fr.** A soft sandy stone which answers two purposes, either to build upon, or to build with. The French say figuratively—*C'est un homme de tuf*, he is a man of no depth, or profound knowledge.

**TUFFES, Fr.** See **Pitaur**.

**TUG, Fr.** A turkish term for tail; a sort of standard called so by the Turks. It consists of a horse's tail, which is fixed to a long pole or half-pike, by means of a gold button. The origin of this standard is curious. It is said, that the Christians having given battle to the Turks, the latter were broken, and in the midst of their confusion, lost their grand standard. The Turkish general, being extremely agitated at the untoward circumstances which happened, most especially by the loss of the great standard, cut off a horse's tail with his sabre, fixed it to a half-pike; and holding it in his hand, rode furiously towards the fugitives, and exclaimed—*Here is the great standard; let those who love me, follow into action!* This produced the desired effect.—The Turks rallied with redoubled courage, rushed into the thickest of the enemy, and not only gained the victory, but recovered their standard. Other writers assert, that six thousand Turks having been taken prisoners during a general engagement, contrived to escape from their guard or escort, and afterwards fought so gallantly, that they regained another battle; that in order to recognize one another, they cut off a horse's tail which they carried as a standard; that when they joined the Ottoman army, they still made use of the tug or tail; that the Turks, in consequence of the victory which was obtained under this new standard, looked upon it as a happy omen: and that since that period they have always fought under it as their banner, and the signal of success.

Whatever may have been the origin, it is certain, that when the Grand Signor takes the field in person, seven of these tails are always carried before him; and when he is in camp, they are planted in front of his tent.

## T U M

The Grand Visier is entitled to three of these tails.

The three principal Bashaws of the empire, (viz. those of Bagdad, Grand Cairo, and Buda,) have the Grand Signor's permission to use this mark of distinction, throughout the whole extent of their jurisdiction.

Those Bashaws, that are not Visiers, have the privilege of having two tails.

The Beys, who are subordinate to the Bashaws, have only one.

In the bas-relievo which is under the tomb-stone of John Cassimir, King of Poland, in the abbey church of St. Germain, *des Prés de Paris*, that monarch is represented at the head of his Cavalry, with a horse's tail, or tug for his standard.

TUG-PINS, are the iron pins which pass through the fore end of the shafts of the army carts, to fasten the draught chains for the fore horses.

TULE, *Fr.* A tile.

TULE *creuse*, *Fr.* A gutter tile.

TUILE *de petit moule*, *Fr.* A tile measuring about 10 inches in length, and six in breadth. About 300 will cover a square toise.

TUILE *de grand moule*, *Fr.* A tile measuring about 13 inches in length, and about eight and a half in breadth. One thousand are sufficient to cover seven toises.

TUILEAU, *Fr.* Shard of a tile.

TUILERIE, *Fr.* Tile kiln.

TUILERIES, *Fr.* The gardens, belonging to the adjacent Royal Palace in Paris, are so called, from the spot having originally been used for the tile-kilns.

TUKKEKYAIL, *Ind.* Carpenters.

TUKNAR JUMMA, *Ind.* Money brought more than once to account.

TULBANUA, *Ind.* A fee, taken by Beons when placed as guards over any person.

TULLUB, *Ind.* This word literally means a demand, but it is often used for pay.

TULLUA *Chitty*, *Ind.* A summons.

TULWAR, *Ind.* A sword.

TUMBEELS, (*Tomberiaus*, *Fr.*) Covered carts, which carry ammunition for cannons, tools for the pioneers, miners, and artificers; and sometimes the money of the army.

TUMULTUS. Among the ancient Romans, the word *tumultus* signified

## T U N

more than was generally understood by the term *bellum*, (war.) For during hostilities, the civil distribution of justice was never interrupted; whereas in times of tumult, and popular insurrection, all functions of the kind ceased; every magistrate, and public officer, was obliged to take up arms, and the *Consuls alone* were invested with the full authority of the state.

TUMUSSOOK, *Ind.* A bond.

TUNCAW, *Ind.* An assignment.

TUNES, *Fr.* Small twigs which are incased, or twisted across round several stakes planted in the earth, and which serve to keep the fascines together.

TUNIC, (*Tunique*, *Fr.*) A coat without sleeves, a tunic. It derives its name from the Latin word *Tunica*, or close coat, which was the common garment worn within doors by itself, and abroad under the gown. It was distinguished by different names among the Romans, corresponding with the several classes of the people, that were clothed according to their rank in life. See *Kennel's Roman Antiquities*, page 311, &c.

This sort of clothing is still worn in the East, and was prevalent among the French after their return from the Crusades to the Holy Land. They adopted it from the Saracens, and seemed ambitious of appearing in a garb which bore testimony to their feats of valour. These tunics, which were converted into a sort of uniform, obtained the name of *Saladines* among the French in compliment to the Emperor Saladin. Hence too the origin of *Salade*, which not only signified the armour that was worn beneath the *Tunic* or *Saladine*, but also the light helmet of that name.

Among the French, it likewise signified, a particular dress which was worn by their kings, under their robes of state at a coronation.

TUNICA PALMATA. A purple garment, or long robe, worn among the ancient Romans, which had a gold cloth border on it of a hand's breadth. Littleton says under *Palmatus*, a gown embroidered and branched all over with palms, worn in triumph; also marked with the palm of one's hand. The Roman Emperors, by a refinement in politics, had attached considerable consequence to this appointment; for they well

well knew that it was necessary to keep the public mind in a state of constant amusement or occupation; and this could only be done by popular feasts and games. The person who presided on these occasions, was entitled to the first posts and employments in the Republic. If the present head of the French nation should ever get established on the throne of France, he will probably have recourse to the same expedients.

**TUNTUNGI-Bashi**, A Turkish term signifying master of the pipes, a situation under the Pacha.

**TUQUE**, *Fr.* A tarpaulin.

**TURBAN**, } (*Turban*, *Fr.*) A

**TURBANT**, } cover consisting of

**TURBAND**, } several folds of white muslin, &c. which is worn by the Turks and other oriental nations. The blacks belonging to the different bands that are attached to British regiments likewise wear turbans, ornamented with fictitious pearls and feathers. Those of the foot guards are particularly gorgeous. The French say familiarly *Prendre le Turban*, to turn Turk.

The Great Turk bears over his arms, a turban enriched with pearls and diamonds, under two coronets. The first, which is made of pyramidical points, is heightened up with large pearls, and the uppermost is surmounted with crescents.

**Green-TURBAN**. A turban worn by the immediate descendants of Mahomet, and by the idiots or saints in Turkey.

**White-TURBAN**. A turban generally worn by the inhabitants of the East.

**Yellow-TURBAN**. A turban worn by the Polygars who are chiefs of mountainous or woodland districts in the East Indies. By the last accounts from India, this turban has been adopted by the revolted natives of that part of the globe, as a signal of national coincidence and national understanding. The Polygars are in possession of very extensive tracts of country, particularly among the woods and mountains, and are likely to be extremely troublesome to the British. For an interesting account of them, see *Orme's History of the Carnatic*, pages 386, 390, 396, 420, &c.

**TURCIE**, *Fr.* Mole; pier; dyke.

**Grand TURCOPOLIER** *de la religion*, *Fr.* Before the Reformation, (when the Roman Catholic Religion prevailed in Great Britain,) England formed the sixth tongue in the Order of Malta, and the Grand Prior, as *Turcopolier de la Religion*, had the chief command of the troops belonging to that Order. We have endeavoured to trace this word to its etymology, but we have not been able to get beyond the French authority, from which we have taken the article. See *Nouveau Dictionnaire Militaire*, published in 1802.

Since we extracted the above article from the *Nouveau Dictionnaire Militaire*, we have been favoured with the following account of this term.

**TURCO-PILIER**, (French word *Pilier*, a pillar). As in all languages, certain powers and offices have been called "The Pillars" of the constitutions they upheld.

*Turco-Pilier*, (erroneously, at times, spelt *Pelcier*, and *Polcier*), is a term never found but in one or two dictionaries, and in the obscurest narratives of the Maltese; occurring, perhaps, only in Boisset or Bosso; not in Vertot nor in Voltaire.

In *Malta*, during the establishment of the *Knights*, over each of the eight subdivisions, (*les huit Langues*, as they were named,) each chief was called *Le Bailli*, or *Le Pilier*. The English leader (for till the 8th Henry seized the knights revenues at the reformation, there was an English langue,) was entitled *Turco Pilier*. Possibly, from some pre-eminent absurdity, or mischief, in that banditti-masquerade, which they had the audacity to call *The Holy War*.

Hence, besides, this fantastic title of *Turco-Pilier*; many expressions, towards such effect, grew proverbial, in the chief modern languages, and appear even in Shakespeare and Moliere.

*Il est Turc la dessus*,

*Il est fort copine un Turc*, &c. &c. are in Moliere.

If Shakespeare's words be wanting, they may now readily be had in the *New Index to Shakespeare*, by Mr. Francis Twiss; which is a most exemplary work, of care and usefulness too.

Since, in the *Paris Virgil* for the Dauphin, the French critics, for their index, had such excitements, as the Bishop Bossuet, M. le Duc de Montausier, and the French King—That king, moreover, such a one, as is very

As to the great work of Cardinal Charo, for the bible. He is said to have had a whole college of monks, no less than five hundred, to help him!

In a facetious contribution, a gay friend would trace *Turco-Pilier*, from the word pillage, and then have it stand thus:—

Anglo,	}	PILIER.
Italico,		
Provenço,		
&c. &c. &c.		

Or again, if it could be *Turco-Polier*, it can only be derived from the Greek Πολυς, & Πολις, & Πολη, to signify many, the city, and a gate.

But to take it near at hand, from the Latin, through the Italian, into French, viz. *Polio*, *Polire*, *Polir*.

As if the knights-errant, &c. had nothing else for it, but to scour and brush up the Turks.

*TURC-Opilier*, *Oppiler*, Fr. *Oppillo*, Lat. *Oppilare*, Ital. to stop.—English also, *Oppilate*, to obstruct.

This word, with its substantive and adjective, almost confined to medical uses, is rare, except with the physicians, who threw such a lustre over Italy, in the 17th century; and among them, Johnson quotes our Harvey.

From the physicians, it got into the French poets of the time, as *Regnier* and *Senecé*; or, perhaps, it might be from *Lucretius* it came—

*Ut possit, magnus congestus Arena,  
Fluctibus adversis OPPILARE ostia, con-  
tra*

*Cum mare permotum, ventis, ruit intus  
arcem.*

An hypothesis of his, on the periodical swell of the Nile.

*Pilier*, Fr. also signifies a buttress. Perhaps we may not strain the interpretation, when we say *Turco-Pilier*, a buttress against the Turks; in which light, the Order of Malta was originally considered. So that (by a very easy affinity to the word) *Grand Turcopilier de la Religion* meant the great support, or buttress, of the Roman

Catholic Religion against the Turks; and a compliment was paid to England, by investing the Grand Prior of the English langue or tongue, with that dignity. It should also be recollected, that in those days, the popes were sedulously attentive to this Island; so much so, that the title of Defender of the Faith was exclusively given to Henry the VIIIth, (before his libidinous secession from the church,) and has since been continued—though no longer acknowledged in the Vatican, among the honorary titles of our kings.

*TURK*, (*Turc*, Fr.) The following account of the Turks has been given by a modern French writer:—"The Turks are a nation that is naturally warlike, whose armies are commanded by experienced generals, and are composed of bold and executive soldiers. They owe their knowledge of war, and their experience in tactics to three national causes, two of which do credit to their intellects. In the first place, they become enured to arms, from being bred to the profession from their earliest infancy; in the second, they are promoted upon the sole ground of merit, and by an uninterrupted gradation of rank; and in the third, they possess all the opportunities of learning the military art that constant practice and habitual warfare can afford. They are naturally robust, and constitutionally courageous, full of activity, and not at all enervated by the debaucheries of Europe, or the effeminacy of the East. Their predilection for war and enterprize, grows out of the recollection of past victories, and is strengthened by the two most powerful incentives to human daring, viz. reward and punishment: the first of which is extremely attractive, because it is extremely great, and the other equally deterring, because it is rigorous in the extreme. Add to these the strong influence of a religion, which holds out everlasting happiness and seats near Mahomet in heaven, to all who die fighting for their country on the field of battle; and which further teaches them most implicitly to believe, that every Turk holds inscribed upon his forehead his fatal moment, with the kind of death he must submit to, and that nothing human can alter his

his destiny. When any thing is to be put into execution, the order they receive is absolute, free from every species of intervention or controul, and emanating from one independent authority. The power which is entrusted to their generals (like that of the Romans to their dictators) is brief and comprehensive, viz.—Promote the interests of your country or your sovereign." See *Essai sur la Science de la Guerre*, tom. i. p. 207.

Such is the character of the Turks, as detailed by their old allies the French. How far it corresponds with reality, especially in regard to military knowledge, we must leave to future historians to determine; observing at the same time, that a few sparks of British valour and perseverance contributed more to the preservation of the Ottoman empire, during the late war, than all the fantastic images, or well-devised hypocrisies of Mahomet could have done. Our brave countrymen, on their return from Egypt, have been enabled to give a more faithful and correct account of their characters as soldiers.

**TURMA.** A troop of cavalry among the ancient Romans. The horse required to every legion was three hundred, divided into ten *turnæ* or troops, thirty to a troop, every troop making three decurie, or bodies of men. See *KENNEDY*, R. A. p. 192.

**TURNCOAT.** A renegade, a deserter; one who abandons his party.

**TURNOVER.** A piece of white linen which is worn by the soldiers belonging to the British cavalry over their stocks, about half an inch deep. Three turnovers per annum are ordered to be provided by stoppage, in the list of necessaries from the pay of each cavalry soldier.

*To TURN out.* To bring forward, to exhibit; as, to turn out the guard; to turn out so many men for service.

*To TURN in.* To withdraw; to order under cover; as, to turn in the guard.

**TURNPIKE.** (*Barrière*, Fr.) An obstacle placed across a road to prevent travellers, wagons, &c. from passing without paying an established toll. Officers and soldiers regimentally dressed, and on duty, may pass through turnpikes gratis.

**TURNPIKE** is also used in the military art, for a beam stuck full of spikes, to be placed in a gap, a breach, or at the entrance of a camp, to keep off the enemy. It may be considered as a sort of *cheval de frize*.

**TURPENTINE.** A very combustible gum, used in the composition of fireworks.

**TURRET.** A small tower.

*Movable TURRETS.* See **TOWERS**.

**TURRIS.** A tower; a turret. This was formerly a sort of retrenchment, used among the people in Asia, and which the Greeks adopted for warlike purposes. It was a moveable machine and principally employed at sieges. In the latter case Vegetius calls it *Turris Ambulatoria*, a moveable turret, which was higher than the walls of a town, and went upon wheels. Athenæus gives the invention of this turret to the Sicilians; and Servius says that Agrippa, a celebrated sea captain among the Romans, first introduced it. We are of opinion, with the author of the French military dictionary, that it owes its origin to the remotest antiquity, and that it was common among the Hebrews, the Israelites, &c.

**TUSSULDAR.** *Ind.* The Company's collector of the kistibundy.

**TUYAU.** *Fr.* Any pipe, &c. of lead, or gutter, or canal, made of burnt clay, &c. which serves to carry off the water from the roof of a house.

*TUYAU de cheminée.* *Fr.* The cylindrical conduit which receives and lets out the smoke at the top of a chimney.

*TRYAUX de descente.* *Fr.* The pipes which convey the water downwards.

**TWEED.** A river that divides England from Scotland.

**Berwick upon Tweed.** The power respecting the militia for the county of Northumberland extends to this place; the men belonging to it being subject to be balloted for, in the same proportion with the other divisions, and to join and be deemed part of the militia of that county.

The chief magistrate of Berwick upon Tweed, has authority to appoint deputy lieutenants, and to nominate officers.

**TYMPAN.** (*Tympan*, Fr.) In architecture, the area of a pediment, being that part which is on a level with the naked of the frize. Or it is the space includ-

included between the three cornices of a triangular pediment, or the two cornices of a circular one. Among joiners it signifies the pannels of a door.

**TYMPAN** of an arch, is the triangular space or table in the corners or sides of the arch, usually hollowed and enriched, sometimes, with branches of laurel, olive-tree, or oak, or with trophies, &c. Sometimes with flying figures, as Fame, Victory, &c.; or sitting figures, as the cardinal virtues.

**TYMPANUM**. A drum, a musical instrument which the ancients used, and which consisted of a thin piece of leather or skin stretched upon a circle of wood or iron, and beat with the hand. Hence the origin of our drum.

**TYMPANUM**. In mechanics, a kind of wheel placed round an axis or cylindrical beam, on the top of which are two levers, or fixed staves, for the more easy turning the axis about, in order to raise a weight required. It is also used for any hollow wheel, wherein one or more persons or animals, such as horses, dogs, &c. walk, to turn it. This wheel is found in cranes, calenders, &c.

**TYRANT**, (*Tyran*, Fr.) Any individual is so called, who by force of arms, or by other illegitimate means, has encroached upon, or usurped, the sovereign authority in a country. Thus Dionysius was called the tyrant of Sicily; and Robespierre the tyrant of France; we might also add Henry the Eighth, the tyrant of England. The term is likewise applicable to legitimate princes, when they oppress their subjects, by excessive taxation and unnecessary wars. All men, in a more general acceptation of the term, may be called tyrants, who exceed the limits of prescribed and fair authority, in opposition to the dictates of reason and good sense. Thus the colonel of a regiment, an adjutant, and even a serjeant-major, or drill-serjeant, may incur the imputation.

**PEITY TYRANTS**, *Tyranncaur*, Fr. A low, groveling set of beings, who without one spark of real courage within themselves, execute the orders of usurped or strained authority, with brutal rigour.

## V.

**VACANCY**, (*vacance*, Fr.) State of an office or commission to which no one is appointed.

**VACANT**, (*Vacant*, *e*. Fr.) Empty; not filled.

**VACANT Companies**, (*Compagnies vacantes*, Fr.) Companies to the permanent command of which no person is appointed.

**VACANT Pay**. See **PAY**.

**Emplois-VACANS**, Fr. During the French monarchy, seniority of rank or standing did not give the right of promotion. It belonged solely to the king to appoint and nominate all persons to vacant commissions or employments.

**VACATIO militie**. Military exemption. Among the Greeks no man was called into active service after he had reached his sixtieth year. The Romans established the *vacatio-militiæ*, or military exemption, at forty-five and fifty.

**VACCINATION**. See **Cow-Pox**.

**VACHE enragée**, Fr. A term used in France to express great discontent. *Je te ferai manger de la vache enragée*. Thou shalt go for a soldier; intimating thereby that soldiers are obliged to eat any thing, and any sort of meat, even that of a mad cow or bullock. This, thank God, is not the case with us. For no men live better or upon choicer morsels than the soldiers of Old England.

**VAGUE-Mestre**, Fr. See **WAGON-MASTER**.

**VAGUE-Mestre-Général**, Fr. This word has been adopted by the French from the German term *Wagen-Meister*, which signifies *Wagon-Master*.

**VAINCU**, Fr. Beaten: overcome; defeated.

**VAINQUEUR**, Fr. A conqueror. One who beats, overcomes, or defeats another.

VAIN.

## V A L

**VAISSEAU**, *Fr.* Ship.

**VAISSEAU du premier rang**, *Fr.* A first rate.

**VAISSEAU du second rang**, *Fr.* A second rate.

**VAISSEAU de guerre**, *Fr.* A man of war.

**VAISSEAU Marchand**, *Fr.* A merchant-man.

**VAISSELLE d'Argent**, *Fr.* Silver utensils; plate. We have already remarked under *Table d'Officiers*, that during the old government of France, it was strictly forbidden to use any other plate than silver goblets, spoons, and forks.

**VAIVODE**, *Fr.* An old Sclavonian word, which signifies prince or general. This title was formerly given to the sovereign princes of Wallachia, Moldavia, and Transylvania.

**VAJIB UL ARZEE**, *Ind.* A petition, memorial, or proposal to a superior.

**VAKEEL**, *Ind.* An agent—a subordinate envoy or ambassador.

**VAKIAS**, *Ind.* A weight nearly equal to a pound. It also signifies a measure.

**VAKILIT**, *Ind.* The first office in the empire.

**VALET**, *Fr.* An instrument which is used by carpenters to keep boards, that have been glued, close together.

**VALETS de l'Armée**, *Fr.* Officers' servants; they are likewise called by the French, *Tartares*.

**VALETS d'Artillerie**, *Fr.* Men attached to the guns on board of ships of war, for the purpose of assisting the regular cannoneers.

**VALETS à Patin**, *Fr.* An instrument which is used by surgeons—A small pincer to take up the arteries when it is found necessary to make a ligature.

**VALETS de Ville**, *Fr.* Constables, &c. Men who are attached to the Police of a town.

**VALETUDINARIUM**. An infirmary, or hospital for sick folks. Among the Romans the *valetudinarium* or hospital was only established in time of war, when their armies marched beyond the boundaries of the republic. In the remote periods of their history, the wounded soldiers were lodged with the inhabitants of the several towns belonging to the republic,

## V A L

by whom they were nursed and fed; and when they were on foreign service, the wounded were obliged to dress one another. There were, in those times, neither physicians nor surgeons attached to the armies; and it often happened, that superannuated or old soldiers did their business.

**VALEUREUSEMENT**, *Fr.* Courageously.

**VALIANT**, } personally brave,  
**VALOROUS**, } fearless of danger  
in war, &c.

**VALLEY**, (*Val*, *Fr.*) A hollow space of ground, generally between hills.

**VALLUM**, *Agger*, *Vinea*, *Turres*.

All these different terms were used among the Greeks and ancient Romans, as well as among the eastern nations, to signify the retrenchments which were made for offensive or defensive purposes. That which was called *Agger* consisted of an elevation made with piles of wood, branches of trees, &c. and afterwards covered with turf. It was sufficiently high to overlook the town. This artificial mount was surrounded by a fosse or ditch, and fenced with palisades. These retrenchments had different terms applied to them, according to the different manner in which they were constructed. The *Vinea* were engines of war made of timber and hurdles, beneath which the ancients in assault, came safely under the walls of a town, and so scaled them. Then came the *Turres*, which see.

**VALOUR**, (*Valour*, *Fr.*) Courage, bravery, intrepidity. A generous quality, which, far from assuming brutality and violence, with-holds the fury of the soldier, protects helpless women, innocent infants, and hoary age. Nothing which is incapable of resistance, can ever be the object whereon true valour would exercise its prowess. Courage is that grandeur of soul, which prompts us to sacrifice all personal advantages, and even the preservation of our beings, to a love of doing our duty. The exercise of this determined courage in the profession of arms, is called *valour*. It is composed of bravery, reason, and force: by bravery we understand that lively ardour which fires us for the combat; reason points out to us the method of conducting it with justice and prudence; and force is necessary for the execution.

tion. It is bravery which animates the heart, reason springs from the soul, and force depends upon the body; without bravery we fear obstacles, danger, and death; without reason, courage would have no legitimate view; and without force it would be useless: these three qualities should concur to form true military valour.

Dr. Johnson defines valour, bravery, and courage almost as synonymous terms. Mr. Addison distinguishes between that sort of courage which springs, by instinct, from the soul, and from that which originates in a sense of duty, and is strengthened by reflexion. Count Turpin, on the other hand, establishes a wide difference between bravery and courage, which he makes two terms. In page 5, of the preliminary discourse to his *Essay on the Art of War*, he has the following passage:

“Is the officer—speaking of the requisite qualifications in a general—who loves his duty, and who would make himself master of it, under no obligation to ascertain what qualifications his station requires? That he ought to have such or such a quality, under such or such a circumstance? That here only bravery is necessary, there only courage? And that he is not always obliged to have both at the same time?

These two qualities, which are often confounded in the same subject, merit a particular distinction; they are not so closely united, but that one may be found without the other. Courage seems fittest for a general, and for all those who command; bravery more necessary for a soldier, and for all those who receive orders; bravery is in the blood; courage in the soul; the first is a kind of instinct, the second a virtue; the one is an impulse almost mechanical, the other a noble and a sublime conception. A man is brave at a particular time, and according to circumstances; but he has a courage at all times, and upon all occasions: bravery is impetuous, in as much as it is less the result of reflection; courage, on the contrary, in proportion as it grows out of reason, becomes more or less intrepid. Bravery is inspired by the force of example, by insensibility to danger, and by the mingled fury of conflict and action; courage is infused by the love of our

duty, the desire of glory, and by the zeal we feel to serve our king and country: courage depends on reason, but bravery on the constitution. Achilles, such as Horace describes him from Homer, implacable, cruelly despising every law except that of the strongest! presents nothing to the idea, but the hardness of a gladiator. But the Roman general, whose death would have occasioned the ruin of the army, the great Scipio, when covered by the bucklers of three soldiers, to avoid a shower of arrows, which the enemy directed against him, approaches in safety the walls he besieged, and standing only a spectator of the action, exhibits the picture of true courage, whilst he contents himself with giving the necessary orders. Bravery again, is involuntary, and does not depend wholly upon ourselves; whereas courage (as Seneca observes) may be acquired by education; provided nature has sown the first seeds of it. Cicero, sheltering himself from the hatred of Cætiline, undoubtedly wanted bravery; but certainly he possessed an elevated firmness of mind (which is in reality courage) when he disclosed the conspiracy of that traitor to the senate, and pointed out all his accomplices; or when he pleaded for Deiotarus against Cæsar, his friend and his judge.

Coolness is the effect of courage, which knows its danger, but makes no other use of that knowledge, than to give directions with greater certainty; courage is always master of itself, provided against all accidents, and regulated by existing circumstances; never confounded by any danger, so as to lose sight of the motions of the enemy, or of the means by which he may be most effectually opposed.

The Chevalier Folard makes the following remarks upon this quality of the mind and heart. He says, in his notes on Polybius, there are various kinds of that species of courage, intrepidity, or strength of soul, which no circumstances can vanquish, and no events can shake. I do not know whether a quality, so diversified in its nature, can be found united in the same person to the full extent of its activity. We generally discover that some men possess a larger proportion of it than others.

In order to form a correct opinion of its existence in the human character, we should find out some individual who has acted through all the vicissitudes of life, and has uniformly discovered the same firmness of mind and intrepidity of heart. But where shall we pick out a character of this sort? Life is too short for the full exercise of its various powers, and were it of a longer date, the circumscribed faculties of man render the research useless. I do not believe it is possible to point out an individual who, free from the natural weaknesses that are attached to our constitution, has in adversity as well as prosperity been equally firm, and equally determined throughout all the changes to which military operations are unavoidably subject.

This intrepidity and strength of mind, have been peculiarly visible on manifold occasions in some extraordinary characters, who have been equally remarkable on others for weakness and pusillanimity. We have seen them bold to the full extent of hardihood during a succession of triumphs; we have then beheld them shamefully agitated under a temporary reverse of fortune, and we have again seen them recover their wonted energy on the first favourable opportunity. These opposite qualities succeed one another; and we see boldness and timidity occupy by turns the same man, so as to produce, according to circumstances, the utmost solicitude and caution in some instances, and the greatest courage, firmness, and decision in others, during the prosecution of a war.

These fluctuations of the human character may be traced, almost every day, in a certain description of generals. When they are reduced to defensive operations, their understanding becomes perplexed; they know not how to act, and not only omit to make use of favourable opportunities themselves, but unwittingly afford them to their enemies; whilst, on the other hand, in offensive war, their genius expands itself into a variety of expedients; they create occasions that did not seem to exist, turn them to account, and finally succeed. Thus we see united in the same men promptitude, vigour, and enterprise in one species of warfare; and

timidity, doubt, and consternation in another.

I have known, says Folard, generals of marked intrepidity, (who in trifling matters have discovered a solicitude that approached to a want of manliness) conceive projects of vast extent, that were full of intricate developments, and chequered by incertitude; and I have seen them conquer the greatest obstacles by their courage and good conduct.

Human nature is so strangely constituted, that whilst one man will rush into danger, as if attracted by blood and devastation, another will not have firmness enough to stand his ground, and face the coming evil. He, who in the hour of battle would give fresh courage to his troops, by being the foremost to advance, has been known to turn pale in the very trench where a soldier's boy or woman has sat undisturbed selling spirits and provisions, or has been discovered to tremble, when the signal for storming was given. The very man that would courageously lead his troop into action, or would prove the most expert marksman in the world, were he directed to practise in the front of a whole line, has been known to shrink at a single combat, and would rather rush headlong into a guarded breach, than measure swords or point a pistol with an antagonist. Another again, whom no danger could affect in public contests or in private feuds, when visited by sickness is full of apprehension, has recourse to physic, and in proportion as his malady increases, grows timid, scrupulous, and unhappy. It sometimes happens, on the other hand, though rarely, that the rankest coward will lie peaceably in bed amidst all the surrounding terrors of dissolution, and will even smile as his agony approaches.

I have seen, continues the same author, (and daily experience confirms his observations) one of the bravest officers in the world, suddenly turn pale in a thunder-storm, and even so far give way to his fears, as to hide himself in a cellar. One man possesses what the French so forcibly style *une valeur journalière*, a sort of ephemeral courage, or what depends upon the influence of the moment; to-day he is as bold as

Achilles; to-morrow he sinks into the degraded character of Thersites.

These changes in character and constitution, which are so visible in individuals, may be traced in their influence over whole nations, with little or no deviation. The Persian cavalry still maintains its ancient reputation for valour, and is still dreaded by the Turks. Tacitus relates, that the Sarmatian horse was invincible, but when the men were dismounted, nothing could be more miserably defective in all the requisites of war. Their whole dependence was on their cavalry, and, as far as we are enabled to judge, the same partial quality exists to this day.

The French, until the present revolution, seemed to have preserved the character and disposition of the ancient Gauls. They went with more alacrity into action, and met death, at first sight, with more valour, than they discovered firmness and resolution to wait patiently for its approach. Hurry and agitation appeared more congenial to their minds, than calmness and composure.

In order to conquer, it was found necessary, by their ablest generals, to make them attack and insult their enemy. They grew impatient in slow operations, and gradually became less capable of meeting their antagonists in proportion to the time they were restrained from coming to action. Their whole history, indeed, is a continued proof of the justness of this observation; and although their character seems to have undergone considerable changes since their revolution, they have still retained so much of the original cast, as to shew more promptitude in offensive, than steadiness and perseverance in defensive operations. Not that they are deficient in the latter, but that the former quality has been more brilliantly successful. To the first they owe their stupendous triumphs under Bonaparte; but they have again been rendered almost equally conspicuous by their conduct in the second under General Moreau, in his celebrated retreat out of the Black Forest. Having said so much of our rival, we shall not be thought unjust to other nations, or too much prejudiced in favour of our own, if we assert that the British character unites within itself every

quality that constitutes the real soldier. Let British soldiers be well officered, and ably commanded, and they will march into action not only with the elastic promptitude of the Frenchman, but they will also carry with them the cool determined courage of the German. If there be a feature in their character that approaches nearer to one nation than another, it is in the quickness and vigour of their attacks. But, alas! of what avail is the courage of the multitude, if the generality of their leaders are deficient in those indispensable qualities by which French officers have acquired the greatest reputation. It is like a torch in the hands of a fool or madman, who would as soon lead an enthusiast to a precipice, as he would shew him the paths he ought to tread.

In a work, originally written by the Marquis of Santa Cruz de Marzenado, and translated under the title of *Réflexions Militaires et Politiques par de Vergy*, the following just observations are made relative to this important quality of the mind.

Valour (by which we understand a thorough indifference to all sort of personal danger, and even a contempt of death,) is so necessary an ingredient in the character of a general, that were I to discuss the subject, I should pay a bad compliment, indeed, to the idea which every individual must have formed of it in his own mind. A real general, in my opinion, should therefore remain satisfied with saying in the words of Marius, *Nihil metuo nisi turpem famam*—(Salust. Bel. Jugur.) I fear nothing except the disgrace which must be incurred by a bad reputation; or in those of Alcibiades, *Ne vivere quidem vellem, si timidus essem*.—Plat. l. 5. Alci. 1. I would not even live were I personally timorous, or afraid of death: and this saying is the more correct, because, according to Strada, *Belli dur nihil magis timere debet, quam timere rideatur* (Famianus Strada de Bello Belgico, l. 7.) There is nothing which a general or chief of an army should so much fear as having it known, or even suspected, that he is afraid.

To these might be added the more modern saying, already quoted under religion:

*Je crains Dieu, Abner.—Je n'ai point d'autre*

*d'autre crainte.* I fear God, Abner.—  
I have no other fear.

**VALUE**, in a general acception of the term, signifies the rate at which any thing is estimated. It is particularly applicable to the half-pay, in contradiction to full pay. The former having an inherent value, but not being a saleable commodity (as every officer is strictly forbidden to sell that allowance) it cannot properly be said to have a price, which implies bargain and sale, but still it has a value within itself; whereas full pay has both value and price. Hence regulation price of a commission means the marketable rate at which a full pay commission may be bought or sold; and regulation value of a half-pay signifies the rate at which it is estimated, but cannot be sold. The regulation value for a company of foot is 821l. 5s. being nine years purchase.

**VAN**. The front of an army, the first line.

**VAN-guard**. That part of the army which marches in the front. See **GUARD**.

**VANCOURIER**. See **AVANT COURIER**.

**VANNE**, *Fr.* A floodgate.

**VANNES**, *l'entreux ou cloisons de bois de chêne*, *Fr.* Floodgates, generally made of oak.

**VANTAIL**, *Fr.* Leaf of a folding-door.

**VANT-brass**. Armour for the arm.

**VARECH**, *Fr.* A term used in Normandy, upon the coast of France, to signify all goods, &c. that are washed on shore, and are near enough for a man on horseback to touch them with a lance, thereby becoming his property.

**Droits de VARECH**, *Fr.* The right to salvage. A term used in Normandy. *Varech* likewise signifies any vessel under water.

**VARLET**, *Fr.* In the days of chivalry this word was synonymous to page. With us it anciently meant a yeoman's servant. Varlet is also taken in a bad sense, and signifies a sorry wretch, a rogue, or rascal.

In Stat. 20. Rich. II. Varlets meant yeomen, or the servants of yeomen. For the etymology of this word, see p. 149, in the second part of Mr. Horne Tooke's learned and interesting publication, entitled the *Diversions of Purley*,

**VARLOPE**, *Fr.* A carpenter's lage plane.

**VARSA**, *Ind.* The rainy season.

**VASA-Conclamare**. Among the ancient Romans, the first signal to decamp, (which was given by the sound of a bugle-horn) was so called. The first time the bugle sounded, the general's tent was struck, and immediately after, the soldiers struck theirs, and packed up. When it sounded the second time, the wagons were loaded; and at the third signal, the army marched off the ground; care being taken to leave lighted fires in the camp, for the purpose of deceiving the enemy.

**VASANT**, *Ind.* The mild season or spring.

**VASSALAGE**. Subjection, or the condition of a vassal.

**VASSAL**, (*arrière-*) *Fr.* Under the race of Charlemagne, in France, the *arrière vassal* was a man, who owed allegiance at the same time, for feudal tenure, both to the king and to some particular lord of the manor, so that when the king and the lord of the manor differed, he did not know which master he was bound to serve. This monstrous and incongruous system, so disgraceful to the very name of manhood, continued until the third race of French kings, when it was reduced to a mere rational homage, which was paid to the king or lord of the manor, with a low rent for the right of tenure.

**VASSAL-lige**, *Fr.* See **VASSALAGE**.

**VASSALS**. They who in the feudal system were obliged to attend their lord in war, as a tenure by which they held their lands, &c.

**VAUDOIS**, or *Barbets*. A species of light troops in the service of Sardinia. They consist of mountaineers or highlanders, who are lightly clothed and armed, and are enured to the chicanery of mountain-service.

**VEDETTE**, (*Vedette*, *Fr.*) in war, a sentinel on horseback, with his horse's head towards the place whence any danger is to be feared, and his carbine advanced, with the butt end against his right thigh. Vedettes are generally posted at all the avenues, and on all the rising grounds, to guard the several passages when an enemy is encamped.

The Vedettes to the out-posts should

always be double, for the following reasons: first, that whenever they make any discovery, one may be detached to the commanding officer of the out-posts; secondly, that they may keep each other watchful; and thirdly, that the vigilance of both may render it impossible for any thing to come near them without being seen. They should be at no greater distance from their detachments than 80 or 100 paces.

For particular instructions, relative to the posting of vedettes, see a *Treatise on the Duties of an Officer in the Field*, by Baron Gross; see likewise *Gen. Reg. and Orders*, page 34, to 37.

**VEHICLE**, (*Véhicule, voiture*, Fr.) carriage, a machine which is made to convey one or more persons: of this description are our military cars.

**VEKILCHARES**, a word used among the Turks, which signifies the same as *fourrier* in the French, and corresponds with quartermaster.

**VELITES**, Roman soldiers, who were commonly some of the Tiro, or young soldiers of mean condition; and lightly armed. They had their name, a *volando*, from flying, or a *velocitate*, from swiftness. They seem not to have been divided into distinct bodies or companies, but to have hovered in loose order before the army. *Kennell's R. A.* page 190. Their arms consisted of a sword and javelin, and they had a shield or buckler, which was sufficiently large to cover its man, being round, and measuring three feet and a half in diameter.

They generally wore a wolf's skin, or some other indifferent ornament upon their heads, to distinguish them during an action. Their javelins were a sort of dart, the wood of which measured three cubits in length, and was about the thickness of a finger. The point was about a hand's full breadth in length, and was so thin and brittle, that it snapped off the instant it reached or penetrated its object, so that the enemy could not return it. It was distinguished, in this particular, from other darts and javelins.

**VELOCITY**, the quickness of motion with which bodies are moved from one place to another.

In the years 1783, 1789, 1790, experiments were made at Woolwich with the ballistic pendulum, to ascertain the

initial velocity of military projectiles; the result of which will be found in a work entitled the *Pocket Gunner*, published in 1801.

**VENGEANCE**, (*Vengeance*, Fr.) punishment; penal retribution; avengement. There is an old proverb in our language, regarding the first part of the interpretation of this term, which has been quoted by N. Bailey in the following manner:—

When vice goes before, vengeance follows after. The notion of impunity often animates ill-disposed persons to the commission of *flagrant crimes*, which would never have been perpetrated, had the verity of this proverb been impressed in the minds of those delinquents; for certain it is, however slowly vengeance may seem to move, it will assuredly overtake the offender at last; and by how much it is the longer in coming, being once arrived, it will fall on them the heavier. According to that maxim, *though justice has laden feet, it has iron hands*. Horace says, *Raro antecedentem scelerum describit pede pena claudo*.

With respect to the last interpretation, *avengement*, a French author very justly observes, that the indulgence of this fatal passion has, at all times, proved a source of the greatest evils. Vengeance, among men, grows out of self-interest; is the off-spring of ambition; and frequently the effect of the blackest ingratitude. It also often happens, that under the mistaken veil of justifiable chastisement, the most unmanly acts of *vengeance* are perpetrated; happy the man who is a stranger to this mean and unworthy propensity! It has been said, (and most absurdly so) that vengeance is a godlike pleasure. The wretch who fosters in his breast this melancholy notion, is secretly nursing ten thousand vipers that must, sooner or later, sting him to the heart. Let it, however, be remembered, that if the suppression of the dictates of revenge be ornamental to the human mind, the never giving cause for vengeance is equally brilliant; and if the person, against whom sufficient has been done, to excite a just resentment in his mind, can rise superior to his own wrongs, such a person may be truly called a high-minded man, and a hero in the best sense.

VENGER, *Fr.* to revenge; to avenge:

VENT, (*Lumière, Fr.*) in artillery, or, as it is vulgarly called, the touch-hole, is the opening through which the fire is conveyed to the powder that composes the charge.

As the placing the vents in mortars, howitzers, and guns, in the best manner, is so very delicate a point, and about which both authors and practitioners differ, we will advance what the result of experiments has demonstrated. The most common method is to place the vent about a quarter of an inch from the bottom of the chamber or bore; though we have seen many half an inch, and some an inch from the bottom. It has always been imagined, that if the vent was to come out in the middle of the charge, the powder would be inflamed in less time than in any other case, and consequently produce the greatest range; because, if a tube be filled with powder, and lighted in the centre, the powder will be burnt in half the time it would otherwise be, were it lighted at one end. This gave a grounded supposition, that the greater the quantity of powder which burnt before the shot or shell was sensibly moved from its place, the greater force it would receive. To determine this, the King of Prussia, in 1765, ordered that a light three-pounder should be cast, with three shifting vents, one at the centre of the charge, one at the bottom, and the other at an equal distance from the bottom and centre one; so that when one was used, the others were effectually stopped. The gun weighed 2 cwt. 1 qr. 20 lb. its length was 3 feet 3 inches, and the bottom of the bore quite flat. It was loaded each time with one-fourth of the shot's weight; and it was found, that when the lowest or bottom vent was used, the shot went farthest, and the ranges of the others diminished in proportion as they were distant from the bottom. The piece was elevated to 1 degree 30 minutes.

In 1766 the same monarch caused several experiments to be tried with three small mortars of equal size and dimensions, but of different forms in their chambers; each of which held seven ounces and a half of powder. From these experiments it appeared, that the

concave chamber produced the greatest ranges, and that the bottom of the chamber is the best place for vents, having in that place the greatest effect.

VINT-field, is the part of a gun or howitz between the breech mouldings and the astragal.

VENT-astragal, that part of a gun or howitzer which determines the vent-field.

VENT, *Fr.* that vacancy which is occasioned by the difference between the caliber of a piece of ordnance, and the diameter of its ball: See WINDAGE.

VENT, *Fr.* wind. The French use this word in various senses.

VENT d'un boulet de canon, *Fr.* the wind of a cannon ball.

Coup de VENT, *Fr.* heavy weather; a squall.

VINT reglé, *Fr.* a regular wind; such as the trade-wind.

Aour du VENT, *Fr.* in farriery, to be palsy.

VENTS alizés, *Fr.* trade winds.

VENTAIL, that part of a helmet which is made to lift up.

VENTOUSES, *Fr.* air-holes, ventilators.

VENTRE, *Fr.* belly; womb. When a piece of ordnance is off its carriage, and lies on the ground, it is said, among the French, to be upon its belly—*être sur le ventre.*

Se coucher VENTRE à terre, *Fr.* To lie down flat on your face. *Le capitaine ordonna à ses soldats de se coucher ventre à terre,* the captain ordered his men to lie down. This frequently occurs in action, when any part of the line or detached body is so posted as to be within reach of the enemy's cannon, and not sufficiently near to make use of its own musquetry. A cool determined officer never lies down himself.

Demander pardon VENTRE à terre, *Fr.* to ask pardon in the most abject position.

VERANDA, *Ind.* the covering of houses, being extended beyond the main pile of building, by means of a slanting roof, forming external rooms or passages.

VERBAL orders, instructions given by word of mouth, which, when communicated through an official channel, are to be considered as equally binding with written ones.

VERBAL,

## V E R

**VERBAL**, *Fr.* verbal; given by word of mouth.

**Procès VERBAL**, *Fr.* a verbal deposition.

**VERD**, *Fr.* green. This word is sometimes used in a figurative sense by the French, viz.

**Homme VERD** or **VERT**, *Fr.* a resolute man.

**Tête VERT**, *Fr.* a giddy thoughtless fellow.

**VERD pour les chevaux**, *Fr.* green forage or grass. In the *ancien régime* of France, the cavalry and dragoon horses, when quartered in a flat country, were allowed to be thirty days at grass; the particular period was left to the discretion of the commanding officers. The term was sometimes extended to forty days, without any deduction being made for the ten days; by means of which an emolument accrued to the captains of troops, not only from the horses which were actually sent to grass, but likewise for those that were returned as such.

**VERDIGREASE**, (*Verd-de-Gris*, *Fr.*) a kind of rust of copper, which is of great use among painters. It is also taken medicinally.

**VERGE**, *Fr.* a yard; a measure; a switch, &c.

**VERGE Rhinlandique**, *Fr.* a measure which is equal to two French toises, or to 12 French feet. It is often used by Dutch engineers, in the measuring of works in a fortification.

**VERGE d'or**, *Fr.* the same as *arbalète*, *arbalétrille*, or Jacob's staff; in astronomy, a beam of light.

**VERGES**, *Fr.* rods.

**Passer par les VERGES**, *Fr.* a punishment which was formerly practised among the French. See **PUNITIONS corporelles**.

**VERGES**, *Fr.* twigs or branches, measuring from ten to twelve feet in length, which are used in making fascines.

**VERGUE**, *Fr.* A ship's yard.

**La VÉRITÉ**, *Fr.* truth. A French lexicographer has entered very diffusely into the explanation of this term; we shall satisfy ourselves by extracting the most remarkable passage in it; this relates to the general character of his countrymen. He says, "The French, considered collectively, are mostly of an open and ingenuous character; but

## V E R

it must be allowed, at the same time, that the generality of the nation are light and thoughtless, and extremely indifferent about what they may assert as truth, and indeed about their actions."

**VERNIS**, *Fr.* varnish.

**VEROLE**, *Fr.* great pox, which see. Notwithstanding the prevalence of this disorder in France, and throughout Europe, it is reckoned so dreadful a visitation, that the French have a familiar proverb, which says,—*Si tu ne crains pas Dieu, au moins crains la vérole*; if thou art not afraid of God, dread, at least, the pox.

**VERRE pour prendre hauteur**, *Fr.* a thick coloured glass, through which an observation is taken of the sun.

**VERRE pilé**, *Fr.* broken pieces of glass, which are sometimes used in artificial fire-works.

**VERRIN**, *Fr.* a machine which is used to raise large weights; such as cannon, &c.

**VERROU**, *Fr.* a bolt.

**VERS**, *Fr.* towards. Hence, *marcher vers la côte*, to march towards the coast; *diriger les opérations vers la côte*, to direct a plan of operations towards the coast.

**VERSER**, *Fr.* to spill; to shed; to pour in.

**VERSER son sang pour la patrie**, *Fr.* to shed one's blood for the country. This word is used, among the French, to specify the delivery of musquets, viz. *fusils versés à l'arsenal*, firelocks delivered up or thrown into the arsenal.

**VERSER du sang**, *Fr.* to spill blood.

**VERTICAL**, (*vertical*, *Fr.*) perpendicular.

**VERTICAL point**, (*point vertical*, *Fr.*) a term used in astronomy, to express an imaginary point in the heavens, which is supposed to fall perpendicularly upon our heads.

**VERUTUM**, a weapon or dart, which was used among the ancients, short and narrow, headed with iron, like a narrow spit; some call it a casting dart with a string.

**VERVINA**, among the Romans, a long javelin, also a spit or broach.

**VERVINA**, (*Vervine*, *Fr.*) Vervein, an herb that was reckoned sacred among the Romans, with which the *Pater Patratus*, or the king of heralds,

was crowned, when he quitted the council of heralds, for the purpose of declaring war, or proclaiming peace.

**VESTIBULE**, *Fr.* porch; entry; hall.

**VESTIBULE**, (*vestibule*, *Fr.*) in fortification, is that space or covered ground which is in front of guard-houses, and is generally supported by pillars. Of this description is the front part of the new guard-house near Buckingham House. In a more general sense, any large open space before the door or entrance of a house. Daviler derives the word from *vestes* and *ambulo*, by reason people there begin to let their trains fall. In the West-Indies the vestibule is called a balcony.

**VETERAN**, (*vétérán*, *Fr.*) This word comes from the Latin *veteranus*, a soldier in the Roman militia, who was grown old in the service, or who had made a certain number of campaigns, and on that account was entitled to certain benefits and privileges.

Twenty years service were sufficient to entitle a man to the benefit of a veteran. These privileges consisted in being absolved from the military oath, in being excused all the duties and functions of a soldier, and in being allowed a certain salary or appointment.

A French soldier is entitled to the honourable name of veteran, after he has served twenty-four years, without any break in his service.

**VÉTÉRANCE**, *Fr.* the state, condition of an old soldier.

*Lettre de VÉTÉRANCE*, *Fr.* the document or letter which enables an old soldier to claim the rights and privileges of a veteran.

**VETERANI**, among the Romans, all soldiers were so called who, after having served twenty-five years, obtained their discharge. If they chose to continue in the service, they were exempted from all sentry and fatigue duties; and they only joined their different legions when the army took the field. The period for being put upon this list, was shortened by the Emperor Augustus; and was, (from having once been 29) reduced to twenty years service in the infantry, and to ten in the cavalry.

**VÉTÉRINAIRE**, *Fr.* See *Veterinary*.

*Ecole VÉTÉRINAIRE*, *Fr.* Veterinary school.

**VETERINARIAN**, (*Veterinarius*, *Lat.*) One skilled in the diseases of cattle; a farrier, or horse-leech.

**VETERINARY**. Appertaining to the science of taking care of cattle.

**VETERINARY surgeon**. The surgeon appointed to take care of the horses in a cavalry or dragoon regiment, is so called. He is subordinate and accountable to the veterinary college.

**VETILLES**, *Fr.* This word literally signifies trifles. In artificial fireworks, they are small serpentine compositions, confined within a single roll of paper. They have generally three lines in diameter.

**VEVATIOUS and Groundless.**

Charges of accusation, and appeals for redress of wrongs, are so called, when the persons who make them cannot substantiate their subject matter. Officers, non-commissioned officers, and soldiers are liable to be punished at the discretion of a general court-martial, for vexatious conduct. His Majesty sometimes peremptorily dismisses the former, without permitting them to stand the investigation of a court-martial.

**VEXILLARI**. Standard-bearers. Among the Romans, the vexillarii were a certain number of chosen men, who were attached to the standards, and who were the first on the lists of promotion, and military reward. This standard was called *vexillum legionis*. There were six hundred vexillarii, or standard-bearers, belonging to each legion, who enjoyed the same privileges as were given to the veterans; with this exception, that they were obliged to carry the standard on service.

**VEXILLUM**. The standard which was carried by the Roman horse. It corresponds with the standard and guidon of modern times. It also signifies, generally, a banner, ensign, or flag.

**VEXILLUM Navale**, a streamer; the top-gallant of a ship. Whence *vexilla submittere*, to strike sail.

**VEXILLUM** likewise meant the Imperial standard. See *Labarum*.

**UGHUN**, *Ind.* A month which partly corresponds with November: it follows Kutik.

**VIANDE**,

**VIANDE**, *Fr.* Meat; animal food. In the old regime every French soldier was allowed half a pound of meat per day.

**M. de Louvois**, who was in a public situation under the old government of France, sent in a plan, recommending, that a quantity of dried meat reduced to powder, should be distributed to troops on service. He took the idea from a custom which is prevalent in the East. He did not, however, live to fulfil his intentions, although he had already constructed copper ovens that were large enough to contain eight bullocks. Very excellent broth can be made of this powder; one ounce of which boiled in water, will supply a sufficient quantity for four men; and one pound of fresh meat gives one ounce of powder; so that, according to the inventor's assertion, there is a saving of one pound. The portable soup-balls which are sold in this country are of the same nature.

**VIBRATION**. See *Pendulum*.

**VICE-ADMIRAL**, (*vice-amiral*, *Fr.*) A naval officer of the second rank; who takes rank with generals of horse. Louis XIV. who endeavoured to establish a French navy in 1669, created two vice-admirals of the fleet, whom he called vice-admiral of the East, and vice-admiral of the West.

**VICTOR**. A conqueror; generally applied to the chief officer of a successful army.

**VICTORY**, (*Victoire*, *Fr.*) The overthrow, or defeat of an enemy in war, combat, duel, or the like.

**VICTUAILES**, *Fr.* The provisions which are embarked on board ships of war are so called by the French.

**VICTUAILLER**, *Fr.* Victualler.

**VICTUALS**. Food or sustenance allowed to the troops, under certain regulations, whether on shore or embarked in transports.

By the last general regulations, page 177, it is ordered, that at dinner time the officer upon duty in any of his Majesty's transports, on board of which troops are embarked, is personally to see that the men are regular at their messes; that their rum is mixed with at least three parts of water to one of spirit; and should he observe any circumstance of neglect in victualling the

troops, he is to report the same to the officer commanding on board, who, if necessary, will make complaint thereupon, as also on any other matters touching the conduct of the masters of vessels, to, the agent of transports. Minutes of all these circumstances should be taken by the commanding officer and kept by him, if not in company with the transport agent.

The greatest care is to be taken, that the coppers be well and regularly cleaned, both before and after use.

The cooks are to appear clean on parade once a day. In page 180 of the same official compilation, it is sensibly stated, that it will be necessary to guard the men when they get into a hot climate against costiveness; and, as upon the arrival of the transports in the West Indies, a great number of canoes will probably come off with fruit, plantains, &c. generally very green and very bad, the soldiers should not be allowed to buy such trash, and should only be supplied with fruit and vegetables under the orders of the officers, and by the recommendation of persons acquainted with the West Indies.

**VICTUALLERS**.—See *Sutlers*.

**VIDAM**, (*Vidame*, *Fr.*) The judge of a bishop's temporal jurisdiction. He formerly held lands under the bishop, on condition, that he should always be ready to defend the temporal Rights of the church, and to place himself at the head of the ecclesiastical troops.

**VIE**, (*crier la*, *Fr.*) To ask quarter of an enemy, who has one's life in his power.

*Donner la Vie*, *Fr.* To give quarter.

**VIE**, *Fr.* is also used in a variety of significations, as *donner, hazarder, exposer sa vie*, to give, to hazard, to expose one's life; *ôter, arracher, ravir la vie*, to take away, to wrest, to snatch away life; *entreprendre sur la vie de quelqu'un*, to have some design against a man's life; *sous peine de la vie*, under pain of death, or at the forfeit of one's life; *soutenir au péril de sa vie*, to sustain any thing at the risk of one's life.

**VIEUX Corps**, *Fr.* A term used among the French before the revolution, to distinguish certain old regiments. There were six of this description,

tion, viz. Picardy, Piedmont, Navarre, Champagne, Normandy, and the marine corps. The three first were formed in 1562, and that of Champagne in 1575. They were then called *Les vieilles bandes*; the ancient or old bands; and before that period, each was known by the name of its colonel.

*Les Petits Vieux Corps*, Fr. La Tour du Pin, Bourbonnois, Auvergne, Bel-sunce, Meilly, and the Regiment du Roi, or the King's own, were so called, during the French monarchy. All the other regiments ranked according to the several dates of their creation, and the officers took precedence in consequence of it.

*Eau de Vie*, Fr. Brandy. A spirituous liquor, which, in the early part of the French Revolution, was plentifully given to the soldiers as a succedaneum for courage. The lower classes are remarkably fond of it in all countries, and it is frequently resorted to in the higher orders for the purpose of driving away care, or of becoming valiant in critical moments.

*VIEW of a place*. The view of a place is said to be taken when the general, accompanied by an engineer, reconnoitres it, that is, rides round the place, observing its situation, with the nature of the country about it; as hills, valleys, rivers, marshes, woods, hedges, &c. thence to judge of the most convenient place for opening the trenches, and carrying on the approaches; to find out proper places for encamping the army, and for the park of artillery.

*To Viſw*. See *To Reconnoitre*.

*VIF*, Fr. This word is frequently used among the French to signify the core, or inside of any thing—viz:

*Vif d'un arbre*, Fr. The inside of a tree.

*Vif d'une pierre*, Fr. The inside of a stone.

*Vif de l'eau*, Fr. High water.

*VIGIER*, Fr. To keep watch; to convey.

*VIGIER une flotte de vaisseaux marchands*, Fr. To convoy a fleet of merchantmen.

*VIGIES*, Fr. A term given to certain rocks under water near the Azores. *Vigie* likewise signifies a watch, or sentinel on board a ship; but it is chiefly used among the Spaniards in South America.

*VIGILANCE*, (*Vigilance*, Fr.) Watch-

fulness; circumspection; incessant care. This quality is essentially necessary in a general; nor will it be found in his character, unless he has sedulously cherished it through all the intermediate stations of his profession.

Vigilance, or vigilancy, must not be confounded with precipitancy of conduct; for the latter does not comprehend either the care, or the reflection and regularity which must all be united in the former.

*VIGILANT*, (*vigilant*, Fr.) Watchful, attentive.

*VIGILES*. Guards on outposts, round a camp, &c. and sentinels were so called among the Romans. Their duty was, in some degree, similar to that which is practised in these days; with this difference, that the *Vigiles*, among the ancients, were not armed, in order to prevent them from sleeping, either by leaning against their pikes, or by lying upon their shields. The man on sentry held a sort of dark lantern, which was so constructed, that the light reflected to himself and his three comrades only. The Roman sentinel challenged in the following manner:—*Stale viri; qua causa via?* *Quive estis in armis?* stop men; what are the causes of your journey, or on what business are you? or why are you in arms? He then demanded the *tessera*, or watchword, from the patrol.

*VIGOROUS*, (*Vigoreux*, Fr.) Strong, brisk, active, resolute, as a vigorous attack.

*VIGOTE*, Fr. A model by which the calibers of pieces of ordnance are ascertained, in order to pick out appropriate bullets. This model consists of a thick piece of wood, in which there are holes of different sizes, according to the several calibers of cannon.

*VILBREQUIN*, Fr. A wumble.

*VILLAIN*, (*Vilain*, Fr.) Formerly a man of low and servile condition, who had a small portion of cottages, and land allotted him, for which he was dependent on his Lord, and bound to certain work and corporal service. In the ancient days of France, it was customary to degrade officers and men of rank, by reducing them to the condition and servitude of a villain. In these times, villain generally signifies an arrant rogue, or pitiful, sordid fellow.

*VILLE*, Fr. See *Town*.

*VILLE Moyenne*, Fr. See *Moyenne*.

**VILLE ouverte**, *Fr.* See *Ouverte*.

**VILLES libres**, *Fr.* Free towns.  
See **HANS-TOWNS**.

**VIN**, *Fr.* Wine. The genuine juice of the grape, which is so plentiful and so cheap in France, that a common soldier there has a larger quantity to his share, than a British soldier can get of small beer here.

**VINCIBLE**. Conquerable; in a state to be defeated.

**VINDAS**, *Fr.* See **WINDLASS**.

**VINEFE**. See **VALIUM**.

**VINEGAR**, (*Vinagre*, *Fr.*) Vinegar is frequently used in the artillery to cool pieces of ordnance. Two pints of vinegar to four of water is the usual mixture for this purpose.

**VINTAINE**, *Fr.* A small rope which masons use to prevent stones from hitting against a wall when they draw them up.

**VIOL**, *Fr.* A rape, or the act of forcing a female, by main force, to give up her person. It sometimes happens, that through the obstinacy of the governor of a besieged place, the inhabitants are exposed to the dreadful calamity, of seeing themselves and their property given up to the plunder of an enraged soldiery. When this is the case, the conquering general does himself infinite honour, by strictly forbidding every soldier, under pain of death, to commit the least violence on the persons of the inhabitants, but most especially on those of defenceless women, or to set fire to their houses.

**VIOLENCE**. Force; attack; assault.

**VIRAGO**. A female warrior.

**VIRER**, *Fr.* To change, to turn round. This word is used figuratively by the French, viz. *Tourner et virer*, to beat about the bush; as, *Tourner et virer quelqu'un*, in an active sense, to pump another, or to draw out his secrets.

**VIRETONS**, *Fr.* Arrows.

**VIREVAU**, *Fr.* A draw-beam, a capstan.

**VIRE-VOLTE**, *Fr.* A quick turning about. It is a term of the maudg.

**VIROLE**, *Fr.* A sergule; a verrel.

**VIS**, *Fr.* Screw, vice, spindle-tree.

**VISER**, *Fr.* To aim at any thing.

**VISER à vue**, *Fr.* To aim at a mark.

**VISIÉR**, (*Visir*, *Fr.*) An officer

**VIZIER**, } of dignity in the Otto-  
**VIZIR**, } man Empire; whereof there are two kinds, the first called by

the Turks **Vizir Azem**, or **Grand Vizir**, first created in 1370 by Amurath the First, in order to ease himself of the chief and weightier affairs of the government. The **Grand Vizir** possesses great powers, especially with regard to military affairs. The orders he issues are so thoroughly discretionary, that when he quits Constantinople to join the army, he does not even communicate his intentions to the sultan. This system entirely differs from that which is followed by European generals. When the latter take the field, they proceed upon plans that have been previously digested; and although they may occasionally change their dispositions, yet they never deviate from the essential and governing principles.

The **Grand Vizir**, on the contrary, not only makes the arrangements according to his own judgment, but he even changes an operation that has been previously ordered by the sultan, if, on his arrival at the spot he should think it expedient to employ the troops in a different way. This absolute power is not, however, without its risk; for if the **Grand Vizir** should fail in his enterprize, it is more than probable that the sultan will cause him to be beheaded: a punishment which has long been familiar to the Turks, from the arbitrary manner in which it is practised, and the frequency of its occurrence.

When the Turks engage an enemy, the **Grand Vizir** generally remains with the reserve, and seldom mixes with the main body, which is soon converted into a mob of desperate combatants. The war which has been carried into Egypt, bids fair to change the whole system of Turkish tactics.

**VISIÈRE**, *Fr.* The sight which is fixed on the barrel of a musquet or firelock.

**To VISIT**, (*Visiter*, *Fr.*) To go to any place, as quarters, barracks, hospital, &c. for the purpose of noticing whether the orders or regulations which have been issued respecting it, are observed.

**VISITE des Postes**, *Fr.* The act of visiting posts, &c.

*Faire la VISITE*, *Fr.* To visit, to inspect.

**VISITEUR**, *Fr.* The person who visits or goes the rounds.

**VISITING Officer**. He whose duty it is

is to visit the guards, barracks, messes, hospital, &c. See *Orderly Officer*.

**VISOR**, that part of the helmet

**VIZARD**, which covered the face.

**VITAL**, Essential; chiefly necessary.

**VITAL AIR**, or oxygene, the cause of the rapid ignition of gunpowder.

**VITCHOURA**, Fr. a furred coat.

**VITESSE**, Fr. dispatch; promptitude of action.

**VITIS**, a vine; a centurion's rod; such as was used among the old Romans to chastize soldiers that stepped out of the ranks, or were guilty of small irregularities. Mercenaries, and those men that were not Roman citizens, were flogged with switches on their naked shoulders.

**VITONIERES**, Fr. lumber holes.

**VIVANDIERS**, Fr. victuallers, sutlers, &c.

**VIVAT**, Fr. a familiar exclamation, which is used not only by the French, but by the Dutch and Germans. It comes from the Latin, and signifies literally, May he live!

**Vive le Roi!** Fr. God save the king! Long live the king!

**Vive la Republique!** Fr. Long live the republic!

**Qui vive?** Fr. a military phrase which is used in challenging—Who comes there?

**VIVRE**, *vivres*, Fr. food, provisions, subsistence. In the *Dictionnaire Militaire*, vol. iii. page 525, is an interesting account of the manner in which troops were subsisted during the first years of the French monarchy.

**Vivres, et leur distribution chez les Turcs**, Fr. the kind of provisions, &c. and the manner in which they are distributed among the Turks. The food or provisions for the Turkish soldiery form an immediate part of the military baggage.

The government supplies flour, bread, biscuit, rice, bulgur or peeled barley, butter, mutton and beef, and grain for the horses, which is almost wholly barley.

The bread is generally moist, not having been leavened, and is almost always ready to mould. On which account the Armenians, who are the bakers, bake every day, in ovens that have been constructed under ground for the use of the army. When there is

not sufficient time to bake bread, biscuit is distributed among the men.

The ration of bread for each soldier consists of one hundred drams per day, or fifty drams of biscuit, sixty of beef or mutton, twenty-five of butter to bake the peeled barley in, and fifty of rice. The rice is given on Friday every week, on which day they likewise receive a ration of fifty drams of bulgur mixed with butter, as an extraordinary allowance, making a kind of water-gruel.

These provisions are distributed in two different quarters. The meat is given out at the government stall or butchery, where a certain number of Armenians, Greeks, and Jews regularly attend.—Each company sends a head cook, who goes with a cart and receives the allowance from a sort of quarter-master-serjeant, who is in waiting with a regular return of what is wanted for each oda.

This person is stiled among the Turks *Ayidan Chiaous*. He stands upon a spot of ground which is more elevated than the rest, and receives the allowance due to his district.

The distribution of bread, &c. is made within the precincts of the Tefterdar-Bascy, where the Vekil-karet attends as director or superintendent of stores and provisions, and by whose order they are delivered.

When the allowance is brought to the oda or company, the Vekil-Kharet, a sort of quarter-master, sees it regularly measured out, and if any portions be deficient, he takes note of the same, in order to have them replaced for the benefit of the company. The remainder is then given to the head cook, who divides it into two meals, one for eleven o'clock in the morning, and the other for seven in the evening.

These two meals consist of boiled or stewed meat, mixed with rice, and seasoned with pepper and salt; water-gruel being regularly made for each man on Friday.

There are six kitchen boys or quarters attached to each oda, by which they are paid a certain subsistence. On solemn occasions, and on festival days, the quarters are dressed in long gowns made of skins, with borders to them; they likewise wear a large knife, with an engraved silver handle, which hangs at their side. They serve up the victuals

in two copper vessels, that are laid upon a table covered with a skin, round which seven or eight persons may be seated.

**VIVRIERS, Fr.** Purveyors and other persons employed by the commissary-general, or contractor for stores and provisions.

**Mons. Dupré D'Aulnay**, in a work entitled *Traité des Subsistances Militaires*, has suggested the establishment of a regular corps of *Vivriers* or persons whose sole duty should be to attend to the subsistence of an army, in the field as well as in garrison. His reasoning upon this subject is very acute, full of good sense, and seems calculated to produce that system of economy and wholesome distribution, that, to this day, are so manifestly wanted in all military arrangements.

**VIZ, Ind.** a small coin; it is also a weight equal to about three pounds; but differs much in value according to place.

**VIZARUT, Ind.** the office of vizier.

**VIZIER, Ind.** prime minister.

**ULANS, Fr.** This word is sometimes written *Uhlans*, and more frequently *Uhlaus*. A certain description of militia among the modern Tartars was so called. They formerly did duty in Poland and Lithuania, and served as light cavalry.

It is, not exactly known at what epoch the Tartars first came into Poland and Lithuania. Dlugossus, in his history of Poland, book XI. page 213, relates, that there were troops or companies of Tartars attached to the army which was under the command of Alexander Witholke, Grand Duke of Lithuania. Heidenstein, in his account of Poland, *Rer. Polonicæ*, page 132, makes mention of a corps of Tartars belonging to the army which Stephen Bathori, King of Poland, carried into the field when he fought the Russians. This corps, according to the same author, was headed by one *Ulan*, who said he was descended from the princes of Tartary.

Although the origin of the word *Ulan*, as far as it regards the modern militia so called, does not appear to be indisputably ascertained, it is nevertheless well proved, that besides the Tartar chief under Stephen Bathori, the person who, in the reign of Augustus II. formed

ed the first pulk, or regiment of that description, was not only called *Ulan* himself, but likewise gave the name to the whole body under his command. This chief is mentioned in the records of the military institution of Poland in 1717. He was then colonel or commandant of the first pulk, or king's regiment, and there were three captains under him of the same name, viz:—Joseph *Ulan*, David *Ulan*, and Cimbey *Ulan*. In 1744, one of these was captain of a company of *Ulans* in Bohemia, and was afterwards colonel of a corps of the same description in Poland. He is likewise said to have been descended from the Tartar princes. It is, however, left undecided, whether *Ulan* be the name of a particular family, or a term given to distinguish some post of honour; or again, whether it barely signify a certain class of turbulent haughty soldiers, such as the *Strelez*, of Russia, or the *Janissaries* of Constantinople.

If there be any thing which can make us question the authenticity or probability of this account, it is the passage we find in the book already quoted—viz. Dlugossus, where he says, liv. XIII. page 403, that in 1167 an ambassador from Tartary had arrived at Petrigkow to announce to king Casimir, that, after the death of Eczigier, his son Nordowlad had ascended the throne of Tartary, with the unanimous consent and concurrence of all the princes and *Ulans*. Quitting the etymology of the word, and leaving the original name to the determination of wise and scientific men, we shall confine our present researches to the modern establishment of the *Ulans*; which, by the best accounts, we find to have happened in 1717.

It is acknowledged by all writers, that the *Ulans* are a militia, and not a particular nation or class of people; their origin, in this particular, resembles that of the *Cossacks*. When Augustus II. in 1717 altered the military establishments of Poland, he formed two regiments of *Ulans*; one consisting of six hundred men, which had already existed, and was called the king's pulk, and the other of four hundred men, which was given to the great general of the republic.

Augustus III. on his accession to the throne, took both these regiments into his own immediate pay, and afterwards augmented the establishment by raising several other pulks or corps of this description. The Ulan<sup>s</sup> are mounted on Polish or Tartar horses, and do the same duty that is allotted to hussars; with this essential difference, that they are better armed and accoutred, and that their horses excel those of the hussars in strength and swiftness, although they are mostly of the same size. The Ulan<sup>s</sup> have frequently distinguished themselves on service, particularly in Bohemia.

Their principal weapon is a lance five feet long, at the end of which hangs a silk streamer, that serves to frighten the horse of the Ulan's opponent, by its fluttering and noise. The lance is suspended on his right side, by means of a belt that is worn across the Ulan's shoulders, or by a small leather thong which goes round his right arm, the end of the lance resting in a sort of stay that is attached to the stirrup. Before the Ulan takes his aim, he plants his lance upon his foot, and throws it with so much dexterity, that he seldom misses his object.

The dress of the Ulan consists of a short jacket, trousers or breeches, made like those of the Turks, which reach to the ankle bone, and button above the hips. He wears a belt across his waist. The upper garment is a sort of Turkish robe with small facings, which reaches to the calf of the leg; his head is covered with a Polish cap. The colour of the streamer which is fixed to the end of the lance, as well as of that of the facings, varies according to the different pulks or regiments which it is meant to distinguish. The Ulan is likewise armed with a sabre, and a brace of pistols which hang from his waistbelt.

As the Ulan<sup>s</sup> consider themselves in the light of free and independent gentlemen, every individual amongst them has one servant, if not two, called *pocztony* or *pachuleks*, whose sole business is to attend to their baggage and horses. When the Ulan<sup>s</sup> take the field, these servants or batmen form a second or detached line, and fight separately from their masters. They are armed with a carbine, which weapon is looked upon with contempt by their masters,

and they clothe themselves in the best manner they can.

The Ulan<sup>s</sup> generally engage the enemy in small platoons or squads, after the manner of the hussars; occasionally breaking in the most desultory manner. They rally with the greatest skill, and frequently affect to run away, for the purpose of inducing their opponents to pursue them loosely; a circumstance which seldom fails to be fatal to the latter, as the instant the pursuers have quitted their main body, the Ulan wheels to the right about, gets the start of him through the activity of his horse, and obtains that advantage, hard to hand, which the other possessed whilst he acted in close order.

The instant the Ulan<sup>s</sup> charge an enemy, their servants or batmen form and stand in squadrons or platoons, in order to afford them, under circumstances of repulse, a temporary shelter behind, and to check the enemy. The batmen belonging to the Ulan<sup>s</sup> are extremely clever in laying ambushes.

The pay of the Ulan<sup>s</sup> in time of peace is very moderate. Poland, before its infamous dismemberment and partition by Russia, Prussia, and Austria, kept a regular establishment of four squadrons and ten companies on foot. These troops were annually supplied with a thousand rations of bread and forage, which quantity was paid them at the rate of 272 florins, Polish money, per ration. The Grand Duchy of Lithuania subsisted, in the same manner, fifteen other companies of Ulan<sup>s</sup>. The other pulks were paid by the king. The annual pay of the captains was five rations, and that of the subalterns two; that is 1360 florins to the former, and 544 florins to the latter.

In 1743 Marshal Saxe, with the approbation and concurrence of the French court, raised a regiment of Ulan<sup>s</sup>, which was attached to the military establishment of that country. This corps consisted of one thousand men, divided into six brigades, each brigade composed of one hundred and sixty men, eighty of whom were Ulan<sup>s</sup>, and eighty dragons. So that the regiment consisted of five hundred Ulan<sup>s</sup>, properly so called, armed and accoutred like those in Poland, and the other five hundred were dragons, without being considered as the servants or batmen of the

the Ulaus; in which instance they differed from the pacholeks of the Polish Ulaus. These dragoons were paid by the king; whereas in Poland each Ulan paid his own servant or batman, who looked to him only for clothing, arms, and subsistence. On the death of Marshal Saxe, the Ulaus in France were reduced; and the dragoons only kept upon the establishment. They were considered as a regiment; being in the first instance given to Count de Frise, who was a major-general in the service, and became their colonel. They remained on that footing until the revolution.

The uniform of the French Ulaus consisted of a green coat or cloak, with green breeches, Hungarian half-boots, pinchbeck helmet, with a turban twisted round it of Russian leather; the tail or mane of the helmet consisted of horse-hair, which was coloured according to the facings of the brigade; their arms were a lance nine feet long, with a floating streamer at the top, a sabre, and a pistol in the waist-belt.

The dragoons were clothed like other regular troops. Their coat was green, with cream-coloured facings and scarlet linings; plain brass buttons, an anguilette or tagged point, made of red worsted; a tawn-coloured waistcoat, edged round with scarlet; leather breeches; half-boots that were laced up to the calf of the leg; pinchbeck helmet, with a seal-skin turban round it, and two rosettes made of pinchbeck; the top was adorned with horse-hair, which hung behind. Their arms consisted of a fusil with a bayonet, which was always fixed; two pistols and a sabre; the horse was covered with a wolf's skin. The Ulaus rode horses which were somewhat lower than those of the dragoons, and were more active. The dress of the German Ulan is somewhat similar to that of the French.

At the commencement of the French revolution, particularly in 1792 and 1793, the Ulaus belonging to the Imperial army that endeavoured to penetrate into France, were the terror of the inhabitants all along the frontiers. The excesses which they committed, and the desolation they occasioned, rendered their very name a signal of alarm. They seldom gave quarter, and they never received it.

ULTIMATUM, a term used in ne-

gociations to signify the last condition or conditions upon which propositions, that have been mutually exchanged, can be finally ratified.

ULTRAMARINE, (*d'outremer*, Fr.) From beyond the sea—foreign.

ULTRAMARINE, (*oultre mer*, Fr.) A very delicate sky blue powder used in the drawing of plans, &c.

ULTRAMONTANE, derived from the Latin *ultra*, beyond, and *mons*, mountain. This term is principally used in relation to Italy and France, which are separated by the Alps. According to Bailey, *ultramontanus* is a name given by the Italians to all people who live beyond the Alps.

UMBO, the pointed boss or prominent part in the centre of a shield or buckler.

UMBRIERE, the visor of a helmet.

UMPIRE, (*arbitre*, Fr.) An arbitrator, or a power which interferes for the adjustment of a dispute or contest.

UNARMED, the state of being without armour or weapons.

To UNCASE, in a military sense, to display, to exhibit—As to uncase the colours. It is opposed to the word *To Case*, which signifies to put up—to enclose.

To UNCOVER. When troops deploy, the different leading companies or divisions, &c. successively uncover those in their rear, by marching out from the right or left of the column.

UNCONDITIONAL, at discretion; not limited by any terms or stipulations.

UNCONQUERED, not subdued or defeated; in opposition to conquered or defeated.

UNDAUNTED, not appalled by fear; valiant.

UNDECAGON, a regular polygon of 11 sides or angles.

UNDER. This preposition is variously used in military matters, viz.

UNDER Arms, (*sous armes*, Fr.) a battalion, troop, or company is said to be under arms when the men are drawn up regularly armed and accounted, &c.

UNDER Command (*sous ordre*, Fr.) in subjection to; liable to be ordered to do any particular duty.

UNDER Cover, (*d'ouvrage*, *à l'abri*, Fr.) Shielded, protected, &c. See COVER.

UNDER-Officer, an inferior officer; one in a subordinate situation.

UNDER-

**UNDERHAND**, (*sous main*, Fr.) Clandestinely; with fraudulent secrecy. A term not known in military phraseology; or it is known that ought to be expunged.

**To UNDERMINE**, to dig cavities under any thing, so that it may fall, or be blown up; to excavate.

**To UNDERMINE**, in a figurative sense, to insure by clandestine means. The discipline of the army may be *undermined* by secret practices and cabals; and the most enterprising officer may be undermined by the insinuations of a cowardly parasite and reporter.

**UNDERMINER**, a sapper, one who digs a mine.

**UNDISCIPLINED**, not yet trained to regularity or order: not perfect in exercise or manoeuvres.

**To UNFIX**, in a military sense, to take off, as *unfix bayonet*, on which the soldier disengages the bayonet from his piece, and returns it to the scabbard. The word *return*, as we have already observed, is sometimes used instead of unfix. But it is improperly used, although it more immediately corresponds with the French term *remettre*.

**UNFORTIFIED**, not strengthened or secured by any walls, bulwarks, or fortifications.

**UNFURLED**, a standard or colours, when expanded and displayed, is said to be unfurled.

**UNGENTLEMANLIKE**, } (*mal-*  
**UNOFFICERLIKE**, } *honnête,*  
*grossier*, Fr.) not like a gentleman or officer. Conduct unbecoming the character of either is so called. Officers convicted thereof are to be discharged from the service. See *Articles of War*. 25th Article of the 16th section.

**UNHARNESSED**, disarmed; divested of armour or weapons.

**UNHORSED**, thrown from the saddle; dismounted.

**UNHOSTILE**, not inimical, or belonging to an enemy.

**UNIFORM**, (*uniforme*, Fr.) this word, though in a military sense, it signifies the same as regimental, which is used both as a substantive and an adjective, may nevertheless be considered in a more extensive light.

Uniform is applied to the different sorts of clothing by which whole armies are distinguished from one another; whereas regimental means properly the

dress of the component parts of some national force. Thus scarlet is the national uniform of the British army, as blue is of the modern French, white of the Austrian, green of the Russian, &c. But in each of these armies there are particular corps which are clothed in other colours, and whose clothing is made in a shape peculiar to themselves. Though, generally speaking, each has an uniform within itself, yet this uniform, strictly considered, is a regimental. Thus, the regimentals of the guards cannot be called the regimentals of the 29th, but scarlet is the uniform of both. In the same manner, though sky blue be the regimental colour of dragoon regiments which serve in India, and green be that of rifle-corps, yet neither the one nor the other can be called the uniform of the British army. It were to be wished, indeed, that, like the navy, all the land troops could be clothed alike, and in one colour. With respect to the origin of *Military Uniforms*, we may assert, with some degree of confidence, that, however ancient the custom of being clothed in some distinguished manner is allowed to be, it is impossible to trace their first adoption beyond the eleventh century.

We should make useless enquiries were we to direct our attention to those periods in which the Romans fought covered with metal armour, or with leather, which was so dressed and fitted to the body, that the human shape appeared in all its natural formation; nor to those in which the French, almost naked, or at least very lightly clad in thin leather, conquered the ancient Gauls.

Better information will be acquired by referring to the crusades which were made into Palestine and Constantinople by the Europeans. We shall there find, that the western nations, France, England, &c. first adopted the use of rich garments, which they wore over their armours, and adorned their dresses with furs from Tartary and Russia.

We may then fix the origin of coloured dresses to distinguish military corps, &c. in the eleventh century. The Saracens generally wore tunics or close garments over their armour. These garments were made of plain or striped stuffs,

stuffs, and were adopted by the Crusaders under the denomination of coats of arms, *Cottes d'armes*. We refer our readers for further particulars to the author of a French work, intitled, *Traité des marques nationales*, and to page 533, tom. iii. du *Dictionnaire Militaire*; observing, that the uniforms of the French army were not completely settled until the reign of Louis XIV. and that the whole has undergone considerable alterations since the present revolution. The uniform of the British army is too well known to require any particular detail from us. We must, however, observe, that from the great attention which his Royal Highness the Commander in Chief pays to every species of military system and organization, we make no doubt, but the great principles of economy and uniformity in dress, will form no inconsiderable part of the reform and good order which he is gradually effecting.

**UNIFORME des charretiers des vivres**, Fr. uniform of the old French wagon corps. It consisted of white sack-cloth edged round with blue worsted, with brass buttons, two in front and three upon each sleeve. They wore a dragon watering cup, with W. upon the front fold, and a tuft at the end. The W and the tuft were made of white worsted.

**UNIFORMITY**, conformity to one pattern; resemblance of one thing to another. In order to preserve this essential requisite, in the exercise and manœuvres of the British forces, it is expressly ordered by his Majesty, that the general officers appointed to review his troops shall pay particular attention to the performance of every part of the regulations issued for the formations, field exercise, &c. and report their observations thereupon for his Majesty's information; so that the exact uniformity required in all movements may be attained and preserved, and his royal intentions thereby carried into full effect.

*UNIFORMITY in dress, to be served by officers belonging to the infantry of the line.*

By orders issued from the adjutant-general's office, 24th May, 1796, all officers, without distinction, belonging to the infantry of the line, are directed to have certain articles of their dress made conformable to patterns deposited in

the office of the comptroller of army accounts in Scotland-yard, for the inspection of such tradesmen as usually furnish those articles.

The hat encircled with a crimson and gold cord; rosettes or tufts of the same brought to the edge of the brims.

The sword blade to be 32 inches long; straight and made to cut and thrust; the shoulder of it at least one inch broad; the guard, pommel, and shell to be brass and gilt; the gripe of silver twisted wire; the knot crimson and gold in stripes.

The gorget to be gilt, with the king's cypher and crown over it engraved in the center; to be worn with a ribband, and rosette or tuft at each end, of the same colour as the facing of the regiment. Since this regulation appeared, officers in the British army, and in the militia and volunteer establishments, are directed to wear their sashes on the outside of their regimentals.

**UNION**. The king's or national colours are called the union.

**UNIVERSITY**, in a general acceptation of the word, any nursery where youth is instructed in languages, arts, and sciences. It likewise means the whole in general, generality. But in a more partial sense it signifies one of the two national institutions which have been established for the encouragement of literature at Oxford and Cambridge. Among other privileges which belong to these royal foundations, the vice-chancellors have a right to know the authority by which any armed force enters either city; and every commanding officer, the instant he has marched in, should report to the vice-chancellor the nature of his route, &c. In this respect the vice-chancellors of both universities are to be looked upon as governors of their respective cities.

**UNSPRING**, a word of command formerly used in the exercise of cavalry.

*Unspring your carbine.* Quit the reins of your bridle, and take hold of the swivel with the left hand, placing the thumb on the spring, and opening it; at the same time take it out of the ring.

**UNTENABLE**, not to be held in possession; incapable of being defended.

**UNTRAINED**, not disciplined to exercise or manœuvre.

**UNVANQUISHED**, not conquered or defeated.

**UNWALLED**,

**UNWALLED.** Being without walls of defence.

**UNWARLIKE.** Not fit for or used to war.

**UNWEAPONED.** Not provided with arms of offence.

**VOGUE, Fr.** The course or way which a galley or ship makes when it is rowed forward.

**VOQUER, Fr.** To make way upon water either by means of sailing or by oars. It also signifies generally to row.

**VOIE, Fr.** Way, means, course of communication.

**VOILE, Fr.** A sail. This word is frequently used by the French to signify the ship itself.

**VOILE quarrée ou à trait quarré, Fr.** A square sail, such as the main-sail.

**VOILE Latine, Voile à tiers-point ou à oreille de Lièvre, Fr.** A triangular-shaped sail, such as is used in the Mediterranean.

**Jet de VOILES, Fr.** The complete complement of sails for a ship.

**Faire VOILE, Fr.** To go to sea.

**VOITURES, Fr.** Carriages, wagons, &c.

**VOL, Fr.** Theft. The military regulations on this head during the existence of the French monarchy, were extremely rigid and severe.

Whosoever was convicted of having stolen any of the public stores, was sentenced to be hung or strangled; and if any soldier was discovered to have robbed his comrade, either of his necessities, bread, or subsistence money, he was condemned to death, or to the galleys for life. So nice, indeed, were the French with respect to the honesty of the soldiery in general, that the slightest deviation from it rendered an individual incapable of ever serving again.

**VOLÉE, Fr.** The vacant cylinder of a cannon, which may be considered to reach from the trunnions to the mouth.

**VOLÉE et culasse d'une pièce, Fr.** This term signifies the same as *tête et queue d'une pièce*. The mouth, or head, and the breech of a piece of ordnance.

**VOLÉE, Fr.** Also signifies a cannon-shot, as *tirer une Volée*, to fire a cannon-shot.

**VOLÉE, Fr.** See SONNETTE.

**VOLET, Fr.** A shutter. It likewise means a small sea-compass.

**VOLLEY.** The discharging of a great number of fire-arms at the same time.

**VOLONES.** In a general acceptance of the term, *Volones* signified volunteers among the ancient Romans. This word was also particularly applied to those slaves who volunteered their services after the battle of Cannæ, and on which account they became Roman Citizens.

**VOLONTAIRES, Fr.** See VOLUNTEERS.

**VOLONTÉ, Fr.** Will, &c. It likewise signifies readiness to do any thing. *Officier, soldat de bonne Volonté.* An officer, a soldier that is ready to do any sort of duty.

**Dernières VOLONTÉS, Fr.** The last will and testament of a man.

**VOLT, (Volte, Fr.)** In horsemanship a bounding turn. It is derived from the Italian word *Volta*; and according to the Farrier's Dictionary is a round or a circular tread; a gait of two treads made by a horse going sideways round a center; so that these two treads make parallel tracks; the one which is made by the fore feet larger, and the other by the hinder feet smaller; the shoulders beating outwards, and the croupe approaching towards the center.

**Mettre un cheval sur les VOLTES, Fr.** To make a horse turn round, or perform the volts. They likewise say in the manege, *Demi-volte*, half-turn or volt.

**VOLÉE, Fr.** In fencing, a sudden movement or leap, which is made to avoid the thrust of an antagonist.

**VOLÉE-face, Fr.** Right about.

**Faire VOLÉE-face, Fr.** To come to the right about. It is chiefly applicable to a cavalry movement; and sometimes generally used to express any species of facing about, viz. *Les ennemis firent jusqu'à un certain endroit, où ils firent Volée-face*; the enemy fled to a certain spot, where they faced about.

**VOLTE,** is also used as a sea phrase among the French to express the track which a vessel sails; likewise the different movements and tacks that a ship makes in preparing for action.

**VOLTER, Fr.** In fencing, to volt; to change ground in order to avoid the thrust of an antagonist.

**VOLTIGER**, *Fr.* To float; to stream out; to hover about; *La cavalerie voltige autour du camp*; the cavalry hovers about the camp. It also means, in the manège, to ride a wooden horse for the purpose of acquiring a good seat.

**VOLUNTEER**. In a general acceptance of the word, any one who enters into the service of his own accord. The signification of it is more or less extensive, according to the conditions on which a man voluntarily engages to bear arms.

**VOLUNTEERS**, are also bodies of men who assemble in time of war to defend their respective districts, and fight generally without pay.

*To VOLUNTEER*. To engage in any affair of one's own accord. Officers and soldiers often volunteer their services on the most desperate occasions; sometimes specifically, and sometimes generally. Hence to volunteer for any particular enterprise, or to volunteer for general service. In some instances soldiers volunteer for a limited period, and within certain boundaries. Of this description were the drafts from the militia in 1793, who volunteered to serve in Europe only. It is not our business to enter into the impolicy of this measure; the inconveniences which have already arisen from it, and the enormous addition to the half-pay list, sufficiently condemn it. We are certainly advocates for a limited period of enlistment, but decidedly repugnant to limited service. A real soldier knows no boundary to his exertions, when the interest of his country requires an extension of them.

The volunteers that approach nearer to the regular establishment of a militia corps than any others, are the St. George's, Hanover-square.

The adjutant has a certain allowance, and the sergeants and corporals receive subsistence throughout the year: the privates when they go out for exercise, or when they mount guard. The several weekly rates, exclusive of the adjutant, are as follow, according to the different ranks.

	l.	s.	d.
Drum-major	1	1	0
Drummers each	0	7	0
Drill-serjeant	0	4	0
Serjeant	0	3	0
Corporal	0	2	6

Private for a whole day 0 3 0

Doitto for half-a day 0 2 0

Mounting guard 0 2 6

There are three armourers, who receive each, per week } 0 18 0

When the sergeants and corporals attend for a whole day, they receive one shilling each; but they do not get any thing when they go out for half a day only.

With respect to the volunteer system, of which so much has been written, and concerning which so many contradictory opinions have been hazarded by individuals, both in and out of parliament; we cannot conceive how, at this critical juncture, any difference should exist on the ground of national utility. That there are defects in its organization no man will pretend to deny; but that the root of its establishment, and its staminal branches, may be converted into a state-engine of defence, the most prejudiced of its opposers, and we are sorry to add of its technical scoffers and revilers, must acknowledge. When the enemy was on the frontiers of France, and a victorious, (because an imposing army from established fame,) was ready to storm the gates of her capital, no member of the French convention, no regular old officer, or upstart hero of the line, attempted to weaken the energies of the country, by throwing a damp upon the public spirit of the nation. All were invited to join the threatened standard of their mother country; all were respected alike, and when uncommon genius was elicited by uncommon circumstances and events, extraordinary stations were allotted to it. Though La Fayette had distinguished himself, as a regular officer, against the bravest troops that ever crossed the Atlantic, he had too much good sense, and (though not the best politician in the world) too much discernment not to see, that the aggregate of a nation is never to be despised. Every part has its little orbit; and if it be permitted to move so as not to jar or come in contact with larger bodies, it will always contribute to that general harmony, which constitutes good order. It is a solecism in state, and a most fatal error in military government, to caust any man to feel

feel little within himself, whose assistance in person or mind, may be useful to community; but it is more than a solecism, and worse than an error, to depreciate a whole body of men. With regard to individuals, it will certainly not be denied, that in the dispensations of Providence, and in the immense variety of the gifts of nature, many may be found, who, without having been born in the womb of grandeur, or brought up in the lap of opulence, are equal to the first employments of a state. History can furnish us with innumerable instances of this sort; and the annals of our own times sufficiently prove the justness of this observation. How, therefore, any man of this Island, whose great boast is equality of right, and whose pride is the aristocracy of talents!—could descend to invidious comparisons, or degrading animadversions before the grave senate of such a nation; or how any officer, of common sense, could be prejudiced against an active and meritorious individual, because he had not been in the line, is a circumstance in our opinion, which deserves the severest censure. This gentleman did not probably recollect, that some of the best generals in Europe, and, indeed, some of the bravest warriors on record, have issued out of the aggregate of a nation, and, not unfrequently, out of bodies of volunteers.

To be perfectly in point, we refer him to the history of General Championet. This man was originally a common scullion, and afterwards cook at the *Pères de la Charité*, a religious order whose time was devoted to the care of the sick at the hospital in the isle of Rhé. Yet he became an officer of experience, was commander in chief of the army of Naples, and gained a complete victory over the celebrated General Mack.

**VOUCHER**, (*Pièce justificative; preuve; recette, Fr.*) A written document or proof upon which any account or charge is established.

**Regimental VOUCHERS**. Particular documents which are signed by regimental colonels, paymasters, adjutants, quartermasters, &c. for pay and allowances, &c.

**VOUGE**, *Fr.* A sort of hedging bill.

It likewise signifies an axe, which the ancient bowmen of France had fixed to their halberds. It is also called a hunter's staff.

**VOULGUE**, *Fr.* A sort of javelin which was formerly used in hunting the wild-boar. See **GUISARMIERS**.

**VOUSSOIR** or *Voussure*, *Fr.* The bending of a vault.

**VOÛTE**, *Fr.* A vault; an arch.

**VOUTE à dos d'âne**, *Fr.* A sharp raised vault.

**VOUTE en anse de punier**, *Fr.* A flat arched vault.

**VOÛTER**, *Fr.* To arch over. The French also use this word figuratively as: *Se voûter*, to stoop with age.

**VOYAGE sur Mer**, *Fr.* A sea voyage. The French call a voyage to the East Indies, *Un voyage de long cours*.

**UP**. An adverb frequently used in military phraseology, viz.

*To cut up*, the same as cut down, in a military sense. See **CUT**.

*To draw up*. To put in regular array, as to draw up a regiment.

**UP**. In a state of insurrection, ready to oppose. This term is also figuratively used.—As, my soul is up in arms.

**UP-to**. Adequately to. Hence, up to the circumstances of the times. The French say, *à la hauteur des circonstances*. **Up to every thing**. A trite, and indeed a vulgar phrase, which implies, that a person is adequate to and ready for every project or undertaking. It is generally used in a bad sense. The French say, particularly with respect to play, &c. *Il a fait les quatre coups*.

**TO COME UP WITH**. (*Atteindre, Fr.*) A term used, in the British service, when an army or detachment is in pursuit of an enemy, and gets near enough to harass and attack him.

**UP!** Exhorting, exciting, or rousing to action.

Thus, Dryden says:

Up! up, for honour's sake; twelve legions wait you,  
And long to call you chief.

**HEADS-UP** (*à tête haute, Fr.*) A term used at the drill, by which recruits and soldiers are cautioned to take an erect and soldier-like posture, without constraint.

**UP**. (*Debout, Fr.*) Rise, a word of command in the French service

when troops are in the presence of the consecrated host.

**URBANICI.** From Urbanicus, belonging to a city. A body of armed men, amounting to six thousand effectives, which was formed by the Emperor Augustus for the defence and internal tranquillity of Rome: This body was divided into four cohorts, which were quartered in a particular part of the city called *Castra Urbana*.

**VRILLE, Fr.** A wimble.

**VRILLEK, Fr.** Among fireworkers, to rise in a spiral manner, as sky-rockets do.

**USARII, Ind.** The name of a month; which partly corresponds with June; it follows Jeth.

**To USE.** To employ to any particular purpose; to bring into action; as he used his choicest troops on that decisive day.

**USTENSILES, Fr.** The necessary articles which a soldier who is quartered or billeted at an inn, &c. has a right to be supplied with.

**USTENSILES de Magazins, Fr.** Under this word are comprehended all the various tools, implements, &c. which are required in military magazines and store-houses.

**USTENSILES d'un Voisseau, Fr.** Every thing which is necessary in the navigation of a ship.

**USTENSILES de Canon, Fr.** Every thing which is required to load and unload a piece of ordnance, viz. the rammer, sponge, priming horn, wedges, &c.

**To USURP. (Usurper, Fr.)** To seize upon by violence, or stratagem.

**USURPER, (Usurpateur, Fr.)** Any person is so called, who by force or stratagem, gets possession of a power or authority to which he is not legally entitled.

**USURY, (Usure, Fr.)** Excessive interest for money lent. From the Latin *Usura*. No class of individuals, perhaps, (if we except that of gamblers) are so often driven to the necessity of applying to this ruinous source of accommodation, as military men; especially those of the profession, who have been placed upon the half-pay list of Great Britain and Ireland. The danger, which attends every species of usurious contract, is rendered less, and the practice consequently more frequent, in proportion to the nice sense

of honour that is attached to a military character. It is not, however, less criminal, particularly with regard to the half-pay; and we should be deficient in our duty to the army at large—for whom alone we write—did we omit to warn them against the insidious aid of discount, and of temporary loans. Nor do we scruple to say, (however sacred the word of an officer must at all times be held) that a deviation from it, under circumstances of palpable extortion, is not dishonourable. Perhaps it might not be wholly useless were the legislature so far to interfere, as to express in the mutiny bill, not only the nullity of all pecuniary engagements, beyond the *bona fide* interest of the law, between officers and money-lenders; but also to make it criminal in the latter to injure the king's service by inveigling the former into promissory notes, &c. With regard to usury in general, it is defined to be an unlawful profit which a person makes of his money; in which sense usury is forbidden by the civil and ecclesiastical, and even by the law of nature. For the information of those gentlemen who are in the habits of accommodating officers, it may not be irrelevant to state, that by stat. 12 Ann. c. 16, which is called the statute against *Excessive Usury*, it is ordained, that no person shall take for the loan of any money, or other thing, above the value of five pounds for the forbearance of one hundred pounds for a year; and so in proportion for a greater or lesser sum: and it is declared, that all bonds, contracts, and assurances, made for payment of any principal sum to be lent on usury, above that rate, shall be void: and that whosoever shall take, accept, or receive, by way of corrupt bargain, loan, &c. a greater interest than 5 per cent. shall forfeit treble the value of the money lent, provided the information is laid within the space of one year, for the borrower or informer, and of two years for the king; and also that scrivener, solicitors, and drivers of bargains, shall not take or receive above five shillings for the procuring of the loan of one hundred pounds for one year, on pain of forfeiting twenty pounds.

In an action brought for usury, the statute made against it must be pleaded;

ed; and in pleading an usurious contract, as a bar to an action, the whole matter is to be set forth specially, because it lies within the party's own privacy; yet on an information on the statute for making such contract, it is sufficient to mention the corrupt bargain generally; because matters of this kind are supposed to be privily transacted; and such information may be brought by a stranger. 1 Hawk. P. C. 248. See *Ord on Usury*, also *Bentham*.

It will likewise be remembered, that upon an information on the statute against Usury, he that borrows the money may be a witness, after he has paid the same.

**UTENSILS.** In a military sense, are necessities due to every soldier, and to be furnished by his host, where he is in quarters, viz. bed with sheet, a pot, a glass or cup to drink out of, a dish, a place at the fire, and a candle. See *Billeting*.

**UTENSILS, &c. directed to be provided for the use of regimental hospitals.**

In page 19, of the Regulations for the Sick, it is stated, that each hospital ought to be furnished with a slipper bath, or bathing tub, two water-buckets, one dozen of Osnaburgh towels, one dozen of flannel cloths, half a dozen of large sponges, combs, razors, and soap; two large kettles, capable of making soup for 30 men, two large tea kettles, two large tea-pots, two sauce-pans, 40 tin cans of one pint each, 40 spoons, one dozen of knives and forks, two close-stools, two bed-pans, and two urinals.

A regiment, consisting of 1000 men, and provided with three medical persons, ought to be furnished with hospital necessities and utensils for at least 40 patients. It should be provided with 40 cotton night-caps, 40 sets of bedding, in the proportion of four for every hundred men; each set consisting of one pailasse, one straw mattress, one bolster, three sheets, two blankets, and one rug.

For regiments of smaller number, the quantity of hospital necessities will of course be proportionally reduced.

**Bakery UTENSILS.** The following list of bakery utensils, being the proportion requisite for an army of 36,000 men, has been extracted from the Bri-

tish Commissary, to which useful treatise we refer the military reader for a specific description of field ovens, &c. and field bakery, page 16, &c.

12 double iron ovens, 11 feet long, 9 feet diameter, and 3 feet high; 28 troughs and their covers, 16 feet long, 3 feet wide, and 3 feet deep, to knead the dough.

12 large canvas tents (having double coverings) 32 feet long, and 24 feet wide, to make the bread in.

4 ditto, to cool and deposit the bread in.

2 ditto, to deposit the meal and empty sacks in.

200 boards, 8 feet long, and 1½ feet wide, to carry the bread to the oven and back when baked; 24 small scales to weigh the dough, with weights from half an ounce to 6lb; 24 small lamps for night work; 24 small hatchets; 24 scapars, to scrape the dough from the troughs; 12 copper kettles, containing each from 10 to 12 pails of water; 12 trevets for ditto; 12 barrels with handles, to carry water, containing each from 6 to 7 pails.

12 pails, to draw water; 24 yokes and hooks, to carry the barrels by hand; 24 iron peles, to shove and draw the bread from the ovens; 24 iron pitch-forks, to turn and move the firewood and coals in the ovens; 24 spade handles, 14 feet long, for the peles and pitch-forks; 24 rakes, with handles of the same length, to clear away the coals and cinders from the ovens; 4 large scales, to weigh the sacks and barrels of meal, and capable of weighing 500lb.; 4 triangles for the said scales; to each must be added 500lb. of weights, 3 of 100lb. each, 2 of 50lb. each, and downwards to half a pound.

**UTER.** A bladder to swim with. This machine is mentioned in *Cæsar's Commentaries*, and was frequently used by the Romans in crossing rivers, &c.

**VUE, Fr.** Sight; view; prospect; look, &c. The French say, *Les armées sont en vue*. The armies are in sight of one another. *Camper en vue de l'ennemi*. To encamp in sight of the enemy. *Marcher à vue de pays*. To march by guess, or without any particular direction to move by.

A *vuz, d'ail, Fr.* Visibly.

• *Vcz de toute longueur et de toute hauteur,*

## W A D

*hauteur*, Fr. When you stand directly opposite the center of a plan or building, the aspect is called *Vue de front*, a front view; when placed on one of the sides, it is called *Vue de côté*, a side view; when the building is seen from one of its corners, the aspect is angular.

**VULCANO**, (*Velcan*, Fr.) a burning mountain which throws forth

## W A G

flames, smoke, and ashes; such as Mount Vesuvius, Mount Ætna.

**VULNERABLE**, susceptible of wounds; liable to external injuries; capable of being taken; as, the town is extremely vulnerable in such a quarter. It is also applied to military dispositions, viz. the army was vulnerable in the center or on the left wing.

## W.

**WAD**, (*Bourre*, Fr.) in gunnery, a substance made of hay or straw, and sometimes of tow rolled up tight in a ball. It serves to be put into a gun after the powder, and rammed home, to prevent the powder from being scattered, which would have no effect if left unconfined.

**WAD-hook**, a strong iron screw, like those that serve for drawing corks, mounted upon a wooden handle, to draw out the wads, or any part of cartridges, which often remain in guns, and when accumulated stop up the vent.

**WAD-mill**, a hollow form of wood to make the wads of a proper size.

**WADA** or **WADADARY**, *Ind.* a farm of a district.

**WADABUNDY**, *Ind.* stated periods, or dates, on which money is to be paid.

**WADADAR**, *Ind.* a government officer, who is responsible for the rents of a zemindary.

**WADDING**, hay or straw, or any other forage, generally carried along with the guns to be made into wads.

*Experiments relative to the effects of Wadding.* The quantity of powder requisite to raise a shell weighing 218 lb. clear of the mortar and bed was found to be 4 oz. 2 dr. without any wadding; but with the help of a little wadding, rammed over the powder, 3 oz. 1 dr. were sufficient. The powder requisite to raise a shell weighing 106 lb. clear of the mortar and bed, was found to be 2 oz. 6 dr. without any wadding; but with wadding, properly rammed over

the powder, 2 oz. were found to be sufficient.

To raise a shell of 16 lb. 4 dr. were sufficient without wadding, and only 3 dr. with wadding.

And to raise a shell of 8 lb. 2 dr. were enough without wadding, and 1 dr. two-thirds with wadding.

From the above experiments it may be observed, that the judicious ramming of a little wadding over the powder, adds about  $\frac{1}{3}$  part of the whole effect.

**WAGON**, in the army, (*Chariot*, Fr.) is a four-wheel carriage, drawn by four horses, and for sundry uses.

**Ammunition-WAGON**, (*Chariot d'artillerie*, Fr.) a carriage made for transporting all kinds of stores, as also to carry bread, it being lined round in the inside with basket-work.

**WAGON-Train**, the wagons, carts, &c. that are provided for the use of an army are so called. In page 25, of the British Commissary we find the following observations concerning this necessary establishment. "The great engine in the hands of the commissariat, on which the movements of an army depend, is a proper establishment of wagons. In all wars where a British army has taken the field, great abuses have unfortunately prevailed in this department, and it even now remains a problem, whether government ought to purchase wagons and horses, and form temporary establishments, or whether the army should be provided with a train by contractors?"

In the seven years war, there was a general contractor for the wagon train, and

and his contract was kept up until the very year before the peace, when government bought the train of him. In the American war, wagons were considered almost as a privilege by the departments to which they were attached, until the arrival of the gentleman (we presume Brook Watson) last sent there as commissary general, who found it necessary to make great reforms in that branch of the service. The same gentleman, when he went out to the continent with the late army, (viz. in 1793) made use of the wagons of different contractors: but in the beginning of 1794, an experiment was made by raising a corps called the corps of royal wagoners, and purchasing wagons and horses. Of this corps little need be said, as its miserable state became proverbial in the army: it failed completely in every part; and on many occasions, the service suffered very materially in consequence.

The idea of this corps was probably taken from the fine well-regulated establishment of Austrian wagons. This is a standing establishment kept up in peace and war, having officers and men trained to the service, and a system improved and perfected through a succession of years. The ingenious author very properly remarks, that such an establishment is necessary to Austria on account of its large military force, which is constantly kept up; but that it is utterly impossible for Great Britain to procure a similar one upon the spur of the moment. He further remarks, with great justness, that the excellent roads of England, also render it difficult to find English drivers capable of acting in foreign countries in the same capacity; the carriages in those countries being constructed purposely for the roads, and both different from any thing seen here.

Bad, therefore, as were the contract wagons in the campaign of 1794, they certainly did far better service than the royal corps of wagoners.

Accordingly the royal train was sold, and every purchaser of not less than 50 wagons was admitted to the advantages of a contract for all the wagons he purchased; he was insured the duration of his contract for three months, and was only to deposit one-third of the cost, allowing the remainder to be paid out of

his earnings. The form of the contract and the pay of the wagons were previously fixed, and by this made a most advantageous sale was procured, while a new set of contractors were introduced, with the additional advantage of obliging old contractors to reduce their prices, and to come under the same terms.

The space of ground occupied by a wagon with four horses, is about 16 paces; a mile will, therefore, hold 117 wagons; but allowing a short distance between each wagon in travelling, a mile may be said to contain about 100 wagons. Wagons, in convoy, may travel from one to two miles per hour, according to the roads and other circumstances. A great object in convoys is to preserve the horses as much as possible from fatigue. For this purpose, if the convoy amounts to many hundred wagons, they must be divided into divisions of not more than 500 each. Should it consist of thousands, it will be advisable to divide them into *grand* divisions, and then again into subdivisions of 500 each: by this means, and the time of departure being calculated by the following rules, each division may remain at rest, till just before its time of movement; and which will prevent the necessity of the latter part of a large convoy being harrassed for a considerable time before its turn to move.

Rule 1. *To find the time in which any number of wagons may be driven off:* Divide the number of wagons by 100, and multiply by the time of travelling one mile.

Rule 2. *To find the time in which any number of wagons will drive over any number of miles:* To the time they take in driving off, add the time any one of the wagons takes to travel the distance.

The different divisions of the convoy should be numbered, and obliged each day to change the order of their marching.

WAGONER, (*Charretier*, Fr.) one who drives a wagon.

Corps of WAGONERS, or *Royal Wagon Corps*, (*Corps de Charretiers*, Fr.) a body of men originally employed in the commissariat. It now forms a part of the regular army.

WAINROPE, the large cord with which the load is tied on the wagon.

WAIT,

## W A L

**WAIT**, to lie in wait; to lay wait. See **AMBUSH**.

In **WAITING**. This term is used, in the British service, to mark out the person whose turn is next for duty; as officer in waiting.

**Field Officer in WAITING**, a monthly duty taken by the field officers of the three regiments of Foot Guards, who attend his majesty on Court days, to present the detail of this corps, and receive the parole or other orders from him personally, which are afterwards given to the guards in orders. The field officer in waiting commands all the troops on duty, and has the immediate care of his Majesty's person without doors, as the gold stick has of it while in Court. The latter also receives the parole from the King.

**WAKANAGUR**, *Ind.* a writer of occurrences.

To **WALK**, (*se promener*, Fr.) generally speaking, to move with the ordinary pace of man; it is likewise said with respect to horses. When the term is applied to the latter, it is commonly used in an active sense: as to walk a horse, *promener un cheval*, Fr.

**Walk about**! a military term used by British officers when they approach a sentry, and think proper to waive the ceremony of being posted to.

**WALL**, a series of brick, stone, or other materials, carried upwards, and cemented with mortar. When used in the plural number, wall signifies fortification; works built for defence.

**Chinese WALL**, or the great wall in China, a wall of immense extent, which the Chinese built to secure their country from the incursions of their neighbours, but which was not found sufficiently strong to keep out the Tartars. This wall, which has lasted one thousand five hundred and thirty odd years, is still in good condition: it comprehends, in circumference, five hundred leagues; runs over mountains, down into vallies and steep descents, and is, almost in every part, more than 20 feet in breadth, and 20 in height.

To be *degen* to the **WALL**, (*Etre aculé*, Fr.) a figurative term, signifying to be so pressed, that you can neither advance nor retreat.

**Walls of a Tent or Marquee**, that part of the canvas which is attached to

## W A R

the fly or top by means of hooks and eyes, and which is fixed to the earth with wooden pegs. These walls should be frequently lowered in order to admit fresh air. When there is an hospital tent, this precaution is indispensable, if the weather will permit.

**WALLET**. See **HAVERSACK**, **KNAPSACK**.

**WAPENTAKE**, (from the Saxon,) the same as what we call a hundred, and more especially used in the northern counties beyond the Trent. There have been several conjectures as to the original of the word; one of which is, that anciently musters were made of the armour and weapons of the inhabitants of every hundred; and from those that could not find sufficient pledges of their good abating, their weapons were taken away; whence it is said *wapentake* is derived. *Spenser* says it was so named, of touching the weapon or spear of their alderman, and swearing to follow him faithfully, and serve their prince truly.

**WAR**, a contest or difference between princes, states, or large bodies of people, which, not being determinable by the ordinary measures of justice and equity, is referred to the decision of the sword, &c.

It is that important event, for which all military education is designed to prepare the soldier. It is for this that in peace, he receives the indulgence of a subsistence from society; and for this he is gratefully bound to secure the repose of that society from the outrage of an enemy, and to guard its possessions from the devastations of invaders.

Although it would be as needless as it is impossible to shew, how often this art of the soldier has accomplished the design of its institution, we shall, however, distinguish those wars which are remarkable for having obtained the blessings of peace to this kingdom since the

War between Great Britain and Spain.

War between Great Britain and the Batavian Republic.

War between Great Britain, Russia, Sweden and Austria, united against France, or more properly against Bonaparte, surnamed the Emperor Napoleon, 1805.

There are five different kinds of war, each of which is to be conducted differently the one from the other, viz. the offensive; the defensive; that between equal powers; the auxiliary, which is carried on out of our own territories to succour a prince or ally, or to assist a weaker whom a more powerful prince has attacked; and a civil war.

Offensive war must be long meditated on in private before it be openly undertaken; when the success will depend upon two essential points; that the plan be justly formed, and the enterprise conducted with order. It should be well and maturely considered and digested, and with the greatest secrecy, lest, (however able the prince or his council may be,) some of the precautions necessary to be taken, be discovered. These precautions are infinite both at home and abroad.

Abroad, they consist in alliances and security not to be disturbed in the meditated expedition, foreign levies, and the buying up of warlike ammunition, as well to increase your own stores as to prevent the enemy from getting them.

The precautions at home, consist in providing for the security of our distant frontiers, levying new troops, or augmenting the old ones, with as little noise as possible; furnishing your magazines with ammunition; constructing carriages for artillery and provisions; buying up

horses, which should be done as much as possible among your neighbours; both to prevent their furnishing the enemy, and to preserve your own for the cavalry, and the particular equipages of the officers.

Defensive war may be divided into three kinds. It is either a war sustained by a prince, who is suddenly attacked by another superior to him in troops and in means; or a prince makes this sort of war by choice on one side of his frontiers, while he carries on offensive war elsewhere; or it is a war become defensive by the loss of a battle.

A defensive war which a prince attacked by a superior enemy sustains, depends entirely on the capacity of his general. His particular application should be, to chuse advantageous camps to stop the enemy, without however, being obliged to fight him; to multiply small advantages; to harass and perplex the enemy in his foraging parties, and to oblige them to go out with great escorts; to attack the convoys; to render the passages of rivers or defiles as difficult to them as possible; to force them to keep together; if they want to attack a town, to throw in succours before it is invested. In the beginning his chief aim should be, to secure the enemy's respect by his vigilance and activity, and by forcing him to be circumspect in his marches and manner of encampment, to gain time himself, and make the enemy lose it. An able general, carefully pursuing these maxims, will give courage to his soldiers, and to the inhabitants of the country; he affords time to his prince to take proper precautions to resist the enemy who attacks him; and thus changes the nature of this disagreeable and vexatious kind of warfare.

The management of a defensive war requires more military judgment than that of an offensive one.

A war between equal powers, is that in which the neighbouring princes take no part, so long as the belligerent parties obtain no great advantage, the one over the other. This sort of war never should last long if you want to reap any advantages from it. As to its rules, they are entirely conformable to those already given; but we may look on it as a certain maxim in this sort of war, that

that the general who is the most active and penetrating, will ever in the end prevail over him, who possesses these qualities in a lesser degree; because, by his activity and penetration, he will multiply small advantages, till at last they procure him a decisive superiority. The success which has attended the rapidity of the movements of the French armies, is a strong illustration of this maxim. A general who is continually attentive to procure himself small advantages, ever obtains his end, which is to ruin the enemy's army; in which case he changes the nature of the war, and makes it offensive; which should ever be the chief object of his prince.

*Auxiliary War*, is that in which a prince succours his neighbour, either in consequence of alliances or engagements entered into with them; or sometimes to prevent their falling under the power of an ambitious prince.

If it be in virtue of treaties, he observes them religiously, in furnishing the number of troops prescribed, and even offering to augment his quota, if required; or in making a diversion by attacking the common enemy, or his allies.

If it be to prevent a neighbouring prince from being crushed by a power, who after this conquest may become dangerous to yourself, there are several measures to be taken for your own particular interest. One of the chief is, to exact from those you succour, the possession of some place in security, lest they make their peace without your knowledge, or to your prejudice.

The general, therefore, who is chosen for the command of this auxiliary corps, should have wisdom, penetration, and foresight; wisdom, to preserve a proper discipline in his corps, that the allied prince may have no cause to complain of him; foresight and penetration, to prevent his troops suffering for want of subsistence, or being exposed to the perils of war, but in proportion to their numbers with those of the allied prince; and, finally, that nothing shall pass without his knowledge, which may be prejudicial to his master.

*Civil or intestine War*, is that between subjects of the same realm, or between parties in the same state. In this sense, we say, the civil wars of the Romans destroyed the republic; the

civil wars of Grenada ruined the power of the Moors in Spain; the civil wars in England began 1641, and ended in the king's death.

*Religious War*, is war maintained in a state on account of religion, one of the parties refusing to tolerate the other.

*Holy War*, is that species of warfare which was anciently maintained by leagues and crusades, for the recovery of the Holy Land.

*Civil and religious Wars* are ever unhappy for the states who sustain them. These sorts of war, which the animosity of the different parties, and fanaticism, always carry beyond the bounds of humanity, and the duties of society, have in general, no other rules but those of the *offensive* and *defensive*. It has however, always been observed, that civil wars form great men and good soldiers, because the nobility, citizens, and labourers, being equally obliged to fight for their property and preservation, every man has an equal opportunity of learning the art of war. This species of war may likewise be called *revolutionary*, with the additional circumstance, that in the latter sense it is of a more extensive nature.

*WAR of opinion.* See *OPINION*.

*WAR of Finance*, (*Guerre de finance*, Fr.) This term seems to be peculiarly applicable to the late period of hostilities, between Great Britain and the French government. Shut out, as we were, from the Continent, and destitute of all the means of military co-operation, our disposable forces were reduced to the necessity, either of hovering about our own possessions at home, or of looking into the enemy's ports, without being sufficiently strong to attack them. At present the case is altered. How far the change will be beneficial to Great Britain, time and events must prove.

*Council of War*, is an assembly of great officers called by a general, or commander, to deliberate with him on enterprizes and attempts to be made. On some occasions, council of war is also understood of an assembly of officers, sitting in judgment on delinquent soldiers, deserters, coward officers, &c.

*WAR.* This word is frequently prefixed

fixed or attached to things or persons, in order to distinguish their particular state or functions, viz.

**WAR Establishment.** See **ESTABLISHMENT**.

**WAR Minister.** See **MINISTER**.

• **Secretary at WAR.** An eligible character at the head of the war-office, with whom all pecuniary matters belonging to the army rest. See **OFFICE**.

**WARASDINS,** a kind of Slavonian soldiers, clothed like the Turks, with a sugar-loaf bonnet instead of a hat. Their arms are a fuzee and pistols; the butt end of their fuzees serves for a spade, when they have occasion to throw up earth.

**WAR-Cry,** was formerly customary in the armies of most nations, when they were just upon the point of engaging. Sometimes it consisted of tumultuous shouts, or horrid yells, uttered with an intent to strike terror into their adversaries; such as are still practised by the Indians in America. See *War-whoop*.

**To WARD.** To guard; to watch; to defend; to parry any attack.

**Ward.** Watch; the act of guarding. A garrison or party stationed for defence of any place; a position of defence, or guard made by a weapon in fencing. That part of a lock, which, corresponding to the proper key, hinders any other from opening it. A *district* of a town; division of a building, &c. It is also used to denote one under the care and subject to the controul of a guardian.

**WARDEN.** A keeper or head officer.

**WARDEN, or Lord Warden of the Cinque Ports.** A magistrate that has the jurisdiction of those havens in the east part of England, commonly called the cinque ports, or five havens, where he is invested with all that jurisdiction which the admiral of England has in places not exempt. According to Cowel, from whom this explanation is taken, the reason why one magistrate should be assigned to these havens seems to be, because, in respect to their situation, they formerly required a more vigilant care than other havens, being in greater danger of invasion from our enemies. On this account, the lord chief warden of the cinque should, in our humble opi-

tion, be an officer of some experience, well skilled in the art of defence, and equal to the superintendence of so important a range of coast, upon which France has cast a jealous eye from time immemorial, and where Caesar made a successful landing. It is, however, little more than a sinecure situation, and a snug retreat for ex-ministers.

By act the 26th of the king, it has been enacted, that the warden of the cinque ports, two ancient towns, and their members, and in his absence his lieutenant or lieutenants, may put in execution within the said ports, towns, and members, all the powers and authorities given and granted by this act, in like manner as lieutenants of counties, and their deputy lieutenants, may do, and shall keep up and continue the usual number of soldiers in the said ports, towns and members, unless he or they find cause to lessen the same. The militia of the ports is, according to this act, to remain separate from the militia of the counties, and may be called out, pursuant to an act passed in the 13th and 14th years of King Charles the Second, notwithstanding the pay advanced may not have been reimbursed.

**WARDEN of the Stannaries.** By act the 26th of his present Majesty, it is directed, that the warden of the stannaries, and such as he shall commissionate and authorize under him, shall have and use the like powers with the lords lieutenants of counties, and array, assess, arm, muster, and exercise the tinners in the counties of *Devon* and *Cornwall*, within the said counties, or either of them, according to the ancient privileges and customs of the said stannaries.

**WARDER.** A guard: a truncheon by which an officer at arms forbade fight.

**WARFARE.** Military service, state of war.

**To WARFARE.** To lead a military life.

**WARHABLE,** } Military; fit for  
**WARLIKE,** } war.

**WARLIKE virtues,** are, love of our country, courage, valour, prudence, intrepidity, temperance, disinterestedness, obedience, wisdom, vigilance, and patience.

tience. In the last celebration of the anniversary of the destruction of the Bastille, which took place at Paris on the 14th of July 1789, the French characterized these eleven virtues by the following emblems:—a pelican, a lion, a horse, a stag, a wolf, an elephant, a dog, a yoked ox, an owl, a cock, and a camel.

**WARNED.** Admonished of some duty to be performed at a given time or place. Thus officers and soldiers are warned for guard, &c.

**WARRANT.** A writ of authority inferior to a commission; thus quarter-masters are warrant officers. Likewise a document with the sign manual attached to it, to authorize the assembling a general court-martial in Great Britain and Ireland, &c. the receipt of public monies at the treasury, &c. Also a writ to arrest and take persons into custody.

**To WARRAY.** To make war upon any state or body of men. An obsolete word.

**WARREN.** A kind of park for rabbits.

**WARREN,** at Woolwich, so called from the spot having formerly been stocked with rabbits. It now comprehends the head-quarters for the royal artillery, the royal foundery, the royal laboratory, and royal military academy; also famous for proofs and experiments of artillery, and great apparatus of war. It is now called the *Royal arsenal*, in compliment to an observation made by his present Majesty.

**WARRIOR.** A soldier; one who fights in war.

**WAR-Whoop.** A signal of attack among the Indians. See *Wuoor*.

**WARWOLF.** In ancient military history, an engine for throwing stones and other great masses.

**WAR-WORN.** Worn out in the service.

**WASELAAT,** *Ind.* Collections made. **WASEL.** *Baky, Ind.* Collections made, and balances struck.

**WASHER.** A flat circular ring put on the axle-tree, between the linch-pin and small end of the nave, to prevent the nave rubbing against the linch-pin and wearing it, as likewise to diminish the friction of the nave.

**WASSYOUT** *Namu, Ind.* A will or last testament.

**To WATCH.** To keep guard; to be attentive and vigilant; to observe the conduct of any one.

**WATCH.** A duty performed on board of ship. It likewise means the person who performs that duty.

*Serjeant of the Watch.* A non-commissioned officer belonging to the marines or other troops on board, who does duty for a stated period. At sea, the term watch denotes a measure or space of four hours, because half the ship's company watch and do duty in their turns, so long at a time: and they are called the starboard watch and larboard watch.

The following instructions have been published respecting the watch duty which is to be done by troops embarked in transports, &c.

At eight o'clock in the evening, every man is to be in his birth, except if men on watch; the officer of the watch to go round with a lanthorn, to see if the above has been complied with.

The whole to be divided into three watches, both subaltern officers and men; the watch gives all the sentries &c. &c.

A captain of the day to be appointed to whom the subaltern of the watch will make his reports; and the captain to the commanding officer; if there is a superior officer on board.

The whole watch to be always deck, except when rain obliges them to go down for shelter; and, in fine weather, every man should be upon deck the whole day. *Regulations and Orders* p. 178.

**WATCHMAN.** A sentinel, set to keep guard.

**WATCH-TOWER.** A tower which a sentinel is posted to keep guard against an enemy.

**WATER-DECK.** A painted part of canvas, which is made sufficient large to cover the saddle and bridles, &c. of a dragoon's horse. As the tents are not large enough to cover these articles, in addition to fire-arms and bags of necessities, water-decks serve to secure them from rain, and are fastened with pegs to ground. The name of the regime generally painted on the outside; when the dragoon is mounted for

vice or a march, it is strapped over his portmanteau.

**WATER-Rocket.** A kind of fire work made to burn in the water.

**WATERING-Call.** A trumpet sounding, on which the cavalry assemble to water their horses.

**WATERING-Cap.** A cap, made of leather or cloth, which dragoons wear when they water their horses or do stable duty.

**WATERING-Jacket.** A waistcoat with sleeves, which dragoons wear on the above occasions.

**WATREGANS, Fr.** This word is pronounced *outrégans*, there being no W in the French alphabet. It is a Flemish term which is generally used in France, and signifies a ditch full of water, that has been made for the purpose of separating lands and inheritances. These ditches are sometimes large enough to receive small boats or barges, and run through a whole village.

**WATTLE.** A hurdle made by entwining twigs together.

**WAY.** A military road among the Romans and Saxons.

**Way of the rounds,** in fortification, is a space left for the passage of the rounds, between the rampart and the wall of a fortified town. This is not much in use at present. See *Berme*.

**To WAYLAY.** To beset by ambush.

**WAYMODÉ, Ind.** prince; a chieftain.

**WEAPON.** An instrument of offence.

**WEAPONED.** Armed; furnished with arms of offence.

**WEAPONLESS.** Unarmed; having no weapon.

**WEAR.** A sluice-gate, or dam to shut up the water.

**WEDGE.** See *Coins, Mechanic Powers, &c.*

**WEDGE.** In a work translated from the French, and which is entitled, *Observations on the Military Art*, we find the following description of this instrument. It is composed of five surfaces, two of which are triangular, two long squared, and the fifth arbitrary. The two oblong surfaces, by their inclination to each other, form the point that insinuates itself into the wood, &c.,

that is to be split, as well as the sides of triangular surfaces, if the triangle, as it is driven, lengthens the slit or opening. They are the square surfaces that first insinuate themselves into the body to be cleft; and what are called triangular surfaces, are only what fill the space that separates the two quadrangular sides. After this reflection it appears, that the column has, at least, as just a claim as the triangle, to the term or word wedge. We may even say, with confidence, it has a much better; for a triangle of men ranged according to the same proportion, as the triangle of the mechanic wedge, would be of very little force; and a mechanic wedge, of which the incisive angle was as great as that of a triangle of men, would be too large to enter these bodies we might want to cleave or split.

The double phalanx amphistome, of which Epaminondas formed the wedge, contained 3000 men, who were ranged, in Bouchaud's opinion, one hundred in front, and 30 deep. This opinion, according to some is erroneous. Among the different evolutions of the ancients, the wedge was frequently resorted to, and was in some degree connected with the lozenge, which is a figure in geometry composed of four sides and four angles: of the four angles two are always obtuse, and two acute. The angles, that are alike, are always opposed one to the other, and always in the same number of degrees. According to Elien, there are many ways of ranging squadrons in a lozenge: In the first, they have ranks and files; in the second, neither; in the third, they have files, but no ranks; lastly, in the fourth, they have ranks alone without files. With regard to the wedge, it was a formation which the ancients adopted both in cavalry and infantry evolutions, and was variously used, *viz.*—

**The WEDGE of Cavalry.** This figure was formed on the same principles and movements as the lozenge, as far as the greatest rank of the latter, which served as a base to the triangular wedge. It was therefore as the half of a lozenge, cut and divided at its obtuse angles.

**The triangular WEDGE of Infantry.** Some people pretend, that there were two sorts of triangular wedges in use among

among the ancients. The first was full, and formed after the same manner as the lozenge, and the wedge of the cavalry. The second was open at the base, and ranged differently from that of the first.

*Triangular WEDGE with a full center.* The Greek soldier occupied, at all times, a square space greater or less in proportion to the requisite order, either at a review, advancing towards the enemy, or standing in a position to receive him. This wedge was formed according to the arithmetical progression,  $\div 1, 3, 5, 7, \&c.$

*The open WEDGE.* This species of wedge was formed two different ways, with the Greeks and Romans. Bouchaud du Bussy, who takes them, one from *Eben*, whom he translates, and the other from *Vegilius*, gives us a third, which appears to be of his own invention, and is very much superior to the other two. According to Elien, Epaminondas, the Theban general, employed the open wedge at the battle of Leuctra, and overthrew the Lacedemonians, whose army was much superior to the one he commanded. To form this wedge, the two divisions of a double phalanx amphistome, are to unite together at the head, being separate or open at the tail or rear; which gives them a near resemblance of the Greek letter  $\Delta$ . Bouchaud du Bussy, formed the wedge in the following manner:—

“The same body of troops being in array, may likewise, says he, form the wedge in marching forward, and this manœuvre requires no preliminary movement. The three divisions being marked, as well as the three files of the center which compose the head of the wedge, the following words of command are given: *Marked divisions, prepare to form the wedge in marching: March.* At the first notice, the files and ranks close suddenly; at the second, the three files of the center, which will be the two first left files of the division on the right, and the first right file in the division on the left, march straight forward; at their second pace, the first file, that is contiguous to them on the right, and that which is equally contiguous on the left, move in their turn, so as to have their chiefs or leaders on a line, and in a rank, as

it were, with the second soldiers of the three files of the center; at the second pace of the files that have made the second motion, the files which touch them march immediately likewise, and the same manœuvre is to continue successively; each head of a file taking notice not to move, until the moment he finds himself on a line with the second man of the file contiguous, &c.

This method is beyond dispute the most simple, short, and secure that can be devised. The men occupy necessary and proper spaces, and if the enemy's resistance should stop their head, the rest of the files, continuing their movements, would all arrive on the same front to engage together, that is, they would be in their primitive order of the phalanx. This author, to whose observations we refer from page 170 to page 203, thus concludes: We shall only remark, that all terms, metaphorically applied, sooner or later produce doubt and uncertainty. Neither a column nor a triangle of men should have ever been denominated a wedge; for a line of troops is not formed to be split like a piece of timber; it may be opened, broken through, or divided into as many parts as possible.

**WEIGHTS** in military matters, are those in general use, except in artillery, where hundreds are made use of, each of 112 lb. quarters, each of 28 lb. and pounds, each 16 ounces.

The 100 lb. of England, Scotland, and Ireland, are equal to

91	8	Amsterdam, &c.
96	8	— Antwerp or Brabant;
88	0	— Rouen, the viscounty weight;
106	0	— Lyons, the city weight;
91	8	— Paris;
90	9	— Rochelle;
107	1	— Toulouse and Up. Languedoc
113	0	— Marseilles or Provence;
81	7	— Geneva;
93	5	— Hamburg;
89	7	— Frankfort, &c.;
137	4	— Genoa;
132	11	— Leghorn;
153	11	— Milan;
152	0	— Venice;
154	10	— Naples;
97	0	— Seville, Cadiz, &c.;
101	13	— Portugal;

*lb. oz.*

112 8 — Spain;

96 5 — Liege;

112 3 — Russia;

107 1 — Sweden;

80 1 — Denmark.

• **WEIGHT**, (*poids*, Fr.) Impression, pressure, burthen, overwhelming power.

The great advantage which heavy cavalry has over the light horse, and particularly over infantry troops, consists wholly in its pressure and overwhelming power. The British are superior to all others, because in addition to the weight of substance or carcase, their horses unite spirit and intrepidity, to a natural eagerness of pushing forward; and what the light dragoons want in weight, they generally make up in velocity; so that the British cavalry may be looked upon as the best in the world for a charge. The same may be said of the infantry. The English, Scotch, and Irish are naturally robust, broad-set, and strong-limbed; they are likewise bold; and although the Germans may be equally able-bodied in appearance, neither they, nor even the Swiss, possess that elastic impulse and activity by which British troops, when well officered and ably commanded, make use of the bayonet with irresistible effect.

**WELL**. In the *military art*, a depth which the miner sinks under ground, with branches or galleries running out from it; either to prepare a mine, or to discover and disappoint the enemy's mine.—See **SHAFT**.

**To WET**. In a sense of good fellowship and hilarity, and of course in a military one, to take a cheerful glass, or, speaking popularly, to moisten one's clay.

**To WET a Commission**. It has always been customary in the British army, (the life and foot guards excepted,) for every officer, when he obtains a commission, gets promoted, or exchanged, to afford some mark and acknowledgment to the corps he joins. Among the regulars, a pecuniary consideration is made for the benefit of the mess-plate, (where a service of plate is allowed) according to the rank of the individual; where it is not, that acknowledgment is given in wine. To the best of our recollection, it is a rule in a well conducted regiment of Light Dra-

goons, for a lieutenant-colonel, on his joining, to pay five dozen of port, the major 4; captain 3; lieutenant 2; cornet ditto; and the adjutant and surgeon, for each commission, likewise a cornet. Whenever the commission or promotion is obtained without purchase, the individual pays one bottle more according to his rank. In a regiment of foot, equally remarkable for its interior economy, the following regulation is observed with respect to wetting commissions.

A second lieutenant pays five guineas towards the mess-plate, a first lieutenant seven, a captain ten, a major fifteen, and a lieutenant-colonel twenty-five. Each pays more or less according to the regimental advantages which he obtains; all giving something more when they get their commissions, are promoted, or exchanged, without purchase or difference. There is also a grand day whenever these casualties take place; on which occasion the usual allowance of wine is exceeded.

**WERE**. The preterite of I am.

**As you WERE**. A word of command in the British service which corresponds with the French *remettez vous*. It signifies to return to the same position from which you had faced or wheeled, &c. and is generally used when any motion of the firelock or movement of the body has been done improperly.

**WERST**. A Russian measure in travelling. The Werst contains seven hundred and fifty geometrical paces.

**WESTMINSTER and SOUTHWARK**. It is expressed in the articles of war, that no commissary shall muster any regiment, troop, or company within the city of Westminster, and borough of Southwark, and liberties thereof, but in the presence of two or more justices of the peace, not being officers of the army, under the penalty of fifty pounds, and of being discharged from his office; unless such justices, upon forty-eight hours notice being given to six of his Majesty's justices of the peace, residing within the city and liberties aforesaid respectively, shall neglect to attend such muster; and in case of such neglect, such commissary may proceed to muster such regiment, troop, or company; provided that oath be made before any of his Majesty's justices

justices of the peace, within forty-eight hours after such muster taken, that such notice was given to six justices of the peace; which justices so attending are empowered to sign the said muster-rolls, and to take cognizance of such muster, and to examine the truth thereof before they sign.

**WHEEL**, in artillery. A circular body which turns round on its axis. The strength of these wheels is always, or should be, proportional to the weight they carry: the diameters of the wheels of heavy gun-carriages are 85 inches, and those for light field-pieces 52 only.

*To WHEEL, (Eure conversion, Fr.)* In a military sense, to move forward or backward in a circular manner, round some given point. See *Pivot*. It is observed, s. 8, p. 19, of the Cavalry Regulations, that wheeling is one of the most essential and important operations of the squadron, necessary in many changes of position, and in the formation of column and of the line.

*WHEEL of the squadron.* When the entire squadron is to wheel, a caution is given to that purport, and to which hand. At the word *March*, the front rank of the squadron remains dressed to the center, the leader fixes his eye and makes his circle on the standing flank man; the standard follows him exactly, and the squadron wheels with the same uniform front, at such a pace as is requisite to keep every where dressed with the standard. The rear rank and the serrefiles look to the wheeling flank, and incline, at the same time that they wheel, so as always to cover their front leaders.

The standard must take care never to oblige the wheeling man to exceed a moderate gallop, otherwise the rear rank, which has still more ground to go over, cannot keep up; the squadron will wheel loose and in disorder, and be longer in dressing than if it had come about at a slower pace, but close and connected.

The flanks must always conform to the center, in case the leader does not take his ground exactly as he ought. At any rate, the standard is the guide for the pace, and the point from which the distance of files is to be preserved.

The leader must take care to time his words, *halt! dress!* the instant be-

fore the wheel is completed, otherwise an over wheel or reining back will be the consequence. The whole halt and dress by the center.

The squadron breaks into column of any of the divisions in which it is told off, by each of those divisions wheeling up the quarter circle. If the body is in motion (as in column) the wheels of the divisions all begin at the word *wheel!* If halted, they are begun at the word *march!*

In all division wheelings, the whole look to the wheeling hand. In all wheelings, the rear rank must rein back at the standing flank, and incline towards the wheeling hand, in order to cover.

At the words *halt! dress!* given when the wheel is completed, the whole turn eyes and dress to the standing flank, and remain so till a new direction is given, which will be,

EYES  $\left\{ \begin{array}{l} \text{Right} \\ \text{or} \\ \text{Left} \end{array} \right\}$  to the pivot flank, when necessary.

Wheelings of the squadron, or its parts from the halt, are made on the flanks, except those of ranks by threes, which are made on the middle man of each.

*WHEEL of divisions into squadron.* When the squadron is to be formed by the wheeling up of its divisions, there must not be any intervals, and the rear ranks must rein back, and incline so as not to interrupt the front ranks coming up together.

In division wheelings, the whole keep closed lightly towards the hand they wheel to, and must avoid pressing the pivot man off his ground. The outward man looks to his rank, he of course regulates the pace at which the wheel is made; he must not press in on his rank, nor turn his horse's head towards the standing flank; all the horses' heads must be kept rather outwards (for to attempt to bend them inwards, would certainly occasion a crowding on the standing flank) and the croupes lightly closed inwards with the leg. The pivot man of the wheel turns his horse on his fore feet, keeps his ground, and comes gradually round with his rank.

*WHEELS of divisions made on a halted, or on a movable pivot.* Wheels of divisions of the squadron or line, are made

on a HALTED, or on a MOVEABLE pivot. When on a halted pivot, they are made from line into column, or from column into line; and also generally by the column of manœuvre or march, when moving on a considerable front, and when the wheel by which its direction is to be changed, approaches to, or exceeds the quarter circle. When on a moveable pivot, they are generally used and ordered when the front of the column is small, and its path winding and changeable.

Whenever the wheel, made on a halted pivot, is less than the quarter circle, the pause after the wheel will be considerable; should the wheel be greater than the quarter circle, it must be accelerated, otherwise more than one division will be arrived, and arrested at the wheeling point.

**WHEEL on a moveable pivot.** When wheels or changes of direction of bodies in column, are made on a MOVEABLE pivot, both flanks are kept in motion; the pivot one always describing part of a circle, and the reverse flank, and intermediate men of the division, by a compound of inclining and wheeling, conforming to the pivot movement.

**WHEEL made to the pivot hand, and moveable.** When the change is made to the pivot hand, (the whole being in motion) the leader of the head division, when at the distance of twenty or thirty yards from the point of intersection of the old and new direction, will give the word, *right or left shoulder forward*, which is a caution for each man to give a small turn of his horse towards the pivot hand, and the leader himself carefully preserving the rate of march, without the least alteration of pace, will in his own person begin to circle BEFORE the line, from the old, so as to enter the new direction twenty or thirty yards from the point of intersection, which he in this case leaves at some small distance WITHOUT his pivot hand. When this is effected (the rest of his division having, during the transition, and on the principle of gradual dressing, conformed to the direction he is giving them) he will give the word *Forward!* for the division to pursue the right line. The leader of the second, and of every other division, when he arrives on the ground on which the first began to wheel, will in the same man-

ner follow his exact tract, always preserving his proper distance from him.

**WHEEL made to the reverse flank.** When the change is made to the REVERSE hand, the pivot leader having arrived as before, at the spot where he gives his word *right (or left) shoulder forward!* for each man to give a small turn of his horse's head FROM the pivot hand, will begin in his own person to circle BEFORE the line from the old, so as to enter the new direction twenty or thirty yards from the point of intersection, which, in this case, he leaves at some small distance WITHOUT his pivot hand. The rest of his division, by giving way, having gradually conformed to his movement, he will at the proper instant order *Forward!* and resume a straight line.

During the change to either hand, the whole continue looking to the pivot flank, which never alters the rate of the then march; but the reverse flank is in the one case obliged to slacken, and in the other to quicken its movement.

In this manner, without the constraint of formal wheels, a column, when not confined on its flanks, may be conducted in all kinds of winding and changeable directions; for if the changes be made gradual, and circling, and that the pivot leaders pursue their proper path at the same uniform equal pace, the true distances of divisions will be preserved, which is the great regulating object on this occasion, and to which every other consideration must give way.

The wheelings of cavalry being more difficult than those of infantry, we have, on that account given these copious extracts from the regulations printed by authority; referring, at the same time, to what has been laid down respecting the wheelings of corps on foot in pages 38, 39, &c. of the Infantry Regulations. The French do not make use of any word that immediately corresponds with *Wheel*, as a term of command. They say briefly, by platoons, &c. To the right or left into line, march. *Par pelotons, à droite ou à gauche en bataille, marche.* The act of wheeling in general is expressed by *Conversion*, as *Demi quart de conversion*, half-quarter wheel.

**WHEELINGS.** Are different motions made by horse and foot, either to

to the right or left, or the right and left about, &c. forward or backward.

**General rules for WHEELING.** The circle is divided into four equal parts: thence, wheeling to the right or left, is only a quarter of the circle; wheeling to the right or left about, is, one half of the circle.

When you wheel to the left, you are to close to the left, and look to the right as above directed. This rule will serve for all wheeling by ranks; as when a battalion is marching by subdivisions with their ranks open, then each rank wheels distinctly by itself, when it comes to the ground on which the ranks before it wheeled, but not before.

In wheeling, the men are to take particular care, neither to open nor close their ranks, and to carry their arms well.

When you wheel to the right, you are to close to the right so near as to touch your right hand man, but without pressing him; and to look to the left, in order to bring the rank about even.

In wheeling, the motion of each man is quicker or slower, according to the distance he is from the right or the left: thus, when you wheel to the right, each man moves quicker than his right-hand man; and, wheeling to the left, each man moves quicker than his left-hand man; the circle that every man wheels being larger, according to the distance he is from the flank he wheels to; as may be seen by describing several circles within one another, at two feet distance from each, which is nearly the space every man is supposed to take up.

**Over-wheeling.** The act of moving beyond a given point or pivot, so as to be obliged to rein or fall back. When this happens the leaders of squadrons or divisions are generally in fault.

**WHEEL-carriages.** In artillery, &c. The whole doctrine thereof, as it stands on a mathematical theory, may be reduced to the following particulars, viz.

1. **WHEEL-carriages** meet with less resistance than any other kind of carriage.

2. The larger the wheels, the easier is the draught of the carriage.

3. A carriage, upon four wheels of equal size, is drawn with less force than with two of those wheels, and two of a lesser size.

4. If the load be all on the axle of the larger wheels, it will be drawn with less force than if laid on the axis of the lesser wheels; contrary to the common notion of loading carriages before.

5. Carriages go with much less force on friction wheels, than in the common way.

**WHEELBARROW.** A small carriage of burthen, pushed forward by the hands on one wheel; a certain number are always attached to the artillery.

**WHINYARD.** A sword, so called by Butler in his Hudibras. A sort of back-sword or scimitar.

**WHIPCORD.** A tight-spun cord, with which the cat-o-nine tails is made.

**WHOLE.** All, total, containing all.

**Take care the wheel.** A cautionary word which was formerly used in the British service, and is sometimes, but improperly, given now. The term *Attention* is adopted in its room.

**WHOOOP.** A shout; a loud noise which soldiers make in charging, &c. It is a natural though a barbarous habit, and has been preserved in civilized armies from a prevailing custom among savages, particularly the wild Indians of America.

**WICKET,** (*gauchet*, Fr.) A small door in the gate of a fortified place, through which people go in and out, without opening the great gate.

**WIDERZOUROUK.** A compound word from the German, which signifies back again. The French pronounce it *Vuiderzourouk*. It means a movement which is made to the rear, in order to bring a squadron to the right about, in the same manner that a battalion is faced about. Marshal Puységur remarks, that the French adopted this movement from the Germans, in the year 1670. He is of opinion, that previous to this epoch, squadrons were faced to the rear by means of a double caracol, describing a half-circle, the extent of whose front was equal to half of its diameter; on which account, the general order of battle in those days had considerable intervals.

**WIG.** A Saxon termination of the names of men, signifying war.

**WIGWAM.** A hut used in America.

**WILBE,** *Ind.* Guardian; protector.

**WILDFIRE.** A composition of fire-work,

work, so called from its ready ignition and rapid combustion.

**WINCH**, (*Mancelle*, Fr.) The handle or lever by which a jack, windlass, &c. is turned.

**WINDAGE** of a gun, mortar, or howitzer. The difference between the diameter of the bore, and the diameter of the shot or shell. In England the diameter of the shot is supposed to be divided into 20 equal parts, and the diameter of the bore into 21 of those parts. The French divide the shot into 26, and the bore into 27. The Prussians divide the shot into 24, and the bore into 25. The Dutch nearly the same as the English. The general windage of shells in England is  $\frac{1}{4}$  of an inch, let them be large or small, which is contrary to all reason. It is evident, that the less windage a shot or shell has, the farther and truer it will go; and having less room to bounce from side to side, the gun will not be spoiled so soon.

It is true that some artillery officers say, that the windage of a gun should be equal to the thickness of the ladle; because, when it has been loaded for a while, the shot will not come out, without being loosened thereby, in order to unload it; and when this cannot be done, it must be fired away, and so lose; but in our humble opinion, the most advantageous windage should be in dividing the shot into 24 equal parts, and the bore into 25, on account of the convenient scale it affords, not only to construct guns thereby, but also their carriages. Hence, agreeable to this plan, the windage of a 9-pounder will be 100 of an inch, consequently a sufficient thickness for a ladle; and those of a higher calibre become still thicker in proportion: but suppose this thickness is not enough, the loss of a shot is a mere trifle, in respect to the advantage got thereby.

**WIND-GUN**. See AIR-GUN.

**WINDLASS**, (*vindas*, Fr.) is a roller of wood, square at each end, through which are either cross holes for handspikes, or staves across to turn it round: by this means it draws a cord, one end of which is fastened to some weight which it raises up. They are used in guns, and about Dutch mortars, to help to elevate them. The French say, *vin-*

*das ou cabestan horizontal*, the latter being a sea term.

**WINDSAILS**, (*manches à vent*, Fr.) large pieces of canvas, which are used in ships at sea for the purposes of ventilation, &c. It is very judiciously observed, in page 101 of the Regulations and Orders, that during voyages in hot climates, the most beneficial effects are derived from the use of windsails. The master of the transport should be desired to have them made immediately as troops are embarked, if not already provided, and they should be constantly hung up. These sails throw a stream of cold air between decks. It is not an unusual practice among the men, at least among the unexperienced soldiers, to tie up the bottom of them, by which this salutary purpose is defeated. The serjeant of the watch must be responsible, that this irregularity is never committed.

**To WINDWARD**, (*au vent*, Fr.) Towards the wind. As St. Domingo is to the windward of Jamaica. ..

**WINGS** of an army, when drawn up in battle, are the right and left hand divisions; when a battalion is drawn up, the divisions on the right and left are called the wings. The word wing is sometimes used to denote the large sides of horn-works, crown-works, tenailles, and other out-works, &c.

**WINTER-Quarters**. See **QUARTERS**.

**WITHERBAND**, a piece of iron laid under a saddle, about three inches above the withers of the horse, to keep tight the two pieces of wood.

**WITNESSES**, in fortification. See **TIMOINS**.

**WITNESSES**, in a military judicial sense, persons summoned by the judge-advocate, or any of his deputies, to attend at a general court-martial, there to speak to facts which they know of their own knowledge, and to which they can bona fide swear, from having been present at the transaction, &c. See *Tytler on Courts-Martial*.

According to the articles of war, (see Art. xii.) witnesses attending courts-martial are to be privileged from arrests, and not attending are liable to be attached.

**WOLKEELE**, *Ind.* an ambassador.

**WOLF-Holes**, in the defence of places, are round holes, generally about 2 or

2 or 3 feet in diameter at the top, 1 at bottom, and  $2\frac{1}{2}$  deep, dug in the front, of any work. Sometimes a sharp-pointed stake or two are fixed at the bottom, and covered with very thin planks, and green sods; consequently the enemy, on advancing, fall in, and are put into confusion.

**WOODEN-Bottoms**, in laboratory works, are cylindrical pieces of wood, of different lengths and diameters, agreeable to the size of the gun. They are hollowed at one end to receive the shot, and the flannel cartridge is fastened to the other end: the whole forming one cartridge, which is put into the piece at one motion.

**WOOL-Packs**, bags of wool. They are frequently ranged in form of a breast-work, because they resist cannon-shot. See **SIEGE**.

**WORD**, (*mot*, Fr.) a single part of speech, consisting of one or more syllables, for the purpose of expressing ideas. In a military sense, it signifies signal, token, order; as watch-word, &c.

*The Word.* } is a peculiar word  
**Watch Word**, } that serves for a token and mark of distinction, given out in the orders of the day, in times of peace, but in war every evening in the field, by the general who commands, and in garrison by the governor, or other officer commanding in chief, to prevent surprise, and hinder an enemy, or any treacherous person, to pass backwards and forwards. This watch-word is generally called the *parole*, and to which is added the *countersign*. The first is known to all officers and non-commissioned officers, the latter only to the sentinels. The officers that go the rounds, or patrols, exchange the word with the officers on duty; for must the sentinels let any one pass who has not got the countersign.

**WORDS of command**, (*mots de commandement*, Fr.) certain terms, which have been adopted for the exercise and movement of military bodies, according to the nature of each particular service. Words of command are classed under two principal heads, and consist of those which are given by the chief or commander of a brigade, battalion, or division, and of those which are uttered by the subordinate leaders of troops or companies, &c.

**Cautionary Words**, (*commandemens d'avertissement*, Fr.) certain leading instructions which are given to designate any particular manoeuvre. The cautionary words precede the words of command, and are issued by the chiefs of corps.

It was our intention to have inserted under this head, all the different words of command that are directed to be given in infantry manoeuvres, and to have added the *mots de commandement*, as practised in the French service. But as most of those used in the British service have been published by authority, we judged it superfluous to encumber a work of this description with so much additional matter.

With respect to the French words of command, of which we have the arrangement by us, we have declined inserting them in the present volume; first, because they would have considerably increased its size, and, in the next place, because we had already given occasional explanations of them, with their corresponding terms in English.

**WORKMEN**, are persons that attend the ammunition, boatsmen, carpenters, smiths, millers, bakers, wagoners, miners, pioneers, &c.

When soldiers are employed upon fatigue, or working parties, the drums and fife, &c. should invariably play to time and measure. According to Marshal Saxe, they should be relieved at the expiration of two hours and a half; by which means the individuals are less harassed, and all the troops share alike. With regard to accompanying them in their labour with music, the policy of it is warranted by antiquity. The Lacædæmonians, with a detachment of only 3000 men, under the command of Lysander, destroyed the famous Pyæus of Athens in less than six hours. During the whole of the operation, the flutes were playing to enliven and encourage the troops. This custom existed in France to a late period among the galley-slaves at Marseilles, who, whilst they were employed in removing enormous loads of rubbish, &c. were constantly accompanied by musical instruments and drums. Marshal Saxe's *Flaveries*, pages 157 and 158.

**WORKS**. This term is generally understood to comprehend the fortifications

tion about the body of a place; as by outworks are meant those without the first inclosure. The word is also used to signify the approaches of the besiegers, and the several lines, trenches, &c. made round a place, an army, or the like, for its security.

**Crown Works**, (*ouvrages à crêtes*, Fr.) See CROWN-WORK.

**Horned Works**, (*ouvrages à cornes*, Fr.) See HORNED-WORK.

**To WORM a Gun**, (*décharger un canon avec la tire-bourre*, Fr.) to take out the charge of a firearm by means of a worm.

**Worm of a Gun**, (*tire-bourre*, Fr.) an instrument vermiculated or turned round, that serves to extract any thing into which it insinuates itself by means of a spiral direction. It is much the same as war-hook, with this difference, that the one is more proper for small arms, and the other for ordnance.

**Divine WORSHIP**. In section I. of the Rules and Articles of War, it is ordained that all officers and soldiers, not having just impediment, shall diligently frequent divine service and sermon, in the places appointed for the assembling of the regiment, troop, or company to which they belong.

Commissioned officers who wilfully absent themselves, or being present, behave indecently or irreverently are liable to be brought before a court-martial, there to be publicly and severely reprimanded.

Non-commissioned officers and soldiers are liable to a forfeit of twelve pence, to be deducted out of the next pay of each individual so offending, for his first offence; for the second, he not only forfeits twelve pence, but he is laid in irons for twelve hours. The money so forfeited, is applied to the use of the sick soldiers of the troop or company to which the offender belongs.

**To WORST**. To defeat, to overthrow.

**WORSTED**. Defeated; put to the rout.

**WORTHY**. A man particularly distinguished, more especially for his valour, as the worthies of antiquity.

**To WOUND**, (*Blessure*, Fr.) To make or cause a wound.

**A WOUND**, (*Blessure, plaie*, Fr.) The breaking the continuity of the parts of the body.

**A simple WOUND**, (*Blessure extérieure*, Fr.) that which only opens the flesh, and does not affect the bones or sinews.

**A complicated WOUND**, (*Blessure compliquée*, Fr.) A wound which is accompanied with bad symptoms, as fluxes of blood, &c.

**A dangerous WOUND**, (*Blessure ou plaie dangereuse*, Fr.) A wound by which the nobler parts are affected; as when an artery is pricked, &c.

**A mortal WOUND**, (*Blessure ou plaie mortelle*, Fr.) A wound which must unavoidably end in dissolution.

**The WOUNDED**, (*Les Blessés*, Fr.) Under this term are comprehended all the individuals belonging to an army, who may have been ruined or otherwise hurt in battle, &c. It forms part of the general return which is made on service, viz. *killed, wounded, missing and taken prisoners*. The care of the sick and wounded is one of the primary duties of a commander in chief.

To this list might be added **DE-SERTED to the enemy**; but desertion of this kind, though not unusual in other services, is so uncommon among British sailors and soldiers, that we think the mention of the term superfluous.

**To WREAK**, (*Assouvir, décharger sa colère*, Fr.) To discharge, to vent; as to *wreak one's vengeance*, or *malice on defenceless prisoners*. A species of vengeance which no state policy can justify, (not even on the Machiavelian system).

**WREATH of victory**. The garland or chaplet of triumph. See TRIUMPH.

**WRESTLER**. One who contends in wrestling.

**WRESTLING**. A contest for ascendancy of bodily strength; as when two wrestlers attempt to throw each other down. It was in great vogue among the Olympic games; and is yet to be met with in many parts of England.

**WRIT**. A legal instrument. A slender piece of parchment which is issued out of the Sheriff's office, and to which

which the stoutest officer must yield: The only mode of avoiding this hovering enemy to personal freedom, is to avoid unnecessary expence, and to keep out of debt. The latter mode, is, however, scarcely feasible under the circumscribed limits of British pay, and the exorbitant price of every necessary in life. By the articles of war, no soldier can be sued unless for a real debt of 20*l*. of course no writ can be served upon him. ART. WAR, page 126, Art. LXVII.

**Writ of Rebellion.** A writ when a man (after proclamation issued out of the Court of Chancery or Exchequer, and made by the Sheriffs, to present himself to the court under pain of his allegiance, by a certain day) does not appear.

**WRONG.** An injury; a designed or known detriment; not right, not justice.

**WRONGS.** We have already observed under the article *Rights*, that although they are not specifically mentioned or described in the mutiny bill, they nevertheless exist in military life. Every officer and soldier possesses rights, and when either is wronged he is authorised to seek for redress. In section III. art. 1st, it is expressly laid down, That if any officer shall think himself to be wronged by his colonel or the commanding officer, of the regiment, and shall upon due application made to him, be refused to be redressed, he may complain to the general commanding in chief of his Majesty's forces, in order to obtain justice; who is by the same article required to examine into such complaint; and either by himself or by the secretary at war, to make his report to the king thereupon, in order to receive his further directions. It will be observed, that although officers may be peremptorily dismissed the service by the king, without trial or investigation, yet, according to this article, and in the true spirit of justice, they have a right to have any particular instance of grievance laid before his majesty through the commander in chief or secretary at war.

If any inferior officer, non-commissioned officer, or soldier shall think himself wronged by his captain, or other officer commanding the troop or

company to which he belongs, he is to complain thereof to the commanding officer of the regiment, who is required to summon a regimental court-martial for the doing justice to the complainant; from which regimental court-martial either party may, if he thinks himself still aggrieved (provided always that the wrong complained of be of a pecuniary nature), appeal to a general court-martial: and if upon a second hearing, the appeal shall appear to be vexatious and groundless, the person so appealing shall be liable to be punished at the discretion of the said general court-martial.

To the credit of British jurisprudence, and to the honour of the present administration, let it, however, be said, that not military power which is exercised with barbarity, is eventually paramount to the equality of justice that pervades our criminal code. No distance of time or place within the empire; no rank, no connection can rescue the offender from insulted justice. The late trial of Governor Wall, for the inhuman murder of Serjeant Armstrong, upwards of twenty years ago, is corroborative of this assertion. He was convicted before a special jury on the 20th of January 1802; and notwithstanding the exertions of considerable friends to save him, was finally executed on the 23rd day of the same month.

The fate of Governor Wall will bear testimony to Europe and to the world, that English justice still retains its original purity, and is still equally and impartially administered to the peer and to the peasant; making no distinction between the private and his commander, but punishing, protecting, and avenging all alike. It will be a consolation to such of the British seamen who may be dejected and cast down by the melancholy end of so many of their messmates, to find that no flimsy charge, no groundless imputation, no pretended mutiny, either imagined at the moment, or afterwards trumped up, as occasion may require, will be admitted as a justification of severities, causelessly and inhumanly inflicted. When they see the death of a simple serjeant, without family, or friends, in a country whence the report of his wrongs might possibly have never reached home, now made the subject

subject of a state prosecution, conducted by the two principal criminal officers of the crown, with the assistance of a number of other highly respectable counsel, and the attendance of every witness in the smallest degree necessary, collected with all the anxiety that could have been bestowed on the case at the commencement of the prosecution in 1784, by the widow and orphan children of the deceased (if such he had, and they were rich enough to afford the expence; will they not rejoice to see, that punishments are not for them alone, and that the proudest of those who rule them cannot tyrannize over them with im-

punity? It is natural to the ignorance of low situation, to suppose that suffering is confined to its own class. In some countries this is unfortunately too much the fact. In ours, great crimes are rare in the higher ranks of society; but in the few instances that have occurred, the equality of justice has been enforced in a manner which gives every peasant in the land reason to thank heaven that he was born in such a country.

WULIAM, *Ind.* Sandals.

WULANDA, or WULANDEZ, *Ind.* The Dutch are so called in India.

## X.

**XEBEC**, *Carchet, Fr.* A sort of armed vessel, with lateen sails, which is used in the Mediterranean.

**XENOPHON**. A Greek general, who has rendered his name immortal by a well-conducted retreat; and is equally celebrated for good military maxims, which are still extant in his *Cyropedia*.

**XERIFF**. A prince, or chief ruler in Barbary is so called.

**XERXES**. A king of Persia, son of Darius, and grandson of Cyrus. This monarch has been rendered notorious in history, by the extravagance of his preparations to invade Greece, and his ultimate failure; which latter may be attributed to the undisciplined state of his army, and to the presumption of his General Mardonius. He entered the Hellespont with so numerous a fleet, that it covered its surface between the two land. The number he embarked exceeded 1,000,000 men, who were entirely defeated by 40,000 well-disciplined troops from Greece.

**XYSTARCHA**. In antiquity, the master and director of the Xystus.

In the Greek Gymnasium, the Xystarcha was the second officer, and the Gynnasiarcha the first; the former was his lieutenant, and presided over the two Xysti, as well as over every species of exercise that was practised therein.

**XYSTER**. An instrument used by surgeons to scrape and shave bones with.

**XYSTUS**. Among the ancients, a long portico, open or covered at the top, where the athletes practised wrestling and running; the gladiators who exercised therein, were called Xystici.

Among the Romans, the xystus was only an alley, or double row of trees, meeting like an arbour, and forming a shade to walk under; so that, in this sense, it might be considered as an open walking place, where the Romans entertained one another.

## Y.

**YACHT**, (*Yacht*, Fr.) This word is taken from the Dutch. It is a small ship with one deck, carrying four, eight, or twelve guns, and thirty or forty men. Yachts, in general, are from 30 to 160 tons; contrived and adorned both within side and without, for carrying state passengers. They answer the purposes of business as well as pleasure, being remarkable good sailers. **YAD DASHIT**, *Ind.* A memorandum.

**YARD-Mattering.** A disease in horses.

**YAWL**, (*Chaloupe*, Fr.) A small vessel belonging to a ship.

**YAWS**, (*Pian*, *Eptan*, Fr.) The venereal disorder, in a most virulent state; with which the negroes, and sometimes the Creoles and Whites, are infected in the colonies, and on the Continent of America.

**YEHOODY**, *Ind.* A Jew.

**YEOMAN.** The French use this word when they allude to the yeomen of the guards. In a general acceptance of the word, among us, yeoman signifies a free-born Englishman, who may lay out of his own free land in yearly revenue to the amount of forty shillings. In other words, a freeholder who has land of his own.

**YEOMAN of the guard.** One belonging to a sort of foot guards, who attend at the palace. The yeomen were uniformly required to be six feet high. They are in number 100 on constant duty, and 70 off duty. They are armed with perruquins. Their attendance is confined to the sovereign's person, both at home and abroad. They are clad as the manner of King Henry VIII.

The yeomen of the guards were at first only 50 men of the next rank, under gentry; but they were afterwards augmented to 100, of which eight are called ushers, who have each 40l. per

annum more than the other yeomen. This corps was first instituted by King Henry VII. anno 1486. The officers of this veteran corps, although they are never included in the general promotions of the army, or derive any benefit from the occasional rise in brevet-rank, have nevertheless the advantage of good pay, and the right of wearing regimentals, without the danger of being called into actual service. The officers are, 1 captain, 1000l. per annum; 1 lieutenant 500l. per ann. and 1 ensign 300l. per ann. Of the same description is the honourable band of gentlemen pensioners, which was established in 1509, viz. 1 captain, 1000l. per annum; 1 lieutenant 500l. per ann. 1 standard bearer 310l. per ann. and 1 clerk of the chequer 120l. per ann.

**YEOMANRY.** The collective body of yeomen. In this class may be considered gentlemen of small landed property, independent farmers, &c. When the unparalleled successes of the French had almost laid Europe at the feet of their armies, England alone seemed destined to stop the torrent. Thanks to her insular situation! to the superiority of her fleets, and not a little to the valour and perseverance of her gallant army in Egypt, she has hitherto been able to preserve the high character of the nation at large. Let us hope, in spite of temporary reverses, that no change of things upon the Continent of Europe, will ever reduce her to the necessity of being awed, at home, by the menacing aspect of her ancient rival.

During the last war, it was deemed expedient to have recourse to the native energies of the land. Not only the militia, but the volunteer corps were increased; and in order to secure a ready co-operation with all the dispos-

able parts of the regular army, &c. it was strongly recommended to the yeomanry to equip and arm, and to make themselves acquainted with the ordinary routine of military evolutions. The plan was accordingly adopted, and in addition to the supplementary militia, and volunteer corps that were formed in the different parishes, bodies of mounted yeomen were regularly assembled, and were headed by the principal noblemen and gentlemen belonging to the several counties. Conspicuous, however, as the martial spirit of the country appeared at that time, it has been far surpassed in the exertions, to which Englishmen have been excited, by the innate valour of their constitutions, at the present eventful period. Roused into action by the repeated menace of invasion, and knowing no other surrender of this last asylum of liberty, but that which is connected and interwoven with their lives, the inhabitants of these Islands have felt increased animation in proportion to the repetition of the old Roman sentence—(*Delenda est Carthago*), which has so long been heard from Usant to the Baltic, and which will again be renewed should the French succeed in Germany. Among other noble instances of disinterested patriotism, his Grace the Duke of Northumberland has raised among his tenants, a corps of 1511 men, consisting of a body of horse artillery, commanded by a captain, six troops of cavalry, and 17 companies of infantry; the whole clothed, appointed, paid and maintained by himself, for government has only found arms and accoutrements. The captain of artillery and the staff receive a permanent pay.—Such a command, and such a saving to the state, are proud circumstances to boast of, and worthy of a British nobleman. Advocates, as we most unquestionably profess ourselves to be, for a regular army, in the most extended sense of the expression, we cannot withhold our tribute of applause to this effusion of native patriotism. It has proved the determined spirit of the land to resist invasion, and by so doing, it has shown, that while the soldiers of general service are fighting their country's battles in all quarters of the globe, their native

homes are not left defenceless or unguarded.

**YEOMANRY CAVALRY.** (*La Cavalerie des tenanciers volontaires*.) Certain corps of mounted gentlemen and farmers, who during the last war, subjected themselves to specific military regulations.

**YESAWUL, Ind.** A state messenger; a servant of parade, who carries a gold or silver staff; an aid-de-camp.

**YETIAB, Ind.** An officer who regulates the weights.

**YIELD.** See **SURRENDER.**

**YOG, Ind.** Junction, or union.

**YOLATOLE.** A sort of drink in the East Indies.

**YOLL.** A general name for tobacco in the West Indies.

**YORK MILITARY ASYLUM.** A charitable institution which has been adopted in this country, through the particular recommendation of His Royal Highness the Duke of York, for the education of orphans, and of the children of meritorious soldiers. The following rules are directed to be observed:

In the selection of the children for admission, preference in general shall be given,

1st. To orphans.

2nd. To those, whose fathers have been killed; or have died on foreign service.

3d. To those who have lost their mothers, and whose fathers are absent on duty abroad.

4th. To those whose fathers are ordered on foreign service; or, whose parents have other children to maintain.

The merit of the father, as to regimental character, shall be always considered as a principal recommendation.

None shall be admitted, except the children, born in wedlock, of warrant and non-commissioned officers and soldiers of our regular army.

Every child, previously to admission, must be ascertained to be entirely free from mental, and bodily, infirmity.

The parents, or friends, applying for the admission of children, shall be required to sign their consent to such children remaining in the asylum as long as our commissioners may think fit; and to their being disposed of, when

of proper age, at the discretion of the commissioners, as apprentices, or servants; or, if boys, to their being placed with their own free consent, in our regular army, as private soldiers.

The number of children to be admitted shall not exceed one thousand, viz. seven hundred boys, and three hundred girls; exclusive of such as, upon any pressure of special circumstances, may be received (for a time, and until they are of proper age to be removed, or until vacancies may occur in the asylum) into the infant establishment in the Isle of Wight; hereby declared to be a branch of this Our Royal Institution, and to be under the general control of the commissioners thereof.

*Officers, Assistants, and Servants on the Establishment.*—The following are the officers, assistants, and servants on the establishment of the Royal Military Asylum; subject to such further change, augmentation, or diminution, in the description, number, or salaries, of the under officers, assistants, and servants, as to the commissioners may hereafter appear necessary: viz.

*A Commandant*; to whom, in consideration of the great trust reposed in him, and the continued attention required of him to promote the general welfare of the institution, an allowance is made of twenty shillings *per diem*, with an allowance of coals and candles for three rooms.

*A Treasurer*; to whom is granted a salary of 300*l.* *per annum*, including all allowances for clerks, stationary, or otherwise.

*A Chaplain, and Superintendent of Morals and Education*; to whom is granted a salary of 280*l.* *per ann.* with an allowance of coals and candles for two rooms and an half.

*An Adjutant and Secretary*; to whom is granted the pay of ten shillings *per diem*, with an allowance of coals and candles for two rooms.

*A Quarter Master and Steward*; to whom is granted a salary of 180*l.* *per ann.* with an allowance of coals and candles for two rooms.

*A Surgeon*; who, holding the rank of surgeon to the forces, has the pay of fifteen shillings *per diem*, with an allowance of coals and candles for two rooms and an half—he has also the as-

sistance of an hospital mate, (not resident in the house) at five shillings *per diem*, without any other allowance.

*A Serjeant-Major of Instruction*; whose pay is two shillings and sixpence *per diem*, with clothing: board, the same as the children; and an allowance of coals and candles for one room.

*Serjeant-Assistants*; in the proportion of one to every fifty boys; they have the pay of one shilling and sixpence *per day*, each; clothing and board; and an allowance of coals and candles, according to the season of the year, in a proportion to be fixed by the commissioners.

*To the Quarter-Master Serjeant*, and to such of the serjeant-assistants as shall be employed to instruct the boys in the different trades, is allowed sixpence *per diem* to each: in addition to the pay of one shilling and sixpence above specified.

*A Drummer*; is allowed drummer's pay and clothing, and to mess with the children.

*A Matron*; who has 100*l.* *per ann.* as salary, and in lieu of all former allowances; except in regard to coals and candles, the allowance for which shall be continued to her for two rooms.

*An Assistant Matron and School-Mistress*; who has a salary of 50*l.* *per ann.* (in lieu of her former salary, and allowance for provisions) allowance of coals and candles for one room.

*One Reading Mistress, and one Knitting Mistress and Scampstress*; each having a salary of 25*l.* *per ann.* one shilling *per diem* in lieu of board, and an allowance of coals and candles for one room.

*Nurses*, in the proportion of one to each ward; are allowed 10*l.* *per ann.* each, and their board; with clothing, and coals and candles, the same as the serjeant-assistants.

*Nurses for the Infirmary*, in proportion to the number of the sick; are allowed 12*l.* *per ann.* each, and their board; with clothing, and coals and candles, as the other nurses.

*A Cook*; who is allowed 20*l.* *per ann.* and her board; with clothing, and an allowance of coals and candles, the same as the Nurses. She is allowed two assistants; each having 10*l.* *per ann.* with board, clothing, and coals and candles, the same as the cook.

*A Laundress*; who is allowed 20*l.* *per ann.* and her board; with clothing, and an allowance of coals and candles, the same as the cooks. She is to have such aid from the female children, and such hired assistance, as circumstances may from time to time require.

*A Serjeant Porter*; who has the pay of one shilling and sixpence *per day*; with clothing, and one shilling *per diem* in lieu of board; together with an allowance of coals and candles, in a proportion to be fixed by the commissioners.

The officers, assistants, and servants, belonging to the Royal Military Asylum, are not, directly or indirectly, to demand or receive any perquisite; or any emolument whatever, beyond the pay and allowances annexed to their respective employments, as specified in

this warrant, or otherwise expressly authorized by the commissioners: and any such officers, assistants, or servants, offending herein, shall be deemed to have forfeited their situations.

*YOUNGEST regiment*, is that which was last raised. See *Seniority*.

*YOUNGER officer*, is he whose commission is of the latest date. Regiments and officers are posted and commanded, according to the dates of their commissions. See *Seniority*.

*YOUNGSTERS*. A familiar term to signify the junior officers of a troop or company. The word youngster is likewise used in the navy. The French say *Mousse* in naval phraseology.

*YPREAU, Fr.* A Dutch elm.

*YZQUI-ATOTE*. A sort of drink in the West Indies.

## Z.

*ZAAT, Ind.* Division of people into tribes or sects.

*ZACCIO*. In architecture, the lower part of the pedestal of a column.

*ZAGAFF, Fr.* A weapon made in the form of a long dart, which the Moors use in battle, and which they cast with extreme dexterity.

*ZAÏMS*. Principal leaders or chiefs; after whom a mounted militia, which they support and pay, is called among the Turks.

One class of the Zaïms receives its appointments direct from the Porte, and the other from the Beglierbeys. Whenever an order is issued by the latter for that purpose, the whole body of the Zaïms must assemble, with their followers, at a given spot of rendezvous.

They are supported by certain revenues called *zimars*; and the money which they receive from thence amounts to twenty thousand aspers—five aspers are equal to one penny English—and they never can receive less. The Zaïms are all of equal rank among them-

selves. They may be considered as the chief noblemen in Turkey; deriving considerable importance from the many privileges and immunities which are attached to their several Ziamets. The lowest annual revenue of a Ziamet is twenty thousand aspers, and the highest amounts to ninety-nine thousand nine hundred and nine-nine. Whenever it exceeds the latter sum, the surplus is added to the income of the Saugia-Bey or Bacha, whose rank in Turkey is nearly similar to that of a count in France.

The Zaïms seldom serve at sea. They prefer paying a certain sum of money to be exempted from that duty. But whenever they take the field, it is incumbent upon each to bring as many horsemen, accounted and fit for service, as there are sums of five thousand aspers in the annual receipt of his Ziamet; so that every Zaïm who receives thirty thousand aspers, must produce six able-bodied and well mounted followers; and every one having sixty thousand aspers per year must bring twelve.

Although

## Z E A

Although the Turks take especial care to see, that the Timariots and the Zaims bring their complement of men, whom they call Jebelus or horsemen; nevertheless they do not reckon them as any part of the effective forces of the Ottoman empire. On the contrary, they call a Zaim, accompanied by his quota of horsemen, a Selictar or one sabre.

When a Zaim takes the field, he must provide himself with camp equipage, &c. and independent of the necessary number of tents for himself and his men, he must also have one to cook in, and another to serve for stabling.

The Zaims, as well as the Timariots, are under the immediate orders of their Ali-Beglier or colonel. These officers are subordinate to the Bacha, who has the rank of colonel-general; but in all considerable enterprises, such as sieges, battles, &c. the Bacha is obliged to communicate with the seraskier or general in chief of the army; which is usually the Grand Viâir.

**ZAMORIN.** A title of sovereign princes, in Malabar in the East Indies.

**ZAMPOGNI.** A common flute, or whistle.

**ZAYM, Ind.** A feudal chief, or military tenant.

**ZEAL, (Zèle, Fr.)** More than common ardour for the good of the service. An earnest passion for any thing; especially for religion, and for the welfare of one's country. It has been wisely said by one of our best didactic poets, that excess of zeal may be detrimental to community:

For virtue's self may too much zeal be had;

The worst of madmen is a saint run mad. Pope.

**Military ZEAL.** Under this term may be comprehended, not only a natural disposition to arms, but also an unwearied application to the science of war, add a prompt and undaunted exercise of all the duties which the situation of an individual may prescribe. There is not, perhaps, any profession in which the thorough devotion of a man's time and talents is so imperiously called for, as in the theoretical and practical branches of military knowledge. It is scarcely possible to have too much zeal; most especially when the heated imagi-

## Z I N

nation of a soldier has been gradually tempered by experience, calmed by the hand of time, and is constantly under the influence of well digested plans.

**ZEBANRUNDY, Ind.** A deposition.

**ZECHIN, (Séquin, Fr.)** So called

**ZACHIN, (from La Zeecha, a place** in the city of Venice, where the mint is settled; a gold coin worth about nine shillings sterling.

**Turkish ZECHIN.** A gold coin, in value about nine shillings.

**ZEINAU, Ind.** A term of distinction used to persons of rank or eminence.

**ZEMEEN, Ind.** Ground.

**ZEMEENDAR, Ind.** A person who holds a tract of land immediately from the government, somewhat similar to a lord of the manor.

**ZEMEENDARY, Ind.** The lands of a zemendar.

**ZENITH, (Zénith, Fr.)** The point or vertex in the heavens directly over one's head. If we conceive a line drawn through the observer and the center of the earth, which must necessarily be perpendicular to the horizon, it will reach to a point among the fixed stars called the zenith.

The zenith is directly opposite to the Nadir; one above our heads, and the other below our feet.

**ZERAKET, Ind.** Agriculture.

**ZERB, Ind.** A blow; a stroke.

**ZERB SHAILAAK, Ind.** A blow given with a stick.

**ZERO, Fr.** A word used to express a cypher, or nought (0).

**ZIG-ZAG, Fr.** A term used in mechanics. The working beams or balances which give motion to the several pumps that throw the water up from the river to the hill at Marly, near Paris, form a sort of zig-zag.

**ZIG-ZAGS,** in fortifications, are trenches or paths with several windings, so cut, that the besieged are prevented from enfilading the besieger in his approaches.

**ZIL.** A military musical instrument which is used in the Turkish armies. It consists of two brass basons, that are struck together, so as to be in concord with other instruments.

**ZIMRA, Ind.** A certificate.

**ZINDIGEE, Ind.** Grain, cattle, lands, plantations.

**ZIYAMUT,**

**ZIYAMUT, Ind.** A tief bestowed for military services.

**ZOCLE,** (in architecture.) A square member, lower than its breadth, serving to support a pillar, or any other part of a building, instead of a pedestal, base, or plinth.

*ZOCLE continued,* a continued pedestal, on which a structure is raised, but which has no base or cornice.

**ZODIACK,** (*Zodiaque, Fr.*) One of the greatest imaginary circles of the heavens, which passes obliquely between the two poles of the world; it is cut into two equal parts, by the equator,

one of which comprehends the six northern signs towards the Arctick Pole, and the other the six southern signs towards the Antarctick Pole; it is furnished with twelve constellations, represented upon globes, by the figures of twelve living creatures.

**ZOPISSA,** (*Zopissa, Fr.*) The best sort of pitch, or pitch which is scraped off from the sides of snips, and then tempered with wax and salt.

**ZULLUM, Ind.** Violence; oppression.

**ZUROOREAT, Ind.** Necessaries.

FINIS.

and new friends; had not experience forced me to feel the characters of our leading men; the state of parties; the forms of office, and the operations of our civil and military system. In this peaceful service I imbibed the rudiments of the language and science of tactics, which opened a new field of study and observation. I diligently read and meditated the *Mémoires Militaires* of Quintus Julius (Mons. Guichardt,) the only writer who has united the merits of a professor and a veteran. The discipline and evolutions of a modern battalion gave me a clearer notion of the phalanx and the legion;\* and the captain of the Hampshire grenadiers (the

\* As I have occasionally touched upon the manœuvres and evolutions of the ancients, particularly under Phalanx,—the following additional extract from Sir Thomas Browne's *Hydrotophiæ*, may not be superfluous.

The Roman battle was ordered after this manner, whereof, as sufficiently known, Virgil hath left but a hint, and obscure intimation. For thus were the maniples and cohorts of the *Hastati*, *Principes* and *Triarii* placed in their bodies, wherein consisteth the strength of the Roman battle. By this ordination they readily fell into each other.

<i>Hastati</i>	0	0	0	0	0
<i>Principes</i>		0	0	0	0
<i>Triarii</i>	0	0	0	0	0

The *Hastati* being pressed, handsomely retired into the intervals of the *Principes*, these into that of the *Triarii*; which making, as it were, a new body, might jointly renew the battle, wherein consisted the secret of their successes. And therefore it was remarkably singular in the battle of Africa, that Scipio, fearing a rout from the elephants of the enemy, left not the *Principes* in their distances, whereby the elephants passing the vacuities of the *Hastati*, might have run upon them, but drew his battle into right order, and leaving the passages bare, defeated the mischief intended by the elephants. Out of this figure were made two remarkable forms of battle, the *canus* and *forceps*, or the shear and wedge battles, each made of half *rhombus*, and but differed by position. The wedge invented to break or work into a body, the *forceps* to environ and defeat the power thereof, composed out of the selectest soldiery, and disposed into the form of an V, wherein receiving the wedge, it enclosed it on both sides. After this form the famous *Suses* ordered his battle against the Franks, and by this figure the *Alia* were enclosed and cut in pieces.

The *rhombus*, or lozenge figure, so visible in this order, was also a remarkable form of battle in the *Urcian* cavalry, observed by the *Thessalians*, and *Philip*, king of *Macedon*, and frequently by the *Parthians*, as being most ready to turn every way, and best to be commanded, as having its ductors, or commanders, at each angle.]

The Macedonian phalanx (a long time thought invincible) consisted of a long square. For though there might be sixteen in rank and file, yet, when they shut close,

† In the dispose of the legion, in the wars of the republic, before the division of the legion into ten cohorts, by the emperors. *Salmas.* in his *ſup. ad Lucetium et de Re Militari Romanorum*.

(the reader may smile) has not been useless to the historian of the Roman Empire\*.

Nor are the advantages of military science—considered as a part of education only—limited to the useful walks of literature; they extend into the familiar pleasures of the closet, and, as they add to the figurative language of the writer, contribute not a little to the instruction and satisfaction of the reader. Who, for instance, can peruse the beneficial records of history, the bright effusions of poetry, or, indeed, any species of writing, from Holy Writ to fable and romance, without meeting some military phrase or allusion? Or who can hear the debates of parliament without sensibly feeling the proper, or improper application of professional language. Who, for instance could advert to such a singular expression as *killing-off*, without being anxious to trace the source from whence it probably was derived? To a person acquainted with military terms, it might so far appear intelligible, that he would easily see into the meaning, although he could not help feeling the misapplication of the phrase. Having noticed this error of an individual, I hope I shall not be thought too trifling or minute in pointing out a passage, wherein a military term has been adopted with the most scrupulous propriety. I have already made use of the word in the first part of this discourse, but not having directed the attention of my reader to the felicity of its adaptation, I cannot omit referring him to Dr. Johnson's learned and well written preface to his Dictionary. He will there find a military term, the full force of which cannot be thoroughly understood without some knowledge, at least, of the duties of a *pioneer*. Nor is it there only, that language has been heightened, and the meaning of the author powerfully assisted by military phrasology. In perusing Dr. Goldsmith's *Deserted Village*, the following couplets naturally lead the mind to reflect upon the manner in which an individual soldier sustains his part in action,

close, so that the fixed pike advanced before the first; though the number might be square, the figure was oblong, answerable unto the *quincuncial* quadrate of *Curtius*. According to this square, Thucydides delivers, the Athenians disposed their battle against the *Lacedemonians*, (*ἐν τετραγώνῳ*) brickwise; and by the same word, the learned *Guelhus* expounded the quadrate of Virgil, after the form of a brick or tile.

Secto viâ limite quadret. In VIRG.

\* To this passage let me subjoin, by way of note, what Plutarch says in the opening of the *Life of Paulus Æmilius*:—"By daily conversing with history, and filling my mind with the images of the best and greatest men, I escape the contagion of idleness and vice."

&c. But if the reader be ignorant of the word, *shoulder*, and the figurative term, *field*, he will lose half their beauty.

The broken soldier, kindly bade to stay,  
Sat by his fire, and talk'd the night away;  
Wept o'er his wounds, or, tales of sorrow done,  
*Shoulder'd* his crutch, and shew'd how *fields* were won.

Having thus endeavoured cursorily to shew the advantages which are attached to a knowledge of military terms, independent of the profession, I shall hazard a few words respecting myself, and the manner in which I have endeavoured to execute this undertaking.

I know enough of mankind in general to be satisfied, that almost every work, but most especially a technical work, let its execution be what it may, receives or loses much of its credit, especially in the estimation of superficial readers, from the character and occupation of its author or compiler. After what I have said of myself in the notes to the dedication, little more, I presume, can be required on that subject, even by the inquisitive, than to add, that I have been honoured with the good opinion of a nobleman, whose ardour for military glory can be only equalled by his private virtues and political integrity; and that the greatest part of my life has been spent, either abroad or at home, in the society of military men.

I owe my acquaintance with his lordship to that laudable promptitude which guides him towards every object, by which the common weal may eventually be benefited. To him I ventured to inscribe a few loose hints on military subjects, upwards of twelve years back; and from that period until the present hour, it has been my good fortune to possess his countenance and encouragement. Of the plan of the work\*, I think it barely necessary to say, that it was originally intended to be nothing

\* Among other objections to the general cast of this work, it will probably be said, that the chief precedents and examples have been borrowed from French writers and French commanders; and that I might have found other instances and illustrations, if not in the History of England, at least in the annals of Germany. This observation is certainly correct. But when it is considered, that every species of military science has been sedulously cultivated by the French, from the earliest periods of their history, but, above all, that the application of their theory is principally directed against this country. I shall not, I trust, be blamed for having endeavoured to anticipate those means, and to put British officers in possession of what have been used, and will probably again be resorted to by their enemies.

more than an enlargement of Smith's Military Dictionary. But on examining that compilation, and comparing it with the French production on the same subject, I found our countryman's labours and researches so extremely limited, with regard to general service, and so wholly deficient in point of modern tactick, and modern terms\*, that I dropped my first intention, and have occasionally referred to his collection for such matter only, as relates to the artillery; reserving to myself the arrangement and explanation of almost every other branch of the service. The selection of the French and Indian terms, and of the extracts from the Rules and Regulations, as well as the distribution of other matter, from the best ancient and modern authors that have written on military subjects, is entirely new.

Although in my selection of the different passages from the Rules and Regulations, I have scarcely, in any one instance, deviated from the strict letter of the original matter, I have by no means observed the same degree of fidelity towards the French. It will be found that I have frequently added observations of my own, and illustrated the remarks of former writers by modern examples.

Imperfect as the present compilation most unquestionably will prove, and unequal as it is to my own conception of what it ought to be, it will nevertheless be found the only work extant of the kind in this country, that can properly and exclusively be called a Military Dictionary. It is a pledge†, in fact, which under the manifest necessity of our having soldiers regularly

\* Some persons—persons of reputed experience too, as far as mere service goes—will assert, that the ancient discipline of the British army was more effective, and, of course, better, than the present. We presume, however, to maintain the contrary; and we further venture to observe, that, in all probability, their assertion is grounded in prejudice, or, in less pardonable motives, in indolence and inaptitude to *unlearn* what they have acquired.

† I have heard it asserted by a man of excellent sentiments and great learning, that the character of a soldier and a citizen is incompatible. In the abstract sense of the term it may be so; but in its relative import, it is quite the reverse. No citizen, considering the distempered, and I fear the incorrigible, state of the human passions, can be secure in his property, &c. without the guardian aid of military vigilance. If all men were to remain at home, what would become of our possessions abroad? and as to the notion, that every man should be sufficiently acquainted with arms to defend his country, its fallacy is too manifest to require an answer. The science of war, like the study of the law of this country—is so vast and complicated, that, to use Mons. Nockliern De Schorn's words, (in his *Idées Raisonnées sur un Système Général*), the life of man is not sufficient for the acquirement and full possession of all its parts and branches.—*La vie de l'homme ne suffit pas pour acquérir et posséder, dans un haut point de perfection, toutes les parties et sujets de la science.*

Mr. Mackintosh, in a work to which he owes more than half his fame as a politician

regularly trained, I affectionately offer to the British army, of what I propose hereafter to accomplish, should I have health, and better opportunities of communication than I have hitherto possessed\*.

It may, perhaps, be a disparagement even to the present edition, to say, from the extreme hurry in which the greatest part of the work has been executed; from the large increase of additional matter and interpolations, whilst in the press; but above all, from the changes to which the greatest

tician and a writer, has remarked; that a domestic army cannot be increased without increasing the number of its ties with the people, and of the channels by which popular sentiment may enter it. Every man that is added to the army, is a new link that unites it to the nation. If all citizens were enabled to become soldiers, all soldiers must of necessity adopt the feelings of citizens. A small army may have sentiments different from the great body of the people, and no interest in common with them; but a numerous soldiery cannot. This is the barrier which nature has opposed to the increase of armies. They cannot be numerous enough, to enslave the people, without becoming the people itself. See *Vindiciae Gallicæ*. I submit this passage to those sceptical gentlemen who conceive, that the military force of this country cannot be increased without the liberty of the subject being essentially endangered thereby; and who would rather see the coast infested by an invading enemy, than give up the visionary idea, that a well disciplined army is useless to Great Britain; and that real military science ought, of course, to be an exploded doctrine amongst us.

Difficult, however, and arduous as this science is, let it be remembered, as Mr. Locke very justly remarks, "that we are born ignorant of every thing." The superficialities of things that surround them, make impressions on the negligent, but nobody penetrates into the inside without labour, attention, and industry. Stones and timber grow of themselves; but yet there is no uniform pile with symmetry and convenience to lodge in, without toil and pains. God has made the intellectual world harmonious and beautiful without us; but it will never come into our heads all at once. We must bring it home piecemeal, and there set it up by our own industry, or else we shall have nothing but darkness and a chaos within, whatever order and light there be in things without us. The same learned writer observes, that no person ought to despond; for of their understanding one may truly say, that its force is greater generally than it thinks, until it is put out. *Viresque acquirit cunâs*.

And therefore the proper remedy here is but to set the mind to work and apply the thoughts vigorously to the business; for it holds in the struggles of the mind, as in those of war, *dum putant se vincere, vicere*; a persuasion that we shall overcome any difficulties that we meet with in the sciences, seldom fails to carry us through them. Nobody knows the strength of his mind, and the force of steady, and regular application, until he has tried. This is certain, he that sets out upon weak legs, will not only go farther, but grow stronger too, than one who with a vigorous constitution and firm limbs, only sits still.

\* I think it fair to mention in this place, that on my applying for such communications as the gentlemen at Woolwich might be authorised to furnish respecting the artillery and engineer departments, I received for answer, that they were under specific instructions to withhold every sort of information from the public. The Little Bombardier, was however, shortly after compiled at the Warren; and was given to the world whilst the following work was in the press. This circumstance will account for the liberties I have taken with that publication.

part must necessarily be subjected, that much as it does contain, it can only be looked upon as a repository of military terms, which require to be scrupulously arranged according to the alphabetical succession of letters, and likewise to be disposed in such a manner, as to lead the young officer into an immediate knowledge of the first elements of his profession. Such was my design; but events have, in some degree, thwarted my intention\*.

Under these circumstances, it will not, I trust, be expected, that I should shield myself against the malignity of petty criticism, by giving a list of typographical or mere literal errors. Of these many will be found, which must strike the reader at first sight—the following ones have again escaped me, to *cut down*, to *out-manoeuvre*, &c. “So true it is,” to use Dr. Johnson’s† words, “that care will sometimes betray to the appearance of negligence. He that is catching opportunities which seldom occur, will suffer those to pass by unregarded, which he expects hourly to return; he that is searching for rare and remote things, will neglect those that are obvious and familiar.” Thus it happens, that in things difficult, there is danger from ignorance, and in things easy, from confidence; the mind, afraid of greatness, and disdainful of littleness, hastily withdraws herself from painful researches, and passes with scornful rapidity over tasks not adequate to her powers; sometimes too secure for caution, again too anxious for vigorous effort; sometimes idle in a plain path, and sometimes distracted in labyrinths, and dissipated by different intentions.”

In some instances, I have omitted the word that expresses the specific or literal act, in order to fix the attention of the reader on the subject or matter to which it refers, in a more general sense, and which is more immediately consonant to military operations. To *Enter*, or to *Retire*,

\* Notwithstanding my hopes to the contrary, I am free to acknowledge that the present edition, though corrected with much care, and considerably enlarged, by the addition of upwards of 2000 words or phrases, with appropriate explanations, is still inferior to my design, having been executed partly in sickness, and, wholly so, under circumstances of solicitude, and extraneous occupation. I am aware that these are feeble excuses to the public, for palpable errors and imperfections. Feeble as they are, they cannot, however, be without their weight; most especially when it is considered, that, instead of being master of my own time, I have been obliged to keep pace with my Bookseller’s eagerness to have it ready for sale, and with my Printer’s laudable and unwearied zeal to correspond with the wishes of his employer.

† It is some sort of consolation, even to men of superior abilities, to find, that the great Leviathan of British literature, Dr. Johnson, has not been able to escape considerable censure with respect to omissions, and sometimes with regard to etymology and explanation. A large quarto volume has been published to point out his defects; which, to say the worst of them, are only like so many specks in a noon-day sun.

for example, though applicable to other phrases, even of a military nature, (or to *enter an enemy's country; to retire from a dangerous position.*) yet being more forcibly expressed in the words, *To invade, To retreat;* they are on that account passed over. In other instances, I have designedly missed a word, for the purpose of conveying, under another term, not only the same act, but the method of effecting what it means, according to prescribed modes and regulations. Thus, to *retire from the service*, or to *resign*, is explained under the words, *To Sell out, and Service.*

Among the French terms, it will be found, that I have not only given such as immediately relate to military knowledge, technically considered, but likewise many which belong to the familiar intercourse of life. In some places the French word follows the English; but where it has been necessary to explain any particular regulation, and which exclusively belonged to the French service, I have always taken the leading word from that language. Sometimes, indeed, I have given an English word without coupling it with a French one; and have now and then omitted the French altogether. This has been owing to two causes; either to the word having totally escaped me, or because the term did not correspond with both languages. This has occurred in the cant-word *To Quiz*. I have not been able to find out a French term to express this absurd and unmanly practice; nor have I inserted the words *PERSIFLAGE, PERSIFLER, PERSILLEUR*, from a full knowledge that it is the extreme of bad breeding among Frenchmen, and indeed among other nations, to take the least liberty with the dress or appearance, &c. of individuals; and that the puerile art of Quizzing was of course unknown among them.

If, however, I have been guilty of omissions, with regard to a few familiar terms, I have made ample amends to the military reader by supplying him with copious information, &c. respecting the most important

\* It is remarkable, that men addicted to the ignorant and boyish habit of quizzing, cannot bear the slightest humour, if it be levelled against themselves. *Il est souvent plus honteux de persifler, que d'être persiflé. Persifler, A quizzer. Persiflé, A person quizzed—Persiflage, The act of quizzing—*Are modern terms among the French. *To Houx—To Roux* are cant terms amongst us which are unfortunately too much sanctioned. With respect to the etymology or origin of these terms, it will probably be found that they come from the noisy purloins of some of our public schools, from whence they ought never to have wandered into familiar usage. Perhaps *Quiz* grew out of an impertinent curiosity, on the arrival of a new boy, and is a corruption of *Quis est?* Who is he?—I leave this important question to be determined by the learned etymologists of Etap, Westminster, and Harrow! *Mistifier*, among the French, in some degree corresponds with our notion on this head.

branch of the profession. It will be found, that many pages in the following work have been devoted to the terms which are generally used in the study and practice of fortification. Nor can these pages be thought superfluous, or too much extended, when it is recollected (according to Belair, in his *Elémens de Fortification*, and according to the experience of the best informed officers) that the science of fortification is by no means confined to students in the artillery and engineer departments.

Frederick the Second, King of Prussia, whose whole reign was distinguished by so many military exploits, and who stood more indebted for success to his acquirements, than to his powerful genius, looked upon the knowledge of fortification as the ground-work of tactics. From this conviction he constantly recommended the study of it to all descriptions of officers.

It has been very justly remarked by a modern writer, that an engineer could never arrive at any excellency in his profession, unless he added a knowledge of general tactics and manœuvres to his own immediate art; we may say, with equal propriety, that no tactician will ever become thoroughly master of his profession, or, as the French justly term it—*de son métier*—or will ever be sufficiently instructed in the art of war to bid defiance to the infinite vicissitudes of chance, and to be equal to some glorious and enterprising plan, unless he know the various duties of the engineer department, be well acquainted with the elementary principles of fortification, and adapt his mind to the true spirit of them all." See Page 10, *Observations Préliminaires des Elémens de Fortification*.\*

If it should be observed, that I have been occasionally betrayed into gallicisms, I can only say with Dr. Johnson—"That he who has long cultivated another language, will find words and combinations crowd upon his memory; and haste and negligence, and refinement (I cannot add affectation, for I am not conscious of having wittingly done so) will obtrude borrowed terms and exotic expressions. Let it also be remembered, that no book was ever turned from one language into another, without imparting something of its native idiom."

\* How would a handful of men have been able to check Bonaparte at Acre, had not the talents of Phillipcaux, the engineer, afforded the best means of defence, and seconded the vigour and intrepidity of Sir Sidney Smith?

It is somewhat remarkable, that this memorable spot should stand recorded in history, for another instance of the superiority of British troops over the French, in point of daring enterprise and perseverance. Whilst the French king failed in his attempts on one side of the town, our Lion-hearted Richard stormed and took it on the other.

With

partiality or prejudice, with regard to modern rivalry, a Moreau, an Archduke Charles ; \*) and all the great men who have gone before us, or exist at present ; would never have been the subject of our admiration ; if they had neglected this study in any of its branches. It is by courage, genius, and capacity, by having a head always cool, and an eye at once quick and exact ; by a nice knowledge of the country, by skill in the choice of officers, and by strict discipline, kept up in the army, that a general is enabled to take such just measures, as will frustrate the designs of the enemy."

The sensible writer of a small Tract, upon Light Troops in the Field, (*Instructions concernant le Service de l'Infanterie légère en Campagne*) is so thoroughly convinced of the necessity of military knowledge, that he says with marked emphasis—"An ignorance of military duties leads to a series of mistakes and errors, one of which is sufficient to do away the well earned reputation of whole years, and to destroy, at once, that confidence which is so imperiously called for between the officer who commands, and the soldier who obeys, and upon which rest the ultimate issue and success of the most brilliant actions." It naturally follows, from the concurrent opinion of so many able men, sanctioned hourly by experience, that an art so diversified in all its branches, and, when reduced into practice, so often at variance with established theory, should not only be studied by the chiefs of armies, but likewise be sedulously followed by all who act in responsible situations. In order to give effect to the best laid plans, it is indispensably requisite, that the chains of operation and communication should be kept up by the strictest discharge of all the civil and military duties, under the infinity of changes which circumstances must create, during the course of a campaign. And how are all these changes to be provided for ? How is the general of an army (which covers an extensive tract of country, and to which magazines, depôts, central points of communication, secret intelligence, &c. are essentially necessary) to be constantly master, as he ought to be, not only of his own resources, but likewise more or less apprized of what is going forward in every part of his opponent's country ? I shall have the concurrence of every man who is in the least acquainted with active warfare, but more especially, the

\* I could, with great propriety, add to this illustrious list, the names of some of our own countrymen, whose talents and exertions, as far as their limited sphere of action would permit, have been conspicuously brilliant during the course of the late war. The record of their actions is in the heart of every good Englishman; and history will supply the vacancy I leave in this humble compilation.

† This Tract, though printed and recommended to the perusal of British officers, was not published, or even translated for several months. It has since been printed in English.

practice of the French, to bear me through, when I confidently assert, that the bravest men, under the ablest general, from the richest country in the world, must prove useless in the field, unless they have the advantage of a general staff, composed of zealous and scientific officers; and consequently, that nothing permanently great can be attained without it.\*

The importance of such a staff, with its subordinate dependencies, has been so well discussed in a late French publication, that it cannot be too often pressed upon the attention of military men, nor too conspicuously detailed in a military work. On this account, I have not scrupled to deviate from the beaten tract of lexicographical writers, and to refer from the alphabetical succession of letter to the preface.\*

The author of *Précis des Evénemens Militaires*, (who is well known to be an officer of rank in the French service) speaks in the following manner of staffs in general. "Military staffs, as well as the different branches which are necessarily connected with the vast and complicated machinery of war, have been considerably improved by the experience of our days. This organization, and the consequent arrangements resulting from it, will be found to be of very modern date; if we consider the manifold aids that have been successively brought forward, in order to simplify the system of details, and, to prevent the mind of the commander in chief from being pre-occupied, by things which must impede the more important objects of executive enterprise. It is impossible to form any determined opinion, with respect to the manner in which the ancients made war. Their conceptions were always bold, and their plans proportionably extensive. But their operations, on the other hand, were less rapid, and their combinations less complicated than ours, on account of the difference of their weapons, and the imperfection of their artificial means of attack and defence.

"The service of military staffs has been rendered a distinct and separate branch in modern times. It has grown out of the various movements of troops, the consequent variety of orders, and the necessity of exact and punctual returns. Notwithstanding this apparent system, no precise method has yet been fixed upon, to govern all the different relations which constitute an efficient staff. The functions of the several officers, belonging to this department, are not yet sufficiently known, nor accurately ascertained.—

\*The chief and most interesting duty of a staff officer—that of reconnoitring ground, with military aptitude and skill—is, in itself, an object of perpetual novelty and speculation; and every man who has paid the least attention to this branch of the service, must have discovered, that it was intimately

\* See Staff.

mately connected with all the rest, and that, in order to execute its various duties, with any degree of accuracy and use, it was necessary to have acquired a knowledge of the elementary principles of other branches.—Such a man must have felt astonished at the deficiency of system, and the want of rules; and he may probably have lost some time in endeavouring to find out a clue, to guide him through so vast and complicated a labyrinth.

“ In order to form an accurate idea of such an institution, and to ascertain its state and progress, at different periods, it is necessary, that the inquisitive should call to their minds, the manifold objects to which it is applied, together with the several denominations by which those objects are distinguished.

“ It is well known, for instance, that in the German and English armies, the quarter-master-generals and their assistants were seldom, if ever, employed in direct military operations.\* Their attention and time were rather confined to the closet, in keeping the details of service, and in communicating orders, than to the active duties of the field; which were performed by the several adjutants attached to the generals. The quarter-master-general was entrusted with the whole interior economy of the army, and his functions, in this respect, corresponded minutely with those of the commissary-general.

“ The regular establishment of staffs (or *états majors*) in the French armies (of which we now propose to give a cursory view) was soon adopted in all the armies of Europe. It is but justice to remark in this place, that while the professional characters of France paid the greatest attention to the most minute details of elementary knowledge that were recommended by the Germans, they supplied the latter with models of the higher branches of the profession, and taught them to apply the different arts and sciences to the purposes of war.

“ Before the revolution, there were three sorts of staffs belonging to the French armies, viz.—The general staff; at the head of which was placed a quarter-master-general, who had assistant quarter-master-generals under him, without any specific rank attached to their situation.

“ Secondly, the cavalry staff; the chief of which was likewise called quarter-master-general; and thirdly, the infantry staff, whose chief had the rank of major-general in the army, and subordinate to whom were the staffs belonging to the park of artillery, and to the engineer department.

\* The Austrians did so during their late war with France.

“ The duties of the two staffs attached to the cavalry and infantry services, were limited to a regular transmission of orders of movements, to the superintendence of good discipline, and to a careful attention to the maintenance and supply of the troops, as well as to the interior œconomy of each particular regiment. The administration and charge of the army at large were intrusted, as they now are, to a commissary, or intendant, who was only accountable to the general of the army, and to the minister. In the duties of the general staff of the army were comprehended, all the preliminary arrangement and subsequent execution of the plans of war, together with the particular operations determined upon by the commander in chief; the survey and reconnoitring of ground; the facilities for the march of the troops; the measurement of ground upon the principles of castrametation; the establishment of head-quarters and subordinate cantonments; and, finally, every thing which related to topographical distribution. It is natural to suppose, that those generals who were solicitous to make a proper choice of their principal aids and assistants, would appoint such officers to the staff as were capable of seconding their designs. But as interest, favour, and partiality occasionally forced them to receive men less informed and less experienced, the service of the staff of the army (which is always more or less an object of jealousy to those corps that pride themselves upon executive knowledge) could not acquire a necessary stability and consequence. These three channels to promotion produced, of course, a multiplicity of candidates for situations; the instant the army was put upon a peace establishment, the advocates for reform and œconomy thought it right to reduce the staff; the officers that had composed it, returned to their several corps, under more or less favourable circumstances; some, indeed, and those only that had been particularly distinguished for assiduity and talents, and who were destined, as it were, to preserve the records of the several details of this particular branch of service, were retained by government, without any military rank, for the purpose of being sent upon specific missions, during peace. The labours and researches of these individuals, have produced the most fortunate circumstances in favour of the service in general, and for the better arrangement of military staffs in particular.\*

“ It was not until after the war, which France had voluntarily entered into, to secure to the Americans their rights and independence, and which

\* To this wise distribution of intelligent officers, during peace, may, perhaps, be attributed that superiority, in topographical knowledge, which has so ably seconded every movement of the French armies.

terminated in 1783, that a permanent staff establishment (in which no distinction was made with respect to corps) was, for the first time, instituted in the French army. The superior officers in it retained the rank of assistant quarter-master-generals, to whom an equal number of deputies or adjuncts, with the rank of captains, was attached, and all obtained or kept a certain rank, independent of the line\*. This corps, thus composed, and under the immediate direction of a general officer, obtained some stability; the official and field duties became more regular, and nothing seemed wanting to complete the establishment, and to lay the foundation of a military school for staff service, but the means of connecting it with the repository of charts and warlike plans, and with the geographical institution belonging to the engineer department.

"All the correspondence, orders and instructions, which had passed between the generals of the French army, and the different ministers of war during the space of thirty years, had been carefully collected together. Able men, selected for the purpose, had scrupulously analysed these documents, in order to ascertain the causes of success or defeat; every one felt the necessity of drawing and of expressing, with greater precision and perspicuity than had hitherto been done, the charts of the different theatres of war, and of those frontiers, whose outward aspect, or front, it was in contemplation to attack or defend. Hence arose the wonderful improvement which has been made in that useful knowledge of topography; and to that conviction is owing the high degree of perfection to which the taking the dimensions of ground, whether by the naked eye, or by instruments, has been brought. A large assortment was collected of military memoirs, which not only related to the frontiers, to the coasts of France, and its foreign possessions, but likewise to all the countries into which the war might be carried. It must indeed be universally acknowledged, that this depôt of military charts and plans forms the richest collection of the kind that has ever existed. The staff officers who had accurately taken, and carefully preserved those historical and topographical documents, which grew out of the researches of this institution, at the conclusion of a war contributed to the general stock, by bringing with them, not only the fruits of their own labours, but the improved result of original information.

"In thus describing the origin, and making known the principles and necessity of a sound theory for the service of military staffs; we do not

\*The staff-corps, on the British establishment, probably owes its existence to this system.

pretend to attach to either, false importance or exaggerated latitude and weight. Military men cannot be too much impressed with the idea, that the science of war is only to be acquired amidst the activity of warlike operations, (or, as the ingenious writer of this work expresses himself, *Que la guerre ne s'apprend qu'à la guerre*); that the most profound theorist must at every step experience incidents and wants, which bid defiance to rules and calculations; that the particular tactics, which suit each branch of the service, can only be learned in the actual experiment of the field; and that combats alone can determine the particular kind of tactics which are adapted to each corps or description of armed force; which suit the country, the soldiery, and the class of men that fall under their command. Even in known countries, and in places where battles have been often fought, and are so well remembered, that nothing seems left for sagacity or foresight to provide for, but where there are only examples to be followed, or marked errors to be avoided; even in such places as these, all suppositions are fruitless; war is always presenting something new: or rather there is no fixed plan which can be deduced from former ideas, and be fitted to the actual circumstances of the moment. It will be natural to ask, whether from these observations one can with propriety infer, that the study of good models, the contemplation of the plans of the most skilful generals, a comparative view of their means of execution, and a minute and scrupulous examination of their several dispositions in action, are objects of useless attention and trouble? On the contrary; the investigation and review of what has passed in preceding times, either prepare the way for great talents, or serve to ripen such as have been developed and seconded by experience. The best modern generals have never lost sight of the brilliant examples that have been left; they have never ceased to call into practice the tactics of the ancients, as far as the difference of arms and a change of manners would allow. To those who peruse the histories of the 17th and 18th centuries, and read over the actions of the most celebrated generals of those times, this observation will appear peculiarly apposite. It is justified in the uniform conduct of the great Condé, Prince Eugene, Turenne, Marlborough, Marshal Saxe, and Frederick the Great. Their several military institutions, as well as their private commentaries, afford the most ample testimony to the truth of what we advance; and if it were meet or necessary to corroborate the same by instances, that are reserved for posterity to consecrate to fame, we might bring forward the opinion and

and the practice of the most celebrated of our cotemporary captains. This sublime conception is visible in all their operations; it is manifested in their writings, and hourly proved in their conversations; nor must it be attributed to that natural elasticity of genius which hurries similar minds to the pursuit of similar objects, and mingles together the congenial elements of which they are composed; but to that quick and just perception, in minds of a superior cast, which instantly attracts them to all the essential relations that exist between the objects of their mutual speculation. Impressed, as it were, by the result of contemplative reflection, they overlook intermediate occurrences, plunge into futurity, and snatch out of the womb of time the ultimate issue of events.

“ Thus in the extensive field of modern and ancient military history, every one may find the particular kind and degree of instruction to which he is ambitious of arriving; in those repositories of knowledge, individuals may collect wherewith to adorn their memories, to sharpen their understandings, and adapt them to a variety of combinations; to animate their courage, to raise their genius, and by useful comparative views to enrich, and by degrees to bring to perfection, not only the basis of the science of war, but likewise the various arts that have been made tributary to it.

“ To this end must all the labours and all the attention of a good staff officer be constantly directed; how arduous, however complicated and extensive this species of military encyclopædia may be, it is wholly his; and must be laboured through with indefatigable industry. Let the genius and talent of the individual be what they may, this truth must be always pressed upon his mind, that they will be useless, unless he have resolution to assist them by intense labour and application. It will be easy to form some opinion of the good, that might be derived from a more extensive and better planned system of instruction in this line, by what was effected by the French during the American war, in consequence of a well-conducted staff; notwithstanding the disadvantages to which it was subjected on account of the frequent changes it underwent, the rapidity with which it was necessarily formed, and the desultory nature of its functions.

“ It must not, however, be concluded from these remarks, that this essential part of modern warfare has been neglected. Staff service has, on the contrary, been considerably improved, its functions have been clearly defined, and the effects which have been produced by gradual ameliorations ought to be carefully preserved. Among the alterations which have taken place for the better, there are two principal instances that de-

serve notice. The first is the simplification of staff duties, by reducing the three heads under which they were classed, and rendering the whole subservient and responsible to one source. The second is the new and hitherto unpractised custom (from being formally opposed by men of military influence) of entrusting the command of columns of attack to staff officers, who before were confined to the mere delivery of orders, and to instructions for their occasional direction. Not only the individuals themselves, but the service in general, are considerably benefited by these arrangements. The officers become calculated for any species of active warfare, by being enabled, through this system, to apply their theory to practice; and to secure the esteem and confidence of the soldiers, who are easily indisposed towards that class of officers that do not combat in the ranks. By means of this arrangement, the general of an army can look with certainty to the execution of that part of his plan, of which he might have apprehended a disclosure in the customary way of transmitting orders. Hence it happened, that the principal staff officers, who, during the late contest with the empire, were selected by the generals of the French army to second their designs, had a considerable share in all the victories they gained. Nor have there, perhaps, ever before been so many instances of that entire confidence in concerting measures, and of participation of glory in the execution of them (without which, indeed, all the talents and activity of a chief of the staff must be abortive, as appeared during the course of this war. Almost every individual, who was employed in that difficult branch, had already given proofs of professional knowledge in some species of military service. Generals Berthier, Regnier, Dessolles, Dupont, Oudinot, and some others, have been alternately taken from the command of divisions, battalions, and even detached armies, to superintend and manage the staff service. They have quitted the same line, and again resumed its functions, according as the commander in chief thought the application of their talents might be useful in either way; and it is but justice to say, that these officers contributed, in a great degree, to the consolidation of the different branches which constitute the present staff of the French army. It is also worthy of observation, that Generals Mack, Bellegarde, Chastelet, Zach, and Schmidt, who belonged to the Imperial service, were the chief executive springs and instruments that influenced the councils, and conducted the operations of the war in Germany and Italy.

“ The consolidation of the different branches, belonging to the staff service, under one head, has not only simplified the transmission of orders,  
but

but by giving those orders the utmost rapidity of communication, the movements of the several armies become proportionably quick and decisive. By means of this consolidation, the specific purposes to which the several branches of the staff service might be applied, are more accurately determined, and more methodically classed than they could have been in their former state.

“ An army may now be considered as being composed of divisions, and each division made up of troops and companies of all descriptions, according to the nature, and in proportion to the relative exigencies, of the country in which they are to act. These divisions are of course provided with every thing that can be required in stores and men, and can act separately, without requiring any other succour, than what has been provided for in the different reserves, appropriated for the reinforcement of their several corps or detachments. They are, moreover, so disposed of, that though apparently scattered, they can at any time unite as one body, and be brought into action, without the hazard of confusion. This excellent method appears to have been adopted throughout all armies; but it is more particularly followed, and more scrupulously attended to in the French. It is there alone that a clear and uniform system of staff service may be discovered. Each division has its separate staff, organized and governed in the same manner that the general one is, and only differing in the exiguity of its detail.” These subordinate staffs are composed of the smallest possible number of individuals, and are, each, subject to the orders of a superior officer, whom the French call adjutant; but whose duties, except in actual service, correspond more immediately with those of our deputy quarter-master-general.

“ All the different details of duty, that are necessary for the interior government of the divisions, the discoveries and dispositions that are taken upon the ground, the communications that are made to the commander in chief of the division, and to the quarter-master-general of the army, must, in every respect, correspond with the established distribution of the several objects, and minutely agree, throughout all the divisions, with the rules and forms which have been laid down by the general staff.

“ It is easy to distinguish those objects, which are immediately connected with the central point of communication, belonging to the general staff, from those which are diversified, and in a manner branch out of the divisional ones. The following table contains an abstract of all the objects that relate to interior or official distribution, discoveries of ground, and to active operations in the field.

“ The first section contains

“ Military discoveries. General and special discoveries and distributions of ground. Topographical excursions and views for the purpose of reconnoitring and ascertaining ground; discoveries made upon the enemy.

“ 2d Section.—Openings and facilities of progress for troops upon the route, likewise, for movements of manœuvre, and for castrametation; the marking out positions of attack or defence; the designation of appropriate quarters and cantonments, and the establishment of hospitals and magazines.

“ 3d Section.—Stations; police for the interior government of troops in quarters, inspection and examination of guides; wagon train; forage parties; scouts; equipages; baggage and convey; postage of letters.

“ 4th Section.—Office of Inspection in general; states of situations and quarters, pay, clothing, internal police and discipline; drill and instruction of troops of all descriptions; councils of war; and courts-martial.

“ 5th Section.—Adjutant-general's office, from whence general orders are issued for the movement of troops.

“ 6th Section.—Office of communication and correspondence: 1. With the minister at war.

“ 2. With the intendant, or director-general of the army.

“ 3. With the generals commanding divisions; with the heads of their several staffs; and with the generals commanding the artillery and engineer departments.

“ 4. With the governments and persons in power belonging to the countries, which may be immediately occupied by the army.

“ 5. With the staffs that are attached to the armies which lie in adjacent quarters.

“ 7th Section.—The topographical office, in which the charts of countries &c. are deposited, and where the minutes are kept relative to position and locality.

“ 8th Section.—Functions which are immediately personal, and belong to the secretaryship of the general staff; the opening of packets; dispatches with explanatory reasons and instructions (if they be found necessary) to the several sections; communications direct with the commander in chief; the formation and distribution of the army; orders and instructions respecting the stations, &c. of the troops, and of the several generals commanding them; the management of the secret correspondence relative to the movements and designs of the enemy; the dispatching officers belonging to the secret correspondence, and of the necessary couriers and mounted orderlies; and, finally, the vouchers for extraordinary disbursements.

“ By

"By the assistance of a table of this sort, in which the several objects would be explained under their appropriate titles, all the relative duties of the staff of an army might be arranged and distributed, according to the exigencies of the service, and a perfect theory be formed that would minutely correspond with every branch of practice. In order to render such work truly useful, it would be necessary to bring forward all the principles, laws, rules, and customs which are connected with this theory, and to strengthen them by precedents and examples."

The author concludes this interesting view of the staff service with the following passage :

"We should not have been satisfied with merely having pointed out the form and method, in which a work, so truly classical as this is, might be arranged, had not our observations already greatly exceeded the limits of a note. We feel regret in thus abruptly finishing our remarks, after having insensibly been led to treat this important branch of the art of war in a didactic manner. If ever it should fall to our lot to resume these historical essays, and to give an epitome of the events of the two last campaigns; or if we should be bold enough to undertake a larger work, we must necessarily enter into all the details of service, to which our readers have a right to look, after having perused these general outlines." See from page 435 to 451 of *Even. Milit.* 11 & 12.

In another place this sensible writer observes, that "the nature of staff service is very different from that of other military branches, particularly of such as require a regular education and training; of which description are the artillery and engineer departments. These have certain bounds affixed to their service; their theory rests upon immutable principles, with the advantage of being perpetually enriched by new discoveries; in addition to the acquisition of gradual lights and improvements, its future practice is constantly aided by experience. But the objects to be acquired and the labours to be gone through by staff officers, are of a more extensive and more variable kind; they comprehend, in fact, no less than the whole science of war; so that, in proportion as the views of individuals belonging to that service extend, its theory becomes vague, and the application of its rules less fixed and determinate. The very idea of an established doctrine in this branch, yields to its desultory nature, and after all our researches, we conclude with this melancholy truth, *That there is not any fixed art in that part of the science of war, which, above all others, requires specific knowledge and information.*

"If, in addition to these reflections, we take a cursory view of the man-

ner in which staffs are generally composed, and of the incessant changes to which they are exposed, from military movements, we shall perhaps be able to account for the uncertainty and for the indifference to which this important branch of public service is exposed. The greater scope it affords to the natural ambition of individuals, who by favour or personal merit obtain employment, and are thereby enabled to distinguish themselves out of the regular line of promotion, the more readily do they believe, that a certain degree of knowledge, with extreme activity, will be sufficient to answer all the duties it imposes. The uncontrolled and uninfluenced privilege which every Commander in Chief of an army must invariably possess, of selecting from the different corps, such persons as he judges best calculated for his staff, precludes the possibility of a regular school, and of having officers properly instructed in that particular branch of service. It even happens, that when individuals, by intense study, have acquired a considerable degree of knowledge in all the different parts of this intricate service, the application of their talents is only considered as the natural effect of genius, without any allowance being made for the regular method they have pursued; a method, in fact, which is too often looked upon, even by able officers, as superfluous and unnecessary.

“At the conclusion of a war\*, which, of all others has been distinguished by the most extraordinary events, and by the multiplicity of which theory has been replaced by practical experiment, it naturally strikes every thinking man, that certain rules should be established for the preservation of a theory that has been so powerfully proved. It is to the improvement of military education, and to the diffusion of general knowledge during a long peace, but most especially to the spirit of rivalry which has existed between governments, and the consequent emulation which was kept up among the different corps, that Europe stands indebted for so many distinguished characters who rose from the ranks, and whose skill has been of a much more extensive nature, than ancient prejudice could possibly be aware of. Men of this cast discovered, the instant they got into commands, that however subordinate their original station might have been, their minds were elevated by notions of true military genius, and equal to the boldest enterprizes. Yet notwithstanding the acquisition of so much practical knowledge, (which can only be secured during the activity of a campaign) the possession of it is by no means permanent. The instant peace is proclaimed, the individuals, who have composed the staffs of the different armies, either retire from the service, or return to the

\* The Author is here speaking of the last war.

several corps from which they had been taken. The various communications and documents, which must necessarily have been made during the several campaigns, though in some degree preserved, are so much scattered, that no clear system is established, and no regular plan is laid down for the ready government of future staffs. From a conviction of this sort, (continues the same author), we have endeavoured to collect all the various objects which may elucidate the subject, and fix, if possible, the principles by which this service may be governed. These observations, however, though perhaps, the ground-work of a more enlarged undertaking, must be considered only as so many leading heads for a more ample discussion \*."

Having given this copious extract from a foreign writer relative to staffs in general, I cannot conclude his observations more appropriately, than by referring the English reader to a small treatise which has lately been published for the specific purpose of introducing system and regularity into the British Commissariat on foreign service. This treatise is written by a gentleman whose whole theory has had the advantage of practice, and although its contents are confined to one specific branch only, namely the civil administration of an army as far as relates to the commissary's duty, it nevertheless comprehends so much useful detail, that persons employed upon that service, will do well to study the British Commissary.

The author justly observes in his introduction, that "there is not an article of expence in the contingencies of an army but must in some measure depend on the abilities and integrity of its commissaries. The Commander in Chief, occupied with the great movements and general plans, cannot stoop to the inspection of articles of running expence; neither can the military departments be taken off from the detail of their duty to examine and controul them." It will strike the observant reader in this place, that the writer of the *Evénemens Militaires* does not exactly accord with the British Commissary, in as much at least as regards the union of civil and military talents in the same person. The position is notwithstanding correct in its general import, and particularly so with respect to the British army, whose civil administration materially differs from the plans laid down for the French. Commissaries in our service, to use the English writer's words, "although necessarily under the orders of the Commander in Chief, do nevertheless receive instructions from, and report

\* To those persons who may wish to see the subject of French staffs treated more at large, we recommend the perusal of the *Manuel des Adjudant-Général, & des Adjoints employés dans les Etats-Majors-Divisionnaires des Armées*; par Paul Thiébault, Adjudant-Général.—This work has been translated by an anonymous writer.

to the Lords of the Treasury, as being alone accountable to parliament for the expenditure of all grants. Experience shews, that notwithstanding commissariat expences have been commented upon, in and out of parliament, from the Duke of Marlborough's time to this day, no one has attempted to bring a system forward which may obviate the inconveniences of sending men abroad to exercise functions, that are perfectly new to them. The truth is, commissaries are only employed in time of war, and sought for at the moment of active operations; it should, however, be remembered, that the importance of their office is not to be estimated by the length of their services, but by the weight of its responsibility. For instance, continues the same writer, the assistant commissaries sent out to the continent during the late campaigns, received no other information from the treasury, than notice of their appointment, and verbal orders to join at head quarters. Had the nature of the service been previously known to those gentlemen, or at least had general instructions been delivered to them on their arrival, their minds would have been relieved from much anxiety, and their accounts would, from the beginning, have been regularly brought forward: now as the saving to the country must ever be proportionate to the punctuality of its agents, it may be fair to ask, how many millions would have been saved in the seven years war, the late American war, and the present numerous commissariat establishments, had an uniform system been adopted and followed?"

It must be manifest from these and the preceding observations, that, however superior to the rest of mankind an individual may prove, upon the large scale of military arrangements, however gifted with genius, and the faculties of command, it is, nevertheless, impossible for him to act without the assistance of auxiliary talents. From the persons with whom he communicates, in the most confidential manner, who serve immediately under him, and from whom the various branches of executive service take their spring and action, down to the most subordinate corporal, military knowledge is more or less indispensably necessary.

Turpin observes, "that a general who would merit the title of a great man, ought to unite in himself all civil, military, and political excellence\*: It is by this that he will easily acquire the means of making war with success. Nothing will escape him; he will know, without difficulty,

\* Those persons, however, who imagine that the whole art of war consists in mere practice, will do well to reflect upon the following lines of Frederic the Great of Prussia:—

Ces armées, ces chevaux, ces soldats, ces canons,  
Ne soutiennent pas seuls l'honneur des nations:  
Apprenez leur usage, et par quelles maximes,  
Un guerrier peut attendre à des exploits sublimes.

the

the genius of every country, and of the nations which compose the enemy's army; the abilities of the generals who command, and the nature of the troops under them. Without these precautions, he would never think, that he could act upon sure grounds; he knows that he may venture a movement with some troops, which he would not dare to attempt with others that are equally brave. One nation is vehement, fiery and formidable in the first onset, as the French; another is not so hasty, but of more perseverance, as the British or German; with the former, a single instance determines success; with the latter, the action is not so rapid, but the event is less doubtful."

We must, however, acknowledge, that many natural qualifications are required to form the character of a perfect general. Mere industry and ambition will not suffice to make it up; there must be genius and an aptitude of mind, to anticipate and to square events; a solidity of judgment to regulate every impulse to enterprise, and a coolness of temper to guide this vast machinery of war, through all the natural and artificial difficulties by which it is surrounded\*. Had Bonaparte been ignorant of the principles of mechanics, when he was serving at Toulon †, in the capacity of a subordinate officer belonging to the engineer department, he would, probably, never have attracted the notice of the French general, Dugommier, who commanded in that quarter, or have been recommended to the minister at war for his ingenuity in getting some heavy pieces of ordnance up a height which overlooked the town and harbour; nor would he, previous to the battle of Marengo, have been able to astonish all Europe, by the conveyance of his artillery over Mount St. Bernard‡.

Let it not, however, be imagined, that a military dictionary ought exclusively to belong to a camp or barrack, or to be found only in the libraries, and on the tables of military men. The arts and sciences are so intimately connected together, that they mutually borrow terms from one another for illustration, and go hand in hand, from the senate to the field, from the pulpit to the bar, through all the vicissitudes of human intercourse and correspondence.

\* Vast conception joined to prompt and resolute execution must constitute the principal features of a consummate chief. The late unexampled success of our lamented and immortal NELSON is the best illustration that can be offered on this head. If ever a grateful country owed an illustrious and uncommon tribute to the memory of departed worth, Great Britain owes it to this constellation in naval glory. God send we may see his like again!

† In consequence of the French having secured a commanding position and planted cannon upon it, the English and Spaniards evacuated Toulon on the 3d of January 1794.

‡ See Mountains.

Military science, in which I include every species of tactics, and the interior economy of corps, is, in fact, of so extensive and comprehensive a cast, that there is not a single trade or profession, to which it may not be rendered more or less useful. To the gentleman, it gives an easy deportment, a frankness of manners; and, above all other qualities, the nicest sense of honour. For it is an abuse of the term to call any person, (let his standing, or occasional services in the army be what they may,) a real soldier, who does not unite calmness of mind and urbanity of conduct, with a knowledge of his profession. Brutal audacity may belong to the mere mechanical portion of fighting men; but unless it be governed, in the aggregate, by the superior genius of individuals, and in the individuals themselves by the higher notions of national fame and responsibility, the character will degenerate into a public nuisance and disgrace. A real soldier, on the contrary, is an ornament to society. After having fought the battles of his country abroad, or co-operated with those of general service, by guarding her coasts at home, the officer of experience, not only participates in the blessing of peace, but enlivens every scene by the most interesting communications.

Nor is it necessary to have been in actual service, to derive advantage from military knowledge; I have already observed, that there is not a single trade or profession, to which it may not be rendered more or less useful. The man of letters cannot, with any permanent satisfaction, read the histories of former times, nor even the ephemeral records of his own, without feeling the justness of this assertion. That a knowledge of military terms forms no inconsiderable part of a writer's qualifications, the following candid avowal of the ingenious translators of Plutarch's Lives, will sufficiently evince: "In the descriptions of battles, camps, and sieges, it is more than probable that we may be mistaken in the military terms. We have endeavoured, however, to be as accurate in this respect as possible, and to acquaint ourselves of this kind of knowledge, as well as our situations would permit; but we will not promise the reader, that we have always succeeded \*."

Mr. Gibbon, the historian, who was two years and a half, (from May 10th, 1760, to December 23d, 1762,) a captain in the Hampshire Militia, speaks thus of a military life, even within the limited sphere of that establishment. "My principal obligation to the militia was, the making me an Englishman and a soldier. After my foreign education; with my reserved temper, I should long have continued a stranger in my native country, had I not been shaken in this various scene of new faces."

With respect to the introduction of French terms at all, beyond what were found absolutely necessary for the explanation of technical phrases which have been adopted among us, I can only say, that some knowledge of the French is not only useful, but absolutely necessary to military men.\* So true in this science, at least, if not in all others, (to use Mr. Tooke's words in his *Introduction to the Diversions of Purloin*), is that saying of Roger Ascham, "*Even asou karke fleeth not he with ore wing, even so a man reacheth not to excellency with one tongue.*" †

And if it should be said, that I have been tediously minute in explaining some terms which appear trifling in themselves, let it be recollected, as the editor of the *Rudiments of War* has justly remarked, that "Trifles are usually the first things forgotten in a period of inactivity and repose; that the elements of every science, however trivial in detail, become collectively of importance; that it is an assemblage of units which composes a million, and of points that form the most valuable theorems of mathematical demonstration."

In the hurry and confusion of a battle, the simplicity of the two grand principles of *calculation* and *compression*, must be so unavoidably lost, that the safety of the line of action depends wholly upon the quick restoration of the most subordinate parts. This restoration can only be effected by a thorough knowledge of military mechanism, in every part of a battalion. Hence the necessity of those minute manœuvres and evolutions which Frederick the Great, of Prussia, is said to have first introduced, and to which the best disciplined armies in Europe have thought it prudent to subscribe.

As to those parts of the work, which are not necessarily connected with the mere explanation of technical terms, &c. but grow out of its subject matter into general remarks, I may with safety say, that there is not one observation or suggestion which does not tend to promote the morality of individuals, the advancement of military science, or the important objects of discipline and good order. I have, with some degree of earnestness,

\* It will also be observed, that, in many instances, I may appear to have unnecessarily swelled the work by a repetition of terms, signifying the same thing in both languages. The reader, however, will be pleased to remark, that the explanation of the same terms, or of terms with few or no shades of difference between them, is so variously given by my French authorities, that I have often thought it best to submit them, as they have come to me, rather than hazard a misconstruction on my own judgment.

† With respect to the insertion of Indian terms, I feel myself justified in having one so, whenever I cast my eyes on the official Gazette, and see the returns of the killed and wounded in our battles with the rebellious chiefs of that country.

excited the attention of the army, and of course the judgment of the Commander in Chief, to the mischievous practice of buying, selling and exchanging commissions. A general Agency Board, subject to the Commander in Chief, &c in time of war, and to the Secretary at War in time of peace, naturally forms the jet and ultimate object of these suggestions.

In concluding this Preface (the subject matter of which cannot be deemed wholly superfluous, although some parts may be thought tedious and uninteresting), I must advert to that passage in Dr. Johnson's laborious work, wherein he says, "a large work is difficult, because it is large, even though all its parts might singly be performed with facility; where there are many things to be done, each must be allowed its share of time and labour, in the proportion only which it bears to the whole; nor can it be expected, that the stones which form the dome of a temple, should be squared and polished like the diamond of a ring."

That it will immediately become popular," to use the same writer's words, even among those military men who may perhaps stand in considerable need of theoretical aid, "I have not promised to myself. A few wild blunders and risible absurdities, from which no work of such multiplicity was ever free, may for a time furnish folly with laughter, and harden ignorance in contempt; but useful diligence will at last prevail, and there never can be wanting some who distinguish desert; who will consider that no dictionary of a living tongue (most especially a military dictionary in our language, which is hourly borrowing fresh terms from the French and German) can ever be perfect; since, while it is hastening to publication, some words are budding, and some falling away; that a whole life cannot be spent upon syntax and etymology, and that even a whole life would not be sufficient; that he whose design includes whatever language can express, must often speak of what he does not understand; that a writer will sometimes be hurried by eagerness to the end, and sometimes faint with weariness under a task which Scaliger compares to the labours of the anvil and the mine; that what is obvious is not always known, and what is known is not always present; that sudden fits of inadvertency will surprize vigilance, † slight avocations will seduce attention, and

Quæ nunc in honore vèrè abula; si volet Usus.

Hor.

† Some words, having been omitted in their alphabetical arrangement, are found incorporated with other articles, to which they have an affinity. Of this description is *Aventurier* under *Soldat*; to which I might add several others that will naturally strike the judicious reader. In the same manner I have been obliged

and casual eclipses of the mind will darken learning; and that the writer shall often in vain trace his memory at the moment of need, for that which yesterday he knew with intuitive readiness, and which will come uncalled into his thoughts to-morrow."

In dismissing this work, which I am free to confess I cannot do with the frigid tranquillity our learned lexicographer experienced at the close of his labours, I think it necessary to observe, that the books from which I have principally made extracts consist of *Dictionnaire Militaire, en trois Tomes*; ditto in two volumes, and the last printed work of that description, entitled, *Nouveau Dictionnaire Militaire*, published in 1802; *Les Elémens de Fortification*, par Bélair; *Manuel de l'Artilleur*; *Essai général sur l'Attaque & Défense des Places*; *Instructions pour tracer & construire toutes Sortes d'Ouvrages de Campagne*, par P. Gaudi, augmentée par A. P. J. Bélair; *Vauban's Fortification*; *Aide Mémoire*; *Tactique et Discipline de Prusse*; *Dictionnaire de l'Académie Française*, cinquième édition; *Salder's Tactics*; *Recès des Evénemens Militaires*; *Rules and Regulations published by Authority*; *Robert's Indian Glossary*; *Orme's History of the Carnatic*; *Bombardier François*; *Potter's Antiquities*; *Kennett's Roman Antiquities*; *Little Bombardier*; *Articles of War*; *Tytler on Courts-Martial*; *McArthur's Treatise on Courts-Martial*; *The Life of Gustavus Adolphus*; *Smith's Dictionary*, as far as regards the artillery; and various small treatises which have occasionally appeared.

With respect to any collateral aid, which might have been afforded me, during the collection and subsequent distribution of the materials, I shall not be thought unkind or ungenerous—I certainly am not unjust—when I assert, that the little assistance which I did apparently receive, upwards of twelve months before the completion of the first edition, rather impeded than forwarded its progress; rather perplexed than cleared the way, and exposed me to the revision of words, and the re-writing of articles, during which interruption, I might have collected the same terms myself, and have added appropriate illustrations. So that all the praise—if the most trifling praise be given—and all the blame—of which I can easily anticipate no inconsiderable portion—that may be attached to this work, must be my own. It would however be an injustice done to real industry, were I to omit acknowledging in this place my obligations to my printer. To him, and to him only, I stand indebted not only for some acute and sensible queries

obliged to divide the explanation and the use of *Mortello Tower*. Under *Mortello* will be found the derivation, &c. and under *Tower*, the description of that which is in Jersey; the latter article having reached me after the other had been worked off.

relative to the general matter, but considerably so for great attention to the arrangement of the words, according to their alphabetical succession.

Looking, as I confidently do, to the candour and consideration of that respectable class of military individuals, whose disposition to promote the general good of the service is at least equal to their personal toil and glory in it, I should finally close this long Preface with little courtesy to them, and less advantage to myself, were I to omit soliciting on this occasion, their friendly communications. Hints, suggestions, and corrections, for the improvement of this Dictionary, and of the "Regimental Companion," will be thankfully acknowledged by me, addressed to the Military Library, Whitehall; observing to every reader that may do me the honour to peruse either of these publications,

— Si quid novisti rectius istis,  
Candidus imperti, si non, his utere mecum. Hor.

## POSTSCRIPT.

It will not, I am persuaded, be deemed presumptuous in me to point out specific articles (to which the attention of young officers is principally invited), when I observe, that some of the chief ones have been kindly supplied by gentlemen of acknowledged learning and reputation. I shall, therefore, not scruple to recommend to their occasional perusal the following terms; and in so doing, I beg to be understood by those persons, who have done me the friendship to contribute to the undertaking, that I have a due sense of the service they have rendered me. I only wish (for the benefit of the army at large) that I had been fortunate enough to merit the countenance of those in power, so far as to have secured the contribution of the different offices, and established institutions of the country. Perhaps I may not be too vain when I say, that I have laid the groundwork of a valuable compilation. To render it what it ought to be, a national Military Encyclopædia, the professors at Woolwich and High Wycombe should not only lend their theoretical aid, but officers of known ability and experience who are provided for in the several departments, should add their practical observations.

An office, or circumscribed department, at a moderate expence to the public, ought, indeed, to be established for the purpose of receiving communications, of translating foreign military works, and of digesting the  
different

different acts of parliament which relate to the army. This office, or literary board, might be subordinate to the commander in chief and to the secretary at war; under whose immediate action and direction, works of a military tendency, as well as official rules and regulations, would be arranged in clear and short manner. But I am insensibly digressing from the immediate object of this Postscript. I shall therefore take my leave of this new edition of a work, which has been executed by me amidst the hurry of a capital, and, as I have already stated in the Preface, under circumstances of peculiar care, and extraneous occupation. For the errors it contains, and for some palpable omissions, I must trust to the indulgence of those men, who can make allowances for the situation of the Author, and for the unavoidable imperfections to which every work must be subjected, which has been completed with scarcely any assistance, but that of his Printer. The words which are marked with asterisks have been chiefly given by others.

Animate.	Retirade.	Sword
Golden Rock.	Retreat.	Swimming.*
Honour.	Riot.	Table des Officiers.
Infantry.*	River.	Tactics.
March.	Représailler.	Target.*
Military Mind.*	Religion.*	Telegraph.*
Money Matters.	Military Rewards.	Turcopilier.*
Montagnes.	Salutaires.	Turcopolier.
Nager.*	Secrecy.	Valour.
Nation.	Science of War.	Vivics.
Neutrality.	Serjeant.	Ulans.
Officer.*	Military Secretary.	Volunteers.
British Pay.*	Servants.	Wheeling.
Plarsalia.	Signal by Colours.	Wrongs.
Poltroon.	Soldier.*	Yeomen.
Population.	Superiority.	York Asylum.
Presumption.	Suspension.	
Reconnoitring.*	Surprizes.	

I must here generally observe, that as I have collected materials from established authorities, or at least from books which have been published under the apparent sanction of military institutions, such as Woolwich, &c. I can only refer the scientific reader to the same sources; claiming indulgence for such errors as I may inadvertently have copied, and which might possibly have been avoided, had I possessed the leisure which every undertaking of this description requires: I trust, however, that few or none will be found in this edition, which are likely to mislead any officer on service.

I cannot conclude this article without expressing my acknowledgments to the several gentlemen from whom I have received suggestions; and I

## P R E F A C E.

I beg leave to repeat, that every communication, for the improvement of this work, or of the *Regimental Companion*, will be thankfully acknowledged.

It is also necessary to say something more regarding the French terms which are interspersed, and in some instances, apparently out of place. The rule, which I have generally gone by, has been to select not only such words as might be found useful on service, but also those which tend to the elucidation of French military works, or communications. The more technical ones are attached to their English letters; and when the phrase has been used amongst us, the English term has followed. In some instances, the leading word has not been succeeded by its French or English adjunct; and where this occurs it will be found, that the term was not used in both languages to signify the same thing. Thus under *Officer in waiting* (literally *Officier en attendant*), which is found in our orderly books, I have not affixed a French term, because the same form is not observed among the French. They have certainly a phrase that corresponds; which is, *Le Premier à prendre*, and the *Le Suppléant*.

To those, who may peruse different articles which are occasionally extended beyond the mere etymological or technical explanation of terms, it will not, perhaps, be presumption in me to say, that they will not lay down this volume with sentiments or impressions, which can make them worse men, worse Christians, or worse soldiers than they were, when they took it up; too happy should I be, if, without the imputation of flattery to myself, I could add, they may be better.
